HULL: 53.44 N. 00.14 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER:

The Humber Ports Operation and Information Service operates radar surveillance between Spurn and Humber Bridge, and VHF (FM) radio telephone service available to all vessels navigating the Rivers Humber, Ouse, and Trent from the Queen Elizabeth Dock.

A continuous watch is maintained on Channels 10, 12, 14, 16 and 52. The call sign is "VEE TEE ESS" Humber. The telephone number is Hull 0482 – 701787. Telegraphic address "Humberops". Telex: 597656. Fax: 0482-795221.

The Service provides information regarding the arrival, berthing, anchoring and departure of vessels and also information on navigational aids, navigation generally, visibility, and the safety of vessels and persons. Tidal information, including the height of tide at Spurn Pilot Jetty, Immingham, Hull, Humber Bridge, Blacktoft and Keadby, is also available on request. Messages of any other nature and messages of a personal character cannot and will not be accepted. Messages of this kind should be passed through the British Telecom Ships Telephone Service via "Grimsby Radio" on Channel 27.

Other VHF (FM) Stations situated on the River Humber and the Channels used are shown in the Appendix to this Notice. These Stations provide direct communication between a vessel and the Dock or Pier Master at the place of destination. In general, vessels should obtain their navigation and safety information from the Vessel Traffic Services Humber and their berthing, docking and other pre-arrival information from the Station serving their destination.

A general broadcast giving weather reports, tidal information and navigational warnings is made by the Vessel Traffic Services Humber on Channel 12 every 2 hours commencing at 0103 hrs., prior notification being given on Channel 16.

Procedure:

(i) Vessels fitted with appropriate VHF R/T equipment on approaching the Humber should set watch on Channel 16.

(ii) Vessels wishing to communicate with the pilot station should call "Spurn Pilot" on Channel 16 and shift to Channel 14 for exchange of traffic.

(iii) On entering and before sailing or moving in the Humber, vessels should call "VEE TEE ESS" Humber on Channel 16. When contact is established they will be requested to transfer to Channel 12 for exchange of arrival or departure information. Watch should then be resumed on Channel 16 and 12.

(iv) Vessels wishing to communicate with the Station serving their destination should do so at the appropriate time on the Channels shown in the Appendix, reporting their departure from Channel 12 to "VEE TEE ESS" Humber. Vessels are advised that, when communicating with these Stations, contact with the Vessel Traffic Services Humber can only be re-established through Channels 16 and 12 and it is particularly advisable to maintain a listening watch on Channel 16 whenever practicable in the event of unforeseen circumstances developing in the River.

All times in messages should be given in local time using the 24 hour notation.

To achieve the full advantage of efficient communication, strict telephone discipline and attention to procedure, particularly on the Calling Channel, is imperative. The operating procedure should be in accordance with that laid down in Chapters VI and VII of the G.P.O. Handbook for Radio Operators (1975 Edition, with Supplements).

These services will be offered and will be rendered on the condition that neither the Associated British Ports, nor any of its servants or Agents, shall be liable to any person for loss or damage of any kind howsoever caused or arising whether as a result of negligence or otherwise or as a result of the non-availability of the services.

Appendix:

NOTICES:

GENERAL DIRECTIONS FOR NAVIGATION IN THE HUMBER: PROCEDURE AND INSTRUCTIONS FOR SHIPS USING THE RIVER HUMBER

1. *Time of arrival. ETA:*

1.1 Ship Owners, Masters and Agents are required to inform the Associated British Ports of the Estimated Time of Arrival of their vessels as per the General Directions together with relevant information regarding draft, air draft if proceeding under the Humber Bridge, EEC Check Lists, hazardous cargo, last port of call, nationality of vessel. In this context the Associated British Ports means the Dock Master at the particular port to which the vessel is bound, the Vessel Traffic Services Humber and the Pilot Office at Spurn. Reference British Transport Docks Board Notice to Mariners Nos. 2 and 3 of 1974.

1.2 Ship Owners or Agents are requested to inform the Masters of their vessels of the importance of amending ETA's as necessary due to changing circumstances. Such amendments can be passed to the Associated British Ports by radio through Grimsby Radio either in the form of a link call or telegram.

1.3 Within the Associated British Ports organisation Vessel Traffic Services Humber will disseminate relevant information received to all interested parties.

1.4 Within the river any message related to the movement and safety of vessels will be passed by Vessel Traffic Services Humber to the vessel concerned and Ship Owners and Agents may avail themselves of this service at any time.

2. *Time of Departure. ETD:*

2.1 In order to maintain a complete and up to the minute picture of traffic movement Dock Masters are requested to notify the Vessel Traffic Services Humber of the intended time and actual time of departure of vessels from their docks. This information should be passed by land line. Exchange of information thus engendered should ensure that all Officers of the Associated British Ports are fully informed of traffic movements. In the case of berths not under the jurisdiction of a Dock Master (e.g. wharves on the River Trent), requests for services of Pilots on Telex No. 527393 Spilot g duplicated to Telex No. 597656 Vtshumg.

3. *Navigation of the river:*

3.1 Vessels entering the river should communicate with the Vessel Traffic Services Humber (VHF Channels 16 and 12). A two way exchange of information is essential to ensure the smooth flow of traffic on the Humber necessary for the safety of vessels using the ports. In addition the Vessel Traffic Services Humber can fully advise Owners, Agents and Dock Masters, etc., as to the movement on the river of the vessels in which they are interested. Vessels approaching their destinations desirous of communication with the station serving their destination should do so as per the instructions in Notice to Mariners No. 3 of 1974.

4. *Completion of passage or departure from river:*

4.1 Inward bound vessels should on completion of their passag report to Vessel Traffic Services Humber indicating the closing down o their station. R/T should not be used whilst laid alongside in dock.

4.2 On departure from the river vessels are requested to report th disembarking of their Pilots and their intention of proceeding to sea.

4.3 All reported departures from normal traffic movement (e.g. engin failures, vessels weather bound at Spurn etc.), will be disseminated b the Vessel Traffic Services Humber to the appropriate authorities.

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British Ships only.
Load Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
EEC Check List.

In addition Manifests and Bills of Lading are usually sent to Agen direct from the loading port.

PILOTAGE: Compulsory. *Humber Pilotage District – Spurn Pil Station:* Mariners are advised that the Pilotage Control Station (Te 0964-650392; Telex: 527393 Spilot G) is established on the Spur Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendanc and vessels bound to the Humber requiring the services of Humber Pilot must give advance notice by signal through a G.P.O. Coast Station o by telex to the Spurn Pilot Station giving ETA at the seaward limits o the Humber Pilotage District, draft, and destination at least 12 hours i advance. Any adjustment to the time should be given at least 2 hou before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Stati by VHF radiotelephony may if within VHF range (approximately 20 mile call "Spurn Pilot" on VHF Channel 16 and after contact transfer t Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme rang can cause unnecessary interference).

All requests for Pilots for ports or berths on the Humber, Ouse or Trent will be processed from Pilotage Control Station at Spurn (Telex: 527393 Spilot G. Tel: 0964-650392).

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.

ANCHORAGES: The undermentioned anchorages have been designated for the use of sea-going vessels. Masters are asked to co-operate by using these anchorages and to avoid anchoring in the Fairway or elsewhere.

Spurn Anchorage for vessels awaiting Pilot, Bull Anchorage for vessels awaiting berth and vessels outward (awaiting orders, etc.), Hawk Anchorage for small vessels and vessels sheltering and Haile Anchorage for vessels carrying explosives.

Spurn Anchorage. From position "A" 121° distant 3.65 miles from Spurn Lighthouse, in a 125° direction 1.60 miles; thence in a 020° direction 0.60 mile; thence in a 077° direction 1.00 mile; thence in a 347° direction 0.70 mile; and thence in a 257° direction 2.40 miles to position "A".

Haile Anchorage: (Explosives): From position A, 216° distant 2.18 miles from Spurn High Lighthouse in a 284° direction 0.77 mile; thence in a 139° direction 0.80 mile; and thence in a 027° direction 0.46 mile to position A.

Bull Anchorage: From Position "A", 193° distance 2.1 miles from Spurn High Lighthouse, in a 090° direction 1.96 miles thence in a 294° direction 1.76 miles, thence in a 274° direction 0.93 miles, thence in a 206° direction 1.0 miles, thence in a 116° direction 0.88 miles, thence in a 026° direction 0.55 miles to Position "A".

Hawk Anchorage:

(1) Lat. 53° 35′ 00″ N., Long. 00° 04′ 14″ E.
(2) Lat. 53° 36′ 16″ N., Long. 00° 01′ 33″ E.
(3) Lat. 53° 36′ 09″ N., Long. 00° 00′ 52″ W.
(4) Lat. 53° 34′ 51″ N., Long. 00° 04′ 02″ E.

RESTRICTIONS: Vessels may be accepted through the day and night, the only restrictions on the larger vessels being influence of tides together with the undermentioned physical limitations. The larger deep drafted vessels are usually docked from 3 hours before HW until HW, with similar restrictions on vessels sailing. Ships drawing up to 19 ft. can have access to the docks over the full 24 hours on Neap tides and can be docked/undocked over an 18 hour period on Spring tides.

Locks	*Entrance lock*		*Depth of water on sill*	
	Length	*Width*	*at MHWS*	*at MHWN*
	321m.	m.	m.	m.
King George Dock	228	25.7	12.75	11.25
Albert and William Wright Docks	97	24.3	8.52	7.02
			at MLWS	
Salt End Jetty Number 1	tidal		10.64	
Salt End Jetty Number 3	tidal		10.64	
Alexandra Dock	167	25.7	10.20	8.70

MAX. SIZE: The maximum permissible dimensions for a general cargo/bulk carrier vessel (excluding tankers) requiring a berth in the enclosed docks are as follows: King George & Queen Elizabeth Docks, length 196 m., beam 25.5 m., draft 9.5 m. at Neaps, up to 10.4 m. at Springs.

A vessel of LOA 222 m. recently entered King George Dock by special arrangement.

HEALTH: Pratique is normally automatic. In case of suspected illness, death on board or the presence of captive birds or animals on board, Master must radio the Hull and Goole Port Health Authority through the Post Office or Coastal Radio Stations not more than 12 hours or less than 4 hours before arrival using the following telegraphic address "Portealth Hull" or through the Vessel Traffic Services Humber using call sign "Vee Tee Ess" Humber on VHF Radio Channel 12. The usual flag or light signals should be shown except where only animals are present and Free Pratique should be obtained from the Hull and Goole Port Health Authority.

RADIO: Portishead Radio – call sign GKL but when within 200 miles of the Humber can go through Grimsby Radio – call sign GKZ.

VHF: See "Vessel Traffic Services Humber".

TUGS: Head boat normally joins vessel in vicinity of Salt End, about 2 miles from dock, and the other tug or tugs connect with vessel when approaching the dock. Where vessel supplies own ropes for towage these to be good stout hawsers. Wire ropes will not be accepted. There is a charge for use of tug's hawsers.

BERTHING:

Dock or Jetty	*Length of Operational Quays* (m.)	*Normal Depth* (m.)	
Alexander Dock	4,082	6.5	Tidal
King George	3,423	11.5	Impounded
Queen Elizabeth	1,646	11.5	
Albert and William Wright	3,453	HW	
Salt End Jetty No. 1	79	9.8	At C.D. which is at L.A.T.
Salt End Jetty No. 2	121	9.8	
Riverside Quay	325	4.8	

CONTAINER FACILITIES: Container terminal at Queen Elizabeth Dock equipped with 3 container gantry cranes of 35 tonnes, 40 tonnes and 45 tonnes capacity, 5 rubber-tyred gantries and a fleet of tractors and trailers.

Ro/Ro container services operated from King George and Queen Elizabeth Docks.

BULK HANDLING FACILITIES: Cargill UK operate a grain storage and export facility for vessels up to 34,000 d.w.t. Loading rate 1,200 tonnes/h. Storage capacity 60,000 tonnes. The facility can handle vessels with length 650 ft., beam 83 ft. and draft 32 ft.

Edible oil storage available.

CRANES: 41×3-10 tonnes, 2×32 tonnes and 1×35 tonnes capacity.

STEVEDORES: Enable Agent order gangs important receive accurate ETA. See "Holidays".

Working hours: 24 hours a day.

DENSITY: 1013/1015.

MEDICAL: Necessary for Agents to be advised of any urgent cases of illness in order that they can arrange for a doctor or if necessary an ambulance to be available immediately on berthing. Hospital facilities available.

If vessel required to remain in river awaiting berth, arrangements can be made for any serious case to be taken from vessel by lifeboat and conveyed to Grimsby for immediate treatment.

TANKERS: The Oil terminal at Salt End handles refined or semi-refined chemical, liquefied ammonia and petroleum products which are transferred from the vessel along the oil jetties through a series of chemical and service pipes which range from 4 in. for chemicals, 8 in. and 12 in. for spirit, 16 in. for fuel oils and molasses and 8 in. (300 ASA) for ammonia.

There are 2 tanker berths at Salt End and maximum dimensions of vessels are length 214 m., draft 10.4 m. Max. size 40,000 d.w.t.

Berthing Operations: Vessels normally berth on a rising tide from 2.5 hours before HW, swinging off berth and mooring port side to jetty. Late arrivals may be taken on up to 1 hour after HW, berthing starboard side to jetty but this is subject to tidal and weather conditions prevailing at time.

Moorings are to dolphins and buoys and normally consist of a minimum 2 head lines (to buoys), 2 stern lines (to dolphins), 2 breast lines forward (to buoys), 2 breast lines aft (to dolphins), 2 springs forward (to jetty), 2 springs aft (to jetty).

Cargo Handling and Requirements: Ship's derricks are needed to assist in hose connection. Shore hoses have 6 in., 8 in. and 10 in. 150 ASA flanges.

Discharge rates are governed by a maximum back pressure of 7 kg. (100 p.s.i.).

Facilities and Services:

Fresh water available.
Ship's gangway required.
Public telephone situated at jetty head.
No deballast or slop facilities are available.

Unberthing: Normally up to one hour either side of HW or LW slack.

FRESH WATER: King George and Queen Elizabeth Docks. Rate of delivery – 15 t.p.h. Also available at Salt End if berth vacant, at 50 t.p.h.

At Albert Dock water is delivered by water boat.

If water required urgently after 1700 hrs. weekdays or on Saturdays or Sundays Agents must be notified in good time to enable them order men out.

FUEL: Fuel oil available, viscosity up to 3,500 secs. Redwood. Gas oil and diesel also available. At least 24 hours notice required. Delivered by barge or road tanker.

FIRE PRECAUTIONS: Masters receive an emergency services dock plan with an explanatory leaflet.

CONSULS:

	Tel.		*Tel.*

Italy	0482 447118		

REPAIRS: Facilities available for all types of deck and engine repairs.

DRY DOCKS:	Wm. Wright Dock.
Net length	137.0 m.
Width at cope level	25.9 m.
Width at entrance.	15.2 m.
Depth of water on sill MHWS	6.6 m.
Depth of water on sill MHWN	5.1 m.

GANGWAY/DECK WATCHMEN: Watchmen available if required by Master.

OPENING/CLOSING HATCHES: Can be carried out by stevedores when ordered. Ship charged with actual cost, but ship's crew may do so if required.

CUSTOMS ALLOWANCES: Foreign trade – max. allowance 0.5 lb. cigarettes or cigars or tobacco. Home Trade – (Elbe/Brest limits) half the above. Wine and/or Spirits. Foreign Trade – 1 pint – opened. Home Trade – (Elbe/Brest limits) half the above allowance.

CARGO GEAR: When working with ship's gear a Register of Machinery, Chains and Wire Ropes, etc., with all Test Certificates and record of inspections to be produced to the stevedores before work commences.

REPATRIATION: Crew changes can be effected and repatriation arranged by sea or air.

AIRPORT: Humberside Airport. Air UK operate flights to Aberdeen, Amsterdam, Bergen, Norwich, Stavanger and Teesside.

TIME: BST (British Standard Time) GMT plus 1 hour, GMT during Winter.

HOLIDAYS: New Year's Day; Good Friday (movable Holiday); Easter Monday (movable Holiday); May Day (1st Monday after May 1st.); Spring Holiday (last Monday in May); Bank Holiday (last Monday in August); Christmas Day (25th December); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Emergency Calls – Police – Fire – Ambulance – Coastguard – Dial 999 and ask the operator for the service required, or by VHF Channels 16 or 12 to VTS Humber.

TELEPHONES: Can be placed on board at the majority of berths in King George and Queen Elizabeth Docks.

SERVICES: Tank cleaning, facilities for discharge of tank washings slop (residue), compass adjusting, etc., available.

SHORE LEAVE: Crew members allowed ashore.

DEVELOPMENTS: The Alexandra Dock, which closed in 1982, is to re-open to cater for increased trade using the port.

Parliamentary powers have also been granted allowing A.B.P. to construct 3 riverside Ro/Ro berths adjacent to King George and Queen Elizabeth Docks.

AUTHORITY: Associated British Ports, P.O.Box No. 1, Port House, Corporation Road, Hull, North Humberside, HU9 5PQ. *Tel:* (0482) 27171. *Telex:* 592251. *FAX:* (0482) 26283. *Contact:* M.G. Fell, Port Manager.

PILOTAGE: Compulsory.

Humber Pilotage District – Spurn Pilot Station: A Pilotage Control Station (Tel. No. 096-46-392; Telex No. 527393) is established on the Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendance and vessels bound to the Humber requiring the services of Humber Pilots must give advance notice by signal through a Coast Station to the Spurn Pilot Station giving ETA at the seaward limits of the Humber Pilotage District, draft, and destination at least 12 hours in advance. Any adjustment to the time should be given at least 2 hours before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Station by VHF radio telephony may if within VHF range (approximately 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transfer to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme range can cause unnecessary interference).

Inward vessels bound for ports up river of Hull desiring to pick up a Goole or Trent Pilot in Hull Roads should give at least two hours advance notice of their ETA in Hull Roads to the Vessel Traffic Services Humber on VHF Channels 16 or 12 or through a Coast Station (telegraphic address "Humberops") or by telex No. 527656.

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.

ANCHORAGES: "Hawk", "Bull" and "Haile Explosives Anchorage".

The Pilot station will advise where to proceed to anchor and also provide Pilot. See "Hull".

RESTRICTIONS: No restrictions, vessels may enter the harbour day or night. Max. draft for entering harbour 10.36 m. HW. Compulsory Pilots boarding Spurn Light-vessel, decide whether vessel shall proceed up river or anchor and await suitable state of tide.

MAX. SIZE: Also see "Tetney Terminal" and Immingham Oil Terminal under "Tankers".

Immingham Dock: Max. length 198 m., breadth 26.2 m., draft 10.36 m. on density 1010.

HEALTH: Master to report any "Reportable" illness as detailed in form "Port 38" to "Porthealth Immingham".

See "Health – All Ports" before first U.K. port.

RADIO: Humber Radio – 2182 kHz or VHF Channel 16. Dock Master VHF Channel 16. Tankers use Channel 19.

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Will join vessel off dock entrance, optional use of tow lines. If using tug's tow lines, charge for this service, depending on vessel's length.

BERTHING: Unless Master or Agent indicates preference, the Port Authorities will decide which side alongside. River Pilot deciding in conjunction with Dock Master most suitable berthing time for harbour and river installations.

Ro/Ro Terminals: The enclosed dock system incorporates 2 Ro/Ro freight terminals: 1×4 berth facility is operated by Exxtor while a second single berth terminal is available on a common user basis.

BULK HANDLING FACILITIES: Immingham Bulk Terminal – Ore:

Immingham Bulk Terminal is an off-shore jetty, some 525 m. long, sited approximately 0.5 miles upstream from Immingham Dock. It comprises 2 berths, one for the discharge of iron ore and coal, the other for the loading of coal and coke.

It is serviced from the shore by a single lane roadway, which has height and weight restrictions, which must be conformed with.

Ore Berth: All depths are to L.A.T. Datum.

Sea Channel	A deep Buoyed Channel to Humber Light Vessel.
Sunk Channel designed depth **	9.2 m.
Berth designed depth **	14.8 m.
Average Tidal Range – Springs	6.4 m.
Average Tidal Range – Neaps	3.2 m.
Max. Berth length	303.0 m. Stern lines to mooring dolphin.

Ship's Dimensions:

Max. length overall	303.0 m.
Beam	47.0 m.
Draft **	14.5 m.
Max. height of hatch coaming or side covers above High Water	15.80 m.
Max. working length of vessel	260.42 m.

** Subject to alteration due to local tidal conditions.

Additional Berth Data:

Designed stockpile capacity imported coal	150,000 tonnes
Seasonal restrictions	None
Designed stockpile capacity	600,000 tonnes
Discharge system	2 unloaders – Verstegen Grabs
Maximum designed hourly discharge	4,000 tonnes (ore) 2,000 tonnes (coal)
Average hourly discharge	2,300 tonnes (ore) 1,200 tonnes (coal)
Outreach of grab beyond fender line	37.4 m.
Clearance of unloader boom from High Water	29.84 m.
Clearance of unloader boom from Low Water	35.94 m.
Travelling length of unloader along jetty	287.72 m.

All oil/ore carriers must be in possession of a valid Gas F Certificate, and be fitted with an Inert Gas System. If any slops rema on board, these must be inerted as per Charter Party B.S.C. COR 7 CL48.

Discharge is continuous, including Bank Holidays.

Potable fresh water is available at the rate of 12 tonnes per hour.

Small quantities of stores can be supplied by road. Howeve chandlers must consult with the Jetty Officer before delive (Tel: Immingham 571-300, Ext. 127). Larger quantities and heavy loa are by barge only.

All oil bunkers are supplied by barge only.

Parking facilities on the Jetty are very limited.

Public telephone boxes are sited on the Jetty.

A ship-shore access gangway is available.

Garbage disposal by arrangement with Agents and Termin management.

Maximum vehicle dimensions are:
Height – 3.20 m. (10 ft. 6 in.).
Width – 3.05 m. (10 ft. 0 in.).
Length – 9.70 m. (32 ft. 0 in.).
Axle weight – not to exceed 9 tonnes.

Contact: Immingham Bulk Terminal, Humber Road, Sou Killingholme, South Humberside DN40 3LZ. Tel: (0469) 57130 Fax: (0469) 571750.

Immingham Bulk Terminal – Coal:
Coal Berth:

Sea Channel	A deep Buoyed Channel to Humber Light Vessel
Sunk Channel designed depth **	9.2 m.
Berth designed depth **	12.6 m.
Berth length	282.0 m.
Travelling length of shiploader	180.0 m.
Outreach of shiploader beyond fender line	19.0 m.
Max. height hatch coaming or side covers above High Water (Fresh air draft)	12.2 m.
Present berth depth	9.5 m.

** Subject to alteration due to local tidal conditions.

Additional Berth Data:

Seasonal restrictions	None
Maximum loading rate	2,000 – 3,000 tonnes per hour (coal).
Average loading rate	1,000 – 2,000 tonnes per hour (coke).
Stockpile capacity	up to 250,000 tonnes (coal)
Loading hours are	24 hours per day from 0600 hrs. Monday to 0600 hrs. Saturday with weekend loading by arrangement.

A shore gangway may be hired on request.

A public telephone box is sited outside the Jetty Office.

General Information to Jetty Users – Coal and Ore:

Potable fresh water is available at the rate of approximately 12 ton per hour.

Small quantities of stores can be supplied by road. Howeve chandlers must consult with the Jetty Officer before deliver (Tel: Immingham 571300, Ext. 127).

Very large quantities, along with bunkers, would have to be supplie by barge.

Maximum vehicle dimensions are:
Height – 3.2 m. Width – 3.05 m. Length – 9.7 m.
Axle weight – not to exceed 9.0 tonnes.

Parking facilities on the Jetty are limited, and therefore restricted t Permit Holders.

Applications for permits should be made to: British Coal Corporatio Immingham Bulk Terminal, Humber Road, South Killingholme, Sou Humberside DN40 3LZ. Tel: 0469-571300. Fax: 0469-571750.

Grain: 2×500 t.p.h. shiploaders available.

CRANES: 16 electric cranes 3 – 20 tonnes capacity.

1×40 ton crane at Exxtor berths.

STEVEDORES: Firm ETA to Agent required if possible before noon o previous day before arrival.

Working Hours: Monday – Thursday, 0800 – 1700 hrs.; Friday, 0800- 1600 hrs.; overtime by arrangement.

MEDICAL: No advance notice necessary for medical treatment as hospital facilities available.

TANKERS: Also see "Tetney Terminal".

Immingham Oil Terminal: Berths No. 1 & 2: Up to 280,000 d.w.t. wi part cargo conducive with Sunk Dredged Channel. Length up to 1,100 f breadth no restriction and max. draft 42 ft. Four 12 in. lines for cru oil. Two 12 in. lines for fuel oil and three 10 in. lines for white oils. On 8 in. line for fuel oil bunkers.

Finger Pier: 8 in. loading arms for fuel and white oils

Mooring Operations: Large vessels normally berth at HW port side t jetty. Ideally, vessels of maximum size should stop off jetty and approa beam on at rates of no more than 55 ft. per minute. Number of tug depends on vessel size.

Mixed moorings in the same service (i.e. headlines, stern lines breasts and springs) are not permitted unless previous authorisation ha been given and then only when stand-by tugs and Pilot remain o stand-by throughout vessel's stay alongside.

Vessels are not allowed to berth or unberth without the attendance of the Associated Petroleum Terminal's Berthing Master.

There is no fixed doppler or berth approach rate indicators installed on jetty.

Normal mooring pattern is indicated in the "Plan Section".

Various wind speed restrictions in force for berthing and sailing operations.

Unberthing: Due to the strong tidal currents which develop in the vicinity, vessels normally sail on or around HW or LW slack.

Maximum size vessels, having made fast their tugs, come off the berth bodily, and swing in a position just to the S.E. of the terminal.

Eastern Jetty: Max. Length approx. 650 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft. Lines 10 in., 8 in., 6 in. depends on Receivers. Bunker line available.

Western Jetty: Max. Length approx. 800 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft.

Berthing Operations: (Eastern and Western Jetties): Normal berthing time for vessels is not more than 1 hour either side of HW or LW slack.

Vessels berth either port or starboard side to jetty depending on weather and tidal conditions prevailing at time.

Jetties are of wooden piling and fender construction and consequently care should be taken to ensure vessel does not land too heavily when berthing.

Draft restrictions can be calculated by taking the ABP predictions on the outer sill at Immingham for LW and adding 0.5 m. (1.6 ft.).

Normal mooring pattern is 3 headlines, 3 sternlines, 2 breastlines forward, 2 breastlines aft, 2 springs forward and 2 springs aft.

Unberthing; Normal sailing time, in view of strong tidal conditions which develop, is at HW or LW slack or up to one hour either side of these times.

Killingholme North: Max. length 580 ft., beam, no restriction. Draft 30 ft. 6 in. One 8 in. line. One 4 in. bunker line.

Berthing Operations: Normal berthing time for vessels is at HW or LW slack and not more than 1 hour either side of these times. Vessels berth either port or starboard side to jetty depending on weather or tidal conditions prevailing. The mooring pattern is similar to that used at Immingham East and West Jetties (see above).

Unberthing: Normally up to one hour either side of HW or LW slack.

Killingholme South: Max. length 800 ft.; beam, no restriction. Max. draft will be advised. 10 in. loading arms. Bunkers by barge.

Berthing Operation: Vessels berth at H.W. or L.W. (if draft acceptable).

Unberthing: One hour before H.W. or at L.W. (if draft acceptable).

Small vessels normally berth and unberth at anytime.

Head and stern lines must be a minimum of 100 m. length.

LPG FACILITIES: Humber Gas Terminal located at South Killingholme.

Max. Vessel Size: LOA – 280 m. (Min. 65 m.). Beam – No restriction. Capacity – 80,000 cu.m. (L.P.G) or 55,000 d.w.t. (white oil)

Max. Draft: Berth dredged to 12 m. Draft dependent on low water level. Mud bottom on berth. Capable of future dredging to 14.8 m below LAT.

Tidal Range: Springs – 6.4 m. (21 ft.) (approx.) Neaps – 3.2 m. (10.5 ft.) (approx.)

Max. Tidal Ebb Speed: Springs – 4.5 – 5 knots. Neaps – 2.54 – 3 knots.

Approach to Berth: Sunk Dredged Channel and Main Channel. Two Channels are marked by light buoys and light floats. Pilotage compulsory.

Jetty Berth: 6 facing fenders. 6 mooring dolphins (3 Fore/3 Aft). Minimum flat side vessel – 32 m. with manifolds midships.

Presentation Arm: 1 × 10 in. L.P.G and 1×10 in. white oil.

Jetty Pipe-lines: 1×14 in. L.P.G., 2×10 in. and 2×12 in. white oil lines.

Cargo Handling Rates: L.P.G. exports – 2×300 cu.m.p.h. pumps. L.P.G. imports – up to 1,000 cu.m.p.h. White oil exports – up to 1,200 cu.m.p.h.

Fresh Water: Available from berth.

Bunkers: Available only by barge.

Stores: Limited access to Jetty. Rigid vehicles only but no parking facility at Jetty Head. (Always refer to Agent).

DENSITY: In harbour 1010.

FRESH WATER: Available all berths by hose. Rate of delivery 20 t.p.h.

FUEL: 24 hours notice required. All grades available.

FIRE PRECAUTIONS: Copy of these regulations handed to the Master on arrival.

CONSULS:

Finland	Immingham 573187	Netherlands	Immingham 76246
Denmark	Grimsby 357521	Norway	Hull 224151
Greece	Hull 224151	Sweden	Immingham 571387

REPAIRS: All major repairs possible.

DRY DOCKS: Length 225.6 m., width at entrance 17.1 m.

SURVEYORS: Classification/P&I and cargo surveyors available.

GANGWAY/DECK WATCHMEN: Watchmen not usually employed, but left to the discretion of the Master.

OPENING/CLOSING HATCHES: See "Grimsby".

CERTIFICATES:

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction and any British Light Dues Receipts.
Derat Certificate.
Oil Pollution Certificate (Tankers).

CUSTOMS ALLOWANCES: 8 days – 200 cigarettes per person approx. Wine/spirits, 4 days – 0.25 pt. per day; this depends on the Customs Officer's discretion.

CARGO GEAR: This must comply with the Department of Employment and Productivity regulations. Normally discharge carried out by shore cranes, although overside berths available.

REPATRIATION: All facilities exist for dealing with crews and passengers.

AIRPORTS: Leeds Bradford Airport and Humberside Airport for Amsterdam (3 flights from each daily), Aberdeen and London for International destinations.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: See "Grimsby".

POLICE/AMBULANCE/FIRE: Port Security – 72067, 72068. County Police – Immingham 76444. Ambulance; County – Cleethorpes 692912. Fire; 999 ask for Fire.

EMERGENCY CO-ORDINATION CENTRE: Humber Estuary, Humber Ports Operations and Information Service. Tel: Hull 35599 – Hull Radio on VHF Channels 16 and 12.

TELEPHONES: Public telephones available.

BANKS: All major U.K. Banks have branches in the area.

STORING: See "Prelims".

1, 2, 3. It is normal practice for such stores to be delivered to ships side at in-dock berths by road vehicles. At the Eastern and Western River Jetties at Immingham, however, vehicles are not permitted and the approximate distances fom the root of the Jetties to ships side is from 400 m. to 500 m. South Killingholme Jetty – access by foot only.

4. Fork lift trucks could be used at in-dock berths, if necessary.

If proceeding to NCB/BSC or Immingham Oil Terminals – check with Terminal Authorities.

IDENTIFICATION CARDS: Seaman's Book or Passport sufficient for crew members going ashore.

GARBAGE DISPOSAL: In dock, collection service available alongside vessels using private hire skips for kitchen/galley waste. Contact BIFFA. (Tel: 0472 351185). Some Port Authority skips available on the quayside for dunnage waste disposal only.

At the jetties, garbage skips are also available.

Immingham Oil Terminal: Garbage disposal available at each berth. Skips permanently in position and are emptied 3 times per week. Service administered by jetty contractor, Catalytic Seaforth Port Services. (Tel: 0469-574044). Ships up to 6,000 d.w.t. included in mooring tariff at finger pier. Other vessels at other berths, £39.00 per vessel. Same facilities at South Killingholme Jetty and Immingham Gas Terminal.

WASTE OIL DISPOSAL: In dock, collection service available using tanker trucks alongside vessel. Contact Waste Oil Services. (Tel: 0472-827112) or BIFFA (Tel: 0472-351185).

Killingholme Jetty has no access for vehicles to come alongside vessels, but other jetties can be facilitated similarly to vessels in dock.

SEAMAN'S CLUBS: Immingham Seaman's Club, Immingham Dock. Tel: 0469-574195. Danish Mission, 2 Cleethorpe Road, Grimsby. Tel: 0472-342257.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.6289 (21.6.91).

AUTHORITY: Associated British Ports, Port Office, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 359181. *Telex:* 52250. *FAX:* (0472) 48275. *Contact:* D. Dunn, Port Manager.

INVERNESS: 57.29 N. 04.14 W. (See Plan)

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
Customs and Excise and Health Documents.
Manifest.
Bills of Lading, etc.

PILOTAGE: Compulsory for all vessels over 50 g.r.t. Apply direct to Agent or to Pilot, telephone Inverness 715715. ETA 24 hours. Pilot equipped with VHF. Pilot cutter blue launch with letter "P". Pilot station Meikle Mee Buoy. Location of anchorage while awaiting Pilot – Munlochy Buoy.

ANCHORAGES: Munlochy Buoy in 5 – 8 fathoms. Beauly Basin in 15 fathoms.

RESTRICTIONS: Vessels may enter and leave from 2 hours before HW until 2 hours after HW.

MAX. SIZE: Ship max. 125 m. length, 6.25 m. draft, high water springs. 5.5 m. draft, high water neaps

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Wick Radio.

VHF: Harbour Office on VHF Channels 16, 14 and 12 during office hours.

TUGS: Available from Invergordon.

BERTHING: *Longman Quay:* Length 180 m. Depth 5.0 m L.A.T.

Thornbush Quay: Length 156 m. Depth 3.0 m L.A.T.

New Citadel Quay, Old Citadel Quay and *Central Quay:* Each about 100 m. in length, and *Shore Street Quay,* about 150 m. in length, form a continuous length of quayside on the East side of the harbour at its upper end; there are depths of 3 m. alongside. L.A.T.

BRIDGES: Kessock Road Bridge, max. clearance 29 m. at MHWST.

STEVEDORES: Arrange through Agent. 24 hours notice required.

MEDICAL: Doctor available.

DENSITY: 1002.

FRESH WATER: Available on demand, 5 t.p.h., ex-hose on quay.

FUEL: Marine diesel and petroleum on request.

CONSULS: Sweden (Mr. John Fraser), Tel: Inverness 238366.

REPAIRS: Thornbush Slipway Tel: 243585.

GANGWAY/DECK WATCHMEN: Supplied by ship.

OPENING/CLOSING HATCHES: Done by crew.

CUSTOMS ALLOWANCES: Tobacco/Wines/Spirits. Usual amount allowed by Customs and Excise.

REPATRIATION: Facilities available.

AIRPORT: Dalcross, 7 miles from Inverness.

HOLIDAYS: 1st and 2nd January; Easter Monday; July Bank holiday; First Monday in October; and Christmas Day. All official holidays, cargo work can be arranged on these days.

POLICE/AMBULANCE/FIRE: Police Inverness 239191; Fire Brigade Inverness 222722; Ambulance Inverness 231511.
TELEPHONES: Adjacent to quays.
SHORE LEAVE: Unrestricted.
IDENTIFICATION CARDS: None.
GARBAGE DISPOSAL: Rubbish bins available on quay, free of charge, emptied as required.
WASTE OIL DISPOSAL: Full service into tanker trucks available. Charges according to quantity and commodity. Contact Agent for details.
SEAMAN'S CLUBS: None.
AUTHORITY: Inverness Harbour Trust, Harbour Office, Longman Drive, Inverness IV1 1SU, Scotland. *Tel:* (0463) 715715. *FAX:* 0463-235085. *Contact:* Captain J.B. Fairgrieve, Harbour Master.

IPSWICH: 52.03 N. 01.10 E. (See Plan)

DOCUMENTS: Masters can conclude all documentation in port. Ship's Agent will give the necessary advice.
PILOTAGE: On behalf of the Ipswich Port Authority. Pilotage Authority – Harwich Haven Authority.
Compulsory Area: River Orwell and Harwich Harbour as far seaward as the following outer boundaries:
Eastwards to Longitude 01° 24′ E.
Southwards to Latitude 51° 54.5′ S.
Northwards to Latitude 51° 57.4′ N.
Pilotage is compulsory for all vessels over 50 m. LOA navigating within this area except H.M. Ships and vessels of less than 100 m. LOA operating exclusively within the port area.
Boarding Point: Boarding and landing of pilots is carried out by fast launches operating from Harwich. The boarding position will be outside the compulsory area, and must be agreed with Harwich Harbour Operations, having regard to the size and draft of the ship, and other prevailing circumstances.
ETA's/ETD's: Inward vessels to give 8 hours Notice of Arrival at Harwich Approach Buoy, (Latitude 51° 56.4′ N., Longitude 01° 31.2′ E.), together with details of Gross Tonnage/Gross Register Tonnage, Draft (Maximum), Departure Port and Destination.
Confirmation of ETA required 3 hours before arrival.
Outward vessels must give a minimum of 2 hours' notice before sailing from or moving within the compulsory area.
Communications: Call sign "Harwich Harbour Radio", VHF Channel 9.

VHF Radio:	Channel 16	Safety
	Channel 9	Pilotage and ETAs
	Channel 71	VTS and Reporting
	Channel 6	Pilot Launches
	Channel 69	Tugs
	Channel 20	Harwich Radar Assistance
	Channel 11	Harbour Craft

Telephone:	(0255) 243000 Harbour Operations, or (0255) 243111 Pilot Orders.
Telex:	98472 HAROPS G.
Fax:	(0255) 241325.
Pilot Launches:	VHF Channels 6 and 71.
Director of Pilotage:	Captain I.T.Whale, Tel: (0255) 243030.
Ipswich Harbour Master:	Captain D.H.Winter, Tel: (0473) 231010 (manned 24 hours).

ANCHORAGES: No anchorages within port. All vessels will proceed direct to berth, otherwise anchorage provided in Harwich Harbour or as indicated by Harwich Harbour Radio (VHF Channel 71).
RESTRICTIONS: Up to 80 m. in length the lowest permissible U.K.C. is 0.75 m. Over 80 m. and up to 110 m. in length the lowest permissible U.K.C. is 1.0 m. Over 110 m. in length by special arrangement. (U.K.C.=Under Keel Clearance).
See "Notices" – "Guidelines – Vessels Navigating the River Orwell and the Port of Ipswich" and "Dangerous Substances in Harbour Areas Regulations".
MAX.SIZE: LOA 140 m., draft 7.7 m. (inward) and draft 7.4 m. (outward), both on a 3.6 m. tide.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Masters to contact ship's Agent through North Foreland, Humber, Niton or Portishead depending on position of vessel. All these radio stations hold cable addresses and staff telephone numbers of Agents.
VHF: A 24 hour VHF radio facility is in operation. Vessels arriving should contact "Ipswich Port Radio" on VHF Channel 16 on entering the River Orwell and report and/or maintain a listening watch as instructed. Channels 14 and 12 will be used for the passing of messages which should be restricted to the safety of navigation or persons.
TUGS: Vessels of 110 m. in length and up to 130 m. will use 1 tug. Vessels of 130 m. in length and over will use 2 tugs.
Special consideration may be given to vessels fitted with bow thrust facilities trading regularly to the port.
BERTHING: Vessels bound for berths in the Wet Dock should arrive off the lock 2 hours before HW.
Power Station Quay: Length 143 m.
Depth of water alongside: 7.5 m., subject to silting.
Approach channel: 5.6 m. below chart datum.
Cliff Quay: Length: 3,250 ft (990 m.).
Depth of water alongside: 7.5 m. below Chart Datum. Subject to silting.
Approach Channel: 5.6 m. below Chart Datum.
Cranes: 5 portal jib cranes from 10 tonnes to 35 tonnes lifting capacity. A Karrilift container gantry is also available.
Largest vessel which can be accommodated: 460 ft. (140.2 m.) overall in length, 25 ft. 6 in. (7.7 m.) draft inwards, 24 ft. 6 in. (7.4 m.) outwards.
The Quay handles containers and heavy lifts up to 35 tonnes an particularly well equipped to handle cargoes direct to and from both ro and rail transport. The South end has been developed as a mode terminal for handling all types of general cargo, including containe flats, palletised units and bulk cargoes. Spacious modern transit she and a container park are sited on part of this Quay. Vessels up 25 ft. 6 in. (7.7 m.) draft can be handled at the terminal.
Grain Terminal: Located at Cliff Quay. Capable of handling vessels to 10,000 tonnes capacity at a loading rate of 550 t.p.h. (malt) a 700 t.p.h. (other grain products). Grain silo capacity 11,000 tonnes.
Container Terminal: The terminal has a 40 tonne ship to shore luffi crane and 2 shoreside gantries with 1-9-1 configuration.
West Bank Terminals: These terminals provide 3 berths with a total qu frontage of 310 m. and are dredged to 5.8 m. below Chart Datu 2 container berths are backed up by 5.5 hectares of hardstandin including a transit shed of 2,750 sq.m. floor area. The berths are serve by portal cranes of 40 tonnes, 37.5 tonnes and 10 tonnes capacity a are adjacent to a Freightliner Terminal offering daily services a incorporated into the Railfreight Speedlink network.
A Ro-Ro berth is backed up by 7 hectares of hardstanding. The brid ramp is designed to carry a load of 180 tonnes with maximum axle loa of 45 tonnes. The ramp has a carriageway of 36.9 m. long×7 m. wi and can handle traffic at all states of the tide.
The Dock: The dock is situated within the town of Ipswich. It is som 26.25 acres (10.63 hectares) in extent and is approached by an entranc lock.
NAVIGATION - THE ENCLOSED DOCK, ISPWICH
VHF Radio: The Lock Master is equipped with VHF Marine Radio a may be contacted through the Orwell Navigation Service (Ipswich Po Radio) on Channel 14.
Maximum Size Vessels that can:

(a) Lock In or Out:	80.76 m. LOA and 14.50 m. beam.
(b) Enter the Dock:	114 m. LOA and 14.50 m. beam. (Vessels over 80.76 m. LOA can only enter the Dock when the Outer and Inner Lock-gates are open, that is for approximately one hour prior to HW on most tides but this is no guaranteed).
(c) Maximum Draft:	Owing to the shape of the Lock Pit, modern vessels require a minimum Under Keel Clearance depending upon their beam. To ascertain the maximum permissible draft add the following to the height of the Tide above Chart Datum at time of entry.

Vessel's Beam (m.)	(m.)
12.00	+2.09
12.50	+1.81
13.00	+1.59
13.50	+1.43
14.00	+1.28
14.50	+1.17

Notwithstanding the above, the maximum draft for any vessel the enclosed dock is 5.50 m.
Locking Times:
(i) Commercial Vessels:
May Lock In or Out from 2 hours before HW to 40 minutes aft HW.
Special arrangements may be made for vessels to enter or lea one hour either side of these times, subject to the Lock Mast being advised during the preceeding tide, there being sufficie water and at additional cost to the User.

(ii) Non-Commercial Vessels:
Should enter or leave the Dock from one hour to quarter ho prior to HW, if possible.
Entry Signals:
Lights fixed above the Orwell Navigation Service Building on th East-side of the Lock indicate to vessels whether the Lock is ope or closed for entry from the River or the Dock as appropriate.
ONE RED LIGHT *Lock closed* to vessels entry.
ONE GREEN LIGHT *Lock open* for vessels entry.
Flood Protection Gates:
These gates are closed when the tide level is 4.6 m. or mo above Chart Datum. During this period the Dock Entrance closed to navigation.

Inside, in addition to some 2,700 ft. (823 m.) of private quays owne by merchants having warehouses or mills adjoining, where small vesse can berth, there are the following quays owned by the Authority:
(i) *South West Quay:* This quay is 800 ft. (244 m.) in length wit depth of 19 ft. (5.79 m.) of water alongside at mean dock level. Th quay is served by 3 modern 7.5 tonne portal electric travelling cra and mobiles as required.
(ii) *Timber, Public Warehouse,* and *End Quays* total 940 ft. (286 m in length and have a depth of water alongside varying from 12 (3.65 m.) to 20 ft. (6.09 m.). Public warehouse is served by mobile cra capable of lifting up to 5 tonnes.
(iii) *Tovell's Wharf* is a 600 ft. (183 m.) reinforced concrete quay w 22 ft. (6.70 m.) of water alongside. It is served by mobile cranes up 5 tonnes lifting capacity.
(iv) *Orwell Quay* is 775 ft. (236 m.) in length, with 18 ft. (5.48 m.) water alongside and includes a Ro/Ro berth. One transit shed, wit floor area of 10,100 sq.m. is situated immediately behind the quay ap together with further extensive covered and open areas.
BRIDGES: The River Orwell Bridge has a clearance of 38.8 m. abo MHWOST (43.07 m. above Chart Datum).
Masters of larger vessels are advised to check their air drafts an in any doubt contact their Agent or the Ipswich Port Authority bef proceeding up the River Orwell.

STEVEDORES: Ship's Master normally advises his Agent of his ETA, distribution of cargo on board, and all relevant details. The Agent passes this information to Stevedores.

MEDICAL: All medical facilities available in port. Vessels requiring medical assistance on arrival should advise all details by radio telephone or in their ETA cables.

TANKERS: It is desirable that when Master of a tanker gives an ETA he also indicates the size of pipe-line, size of connection and discharging point in order that necessary arrangements can be made at discharging point of receiving oil terminal. There are no slop facilities at Port of Ipswich, however arrangements can be made, through the Port Authority (Tel: (0473) 231010) for firms using road tank vehicles to remove sludge or oily-waste. All cleaning and gas-free operations must be carried out outside precincts of the Harwich Harbour Board. Only one tanker berth at Ipswich but there are 6 intake points on quay and it is usual for 3 coastal tankers to be accommodated, depending on the overall length and berth availability. A maximum draft on the berth of 23 ft. (7 m.) subject to silting.
Also see "Notice".

DENSITY: Approximately 1020, depending on the amount of fresh water in river due to heavy rain.

FRESH WATER: Available at all quays. Delivery by hose through meter at 10 t.p.h.

FUEL:
Gas oil 35 secs. Redwood.
Light fuel oil 200 secs. Redwood.
Medium fuel oil heated 950 secs. Redwood.
Heavy fuel oil heated 3,500 secs. Redwood.
At least 24 hours' notice required.

CONSULS: Vice-Consul for Sweden and Vice-Consul for Norway. Tel: (0473) 59281.

REPAIRS: Only small repairs on board.

SURVEYORS: Lloyd's Register, Tel: (0502) 81117.

GANGWAY/DECK WATCHMEN: No watchmen required by Port Authority, but sufficient men available at all times to move vessels, if necessary.

OPENING/CLOSING HATCHES: Hatches opened and closed by ship's crew.

CERTIFICATES:
Following certificates are required by Agents in order to arrange Customs Clearance:
Ship's Register.
Radio Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
British Tonnage Certificate, if required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes, or equivalent in tobacco, per man. Wine and/or Spirits, 1 bottle per man.

CARGO GEAR: Cargo working gear is supplied by stevedores. Normally, quayside cranes are used for discharging and loading. In event of cargo gear being used in port, Ship's Gear Certificate, duly certifying that all gear has been examined and is in every way workable and suitable for discharge and/or loading of cargo, is to be produced.

REPATRIATION: Facilities exist at port for effecting crew changing and arranging repatriation.

AIRPORT: Ipswich Airport is 2 miles from the port. Charter flights available for ship's crew. Tel: (0473) 70111.

HOLIDAYS: Normal holidays for English ports.

TIME: GMT in Winter months. Summer time, GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: In emergency dial 999. Otherwise Police – Ipswich (0473) 725363.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required as long as each crew member has in his possession a Seaman's Book and/or Passport.

GARBAGE DISPOSAL: Garbage disposal is available, skips are placed alongside vessels. Contact Port Authority.

WASTE OIL DISPOSAL: Service available using private contractors. Contact Cleanaway Ltd. (Dry Cargo, Tel: 0953-452374. Wet Cargo, Tel: 0223-423231) or Hales Containers. (Tel: 0473-831725).

SEAMAN'S CLUBS: Ipswich Mission to Seamen, 20 Camberley Road, Ipswich, IP4 5QF. Tel: 0473-727822.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.56 (12.4.91).

NOTICES: *Guide Lines – Vessels Navigating the River Orwell and the Port of Ipswich (B.A. Chart No. 2693).*

1. *Length and Under Keel Clearance (UKC):*
Vessels up to 80 m. LOA – lowest permissible UKC 0.75 m.
Vessels between 80 m. LOA – 140 m. LOA – lowest permissible UKC 1.0 m.
Vessels over 140 m. will only be accepted by special arrangement with the Harbour Master.
Air draft under the Orwell Bridge is 43.07 m. above Chart Datum.

2. *Towage:*
Up River from Buoy No. 5, vessels between 110 m. LOA and 130 m. LOA – 1 Tug. Vessels 130 m. LOA and above – 2 Tugs.
Special consideration may be given by the Harbour Master to vessels fitted with bow thrust facilities which trade frequently to the Port of Ipswich.

3. *Speed:*
A Master of a vessel will at all times navigate with caution and at such speed that no damage to the environment, or hazard will be created to other craft which may be navigating or moored in the vicinity.
The speed of vessels must be reduced to the minimum consistent with safe navigation when passing the yacht anchorages at Pin Mill, Woolverstone and other places, or other vessels moored, or dredgers operating; or works of repair, maintenance or construction in progress within the Harbour and from a point abreast of East Fen Buoy to the Lock Gates and while within the Dock.
The maximum speed for vessels under 50 g.r.t. shall be deemed to be 6 knots.

4. *Position Reporting:*
(a) A Master shall report to the Orwell Navigation Service on VHF Channel 14/12.
  (i) On entering the River approaching Buoy No. 1.
  Passing Buoy No. 4.
  Passing Cathouse.
  Passing Buoy No. 9.
  When secure on berth.
  If any such vessel is in a damaged condition which renders such vessel in any way unseaworthy, or inhibits the vessel's ability to manoeuvre, full particulars of the damage shall be given in such report.**
  ***Note:* The Harbour Master on receiving a report from a Master of a vessel may give directions to the Master of such vessel under powers in that behalf given by Section 59 (2) of the Ipswich Dock Act 1971.
  (ii) On leaving the Port, report to the Orwell Navigation Service at the following positions:
    Prior to leaving the berth
    On clearing berth and proceeding
    Passing Cathouse Buoy
    Passing Buoy No. 4
    Passing Buoy No. 2
    Immediately before leaving the Port.
  (iii) While navigating within the Port at all times maintain a listening watch as directed by Orwell Navigation Service.
(b) If such vessel is not fitted with VHF radio-telephone or is fitted with one which is not operational at the time of entry into the Port or departure from a berth therein, on arrival at a berth owned or occupied by the Authority, prior to leaving a berth in the Port and before moving from one berth to another, report to the Orwell Navigation Service in person or by telephone.

5. *Restrictions (Navigational):*
(a) Inward Bound Vessels:
To satisfy the conditions in 5/1 and 5/2, Masters and/or Pilots of Inward bound vessels *must* contact the Orwell Navigation Service and liaise, if necessary, with any outward bound vessel.
(b) Outward Bound Vessels:
The Master and/or Pilot of outward bound vessels *must* ascertain the position in the Channel from the Orwell Navigation Service, prior to leaving the berth and liaise, if necessary, with any Inward bound vessel.
(1) Vessels over 90 m. LOA:
A vessel of 90 m. LOA or more, *must not pass* or *overtake* another vessel of 90 m. LOA or more in the River Orwell between the Butt Buoy and the Port of Ipswich.
(2) Petroleum Tankers and Chemical Tankers with Hazardous Cargo:
These vessels may navigate at any time (subject to the above and to tidal constraint if appropriate) provided that:
  (i) Between one hour after sunset to one hour before sunrise there is no opposing traffic on the River above the Butt Buoy, the size or draft of which would present a potential hazard.
  (ii) Weather and visibility conditions are of a standard acceptable to the Master and the Pilot concerned.

6. *Sound Signals:*
In addition to the Sound Signals required to be made by the Regulations for the Prevention of Collisions at Sea, the following signals will be used by vessels navigating in the River Orwell:
  4 short blasts followed by 1 short blast = Vessel swinging to starboard.
  4 short blasts followed by 2 short blasts = Vessel swinging to port.
  1 long blast, given when approaching the Woolverstone and Pin Mill areas between the hours of sunrise and sunset. (Inward bound vessels between Buoys No. 4 and 5, and outward bound vessels when passing Buoy No. 7.).
  1 long blast when leaving Cliff Quay or West Bank berths during daylight hours on Saturdays and Sundays.

7. Nothing in these Guide Lines will remove from any Pilot the right to advise Masters against navigating in the River if in the professional opinion of the Pilot a proposed course of action is considered to be imprudent.

8. Notwithstanding anything contained in the generality of these or other arrangements regarding the navigation of the River Orwell, vessels of over 140 m. LOA may, under certain special circumstances and conditions, navigate in the River subject to prior consultation with the Ipswich Harbour Master.

9. Nothing in these Guide Lines shall preclude the Ipswich Port Authority Harbour Master, after consultation, if relevant, with the Haven Pilots, from giving consideration to the exemption of a specific vessel from any of the conditions and requirements hereinbefore mentioned.

Signed: Harbour Master
Date: 1st February 1990.

Dangerous Substances in Harbour Areas Regulations 1987:

1. A Ship Master; Agent; Transport Operator; Contractor or any person who intends to bring a dangerous substance, as defined in Regulation 1(a) of the Merchant Shipping (Dangerous Goods) Regulations 1981, into the Harbour or Harbour Area of the Port of Ipswich, either from Inland or from the Sea, is required under the above regulations to give the Harbour Master and the Berth Operator advance notice of their intention.

   The Harbour Master reserves the right to refuse transit through the Harbour Area of certain highly dangerous substances, or to require them to be handled direct to or from transport into a vessel or vice versa.

2. Notification should be made to both the Harbour Master and the Berth Operator from 14 days to 24 hours prior to the goods entering the Harbour Area. However, under certain circumstances the following may apply:

   Inward Cargoes: Harbour Master's Information.

   In the case of ship reporting Inward from Continental passage, where it is impracticable to comply with the foregoing, then the maximum notice possible should be given but *never less* than *6 hours*.

   This to include R O B (Remaining on board) Dangerous Substances in transit through the Port.

   This information to be telexed to No. 98642 or Fax to (0473) 230915 at the Orwell Navigation Service (Port Radio) and should also be sent to the Berth Operator.

   Export Cargoes: Berth Operator's Information.

   In cases where it is not possible to comply with the above regulation, a lesser notification *may* by accepted but *never less* than *12 hours* prior to the arrival of the goods in the Harbour Area.

   This information to be transmitted to the Berth involved (Berth Operators – See No. 3).

3. *Berth Operators:*

   Ipswich Port Authority: West Bank – Ro-Ro and Container Terminal (excluding Cast Berth).

Fax:	(0473) 602266
Telex – ONS:	98642 For internal transmission to Berth
Letter by hand or GPO:	Ipswich Port Authority (Dangerous Substances Notification) West Bank Terminal Office Wherstead Road Ipswich IP2 8LY.
Telephone:	Enquiries/Notification (0473) 231010. Ext. 200/297.

   Ipswich Port Authority: East Bank – Cliff Quay and Dock

Fax:	(0473) 232064
Telex – ONS:	98642 For internal transmission to Berth
Letter by hand or GPO:	Ipswich Port Authority (Dangerous Substances Notification) Superintendents Office c/o No. 1 Stevedores Office Cliff Quay Ipswich IP3 0BS
Telephone:	Enquiries/Notification (0473) 231010. Ext.265.
Cast Terminal	
Telephone:	(0473) 690593
Fax:	(0473) 688202
Telex:	988891
Letter by hand or GPO:	Cast Terminal (UK) Ltd (Dangerous Substances Notification) Cast Terminal Wherstead Road Ipswich IP2 8NB

4. *Notification:*

   Notification must include full details of Dangerous Substance to be presented into the Harbour Area, which should be given in the following format.
   (a) Name of Agent and/or Operator presenting the notification.
   (b) Name of Vessel.
   (c) Berth.
   (d) Date/Time due.
   (e) Dangerous Substance.
   (f) UN Number/Flash Point.
   (g) Quantity.
   (h) Method of Packaging.
   (i) Transport Company involved.

5. *Radio Active Substances and Explosives:*

   Radio Active Substances and Explosives which are subject to the Port's Licence may only be brought into the Harbour Area after prior booking and by agreement with the Harbour Master and the Berth Operator as to the type, quantities and dates of transit in line with the foregoing.

6. *Other Regulations:*

   A Dangerous Substance brought into the Harbour or Harbour Area under the Merchant Shipping (Dangerous Goods) Regulations 1981, must also conform to the following regulations:

   International Maritime Organisation – Dangerous Goods Code.

   Classification, Packaging and Labelling of Dangerous Substances Regulations 1984.

   Dangerous Substances (Conveyance by Road in Road Tankers and Tank Containers) Regulations 1981.

   The Classification and Labelling of Explosives Regulations 1983.

   Radioactive Substances (Carriage by Road, GB Regulations 1974). Regulations for the Safe Transport of Radioactive Materials. – Ionising Radiation Legislation 1985.

   International Carriage of Dangerous Goods by Rail (RID).

   International Carriage of Dangerous Goods by Road (ADR) Geneva 1957.

   Road Traffic (Carriage of Explosives) Regulations 1989.

7. *Documentation:*

   When Dangerous Substances arrive at the Harbour Area, Ipswich Port Authority will require, in addition to the Unit L Note/Interchange Note, the following:
   (1) Dangerous Substance Documentation Showing:
      (a) IMO Class.
      (b) The UN Number.
      (c) The correct Chemical name of substance – Trade Na not acceptable.
      (d) Flash Point (if applicable).
      (e) The number and type of packages and, if explosive, nett explosive content.
      (f) Emergency contact telephone number.
   (2) Labelling:
      The Packages/Unit to be labelled in accordance with the IMO Code and old label/s to be removed.
   (3) Certificates and Licences:
      If Radioactive Substances, the appropriate packag certificates and Licences.

Signed: Harbour Master.
Date: 6th November 1989.

DEVELOPMENTS: Main channel at Harwich presently being dredg to 11.0 m.

AUTHORITY: Ipswich Port Authority, Old Custom House, Key Stre Ipswich IP4 1BY. *Tel:* (0473) 231010. *Telex:* 988787 (Head Offic 98642 (Operations). *FAX:* (0473) 230914. *Contact:* A. J. Hanso Commercial Manager. Captain D.H.Winter, Harbour Master.

KING'S LYNN: 52.45 N. 00.24 E. (See Pla

DOCUMENTS:

Pilot Note to be filled in and signed by the Master on completion pilotage services both inwards and outwards.

Cargo tonnage return to be completed by the ship's Agent.

PILOTAGE: Pilotage is compulsory between an East-to-West through King's Lynn Buoy No. 3 in the Wash and the Freebridge King's Lynn.

Vessels may be boarded from pilot cutter in the Wash from appro 2.5 hours before HW between King's Lynn Buoy No. 1, the Sunk Bu and Roaring Middle Light Float. Unless prevented by weather breakdown a pilot cutter cruises between King's Lynn No. 1 Light Bu and the Sunk Light Buoy approx. 2.5 hours before HW until such tim as it is too late for a vessel to transit the Approach Channel on that tid

Requests for a Pilot sent at least 24 hours before the service required (with amendments if necessary up to 14 hours before) to th Pilot Office, Common Staith, King's Lynn (Tel: King's Lynn 77341 telegrams "Conservator" King's Lynn) or through local Agent. The Pil Office is at the Harbour Office and maintains VHF R/T watch o Channels 16 and 14 from 0900 – 1700 hrs. Monday to Friday and fro 4 hours before HW until 1 hour after HW on each tide after 1700 hr and before 0900 hrs. The pilot cutter listens on Channel 16 when o station and is fitted with Channels 14, 12, 11 and 6 as working channe

Pilot launches "United" and "Denver" are 40 ft. fibre glass craft wi blue hulls, white superstructure and orange tops to the wheelhouses the event of bad weather the pilot launch on duty will fore-run vesse into Cork Hole (Lat. 52° 53′ N., Long. 00° 24′ E.) before boarding Pilo

Requests for Pilots for ships in port, should be made to the Pilot Offic at least 2 hours before the Pilot is required to attend the ship. The signa to be used or displayed where the services of a Pilot are required accordance with the provisions of the Merchant Shipping (Pilot Signa Order, 1970.

ANCHORAGE: In the Wash vessels anchor within an area bounded the Roaring Middle Light Float and the King's Lynn No. 1 Light Bu and the Sunk Light Buoy. Anchoring close to Buoy No. 1 in suffici depth of water assists early boarding of Pilots. Depth of water 20 minimum.

RESTRICTIONS: King's Lynn Harbour is situated on the River Gre Ouse about 2 miles inland from its mouth, at the S.E. corner of th Wash.

The shipping channel in the approaches to King's Lynn and approaches in the Wash is subject to changes in depth and direction published on Admiralty Charts.

Harbour Master will advise in advance upon the suitability of vesse and tides.

All ship movements are at HW, times in accordance with a posi list maintained at the Harbour Office on the basis of information suppl in advance from Masters of vessels and their Agents.

At the Docks entrance lock docking signals are exhibited from a sig mast.

MAX. SIZE: Max. dimension for vessels entering the Harbour Ber Length 315 ft. (Berth No. 6, South Quay), beam 45 ft., draft 11 ft. lowest Neap tides, and 18 ft. on highest Spring tides. Access over hi tide only. Harbour Master to be consulted for vessels approaching the limits. Larger vessels can be accommodated at the A.B.P. Rivers Quay and within the enclosed docks (see below).

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: The King's Lynn Conservancy Board operates in the River Great Ouse and its approaches in the Wash, a VHF (FM) port operations and information radio-telephone service in the International Maritime Band, call signs: "King's Lynn Harbour Radio" (Channels 16, 14, 12 and 11); "King's Lynn Pilots" (Channels 16, 14, 12, 11 and 6).

Associated British Ports operates a docks operations and information service, call sign: "King's Lynn Docks Radio" (Channels 16, 14 and 11).

TUGS: Controlled by King's Lynn Conservancy Board and in attendance at the discretion of the Board's Harbour Master. Vessels joined in the Wash Approaches and/or lower reach of River Great Ouse (Marsh Cut). Vessels should provide own hawsers. If ordered, tug hawser available. Harbour Master may require any vessel to use and employ a tugboat.

BERTHING: *A.B.P. Riverside Quay:* Total berthing length 220 m. Located between lock entrance and Fisher Fleet. Vessels up to 140 m. length, beam unlimited and draft up to 18 ft. on highest Spring tides. Access over high water only. Vessels take the ground at low water.

Alexandra Dock: Size 780 ft. × 310 ft. Approached from the River Great Ouse and King's Lynn Harbour by a lock. Vessels of length 119 m. and beam 13.80 m. can be accepted. The depth of water on sill is 22 ft. to 26 ft. (Springs) and 18 ft. (Neaps).

Bentinck Dock: Size 1,000 ft. × 400 ft. Connected with the Alexandra Dock by a passage and gates over which pass 2 swing bridges. Also double-sided jetty 235 ft. long. Container storage terminal with 42 ton capacity forklift.

The quays of the 2 docks have a water frontage of approximately 1 mile and provide a total of 16 berths.

Quay cranes available up to 32 tonnes.

South Quay (King's Lynn Harbour): Grain loading and discharging facilities at South Quay Berth No. 6. Lay-by facilities at South Quay Berth No. 1. Ships berthing at South Quay take the ground at LW.

STEVEDORES: Associated British Ports within enclosed docks. Gangs usually can be provided at minimum notice. Main commodities and handling rates: timber (200 cu.m. pre-pack, pre-slung, per gang-hour), steel coils (250 tons per gang-hour), tinplate (90 tons per gang-hour), grain (200 t.p.h. with one elevator), bulk materials 200 – 350 t.p.h. per crane, also Ro/Ro and container handling.

TANKERS: 3 tanker berths in enclosed docks. Discharge from vessels is to 6 in. connecting pipes feeding 8 in. pipes to storage tanks.

MEDICAL: It is advisable to give advance notice of required medical attendance via Agent. In emergency the Harbour Office will pass on requests received over the VHF R/T Port Operations and Information Service. For other medical information, refer to the Port Medical Officer of Health and H.M. Customs.

FRESH WATER: Available on all berths through 4 in. pipes off hydrants from public supply.

FUEL: Available at berths alongside King's Lynn Harbour on 24 hours previous notice. Light-grade fuel oil, gas oil, petrol and paraffin only.

OPENING/CLOSING HATCHES: Done by crew. Cranes available for heavy beams.

GANGWAY/DECK WATCHMEN: Vessels responsible for providing own gangways at King's Lynn Harbour berths, where the Regulations require the Master or other person having the care of any ship or other craft to have a proper number of hands on board to attend moorings and to comply with all the requirements and directions of the Harbour Master or his Deputy or Assistants.

CONSULS: Vice-Consul for the Netherlands and Germany.

REPAIRS: Limited facilities only available locally for hull and engine repairs.

AIRPORT: Charter flights and some regular flights, from Cambridge and Norwich airports about 45 miles from King's Lynn. Regular flights from London (Heathrow) about 100 miles from King's Lynn.

HOLIDAYS: Cargo work usually available at overtime rates on Saturday and Sundays and on all public holidays.

POLICE/AMBULANCE/FIRE: In emergency dial 999 and ask for the service required. Normal service: Police – King's Lynn 761311; Ambulance – King's Lynn 773503 or 773910; Fire Service – King's Lynn 775163.

GARBAGE DISPOSAL: Waste skips are provided at specific points on the dockside. This service is currently provided free of charge.

WASTE OIL DISPOSAL: No specialised facilities, local agents can arrange collection via road tanker.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: The King's Lynn Conservancy Board, Harbour Office, Common Staith, King's Lynn, Norfolk PE30 1LL. *Tel:* (0553) 773411. *Telex:* 817588. *Cables:* "Conservator" King's Lynn. *FAX:* (0553) 768185. *Contact:* M. J. Kiddle, General Manager. Captain D. W. Garside, Harbour Master and Pilot Master.

KIRKCALDY: 56.07 N. 03.09 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".

RESTRICTIONS: Dock gates open for 2 hours before HW until HW.

MAX. SIZE: Vessels of 1,500 d.w.t. regularly use the port. Width at dock gates 15.2 m. Depth 4.8 m. Max. width to enter 14.6 m.

RADIO: See "Leith".

Vessels are requested to give the Port Authority 24 hours notice prior to arrival at Kirkcaldy.

VHF/RADAR: Forth Navigation Service from Leith or Methil Harbour Radio.

TUGS: Towage available.

BERTHING: 494 m. of berthing space available in dock.

CRANES: Mobile cranes available.

BULK CARGO FACILITIES: Privately owned grain discharge plant.

STEVEDORES: Available from Methil.

GARBAGE DISPOSAL: All garbage collection is arranged via ship's agents who maintain a list of contractors offering this service.

WASTE OIL DISPOSAL: All collection's are arranged via ship's agents who maintain a list of contractors offering this service.

SEAMAN'S CLUBS: None. No clubs for seamen are located in Fife.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Forth Ports Authority, Dock Office, Methil KY8 3RE. *Tel:* (0333) 26725. *Telex:* 72208. *FAX:* (0333) 24873. *Contact:* Captain T.S. Sutherland, Port Superintendent.

KIRKWALL: 58.59 N. 02.58 W. (See Plan)

PORT LIMITS: See "Plan".

DOCUMENTS:

Maritime Declaration of Health.
Vaccination List.
Immigration Form H.O. Form IS6.
Crew List – 2 copies.
Ship's Stores List.
Crew Personal Effects Declaration. Customs Form C142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipt.

Customs and Health: Customs, Immigration, Health and Agent will embark at anchor in Kirkwall Bay or alongside pier.

PILOTAGE: Non-compulsory except for passenger vessels over 65 m. LOA and all other vessels over 80 m. LOA. Pilotage limits same as harbour limits. 10 licensed Pilots available. Arrange through Harbour Authority Office, Scapa. Tel: 0856-873636. VHF Channel 16. Telex: 75475 or by local Agents.

ANCHORAGES: Two areas. See "Plan".

RESTRICTIONS: Kirkwall Pier tidal berthing restrictions on draft. See "Berthing".

MAX. SIZE: See "Berthing".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Coast station call sign "Orkney Radio" (Wick Radio). Call Channel 16 VHF, working Channel 26 VHF.

VHF: Continuous watch Channel 16 VHF, call sign "Orkney Harbour Radio". Working on Channels 9, 10, 11 and 20 from 0800–1700 hrs. weekdays and when vessel expected. "Kirkwall Harbour Radio" Channel 16 VHF, working Channel 12.

RADAR: No facilities at Kirkwall Harbour.

TUGS: Pilot boat/tug of 9 tons bollard pull is due in service Spring 1992.

BERTHING: See "Plan" for berths.

Tidal Reference: Range 3.0 m. at Springs and 2.0 m. at Neaps.

Cargoes: Load/discharge ship's gear and mobile crane. Cargoes: Bulk, general, livestock, fuel oils (not petrol), passengers.

CRANES: One Jones 355 mobile crane with grab SWL 11 tons at 12 ft. radius and 2.75 tons at 40 ft. radius. One Jones 971 mobile crane SWL 40 tons at 12 ft. radius and 11.2 tons at 40 ft. radius.

STEVEDORES: Kirkwall Port Employers Association have 25 dockers available. Contact local stevedores for detailed information.

MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital at Kirkwall.

DENSITY: 1025.

FRESH WATER: Available at all berths by 51 mm. mains supply. May be restricted in dry periods. 0.94p per tonne.

FUEL: Available by road tanker only from Esso – Shell/B.P.

FIRE PRECAUTIONS: Standard precautions. Local fire brigade.

CONSULS: Denmark, Netherlands, Norway, Germany.

REPAIRS: Several small engineering firms can carry out minor repairs.

DRY DOCKS: None.

SURVEYORS: Not available.

GANGWAY/DECK WATCHMEN: Not available.

HATCHES: Opening/closing by crew.

CUSTOMS ALLOWANCES: As per British Customs scales.

REPATRIATION/TRAVEL: There are daily air services during the week to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday. There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.

AIRPORT: Approximately 4 miles from Kirkwall. Airlines: British Airways and Logan Air.

TIME: GMT. BST (GMT plus 1 hour) March – October.

HOLIDAYS: Public holidays vary except for Christmas and New Year (25th and 26th December, 1st and 2nd January).

POLICE/AMBULANCE/FIRE: Emergency – 999. Police: 872241. Ambulance: 872763.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard: Tel. 873268. Telex: 75211.

SERVICES: Radio/radar technicians, divers, charts, etc., all available. Contact Agents.
BANKS:
Bank of Scotland, 56 Albert Street, Kirkwall. Tel: 0856-872169.

The Royal Bank of Scotland plc, P.O.Box 1, 3 Victoria Street, Stromness. Tel: 0856-850217.
SHORE LEAVE: No restrictions.
GARBAGE DISPOSAL: Skips provided on piers free of charge and collected as required.
WASTE OIL DISPOSAL: Facilities available for small quantities only via 250 galls. tank provided on pier. The tank is collected as required.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
DELAYS: Stevedores also work Stromness when required, delays to vessels at Kirkwall can be expected due to lack of labour.
DEVELOPMENTS: Proposed extension to Kirkwall main pier, no details available at present.
AUTHORITY: Department of Harbours, Orkney Islands Council, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-873636. *Telex:* 75475. *FAX:* 0856-873012. *Contact:* Captain R.C. Sclater, Director of Harbours. Captain R.S.Moore, Deputy Director.

LARNE: 54.51 N. 05.48 W. (See Plan)

DOCUMENTS: See "Belfast".
PILOTAGE: Not compulsory. Private Pilots available through Ships' Agents. Pilots board off Fairway Buoy. Contacted through Port Information Service on Channel 14, Call Sign 'Larne Harbour'. ETA 3 hours and 1 hour in advance, giving name, nationality, length, draft and gross tonnage. For Ballylumford Power Station call Belfast Pilots on VHF Channel 12.

Berths arranged by Harbour Master in advance.
ANCHORAGES: Inner anchorage at Larne up to 9 m. Anchorage outside Fairway Buoy in 11 m.
MAX. SIZE: Draft dependent on berth. Minimum depth at Mac Kean quay is 6.8 m. at C.D. Oil tankers proceed to Ballylumford Power Station which lies across Larne Lough directly opposite Larne Harbour. Approach channel has a minimum depth of 30 ft. below datum and berth has 35 ft. below datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Portishead/Portpatrick.
VHF: Port Information Service maintains continuous watch on Channels 14 and 16. Call sign 'Larne Harbour'. The service provides information regarding arrival, berthing, anchoring, departure and movements of vessels. Also information including pilots, wind direction and strength, visibility, tidal information, etc.
TUGS: 1×18 ton, 1×7 ton and 1×3.5 ton bollard pull tugs are stationed at Larne. Tugs from Belfast serve oil tankers to Ballylumford.
BERTHING: 1 berth equipped with 2×5 ton cranes for grabbing and general cargo work. 2 berths are equipped with cranes of 32 tons and 35 tons capacity for handling containers. 4 berths (3 twin level ramps for vessels up to 170 m.) are equipped with Ro/Ro ramps, capable of taking loads up to 180 tons and ships up to 27 m. beam.
STEVEDORES: Larne Harbour Ltd. carry out all the stevedoring. 24 hours' notice required for arrangements. Normal hours 0800 — 1700. Overtime by arrangement.

Main commodities: Fertiliser in bulk (150 t.p.h.), palletised fertiliser (200 t.p.h.), pulp (200 t.p.h.), steel plates and general cargo, etc.
MEDICAL: No advance notice required. Ample hospital facilities available within near vicinity.
TANKERS: For Ballylumford, see "Max. Size".
DENSITY: 1025.
FRESH WATER: Available at all berths. Order through Agent. Rate 15 t.p.h.
FUEL: Bunkering carried out by road tanker. Major grades of bunker fuel, diesel and marine lubes can be obtained through suppliers.
CONSULS: Consuls in Belfast (20 miles) can be contacted through ship's Agent.
REPAIRS: Small repairs by local firms. Major repairs by Belfast firms.
DRY DOCKS: See "Belfast".
GANGWAY/DECK WATCHMEN: Ship's gangway. Watchmen by arrangement with Agents.
OPENING/CLOSING HATCHES: Performed by ship's crew.
CUSTOMS ALLOWANCES: Usual allowances as per H. M. Customs and Excise.
CERTIFICATES:
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Ship's Register.
Derat Certificate.
REPATRIATION: Crew changes and repatriation without difficulty sea and air.
AIRPORT: Belfast International Airport and Belfast City Airport 20 mile distant. Frequent flights to all parts of U.K.
HOLIDAYS: Christmas Day and New Year's Day. No cargo worked these days, except by special arrangement.
POLICE/FIRE/AMBULANCE: Dial 999 and ask for Emergency servic required. Also through Port Information Service on VHF Channels and 16.
TELEPHONES: Placed on Cross Channel vessels. Public telephone in port area.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
SHIP SUPPLY SERVICE: John McLoughlin & Son (Shipping) Ltd North End, The Harbour, Larne. Tel: Larne 273785 and 274085.

Ship supply and personnel transfer to ships alongside or at ancho
GARBAGE DISPOSAL: Service available using skips on a cost of £1 skip. Food waste skip requires a Dept. of Agriculture licence at a co of £60/skip. Contact D. Campbell (09603) 78287.
WASTE OIL DISPOSAL: Service available at all berths. Waste o transferred to tanker trucks. Contact Capital Fuels, Ballynahinc (Tel: 0238-561574. Fax: 0238-561576).

2 Report Forms (C. 13). 3 Stores Declarations (C. 14).	One Combined Form
2 Crew Declarations (C. 142).	
2 Crew Lists	
2 Passenger Lists	

Also additional forms for specific circumstances, e.g. deck carg hazardous cargo, livestock etc.
Light Dues: £0.35 per n.r.t. One payment per month or 7 visits in an one year, coastwise or foreign.
(Also see "Glasgow".)
APPROACHES: *Cautionary Advice:* Tidal streams set across th approach channel with rates up to 1.5 knots (in a 080/260° (T) direction Great care should be exercised in ensuring sufficient set is allowed t maintain the correct approach course when slowed down in the chann immediately prior to entering the locks.
PILOTAGE: Pilot station Firth of Forth located at Granton, boardin station West of Fairway Buoy at Long. 3° West. Contact with pilot cutter can be made on VHF Channel 16 (working Channel 14) and radio telephone 2182. Pilotage not compulsory for vessels approaching Sout of Inchkeith Island.

Large vessels are normally docked 1.5 hours before HW. Vessels u to 20 ft. draft, dock at any time.
ANCHORAGES: Good holding ground at Inchkeith Island and Leit roadstead, depths 8 m. – 19 m. at C.D. Request should be made t Forth Navigation Service (calling on Channel 71, working on Chann 20). Other anchorages as per Admiralty Charts of the area.
RESTRICTIONS: None. Vessels can enter harbour day or night.
Lock: Entrance to the port is from the Firth of Forth through the entran lock which is 259 m. long and 31.6 m. wide between fenders, depth ov the outer sill MHWST 12.239 m. Maximum dimensions: LOA 230 m beam 30 m.

The lock is operated 24 hours a day, 7 days a week with the exceptio of December 25th and January 1st, when it is operated in emergenci only.
MAX.SIZE: Governed by draft of vessels. Max. permissible dra alongside in Imperial Dock 9.1 m. and in Western Harbour 9.7 m in dock water density is 1015.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Forth, Stonehaven and Cullercoats Radio Stations.
RADAR/VHF: Port and Estuary radar service. VHF contact can be ma with Leith Harbour Radio on Channel 16. Forth Navigation Service mu be contacted on VHF Channel 71 by vessels entering Forth Po Authority Seaward Limit (line joining North and South Carr Beacon working Channels 20 and 12.
TUGS: 4 tugs, 12-30 tonnes bollard pull. Attend inward-bound vess in Leith roads. Tug's towline available and compulsory. Tugs on VH Channels 16, 6, 8, 11, 12 and 14.

BERTHING:

Dock/Basin	Quayage (m.)	Maximum Draft (m.)	Entrance Width (m.)	Quayside Cargo Handling Equipment			General Information
				No.	Capacity (tonnes)	Type	
Imperial Basin Common User Oil Jetty	200	9.15	31.6	3 Arms	10 in. Fuel Oil 8 in. Distillate 8 in. Spirit	Woodfield Arms	2 × 6 in. dedicated stainless steel pipelines available as required, connected by flexihose for receipt or delivery. 1 × 4 in. metered bunkering facility.
Imperial Passage	200	9.60	31.6				See Imperial Dock
Imperial Dock	1,396	9.15	31.6	3	220 t.p.h.	Grain suction elevators.	The 3 travelling grain elevators are connected by overhead gantry to grain warehouse. Storage capacity 55,880 tonnes in 100 & 200 tonnes bins, some fitted with aeration equipment. Warehouse fitted with dust collection plant and pelletiser. Intake and delivery facilities available. Bunker line 4 in., Distillate line 8 in. and HFO line 10 in. (2 Woodfield arms). Road and rail access. Ro/Ro operations can be carried out at corner berths on South Side of Imperial Dock. Quay/Water level 2.0 m.

				1	100 t.p.h.	Elevators	
				1	100 t.p.h.	Pellet Loading Plant	

CRANES: 1×9 tonnes, 1×7.5 tonnes and 1×3 tonnes mobile diesel cranes. Also see "Berthing".

BULK HANDLING FACILITIES: See "Berthing".

Grain Storage: Imperial Basin: 55,880 tonnes. Western Harbour (private) 53,848 tonnes.

STEVEDORES: ETA advices given by Master to ship's Agent and conveyed by them to stevedores.

MEDICAL: No advance notice of medical attention required. All hospital facilities available. Fully equipped Occupational Health Centre in docks.

TANKERS: 2 tanker berths – max. permissible draft 9.15 m. in dock water of density 1015. Discharge lines 10 in. and 8 in. (see "Berthing"). No slop discharge facilities. 2 tanker berths for distillates with 8 in. line and 4 in. bunker line.

DENSITY: 1015.

FRESH WATER: Available alongside at all berths.
FUEL: All grades available subject to 24 hours notice in advance.
REPAIRS: Facilities available to carry out all types of deck and engine repairs.
DRY DOCKS: Largest dry dock "Imperial", length 167.6 m. width of entrance 21.3 m. depth over blocks at 7.3 m., also 2 smaller dry docks.
GANGWAY/DECK WATCHMEN: Usually supplied by ship but shore watchmen arrangeable by special agreement.
OPENING/CLOSING HATCHES: Custom of the port is that this work is normally carried out by ship's crew.
CERTIFICATES:

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Cargo Construction.
Derat Certificates.
Light Dues receipt.

CUSTOMS ALLOWANCES: Usual amounts allowed by Customs and Excise.
CARGO GEAR: No additional requirements necessary to comply fully with local safety regulations as all gear supplied by stevedores.
REPATRIATION: All facilities available for effecting crew changes and repatriation by sea, air and rail.
AIRPORT: Edinburgh Airport served by regular airlines and located approx. 9 miles from Leith.
TIME: British Standard Time, GMT plus 1 hour. GMT in Winter months.
HOLIDAYS: Public holidays observed annually: 3rd Monday in April; 3rd Monday in September; Christmas Day (25th December); 26th December; 1st, 2nd, and 3rd January. Cargo work can be arranged on public holidays except 25th December and 1st and 2nd January.
POLICE/AMBULANCE/FIRE: Tel. 999 and ask for service required or call Leith Harbour Radio on VHF Channels 16 and 12.
TELEPHONES: Can be arranged with G.P.O.
SERVICES: Compass adjusting facilities available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GARBAGE: Local ship's Agents order skips as required from local disposal companies. Small amounts of garbage can be arranged through the port.
WASTE OIL DISPOSAL: Collection by road tanker, contact Agent.
SEAMAN'S CLUBS: No local clubs. Agents can arrange social activities and tours.
CURRENCY: No restrictions. Exchange rates available in all local banks.
DELAYS: Minimal delays in berthing, loading and discharging.
AUTHORITY: Forth Ports Authority, Leith Port Office, 1 Prince of Wales Dock, Edinburgh EH6 7DX. *Tel:* (031) 554 4343. *Telex:* 72192. *FAX:* (031) 555-1212. *Contact:* Captain J.Landels, Harbour Master – Leith & Granton.

LERWICK: 60.09 N. 01.08 W. (See Plan)

PORT LIMITS: All waters contained within the following boundaries including Dales Voe and Aith Voe.

Straight line drawn from the N.E. extremity of Hawks Ness (Lat. 60° 13′ 27″ N., Long. 1° 10′ 00″ W. approx.) in an East Southeasterly direction to the N.E. extremity of Green Holm and thence in a Southeasterly direction to the N.E. extremity of Score Head in the island of Bressay. Thence in a Westerly and Southerly direction along the HW mark of all foreshores to Kirkabister Ness thence in a Westerly direction to the Southern extremity of Ness of Trebister. Thence along high water mark of all foreshores in a generally Northerly direction to Hawks Ness.
BUOYAGE: Buoyage in Lerwick Harbour is IALA System "A".
DOCUMENTS: See "London".
PILOTAGE: *Pilot Office:* Pilot Office and Harbour Master's Office located at Albert Building on the Esplanade. Limits of Pilotage District similar to Port limits given above. Licenced Pilots always available on 24 hour service subject to following correct procedure given below.
Call Sign: Lerwick Harbour Radio.
Frequencies: Calling: VHF Channel 16. Working: VHF Channel 12. Pilot Cutter: VHF Channels 6, 11, 12 and 16.
Port Control: Fitted with VHF Channels 11, 12 and 16. Continuous watch is maintained 24 hours per day, 7 days per week on Channel 16 except when working vessels on Channel 12.
Procedure: The Port Control Office controls the movement of all vessels arriving or departing by either entrance and all movement within the harbour from public or private quays or supply bases, whether such vessels are under the control of Pilots or not.

(a) Vessels requiring pilotage should arrange with Agent not less than 24 hours before arrival. Vessels without Agent should contact Lerwick Harbour Master through Coast Radio Stations not less than 24 hours before arrival. Vessels leaving ports less than 24 hours steaming away should advise time of sailing, projected speed and ETA at time of leaving last Port. Vessels inward from Continental Shelf should advise time of leaving location, projected speed and ETA at time of leaving last location. Amended ETAs should be advised 2 hours before the time given in the last transmitted ETA. VHF contact should be made with Lerwick Harbour Radio while still 1 hour away when final pilotage and berthing arrangements will be made. Port control cannot guarantee a Pilot on station unless 1 hour's notice is given.

(b) ETA messages should also contain information on which harbour entrance is to be used, draft and length overall. Vessels entering by the South entrance will be boarded West of Kirkabister Lighthouse or near Knab Point if weather conditions are unsuitable. Vessels entering by the North entrance will be boarded abeam of the Green Holm and 0.5 miles N.E. of Beosetter Holm. If boarding conditions in this area are unsuitable the South entrance must be used.

(c) "Knab", 18 m. Dark blue hull, white upperworks. Pilot boat and tug, can be used for towing, bollard pull 8 tons.

(d) Outward vessels should call the Port Control 1 hour before departure when information on traffic movement will be given and arrangements for pilotage will be made. When moving within the harbour all vessels should maintain a continuous listening watch on Channel 16. All vessels moving within the harbour should report to the Port Control immediately prior to leaving the berth or anchorage, whether a Pilot is on board or not.

(e) Pilotage compulsory for oil tankers over 1,600 g.r.t. and for all vessels over 3,000 g.r.t. in the Inner Harbour defined by; in the North a straight line between Rova Head and the Ness of Beosetter, and in the South, a straight line between the Knab and Taing of Ham.

(f) Telephone number of Lerwick Harbour Master and pilot station is Lerwick 2991.
ANCHORAGE: Ample anchorages in harbour roads.
Inner South Harbour depth up to 60 ft.
Breiwick Bay (Inner South Harbour) depth up to 90 ft.
MAX. SIZE: Vessels up to 20 ft. draft and 320 ft. long alongside berths as routine. Vessels of greater length and for draft may be accommodated alongside after discussion with Harbour Master. Anchorages available for any size of vessel subject to prior consultation with Harbour Master if above 10,000 g.r.t. No mooring buoys available.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Nearest Coast Radio Station "Shetland Radio" Frequency and other details as for "Wick Radio" except for VHF working Channel which is Channel 27.
"Lerwick Harbour Radio" see "Pilotage".
TUGS: A tug "Kebister" of 25 tons bollard pull is available. The pilot cutter will also give towage assistance.
BERTHING: Berths are available for the handling of most cargoes including Roll-on/Roll-off and arrangement should be made through Agents well in advance of arrival. No berths available for handling liquid chemicals. Mobile cranes available from Harbour Authority up to 30 tons capacity or through private operators to 110 tons capacity.

	Length of Quay (ft.)	*Depth* (ft.)
South Harbour	3,000	10 – 35
Shell & B.P. Bases, Holmsgarth	1,000	15 – 25
Holmsgarth, 5 berths, including 2 Ro–Ro	3,000	18 – 35
O.I.L. (Shetland) Ltd.	2,656	18 – 24
Dales Voe Rig Repair Base	164	41

STEVEDORES: Arranged through Agent.
MEDICAL: Medical aid can be arranged through Agent or Coastguard at any time day or night.
TANKERS: BP Oil have their own discharging berth. Tankers are also able to discharge at various offshore oil industry supply berths
DENSITY: Density 1025 at all states of tide.
FRESH WATER: Available at most berths, 65 t.p.h. to 100 t.p.h. No water boat.
FUEL: Gas oil available on demand.
FIRE PRECAUTIONS: No-smoking regulations in operation inside all transit sheds. Usual tanker terminal regulations in operation. Handling of explosives covered by local Bye-Law.
CONSULS:

Denmark	(C.W.L. Aitken)	Tel. 2533
Finland	(J. Smith)	2556
France	(W.H. Stubbings)	2556
Germany	(J. Smith)	2556

Netherlands	(C.R. Duncan)	2533
Norway	(F. Garriock)	2556
Sweden	(M.M. Shearer)	(0595 82) 363

REPAIRS: Repairs to fishing vessels and other small craft in steel, wood and fibre glass. Also engine and machinery repairs. Comprehensive electronics repair facilities.
DRY DOCKS: At Holmgarth No. 2 (see "Plan"), Floating Dock 116 m. × 21.9 m. Lifting capacity 2,750 tons. Vessels up to 15.2 m. beam can be accommodated. Slip available to take small vessels up to 100 d.w.t.
GANGWAY/DECK WATCHMEN: Ships usually supply own watchmen. No fixed sum if shore watchman is employed.
OPENING/CLOSING HATCHES: Crew open hatches.
CUSTOMS ALLOWANCES: Tobacco, wine/spirits; at the discretion of the Customs and Excise.
REPATRIATION: Facilities exist.
AIRPORT: 25 miles to airport. 4 services per day to Aberdeen operated by British Airways. Loganair daily to Edinburgh and Glasgow. Charter flights by Dan Air and other airlines.
HOLIDAYS: Scottish holidays. Working can be arranged on these days if so desired.
POLICE/AMBULANCE/FIRE: Emergency telephone 999 or call Port Control VHF Channel 16. Harbour Master and Port Control 3462 night or day.
COASTGUARD: Lookout on top of Knab Point manned 24 hours a day. Fitted with MF and VHF Radio Channels 16, 13, 10 and Zero.
TELEPHONE: Ships telephones not available.
SERVICES: No tank-cleaning equipment. Compass adjuster can be procured if necessary.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Foreign seamen have to supply same if left behind, i.e. hospital, etc.
GARBAGE DISPOSAL: Covered skips are provided on all quays for use by vessels. Private contractors are also available. Contact P&O Scottish Ferries. (Tel: 0595-4848) or Layfields (Lerwick) Ltd. (Tel: 0595-2974) for further details.
WASTE OIL DISPOSAL: Contact Burgess & Garrick (Oil Services) Limited. (Tel: 0806-242107).

SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fishermen, Harbour Street, Lerwick. (Tel: 0595-2703) and Havly Centre, Charlotte Street, Lerwick. (Tel: (0595) 2100).
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Lerwick Harbour Trust, Albert Building, Esplanade, Lerwick, Shetland, ZE1 0LL. *Tel:* (0595) 2991. *Telex:* 75496. *FAX:* (0595) 3452 (Main Office); (0595) 5911 (Port Control). *Contact:* A.S.Wishart, General Manager. Captain D.I.Polson, Harbour Master.

LIVERPOOL: 53.28 N. 03.02 W. (See Plan)

DOCUMENTS: Required on arrival, Crew List Form I.B.6 to be completed; this list to include all passengers and any British subjects who joined vessel outside of U.K. If any person falling into this category should be on board they must not leave until permission to land is granted by Immigration Officer.

Customs Form C.142, Declaration of goods obtained abroad or during a voyage, must be completed and signed by Master, and each crew member. Health Declaration must be completed. Above forms should be obtained from Pilot.

Manifest and Bills of Lading should be forwarded to vessel's Agent so as to be available before vessels arrival.

Ship's Papers Required:
Ship's Register.
Certificate for British Tonnage (if issued).
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
International Load Line Certificate.
Derat Exemption Certificate.

PILOTAGE: Pilotage is compulsory for all vessels navigating within the Port of Liverpool (as defined in the M.D. & H.C. Act 1971). The M.D. & H.C. is also empowered to act on behalf of Garston Docks for Pilotage Directions. The following vessels shall be exempt from Compulsory Pilotage:

1. Any vessels belonging to Her Majesty.
2. Any vessel which is under 82 m. LOA, provided that this exemption shall not apply to any such vessel which is:-
   (a) Carrying hazardous cargoes.
   (b) The navigation of which is, in the opinion of the company, affected by a defect in or damage to the vessel or her equipment, or inadequacy of the Master or crew.
   (c) Navigating solely to adjust her compasses within the Port limits.

Attention is drawn to the General Directions for Navigation in the Port of Liverpool No. 4, the Pilotage Directions 4:1 and the Mersey Channel Collision Rules.

Boarding Position: The normal boarding position will be in the vicinity of the Bar Lanby Buoy, but vessels may, by arrangement, board their Pilots at Point Lynas. Both stations are served by launches controlled from "Port Operations Control" in Liverpool. The Control Centre operates on VHF Channel 11 (and 9, 12 or 16) with the call sign 'Liverpool Pilot'. The Pilot launches will show the appropriate Pilot Flag or Lights and will have the words "Liverpool Pilot" painted on the superstructure.

Inward Bound Vessels: Vessels requiring a Pilot must give not less than 24 hours notice before the expected time of arrival of the relevant vessel at the Pilot Station at which the Pilot is to be boarded; via Agents, via G.P.O. Coast Stations to the Liverpool Pilotage Control Centre, or via telex to 626264 P.T.O.P.S. Liverpool and ETA's must be kept up-dated. Penalty charges are made for non-compliance with the ETA Regulations (Reference Pilotage Directions No. 7).

Outward Bound Vessels: Vessels requiring a Pilot must give not less than 3 hours notice before the expected time of departure of the relevant vessel to the Port Operations Control Centre, between the hours of 0800 hrs. to 1630 hrs. on weekdays and 0800 hrs. to 1200 hrs. on Saturdays, Sundays and Bank Holidays.

ANCHORAGE: In the event of berths not being readily available for vessels, normally they must wait at the Mersey Bar Anchorage which is in the open roadstead. There are river anchorages, but these are only usually for vessels about to enter the dock system.

RESTRICTIONS: No restrictions on night entry, except VLCCs, tidal restrictions depend on vessel's draft and to which berth vessel proceeding, larger vessels usually have to wait for HW.

MAX. SIZE: Tranmere: up to 41 ft. (12.5 m.) draft dependent on tide.
Birkenhead: Up to 28 ft. 6 in. (8.68 m.) draft.
Liverpool Docks: Up to 42 ft. (12.8 m.) draft.
Royal Seaforth Dock: 42 ft. (12.8 m.) of water depth, up to 75,000 d.w.t.

HEALTH: Maritime Declaration of Health Form must be completed and handed to Customs Officer or Port Health Officer, whoever first boards ship. This form is obtainable from Pilot. In event of any suspected disease or fever on board, or if ship has called during last 4 weeks at any port in Brazil, China, Indo-China, India, Pakistan, Myanmar (Burma), Colombia and the port of Dar-es-Salaam, West African ports between Lat. 20° North and 20° South, the Master should, prior to entering port, make radio contact with Liverpool Port Health Authority, via Portishead Radio or Port Radar Station (Signal "Portelth Liverpool") giving them following information:

1. Name of Ship. 2. Date of departure from and name of last infected port. 3. Number, ages and sex of any cases of infectious diseases or other relevant information. 4. Expected time of arrival at Rock Light.

Before reaching the Rock Light, if medical clearance has not been obtained, the following signal must be displayed: By day – fly the flag signal "Z W". By night – show red light over white light.

When medical clearance is obtained Pratique will be issued at discretion of Customs Officer.

If there is no suspected disease on board and vessel has not called at any of the above ports listed, Master can radio for Free Pratique. Unless otherwise instructed, Customs Officer will again issue Pratique.

Vessels arriving from another U.K. port do not require Pratique or health clearance.

Also see "Health – All Ports" before first U.K. port.

RADIO: Portishead Radio, call sign: GKL; Landsend Radio, call sign: GDL; Wick Radio, call sign: GKR; but on approaching Liverpool, the local radio station is Anglesey Radio, call sign: GLV.

RADAR/VHF: VTS operational. Vessels should establish contact by VHF/RT with the Port Operations Control, call sign "Mersey Radio", before sailing and inward bound when within VHF/RT range and not later than when in the vicinity of the Bar Lighted Buoy.

Harbour Radar: The radar coverage extends seaward over Liverpool Bay for a radius of 20 miles from the station and in the River Mersey as far South as the approaches to the Manchester Ship Canal.

Vessels entering or leaving the Port in conditions of low visibility can, on request, be supplied with continuous information of their position whilst navigating in the river or sea channels.

A general situation and movement statement, giving all intended movements inwards and outwards for the Port of Liverpool, Eastham, Garston and Cammell Lairds and approximate times at the dock entrance or river berth, together with a list of Local Navigation warnings in force, latest weather reports and area forecast, is broadcast on Channel 9 at 3 hours before each HW. This full statement is repeated with any amendments and the disposition of the River Anchorages North and South at 2 hours before each HW.

Any local navigation warning, gale warnings and amendments to gale warnings are broadcast on receipt on Channel 12.

A full list of navigation warnings and gale warnings is broadcast on Channel 9 every 4 hours, commencing at 0001 hrs. No separate broadcast of this list is made during the period from 4 hours before HW to 1 hour before HW as such warnings are included in the General Situation and Movement Statement.

Docking Instructions: The VHF/RT Stations at the Dock Entrances and Stages are provided to facilitate docking and berthing operations and to provide direct communication between the Dock Master or Stage Master and a vessel. The Range of these stations is limited to a distance of 6 miles to 8 miles.

Tug Communications: Channels 8 and 10 are reserved for tug communications and should not be used for any other purpose. Due to the heavy working of these Channels, especially at tide time, and in order to minimise interference, vessels and their tugs when communicating to one another on VHF/RT, should, when possible transmit on reduced power.

Large Vessels Swinging: Vessels of 150 m. or over in length intending to swing in the river should give advance notice of at least 10 minutes to Mersey Radio of their intentions so that Mersey Radio can broadcast on Channel 12 a swinging warning to all ships.

Port VHF Radio Telephone Communications System:

Liverpool Control Centre	Liverpool Pilot	16 12 11	Initial calling Initial calling Calling & ship to shore

Local Priority Messages: A vessel which has an urgent message to transmit to Mersey Radio concerning urgent navigation matters and which message should receive priority over normal Port Operations R/T Communications, should indicate the urgency of the message by prefixing the call sign of the Port Operations Control with the spoken word "PRIORITY" i.e. "PRIORITY MERSEY RADIO" repeated 3 times followed by normal procedure.

In special circumstances such as the launch of a vessel or in an emergency such as a wreck, it may be necessary temporarily to establish a patrol for the control of traffic. Vessels will be warned of the existence of any such patrol by "Mersey Radio" and any such patrol vessels or launches will maintain a listening watch on Channel 12 and communicate with other vessels on Channel 6.

R/T Procedure

Channels to be used for Calling and for Preparatory Signals: Mersey Radio and ship stations will call on Channel 12. Channel 16 should only be used for distress, urgency or safety communications.

Channels for Reply: Calls received on Channel 12 should be replied to on the same Channel, but if calls are received on Channel 16, replies should be made on this Channel.

Indication of the Channel to be used for Radio Telephone Traffic: When communication has been established on Channel 12 between a ship and "Mersey Radio", the shore station will indicate the Channel to be used for passing and receiving information if Channel 12 is busy.

Times: All times in messages should be given in local time, i.e. BST or GMT, using the 24 hour notation.

R/T Discipline: To ensure that the full advantage of efficient communication is achieved, strict telephone discipline and attention to procedure, particularly on the calling Channel is imperative. Channel 16 must only be used for establishing contact between ship and shore or ship and ship, and must not be used for the passing of messages except in cases of distress within Port limits. Channel 12 should be used for establishing contact between ship and shore or ship and ship.

Sequence of R/T Communication for Vessels Entering the River Mersey:

(i) Vessels wishing to communicate with the Liverpool Pilotage District Point Lynas Shore Station should call "Lynas Pilot" on Channel 9. Channel 16 shall only be used in case of difficulty in establishing initial contact.

(ii) Vessels wishing to communicate with the Liverpool Pilotage Control Centre should call "Liverpool Pilot" on Channel 11. Channels 16 and 12 should only be used in cases of difficulty in establishing initial contact.

(iii) When within VHF R/T range and not later than when in the vicinity of the Bar Lighted Buoy the vessel should establish contact with Mersey Radio on Channel 12 and pass her arrival information on Channel 12 or other Channel indicated by Mersey Radio, watch should be kept on Channel 12 unless instructed to remain on another working Channel for Port Operational reasons. A vessel at anchor at the Bar anchorage should keep watch on Channels 16 and 12.

(iv) Vessels requiring radar information or assistance will be requested to shift to Channel 18 or 22.

(v) Vessels should inform Mersey Radio when they are ceasing to keep a listening watch on Channel 12. If they are shifting to a tug or a dock entrance or Tranmere Oil Stage Channel they should inform Mersey Radio of such intention.

Vessels Sailing from the River Mersey: Vessels, on sailing from any Stage or Dock, should establish contact with Mersey Radio on Channel 12 and then maintain watch on that Channel unless instructed to remain on another working Channel for Port Operational reasons. Vessels requiring radar information or assistance will be requested to work on Channel 18 or 22.

TUGS: Join vessel after passing Rock Light. Normally use tug's lines but optional. Charge for tug's hawsers.

BERTHING: 35 general cargo berths.

BULK CARGO FACILITIES: *Grain Berths:* Royal Seaforth Grain Terminal accommodates ships of up to 75,000 d.w.t. up to 260 m. overall length and 12.8 m. draft. Discharge is by 2 marine towers at up to 2,000 tonnes p.h. into 133,000 tonnes capacity silo. 2×750 tonnes per hour dischargers (Buhler) for animal feedstuffs at Berth S.2, storage capacity 30,000 tonnes. 1 × 220 tonnes per hour Vigan pneumatic discharger for heavy grains and animal feedstuffs ex-small vessels up to 4,000 d.w.t.

Other grain berths include Birkenhead East Tower Berth accommodating vessels up to 150 m., draft 8.7 m.

Grab Cargoes: (Minerals, ores, coal, meals, etc.).

N.3 Huskisson Branch Dock: 2 berths for vessels up to 9.5 m. draft, each equipped with 4 grab cranes.

S.E.2 Alexandra Dock: Vessels up to 8.84 m. draft, equipped with 3 grabbing cranes for handling animal feeding stuffs; discharge to road via hoppers and direct by conveyor to silo storage.

E. Bramley Moore: 2 × 5 tonnes grabbing cranes for handling vessels up to 3,000 tonnes d.w.t. and 5.8 m. draft. Discharge direct to road vehicles.

North Bidston Dock: Quay length 305 m., 8.7 m. draft, max. length 192 m., 3 transporters each with an hourly digging capacity of 350 tonnes discharging to road or rail via 175 tonnes hoppers or into coasters or barges.

Cavendish Quay: 2 × 20 tonnes level luffing jib cranes with a grabbing capacity of 15 tonnes. Each designed to handle up to 450 t.p.h. Loading to road or rail with 2 × 100 tonnes capacity mobile weigh hoppers.

Duke St. Wharf: Vessels up to 8.7 m. draft discharged by 2 × 7.5 tonnes electric level luffing cranes.

S.2 Gladstone Dock: Bulk terminal with length 250 m. and depth 12.5 m. The terminal handles Panamax (75,000 tonnes) vessels with 4 grab cranes. Daily rate 14,000 tons.

BULK LIQUID FACILITIES: *Tranmere:* Petroleum oils at Tranmere South Stage, accommodating tankers up to 115,000 tons displacement, max. draft 11.1 m. plus height of tide and Tranmere North Stage accommodating tankers after lightening up to 210,000 tons displacement, max. draft 12.0 m. plus height of tide. Facilities operated by Shell U.K. Ltd.

Cautionary Advice: Vessels which are required to pump over the tide must discharge so as to reach, 30 minutes before LW, a draft not greater than 41 ft. plus height of LW at the North stage, or 38 ft. plus height of LW at the South stage. (These figures may vary slightly from time to time and should be checked with the Berthing Master).

Liverpool: N.2 Gladstone (edible oils berth, total quay length 175 m., 12.8 m. draft).

S.1 Canada (edible oils and molasses, up to 213 m. length, 9.75 m. draft).

S.E. Nelson (wines and spirits, for vessels up to 99.1 m. length, 6 m. draft).

Birkenhead: N. Alfred (8.6 m. draft, edible oils).

Ilchester Wharf (8.6 m. draft).

E. Lewis (edible oils, bulk chemicals and molasses for vessels up 192 m. in length, 8.7 m. draft).

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* Th container terminal at Royal Seaforth Dock has a continuous qua 1,100 m. in length, served by 6 gantry cranes up to 40 tons capac and a fleet of straddle carriers working to a 22 ha. container pa supported by a 26 ha. back-up area. Tractor trailer units are used feed the integral Freightliner Rail Terminal.

Containers can also be handled at all general cargo berths.

Timber and Forest Products: At the Royal Seaforth Timber Termina 793 m. of continuous quay are served by 4 × 10 tonnes crane discharging packaged timber to a 26 ha. stacking and back-up area 3 sheds provide covered storage of 16,000 sq.m. for plywood, pulp-kil dried timber.

Ro/Ro: There are 12 berths in the port with Ro/Ro ramp facilities; Roy Seaforth, S.3, S.6 and S.10; Gladstone No. 3, North Hornby. N.W Alexandra, E. Langton, N.E. 3 Canada, S.E. Nelson, S.E. Trafalgar, S.W Princes and S. Bidston (Birkenhead).

Heavy and Indivisible Loads: Good road access and specialise facilities include 3 berths strengthened to accept loads of up to 300, 40 and 1,000 tonnes respectively. 250 tonne capacity sea-going floatin crane.

STEVEDORES: Earliest possible ETA to be given to arrange gangs.

MEDICAL: If doctor is required to attend immediately on arrival of vesse prior notice will be required, but generally doctor is arranged for mo convenient time after vessel's arrival.

Hospitalisation is available, but seamen will only be admitted immediate treatment is required. It is preferred for foreign seame requiring hospital treatment to be repatriated, if able to travel.

Dentist available by appointment only.

TANKERS: See "Bulk Liquid Facilities".

DENSITY: River Mersey salt water. Docks approximately 1024.

FRESH WATER: Available at all berths, ex-quay. No water barge available. Rate of delivery 15-20 t.p.h.

FUEL: Most major oil companies are represented and can supply rang of fuels of various viscosities. Notice required depends on the berth which vessel is lying as bunkers are supplied ex-lighter at most berths Notice required can vary depending on availability of barges, b generally at least 3 to 4 days notice is required.

FIRE PRECAUTIONS: Tankers may not carry out repairs whilst discharging berth unless permission is obtained from Harbou Authorities. Fire precautions notice is placed on board by Harbou Authorities.

CONSULS: The following countries have representatives in Liverpoo

Dominican Republic
Ecuador
El Salvador
Finland
France
Germany
Panama
Thailand

REPAIRS: All types of deck and engine repairs can be carried out.

DRY DOCKS: Largest (Cammel Laird) – length 950 ft. × 140 ft. Also smaller dry docks (M.D.H.C., Wright and Beyer, and Mannings Marine

SURVEYORS: (1) Caleb Brett and other companies available.

(2) Lloyds, A.B.S. and B.V. are available.

GANGWAY/DECK WATCHMEN: Watchmen not necessary b available if required.

OPENING/CLOSING HATCHES: Carried out by ship's crew for bu cargoes and by stevedores for general cargoes.

CERTIFICATES:

Register/Certificate of Measurement.
Certificate of British Tonnage (if issued).
Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.
Cargo Gear Test Certificates.

CUSTOMS ALLOWANCES: Crew members who remain on vess during vessel's stay in port may be allowed, under certain condition to keep, for their own use on board, small quantities of any tobacc spirits and other goods declared on Customs Form C.142. The amou allowed depends on the number of days the vessel is in port.

CARGO GEAR: Cargo Gear Certificates must be produced with th necessary up-to-date endorsement.

REPATRIATION: Can be effected, but must be arranged through Age so that Immigration Clearance can be arranged.

AIRPORT: City Centre to Airport approximately 7 miles, regular serv to London for international connections.

Regular Services from Liverpool Airport to:

Aberdeen	Air Ecosse
Amsterdam	Gena
Belfast	British Midland
Brussels	Jersey European Airways
Cork	Jersey European Airways
Dublin	Jersey European Airways
Dublin	Air Lingus
Isle of Man	British Midland
Jersey	British Midland
Gatwick	Gena
Heathrow	British Midland
Stansted	Jersey European Airways
Newquay (Cornwall)	Gena

(The above are all passenger services with the exception of Dublin wh is mainly freight).

TIME: British Standard Time, which is 1 hour in advance of Greenw Mean Time, reverting to GMT in Winter months.

HOLIDAYS: Good Friday; Easter Monday (movable); 1st Monday in May; last Monday in May; last Monday in August or first Monday in September, whichever may be closest to August 31st. December 25th-26th and New Year's Day. Weekly holidays Saturday, Sunday. Cargo can be worked on official holidays, other than 25th-26th December, also arrangements can be made for cargo to be worked on Sundays.
POLICE/AMBULANCE/FIRE: Telephone 999, ask for service required.
EMERGENCY CO-ORDINATION CENTRE: "Liverpool Coast Guard" Tel: Liverpool (051) 931-3341/43.
TELEPHONES: A temporary telephone can be placed on board a vessel, at most berths, whilst in port.
SERVICES: Compass adjusting, D.F. calibration can be arranged.
BANKS: Allied Irish Bank Ltd, 5/9 Renshaw Street, Liverpool 1; Banco Exterior C A, 6 Victoria Street, Liverpool 1; Bank of Ireland, 25 Victoria Street, Liverpool 1; *Citibank Trust Ltd, Tower Buildings, 22 Water Street, Liverpool 2; *American Express International, Travel Agents, Lord Street, Liverpool 2.

*Not Banks as such but possibly undertake closely allied functions.

STORING: See "Prelims".

1. All vessels can be stored by either barge or truck.
2. Barge storing at Tranmere Oil Stages is restricted to "Approved" barges.
3. Trucks do not always have direct access to vessels by driving along quayside. Approach may be via sheds.
4. Forklift trucks can be used in most cases.
5. As per British Customs Regulations.
6. Riggers can be employed.

SHIP SUPPLY SERVICE: Alexandra Towing Co. Ltd., Castle Chambers, 43, Castle Street, Liverpool 2. Tel: 051-227 2151.

Carmet Tug Co. Ltd., Lock Head, Bromborough, Wirral. Tel: 051-645 5579.

Rea Towing Co. Ltd., Odyssey Works, Corporation Road, Birkenhead, Merseyside. Tel: 051-647 6263.

In addition the Port of Liverpool has the Buoyage Tender and Salvage vessel "Vigilant" which has fire fighting capability and is Classed 100 A1 for River Mersey and Liverpool Bay Service.

SHORE LEAVE: All bona fide crew members may be granted temporary shore leave during the vessel's stay in port, on condition that they leave in the same ship. This permission does not apply to any alien member of the crew who is refused leave to land by an Immigration Officer, or to whom an Immigration Officer has given notice prohibiting him from landing without leave.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Skips can be provided alongside. Bootle Barge Ltd: (051) 442-2508. M.D.H.C. (Cleansing and Salvage Section) (051) 200-5124.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: Stella Maris Seamans Club, Washington Parade, Liverpool 20. Tel: (051) 922-6161.
CURRENCY: Pound sterling. Rate U.K.£1.00 = U.S.$1.82 (7.2.92).
DEVELOPMENTS: Floating crane "Mersey Mammouth" with capacity 250 tonnes operational.
AUTHORITY: The Mersey Docks and Harbour Company, Port of Liverpool Building, Pier Head, Liverpool L3 1BZ. *Tel:* (051) 200-2020. *Telex:* 627013 MDH G. *Contact:* Captain J.F. Whiteside, Marine Operations Manager (*Tel:* (051) 700-2114, 200-7075, 200-7114).

LOCHMADDY: 57.36 N. 07.11 W.

PORT LIMITS: Westward of a line running Southward from Weavers Point to Leacham Madadh.
PILOTAGE: Pilot can be arranged if required. VHF Channels 16 and 12. Tel: 087 63 337/282/226.
ANCHORAGES: Available in Lochmaddy Bay.
RADIO: Skye Radio.
VHF: Lochmaddy Harbour on Channels 16 and 12.
RADAR: No radar service.
TUGS: None.
BERTHING: Length of berth 370 ft. (South Face). Depths alongside at LWS: East end 6.0 m., West end 4.5 m.

Length of berth 180 ft. (North Face). Depth alongside at LWS is 4.0 m.

CRANES: Available by arrangement. 10 ton lift.
BULK CARGO/SPECIALISED CARGO-HANDLING FACILITIES: Ro-Ro Linkspan at North West end of South Face berth on pier.
BRIDGES: None.
MEDICAL: Doctor and hospital available.
TANKERS: No facilities.
DENSITY: Salt water.
FUEL: Gas oil available. Tel. 087 94 238.
FIRE PRECAUTIONS: None.
CONSULS: None.
REPAIRS/DRY DOCKS/SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Available if required.
HATCHES: Opening/closing carried out by crew.
AIRPORT: 20 miles to Benbecula Airport. Daily service to and from Glasgow, except Sunday. Onward connecting flights available.
POLICE/AMBULANCE/FIRE: Police Tel: 087-63-328. Ambulance Tel: 087-63-324. Fire Tel: 0463-222722.
SERVICES: None.
BANKS: Bank of Scotland Tel: 087-63-323 or 266.
SHIP SUPPLY SERVICE: Crew members, and essential stores can be transported between ship and shore at Lochmaddy by launch. Ships requiring such service should contact Harbour Office. VHF Channel 16 or Telephone 087-63-337 or 282, and at night 087-63-226.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Not required.
REGULATIONS: None.
GARBAGE DISPOSAL: 1100 ltr. wheeled skips are available free of charge. For bulk refuse contact local authority. (Tel: 0870-2425. Fax: 0870-2332). Charges are approximately £15.00 per hour and collection time by arrangement.
WASTE OIL DISPOSAL: By prior arrangement with local authority. (Tel: 0870-2425. Fax: 0870-2332) or through Port Manager. (Tel: 08763-337).
SEAMAN'S CLUBS: No club, but local facilities include hotel, 2 shops, sub-post office, bank, church.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Western Isles Islands Council, Council Offices, Stornoway, Isle of Lewis. *Tel:* 0851–3773. *FAX:* 0851-5349. *Contact:* Captain A. Frater, Harbour Master. Home tel: 0851-870268. Captain C. Macleod, Assistant Harbour Master. Tel: 0870-2425. Fax: 0870-2332.
Local Authority: The Port Manager, Harbour Office, Lochmaddy, Isle of North Uist. *Tel:* Office 087-63-337 and 087-63-282. After Hours 087-63-226. *FAX:* 087-63-412. *Contact:* U.I.M. Robertson, Port Manager.

LONDON and Thames District: 51.30 N. 0.05 W. (See Plan)

PORT LIMITS: The seaward limit means lines drawn from Lat. 51° 37′ 00″ N., Long. 00° 57′ 19″ E. (Foulness Point in the County of Essex) to Lat. 51° 46′ 05″ N., Long. 01° 20′ 32″ E. (Gunfleet old lighthouse) and thence to Lat. 51° 26′ 36″ N., Long. 01° 25′ 30″ E. and thence to Lat. 51° 24′ 55″ N., Long. 00° 54′ 21″ E. (Warden Point in the County of Kent).

An arrived ship is considered (subject to Charter Party terms) to have arrived when vessel is instructed to anchor at a designated anchorage, as ordered by the Port Authority, if berth where vessel's operations are to be carried out is not available. Otherwise when vessel is alongside. Usual anchorage for larger vessels is below Southend, which is allocated to vessels by the Port Authority.

DOCUMENTS:

1 copy of H.M. Customs and Excise Form C.142 to be completed showing each crew members declaration as to the amount of cigarettes, tobacco, spirits, wine, radios, lighters, etc., belonging to them on board the ship to enable Customs to ascertain if in conformity or excess of requirements.
1 copy of IMO Crew List.
1 copy of List of Passengers on board, showing names, place of joining vessel, passport details.
Ship's Register to be available for inspection on arrival.
List of space occupied by cargo in unregistered spaces.
Chief Engineer's declaration as to the quantity of fuel carried in double bottom tanks.
Details of any livestock on board.
Ship's Stores Declaration arrival Form C.14 to be completed.
Details of previous ports of call.

PILOTAGE:
Compulsory Pilotage Area: Lines drawn from Latitude 51° 37′ N., Longitude 00° 57.32′ E. (Foulness Point in the County of Essex) to Latitude 51° 46.08′ N., Longitude 01° 20.53′ E. (Gunfleet Old Lighthouse), thence to Latitude 51° 48′ N. Longitude 01° 40′ E. (Long Sand Head), thence to Latitude 51° 36′ N., Longitude 01° 23.08′ E., thence to Latitude 51° 26.6′ N., Longitude 01° 25.5′ E. and thence to Latitude 51° 24.92′ N., Longitude 00° 54.35′ E. (Warden Point in the County of Kent).

The Port of London Authority, (a competent harbour authority under the Pilotage Act 1987), in exercise of their powers under Section 7 of that Act, direct that pilotage shall be compulsory for all ships of 50 m. or more in length overall when navigating between Putney Bridge and the Seaward Limits of the Port of London.

A ship which is being navigated in the compulsory area and in circumstances in which pilotage is compulsory for it, must be under the pilotage of:-

(a) an authorised pilot, or
(b) a person who is bona fide the Master or First Mate of the ship and possesses a Pilotage Exemption Certificate granted by the Port of London Authority in respect of the area (or a specified part thereof) and ship.

2. PROCEDURE FOR OBTAINING THE SERVICES OF AN AUTHORISED PILOT.

It is imperative that good notice is given of the requirement for the services of a pilot. To comply with the compulsory procedure, an order for a pilot must relate to the time that the pilot is required at the Boarding Point, whether inward bound or departing from the Port. If the pilot service is unable to supply a pilot, due to stress of weather or other unforeseen circumstances, due allowance will be made. Ships' Owners or Masters who fail to provide the proper information in a timely manner may be liable to a surcharge and may cause a delay to the ship.

2.2 ETAs for Inward Bound Ships:

Ships requiring the services of an authorised pilot at the N.E. Spit, Sunk, Warps or Gravesend Pilot Stations must make a provisional notification of arrival to the Thames Navigation Service, at Gravesend, *24 hours in advance,* stating the ETA at the appropriate boarding/landing station, GRT/GT, length overall, draft and destination (name of berth or anchorage). This notification may be in the form of a provisional order and will not incur surcharge penalties.

Confirmation of the above information must be given to the Thames Navigation Service *not later than 8 hours in advance.* (This constitutes the COMPULSORY NOTICE after which time a surcharge may be imposed).

Up to 4 hours in advance, any change in ETA must be notified to the Thames Navigation Service. Thereafter, any further changes and the final confirmation of ETA must be given when the ship is in VHF radio contact with the appropriate Pilot Station.

Ships engaged in short sea voyages may give notice of the Compulsory ETA at the time of leaving the previous port, where this is less than the above Compulsory Notice.

Should the services of an authorised pilot be cancelled within 4 hours of the confirmed ETA, a cancellation charge will be made.

2.3 ETDs for Outward Bound Ships, Ships Proceeding from One Berth to Another or Ships Moving from an Anchorage:

Ships requiring the services of an authorised pilot to depart from a berth, buoy or pier, in the Port of London, move from one berth to another, or to move from an anchorage, must notify the Thames Navigation Service *24 hours in advance,* giving their ETD from the berth, buoy, pier or anchorage, GRT/GT, length overall, draft, destination and landing point. This notification may be in the form of a provisional order and will not incur surcharge penalties.

Confirmation must be given to the Thames Navigation Service *not later than 4 hours in advance* (this constitutes the COMPULSORY NOTICE, after which time a surcharge may be imposed). Thereafter, changes to the ETD must be notified to the Thames Navigation Service until 2 hours before sailing when contact should be made direct to the Gravesend Pilot Station by VHF radio or telephone.

Should the services of an authorised pilot be cancelled within 3 hours of the confirmed ETD, a cancellation charge will be made.

2.4 Ships Anchoring in the Port of London:

Ships required to anchor before proceeding to their berth, must confirm with the Duty Pilot at the Gravesend Pilot Station by VHF radio, that the pilot may remain on board until the ship is required to get underway. No arrangement may be made with any individual pilots.

Under normal circumstances, when a ship anchors for an extended period, the pilot will disembark and be replaced by another pilot when the ship proceeds.

Inward or outward bound ships required to anchor and which have used the services of an authorised pilot must, as soon as is practicable, advise the Gravesend Pilot Station on VHF radio of their ETA at the anchorage in order to land the pilot. When a pilot is required to move from the anchorage, the ship must comply with the requirements of paragraph 2.3 above.

2.5 Ships Requiring Pilots to Join or Disembark at Continental Ports:

Shipowners/Agents wishing a pilot to board the ship at a Continental Port or to remain on board to a Continental Port must obtain the approval of the Pilotage Manager at the Gravesend Pilot Station (Tel. Gravesend (0474) 356646) *not later than 5 days* before the service is required. Charges for this service will be published by the P.L.A. No arrangements may be made with individual pilots.

Should the services of an Authorised Pilot be cancelled within 2 days prior to the date required to join the ship at a Continental Port, a cancellation fee will be made.

Pilots authorised by the Port of London Authority may only act as pilots within the Port of London Compulsory Pilotage Area. The Port of London Authority will not grant such pilots a Deep Sea Pilotage Certificate.

2.6 Berthing Pilots:

Ships of 160 m. or more in length overall or of 11,000 g.r.t. or more, whichever is less, are required to employ the services of an Authorised Berthing Pilot when berthing or unberthing at the oil wharves or jetties at Shellhaven, Coryton, Canvey Island or the Canvey Methane Terminal.

3. BOARDING AND LANDING POINTS FOR SHIPS BOUND TO OR FROM THE PORT OF LONDON.

Boarding and landing of pilots will be carried out by launches operating from Harwich (Sunk Light Vessel), Ramsgate (N.E. Spit Buoy), Sheerness (in the vicinity of the Warps to the East of Sea Reach No. 1 Buoy) and Gravesend as appropriate. Pilot boats have a black hull, the word "Pilots" on the side of the wheelhouse and fly a pilot flag by day and by night display the signals required by Rule 29 of the International Regulations for Preventing Collisions at Sea. Under normal circumstances, these pilot launches operate from their respective bases to ship and land pilots.

3.2 N.E. Spit Buoy:

Ships approaching the Port of London from the East and South or departing to ports to the East or South will normally ship and land their pilots (provided by launch from Ramsgate) in the general vicinity of N.E. Spit Buoy and the Elbow Buoy, the charted location being Lat. 51° 25′ N., Long. 01° 30′ E. Ships from or to the ports referred to in this paragraph, which are constrained by reasons of their draft from using the Edinburgh Channels, may embark their pilot at N.E. Spit or proceed direct to the Sunk boarding and landing station.

3.3 Sunk Light Vessel:

Ships approaching the Port of London from the North and North Easterly directions or departing to the same area will normally ship and land their pilots (provided by launch from Harwich) in the vicinity of the Sunk Light Vessel, charted location being Lat. 51° 51′ N., Long. 01° 35′ E.

3.4 Warps: Ships which are exempt from compulsory pilotage for Areas 1 & 2, as defined in the Port of London General Requirements for Pilotage Exemption Certificates, will normally ship and land their pilots (provided by launch from Sheerness) in the vicinity of the Warps and to the East of Sea Reach No. 1 Buoy. Ships requiring this service should call the Gravesend Pilot Station.

3.5 Gravesend: Ships which are exempt from Compulsory Pilotage for Areas 1 & 3 or 2 & 3, as defined in the Port of London General Requirements for Pilotage Exemption Certificates, will normally ship and land their pilots at Gravesend off the Royal Terrace Pier.

4. SHIPPING OR LANDING A PILOT.

Mariners will appreciate the need to provide a satisfactory lee whe shipping or landing a pilot and may be requested by the pilot launch t change speed and course to enable the operation to be carried o safely.

5. ADVERSE WEATHER CONDITIONS.

When a pilot launch is unable to operate in the normal location du to adverse weather conditions, or any other unforeseen circumstance information will be broadcast on the service available by the appropria pilot station on VHF radio and Pilotage Information Messages will b broadcast by Coast Radio Stations. Subject to permission being grante by the Duty Officer at Thames Navigation Service, nominated inwar bound ships may proceed to the Warps Boarding Station unde controlled conditions from the Thames Navigation Service. Similar nominated outward ships may land their pilots in the same area an proceed under the same controlled conditions.

6. SHIPS CLAIMING EXEMPTION FROM COMPULSORY PILOTAGE

Ships claiming exemption from Compulsory Pilotage, as defined i the General Requirements for Pilotage Exemption Certificates, mus notify the Thames Navigation Service *24 hours in advance* of the intention to claim exemption, giving ETA/ETD as appropriate, ship name, GRT/GT, length overall, maximum draft, name, initials an Exemption Certificate Number of the Master or 1st Mate who will b piloting the ship on that voyage. Failure to provide this information wi necessitate the ship taking the services of an Authorised Pilot and coul involve the ship in a delay as well as the imposition of a surcharge o the pilotage dues. Ships arriving from ports less than 24 hours distan must provide the information immediately after departure from that por

7. COMMUNICATIONS.

The Thames Navigation Service operates 24 hours a day and is the centre for all initial orders for pilots. It is equipped with VHF radio telephones, telex and facsimile equipment.

Long range ETAs from ships at sea may be passed through a Unite Kingdom Coast Radio Station by M.F or VHF radio telephone, telex o telegraph addressed to "Thames Navigation, Gravesend".

The Gravesend Pilot Station operates 24 hours per day and is th administration centre for all pilotage services and is able to provid advice to Shipowners/Agents on all pilotage arrangements. It is equippe with VHF radio, telephones, telex and facsimile equipment.

8. NOTE.

The attention of Masters is drawn to General Directions for Navigatio in the Port of London 1991, and to Sections 15, 16, 17, 18, 19, 20 and 2 of the Pilotage Act 1987.

ISSUED BY:
The Chief Harbour Master,
Port of London Authority,
Thames House, St. Andrews Road,
Tilbury, Essex, RM18 7JH.

Pilot Ladders: Instances of the use of unsatisfactory and unsafe pil ladders continue to be reported by Port of London Pilots.

Faulty ladders endanger the lives of Pilots.

Instructions have been issued to all Port of London Pilots to repo immediately any pilot ladders which do not comply strictly with th provisions of the Merchant Shipping (Pilot Ladders) Rules 1965, th Merchant Shipping (Pilot Ladders) (Amendment) Rules 1971 and th Merchant Shipping (Pilot Ladders) (Amendment) Rules 1972.

Masters of ships are reminded of their obligation to comply with the statutory rules and are requested also to comply with the following recommendations, ensuring that:

1. The Officer responsible for the embarkation and disembarkation of the Pilot is a Watch-keeping Deck Officer.
2. The ladder is in one length and does not consist of two or more lengths shackled or lashed together.
3. The ladder is secure.
4. The ladder is used solely for embarking and disembarking Pilots.
5. A light is provided so that the pilot ladder overside and also the position where the Pilot boards the ship is adequately lit.
6. The ladder is clean and free from oil and grease.
7. Means are provided to enable the Pilot to pass safely and conveniently from the head of the ladder into the ship or on to the ship's deck. Where portable stanchions and accompanying bulwark step ladders are used for this purpose, the portable stanchions *must* be rigidly secured to the ship's structure against being unshipped and supported at not less than 2 points to prevent lateral movement, and the bulwark step ladder should also be independently attached and firmly secured. The stanchions should be of reasonable height and adequately capped to allow firm grip. *Under no circumstances should a stanchion or handrail be attached to the bulwark step ladder.*
8. The ladder is in good condition and its treads remain horizontal. The treads are to have a rough upper surface.
9. The length of the ladder does not exceed 30 ft. Whenever the distance from sea level to a point of access to the ship is more than 30 ft., access from the pilot ladder to the ship must be by means of an accommodation ladder or other equally safe and convenient means.
10. The ladder is rigged so that each step rests firmly against the ship's side.
11. Spreaders are provided not more than 10 ft. apart to prevent the ladder twisting.
12. 2 manropes and a safety line are provided; and a lifebuoy with self-igniting light is available.
13. The ladder is rigged well clear of discharges and water outlets, and at a place where most lee can be given to the Pilot Vessel.
14. Where a pilot hoist is used a ladder must be at hand ready for use in case the hoist fails.

The Masters of small, "all-aft" ships, in which the main deck is frequently awash when a Pilot is being shipped or landed, or of any type of ship in which the bulwark rails are below the deck of the pilot vessel coming alongside, are asked to provide a boarding platform on each side of the forward end of the raised quarter deck and on the same level as that deck.

The platform should be easily accessible from the quarter deck and should have adequate handrails, those on the outboard side being portable. Fittings should also be provided for the rigging of a pilot ladder. When a pilot ladder is rigged from a boarding platform the top rung of the ladder should not be less than 12 in. nor more than 15 in. below the level of the platform. The top of the ladder should be secured at least 3 ft. 6 in. above the platform in such a way as to make a safe handhold for the Pilot entering or leaving the platform.

If a pilot ladder is unsafe a Pilot may refuse to board, thus delaying the ship. If the ladder is unsatisfactory for boarding the Master of that ship renders himself liable to a fine of double the amount of the pilotage dues involved, for failure to comply with the Pilotage Act 1913; and if the ladder does not meet the statutory requirements, the Master renders himself liable to a fine not exceeding the statutory maximum in accordance with the Merchant Shipping Act 1984.

RESTRICTIONS: Certain restrictions are placed on the navigation of vessels carrying petroleum, chemicals, explosives and other hazardous commodities (See "Notices").

Vessels which are carrying any of the above mentioned cargoes should call Gravesend for details of these restrictions and ascertain whether it is permitted for them to navigate.

Notwithstanding any of the aforementioned restrictions, all vessels should comply with the "General Directions for Navigation in the Port of London 1991". (Copies obtained from the Chief Harbour Master, Port of London Authority, Thames House, Tilbury Docks, Essex RM18 7JH.)

The tides at London Bridge have a range of 4.6 m. at Mean Neaps and 6.6 m. at Mean Springs.

The sea approach to Shellhaven is dredged to allow the passage of vessels to 13.7 m. at Mean Neap tides. For latest channel depths contact the Harbour Master or Thames Navigation Centre.

THAMES NAVIGATION SERVICE:

Thames Navigation Centre: (Call sign "Gravesend Radio") is the main operations centre for traffic information within the Port of London Authority area of jurisdiction. All information required by the Authority regarding ETAs and ETDs, etc., should be passed to this Centre. It also deals with matters concerning moorings in the River and enquiries concerning Byelaws, regulations and shipping information.

Communications: VHF radio: Channels 16, 12, 18, 20. Telephone: Gravesend 560311. Telex: 262880 Platns G. Facsimile: Group 3. Gravesend 352996.

Radar coverage and area of responsibility: From Crayfordness to the sea.

Tidal Information: Information on tidal heights from gauges at Walton, Margate, Shivering Sands, Southend and Tilbury is available on request.

Procedures: All vessels must report to this station on entering the Port Limits inward bound or when leaving a berth within the area of responsibility outward bound or when moving from one berth to another. It is also a requirement to report the vessel's progress at the "reporting points" indicated on the Admiralty Charts of the area. Regular half-hourly broadcasts of navigational information are made on VHF Channel 12 on the hour and 30 minutes past the hour.

Thames Barrier Navigation Centre: (Call sign "Woolwich Radio") is a sub-centre to the Thames Navigation Centre with particular responsibility for controlling navigation through the Thames Flood Barrier.

Communications: VHF Radio Channels 16, 14, 22. Tel.: 081-855 0315. Telex: 896157 Plabar G.

Radar coverage and area of responsibility: Radar from Crayfordness to Greenwich. Area of responsibility from Crayfordness to Teddington.

Tidal Information: Tidal information from a gauge at North Woolwich is available on request.

Regular half hourly broadcasts of Navigational information are made on VHF Channel 14 at 15 minutes and 45 minutes past each hour.

Procedures: All vessels navigating in the area of responsibility must inform this station of their intention to do so and maintain a listening watch on VHF radio. Progress reports should be made at the "reporting points" indicated on the Admiralty Charts. Special regulations are in existence for navigating through the Thames Flood Barrier and the Barrier Control Zone (Margaretness to Blackwall Point). See Port of London Notice to Mariners – No. 3 of 1986.

Tilbury Dock: All vessels wishing to enter or leave Tilbury Dock must book a time with the Lock Co-ordinator. Telephone Number Tilbury (0375) 852456. Telex 995176. The Lock Co-ordinator also deals with enquiries for dock tugs, dummy pontoons, floating crane and other services for vessels in the Dock.

Patrol Service: A 24-hour patrol service is maintained by the Authority whose launches can be contacted on VHF radio (Call sign "Thames Patrol") on VHF Channels 16, 12, 14 and 6. They can also be contacted through Gravesend Radio or Woolwich Radio.

General: The Thames Navigation Service maintains close liaison with Owners, Agents, Pilots, Watermen, Port Health, Customs and Excise and all the Emergency Services. It is available to give help and advice on any matters affecting ships and shipping.

ANCHORAGES: Great Nore and Little Nore Anchorages allocated by Medway Port Operations, all other anchorages allocated by the Thames Navigation Service dependent upon the size and draft of vessel, the length of stay required at the anchorage and the specific details of the vessel, i.e. explosives, petroleum, etc.

Explosives anchorage at Chapman Anchorage for discharging/loading to/ex barge to/from appointed river wharves.

MAX. SIZE: Tankers:

Berth	*Depth at Chart Datum*	*Length*
Coryton	14.0 m. maximum	1,100 ft.
Shellhaven	14.6 m. maximum	1,200 ft.
Holehaven	11.2 m. maximum	720 ft.
Purfleet	8.6 m. – 11.2 m. maximum	700 ft.
Grays	11.2 m. maximum	620 ft.-750 ft.

Other river and tanker berths restrictions apply according to tides and berth.

Passage for deep-draft tankers for berthing at Shellhaven and Coryton is sometimes over a period of 2 tides. Passage on the first tide to deep water anchorage, vessel to leave anchorage on make of second tide and arrive off the installation half an hour before HW of this tide.

HEALTH: Port of London Health Authority:
Public Health (Ships) Regulations, 1979.
Notes for the guidance of Masters/ships Agents:

(1) It is the responsibility of the Master of a vessel due to arrive in the Port of London to report to the Port Health Authority the presence of sickness, animals or captive birds on board, or of the occurrence, during the voyage, of the death, other than by accident, of a crew member or passenger.

(2) This information should be transmitted to North Foreland Radio Station for forwarding to "Portelth London", not more than 12 hours or less than 4 hours before vessel's arrival in the Port.

(3) Vessels already in the Port can contact the Port Health Authority directly by telephoning Tilbury (03752) 2663.
At Public Holidays (and all times other than 0900 – 1700 hrs. Monday to Friday) an answering machine is connected to this number giving the telephone number of the Duty Officer who will give any advice or assistance required.

(4) The Port of London Health Authority District includes that part of the River Medway comprising Sheerness, Isle of Grain, Ridham Dock and Queenborough.

Also see "Health – All Ports" before first U.K. port.

RADIO: Outside U.K. waters from the South, call long range station "Portishead Radio"; approaching London, "Niton Radio" or "Northforeland Radio", giving Agent vessel's draft and ETA. "Gravesend Radio" when in the Thames and its estuary.

TUGS: Tugs usually pick up vessels for Shellhaven and Holehaven in reaches approaching berth, or Gravesend for berths/docks up river. Tugs and lines can be hired from Alexandra Towing Co. (London) Ltd., Alexandra House, Royal Pier Road, Gravesend, Kent. Tel: (0474) 359361.

BERTHING:

Cargo Berths: The Port of Tilbury operates the enclosed dock system at Tilbury Docks.

Depths of water shown for berths in the enclosed docks and on the river are the authorised depths to which the berths may be dredged. Actu depths may be less than the authorised depth and the advice of the Port Authority or tenants Operating Manager should be sought if necessa

TILBURY DOCKS:

Entrance lock dimensions: Length 1,000 ft. (305 m.). Width 110 ft. (33.5 m.). Depth 45.5 ft. (13.9 m.).

Access to berths (except the Grain Terminal, Northfleet Hope Container Terminal, cargo and repair jetties, riverside Ro/Ro terminal and passenge landing stage) is gained through an entrance lock.

Berth	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Equipment*	*Remarks*
Northfleet Hope Terminal	1 (in dock) 1 (in river)	850 1,000	35.0 41.0 (MLWS)	2 container cranes 45 tonnes (in dock), 2 container cranes 35 tonnes (riverside), straddle carriers, tractors and trailers.	P & O Containers/ACT and partners. Container services. Accommodation for 5,000 containers at any one time (inc 1,464 reefers). Operation: 24 hours per day, 7 days a week.
Container Terminal	3	2,540	38.0	4 container cranes 30 tonnes, van carriers, tractors and trailers, forklift trucks.	(Container Division). Containers to and from cellular and purpose built lift-on/lift-off all container or semi-container vessels. Electrica reefer points. Floating cranes for uncontainerisable cargo. Operation: 24 hours per day, 7 days a week.
General Purpose Berths 1, 2, 4, 34, 38, 40, 13/16 (2 berths)	9	6,900	up to 38.0	20×5 tonne quay cranes, light and h/duty forklifts, mobile cranes, tractor/trailer units, 80 tonne mobile, 36 tonne land based and up to 120 tonne floating heavy lift cranes, 1×30 tonne container crane, 1×30 ton gantry crane.	(Conventional Division). Conventional, Ro/Ro and unitised general import and export cargoes. Containers to and from semi-container/Ro/Ro vessels. Forest products. Heavy lifts. Scrap metal.
Riverside Ro/Ro Terminal	1	Ship length up to 500 ft.	20.0 (MLWS)	Tractors	(Conventional Division). Ro/Ro. Suitable for bow or stern ramp vessels.
Tilbury Passenger Landing Stage	1/2	Ship length up to 740 ft.	Dredged to 10 m. below datum	2 covered gangways.	(Conventional Division). Embarkation and disembarkation of passengers for ships, hovercraft, hydrofoils and launches and Tilbury/Gravesend local ferry.
42 Berth (Tilbury) Ltd.	1/2	700	38.0	Heavy duty forklift trucks, tractors and 35 tonne trailers.	Forest products.
44 Berth	1	750	38.0	Forklift trucks 4 ton-22 ton capacity – roll trailers/tractors.	Forest products.
46 Berth (Seaboard Pioneer)	1	750	38.0	Forklifts 4 ton-12 ton capacity, roll trailers/tractors	Forest products.
PLA Tilbury Grain Terminal	1 Deep Sea 1 Short Sea 6 barge berths 1 Coaster discharge berth	900 230	42.0 (MLWS)	2×1,000 tonnes per hour marine leg elevator towers, coaster and barge loading points, 2×200 tonnes per hour pneumatic elevators (coastal jetty). Silo capacity 100,000 tons. Export vessels handled. 30,000 tonnes on outer jetty and 10,000 tonnes on inner jetty.	(Grain Division). Terminal has direct feed by conveyor to 5 adjacent privately-owned mills: Allied Mills Ltd., Rank Hovis Ltd. Spillers French Milling Ltd., Cargill Albion Ltd. Laing Nationa Ltd.
Private Wharfingers:					
Bridge Wharf (Bow Creek)	7 (barges)	270-290	15.0 (MHWS)	Up to 20 tonnes, mobile.	Metals of all descriptions and bulk ore by grabs.
Bridges Wharf (Battersea)	1	225	13.0 (MHWS) Dries at LW	2 cranes up to 10 tons.	Handling and storage of inflammable and hazardous chemical products etc.
Convoys Wharf	1	900	18.0 (MLWS)	Ro/Ro pontoon and jetty, 6×2 tonne cranes 1×50 tonne mobile crane.	Equipped with 2 floating Ro/Ro berths handling newsprint, forest products and general cargo.
	1	442	18.0 (MLWS)	Ro/Ro pontoon.	Operators of nationwide warehousing, transport and freight forwarding.
Dartford International Ferry Terminal	2	200 m. (downstream) 150 m. (upstream)	36 (LLW)	1 Sku container mover, 12 tractor units, 4 forklift trucks.	2 Ro/Ro berths (bow, stern or quarter ramp) 22 acres hardstanding. 4,260 sq.ft. transi shed. Extended driver facilities and restaurant.
Denton Wharf (P.L.A.)	3	260-600	34.0 (MHWS)	11×3 – 30 tonnes. 2×30 tonne container park gantries.	Discharge and loading of all types of conventional cargo and containers to and from ships and barges. Groupage service. Licensed for handling explosives
Erith Deep Wharf	1 (ship) 2 (barges)	600 600	21.0 (MLWS)	4×6.5 – 7.5 tonnes. 2×4.5 tonnes.	Direct handling ship/road transport or ship/warehouse. Handling of forestry products. Lash/Seebee barges.
Imperial Wharf	1	300	26.0	3×5 tonnes.	Forest products.
The London Steel Terminal	2	295	16.4 (MHWS)	2 cranes up to 30 tonnes.	Handling of steel using electro-mechanical grabs for steel coils All operations including shipwork carried out under cantilevered roof providing all weather working.
Lovells Wharf	1	280	18.0 (MHWS)	2 cranes up to 20 tonnes.	Steel and other metals (London Metal Exchange approved warehouse).
Mast Pond Wharf	1	220	16.5 (MHWS)	1×5 tonne, mobile.	Bulk handling, overside or direc delivery.

Berth	No. of Berths	Length (ft.)	Depth (ft.)	Equipment	Remarks
Mulberry Wharf	1	225	17.0 (MHWS)	1×5 tonne mobile, 1×2.5 tonne fixed.	Bulk handling, overseas and direct delivery.
Phoenix Wharf	2	625-800 (floating jetty)	21.0 (MLWS)	5 cranes up to 30 tonnes. (8 – 10 tonnes ex-ship's hold). 9 quay cranes up to 10 tonnes.	Forest products in all forms, steel, fertilisers and bulk cargoes, empty containers. Bulk wine and spirits. General cargo.
	1 (Ro-Ro Berth)	450	16.0 (MLWS)	3 tugmasters.	For continental ferry service and Import/Export of motor vehicles.
Purfleet Deep Wharf	2	1,000	27.5 (MLWS)	7 (jetty)×5 – 6 tonnes. 2 (shoreside)×40 tonnes.	Equipped with modern floating Ro/Ro berth. Handling of forestry products and general cargo.
Tate & Lyle Sugars (Silverton)	1	550	28.0	I grab crane 1 continuous ship-unloader	Max. LOA 560 ft. – 570 ft. Max. draft 29 ft. Max. size 23,000 d.w.t. Discharge rate 750 tons per day. Fresh water and fuel available.
Tower Wharf (Northfleet)	1	650	36.0	4×5 tons	Wharf operated by Cargo Transit Services Ltd. Max. size 40,000 d.w.t. Max. draft 10.5 m. Steel, forest products and general cargo handled.
	1 (coasters)			1×5 tons	Fuel available by barge or truck. Fresh water not available.
Victoria Deep Water Terminal	2	850	22.0 (MLWS)	1 crane 32 tonnes. 2×30-40 tonne gantries.	
	1	350	15.0 (MHWS)	1×30 tonne park gantry.	

The depths quoted are to be taken as approximate only. For detailed information contact the Wharf Operator or Thames Navigation Service.

TANKERS: (Also see "Notices"). There are about 40 berths for tankers in the Thames District, main terminals of which are listed below. Recommended that Masters cable terminal with discharge manifold size, enabling wharf have correct pipes ready. Slop tanks are available at most wharves.

Company	Berths	Length **(ft.)	Depth **(ft.)	Remarks
BP (Northfleet)	1	170.0	—	Able to handle vessels 3,000 d.w.t. High and low flash point products. Storage capacity 20,000 tons.
BP (Fulham)	1	—	—	Lube oil, gas oil and spirits.
Esso (Purfleet) No. 1	1	Max. LOA 628	26.5 (LWS)	Max. size 28,000 d.w.t. Products handled: F.O., G.O., D.O., kero, gasoline. 4×10 in. (clean products); 2×10 in. (fuel oil). Max. pressure 150 psi.
Esso (Purfleet) No. 2	1	Max. LOA 628	26.5 (LWS)	Max. size 18,000 d.w.t. Products handled: F.O., lube oil, G.O., kero. 3×6 in. (lube oil); 2×6/8/10 in. (fuel oil); Max. pressure 150 psi. Total capacity (Berths No. 1-2): White oils 187,000 tons. Fuel oil 126,000 tons. Lube oil 39,000 tons.
Mobil* (Coryton) No. 1	1	Max. LOA 650	Max. draft 33 (MLW)	Max. displacement 40,000 tons. Products handled: L.P.G., gas oil, lube oil, fuel oil, gasoline.
Mobil* (Coryton) No. 2	1	—	Max. draft 18 (MLW)	Coaster berth, max. displacement 2,000 tons. Products handled: Same as Berth No. 1 (excluding L.P.G.).
Mobil* (Coryton) No. 3	1	Max. LOA 900	Max. draft 44 (MLW)	Max. displacement 100,000 tons. Products handled: Crude and fuel oil (3,000 t.p.h.), gas oil (2,000 t.p.h.), gasoline (1,000 t.p.h.), products (350 – 500 t.p.h.). Other products handled: Diesel oil, naphtha and Av. Tur.
Mobil* (Coryton) No. 4	1	Max. LOA 1,200	Max. draft 45 (MLW)	Max. displacement 230,000 tons (320,000 d.w.t. with part load). Crude oil only handled. 4×16 in. steel arms. Rate 3,500 t.p.h. each arm.
Mobil* (Coryton) No. 5	1	Max. LOA 200 m. Max. draft 37 ft.	Depth 43 (MLW)	Max. displacement 40,000 tons. 4×10 in. arms for loading/discharging fuel oil, gasoline and gas oil (rate 2,000 t.p.h.). 1×10 in. arm for receiving refrigerated butane.
Conoco Ltd.	1	256 Max. LOA 625 ft.	44.0 (MHWS)	White oils, capacity 70,000 tonnes.
London & Coastal Oil Wharves Ltd., Canvey Island	1	720	36.0 Av. LW	Low flash bonded storage for hydrocarbon oils, chemicals and edible oils. 127 tanks totalling 350,000 cu.m. with tanks ranging from 45 cu.m. – 20,350 cu.m.
London & Coastal Oil Wharves Ltd., Dagenham	1 (ship) 2 (barge)	750	34.0 (MLWS)	Mild and stainless steel storage – 161 tanks totalling 93,000 cu.m. with tanks ranging from 27 cu.m. – 4,532 cu.m. Low/high flash, bonded storage for chemical, minerals, fuel and edible oils.
Murco Petroleum Ltd.	2	730	37.0 (MLWS)	Motor spirit, distillates. Storage capacity: 52,000 tonnes motor spirit. 10,870 tonnes distillates. Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Unitank Storage Company Ltd.
Powell Duffryn Terminals Ltd.	6	840	34.0 (MLWS)	Hydrocarbon oils and all chemicals. Total storage capacity: 423,000 cu.m. Oil storage capacity: 365,000 cu.m. Chemical storage capacity: 58,000 cu.m. (50 cu.m. to 15,000 cu.m. capacity tanks).
Thames Matex (West Thurrock)	3	750	34.0 (MLWS)	Hydrocarbon oils, chemicals, vegetable oils. Storage capacity: 352,000 cu.m. (125 tanks – 200 cu.m. to 10,000 cu.m. capacity). Max. LOA 228 m., max. draft 11.2 m. (LW).
Unitank Storage Co. Ltd.	2	750	37.0 (MLWS)	High and low flash petroleum, some chemicals. Storage capacity: 310,000 cu.m. in 52 mild steel tanks (1,700 cu.m. – 20,800 cu.m. capacity). Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Murco Petroleum Ltd.
Shell (Shell Haven) "A"	1	—	† 8.7 m.	LPG vessels only. Max. size 5,000 cu.m. due to loading arm envelope. Berth kept clear if VLCC on Jetty B. 1×6 in. LPG line.

Company	Berths	Length **(ft.)	Depth **(ft.)	Remarks
Shell (Shell Haven) "B"	1	Max. LOA 350.0 m.	†14.6 m.	VLCC's and large crude carriers berth head down river at slack HW. Berth handles crude, fuel and white oils. 4×10 in. and 4×8 in. (white oils and fuel oil). 4×10 in. and 4×16 in. (crude).
Shell (Shell Haven) "C"	1	Max. LOA 238.0 m.	†10.4 m.	Max. deadweight 40,000 tons. Berth handles black and white oils. Max. deadweight allowed if VLCC on Jetty B is 12,000 tons. 4×10 in. lines.
Shell (Shell Haven) "E"	1	Max. LOA 183.0 m.	†8.6 m.	Max. displacement 20,000 tons. Chemicals and luboil only handled. 5×6 in. lines.
Shell (Shell Haven) "G"	5	No LOA restriction	(outer) †8.3 m. (inner) †5.6 m.	Berths No. 3, 4 and 5 are for estuarial craft only, max. deadweight 1,000 tons. Berth No. 1 (outer) max. deadweight 3,500 tons. Berth No. 2 (outer) max. deadweight 10,000 tons. if vessel over 3,000 deadweight tons on Berth G2 then restricted size only on Berth G1. 6×8 in. lines at outer berths and 5×6 in. lines at inner berths.
London and Coastal Oil Ltd.	1	Max. LOA 580 ft.	Depth (subject to dredging) 40 ft. Max. draft 32 ft.	Products handled: Gasoline, gas oil, diesel, kerosine, jet fuel. Pumping rates into barges, 200 – 250 t.p.h. with max. pressure 100 p.s.i. Discharge rate 400 – 1,500 t.p.h.

Other Wharves: In addition to the above some manufacturing and service industries have their own riverside premises with ship berths. Thames Navigation Service will assist with information. Otherwise contact Waterside Manufacturers and Associated Industries. Tel: 071-481 3681.

*Bunkers available at all berths. Fresh water not available.

**Unless otherwise stated.

†All berths subject to siltation, and Marine Superintendents should be consulted for current depths.

‡Tank cleaning is permitted when back loading operations are to take place. Tank cleaning for other purposes may take place only after agreement from the Terminal.

Dirty ballast separator system allows a cumulative rate of 1,500 cu.m./hr. from all jetties. No waxy material, chemicals or chemical additive is accepted.

Vessels should arrive with minimum possible ballast commensurate with safe handling of vessel.

Shell – Shellhaven: *Cautionary Advice:* Shellhaven Terminal is situated on the concave side of a bend in the river and, as a consequence, the tide does not run parallel to the berths. There is a strong outflow of tide from behind Berth "A" and "B" (the VLCC berth) during the ebb.

When swinging off the terminal before berthing or (for smaller ships) on sailing, due allowance must be made for the run of the tide and a close watch kept on passing traffic. Before a VLCC is berthed on Berth B the adjacent Berths A and C should be vacant or occupied by small craft.

Berthing Masters: All vessels of 160 m. or more in length or of 11,000 g.r.t. or more, whichever is less, bound for oil jetties in the Shellhaven area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berths on a flood tide. Other ships berth heading up or down river according to the tidal direction at the time of arrival (always head to tide).

Tugs are made fast off No. 7 Sea Reach Buoy. Ships are swung off the berth with due allowance for the set of the tide being made. Extreme care should be exercised in selecting the precise swinging position as the flood tide sets strongly onto "Mucking Flats".

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swinging, 2 forward tugs will let go and come alongside to push the ship onto the berth. The vessel should always land on the fenders parallel to the berth. 2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel). Spring lines are normally taken first, followed by breast lines, then head and stern lines. Liaison between the Pilot/Berthing Master and the terminal in positioning the ship is not always good, and it is recommended that a ship's officer with portable VHF be stationed near the manifold to assist in positioning.

Moorings – Cautionary Advice. During Spring tides a surface current of up to 2 knots setting out from behind the berth can be experienced on the ebb tide. Large deep ships should be securely moored prior to the start of operations. Upstream moorings in particular, must be of good material and well positioned. Mixed moorings of wire and fibre are not recommended and the terminal recommends that fibre tails be removed from wire moorings. There are no shore moorings.

Mobil – Coryton: *Berthing Masters:* All vessels of 11,500 g.r.t. and over, bound for jetties in the Coryton area are required to employ the services of a Berthing Pilot. (Drawn from senior P.L.A. Pilots). The Berthing Pilot will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Regardless of draft, VLCCs must not enter the berth dredged box until 1 hour prior to HW.

Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berth on a flood tide. Other ships berth heading up or down river according to the tidal direction at time of arrival (always head to tide).

Tugs are made fast at No. 6 Sea Reach Buoy. Ships are swung off the berth with due allowance for set and tide being made.

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swung 2 forward tugs will let go and come alongside to push the ship onto the berth. Berth 4 (VLCC) is fitted with a Marconi Semi Mark II approach speed measuring device. Information from this equipment is supplied to the ship by means of VHF radio telephone. (The service will be offered to the vessel when radio contact is first made, and radios will be placed aboard the vessel prior to its arrival off the berth).

Maximum impact velocity is 25 ft. per minute for a maximum displacement of 230,000 tons at a maximum angle of 12°.

Mooring arrangements for Berth 4 are as follows:

4 mooring dolphins are provided to take the breast ropes and head ropes from vessels. The 4 mooring dolphins are of equal strength and are capable of taking a load of 150 tons. Each mooring dolphin is fitted with triple hook assemblies capable of taking a load of 50 tons on a single hook.

Mooring hook assemblies are also fitted to each of the 2 berthing dolphins and at either end of the jetty head. Each assembly comprises two hooks which are capable of taking a load of 50 tons on a single hook. These mooring arrangements are intended to take the spring lines of vessels and have been designed to be capable of taking a load of 100 tons acting either parallel to berth face or up to an angle of 20° from this line. Any significant load applied at an angle greater than 20° from the berthing line may cause severe damage to the jetty head.

Mooring diagrams will be available to each vessel from tugs or boatmen.

2 shore breasting wires are provided, and it is recommended that vessels should make use of these.

2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between the ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel).

Moorings: Cautionary Advice. Strong tidal flows, especially during Spring ebb tides which can generate tidal flows up to 4 knots, demand a diligent tendering of vessel's moorings at all times.

Esso – Purfleet: *Berthing:* A vessel should come up river on the flood tide so as to arrive off the berth about 2 hours before HW. Then turn to starboard and berth port side to the jetty head.

Moorings: At Berth No. 1 the first lines run are a head rope to the buoy and a spring to the jetty. When the vessel is secured, she should have 2 head/stern ropes to the buoys, 2 breast lines to shore, and 2 backsprings to the jetty head. For large vessels the eye of a 5 in. shore wire is taken aboard and put over a set of bitts located aft. This wire is tensioned from ashore.

For large vessels or in bad weather, additional heavy wire combination backsprings may be available from shore.

The vessel must provide "emergency towing wires" on her offshore bow and quarter, with eyes maintained at water level.

Thames Matex – West Thurrock: *Cautionary Advice:* Both main berths are of similar construction. Berth No. 2 (down-river) is subject to heavy silting.

Berthing: Depending on the size of the ship and the weather, 2 or 3 tugs usually accompany the vessel from Gravesend. They secure with the tug's towline on the hook when about 1 mile from the terminal. When sailing, 1 or 2 tugs are used depending on the flash point of the product.

Vessels berth head to tide and may secure either side to jetty. Those with drafts not exceeding 25 ft. can berth at any stage of the tide. Deep draft vessels (34 ft.) usually berth about 1 hour before HW, during the last of the flood tide, and turn off the terminal and secure port side to the jetty.

Moorings: No particular pattern of mooring is specified. Vessels usually secure with 2 or 3 head and stern ropes, 1 or 2 breast ropes, and a spring at each end. 2 mooring launches are in attendance while berthing. The vessel must provide emergency towing on her offshore bow and quarter, with eyes placed at water level.

No shore moorings are available.

CRANES: See "Berthing".

BULK CARGO FACILITIES: See "Berthing".

SPECIALISED CARGO HANDLING FACILITIES: See "Berthing".

BRIDGES: No bridges below Tower Bridge which opens for shipping on request.

Queen Elizabeth II Bridge now open. Height of bridge above M.H.W.S. 52 m. Air draft to be confirmed.

STEVEDORES: Ordered by the Agents; no ETA to stevedores from vessel necessary; labour to be ordered by 1200 hrs. day before required.

At PLA General Purpose Berths order by 1100 hrs. day before except for weekends/public holidays when 1600 hrs. 2 days before. PLA/TCS Container Terminals work 24 hours a day, including weekends.

MEDICAL: Not necessary to contact Agents once port health requirements satisfied unless urgent medical treatment required on board on arrival. All medical treatment, vaccinations available.

DENSITY: Varies according to position and tides.

FRESH WATER: Available at all berths either from shore or barge.

FUEL: All types, grades available by barge, or from terminals.

FIRE PRECAUTIONS: Tankers – no smoking on open decks, only cabins. Deck fire hoses to be connected. Fire monitors to be trained on manifold area. Explosive workings at Chapman Anchorage, same precautions. Red flag to be flown by these vessels. Fire tug to be in attendance when explosives being worked. Smoking not permitted in the docks or berths.

CONSULS: All British Commonwealth countries are represented in London by a High Commissioner's Office.

Most foreign countries maintain embassies or a consular representative in London.

REPAIRS: All repairs, gas freeing possible; pre-advice recommended.

DRY DOCKS: Tilbury Dry Dock is closed. Nearest small dry docks are in the Medway.

SURVEYORS: *Classification Societies:*

American Bureau of Shipping, 1 Frying Pan Alley, London E1 7HR, Tel: 071-247 3255.

Det Norske Veritas, European Head Office, Veritas House, 112 Station Road, Sidcup DA15 7BU, Tel: 081-309 7477.

Germanischer Lloyd, Riverdale House, 68 Molesworth Street, Lewisham SE13 7EY, Tel: 081-318 1319.

Korean Register of Shipping, Room 319, Premier House, 10 Greycourt Place, London SW1P 1SB, Tel: 071-222 2840.

Lloyd's Register of Shipping, 71 Fenchurch Street, London EC3M 4BS, Tel: 071-709 9166.

Registro Italiano Navale, UK Office, 52 Aberdour Road, Goodmayes, Ilford IG3 9PG, Tel: 081-590 6543.

Inspection Services:

Cargo Superintendents (London) Ltd., 29 Cambridge Park, Wanstead, London E11 2PU, Tel: 081-989 5191. (Bulk grain, vegetable oils, minerals, chemicals).

Moore Barrett & Redwood Ltd., Old Station Approach, London Road, Purfleet, Tel: 0708-865601. (Petroleum, petrochemicals, calibration of tanks and meters)

SGS Inspection Services Ltd., Testing Division, Gaw House, Alperton Lane, Alperton, Wembley HA0 1WU, Tel: 081-998 2171. (Laboratory testing quality of raw wool, textiles, toys, electrical and consumer goods)

GANGWAY/DECK WATCHMEN: Available but not compulsory, Master's discretion.

OPENING/CLOSING HATCHES: Liner vessels by crew, with stevedore assistance. Tramp vessels according to charter party.

CERTIFICATES: These certificates to be on board.

Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction.
Oil Record Book.
Derat Exemption.
Previous U.K. Light Due Bills.
Cargo Gear and Chain Register complying to U.K. Factory Acts.
British Tonnage Certificate if available.

CUSTOMS ALLOWANCES: Customs usually permit 200 cigarettes or 0.25 lb. tobacco per person on board for 4 days. They can refuse to issue duty free or amount allowed at their discretion. Usually permit 1.3 pints or 1 bottle spirits per person for 4 days. They can issue less or refuse to allow as duty free at their discretion.

CARGO GEAR: To comply with U.K. Factory Acts, valid chain and Cargo Gear Register to be on board. Stevedores usually supply cargo slings, etc.

BANKS: All British and most foreign banks represented in London. British banks have branches in Thameside towns.

REPATRIATION: All facilities exist for changing crews, repatriations.

AIRPORTS: London Heathrow, London City Airport, Stanstead and Gatwick Airports. Southend Airport serves domestic and Continental services.

TIME: British Summer Time which is 1 hour in advance of GMT. GMT during Winter months.

HOLIDAYS: *Public Holidays:* Work is available on official holidays if practical. New Year's Day, Good Friday; Easter Monday; May Day Monday; Spring Bank Holiday Monday; August Bank Holiday Monday; Christmas Day; Boxing Day.

POLICE/AMBULANCE/FIRE: Contact by public telephone; dial 999 and ask for service needed.

EMERGENCY CO-ORDINATION CENTRE: See "Thames Navigation Service" and "Notices".

TELEPHONES: Ship to shore connections available at most berths.

SERVICES: All types of service for navigational aids, radar, compass adjusting, nautical instruments repaired, slop discharge barges available. Tank-cleaning, gas-freeing services available.

GARBAGE DISPOSAL: Garbage collection services are provided by private contractors at most berths. Contact should be made through ship's Agent.

WASTE OIL DISPOSAL: Service available through private contractors, and at certain private berths. Contact should be made through ship's Agent.

SEAMAN'S CLUBS:

Queen Victoria Seaman's Rest. Tel: 071-987-5466.
Anchor House, Canning Town. Tel: 071-476-6062.
Stella Maris, Tilbury. Tel: 03752-5641.
Merchant Navy Hotel, Lancaster Gate. Tel: 071-723-8831.
All of the above offer accommodation.
Flying Angel, Tilbury. Tel: 03752-2080.
Flying Angel, Gravesend. Tel: 0474-363383.
Norwegian Seamen's Mission. Tel: 071-237-5587.
Swedish Seamen's Mission. Tel: 071-237-1644.
Finnish Seamen's Mission. Tel: 071-237-4668.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Seamen's Identity Book required to be retained on board in port.

REGULATIONS: No livestock allowed ashore without permission Customs and Port Health Authorities. Rabies regulations enforced.

NOTICES: *Emergency Procedures for Vessels on The River Thames:* Report immediately by the quickest means available to either Thames Navigation Service on VHF radio, Gravesend Radio, VHF Channel 12; Woolwich Radio, VHF Channel 14, or public telephone Tel: 999.

Message: Vessel's name and present position together with details of emergency and assistance required.

Collision, Fire or Other Accident: If involved in or sighting a collision or accident report as above.

Human Injury or Man Overboard: In event of serious personal injury or recovery of a person from the river when vessel's crew require additional assistance report as above.

Machinery or Steering Failure: In event of machinery or steering failure report as above.

If necessary to anchor then endeavour to anchor clear of the fairway if size and draft permit.

Details of Port of London Authority Combined Accident Procedure Applicable to Vessels (POLACAP): In event of a major accident, the Thames Navigation Service will broadcast on appropriate VHF Channels an outline of the accident, including in the message:

Word	*Meaning*
"POLACAP"	Serious accident as specified has occurred – Combined Accident Procedure is in force.

Action by Vessels on Receipt of POLACAP Message: Maintain current communications watch, keeping requests for information to MINIMUM. If in vicinity of accident be prepared for traffic regulation, which, if required, will be operated by PLA Harbour Master's Launches.

If directly involved in or assisting with the accident, switch to VHF Channel 16 for inter-ship/craft communications, and report to Thames Navigation Service.

On scene control will be exercised from the forward control craft using call sign POLACHIEF. This craft will identify itself by a blue rotating light and in addition by day will hoist a red ball at the masthead.

When Combined Accident Procedure is no longer in force, Thames Navigation Service will pass:

Words	*Meaning*
"CANCEL POLACAP"	Combative measures to deal with the major accident are completed and no further action required.

Merchant Shipping (Tanker) Regulations 1981 and (Amendment) Regulations 1982 (EEC Requirements):

In compliance with the above regulations: (Statutory Instruments 1981, No. 1077 and 1982 No. 1637). The Master of any tanker of 1,600 g.r.t. or over which is:

(a) Carrying a cargo of chemicals, gas or oil in bulk; or
(b) Non gas free from any of these cargoes shall:

Section I: Make a report to the Harbour Master by telex (Telex No. 262880) or via G.P.O. Coast Station before entering or navigating within the limits of the Port of London which shall provide the following information in the order listed:

(a) Tanker's name and call sign.
(b) Country where registered.
(c) Length, beam and arrival draft.
(d) Destination and ETA.
(e) Tankers bound for the Medway, ETA at Medway Buoy.
(f) Nature and type of cargo (together with Flash Point if known).
(g) Is an inert gas system fitted?
(h) If an inert gas system is fitted, is it fully operational?
(i) Do any of the cargo tanks have an atmosphere which has been rendered non-flammable?
(j) If the tanker has a cargo of chemicals or gas has it been issued with a certificate stating that it complies with:
    (i) IMO Code for Ships carrying dangerous chemicals.
    (ii) IMO Code for Existing Ships carrying Liquefied Gas.
    (iii) IMO Code for Ships carrying Liquefied Gas.
(k) Does the tanker have any hull, machinery or equipment defects which may materially affect:
    (i) Its safe manoeuvrability.
    (ii) The safety of other vessels.
    or constitute a hazard to:
    (iii) The marine environment.
    (iv) Persons or property.

If the answer is 'Yes' to any of the 4 questions contained in (k), then details of the problem must also be provided.

If the Master fails to make a report or knowingly provides false information to the Port Authority or to a Pilot when boarding his ship he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

If any Pilot boarding a ship to pilot it in or out of the port believes there are defects as described in sub-section (k) which have not been reported to the Port Authority he shall inform the Master of those defects and if the Master then fails to inform the Port Authority the Pilot shall forthwith give such information to the Authority himself.

If the Pilot knowing the Master has failed to make a report, then himself, fails to make a report of any known defect as defined in sub-section (k) he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £400.

Section II: Make a Check List available to the Pilot when he boards the vessel and make a copy of the same Check List available to the Harbour Master (if necessary through the vessel's agents).

If the Master fails to make a Check List available the Pilot shall forthwith notify the Harbour Master.

If the Master knowingly makes a Check List available which is materially false he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

Inert Gas Systems and Crude Oil Washing (COW): (Reference Statutory Instruments No. 541, 544 and 687 of 1980).

The attention of tanker Masters are drawn to the following conditions, which must be observed whenever crude oil washing of tanks is to be undertaken in the Port of London.

1. *Notification*

(a) At least 24 hours prior notification of the intention to COW is to be received by the Director of Marine Operations (through the Thames Navigation Service) together with written assurance that all systems have been checked and found satisfactory in accordance with the ship's COW Manual and IMO requirements.

(b) One hour before the actual commencement of COW, a further advice must be received by the Director of Marine Operations (through the Thames Navigation Service) that COW is about to commence and that all systems are fully operational.

2. *Terminal Approval*

No vessel is to undertake COW without the approval of the Terminal Management and having complied with IMO COW requirements applicable to that ship.

3. *Failure of Systems*

Following the failure of the inert gas system to supply either the correct quality or quantity of inert gas, or a failure of any other part of a COW system, all cargo discharge, de-ballasting and tank cleaning must cease forthwith, and the Authority is to be immediately advised. Operations are NOT to be resumed until after consultation has taken place and agreement reached between the Authority, the Terminal Management and the ship's Master.

4. *Tanker Drafts*

No tanker crude oil washing is to be accepted at any berth where the vessel cannot safely be afloat at any state of the tide.

Notice:

Dangerous Substances in Harbour Areas Regulations 1987

1. INTRODUCTION

The Dangerous Substances in Harbour Areas Regulations 1987 ("DSHA Regulations") came into force on 1st June 1987. They apply in every harbour and harbour area in Great Britain, including therefore the Port of London. (Attention is also drawn to the Port of London Dangerous Substances in Bulk Byelaws 1991.).

On the same date certain provisions for the control of dangerous substances in the port of London were repealed –

(a) Sections 150, 151, 152 and 160 of the Port of London Act 1968;
(b) the Port of London Explosives Byelaws;

and, subject to temporary exceptions, –

(c) the Port of London Petroleum Spirit Byelaws;
(d) the Port of London Liquid Methane Byelaws.

The exceptions are Petroleum-Spirit Byelaws 7, 8, 9, 10 and 17 and Liquid Methane Byelaws 8 and 9. These remain in force until the end of 1989, and in the meantime replacement byelaws may be made if thought appropriate.

2. MEANING OF "DANGEROUS SUBSTANCE"

The term "dangerous substance" is defined in Regulation 3 of DHSA Regulations. For a full understanding of the term, reference should be made to that definition. Essentially, however, it means any substance which by reason of its characteristic properties creates a risk to the health or safety of any person when the substance is in a harbour or harbour area. It includes any substance or article which is within the definition of "dangerous goods" in Regulation 1 (2) of the Merchant Shipping (Dangerous Goods) Regulations 1981.

3. NOTICE OF ENTRY

Regulation 6 requires that a dangerous substance shall not be brought into a harbour or harbour area, unless *notice* containing the required particulars has first been given. The notice must be of *not less than 24 hours* unless –

(a) the Harbour Master requires a *longer* time (up to 14 days) for operational reasons; or
(b) a *shorter* time is agreed, if it is not reasonably practicable to give 24 hours' notice.

A. *Entry by Vessel – Notice by Master or Agent*

A.1 Persons to be notified

If a dangerous substance is intended to be brought in by a vessel, the notice must be given by the Master or Agent to –

(a) the PLA's Harbour Master at the address mentioned below (*Note* – the requirement applies even if the vessel is in transit to or from the Medway); *and*
(b) the berth operator (*Note* – if the berth is at the PLA's Tilbury Docks, notice must be given to the Berth Superintendent as well as to the Harbour Master).

A.2 Form

The PLA's Harbour Master and the berth operator must be *in receipt* of the notice *before* the specified time. Notices should therefore preferably be sent by *telex* or *facsimile*.

The notice to the Harbour Master should be sent to –

The Harbour Master, Thames Navigation Centre, Royal Pier Road, Gravesend, Kent DA12 2BG
Telex: 262880. Fax: Group 3 – 0474 352996.

A.3 Contents

The notice must contain such information as is *adequate to evalua* *the risk* created by the substance and –

(a) Name of vessel, and PLA voyage reference number i allocated).
(b) Berth to be used.
(c) Whether substance is to be discharged or remain o board in transit.
(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.
(e) Mode of carriage: i.e. bulk, containers, Ro/Ro trailer o general.
(f) If in bulk –
  (i) whether petroleum or chemical, and
  (ii) Flash Point (FP) closed cup (if only an open cu FP can be given, this fact should be stated).
(g) Whether vessel has current certificate of fitness (i recommended by IMO).
(h) If an oil tanker, whether vessel has valid cargo-shi Safety Construction and Safety Equipment Certificates (if required under a SOLAS convention).

B. *Entry by Road or Rail – Notice by Transport Operator and Ship's Agent.*

B.1 Transport Operator

If a dangerous substance is intended to be brought in by road or rail the notice must be given by the transport operator.

The notice must be given to the Manager of the berth concerned who for the purposes of notification under Regulation 6 (1) (b) of the Dangerous Substances in Harbour Areas Regulations 1987 shall be deemed to be both the harbour master and the berth operator.

The notice must contain such information as is *adequate to evaluate the risk* created by the substance and –

(a) Name of the transport operator.
(b) Berth to which substance is to be sent.
(c) Name of vessel for which intended (if known), with date and estimated time of departure.
(d) Product name
IMO class
UN number
IMDG Code page number
Weight in tonnes or kilos.
(e) Method of packaging.

B.2 Ship's Agent

Information about the loading and estimated time of departure of the vessel (as required at (c) above) is important but may not be readily available to the transport operator. Also, the PLA's Harbour Master needs to have the information in a *form* which related mainly to the vessels on which the substances are to be carried. The information given by transport operators under the DSHA Regulations will not normally be in this form, but information in this form has hitherto been given by ship's agents in accordance with Merchant Shipping (Tankers) Regulations 1981 and Amendment Regulation 1982 (E.E.C. Requirements).

Ship's agents should therefore *continue* to give notice to the PLA's Harbour Master at least *24 hours before* a dangerous substance is *loaded* on to a vessel *anywhere* in the Port of London. The notice should be given in the manner stated at A.2 above and should contain the information stated at A.3 above (except for item (c)).

4. TILBURY DOCKS

Dangerous goods intended for loading or discharge in the Tilbury docks continue to be subject to the PLA's published Schedule of Dangerous Goods. Attention is particularly drawn to the terms and conditions for explosives (class 1) and radio-active substances (class 7).

In addition to notification under the DSHA Regulations, some descriptions of dangerous substances (designated in the Schedule as Group 3, require the *prior approval* of the PLA before entering the docks. Application for approval should be made to the Dangerous Substances Section, Accident Prevention, Port of Tilbury, Tilbury Docks, Essex RM18 7EH. Telephone: Tilbury 0375 – 852374. Telex: 995441. Fax 0375 – 857667.

5. FURTHER REQUIREMENTS OF DSHA REGULATIONS

It is impracticable to set out all the provisions of the DSHA Regulations in this notice, but particular attention is drawn to the following:

5.1 Movement of Vessels

(a) Regulation 7 confers on the Harbour Master powers of prohibition, removal and regulation relating to dangerous substances.
(b) Regulation 10 requires that a vessel shall not be placed alongside another vessel carrying Schedule 3 dangerous substance without the permission of the Master of the other vessel and of –
  (i) the berth operator, or
  (ii) the Harbour Master (if the vessel is not at berth).
(c) Regulation 14 requires the Master of a vessel carrying a dangerous substance to anchor or moor his vessel only where directed by the Harbour Master.
(d) Regulation 15 requires that the Master of a vessel (other than a dumb barge) carrying a Schedule 3 dangerous substance shall ensure that the vessel is in a state of readiness to be moved at any time (tidal conditions permitting).

5.2 Permission for Certain Operations

(a) Regulation 20 requires the Master of a vessel to obtain the Harbour Master's written permission before transferring a dangerous substance by pipeline to another vessel.
(b) Regulation 22 requires the Master of a vessel carrying or which has carried dangerous substance in bulk to obtain the Harbour Master's permission before discharging slops or ballast, pumping bilges, gas-freeing or purging tanks and before crude oil washing a cargo tank.

5.3 *Marking of Vessels*

(a) A vessel carrying a Schedule 3 dangerous substance must carry the lights or flags required by Regulation 8.

(b) A barge carrying one or more dangerous substances in the quantities stated in Regulation 11 (1) must display the hazard warning panels required thereby (or those panels and the labels required by regulations 11 (2)).

6. OTHER PROVISIONS

Attention is drawn to the following:

(a) *Port of London River Byelaws 1978*

No. 6 –Escape of dangerous substance – vessel not to proceed above No. 1 Sea Reach Buoy except with permission of Harbour Master.

No. 7(f)–Spillage of liquid in bulk to be forthwith notified to Harbour Master.

(b) *Merchant Shipping Notice 1152*

Reporting of incidents involving loss of dangerous substances.

AUTHORITY: Port of London Authority, Thames House, St. Andrews Road, Tilbury, Essex RM18 7JH. *Tel:* 0375 852200. *Telex:* 995553. *FAX:* 0375 852312. *Contact:* D. J. Jeffery, Chief Executive, River. Captain Gordon Varney, Chief Harbour Master.

Port of Tilbury, Leslie Ford House, Tilbury Docks, Tilbury, Essex RM18 7EH. *Tel:* 0375 852427. *Telex:* 995170. *FAX:* 0375 855106. *Contact:* John S. McNab, Chief Executive, Tilbury.

LONDONDERRY (incl. Moville): 54.59 N. 07.19 W. (See Plan)

The main port of Londonderry is situated about 21 miles from the sea on the River Foyle.

PORT LIMITS: Extend from Lifford Bridge to a line drawn from Greencastle Fort in the County of Donegal to the Tower on Magilligan Point in the County of Londonderry.

DOCUMENTS: For Londonderry see "Belfast". For "Moville" see "Dublin".

Since the Port of Londonderry falls within the Republic of Ireland and the United Kingdom, both Governments are concerned in regard to Customs documents. Moville, which is situated down river from Londonderry, is located in the Republic of Ireland and is the anchorage where deep-sea vessels lie prior to proceeding to Londonderry. Should vessels discharge cargo or load cargo at this anchorage, Irish documents are required. The port is under the control of the Londonderry Port and Harbour Commissioners who are recognised by both Governments.

PILOTAGE: The Londonderry Port and Harbour Commissioners are the Pilotage Authority for the Londonderry Pilotage District. For information regarding pilotage application should be made to The Secretary, Harbour Office, Londonderry, Northern Ireland. Tel: (0504) 262553.

Pilotage is compulsory, vessels normally taking the Pilot at Carrickarory Pier, Moville. A Pilot may be taken at the Fairway buoy by special arrangement.

The Pilot station is located at Carrickarory Pier, Moville, 55° 10′ 57″ N. 07° 03′ 27″ W.

Deep-draft vessels usually take Pilot 2 hours before HW time Londonderry, so as to arrive at Londonderry on the top of HW.

Pilotage service may be obtained in response to following signals:

Inward-bound vessels: By day. 1. The International Code Signal G; 2. The International Code Signal P.T.; 3. The Pilot Jack hoisted at the fore. If required after hours telephone Harbour Radio (Londonderry 363218).

By night. Pilot Station unattended at night. Vessels should contact harbour radio on VHF Channel 14 or Londonderry (0504) 363218.

By day or night. 1. By VHF (FM) Channel 14 to the pilot station at Carrickarory Pier. 2. By VHF (FM) Channel 14 to the pilot launch "Foyle Leader." 3. After hours and weekends VHF (FM) Channel 14 to Harbour Radio.

In poor visibility. By sounding the letter G in Morse Code on the steam whistle or siren.

As visibility to seaward from Carrickarory Pier is restricted it is important that Owners, Masters or Agents notify the Berthing Master (tel: Londonderry 263680) or outside Office hours Harbour Radio (tel: Londonderry 363218) of the name of vessel; estimated time of arrival at the Pilot Station; draft of water of the vessel. It is also important that VHF (FM) communication be established with pilot station, pilot launch "Foyle Leader", or Harbour Radio as early as possible before arrival in Lough Foyle. Call signs, frequencies and procedure are as follows:

VHF (FM) Communications:

1. **Pilot Station at Carrickarory Pier, Moville:** Call sign "Foyle Pilots". Equipment VHF (FM) R/T single frequency working. A continuous listening watch is kept during office hours on Channel 14 (156.70 MHz.) except when pilot launch is operating, when watch is transferred to the launch.

2. **Harbour Radio:** A continuous listening watch is kept on Channel 14 (156.70 MHz) outside of office hours.

3. **Pilot launch:** Name of vessel "Foyle Leader". Equipment VHF (FM) R/T single frequency working. When launch is operating a listening watch is kept on Channel 14 (156.70 MHz).

4. **Harbour Office, Londonderry:** Call sign "Harbour Office". Equipment VHF (FM) R/T single frequency working. All vessels fitted with VHF (FM) R/T while navigating in the river or at anchor in Moville Bay should keep a listening watch on Channel 14 (156.70 MHz).

Messages must be restricted to those related to the movement of vessels and safety of vessels and persons. Messages of any other nature and messages of a personal character cannot be accepted.

A continuous listening watch is kept on Channel 16 (156.80 MHz) which is only to be used in circumstances involving distress and safety.

Outward-bound vessels and vessels shifting:

When the services of a Pilot are required for an outward-bound vessel or for shifting a vessel, 3 hours' notification should be given to the Berthing Master (Tel: Londonderry 263680) during office hours, of name of vessel; time of departure; draft of water of vessel; where bound. Early notification should be given to enable Pilot to board vessel in good time.

ANCHORAGES: The only anchorage at Londonderry is located at Moville.

RESTRICTIONS: See "Max. Size".

MAX. SIZE: For vessels using main port of Londonderry, overall length 152.5 m. draft 7.2 m.

Due to new road bridge at Madam's Bank, height clearance 32 m. H.W.O.S.T.

For vessels using N.I.E.S. Oil Jetty, Coolkeeragh, Londonderry, overall length 183 m. draft (salt water) 7.2 m.

Maximum draft of vessels is increased on Spring tides at Coolkeeragh and Londonderry.

HEALTH: Pratique is automatic except in the case where the Master suspects one of the dangerous diseases on board when he should notify the Agent.

Also see "Health – All Ports" before first U.K. port.

RADIO: Malin Head Radio Station, Republic of Ireland, covers W/T and R/T transmissions and Portpatrick Radio Station, Scotland, covers R/T transmissions.

TUGS: One tug is available which is owned by the Londonderry Port and Harbour Commissioners. Tugs lines normally used.

BERTHING: Vessels of deep draft or large dimensions can only berth at Londonderry to arrive on top of high water. Decisions in this matter are taken by the Pilots in conjunction with the Harbour Master.

A total of 400 m. of ferro-concrete wharf is available. All berths dredged to 7.6 m. LWOST

CRANES: 1×40 tonne mobile grab crane with automatic container spreader, 2×10 ton mobile grab cranes, 1×4 ton mobile grab crane, 1×4 ton mobile hook crane and 1×35 ton derrick.

STEVEDORES: ETA advices should be given before 1600 hrs. on weekdays to arrange work for the next morning and before 1100 hrs. on Saturday to arrange work for Monday morning.

MEDICAL: Doctors and hospital facilities available. Agents should be advised in advance of any medical attention required.

TANKERS: No slop facilities available. Deep-sea tankers discharge heavy fuel oil for electricity power station at N.I.E.S. Jetty, depth 8.8 m., Coolkeeragh, diameter of pipes 8 in. Crew are required to connect and disconnect hoses under port conditions.

Shell Oil: Max. LOA 120 m. Depth 6.0 m.

Du Pont: Depth 8.5 m.

DENSITY: Water at Londonderry is brackish and average density 1005 to 1018.

FRESH WATER: Available at all berths direct from shore lines.

FUEL: Gas-oil and light marine diesel available by road tankers and from Shell Jetty at Pennyburn. Shell Mex and B.P. can supply light, medium and heavy fuel oil by road tanker.

CONSULS: Nearest at Belfast.

REPAIRS: Deck and engine repairs are carried out by a local engineering works. No major repairs available.

GANGWAY/DECK WATCHMEN: Can be covered by crew; shore watchmen available if required.

OPENING/CLOSING HATCHES: This is required to be carried out by ship's crew under local port labour conditions.

CARGO GEAR: Ship's winches and derricks should be in good working order and have DTI Certificates or equivalent. Cluster lighting is required for night work.

REPATRIATION: Can be arranged by ship's Agent on request.

AIRPORT: Eglington Airport 9 miles from city centre. Aldergrove International Airport (Belfast) 60 miles from Londonderry.

HOLIDAYS: Port Holidays at Londonderry are: New Year's Day; St. Patricks Day (17th March); Easter Monday; Easter Tuesday; First Monday in May; Last Monday in May; 12th July; 1st Monday and Tuesday in August; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required, or Police 265161; Ambulance 45171; Fire 264321.

TELEPHONES: No telephones available for connecting on board.

IDENTIFICATION CARDS: Not obligatory but should be carried.

SERVICES: Compass adjusters available from Glasgow.

GARBAGE DISPOSAL: Collection or skip provided on request at no charge.

WASTE OIL DISPOSAL: Service available using sub-contractor's road tanker. Contact Capitol Oils, Ballynahinch. (Tel: 0238-561574). 48 hours notice required.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

REGULATIONS: Copies of Port Bye-Laws may be obtained through Agent.

AUTHORITY: Londonderry Port and Harbour Commissioners, Harbour Office, Meadowbank, Strand Road, Londonderry BT48 7QE, Northern Ireland. *Tel:* (0504) 264884, 264885, 262553, 263680. *FAX:* (0504) 371809. *Contact:* S. J. McIlvenny, Chief Executive. G. S. Wilson, Secretary.

LOWESTOFT: 52.29 N. 01.45 E. (See Plan)

DOCUMENTS:

Crew List (at least 2 copies).
Passenger List (at least 2 copies).
Manifest (at least 3 copies).
Customs & Health Documents (normal U.K. regulations).
Ship's Papers (to be presented to Customs and Port Authorities).

PILOTAGE: Pilots on standby at all times. Pilot launch fitted with VHF and maintains listening watch on Channel 14. Pilots can also be ordered by R/T via Humber and Northforeland Radio, hence by phone.

Pilot's telephone No. Lowestoft 560277, or at the Lowestoft Harbour Masters Office, tel. Lowestoft 572286 (this number manned 24 hours). Pilot boat, black hull, orange upper work with "Pilot" painted on each side. Light and sound signals as laid down in the International Code of Signals.

Pilot boards vessel at West Holm Buoy or East Barnard Buoy. Vessel should not approach harbour closer than these limits when awaiting Pilot.

ANCHORAGES: Pilotage anchorage North of a line joining West Holm Buoy and Lowestoft Lighthouse.

RESTRICTIONS: No specific restrictions provided the height of tide is sufficient for draft of vessel. Large vessels normally enter on slack tide due to cross currents at entrance.

There are regulations governing the passage of vessels through the harbour entrance. Masters of vessels shall observe the Harbour Control Light which is a white flashing light situated below the occulting red light on the South Pier Lighthouse. This light is visible except between 232° to 286° true from the light. When this light is flashing vessels may proceed to sea, but no vessel shall enter the harbour. At all other times vessels may enter the harbour, but no vessel shall proceed to sea.

A green occulting light is shown on the North Pier Head and a red occulting light on the South Pier Head, from sunset to sunrise.

Several Inner Pier lights will be clearly visible from a vessel upon entering the harbour and some will also be visible from certain directions before entry.

A "horn" signal is fixed on the South Pier Head for use in foggy weather. 4 blasts of 2 seconds each will be given every minute.

MAX. SIZE: Max. length approx. 410 ft. Draft up to 21 ft. MHWS. (Check with Port Authority for current situation.)

HEALTH: See "Health – All Ports" before first U.K. port.

TUGS: A number of tugs are available; tug's lines normally used.

BERTHING: *Outer Harbour* (comprising Hamilton and Waveney Docks and Trawl and Yacht Basins). Used largely for fish traffic, sea aggregates and offshore module construction:

Width at entrance	144 ft.
Depth at entrance	23 ft. MHWS
Water area	40 acres
Length of quays	4,500 ft.
Depth of water at quays	18 ft. MHWS
	12 ft. MLWS

Inner Harbour. Used for general cargo and grain traffic.

Width of bridge	74 ft.
Water area	70 acres
Length of quay	6,800 ft.
Depth of water at quays up to	23 ft. MHWS
	17 ft. MLWS

CRANES: 1×35 tonne crane and 1×32 ton container crane. Mobile cranes also available.

CARGO HANDLING FACILITIES: *Grain:* Silo with a capacity of 8,500 tonnes. Discharging and loading rates of 120 tonnes and 275 tonnes/p.h. *Cement:* Silos with a capacity of 3,600 tonnes. *Containers:* Purpose built container terminal is equipped with a 32 tonne container crane and 2 park-gantry cranes.

STEVEDORES: Shipping Agent should be advised of ETA, etc., to enable gangs to be available. Working hours: As required.

MEDICAL: Advance notice desirable of medical attention required on arrival. Hospital facilities available in the district.

FRESH WATER: Can be supplied at various points on quays from hydrants.

FUEL: Marine diesel available from road tankers or fuel barge within the harbour. 24 hours notice is normally required for supplying gas oil or boiler fuel; this comes from road tankers.

FIRE PRECAUTIONS: Local fire services available in an emergency. Special arrangements can be made for taking fire-fighting equipment to sea. Normal harbour fire-prevention regulations apply to all berths.

CONSULS:

Belgium	Tel: Lowestoft 572301
Denmark	" " "
France	" " "
Netherlands	" " "
Norway	" " "

REPAIRS: All types of deck and engine repairs are possible in the port.

DRY DOCKS: One dry dock. Length 248 ft. Width at entrance 48 ft. Depth of water on sill 14.5 ft. MHWS.

OPENING/CLOSING HATCHES: Carried out by crew.

AIRPORTS: Nearest international airport served by regular airlines is London (Heathrow). Smaller airport at Norwich (27 miles) served by regular airlines (Frequent flights to Amsterdam).

POLICE/AMBULANCE/FIRE: In an emergency dial 999 and ask for service required. For normal enquiries: Police Lowestoft 562121; Ambulance Lowestoft 572572; Fire Lowestoft 561700.

GARBAGE DISPOSAL: Skips provided daily at fish market. All other quays by private arrangement or on request to Port Authority. Normal commercial rates.

WASTE OIL DISPOSAL: Service available by tanker trucks. Contact Caird Environmental (Oil). (Tel: 0493-857264, mobile: 0831-113862) or Eastern Counties Tank Cleaners. (Tel: 0493-602848, mobile 0860-729727).

Tank cleaning: Contact Hamilton Painter. (Tel: Lowestoft 574459).

SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fishermen, 16 Waveney Road, Lowestoft, NR32 1BT. Tel: 0502-565269.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.595 (27.4

SERVICES: Compass adjusting. VHF, Radar, radio repairs. All sh provisions are available by arrangements with the shipping Agencie

SHORE LEAVE: Leave is permitted.

GENERAL:

Air/Sea Rescue Services at R.A.F. Cottishall (35 miles).
Royal National Lifeboat Institution, lifeboat berthed at Lowestoft.
Modern transit sheds.

LYDNEY: 51.43 N. 02.33 W. (See Plan

PILOTAGE: Available from Sharpness.

RESTRICTIONS: Entry and exit only possible at HW and for a very shor period afterwards.

VHF: Not permanently manned. Used solely for directing vessels Standard multi-channel. Channel 16 for call up.

BERTHING: *Tidal Basin:* 82.3 m.× 22.8 m. Width of entrance 10.5 m Depth at HWST 7.3 m.

Inner Dock: 237.7 m.×32 m. Width of entrance 7.0 m. Depth 3.6 m.

FRESH WATER: Limited supply from small bore tap.

FUEL: Not available.

AIRPORT: Gloucester (Staverton) 24 miles, Bristol 24 miles, Cardi 30 miles.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

GENERAL: The port does not offer any cargo handling facilities.

AUTHORITY: National Rivers Authority, Severn Trent Regio Riversmeet House, Newtown Industrial Estate, Northway Lane Tewkesbury, Gloucestershire GL20 7JG. *Tel:* (0684) 85095 *FAX:* (0684) 293599. *Contact:* Mr. R. J. Bishop, General Manage Mr. W. Hardy, Harbour Master, Tel: (0594) 516391 (part-time only 48 hours notice required).

MANCHESTER: 53.29 N. 02.14 W. (See Plan)

GENERAL: The Port of Manchester includes the whole of the Manchester Ship Canal and Queen Elizabeth II Dock. The Canal is approximately 36 miles long from its entrance at Eastham on River Mersey to the Manchester Docks.

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Compulsory. Orders for Pilots may be lodged with the Harbour Master's Office at Eastham (Tel. 051-327 1242/4). As much notice as possible should be given, particularly in the case of inward-bound vessels due to arrive at Eastham. Helmsmen can be obtained in same manner.

RESTRICTIONS: Eastham Locks. The main entrance to the Canal is at Eastham where there are two locks side by side, one 600 ft. by 80 ft. and the other 350 ft. by 50 ft. The outer or lower sill of each lock is 11.36 ft. below Chart Datum (1975). The levels of upper sills of the 80 ft. and 50 ft. locks are 32 ft. and 29 ft. respectively below statutory water level in Canal.

Both locks are operated for incoming and outgoing vessels of suitable draft during a period of 8 hours on each tide, i.e. from 4 hours before high water to 4 hours after high water.

The size of vessel which can navigate the Canal is governed by the dimensions of locks, the height of fixed bridges and limitations for the draft of vessel.

Maximum length: The greatest length measured between perpendiculars drawn at the foreside of the foremost extremity and at the afterside of the aftermost extremity of the hull or any attachments to the hull shall not exceed 560 ft. The acceptance of ships proceeding above Ince with overall length greater than 530 ft. is subject to approval of the Harbour Master.

The length measured between perpendiculars drawn at the foreside of the stern and at the afterside of the rudder post, or through centre of the rudder stock if there is no rudder post, on the Summer load waterline shall not exceed 535 ft.

The length measured between perpendiculars drawn at the afterside of the rudder plate and at the foreside of the foremost extremity of any part of the hull which is below a horizontal line drawn through the top of the rudder plate shall not exceed 544 ft.

Maximum beam: Vessels not proceeding beyond Ince Oil Berth: 72 ft. overall. Vessels proceeding beyond Ince Oil Berth: 63 ft. 6 in. overall.

Provided the height of masts and/or funnels or other structures is not more than 70 ft. 9 in. from water-line, vessels can pass under all fixed bridges under normal conditions. As, however, the headroom is less during periods of high-water levels, a vessel, in order to avoid possible detention, should reduce masts and funnels or other structures to 70 ft. above the water-line. The restriction as regards height does not apply to vessels proceeding only as far as Runcorn Bridge.

Facilities are available at Eastham for removing and replacing tops of masts and funnels.

MAX. SIZE: When vessels are loading inwards for the Canal, Masters should take these facts into their calculations and have regard to the following limitations, all of which are expressed as maximum draft in fresh water:

Vessels inward bound to a berth	*Arrival draft (in fresh water) at Eastham not to be such as would exceed:*
Between Eastham Locks and Ince Oil Berth	8.78 m.
Between Ince Oil Berth and Runcorn Lay-by (Other than Runcorn Docks)	8.07 m.
Between Runcorn Lay-by and Mode Wheel Locks	7.31 m.
In the Manchester Docks upstream of the Inner Gates of Mode Wheel Locks and downstream of the Railway Swingbridge.	5.48 m.
In the Manchester Docks upstream of the Railway Swingbridge to No. 3 Dock Pomona	2.90 m.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a port doctor or an officer of H.M. Customs depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (N. European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board the Port Health Authority must be informed preferably not more than 12 hours and not less than 3 hours before arrival.

Also see "Health – All Ports" before first U.K. port.

RADIO: FM VHF R/T equipment is installed at Eastham, Stanlow, Latchford, Irlam, Barton and Mode Wheel Locks as an aid to navigation on the Canal.

Ships which are equipped with the appropriate R/T channels are requested to establish contact with the nearest shore station before leaving a berth or lock within the harbour and thereafter to maintain a continuous listening watch on Channel 14.

Station	*Call sign*	*Channel*	
Eastham Locks	Eastham Locks	7	Docking instructions: When approaching Eastham Locks from seaward.
Eastham Locks	Eastham	14	Port operations:
Stanlow Oil Docks	Stanlow	14 20	Vessels moving within the harbour should maintain a listening watch on Channel 14. After contact has been established the shore station will request the ship to switch to the appropriate speech Channel.
Latchford Locks	Latchford Locks	14 20	
Irlam Locks Lockmaster's Office	Irlam Locks	14 20	
Barton Locks Lockmaster's Office	Barton Locks	14 20	
Mode Wheel Locks Lockmaster's Office	Mode Wheel Locks	14 20	Irlam, Barton and Mode Wheel Locks are for emergency use only.
Ship/tug communications	Name of ship/tug	8 10	Inward bound Outward bound

TUGS: The Canal Company maintains a fleet of high-powered tugs which may be hired to assist vessels, 12 hours notice required.

Weston Point Docks: Near Runcorn, 11 miles from canal entrance at Eastham. 10-12 berths for vessels up to 2,500 tonnes. Fixed, portal and mobile cranes for handling bulk cargoes.

CARGO HANDLING FACILITIES: Heavy duty floating crane with capacity up to 120 tonnes. Roll-on/Roll-off berth with strengthening to take loads of 300 tonnes.

STEVEDORES: The stevedores require to sight a certificate covering inspection and S.W.L. of slings used in pre-slung cargoes.

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

TANKERS: *Queen Elizabeth II Dock:* This dock is adjacent to the locks at Eastham which give access to the Canal, and is approached from River Mersey through its own entrance lock. This lock is 807 ft. long by 100 ft. wide. The level of outer sill is 18.36 ft. below Chart Datum (1975). The dock covers an area of 19 acres in the form of a square and has four berths designed to accommodate large tankers, the dimensions of berths being as follows:

Berth No. 1	800 ft.	Berth No. 3	900 ft.
Berth No. 2	725 ft.	Berth No. 4	730 ft.

The dock is directly connected to oil installations by pipe-lines.

Stanlow Oil Docks: No. 1 & 2 (5 berths) 4.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Oil Berth: 5.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Coaster Berth: Max. length 350 ft., beam 53 ft. draft approx 21 ft. dependent on current survey.

Barton: 32 miles above Eastham Lock. Length 508 ft., draft 24 ft., beam 63 ft. 6 in. Max. height above water-line 70 ft.

DENSITY: The water in lower section of the Canal between Eastham Locks and Latchford Locks is brackish. In all sections above Latchford Locks the water is fresh.

FRESH WATER: Available.

FUEL: Oil bunkers may be taken by arrangement with oil companies either from craft alongside or at various oil berths along the Canal.

(A) MEDWAY (See Plan)

PILOTAGE: *Pilotage to and from the Medway:*

Pilotage for vessels bound to or from the River Medway is compulsory for vessels 50 m. and over in length, and for vessels 80 m. and over in length seaward of the Medway Buoy. The Medway Pilots are stationed at Medway Navigation Service, Garrison Point, Sheerness, and operate a 24 hour service, 365 days a year. The compulsory area extends to Rochester, and includes The Swale, but 'mud' pilots are available, by arrangement, above Rochester and for creek wharves. The recognised seaward Boarding and Landing Station is in the vicinity of N.E. Spit Buoy, served by launches at Ramsgate.

Pilotage Exemption Certificates are available to certain regular traders, by application on the prescribed form.

VHF/RADAR: Medway Navigation Service (Medway Ports Authority) is situated at Garrison Point, Sheerness. Tel: Sheerness 663025. Telex: 96435 (call sign "Medway Radio"). Fax: (0795) 666596. Fitted with VHF, Channels 16, 74, 73, 9, 11 and 22. The station has radar service surveillance of Inner Estuary, Sea Reach, Medway Approach Channel and Lower Reaches of River Medway.

Tugs operate on Channel 73.

REGULATIONS: All vessels required to proceed in accordance with instructions of Port Authority. Vessels are requested to advise Port of Sheerness Ltd. – Medway Navigation Service (call sign "Medway Radio") VHF Channels 16, 74, 9 and 22 of ETA, shifting of sailing movements.

Prior notification to Port of Sheerness Ltd. is required, detailing the carriage of all explosives and "dangerous goods".

GENERAL:

Tidal Information:

Tidal streams in the River Medway vary between about 2.5 knots at Springs and 1.5 knots at Neap Tides, although velocities vary considerably from Reach to Reach, the areas of maximum encountered velocities are: off Garrison Point Sheerness and through Rochester Bridge.

Average Tidal Heights are as follows: (metres)

Sheerness	5.7 MHWS	4.8 MHWN
Chatham	6.0 MHWS	4.9 MHWN
Rochester	6.2 MHWS	5.0 MHWN

High Waters occur approximately:

Margate	45 minutes	before Sheerness
Herne Bay	20 minutes	before Sheerness
Whitstable	10 minutes	before Sheerness
Rochester	9 minutes	after Chatham
Wouldham	28 minutes	after Chatham
New Hythe	33 minutes	after Chatham
Allington Lock	41 minutes	after Chatham

Tide Tables may be obtained at the offices of Port of Sheerness Ltd.

(B) SHEERNESS: 51.27 N. 00.44 E. (See Plan)

Situated on Isle of Sheppey at junctions of Thames and Medway Rivers.

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: For vessels entering River Medway up to 107 m. length, Little Nore Anchorage, Sheerness. Over 107 m. length – as directed by Medway Navigation Service (Medway Radio) or Thames Navigation to Great Nore, Sea Reach or Warps.

RESTRICTIONS: Subject to tidal conditions and under keel clearance appropriate size of vessel. Minimum depth of Medway Approach Channel 11.0 m. at Chart Datum.

Entry as directed by Medway Navigation Service (Medway Radio). Station keeps watch on VHF Channels 16, 74, 73, 9, 22 and 11.

Occasional restriction for vessels over 130 m. overall length entering approach channel between sunset and sunrise when the Traffic Warning Lights are exhibited from Garrison Point.

MAX. SIZE: Five deep water terminals for vessels up to 230 m. in length and 11.0 m. in draft. Also see "Developments".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Portishead. Local Stations: From South – Lands End, Niton, Northforeland. From North, Cullercoats, Humber, Northforeland.

VHF/RADAR: See "Medway".

TUGS: River Medway – For Sheerness, Ridham Dock, Isle of Grain, Oakham Ness – Tugs usually meet vessels at Garrison Point, Sheerness. Tug's lines used, no extra charge.

STEVEDORES: All stevedoring at Sheerness is provided by the Port of Sheerness Ltd.

MEDICAL: 24 hours notice to Agents so that Port Medical Officer can be advised. Normal boarding point – Garrison Point Sheerness. All usual hospital facilities available within 15 mile range of Sheerness.

BERTHING: Sheerness, deep water berths and Ferry Terminal – a directed by Medway Navigation Service (Medway Radio).

Berths equipped for handling containers, forest products, mo vehicles and general cargo of all kinds, including fresh fruit a vegetables.

Storage facilities available for vehicles, forest products and th warehousing of general cargo.

Sheerness Deep Water Berths – No. 1 – Suitable for vessels up t 230 m. length and 11.0 m. draft.

No. 2. Suitable for vessels up to 210 m. length and 11.0 m. draft.

No. 1/2. Retractable Ro/Ro pontoon serves both bert simultaneously, capable of 60 tonne payload.

No. 3. Suitable for vessels up to 230 m. length and 11.0 m. draft.

No. 4. Suitable for vessels up to 250 m. length and 9.0 m. draft.

No. 5. New car and Ro-Ro Terminal for vessels of 100 m. length a 5.5 m. draft.

Ferry Terminal – Berth 10. Suitable for either bow or stern door vesse of up to 165 m. in length and 7.0 m. in draft. Present service twice da Sheerness/Flushing and vice versa.

CRANES:

Berth No.	*Remarks*
1	3×5 tonne Electric 1×30 tonne Container Gantry
2	4×3 & 5 tonne Electric
3	5×3 & 5 tonne Electric
4	None (Car Terminal)
11	Ro/Ro/Ferry Terminal
12	10 tonne static (Launches)
12A	Mobile (Marine Services)
14	Mobiles (Launches)
15	Mobiles (Ship Repairs)
16	Mobiles (Ship Repairs)

DENSITY: Average density 1021/22.

FRESH WATER: Available alongside all berths at Sheerness.

FUEL: All grades available at BP Refinery Isle of Grain – or availab by barge or lorry given 48 hours notice.

REPAIRS: All types of deck and engine repairs can be carried out eithe in berth, in dry dock or at river buoys.

DRY DOCKS: Sheerness: 2 dry docks available. Largest for vessels u to 86 m., otherwise only small slipways available.

SURVEYORS: Cargo Surveyors available from London or Gravesen Lloyd's Agent in docks.

GANGWAY/DECK WATCHMEN: Gangway watchmen – service recommended as all berths at Sheerness are tidal with average rise an fall of 5 m.

OPENING/CLOSING HATCHES: Within Sheerness Docks riggin gangs are employed by Port of Sheerness Ltd. for this purpose.

REPATRIATION: Usual facilities available for crew changes - repatriation can be arranged by various air/sea routes.

TELEPHONES: Police: Sheerness 661451; Fire: Sheerness 662382 o dial 999 and ask for Fire Service; Ambulance: Sheerness 664079.

There are coin boxes on berths.

EMERGENCY CO-ORDINATION CENTRE: Medway Navigatio Service, Garrison Point Fort, Sheerness Docks, Sheerness, Kent ME1 1RX. Tel: Sheerness 663025.

STORING: See "Prelims".

1. Yes.
2. No limitations except when loading dangerous goods or explosive
3. Yes.
4. Yes.
5. Standard practice – 24 hour customs availability.
6. No.

REGULATIONS: See "Medway".

GENERAL: All shipping movement co-ordinated by Medway Navigati Service, Tel: Sheerness 663025, all arrangements being made afte notification of arrival or departure by vessel's Agent.

AUTHORITY: Port of Sheerness Ltd., Dockyard House, Sheernes Docks, Sheerness, Kent ME12 1RX. *Tel:* (0795) 580003. *Telex:* 9623 *FAX:* (0795) 660093. *Contact:* P. V. Vincent, Chief Executive. Captai D. Stoyles, Harbour Master. D. Crampton, Operations Director.

(C) ISLE OF GRAIN: (B.P. Oil and Thamesport).

B.P. OIL TERMINAL: 51.26 N. 00.43 E. (See Pla

DOCUMENTS:

2 Crew's Effects Lists.
2 Stores Lists.
Ship's Certificate of Registry.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
Ship's Register.
Safety Radio Certificate.
Safety Construction Certificate.
2 Cargo Declarations.
1 Oil Pollution Certificate (OPIC).

PILOTAGE: See "Medway".

ANCHORAGES: *Estuary Passage and Anchorages:* Vesse proceeding to Isle of Grain will initially contact the Thames Naviga Service (Gravesend Radio Channels 16-12) and comply with th 'General Directions for Navigation in the Port of London 1975' u entering the Medway Area. Prior contact should be made with th Medway Navigation Service (Medway Radio, Channels 6-74-9-2 Anchorages are allocated according to size and draft of vessel and outside the Medway area are nominated by the T.N.S.

RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and under-keel clearance appropriate to size of vessel. The declared depth in the Medway Approach Channel is 11.0 m. at chart datum.

No vessels of 130 m. length and above can pass each other in the Medway Approach Channel between sunset and sunrise.

HEALTH: Under new procedures which apply from April 1st, 1978 a Health Clearance is only required if the vessel is "Suspect". In this case the Port Health Authority should be advised by radio message addressed to "Portelth London" not more than 12 hours and where practicable not less than 4 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO:
Notice of 72 hours and over – Portishead Radio.
Notice of 12 – 72 hours – Landsend Radio.
Notice up to 12 hours – from South, Northforeland Radio.
– from North, Humber Radio.

RADAR/VHF: See "Medway".

TUGS: 3 tugs available from 0900 hrs.–1700 hrs. weekdays. If required outside these hours they must be ordered by 1600 hrs. the previous day for night work or by 1600 hrs. on Friday for weekend work. One tug is equipped for fire-fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.

BERTHING: There is one jetty (No. 2) of "T" headed design, suitable for coastal and ocean going vessels, which can accommodate vessels of various sizes up to a maximum of 40,000 tonnes deadweight and 250 m. LOA. Maximum safe draft for the Medway Approach Channel and on the berths can be advised on request.

Deballasting facilities are available for the disposal of ballast from clean oil product carriers only. Ballast containing detergents and chemicals is not accepted.

Also see "Developments".

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.

DENSITY: Approx. 1020.

FRESH WATER: Not available.

FUEL: Only gas oil is available from the jetty, prior arrangements can be made for the delivery of other fuel oils by barge.

FIRE PRECAUTIONS: *Safety Regulations:* A copy of the BP Oil Kent Distribution Terminal Jetty Safety Regulations is put on board each vessel on arrival. The booklet additionally contains various tear-out Check Lists, forms for confirmation of bunker requirements and requests for immobilisation and permitted repairs. These must be completed by ship and shore representatives before operations commence.

REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetties.

GANGWAY/DECK WATCHMEN: *Gangways:* Vessels provide their own gangway and are responsible for maintaining it as a safe means of access.

CUSTOMS ALLOWANCES: At the discretion of the local Customs Officer. Normal allowances are 200 cigarettes (F.G.) or 100 cigarettes (H.T.) or equivalent and 1 bottle of spirits per man. Additionally 1.5 litres of wine per man per day. Separate arrangements apply when crew are leaving ship. Vessels in port more than 4 days may receive an additional allowance.

REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of Foreign Consulate Officials arranged through Agent.

TIME: British Standard Time is GMT plus 1 hour. GMT in Winter months.

TELEPHONES: Public telephone kiosks on the foreshore road.

SHORE LEAVE: The Shift Supervisor will board each vessel on arrival to collect from the Master a copy of the Crew List. This should specify which crew members are leaving the vessel, the names of wives or other visitors expected and, if known, details of crew members joining. It should also note if any crew members are not permitted to go ashore.

The list will be retained by the Shift Supervisor and passes will be issued when crew members pass out and collected from them on their return.

GARBAGE DISPOSAL: 3 skips are provided at the rear of Jetty No.2, one for general waste at £2.00 per sack, one for food waste at £10.00 per sack and one for hazardous material, price on application. A standard charge of £20.00 is made for each visit, only if garbage is to be put ashore.

WASTE OIL DISPOSAL: Tank washings (white oil) and ballast only. 2 shore tanks each of 5,500 tonnes capacity of sea water, at Jetty No.2 only for discharge through arm. No facilities for black oil/engine slops and no facilities available at Jetty No.1.

SEAMAN'S CLUBS: None. Phone box available at rear of Jetty No.2.

CURRENCY: U.K.Pound (U.K.£).

GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for Bond, cash, Consular Officials, etc., should be radioed as soon as possible.

DEVELOPMENTS: Jetty No. 1 to be uprated to take larger vessels. Jetty expected to be available April 1993.

OPERATOR: BP Oil Kent Distribution Terminal, Isle of Grain, Nr. Rochester, Kent ME3 0AG. *Tel:* Medway (0634) 270710. *Telex:* 965584 BP Oil G. *FAX:* (0634) 270509.

THAMESPORT: 51.26 N. 00.42 E.

DOCUMENTS: Same as "Isle of Grain" plus 2 copies Immigration Crew List and 1 copy Port Health Declaration.

PILOTAGE: Same as "Medway", except Pilots require 24 hours, 8 hours and 4 hours notice of ETA Pilotage Station, i.e. "North East Spit" or "Sunk".

ANCHORAGE: See "Medway".

Details via Medway Navigation Service based on vessel's dimensions and nature of cargo.

RESTRICTIONS: Max. draft for access from N.E. Spit through Edinburgh Channel 6.3 m. low tide. As an alternative, vessel can traverse via Long Sand Head, adding approximately one hour passage time to berth. Therefore, 24 hour access to port available.

MAX. SIZE: See "Berthing".

HEALTH: Port Health Declaration to be completed.

Also see "Isle of Grain".

RADIO: See "Isle of Grain" and "Pilotage".

ETA messages should be addressed to Telex No. 965873.

RADAR/VHF: See "Medway".

TUGS: Tugs should be ordered through Agent.

Towage is undertaken by Medway Towage Ltd., Sheerness. Tel: (0795) 664311.

3 tugs stationed for Medway operations: 1×30 tonne bollard pull 2,000 h.p. single screw, 1×30 tonne bollard pull 3,200 h.p. 3,200 h.p. with twin Z propellers, 1×40 tonne bollard pull 2,000 h.p. single screw. 1×55 tonne bollard pull 3,200 h.p. with twin Z propellers (Arriving February 1991).

BERTHING: *Location:* Strategically placed where the River Medway meets the Thames Estuary; just 35 miles from London, connected to the B.R. Rail Network.

Berths: Total berth frontage will be 750 m. on completion of all three stages of construction by 1993.

With the completion of Phase II in November 1991, a jetty of 550 m. × 50 m. linked to the container park by 2 approach bridges, and with a minimum depth alongside of 13.5 m. is now provided.

Phase III will be a six million tonnes a year bulk cargo terminal able to accommodate Panamax bulk carriers drawing up to 16 m. and up to 110,000 tons deadweight (completion before end 1992).

Ship-to-Shore Cranes: Manufacturers: Magrini Galileo Meccanica, Padua, Italy.

Weight: 735 tonnes. Height: 60 m.

Outreach: 47.5 m. Lift capacity: 52.8 tonnes.

Cycle speed: 60 seconds – permitting up to 60 box moves per hour.

Operational in wind speeds up to 45 m.p.h.

Fourth generation, hi-tech cranes with remote-read condition monitoring and fault diagnosis systems.

Serviced from the landside stacking area by a fleet of 22 tractors and 50 trailers, some of which are self-steering and can be linked into five-unit trains.

Container Park Cranes: Manufacturers: Stage I MGM.

Weight: 195 tonnes. Height: 23 m. Width: 30 m.

Lift capacity: 35 tonnes under the spreader, five high across nine rows.

"Cranes with brains" capable of fully automatic container handling through computerised speed and position controls. They also feature condition monitoring and fault diagnosis.

Systems: Thamesport is part of the FCP80 Community Container Network. Advanced internal information systems will link customers, authorities, overseas ports, banks and insurance companies. Customers can access at will for current cargo status. The fully duplicated systems are further backed up by standby generators and Uninterruptable Power Supply systems.

CRANES: See "Berthing".

BRIDGES: None.

STEVEDORES: Labour will be arranged based on vessel's final ETA.

MEDICAL: 24 hours advance notification required by Agents for any medical requirements.

TANKERS: See "Isle of Grain".

DENSITY: Approximately 1020.

FRESH WATER: No pipelines on quay at Thamesport. Fresh water available by barge, 24 hours notice required via Agent.

FUEL: See "Isle of Grain".

FIRE PRECAUTIONS: Shift managers attend each vessel on arrival, and provide full safety requirements and full emergency co-ordination instructions.

CONSULS: See "Rochester".

REPAIRS/SURVEYORS/REPATRIATION: All available through prior notification via Agent.

GANGWAY/DECK WATCHMEN: See "Isle of Grain".

HATCHES: Handled amicably by either party.

CUSTOMS ALLOWANCE: See "Isle of Grain".

TELEPHONES: Available on quay and in nearby offices.

STORING: Many local ship supply services available. Vessels can be stored ex-quay under terminal supervision, and stevedore assistance can be provided as required.

SHORE LEAVE: Possible, bar any immigration restrictions.

DELAYS: None anticipated.

DEVELOPMENTS: See "Berthing".

AUTHORITY: Port of Sheerness Ltd.

Operator: Thamesport (London) Ltd., Isle of Grain, Kent ME3 0EP. *Tel:* (0634) 271511. *Telex:* 965873. *FAX:* (0634) 270384.

Contact: A.R.G.Macleod, Managing Director.

(D) CHATHAM DOCKYARD: 51.24 N. 00.33 E.

(See Plan)

Until 1984 the Naval Dockyard and now operated by the Medway (Chatham) Dock Co. Ltd., under the control of the Medway Ports Authority.

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: See "Sheerness".

MAX. SIZE: All berths in Basin No. 3 can accommodate vessels drawing up to 8.0 m. The locks can accept vessels of 143 m. length provided the beam does not exceed 25 m. Canalling can be arranged for vessels in excess of 143 m. subject to turning circle limit. Vessels drawing up to 4.5 m. can be accommodated at any state of the tide.

RESTRICTIONS: Movement of vessels subject to tidal conditions and under keel clearance appropriate to the size of vessel. Entry as directed by Medway (Chatham) Dock Co. Ltd. on VHF Channel 73.

Limiting Depths: Medway Approach Channel 8.5 m. at Chart Datum.
Long Reach 5.8 m. at Chart Datum.
North Lock 4.7 m. at Chart Datum.
South Lock 4.2 m. at Chart Datum.

HEALTH: See "Medway (Rochester)".

RADIO: Portishead. From South: Lands End, Niton, North Foreland. From North: Cullercoats, Humber, North Foreland.

VHF/RADAR: See "Medway".

TUGS: A number of tugs are available, operated by J. P. Knight Ltd., and Crescent Wharves.

BERTHING: Access to Basin No. 3 is via the North or South Lock situated at Bull Nose in Gillingham Reach. A & P Appledore Limited carry out voyage repairs, services, etc. in Basin No. 3. Tel: Medway (0634) 812401/827369.

All 8 berths are presently confined to No. 3 (Outer) Basin.

Berth No.	*Length* (m.)	*Cranes* (tons)	*Operator*	*Remarks*
1	136	None	Kent Wire Ltd.	Weldmesh Manufacture
2	190	None	Kent Line/ Norfolk Line	Ro/Ro Ferry Terminal
3 4	244	1×5 1×10 1×20 1×11 (mobile)	Crescent Wharves Limited	General Cargo Ro/Ro Berth
5	108	1×5	A & P Appledore	Shiprepairing
6	152	None		Ro/Ro Berth
7	108	None	Common User	Ro/Ro/Sto/Ro Berth
8	184	2×6 1×20	Ship-Link Terminals Ltd.	Sto/Ro Terminal

For further details contact: Mr. J. F. Simmonds, Locks Manager. Tel: Medway (0634) 405397/814936.

STEVEDORES: All stevedoring provided by the berth operators (see "Berthing").

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilties available in surrounding area.

DENSITY: 1020 (within Basin No. 3).

FRESH WATER: Metered supply available on all berths.

FUEL: No facility within the dockyard for the supply of fuel, although subject to weather conditions being suitable, bunkering from barges can take place in the anchorages.

REPAIRS: All types of deck and engine repairs can be carried out either in berth, in dry dock or at river buoys. (See "Berthing").

DRY DOCKS: No dry dock available at Chatham Docks. Dry docks available at Sheerness and Chatham Historic Dockyard.

SURVEYORS: Cargo surveyors available from London or Gravesend.

GANGWAY/DECK WATCHMEN: Ship's responsibility.

REPATRIATION: Usual facilities available for crew changes. Repatriation can be arranged by various sea routes or by air through Heathrow or Gatwick.

TELEPHONES: 4 public telephone kiosks are available on the quayside. In an emergency contact Docks Security on Medway 827130 or Locks Office on Medway 827317, or by radio, call sign "Bullnose" on Channel 73. Alternatively call Medway Port Operations and Information Service, call sign "Medway Radio" on Channels 16, 74 or 11. (Tel: 663025).

REGULATIONS: See "Medway".

GENERAL: All shipping movements co-ordinated by Medway Port Operations and Information Service.

GARBAGE DISPOSAL: To be arranged direct with Terminal Operator.

WASTE OIL DISPOSAL: To be arranged direct with Terminal Operator.

SEAMAN'S CLUBS: None.

AUTHORITY: Medway (Chatham) Dock Co. Ltd., Flagstaff House, Chatham Docks, Chatham, Kent ME4 4SW. *Tel:* (0634) 814936. *Telex:* 966642. *FAX:* (0634) 830915. *Contact:* Mr.J.F.Simmonds, Locks Manager.

Details of alongside berths handling equipment, latest depths a relevant information can be obtained from the appropriate wha concerned.

Current depths can be ascertained from Medway Navigation Servic

Pier Wharf: (Lat. 51° 24′ North; Long. 0° 33′ East)

Situated at the Western Arm of Gillingham Dock. Length of wha 183 m. with varying depths from 3 m. to 5 m. at MHWS. Stora warehouses and storage capacity available.

Ship repair and boat builder – Medway Marine Engineering – ST 0634 - 576600.

Tylers Wharf: (Lat. 51° 24.6′ North; Long. 0° 34′ East)

Situated at West Hoo Creek owned and operated by the Lifel Moulding Co. Ltd. Length of wharf 73 m. with a depth of 3 m. at MHWS Large sheerlegs of 30 tons and mobiles available. Boat builders a outfitters.

Mooring Facilities: Buoys are provided at points within the River Medwa and Swale. Arrangements to use these buoys and current charges ca be made through Port of Sheerness Ltd.

Kethole Reach: Buoys 20, 21, 22, 23 and 24: 4 fore and aft moorin to accommodate vessels up to 200 m. length and 16,000 tonne displacement.

Saltpan Reach:

Buoy No.	*Class*	*Maximum Displacement*	*Remarks*
1	3rd	1,000 tons	Max. Length 122 m.
2	Super 1st	70,000 tons	Max. swinging circle 300 m.
5	4th	1,000 tons	
9	4th	1,000 tons	
10	4th	1,000 tons	

MEDICAL: Port Medical Officer available if necessary on arrival a Sheerness with 24 hours notice to Agents. Doctor and hospital faciliti available at Rochester.

DENSITY: 1020 unless excessive land water coming down river.

FRESH WATER: Quantities up to 200 tons available for delivery b water barge.

FUEL: Oil bunkers may be obtained at the main installation at the Is of Grain Oil Refinery or by barge or by road tanker. The last 2 method require minimum 48 hours notice, similarly with supplying lubricating o which is not available at the Isle of Grain.

CONSULS:

Vice-Consul Netherlands, Tel. Medway 43256.
Consul Sweden, Tel. Medway 44632.
Vice-Consul Finland, Tel. Medway 44632.

REPAIRS: The Medway Dry Dock Co. Ltd. (Tel: Sheerness STD 079 – 662241/662461) provide 2 Dry Docks of 87.84 m. and 65.58 m respectively. A smaller slipway is available and alongside berths als

Acorn Shipyard (ex New Medway), Gas House Road, Rochester, Ke ME1 1PJ (Tel: Medway STD 0634 – 41355/6/7), provide ship repa facilities at the Isle of Grain; Sheerness and River Medway, and opera 1 patent slipway of 85.0 m. working length and 1 grid situated a Rochester.

DRY DOCKS: All repair facilities available on river berths for vesse up to 60.96 m. (200 ft.) in length; on a grid for up to 76.19 m. (250 ft and a slipway for up to 42.67 m. (140 ft.).

OPENING/CLOSING HATCHES: To be carried out by crew.

CARGO GEAR: Discharge by ship's gear at ship berth and by mobi cranes up to 10 tons at all river berths.

AIRPORTS: London (Heathrow), Southend, Gatwick and Rocheste

POLICE/AMBULANCE/FIRE: Dial 999 and state service required a where vessel berthed, also contact Medway Radio in cases o emergency.

SERVICES: Compass adjustors available.

REGULATIONS: See "Medway".

DEVELOPMENTS: Development of Frindsbury Marshes (Rocheste

AUTHORITY: Port of Sheerness Ltd.

(F) OTHER FACILITIES:

(1) BLOORS WHARF – RAINHAM CREEK: 51° 22′ 48″ N., 00° 36′ 42″ E.

Situated at the head of Rainham Creek a distance of 10.3 nautical miles from Rochester. Main wharf 183 m. long with 3.1 m. at MHWS. The Western arm is 61 m. long with a depth of 2.1 m. at MHWS. 5×2.5 tonne grab cranes and 2×40 tonne crawler cranes.

Mobile cranes, forklifts and crushing equipment available. Large storage capacity and warehouses also available. Shipbreaking and recycling of metals.

This wharf temporarily not in use due to Medway Metals Ltd. being in receivership.

(2) FAVERSHAM: 51° 19′ N., 00° 54′ E.

DOCUMENTS: See "London".
PILOTAGE: Not compulsory. Advisable to engage local person by arrangement with Agent or contact Medway Navigation Service.
ANCHORAGE: The Swale (East) 1 mile (approx.) upstream of the Sand End buoy.
RESTRICTIONS: No night restrictions. Tidal creek – vessels enter from 1.5 hours before High Water according to draft.
MAX. SIZE: 43 m. LOA, 7.6 m. beam, 2.7 m. draft, on Spring tides only. Larger vessels may be accepted under certain conditions on application to the Harbour Master.
RADIO: North Foreland.
VHF/RADAR: See "Medway".
TUGS: None available.
BRIDGES: Maximum size of vessels proceeding to basin above Faversham Swing Bridge – 43 m. length, 7 m. beam. Draft – the minimum clearance for vessels up to 34 m. in length is 0.5 m. over the sill, and for longer vessels 0.6 m. over the sill.
MEDICAL: Notify Agent of any medical treatment required.
FRESH WATER: Available on some berths.
FUEL: No local installation. Bunkers may be obtained by road tanker – contact Agent.
REPAIRS: Minor repairs can be carried out locally. For nearest grid, slipway and dry dock facilities see "Rochester" and "Sheerness".

(3) KINGSNORTH: 51° 25′ N., 00° 36′ E.

DOCUMENTS: See "London".
PILOTAGE: See "Medway."
ANCHORAGES: Vessels proceeding to Kingsnorth must contact Medway Navigation Service (VHF Channels 16 and 74) when a designated anchorage will be allocated appropriate to the size of the vessel.
RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and under keel clearance appropriate to size of vessel. Minimum depth of 6.0 m. in Long Reach at Chart Datum.
MAX. SIZE: Max. length: 229 m. No breadth restriction. Depth: 6.3 m. min. depth alongside at Chart Datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Notice of 72 hours and over, Portishead Radio. Notice of 12-72 hours. Landsend Radio. Notice of up to 12 hours, from South, Northforeland Radio, and from North, Humber Radio.
RADAR/VHF: See "Medway".
TUGS: Although tugs are not normally required for berthing at Kingsnorth 5 tugs are available, 2 of them equipped for fire fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.
BERTHING: *Kingsnorth Jetty:*

Lat. 51° 24′ 36″ N.
Long. 0° 36′ 18″ E.

The jetty is owned and operated by Powergen and is situated at the Western end of Long Reach a distance of 6.3 nautical miles from Sheerness and 5.85 nautical miles from Rochester.

The jetty is of concrete construction and is 580 m. long and "L" shaped with a 306.3 m. face, there is a single upstream connected dolphin making an overall face of 330.7 m.

The size of vessels using the jetty are governed by draft.

Minimum depth at MLWS is 6.9 m.
MHWS is 12.8 m.

There is an inner spur situated on the approach arm 396 m. from the jetty face. It is primarily intended for stern Ro/Ro craft, and has 2 starboard berthing dolphins situated at 30.5 m. and 61.0 m. respectively.

Depth at MLWS is 0.6 m. above Chart Datum.
MHWS is 5.3 m.

The jetty is used for the import of coal for Kingsnorth Power Station.

Address:
Kingsnorth Power Station
(South Eastern Region)
Hoo, Rochester,
Kent ME3 9NQ
Telephone: STD 0634 – 250088 Telex 965015

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.
TANKERS: Advisable radio Agents connection sizes required. No slop tank available. 1 large tanker berth only.
DENSITY: Approx. 1018.
FRESH WATER: Available by pipe-line on jetty.
FUEL: Bunkers not usually available on jetty, but may be delivered by barge. Advance notice essential.
FIRE PRECAUTIONS: No immobilisation or repairs allowed without prior authorisation. No hot-work allowed alongside jetty.
REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetty.
GANGWAY/DECK WATCHMEN: Services of shore watchmen not necessary. Shore gangway may be used.
REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of British Ministry and Foreign Consulate officials arranged through Agent.
POLICE/AMBULANCE/FIRE: Dial 999 from public call box. Medway Navigation Service can be alerted on Channel 16 and 74 to call these services.
TELEPHONES: No facilities exist for placing telephones onboard.
GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for bond, cash, consular officials, etc., should be radioed as soon as possible.

(4) OAKHAM NESS JETTY: 51° 24′ 55″ N., 00° 38′ 45″ E.

The jetty is jointly owned and operated by Powergen and K.C.A. International Ltd. and is situated in Kethole Reach a distance of 4.5 nautical miles from Sheerness (Garrison Point). The jetty is of concrete construction and is 1,960 m. long. The jetty head is 27.5 m. long with upstream and downstream attached dolphins making a 85 m. face. There are 2 further berthing dolphins unattached, both upstream and downstream. The max. size of vessel permitted on the jetty is restricted to 55,000 d.w.t. with a max. length of 229 m.

The depth at MLWS is 10.6 m.
at MHWS is 16.7 m.

Powergen have a separate storage capacity of 300,000 tons for crude oil primarily for Kingsnorth Power Station.

(5) OTTERHAM QUAY – RAINHAM: 51° 22′ 30″ N., 00° 37′ 42″ E.

Situated at the head of Otterham Creek a distance of 2.75 nautical miles from the junction of Long Reach and Kethole Reach and 10.25 nautical miles from Rochester.

There is 192 m. of quay space with a max. length restriction imposed on loaded vessels of 73 m. There is 3.3 m. at HWNT and 4.6 m. at HWST.

The Quay is owned and operated by Crescent Port Services Ltd. Telephone STD 0634 – 815501. Telex: 96312.

(6) QUEENBOROUGH: 51° 26′ N., 00° 44′ E.

Area of harbour extends from Queenborough Spit to Long Point in the West Swale. Queenborough Creek is landlocked and small commercial interests operate within the creek which is buoyed, all berths dry out but are safe berths.

MHWS 5.8 m. Weather – prev. S.W.

The ex-Coal Wharf known as the Washer Wharf, situated at Loden Hope is operated by Queenborough Rolling Mill Ltd. (Tel: Sheerness 668080) and is primarily used for loading scrap metals.

(7) RIDHAM DOCK: 51° 23′ N., 00° 46′ E.

Situated 900 m. (0.5 nautical miles) S.E. of Kingsferry Bridge in the Swale. Restrictions on vessels governed by Pilots in the light of water available in the Swale, Kingsferry Bridge and restricted bends in the navigational channel. Max. LOA 102 m. Beam 15.3 m. and draft 6.7 m.

Beam of vessels transitting Kingsferry Bridge restricted to 15.3 m. maximum.

Vessels of 82 m. and over LOA require a tug in attendance.

Ridham Dock is owned and operated by Independent Sea Terminals (Tel: STD 0795 – 70881). The terminal has 4 berths, 2 of 244 m. and 2 of 213 m. approximately. These are serviced by 8 electric cranes 2×6 tonnes and 6×5 tonnes. There is a fleet of forklift trucks 8,000 lbs. to 36,000 lbs. plus a 25 ton container handler. 5 hectares of marshalling area for containers including refrigerator points.

Vessels dock only on or near HW and take the ground at LW, the bottom being soft mud. Special facilities for reefer ships going aground.

The terminal covers approximately 26.7 hectares and 13,000 sq.m. of warehousing are available.

Authority: Independent Sea Terminals Ltd., Ridham Dock, Sittingbourne, Kent. *Tel:* 0759 70881. *Telex:* 96409.

METHIL: 56.11 N. 03.01 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".
ANCHORAGES: Deep water anchorages available in Largo Bay.
RESTRICTIONS: Dock gates opened from 3 hours before HW until HW.
MAX. SIZE: Max. beam 14.6 m. to pass dock gates.
RADIO: See "Leith".
VHF: Methil Harbour Radio on Channel 16. Working Channel 14.
TUGS: Available from Leith.
BERTHING: Dock No. 1 has 340 m. of berthing space, max. depth alongside 6.7 m. MHWS. Dock No. 2 has 500 m. of berthing space, max. depth alongside 7.9 m. MHWS. Transit shed with 2,000 sq.m.
CRANES: 4×4 tonne mobile cranes (with grabs) available.
BULK CARGO FACILITIES: 2×1,000 tonnes capacity grain silos and discharge plant at No. 1 Dock (private).

2,000 tonne capacity storage shed and 50 tonne weighbridge (Private).

STEVEDORES: Forth Ports Authority.
GARBAGE DISPOSAL: To be arranged by local agents.
WASTE OIL DISPOSAL: To be arranged by local agents.
SEAMAN'S CLUBS: None.
AUTHORITY: Forth Ports Authority, Dock Office, Methil KY8 3RE. *Tel:* Leven (0333) 26725. *Telex:* 72208. *FAX:* (0333) 24872.
Contact: Captain T.S. Sutherland, Port Superintendent.

MILFORD HAVEN: 51.42 N. 05.10 W. (See Plan)

PORT LIMITS: The seaward boundary of the port is 3 miles from St. Ann's Head.

DOCUMENTS:
5 Crew Lists.
2 Crew Stores Declarations (C.142)
2 Ship's Stores Declarations (C.13)
2 E.E.C. Safety Check Lists.
Agents will prepare other Customs papers.

Ship's Papers:
Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Oil Pollution Insurance Certificate (tankers).
British Tonnage Certificate (if applicable).
U.K. Light Dues for current year (if applicable).

PILOTAGE: Pilots normally board incoming ships from a green-hulled pilot vessel, in a position S.W. of Mid-Channel Rock Light-tower, as close thereto, as weather, size of ship and circumstances permit. When the Western Channel is being used by very large ships other ships may be requested by the Port Signal Station, or by the pilot vessel, to use the Eastern channel, if draft, and length of ship permit, in which case the Pilot will board close to Sheep Buoy. Deep-draft ships should not approach too close whilst awaiting the pilot vessel. They should remain at least 4 miles S.W. of Mid-Channel Rock Light-tower. It is important, when manoeuvring at slow speeds to embark a Pilot to make proper allowance for the set of the tidal stream, which sets across the entrance.

Accurate times of arrival are requested so that the pilot vessel may be on station at the correct time. ETAs should be given at least 12 hours before arrival and amendments should be made 2 hours before the latest ETA.

ETAs and subsequent amendments should be passed by telex or radio telephone through any United Kingdom Coast Station to Milford Haven Signal Station (Milford Haven 692342 or 692343. Telex: 48575) or to the local Agent of the ship. Alternatively when within 30 miles of St. Ann's Head ETA's may be passed direct to Milford Haven Port Authority Signal Station calling on VHF Channel 16 then transferring to Channel 12 (the Port working frequency). In addition pilot vessels are equipped with MF radio calling on 2,182 kHz and transfer to the working frequencies 2,241, 2,246 or 2,301 kHz. However, VHF contact is preferred.

ANCHORAGES: Anchorage normally available for vessels up to 40 ft. draft in Dale Roads. Anchorage for smaller vessels normally available in Dale Shelf or Stack anchorages. Signal Station will advise mariners on the availability of these anchorages.

RESTRICTIONS: The West Channel with minimum depth of 55 ft. at the entrance and 54 ft. inside is the channel used by the largest tankers. The East Channel with minimum depth of 32 ft. is available to all vessels of suitable size and vessels able to do so are requested to use it when the largest tankers are entering or leaving in the West Channel. The inner channel between Chapel Buoy and Westward of Texaco Jetty has a minimum depth of 53 ft.

MAX. SIZE: Vessels of 65 ft. draft can be handled on virtually all high waters, but draft restriction always dependent on tide, 63 ft. at worst HW Neaps, or up to 68 ft. in favourable conditions.

HEALTH: The Port Health Authority must be notified in advance if any animals on board or of any suspected disease or fever (Milford Port Health Authority. Tel: (0646) 692486. Fax: (0646) 690505).

Also See "Health – All Ports" before first U.K. port.

RADIO: Lands End Radio, Ilfracombe Radio, Celtic Radio and Cardigan Bay Radio (use working channels to call).

VHF: It is important to maintain continuous radio telephone contact with Signal Station when within one hour's steaming of St. Ann's Head, and at all times when in Haven and not safely moored to an alongside berth, including all times spent at anchor or at buoys.

All vessels equipped with VHF radio should adopt following procedures:

Entering the Harbour: Contact Signal Station on Channel 16 when within one hour's steaming of St. Ann's Head. After making contact ship will be requested to maintain watch on Channel 12 until vessel safely moored alongside or at anchor.

Going to anchor or to a buoy mooring: Report to Signal Station when secured and then maintain a continuous watch on Channel 16.

Berthing alongside: Report to Signal Station when safely moored and may then shut down.

Leaving the Haven: Maintain continuous listening watch on Channel 12 until Pilot has disembarked, when Signal Station should be informed and vessel should maintain a continuous watch on Channel 16 until one hour after passing St. Ann's Head.

Navigating within the Haven: Maintain a continuous watch on Channel 12. When radio telephone is used between vessel and tugs during berthing operation, Channel 6 or 8 will be used and Signal Station should be informed before vessel comes off Channel 12.

Signal Station will answer calls on Channel 16 for any ship in the port which has been instructed to move off international calling frequency.

RADAR: Harbour surveillance radar in operation, range 24 miles.

TUGS: Tugs normally join vessels to Westward of Herbrandston Jetty, but Master will be advised by Pilot. Tug's lines used, cost of lines inclusive of towage charge.

BERTHING: VLCCs enter at HW and normally berth heading East. Vessel will be required to swing after unloading and prior to departure.

Milford Docks: Enclosed dock, minimum depth on sill 26 ft., lock length 550 ft., width 69 ft., 5,033 ft. of quayage includes 420 ft. fish market and two modern cargo handling berths, one of 732 ft. and the other 455 ft. in length. Vessels of up to 34 ft. draft may be handled on Spring tides.

Pembroke Dock:
Govan Davies Dock:

Quay	*Length* (ft.)	*Depth at C.D.* (m.)	*Remarks*
1	600	10.8	Can accept bulk carriers and container vessels up to 700 ft
2	354	8.0	Can accept bulk carriers and container vessels up to 450 ft
3	235	6.1	Can accept general cargo vessels up to 340 ft.
4	1,000	—	To be built.

Vessels with Ro/Ro ramps (bow or stern) can berth in the bas between Berths No. 2 and 3.

Mainport Jetty: One cargo berth, depth 20 ft., for vessels up to 350 f length. Max. size approximately 6,500 d.w.t.

CRANES: In Milford Docks – 1×25 ton mobile, 2×6 ton electric. Furthe mobile cranage available if required.

SPECIALISED CARGO HANDLING FACILITIES:

Containers: Container traffic is handled at Milford Docks although the is no specialised container handling equipment.

Ro/Ro: Pembroke Dock Ferry Terminal has one Ro/Ro berth, dep alongside 21 ft., and can accommodate ferries up to 425 ft. in lengt max. size 6,000 g.r.t. (approx.).

LPG: LPG is handled at the Elf, Gulf and Texaco oil terminals.

STEVEDORES: Ordered prior to arrival.

MEDICAL: All oil terminals have well equipped medical centres. Loca hospital facilities available.

TANKER TERMINALS:

Elf:

Berth No. 1: Depth 64 ft., 4×16 in., crude line, 2×12 in. and 1×8 in product line, max. size 275,000 d.w.t.

Berth No. 2: Depth 38 ft., 1×12 in., 2×10 in. and 3×8 in. produc lines, 1×8 in. and 1×6 in. LPG lines, max. size 30,000 d.w.t.

Berth No. 3: Depth 22 ft., 3×8 in. and 2×6 in. product lines, 1×8 in and 1×6 in. LPG lines, max. size 5,000 d.w.t.

Herbrandston:

Ex-Esso Terminal. New general purpose terminal with 5 berths, abl to handle VLCC size ships to coasters (1 large berth only in use).

Gulf Oil:

Berth No. 1: Depth 44 ft., 1×8 in., 4×10 in. and 1×12 in. cargo lines max. size 65,000 d.w.t.

Berth No. 2: Depth 55 ft., 2×10 in. and 4×12 in. cargo lines max. size 870 ft. LOA.

Berth No. 3: Depth 32 ft., 3×8 in. cargo lines and 1×6 in. LPG max. size 12,000 d.w.t.

Texaco:

Berth No. 1: Depth 66.25 ft., 4×16 in. crude, two of which can b used for fuel oil, and 4×12 in. clean oil cargo lines. All clean oil and fue oil arms can take ballast. Max. size 275,000 d.w.t.

Berth No. 2: Depth 47.56 ft., 2×12 in. LPG ship discharge lines wit 1×8 in. vapour return line, 4×10 in. black oil, 6×10 in. clean oil an 2×10 in. ballast/bunker lines, max. size 100,000 d.w.t. (75,000 cu.m LPG).

Berth No. 3: Depth 39.36 ft., 1×12 in. Refrigerated Butane ship discharge with 1×4 in. vapour return line and LPG ships with a 4 in arm. 2×12 in. black oil and 4×10 in. clean oil lines. All clean oil and fuel oil arms can take ballast. Max. size 35,000 d.w.t. (30,000 cu.m LPG).

Berth No. 4: Depth 19.02 ft., 1×8 in. black oil, 1×6 in. and 2×8 in clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 2,000 d.w.

Berth No. 5: Depth 20.00 ft., 1×8 in. black oil, 1×6 in. and 2×8 in clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 4,500 d.w.

Berth No. 6: Depth 65.92 ft., 4×16 in. cargo lines, max. siz 275,000 d.w.t.

Berth No. 7: Out of commission.

Berth No. 8: Out of commission.

No ballast facilities at Berth No. 6.

Report: *Cautionary Advice:* In-Port: There are 3 major oil termina within the Haven and the previous Esso Terminal, now the Herbrandsto General Purpose Terminal, which is located less than 2 miles E.N.E. o the Angle Buoy. Ships bound for this terminal make tugs fast betwee the Angle Buoy and South Hook Buoy.

VLCCs which require 5 or 6 tugs have little but adequate time to mak them fast. It is, therefore, extremely important for a deep tanker boun for a terminal in the Haven to have everything ready and the crew a stations prepared to make tugs fast by the time the Angle Buoy i reached and that after the turn is made the speed over the ground i reduced quickly so that by the time the South Hook Buoy is reache all tugs are fast and speed reduced to about 2.5 knots.

Ships bound upstream of Herbrandston Terminal must proceed at th slowest speed consistent with safe navigation, as they pass quite clos to ships lying alongside other terminals and can cause considerab "passing ship" problems. They usually make tugs fast after passin South Hook Buoy.

Berth Approaches: Ships are strongly advised against steaming into th berths at any terminal.

The only safe manoeuvre being to bring the ship to rest, stopped ov the ground, parallel to and about 40 m. – 60 m. off the berth bef breasting in.

This particular manoeuvre is of importance to vessels of 70,000 d.w and over.

Most of the incidents during berthing operations have arisen becau of a combination of an angled approach to the berth, excessive headw and berth approach speed with a sheer resulting from strong aste engine movements.

Anchorages: Ships of up to 12.00 m. draft for which there is no ber available on arrival can find anchorage within the Haven. (See belo Deeper draft ships which have to wait for tide or berth should rema outside the port well offshore, maintaining a listening watch on VHF Channel 16, and allowing sufficient time to reach the entrance at the proper time for shipping the pilot to enter port.

Anchorages within the Haven: The recognised anchorages within the Haven are shown on the large scale charts, and the Milford Haven Port Authority Signal Station must be consulted before ships use their anchorages.

Dale Roads is the only anchorage for ships over 7.00 m. and under 12.00 m. draft. It is exposed to wind and swell and has an uneven rocky bottom which does not always afford a good holding ground. *Many ships have dragged anchor here and several have lost an anchor, and it is emphasised that a full anchor watch must be maintained on all ships with a listening watch on VHF Channel 12.*

If at anchor in Dale Roads at the onset of a gale, it is usually sound advice to pick up the anchor and proceed to sea. After rounding the Angle Buoy, if Mid-Channel Rock Lighthouse is kept fine on the port bow, this will take a ship clear of dangers. Before departing, the status of the buoys should be checked out with the Signal Station and then proceed with caution.

The 2 entrance buoys should not be relied upon as they sometimes drag out of position during gales.

Stack Anchorage can be used by medium sized ships of up to 7.00 m. draft. It is a little more sheltered and has a better holding ground.

Small ship anchorages are at Dale Shelf, Sandy Haven, and with the exception of LPG ships between Milford Shelf Buoy and Newton Noyes Pier. Some small ships find shelter South of the channel opposite the Herbrandston Terminal.

Herbrandston Terminal – Cautionary Advice: Each berth has a designed maximum speed of approach for the maximum size ship acceptable.

The berths are in an exposed position with prevailing winds blowing on to the berths. Strong winds from the Northerly semi-circle do occur and usually with a sudden shift in wind. Ships with high freeboard can be badly affected by these strong winds and it is, therefore, very important that moorings are kept tight and are properly tended at all times.

Description of Berthing Procedures: All vessels berth head to tide. Ships of less than 265 m. and 14.6 m. draft can be berthed on the flood tide and, therefore, swung before berthing. These ships are usually swung off the berth. Ships of greater draft will always berth at HW or on the ebb tide and will, therefore, always be port side to.

All moorings are taken ashore by boat and lifted on to the dolphins by power winch.

Breast and spring lines are usually put out first.

Good messengers are required at each position for this operation. This system is for VLCCs only.

DENSITY: 1025.

FRESH WATER: Available at all berths.

FUEL: All oil terminals can supply all grades of bunkers. Fuel also available within Milford Docks and from bunkering barge elsewhere in the Haven.

FIRE PRECAUTIONS: Fire wires to be rigged fore and aft on all tankers.

CONSULS: The following countries are represented by Consuls at the port or elsewhere in South Wales: Others may be available.

Belgium
Denmark
Finland
France
Italy
Liberia
Netherlands
Norway
Sweden
Thailand
Turkey

REPAIRS: All types of deck and engine voyage repairs carried out.

DRY DOCKS: One dry dock at Milford Docks, 600 ft. × 63 ft. × 18 ft. with cranage.

SURVEYORS: Lloyd's at Swansea, ABS and NV in South Wales. Cargo inspectors available – Saybolt, Moore, Barrat and Redwood have local offices.

GANGWAY/DECK WATCHMEN: Available if necessary – very rarely required.

CUSTOMS ALLOWANCES: Tobacco, 0.045 kg. per man per day. Spirits, 0.185 litres per man per day.

REPATRIATION: Crew changes frequently carried out and repatriation arranged. Crew arriving by rail to join vessels at Elf, Herbrandston, Gulf and Milford Docks should be directed to Milford Haven station. If joining vessels at Texaco to Pembroke station, and for vessels at Port Operators and Storage or Pembroke Dock Ferry Terminal, to Pembroke Dock station.

AIRPORT: Nearest main airport is Cardiff (Wales) Airport, distance approximately 100 miles. Some international flights and flights to London for onward connections.

TIME: GMT in Winter months, BST (GMT plus 1 hour) March to October.

HOLIDAYS: Oil Terminals operate 24 hours/365 days. Other berths observe standard U.K. holidays but cargo work can be arranged if required.

POLICE/AMBULANCE/FIRE: Police – Milford Haven 692351, Pembroke 682121; Ambulance – Haverfordwest 763355, 236444; Fire – A Division, Carmarthen 231184, B Division, Haverfordwest 762131.

EMERGENCY CO-ORDINATION CENTRE: Emergencies within the port are co-ordinated by the Milford Haven Port Authority Signal Station. Emergencies outside the port and S.A.R. co-ordinated by H.M. Coastguard St. Ann's Head (Tel: Dale 636218).

TELEPHONES: No telephones on board. Public call boxes exist on all oil jetties.

SERVICES: Ministry of Defence compass adjuster available subject to operational commitments.

STORING: Vessels can be stored by barge or truck and local riggers are available to assist. Storing can normally take place during cargo operations but, in the case of oil tankers, trucks cannot proceed alongside the ship and storing from a barge must be carried out near the stern of the ship. Fork lift trucks cannot be used to store oil tankers.

SHIP SUPPLY SERVICE: D.V. Howells and Sons Ltd., P.O. Box 14, Milford Haven, Dyfed SA73 3ER. Tel: Milford Haven (0646) 693091/692418. Telex: 48575.

Marine & Port Services Ltd., The Dockyard, Pembroke Dock, Dyfed SA72 6TF. Tel: Pembroke (0646) 682271/5. Telex: 48303.

Additionally, there is a tug company operating in Milford Haven with a fleet of locally based tugs whose prime duty is the berthing and unberthing of tankers at oil terminals in the Haven and firefighting responsibilities, although occasionally a tug may be called offshore for salvage purposes. The tug company is Cory Towage Ltd., Slip Hill, Milford Haven, Dyfed SA73 3BB. Tel: Milford Haven (0646) 692296/7.

There is a helicopter squadron based at RAF Brawdy, Haverfordwest, which provides a rescue service and, on occasions, airlifts seriously injured or sick personnel from ships in the area, usually on request through the local Coastguard Station.

SHORE LEAVE: Shore leave allowed.

IDENTIFICATION CARDS: Not necessary.

GARBAGE DISPOSAL: Service provided by terminal operators.

WASTE OIL DISPOSAL: Service provided by terminal operators.

SEAMAN'S CLUBS: The Merchant Navy Club, Robert Street, Milford Haven, Dyfed. Tel: 692553. Facilities include telephones, bar, snacks, restaurant, juke box, TV lounge, pool, library.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Milford Haven Port Authority, P.O.Box 14, Milford Haven, Dyfed, SA73 3ER, U.K. *Tel:* Milford Haven (0646) 693091 office, Milford Haven Signal Station (0646) 692342 or 692343. Signal Station – 24 hours. *Telex:* 48575 – 24 hours. *FAX:* (0646) 690179. *Contact:* Captain J. E. Frost, Harbour Master.

AGENT: G. S. Kelway Ltd., Murray Crescent House, The Rath, Milford Haven SA73 3JR, Dyfed. Tel: Milford Haven 692313/4. After hours: Milford Haven (0850) 692313, (0646) 695587, 695905, 693341. Telex: 48213. Fax: (0646) 692706. Cables: "Kelway Milford Haven".

MISTLEY: 51.57 N. 01.05 E. (See Plan)

LOCATION: Private port situated on the River Stour within Harwich Harbour. Seven tidal berths, vessels lay safe aground (also see "Harwich").

DOCUMENTS: Normal requirements – local Agents will advise.

PILOTAGE: Order via Agents or direct with Harwich Pilots.
Call sign: "Harwich Pilots".
VHF: Channel 16 and 9.
Telephone: Harwich (0255) 3129.
Telex: 98472.

Compulsory ETA 8 hours before arrival and 2 hours confirmation. Details required: Name of vessel, ETA, destination, max. draft., g.r.t.

ANCHORAGES: Safe anchorage in Harwich Harbour or Cork Pilot Station.

RESTRICTIONS: Vessels can enter/depart on HW, according to state of tide and draft. Day and night navigation.

MAX. SIZE: No length or beam restrictions. Draft varies between 3.3 m. Neap tides to 4.3 m. Spring tides except Berth No. 1 with a draft variation of 4.6 m. neap tides to 5.6 m. spring tides (subject to max. LOA 90 m.). Further dredging of the channel is taking place and will result in a further increase in max. draft for Berth No. 1.

HEALTH: As per Port Health Regulations. See "Harwich".

RADIO: Northern Approach: Humber Radio, Tel: (0521) 73447.
Southern Approach: North Foreland Radio, Tel: (0843) 20592.

VHF: Harwich Harbour Radio, Channel 14.

TUGS: Available from Felixstowe and Mistley via ship's Agents.

BERTHING: Instructions given via Pilot or Agents. Loading/discharging via shore cranes/elevators.

CRANES: Mobile cranes up to 12 tons, and Scotch Derrick up to 30 tons.

BULK HANDLING FACILITIES: Bulk cargo facilities available for discharge of grain, ores, fertilisers, etc., by grab. Loading elevators for grain, etc.

STEVEDORES: All cargo handling instructions and enquiries to: Mistley Quay and Forwarding, High Street, Mistley, Manningtree, Essex. Tel: 0206 394431. Telex: 98692. Fax: 0206-393882.

MEDICAL: All requirements via Agents with advance notice.

DENSITY: 1026.

FRESH WATER: Available with notice. Up to 12 tons-charge £24.20 plus overtime charges if incurred.

FUEL: Bunkers available from major suppliers via Agents.

SURVEYORS: Cargo inspectors, superintendents and surveyors are available locally via Agents.

GANGWAY/DECK WATCHMEN: Ship's gangway, watchmen not necessary.

HATCHES: Opening and closing by crew.

CUSTOMS ALLOWANCES: Normal U.K. Regulations.

CARGO GEAR: All work by shore cranes, heavy lift up to 30 tons.

REPATRIATION: Facilities via Agents.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: No work on public holidays unless overtime working is arranged in advance.

POLICE/AMBULANCE/FIRE: See "Harwich".

TELEPHONES: No onboard facilities available.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary.

DELAYS: None.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

MILFORD HAVEN: 51.42 N. 05.10 W. (See Plan)

BERTHING: VLCCs enter at HW and normally berth heading East. Vessel will be required to swing after unloading and prior to departure. *Milford Docks:* Enclosed dock, minimum depth on sill 26 ft., lock length 550 ft., width 69 ft., 5,033 ft. of quayage includes 420 ft. fish market and two modern cargo handling berths, one of 732 ft. and the other 455 ft. in length. Vessels of up to 34 ft. draft may be handled on Spring tides.

Pembroke Dock:

Govan Davies Dock:

Quay	*Length* (ft.)	*Depth at C.D.* (m.)	*Remarks*
1	600	10.8	Can accept bulk carriers and container vessels up to 700 ft
2	354	8.0	Can accept bulk carriers and container vessels up to 450 ft
3	235	6.1	Can accept general cargo vessels up to 340 ft.
4	1,000	—	To be built.

Vessels with Ro/Ro ramps (bow or stern) can berth in the bas between Berths No. 2 and 3.

Mainport Jetty: One cargo berth, depth 20 ft., for vessels up to 350 length. Max. size approximately 6,500 d.w.t.

CRANES: In Milford Docks – 1×25 ton mobile, 2×6 ton electric. Furth mobile cranage available if required.

SPECIALISED CARGO HANDLING FACILITIES:

Containers: Container traffic is handled at Milford Docks although the is no specialised container handling equipment.

Ro/Ro: Pembroke Dock Ferry Terminal has one Ro/Ro berth, dep alongside 21 ft., and can accommodate ferries up to 425 ft. in lengt max. size 6,000 g.r.t. (approx.).

LPG: LPG is handled at the Elf, Gulf and Texaco oil terminals.

STEVEDORES: Ordered prior to arrival.

MEDICAL: All oil terminals have well equipped medical centres. Loc hospital facilities available.

TANKER TERMINALS:

Elf:

Berth No. 1: Depth 64 ft., 4×16 in., crude line, 2×12 in. and 1×8 in product line, max. size 275,000 d.w.t.

Berth No. 2: Depth 38 ft., 1×12 in., 2×10 in. and 3×8 in. produ lines, 1×8 in. and 1×6 in. LPG lines, max. size 30,000 d.w.t.

Berth No. 3: Depth 22 ft., 3×8 in. and 2×6 in. product lines, 1×8 in and 1×6 in. LPG lines, max. size 5,000 d.w.t.

Herbrandston:

Ex-Esso Terminal. New general purpose terminal with 5 berths, ab to handle VLCC size ships to coasters (1 large berth only in use).

Gulf Oil:

Berth No. 1: Depth 44 ft., 1×8 in., 4×10 in. and 1×12 in. cargo line max. size 65,000 d.w.t.

Berth No. 2: Depth 55 ft., 2×10 in. and 4×12 in. cargo line max. size 870 ft. LOA.

Berth No. 3: Depth 32 ft., 3×8 in. cargo lines and 1×6 in. LPG max. size 12,000 d.w.t.

Texaco:

Berth No. 1: Depth 66.25 ft., 4×16 in. crude, two of which can b used for fuel oil, and 4×12 in. clean oil cargo lines. All clean oil and fu oil arms can take ballast. Max. size 275,000 d.w.t.

Berth No. 2: Depth 47.56 ft., 2×12 in. LPG ship discharge lines wit 1×8 in. vapour return line, 4×10 in. black oil, 6×10 in. clean oil an 2×10 in. ballast/bunker lines, max. size 100,000 d.w.t. (75,000 cu.m LPG).

Berth No. 3: Depth 39.36 ft., 1×12 in. Refrigerated Butane ship discharge with 1×4 in. vapour return line and LPG ships with a 4 in arm. 2×12 in. black oil and 4×10 in. clean oil lines. All clean oil an fuel oil arms can take ballast. Max. size 35,000 d.w.t. (30,000 cu.m LPG).

Berth No. 4: Depth 19.02 ft., 1×8 in. black oil, 1×6 in. and 2×8 in clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 2,000 d.w

Berth No. 5: Depth 20.00 ft., 1×8 in. black oil, 1×6 in. and 2×8 in clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 4,500 d.w

Berth No. 6: Depth 65.92 ft., 4×16 in. cargo lines, max. siz 275,000 d.w.t.

Berth No. 7: Out of commission.

Berth No. 8: Out of commission.

No ballast facilities at Berth No. 6.

Report: *Cautionary Advice:* In-Port: There are 3 major oil termina within the Haven and the previous Esso Terminal, now the Herbrandsto General Purpose Terminal, which is located less than 2 miles E.N.E. o the Angle Buoy. Ships bound for this terminal make tugs fast betwee the Angle Buoy and South Hook Buoy.

VLCCs which require 5 or 6 tugs have little but adequate time to mak them fast. It is, therefore, extremely important for a deep tanker boun for a terminal in the Haven to have everything ready and the crew o stations prepared to make tugs fast by the time the Angle Buoy i reached and that after the turn is made the speed over the ground i reduced quickly so that by the time the South Hook Buoy is reache all tugs are fast and speed reduced to about 2.5 knots.

Ships bound upstream of Herbrandston Terminal must proceed at th slowest speed consistent with safe navigation, as they pass quite clo to ships lying alongside other terminals and can cause considera "passing ship" problems. They usually make tugs fast after passin South Hook Buoy.

Berth Approaches: Ships are strongly advised against steaming into th berths at any terminal.

The only safe manoeuvre being to bring the ship to rest, stopped ov the ground, parallel to and about 40 m. – 60 m. off the berth befo breasting in.

This particular manoeuvre is of importance to vessels of 70,000 d.w and over.

Most of the incidents during berthing operations have arisen becau of a combination of an angled approach to the berth, excessive headw and berth approach speed with a sheer resulting from strong aste engine movements.

Anchorages: Ships of up to 12.00 m. draft for which there is no ber available on arrival can find anchorage within the Haven. (See belo Deeper draft ships which have to wait for tide or berth should rema outside the port well offshore, maintaining a listening watch on VHF Channel 16, and allowing sufficient time to reach the entrance at the proper time for shipping the pilot to enter port.

Anchorages within the Haven: The recognised anchorages within the Haven are shown on the large scale charts, and the Milford Haven Port Authority Signal Station must be consulted before ships use their anchorages.

Dale Roads is the only anchorage for ships over 7.00 m. and under 12.00 m. draft. It is exposed to wind and swell and has an uneven rocky bottom which does not always afford a good holding ground. *Many ships have dragged anchor here and several have lost an anchor, and it is emphasised that a full anchor watch must be maintained on all ships with a listening watch on VHF Channel 12.*

If at anchor in Dale Roads at the onset of a gale, it is usually sound advice to pick up the anchor and proceed to sea. After rounding the Angle Buoy, if Mid-Channel Rock Lighthouse is kept fine on the port bow, this will take a ship clear of dangers. Before departing, the status of the buoys should be checked out with the Signal Station and then proceed with caution.

The 2 entrance buoys should not be relied upon as they sometimes drag out of position during gales.

Stack Anchorage can be used by medium sized ships of up to 7.00 m. draft. It is a little more sheltered and has a better holding ground.

Small ship anchorages are at Dale Shelf, Sandy Haven, and with the exception of LPG ships between Milford Shelf Buoy and Newton Noyes Pier. Some small ships find shelter South of the channel opposite the Herbrandston Terminal.

Herbrandston Terminal – Cautionary Advice: Each berth has a designed maximum speed of approach for the maximum size ship acceptable.

The berths are in an exposed position with prevailing winds blowing on to the berths. Strong winds from the Northerly semi-circle do occur and usually with a sudden shift in wind. Ships with high freeboard can be badly affected by these strong winds and it is, therefore, very important that moorings are kept tight and are properly tended at all times.

Description of Berthing Procedures: All vessels berth head to tide. Ships of less than 265 m. and 14.6 m. draft can be berthed on the flood tide and, therefore, swung before berthing. These ships are usually swung off the berth. Ships of greater draft will always berth at HW or on the ebb tide and will, therefore, always be port side to.

All moorings are taken ashore by boat and lifted on to the dolphins by power winch.

Breast and spring lines are usually put out first.

Good messengers are required at each position for this operation. This system is for VLCCs only.

DENSITY: 1025.

FRESH WATER: Available at all berths.

FUEL: All oil terminals can supply all grades of bunkers. Fuel also available within Milford Docks and from bunkering barge elsewhere in the Haven.

FIRE PRECAUTIONS: Fire wires to be rigged fore and aft on all tankers.

CONSULS: The following countries are represented by Consuls at the port or elsewhere in South Wales: Others may be available.

Belgium
Denmark
Finland
France
Italy
Liberia
Netherlands
Norway
Sweden
Thailand
Turkey

REPAIRS: All types of deck and engine voyage repairs carried out.

DRY DOCKS: One dry dock at Milford Docks, 600 ft. × 63 ft. × 18 ft. with cranage.

SURVEYORS: Lloyd's at Swansea, ABS and NV in South Wales. Cargo inspectors available – Saybolt, Moore, Barrat and Redwood have local offices.

GANGWAY/DECK WATCHMEN: Available if necessary – very rarely required.

CUSTOMS ALLOWANCES: Tobacco, 0.045 kg. per man per day. Spirits, 0.185 litres per man per day.

REPATRIATION: Crew changes frequently carried out and repatriation arranged. Crew arriving by rail to join vessels at Elf, Herbrandston, Gulf and Milford Docks should be directed to Milford Haven station. If joining vessels at Texaco to Pembroke station, and for vessels at Port Operators and Storage or Pembroke Dock Ferry Terminal, to Pembroke Dock station.

AIRPORT: Nearest main airport is Cardiff (Wales) Airport, distance approximately 100 miles. Some international flights and flights to London for onward connections.

TIME: GMT in Winter months, BST (GMT plus 1 hour) March to October.

HOLIDAYS: Oil Terminals operate 24 hours/365 days. Other berths observe standard U.K. holidays but cargo work can be arranged if required.

POLICE/AMBULANCE/FIRE: Police – Milford Haven 692351, Pembroke 682121; Ambulance – Haverfordwest 763355, 236444; Fire – A Division, Carmarthen 231184, B Division, Haverfordwest 762131.

EMERGENCY CO-ORDINATION CENTRE: Emergencies within the port are co-ordinated by the Milford Haven Port Authority Signal Station. Emergencies outside the port and S.A.R. co-ordinated by H.M. Coastguard St. Ann's Head (Tel: Dale 636218).

TELEPHONES: No telephones on board. Public call boxes exist on all oil jetties.

SERVICES: Ministry of Defence compass adjuster available subject to operational commitments.

STORING: Vessels can be stored by barge or truck and local riggers are available to assist. Storing can normally take place during cargo operations but, in the case of oil tankers, trucks cannot proceed alongside the ship and storing from a barge must be carried out near the stern of the ship. Fork lift trucks cannot be used to store oil tankers.

SHIP SUPPLY SERVICE: D.V. Howells and Sons Ltd., P.O. Box 14, Milford Haven, Dyfed SA73 3ER. Tel: Milford Haven (0646) 693091/692418. Telex: 48575.

Marine & Port Services Ltd., The Dockyard, Pembroke Dock, Dyfed SA72 6TF. Tel: Pembroke (0646) 682271/5. Telex: 48303.

Additionally, there is a tug company operating in Milford Haven with a fleet of locally based tugs whose prime duty is the berthing and unberthing of tankers at oil terminals in the Haven and firefighting responsibilities, although occasionally a tug may be called offshore for salvage purposes. The tug company is Cory Towage Ltd., Slip Hill, Milford Haven, Dyfed SA73 3BB. Tel: Milford Haven (0646) 692296/7.

There is a helicopter squadron based at RAF Brawdy, Haverfordwest, which provides a rescue service and, on occasions, airlifts seriously injured or sick personnel from ships in the area, usually on request through the local Coastguard Station.

SHORE LEAVE: Shore leave allowed.

IDENTIFICATION CARDS: Not necessary.

GARBAGE DISPOSAL: Service provided by terminal operators.

WASTE OIL DISPOSAL: Service provided by terminal operators.

SEAMAN'S CLUBS: The Merchant Navy Club, Robert Street, Milford Haven, Dyfed. Tel: 692553. Facilities include telephones, bar, snacks, restaurant, juke box, TV lounge, pool, library.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Milford Haven Port Authority, P.O.Box 14, Milford Haven, Dyfed, SA73 3ER, U.K. *Tel:* Milford Haven (0646) 693091 office, Milford Haven Signal Station (0646) 692342 or 692343. Signal Station – 24 hours. *Telex:* 48575 – 24 hours. *FAX:* (0646) 690179. *Contact:* Captain J. E. Frost, Harbour Master.

AGENT: G. S. Kelway Ltd., Murray Crescent House, The Rath, Milford Haven SA73 3JR, Dyfed. Tel: Milford Haven 692313/4. After hours: Milford Haven (0850) 692313, (0646) 695587, 695905, 693341. Telex: 48213. Fax: (0646) 692706. Cables: "Kelway Milford Haven".

MISTLEY: 51.57 N. 01.05 E. (See Plan)

LOCATION: Private port situated on the River Stour within Harwich Harbour. Seven tidal berths, vessels lay safe aground (also see "Harwich").

DOCUMENTS: Normal requirements – local Agents will advise.

PILOTAGE: Order via Agents or direct with Harwich Pilots.

Call sign: "Harwich Pilots".
VHF: Channel 16 and 9.
Telephone: Harwich (0255) 3129.
Telex: 98472.

Compulsory ETA 8 hours before arrival and 2 hours confirmation. Details required: Name of vessel, ETA, destination, max. draft., g.r.t.

ANCHORAGES: Safe anchorage in Harwich Harbour or Cork Pilot Station.

RESTRICTIONS: Vessels can enter/depart on HW, according to state of tide and draft. Day and night navigation.

MAX. SIZE: No length or beam restrictions. Draft varies between 3.3 m. Neap tides to 4.3 m. Spring tides except Berth No. 1 with a draft variation of 4.6 m. neap tides to 5.6 m. spring tides (subject to max. LOA 90 m.). Further dredging of the channel is taking place and will result in a further increase in max. draft for Berth No. 1.

HEALTH: As per Port Health Regulations. See "Harwich".

RADIO: Northern Approach: Humber Radio, Tel: (0521) 73447.

Southern Approach: North Foreland Radio, Tel: (0843) 20592.

VHF: Harwich Harbour Radio, Channel 14.

TUGS: Available from Felixstowe and Mistley via ship's Agents.

BERTHING: Instructions given via Pilot or Agents. Loading/discharging via shore cranes/elevators.

CRANES: Mobile cranes up to 12 tons, and Scotch Derrick up to 30 tons.

BULK HANDLING FACILITIES: Bulk cargo facilities available for discharge of grain, ores, fertilisers, etc., by grab. Loading elevators for grain, etc.

STEVEDORES: All cargo handling instructions and enquiries to: Mistley Quay and Forwarding, High Street, Mistley, Manningtree, Essex. Tel: 0206 394431. Telex: 98692. Fax: 0206-393882.

MEDICAL: All requirements via Agents with advance notice.

DENSITY: 1026.

FRESH WATER: Available with notice. Up to 12 tons-charge £24.20 plus overtime charges if incurred.

FUEL: Bunkers available from major suppliers via Agents.

SURVEYORS: Cargo inspectors, superintendents and surveyors are available locally via Agents.

GANGWAY/DECK WATCHMEN: Ship's gangway, watchmen not necessary.

HATCHES: Opening and closing by crew.

CUSTOMS ALLOWANCES: Normal U.K. Regulations.

CARGO GEAR: All work by shore cranes, heavy lift up to 30 tons.

REPATRIATION: Facilities via Agents.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: No work on public holidays unless overtime working is arranged in advance.

POLICE/AMBULANCE/FIRE: See "Harwich".

TELEPHONES: No onboard facilities available.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary.

DELAYS: None.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

DEVELOPMENTS: Dredging of the approach channel to Mistley and within the port to increase acceptability of larger vessels is presently in hand but at present it is not possible to indicate when such improvements will be completed. Please enquire to the Port Owners, Mistley Quay & Forwarding.

AUTHORITY: *Port Owners:* Mistley Quay & Forwarding, High Street, Mistley, Manningtree, Essex CO11 1HB. *Tel:* Colchester (0206) 394431. *Telex:* 98692. *FAX:* (0206) 393882. *Contact:* I.J. Forbes, Port Director. *Local Port Authority:* The Harwich Conservancy Board.

MONTROSE: 56.42 N. 02.27 W. (See Plan)

PORT LIMITS: The port is bounded by a line drawn in a Northwesterly direction from Scurdie Ness Lighthouse to the Annat Bank and thence by both banks of the river to the road bridge which completes the inner boundary.

DOCUMENTS:

1 Crew List
1 Passenger List
1 Stores List
1 Personal Effects List for baggage coming ashore
1 Manifest or Bill of Lading
Ship's Register, Load Line Certificate, Radio Certificate, LSA and Safety Certificates to be sighted.

PILOTAGE: Pilotage is compulsory. Pilots are available throughout the 24 hours. International Code Flag "G" to be exhibited.

Vessels should approach the port to a position with Scurdie Ness Lighthouse bearing 250° distance 0.5 mile where Pilot will normally board.

Pilot cutter *"Celurca"* has a dark blue hull with white upper works and "Pilots" painted in black on each side of the wheelhouse. The normal red and white pilot flag is flown during daylight and regulation lights exhibited at night. VHF Channel 16 for calling with a working frequency on Channel 12.

In bad weather it may be necessary for a ship to proceed inwards at the radioed directions of a Pilot to a position on the outer leading marks and inside the lighthouse where the Pilot may board safely. This will only apply during periods of strong Easterly gales and very heavy seas and may be applicable for only a few times in a year. Similarly the port may be closed under severe weather conditions, on average 2.5 days per year.

ETA Messages: Masters should cable Agent with 24 hours' notice of arrival giving overall length and deepest draft and also call "Montrose Port Control" within 2 hours of arrival at the pilot station.

ANCHORAGE: In position mentioned above with Scurdie Ness bearing 250° distance 0.5 mile, in about 13 m.

MAX. SIZE: Since the harbour was reconstructed and deepened ships of 165 m. LOA and 16,700 d.w.t. have been handled on a max. draft of 7.5 m.

HEALTH: "Q" flag to be flown when coming from a foreign country until cleared inwards. In event of disease or fever onboard, advise Agents by radio. Strict attention paid to quarantine regulations regarding dogs which are not allowed ashore.

Also see "Health – all ports" before first UK port.

RADIO: Messages to Agents may be sent through Stonehaven Radio. Harbour service is on Channel 12. Call Montrose Port Control on Channel 16.

RADAR/VHF: No port radar service. Harbour service and pilot vessel work on VHF Channels 16 and 12.

TUGS: Pilot vessel is equipped with towing hook and pusher bow to assist in berthing and unberthing if necessary. Vessel's lines used. Small charge made for such work.

In addition to the pilot vessel, the tug "Glenesk", 425 b.h.p. (4 ton bollard pull) is available.

BERTHING: North Riverside Quays: No. 6 – 112 m., No. 7 – 141 m., No. 8 – 87.5 m., No. 9 – 69 m. No., 10/11 – 152 m.

Depths vary from 18 ft. at No. 8 (see "Developments") to 16 ft. at No. 10/11 at Chart Datum.

South Riverside Quays: Berths No. 12, 13, 14, 15, 16, (Berth No. 16 dredged to a depth of 25 ft. (7.6 m.) at MLWS), 17 and 18. These are extensively used by oil related vessels.

Total wharf length available is 1,600 ft. with depth alongside 20 ft. at MLWS.

Fixed Ro/Ro Ramp available between Berths No. 6 and 7. Vessels able to land bow or stern ramp of width 8 m. Depth alongside 18 ft.

CARGO HANDLING FACILITIES: The stevedores are well equipped with mobile cranes, fork lifts, etc., and only rarely is ship's gear used unless it is of rapid, modern type. Grab discharge is used for bulk cargoes and conveyor belt systems for loading same.

Rates of loading or discharge:— Bagged cargoes 250 tons per gang per day; Bulk 400 tons; Bulk grain loading 3,000 tons; Unitised pulp 500 tons; Paper 500 ton; Timber 500 tons all per gang per day.

A large motor transport fleet is always available at the port and the Agents also have their own road haulage company.

STEVEDORES: Provided by: J. M. Piggins & Co. Ltd., Tel: Montrose 72827. Telex 76251. J. Milne & Sons, Stracathro. Tel: 067484-491. Fax: 067484-608.

MEDICAL: Small hospital in Montrose. Several major units within easy reach by road.

TANKERS: There is no oil berth in the harbour except the facilities offered by Rix Petroleum for the receipt into their 3,000 ton storage depot of gas oil.

DENSITY: At high water average 1024 but can be as low as 1005 at LW during heavy river outflow.

FRESH WATER: Supplied from quayside hydrants at all berths.

FUEL: Obtainable from road tanker, gas oil and H.S.D. from mo prominent oil companies. Rix Oils can supply gas oil from local stoc Contact J. Piggins.

FIRE PRECAUTIONS: Normal rules to be observed.

CONSULS: None in Montrose.

REPAIRS: Minor deck and engine repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: Cargo ship and engine surveyors Johnston & Sma Swan & Co., or Pirie & Smith available from Aberdeen at short notic

Cargo Superintendents regularly working at the port on loading a and discharging various bulk cargoes, include Cargo Superintenden (London) Ltd., 50 Wellington Street, Glasgow; James Patterson, Th Old Granary Buildings, Meadowside Quay, Partick, Glasgow, a Malcolm Main at same address.

GANGWAY/DECK WATCHMEN: Can be arranged. Owing to range tide on riverside berths mooring watch strongly recommended.

OPENING/CLOSING HATCHES: Normally done by ship's crew.

CERTIFICATES: On arrival Ship's Register may be asked for.

CUSTOMS ALLOWANCES: As arranged between Customs Officer a Master.

CARGO GEAR: The port is equipped with mobile cranes which can b used at any berth. These are of various capacities and the maximu lift is 100 tons for which prior notice is required.

REPATRIATION: Facilities available with excellent railway connection Air connections from Aberdeen.

AIRPORT: Aberdeen 36 miles. Montrose has facilities for light aircra and helicopter landing.

TIME: GMT with 1 hour advance for British Summer Time, approximate March to October.

HOLIDAYS: *Port Holidays:* Christmas Day; Boxing Day; 1st and 2 January; One day Spring, mid-Summer and Autumn Trades Holiday

POLICE/AMBULANCE/FIRE: Report to Dock Office immediately. D 999 and ask for whichever emergency service required.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue S Centre – Forth District Tel: Crail 666.

TELEPHONES: Not possible to place telephones aboard. Kiosk o Wharf near Agents office. Comprehensive connections to Continent a Telex services from Agent's office.

SERVICES: Laundry, Ship Chandlers and Lloyd's Agent immediate.

Compass Adjuster, Radio/Radar Mechanics can be called in fro Aberdeen at short notice.

BANKS: Usual branches of Scottish banks all in High Stre No American or European banks.

STORING: Vessels can be stored by truck. Trucks can proceed alon side vessel. Fork lifts can be used if required. Customs notificat required for all bonded stores.

Stevedores can be employed to assist with storing and also lashi and fastening deck cargo.

SHORE LEAVE: No restrictions on crew members after inwa clearance.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: The Port Authority provides skips for garba disposal, however they are not to be used for disposal of waste foo

WASTE OIL DISPOSAL: Can be arranged through ship's agents.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

DEVELOPMENTS: Berth No. 8 has been reconstructed to prov 293 m. of continuous quayside with a minimum depth of 18 ft. bel C.D.

AUTHORITY: Montrose Port Authority, Harbour Office, South Qua Ferryden, Montrose, Tayside. *Tel:* (0674) 72302, 73153, 7272 *Telex:* 76407. *FAX:* 0674-75530. *Contact:* Captain H.J.Johanse Harbour Master/Chief Executive.

NEW HOLLAND: 53.12 N. 00.21 W. (See Pla

PILOTAGE, DOCUMENTS, ANCHORAGES, ETC.: See "Hull".

RESTRICTIONS: Vessels arrive and depart on high water. Vess always aground (N.A.A.B.S.A.).

MAX. SIZE: Max. size 5,000 d.w.t. Max. LOA 100 m. No restriction beam or air draft. Max. draft at Spring tide 7.0 m. – 7.5 m.

TUGS: Not necessary.

BERTHING:

Imports: The Terminal specialises in the import of feeding stu fertilisers, coals, cokes, etc. The import route has been designed to load cargo, from ship to storage or direct to carrier, efficiently and and offers via drop-scale and weighbridge, full documentary control a management.

Terminal: With two berths, an inner berth for vessels of 2,500 d.w.t. a an outer berth with a maximum capacity of 5,000 d.w.t., the Termi reaches into deep water channels of the River Humber and enjoys th advantage of only requiring one Pilot from Spurn Point. Unloading grab discharge direct to covered conveyor belts, the import route is ra at a capacity of between 230 – 300 tonnes per hour and incorpora full bypass facilities.

Weighing: Grains and derivatives can be passed through a drop-sc with a capacity of 250 tonnes per hour; coals, cokes and other b commodities moving from the site are weighed by means of 2×60 to road and/or 100 tonne rail weighbridges.

Storage: Grains and derivatives can be passed by the conveyor syst direct to 4 flatstores with an approximate capacity of 43,000 tonnes with movable and fixed partitions. Coals, etc., are directed to o storage for ease of distribution.

Distribution: Direct ship to road haulage is made possible by 2 overhead lorry hoppers. Recovery from the flatstore is by means of Front End Loaders, and if required, import commodities can be loaded via the export system, weighed or unweighed.

Exports: The Terminal has a dual capability for simultaneous import and export and has been designed for the export of grains and other bulk commodities.

The export route has many features unique to Humberside, and with full weight control and documentation offers the ideal export venue for any product.

Terminal: With two export berths, an outer berth of 5,000 d.w.t. capacity and an inner berth with a maximum capacity of about 1,500 d.w.t., loading is rated at 400 tonnes per hour via the covered conveyor belt which feeds 4 loading spouts, direct to the ship's cargo holds. Vessels approaching New Holland from the North Sea need only one pilot in and outward, thereby reducing costs.

Reception: The Terminal is the only specially designed export terminal in Humberside that can receive grain direct from railcars. With extensive private sidings and shunting locomotive, full train loads can be handled in intake pits. Road haulage delivery is either by intake pit or direct to open compound. Reception of grains also includes a grain testing station for quality control.

Direct or Indirect Loading: Grain intake can either be pre-assembled into 5 silos with an approximate overall capacity of 3,500 tonnes and then loaded directly to ship. Coals, coke, etc., are fed directly to the main export belt from their pre-collected storage areas.

Weighing: All commodities entering the site are weighed by fully computerised weighbridges, 2×60 tonne road and 1×100 tonne rail weighbridges. Export of grain related products is also monitored by 2 dropscales weighbridges prior to being loaded onto export vessels.

CRANES: 2×8 ton electric rail mounted cranes.

STEVEDORES: Work around the clock, from Monday 0600 hrs. – Friday 2200 hrs.

Saturday and Sunday work by arrangement.

FRESH WATER: Available at 5 t.p.h. No charge, included in jetty dues.

FUEL: Available by barge from Hull.

REPAIRS: Local shipyard can undertake minor repairs.

HATCHES: Opening and closing by ship's crew.

AIRPORT: Humberside Airport is 15 minutes away by road. Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Norwich, Stavanger and Teesside.

TELEPHONES: No shore connections. Public telephone available on pier.

GENERAL: The New Holland Bulk Terminal is situated on the South bank of the River Humber, about 4 miles East of the Humber Bridge, and about 20 miles inland from Spurn Point. Close proximity to the U.K.'s motorway and dual carriageway network gives the terminal a competitive and strategic position for the import and export of bulk commodities. Close connections to the M1, A1, M18 and A15 Humber Bridge link road ensure optimal North/South connections with the M180, M62 and A6 offering good East/West connections. The terminal has its own railway sidings, connected directly to the British Rail network.

GARBAGE DISPOSAL: Skip provided at Jetty Head for ship's use at no charge to vessel.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.5682 (11.4.91).

AUTHORITY: New Holland Bulk Services Ltd., Old Ferry Terminal New Holland, P.O. Box 1, Barrow upon Humber, South Humberside, DN19 7SD. *Tel:* Barrow upon Humber 0469-31102. *Telex:* 527466 NH Bulk G. *FAX:* (0469) 31966. *Contact:* J.G. van Velzen, General Manager. J. Lyne, Operations Manager.

NEWHAVEN: 50.47 N. 00.04 E. (See Plan)

PORT LIMITS: A line drawn from a position 300 ft. South of breakwater in a 075° direction to Seaford Bay.

DOCUMENTS: See "London".

PILOTAGE: Pilotage compulsory for all vessels over 50 m. length. Contact Newhaven Radio, VHF Channels 12 and 16, advising ETA 12 hours in advance.

RESTRICTIONS: 5.0 m. through entrance to port LWOST. Inner harbour then dredged depth of 4.0 m. in accordance with chart datum 3.5 m. below OD Newlyn (tide gauge readings are directly applicable to soundings).

MAX. SIZE: Max. LOA 520 ft. 25 ft. draft taking bottom on soft mud at low water. Vessels greater than 350 ft. LOA length must either be towed into or out of port. Vessels for North Quay must not exceed 250 ft. length, draft 17 ft.

HEALTH: See "Health-All Ports" before first UK port.

RADIO: Radio Station Newhaven Radio, call sign Newhaven Radio.

RADAR/VHF: No radar service. Ship's may contact West Pier control point on Channel 16, working on Channel 12.

TUGS: One tug available upon request, owned by Newhaven Port and Properties Ltd.

BERTHING: Vessels may be berthed at any time, with prior notice given.

CRANES: 4×3 ton and 1×30 ton (container gantry).

BRIDGES: Vessels requiring to berth at North Quay must arrive within 2 hours either side of HW in order to pass through swing bridge which governs access to this quay.

STEVEDORES: ETA should be given as far in advance as possible and not less than 24 hours before ETA.

DENSITY: Salt water.

FRESH WATER: Available on request. Supplied by shore hosepipe.

FUEL: Available by previous arrangement.

FIRE PRECAUTIONS: Usual no-smoking precautions on quayside in port area.

CONSULS: Norwegian Vice-Consul and French Consular Agency.

REPAIRS: Repairs of a temporary nature only may be carried out by Newhaven Port and Properties Ltd. workshops, Ship & Industrial Repairs Ltd., Unit A3, Beach Road, Newhaven and C. R. Irving Ltd., Chapel Street, Newhaven.

GANGWAY/DECK WATCHMEN: Not provided by Port Authorities but recommended at discretion of Ship's Master.

AIRPORT: Nearest airport Gatwick, distance 30 miles. Served by regular airlines and Shoreham, distance 17 miles.

POLICE/AMBULANCE/FIRE: Police: Civil, Newhaven 515219; Port, Newhaven 514131 (extension: 229). Ambulance: 0830 – 1700 hrs., Lewes 515400; 1700 – 0830 hrs., Lewes 512819; Fire: 999.

SHORE LEAVE: Allowed.

AUTHORITY: Newhaven Port and Properties Ltd., Beach Road, Newhaven Harbour, Sussex BN9 0BG. *Tel:* Newhaven (0273) 514131. *Telex:* 87151. *FAX:* 512902. *Contact:* G. G. Burke, General Manager. Captain A. Flint, Harbour Master.

NEWLYN: 50.06 N. 05.33 W. (See Plan)

PILOTAGE: Compulsory for all passenger vessels over 20 m. in length, and all other vessels over 50 m. in length. Call "Mount's Bay Pilots" on VHF Channel 16.

ANCHORAGES: As shown on B.A. Chart No. 2345, in Mount's Bay.

No anchoring within Newlyn Harbour.

MAX. SIZE: Length 90 m. Draft (loaded) 5.5 m. (forward) and 6.0 m. (aft).

VHF: "Newlyn Harbour" on Channels 16, 12 and 9.

BERTHING: See "Plan".

FRESH WATER: Available at up to 10 tonnes per hour.

FUEL: Fuel barge in harbour able to visit berths. Maximum capacity 450 tonnes.

Road tankers able to visit berths.

REPAIRS: Most electronic (radio, radar, etc.) repairs can be undertaken.

BANKS: All large clearing banks available in Penzance (2 km.) from Newlyn.

Barclay's and Lloyd's in Newlyn.

GENERAL: Newlyn is primarily a fishing harbour with a turnover of £24m. of fish landed in 1990.

The only commercial traffic, using the port, are those calling for stone cargoes to be loaded from the South Pier, or vessels calling for bunkers, water or stores.

The width of the harbour entrance is 45 m. The area of the harbour is 33 acres and is tidal.

AUTHORITY: Newlyn Pier and Harbour Commissioners, Harbour Office, Newlyn, Penzance TR18 5HW. *Tel:* (0736) 62523. *FAX:* (0736) 51614.

NEWPORT: 51.35 N. 02.59 W. (See Plan)

DOCUMENTS: Required for arrival.

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (completed by Agents)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Telegraphic address – "Sewpil G 498180". Advance notice required – 24 hours. VHF Channel – Channel 16 for contact, thence Channel 6 for conversation. Description of pilot boat – diesel launch, black hull, white superstructure. Particular light or sound signals to be made by vessels requiring a Pilot – Code Signal 8, i.e. 3 longs 2 shorts. Pilot boat is located in vicinity of Breaksea Lightvessel, or in vicinity of Merkur Buoy, for small vessels. Maintain VHF contact (if possible) with pilot cutter and obey instructions with reference to positioning of vessel to facilitate boarding of Pilots.

ANCHORAGES: Large vessel should anchor in deep water to North of one Fathom banks. Deeper water anchorage (10 – 14 fathoms) in area between Breaksea Lightvessel and East 1 Fathom Bank Buoys to the South, and shallow water off Barry Roads to the North. Small vessels will find safe anchorage in Barry Roads in varying depth, depending on weather conditions and draft.

RESTRICTIONS: Entrance to Newport Docks is by means of a sea lock 1,000 ft. long, 100 ft. wide. Entry possible from 4 hours before to 4 hours after HW, depending on size of vessel.

MAX. SIZE: Max. size of vessels accepted at Newport is 800 ft. long, 96 ft. beam, 34.5 ft. draft.

HEALTH: Port Health Authority board vessel at entrance lock and Pratique is automatic.

See "Health – All Ports" before first U.K. port.

RADIO: At sea – Land's End radio station, call sign GIL. Within Bristol Channel use Portishead Radio.

VHF: Vessels requiring entry can contact port on VHF radio Channels 16, 9 and 11.

TUGS: Normally join at Newport Deeps. Ship's line used.

BERTHING: South Dock, normal depth of water 35 ft. North Dock, normal depth of water 27 ft. Junction passage connecting South and North Dock restricts vessels to a max. size of 56 ft. 6 in. beam and 25 ft. draft.

CRANES: Heavy lift/container cranes: 2×25 tonne electro-hydraulic and 1×32 tonne Scotch Derrick cranes.

Bulk handling: 6×11.5 tonne electric grabbing cranes.

General cargo: 2×11.5 tonne, 2×10 tonne and 20×6 tonne electric cranes.

Handling equipment up to 27 tonnes capacity with a comprehensive range of attachments is available.

SPECIALISED CARGO HANDLING FACILITIES:

Combi Ship Operations: Heavy lift/containers for combi vessels are handled by the 25 tonne cranes at the same berth where breakbulk general cargo is handled.

Forest Products: The North side, South dock area extends to over 11 hectares with 1 hectare under cover.

Hardwood Terminal: South Dock (East side) covering 3 hectares.

Banana Imports: There is a terminal of 3 hectares for a weekly Jamaican service importing bananas and exporting general cargo. Included within the terminal is a temperature controlled transit shed of 3,716 sq.m.

STEVEDORES: Labour is allocated to vessels on arrival.

Working Hours: Monday to Friday: 0730 – 1700 hrs., 0600 – 1400 hrs., 1400 – 2200 hrs.

Saturday: 0730 – 1200 hrs., 0600 – 1400 hrs., 1000 – 1400 hrs.

Sunday: 0600 – 1400 hrs., 1400 – 2200 hrs.

MEDICAL: No advance notice of medical attention for crew members is required and hospital facilities are available.

DENSITY: Average density of water in docks is 1016.

FRESH WATER: Available at all berths.

FUEL: All classes of fuel available.

REPAIRS: All wet dock and engine repairs possible.

DRY DOCK: Bristol Channel Ship Repairers Ltd., 454 ft. × 64 ft.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco, 0.5 lb. per crew member, reduced by 50% on coastal trade. 1 pint of spirit and 1 pint wine per crew member, reduced by 50% on coastal trade.

REPATRIATION: All facilities for the changing of crew and repatriation are available.

AIRPORT: Glamorgan Rhoose Airport terminal 28 miles from Newport. Regular connection planes to London Airport.

TIME: BST, GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Work not undertaken on Christmas, Easter, Spring and Summer Bank holidays. With the exception of Christmas holiday (25th and 26th December) dates on other holidays vary.

POLICE/AMBULANCE/FIRE: Telephone number 999 stating which service is required.

TELEPHONES: Telephone facilities are available aboard vessels.

SERVICES: Tank cleaning equipment. Facilities for tank washing, compass adjusting are available.

SHIP SUPPLY SERVICE: A ship supply service could be provided by Cory Ship Towage with their tugs at Cardiff if required. Address: Cory Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwent, NP9 2NP. Tel: Newport 56835/6.

SHORE LEAVE: No restrictions to crew members.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Associated British Ports, Dock Office, Alexandra Dock, Newport, Gwent NP9 2UW. *Tel:* (0633) 244411. *Telex:* 498585. *FAX:* (0633) 246070. *Contact:* R. C. F. Williams, Port Manager.

PADSTOW: 50.35 N. 04.55 W.

PORT LIMITS: A line from Stepper Point to Gulland Rock, thence N.E. to Newland Rock, thence S.E. to Pentire Point.

DOCUMENTS: All usual documentation required by H.M. Government.

PILOTAGE: Pilot compulsory. Contact via Harbour Office, Tel: Padstow (0841) 532239. VHF via Padstow Harbour Office on Channel 16 during all office hours and 2 hours either side of HW at Padstow. ETA's should be given at least 12 hours before arrival, amendments up to 2 hours before ETA. Pilot boards off Stepper Point in normal conditions. In adverse conditions ships should endeavour to close the pilot boat as near to the starboard hand buoy as possible in safety. Padstow Bay experiences heavy ground swell. Anchorage not recommended in onshore wind or sea.

MAX. SIZE: Max. length approximately 350 ft. (depending on draft). Max. draft 11 ft. any tide. Up to 18 ft. draft on Spring tides. No airdraft restriction.

VHF: Harbour office, call sign 'Padstow Harbour' listens VHF channel 16 during office hours and 2 hours either side of HW at Padstow. Call on Channel 16, working Channel 12.

TUGS: Not available. Local fishing vessels may assist.

BERTHING: All berths dry to firm mud or sand bottom. Depth alongside, South Jetty 11 ft. every tide and 18 ft. Springs. Depth alongside South Dock and West Quay 9 ft. every tide and 16 ft. Springs. Lesser depths in Inner Harbour and Outer Basin.

Inner Harbour to be kept "wet" with entry either side of high water by the use of a tidal gate. Max. size 45 m. LOA, 9.5 m. beam and 3.5 m. draft.

CARGO HANDLING: Undertaken by Padstow Harbour Commissioners. Dry bulk and unitised cargoes handled. Limited storage facilities. Cranes hired by Harbour Commissioners to suit requirements.

FRESH WATER: Available, delivery from standpipes.

FUEL: Marine gas oil available direct from bunker tank on South Pier.

REPAIRS: Welding and general engineering services readily available.

DRY DOCKS: A & J Marine (Cornwall) Ltd. Tel: 0841-533114. One dry dock – 70 ft. × 32 ft. × 12 ft. draft at Springs.

STORES: All usual stores available.

GARBAGE DISPOSAL: Skips available onshore.

WASTE OIL DISPOSAL: Can be arranged through the harbour offic

SEAMAN'S CLUBS: Assistance available.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Padstow Harbour Commissioners, Harbour Office, We Quay, Padstow, Cornwall PL28 8AQ. *Tel:* Padstow (0841) 53223 *FAX:* 0841-533346. *Contact:* Port Administrator/Harbour Master.

PEEL, Isle of Man: 54.14 N. 04.40 W. (See Plan

PILOTAGE: Not compulsory.

MAX. SIZE: See "Berthing".

VHF: Channels 16 and 12 available only when vessels expected.

BERTHING: Outer Harbour: Max. LOA 250 ft., although twin scre cross-channel vessels up to 350 ft. LOA can be accommodated unde certain conditions. Max. draft 14 ft. to lie afloat over LWOST. Not tenabl with strong Northerly winds.

Inner Harbour: Max. LOA 160 ft., draft 10 ft. on Neaps, 13 ft. o Springs. Dries out at LW. No quay space for storage.

GARBAGE DISPOSAL: There is an enclosed skip on the breakwat for waste.

WASTE OIL DISPOSAL: Arranged through the Harbour Master.

SEAMAN'S CLUBS: None.

CURRENCY: Isle of Man currency is the same value as U.K., but canno be used in U.K.

AUTHORITY: Isle of Man Department of Highways, Ports an Properties, Harbours Division, Sea Terminal Building, P.O.Box 11 Douglas, Isle of Man. *Tel:* 0624-686627. *Telex:* 629335 IOMHARG *FAX:* 0624-626403. *Contact:* Captain D.Cowell, Chief Harbou Master (I.O.M.).

Harbour Master at Peel: Captain C.A. Clague. Tel/Fax: (0624) 84233

PENZANCE: 50.07 N. 05.32 W. (See Plan

PORT LIMITS: The seaward boundaries of the Port for the purposes o charter parties are considered to be the harbour walls.

DOCUMENTS: H.M. Customs require the Master or Agent of any vesse arriving from a Port outside the United Kingdom to present the followin documents at the Customs House within 3 hours of the vessel's arriva during office hours (0900–1230) Monday to Friday or within 6 hour during night hours.

1 copy	Crew Declaration (Form C.142)
1 copy	General Declaration (Form C.13)
1 copy	Stores and Livestock Declaration (Form C.14)
2 copies	Deck Cargo Declaration (if any) (Form SUR.238)
2 copies	Crew List (IMO Fal.Form 5)

The above is intended to be a guide only, not a definitive list.

PILOTAGE: Pilots are available at all times. Call "Mounts Bay Pilots during normal working hours or when vessel is expected on VHF Channel 16. Working Channels 12 and 9 are also available. Ships ar asked to give advance notice by R/T or telegram through Land's En Radio (GLD) to either the Pilot or Local Agent. Alternatively, through th Port Radio which maintains watch on Channel 16, 12 and 9. The Pil boards at a point immediately adjacent to the Low Lee Buo (50° 05.6′ N., 05° 21.2′ W.) from the pilot boat operated in Mounts Ba The boat operated from Newlyn has a black hulled, white deck hous with "Dayglow" roof.

The pilot boat only cruises when a vessel is expected.

ANCHORAGE: Vessels awaiting orders or entry into Penzance ma anchor in a minimum depth of 15 m., in position 50° 06.1′ N. 05° 31.5′ W.

RESTRICTIONS: The dock gates at Penzance are normally ope enabling vessels to enter from 2 hours before high water until one hou after high water, although this period may be increased so that the gat is open earlier or later by prior arrangement. The depth on the dock gat at MHWS is 5.49 m. and at MHWN 4.4 m. The entrance is 15.3 m. wid

MAX. SIZE: Vessels up to a maximum of 95 m. in length and 2,000 ne registered tonnes may normally enter within the draft and bea limitations listed.

HEALTH: No health or Pratique documents are required under norm circumstances.

RADIO: Vessels may pass messages, telegrams or link calls throu Land's End Radio (GLD).

VHF: Penzance Harbour maintains VHF Radio watch on Channels 1 and working Channels 12 and 9, whenever the dock gates are manne from 2 hours before high water until one hour after high water on bot tides, 7 days a week throughout the year. In addition, the radio is manne Monday to Friday between 0830 hrs.–1200 hrs. and 1300 hrs- 1630 hrs.

RADAR: There is no port radar.

TUGS: Tugs are available with prior notice, however, normal berthi is undertaken with the aid of pilotage workboats.

BERTHING: The wet dock has an entrance 15.3 m. wide and ha 5 berths. Vessels discharging cargo should have a maximum length o 90 m.

The outer harbour has 4 berths. Berth No. 1 is for the use of the Isle of Scilly Ferry and Berth No. 7 is normally designated as a drying o berth for ship repair.

CRANES: Cranes are available with maximum lifts of up to 15 tonnes. Dual gear is normally used for discharge and mobile cranes of greater capacity are available locally.
BULK CARGO FACILITIES: Bulk cargo is discharged and loaded by Grab.
SPECIALISED CARGO HANDLING FACILITIES: There is one drying berth with an operational depth of 4.7 m. at MHWN which has been adapted for heavy lift Ro/Ro vessels. This berth is available by prior arrangement.
BRIDGES: A swing bridge provides access into the dry dock basin.
MEDICAL: Full hospital and dental services are available in Penzance through the Agents or Port Medical Officer. Evacuations are arranged through the Port Medical Officer and the Mounts Bay Boarding Service.
STEVEDORES: Generally 24 hours notice is needed to provide stevedores.
DENSITY: The density of the dock water is 1025. Fresh water can be provided on all berths, delivery rates nominally 15 tonnes per hour.
FRESH WATER: Available on all berths.
FUEL: Marine gas oil by pipeline at 3 bunkering points along the South Pier with up to 55,000 litres available immediately from harbourside tanks. Greater quantities may be supplemented by road tanker. Lubricating oil and other fuel plus liquid petroleum gas available through ship's Agent.
CONSULS: Vice–Consuls for France and the Netherlands are resident in Penzance and Consulates for Denmark, France, Greece, Norway, Spain, Sweden and Germany are located nearby.
REPAIRS: All types of engine and deck repairs carried out to both cargo and tanker vessels.
DRY DOCKS: There is one dry dock 74.73 m. long with a breadth of 11.9 m. and a maximum draft of 3.35 m.
SURVEYORS: Department of Transport, Lloyd's, Norsk Veritas, Bureau Veritas, American Bureau and the Salvage Association have surveyors readily available at Penzance, as are several independent surveyors and consultants.
GANGWAY/DECK WATCHMAN: The employment of a watchman would only be needed in Penzance wet dock if the vessel is un–manned.
OPENING/CLOSING HATCHES: The opening and closing of hatch covers is usually carried out by the ship's crew.
CUSTOMS ALLOWANCES: The following are permitted from Ports within Home Trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	100
	Cigarillos	50
	Cigars	25
	Smoking Tobacco	125 grams
Alcohol	Over 20% volume	0.25 litre
	Under 20% volume and fortified or sparkling wine	0.50 litre
	Still table wine	1 litre

Arrival from Ports outside home trade limits:

Items	*Descriptions*	*Quantities*
Tobacco	Cigarettes	200
	Cigarillos	100
	Cigars	50
	Smoking Tobacco	250 grams
Alcohol	Over 20% volume	0.50 litre
	Under 20% volume and fortified or sparkling wine	1 litre
	Still table wine	2 litres

REPATRIATION: Facilities are readily available for effecting crew changes and repatriation where this is necessary and may be done with medical escort or not as required (see "Ship Supply Service").
AIRPORT: Newquay Airport has connecting flights to London (Heathrow) via Plymouth and/or Exeter and also regular flights to Aberdeen. Total travel time Penzance to London (Heathrow) is 2.5 hours. There is also a Heliport in Penzance with regular flights between the Isles of Scilly.
TIME: Local time is GMT with Summertime being kept at GMT plus one hour.
HOLIDAYS: Public Holidays in the United Kingdom: New Year's Day, Good Friday, Easter Monday, early and late May Bank Holidays (Mondays), August Bank Holidays (first and last Monday), Christmas Day and Boxing Day.

The Harbour does not close for any of these holidays.

FIRE/POLICE/AMBULANCE: The Emergency Services are obtainable by dialling 999 or on more routine matters on the following telephone numbers: Police (0736) 62395; Fire Service (0736) 62918; Ambulance (0872) 78181; Coastguard (0326) 317575.
EMERGENCY CO–ORDINATION CENTRE: Falmouth Marine Rescue Co–ordination Centre is available on Falmouth (0326) 317575 or on Telex 45560. The station maintains a 24 hours, 365 day watch.
SERVICES: Compass adjusting at 2 hours notice, vessels can be swung in daylight hours in Mounts Bay. Divers, engineers, welding, hydraulic repair, radar, radio and other electronic repairs or servicing are available 7 days a week.
BANKS: The four principal clearing banks have branches in Penzance: Midland, Lloyd's, Barclays and National Westminster.
STORING: Vessels can be stored alongside from lorries which park immediately alongside the vessel. The operation can usually be carried out by the ship's crew, however, fork–lift trucks can be made available.
SHIP SUPPLY SERVICE: *Mount's Bay Boarding Service:*

By helicopter: British International Helicopters operate a regular service between Penzance and the Isles of Scilly (30 miles S.W. of Land's End). Mount's Bay Boarding Service (MBBS) can charter helicopters for rendezvous with ships at sea for transfer of equipment and personnel.

Parcels: MBBS collect and despatch stores, parts, charts, etc, via British Rail "Red Star" parcels service, T.N.T. "Overnite" and "Courier", part of the G.P.O. Datapost and Securicor.

Charts: All British Admiralty charts and publications are available within 12 hours.

Stores: Fresh, frozen and dry stores are obtainable within 6 hours notice, while Bonded stores are available at 24 hours notice.

Spare parts: MBBS arrange clearance, forwarding and transport of spare parts to meet vessels on arrival. Undivided lifts of 1.5 tonnes can be handled (up to 10 tonnes by arrangement).

Crew transfer: MBBS can land and clear crew through Customs and Immigration as well as arranging for their travel onward to worldwide destinations. MBBS can also meet crew and either embark or accommodate them until the vessel's arrival.

Landing sick crew: Although in urgent cases, vessels are in direct contact with Falmouth's Coastguard MRCC, MBBS arrange the landing of non-urgent cases. In both instances MBBS liaise with local Coastguards, Customs, Immigration, Doctors and Hospitals, and can usually provide interpreters for non–English speaking crew. MBBS visit and look after the interests of hospitalised crew, and can report to their company/family. MBBS arrange travel and repatriation of crew members either with or without medical escort, according to Doctors' or hospital instructions.

Contact: J.H. Bennetts Ltd., 72 Market Jew Street, Penzance, Cornwall TR18 2LF. Tel: 0736-60660. Telex: 45530 (Jhb G).
SHORE LEAVE: There are no restrictions on crew shore leave.
IDENTIFICATION CARDS: An International Seaman's Card is sufficient identification for crew members.
REGULATIONS: There are no unusual Regulations affecting the Port.
DELAYS: Vessels will berth on the tide and will either commence discharge upon arrival or the following morning if they have arrived overnight.
GARBAGE DISPOSAL: Skips are available on quays. Also contact BIFFA (Tel: (0736) 60736).
WASTE OIL DISPOSAL: By road tanker, contact Pellows (Tel: (0872) 863927).
DEVELOPMENTS: Port development is under review.
AUTHORITY: Penwith District Council, St. Clare, Penzance, Cornwall TR18 3QW. *Tel:* (0736) 62341. *FAX:* (0736) 331331.

Harbour Master, Harbour Office, Wharf Road, Penzance, Cornwall TR18 4AB. Tel: (0736) 66113 office hours; 62341 Ext: 294 office hours; 61119 outside office hours. *FAX:* 0736-331331. *Contact:* Captain M. Tregoning, Harbour Master.

PERTH: 56.24 N. 03.25 W. (See Plan)

LOCATION: On River Tay, 35.4 km. above Dundee and 48.3 km. from sea.
DOCUMENTS: Normal documentation for arrival and departure U.K.
PILOTAGE: Navigation on the River Tay between Dundee and Perth is difficult and can be hazardous. The Perth Harbour Master will arrange for the services of local Pilots to assist vessels in making passage between Dundee and Perth. The contract for the services of a Pilot is between the Pilot and the vessel's Owner. The account will be rendered direct from the Pilot to the Shipping Agent for the charge to the Owner. Masters are strongly advised to make use of this facility, although it is not compulsory and is not provided under the terms of the Pilotage Act 1987. Pilotage from sea to Dundee is compulsory.
ANCHORAGES: Off Birkhill, depth 5.0 m. at L.W.O.S.T. (Emergency use only).
RESTRICTIONS: Air draft – Road Bridge at Dundee 22.0 m. Railway Bridge at Dundee 23.8 m. M.H.W.O.S. Vessel's draft for acceptance at the discretion of Perth Harbour Master, up to a maximum of 4.2 m. (F.W.). Normal safe F.W. draft is 0.2 m. less than predicted tide height, weather conditions permitting.
MAX. SIZE: LOA 87.0 m., beam 12.8 m. and deadweight 2,800 tonnes.
RADIO/VHF: Perth Radio on Channel 9 for upper river transit.
TUGS: Some assistance can be given by harbour launch, when available. Tug assistance is not normally required, however during periods when River Tay is fast running, tug assistance may be necessary and can be arranged through Agent.
BERTHING: Vessels sit on bottom (soft mud).

Berths No. 1 and 2 – total length 146 m.

Berth No. 3 normally only used for harbour requirements – length 55 m.

Berths No. 4 and 5 – length 145 m.

Berth No. 6 – 67 m.

Average depth throughout harbour – 0.76 m. at L.W.O.S.T. Harbour never dries out.

Tidal Range: Spring tides: M.H.W.S.T. 4.26 m. M.L.W.S.T. 0.76 m.

Neap tides: M.H.W.N.T. 2.89 m. M.L.W.N.T. 1.08 m.

Loading and discharging at all berths is by shore equipment. Lighting for nightwork is available at all berths.
CRANES: Ample mobile cranes available with S.W.L. between 5 tonnes and 40 tonnes. Ample forklifts and elevators for handling bulk cargoes.
STEVEDORES: Tay Stevedoring and Storage Ltd. Tel: (0738) 21114. Fax: (0738) 21682. Telex: 76342.

Calport of Perth. Tel: (0738) 26675. Fax: (0738) 39039. Telex: 76458.

Normal working hours for both companies 0800 hrs. – 1700 hrs. Overtime will be worked on request, night-time, weekends and holidays.
DENSITY: Fresh water at Perth Harbour.
FRESH WATER: Available at all berths. Rate of delivery 5 t.p.h. – 7 t.p.h. Cost (1992): £ 1.75 per cubic metre – minimum charge £ 20.00.
FUEL: Available by road tanker, arranged through Agent.
REPAIRS: Small repairs undertaken locally by good engineering firm. Major repairs undertaken at Dundee.

SURVEYORS: Cargo surveyors, samplers and tallying available by arrangement through Agent. Classification surveys available by arrangement through Agent.
REPATRIATION: Available by arrangement through Agent.
AIRPORT: Edinburgh 70 km., Glasgow 115 km., Aberdeen 160 km. and Dundee 35 km. Good main road system to all airports.
HOLIDAYS: Stevedores may work on Public Holidays if required.
POLICE/AMBULANCE/FIRE: Police: 21141. Ambulance: 22123. Fire: 22226. All three services can be reached by dialling 999.
SERVICES: Provisions available.
GARBAGE DISPOSAL: Garbage bag supplied to each ship on arrival for small quantities of domestic refuse, then collected by District Council. Removal of larger quantities of refuse and other items can be arranged through agents.
WASTE OIL DISPOSAL: Collection service available by road tanker from all berths. Arrangements can be made through Agent.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: (a) Tayside Regional Council, Roads & Transport, Transport Unit, Parker Street, Dundee, DD1 5RW. *Tel:* (0382) 23281. *Contact:* G.Fraser, Assistant Director.

(b) Perth Harbour Office, Lower Harbour, Friarton Road, Perth PH2 8BH. *Tel:* Perth (0738) 24056. *Contact:* Captain N. H. Lawrance, Harbour Master. Mr. F. G. Bissett, Assistant Harbour Master.

PETERHEAD BAY HARBOUR: 57.30 N. 01.47 W.

(See Plan)

DOCUMENTS: On arrival at Peterhead, Masters should have the following Customs documents ready for presentation:

2 copies C13 – General Declaration.
2 copies C142 – Declaration of Goods.

PILOTAGE: Pilotage is compulsory for all vessels over 3,500 g.r.t. unless the Master or Mate has a valid Pilotage Certificate. Pilotage is also compulsory for vessels carrying dangerous goods in bulk and all tankers, unless the Master or Mate has a valid Pilotage Certificate. Masters must call "Peterhead Pilots" on VHF Channel 16, giving minimum one hour's notice of ETA.

In the message of ETA, the following information must be included:

1. Name/call-sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot boards within 0.5 miles of breakwaters in fair weather. In adverse weather Pilot boards inside bay.
ANCHORAGE: Depth within bay up to 12.5 m. Poor holding in Easterly gales.
TUGS: A twin-screw tug of 36 tonnes bollard pull is normally stationed in the harbour and is available through Targe Towing Ltd., Tel. (0779) 78264. Additional tugs may be procured if sufficient advance notice is given.
BERTHING: Aberdeen Service Co. (North Sea) Ltd. operate two purpose-built North Sea Oil service bases:

The North Base consists of a 2 berth open pile jetty with depth of 7.0 m. The North Breakwater, which has a purpose-built rig mooring system provides 4 additional berths with depths of 14.0 m.

The South Base consists of a 470 m. quay, depths of 6.8 m. and contains 7 berths supported by warehousing and storage space. The South Breakwater provides 5 berths with depths of 7.8 m.

The Tanker Jetty built to import fuel oil for the nearby Peterhead Power Station, is designed to accommodate vessels up to 50,000 tonnes deadweight with a draft of 11.5 m. and a length of 250 m. It is also used for the servicing of North Sea supply vessels, diving support vessels, survey vessels and vessels loading grain and other similar bulk cargoes. It may also be available for the short term lay-up and maintenance of oil rigs.
Note: Breakwaters are subject to closure during adverse weather and vessels must be ready to leave at short notice.
CRANES: Numerous mobile cranes available including a 200 ton Manitowoc crane.
TANKERS: See "Berthing".
FRESH WATER: Available at Tanker Jetty, South Base, North Base Jetty and North Breakwater. There is no fresh water at the South Breakwater.
FUEL: Marine gas oil available by pipeline at South Base, North Base Jetty and North Breakwater. Bunkering by road tanker is possible at the Tanker Jetty and South Breakwater.
REPAIRS: Most deck and engine repairs can be carried out.
REPATRIATION: Crew changes and repatriation possible.
AIRPORT: Aberdeen, Dyce 34 miles. Feeder routes to main international airports, some continental air transportation.
TIME: GMT. Clocks advanced 1 hour last Sunday in March.

Last Sunday in October, clocks retarded 1 hour.
POLICE/AMBULANCE/FIRE: Emergency 999. Police 72571. Ambulance 72494. Fire (emergency only) 999.
RESCUE CO-ORDINATION CENTRE: Aberdeen Coastguards. Call on VHF Channel 16 or telephone No. 0224-592334.
GARBAGE DISPOSAL: Skips for ship's garbage are provided on all quays.
WASTE OIL DISPOSAL: Collection service available through Shanks & McEwan, Blackdog Centre, Murcar, Aberdeen, Tel: 0224-248445.
SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fishermen, Union Street, Peterhead, Tel: 0779-72940.
CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.5747 (5.4.91).
DEVELOPMENTS: Fishery harbour breakwaters under construction.
AUTHORITY: Peterhead Bay Authority, Bath House, Bath Stre Peterhead AB42 6DX. *Tel:* Peterhead (0779) 74020, after hours (077 74281. *Telex:* 73749. *FAX:* (0779) 75712. *Contact:* Captain A. M. Fle Chief Executive/Harbour Master.

PLYMOUTH: 50.22 N. 04.09 W.

(See Pla

DOCUMENTS: Importer to supply Agent with Customs documentatio e.g. original B/L with cheque to cover various details; plus copies o Invoice and Forms C.105 with packing lists. Derat or Exemptio Certificate required.
PILOTAGE: Compulsory for merchant vessels. Call sign FSG, or 4 sho blasts on whistle. Vessels not subject to compulsory pilotage may obta Docking Pilot in Plymouth Sound otherwise pilot station off Penlee Poi

Pilot boat is motor boat with white upperworks, black hull. "Pilot" i black on wheelhouse.
ANCHORAGES: In Plymouth Sound.
MAX. SIZE: Maximum depth of water 9.0 m. Vessel drawing 8.0 m would leave anchorage 2 hours before HW. Also see "Berthing".
Ro/Ro Berth No. 1: Max. LOA 145 m. Max. beam 20 m. Max. draft 5.5 m
Ro/Ro Berth No. 2: Max. LOA 200 m. Max. beam 30 m. Max. draft 8.5 m
HEALTH: Pratique – Apply to Customs Waterguard. Pratique issue when requirements satisfied.

See "Health – All Ports" before first U.K. port.
RADIO: *Pilots:* The calling and listening frequency is 2182 kHz and th working frequencies are 2246 or 2301 kHz. A listening watch is kept o 2182 kHz at every even hour to 15 minutes past, local time and fo longer periods when a ship is expected.
VHF: The pilot vessel is equipped with VHF and should be called o Channel 16; the working Channels 6, 8 or 12 should be used for passin messages. Alternatively the shore-based Trinity House Pilot Statio Plymouth, call sign "Cattewater Harbour Radio", maintains a continuou watch on Channel 16 (calling Channel) and is fitted with Channel 1 (first choice Port Operations Channel) and 18.
TUGS: Available in Sound by arrangement.
BERTHING: *Millbay Docks:* (Associated British Ports).

Outer Harbour:

Water Area	11.00 Hectares
Length of West Wharf	200 m.
Depth alongside MLWST	8.6 m. – 9.0 m.
Length of Trinity Pier	146 m.
Depth alongside Northside and West end MLWST	5.2 m.
Ro/Ro Berth No. 1 (3 Round dolphins)	
Max. length of vessel	145 m.
Depth alongside MLWST	6.5 m.
Ro/Ro Berth No. 2	
Max. length of vessel	200 m.
Depth alongside MLWST	9.0 m.

Fresh Water available at all berths.
Large transit shed on Trinity Pier.

Note: Inner Basin closed to shipping.
Victoria Bulk Wharves: Pier No. 1. Length 475 ft. Depth 20 ft. LWOST Pier No. 2. Length 350 ft. Depth 20 ft. LWOST. Max. beam 38 ft. (Large with prior notice.) Max. d.w.t. 3,000 tons. Bulk products loaded b conveyor ex-railway trucks and lorry.
Cattedown Wharves: Length 712 ft. Depth 24 ft.–26 ft. LWOST Max. LOA 560 ft. Max. draft 26 ft. Max. size 12,000 g.r.t. 1×5 ton an 2×3 ton cranes.
CRANES: 4 quayside cranes of 6 tonnes capacity. 3 mobile cranes u to 28 tonnes capacity.
STEVEDORES: Commodities regularly handled include fresh fruit an vegetables, timber and general cargoes.
Imports: Fertiliser, clinker, pumice and bulk cargoes.
Working Hours: Monday – Thursday 0800 – 1700. Friday 0800 – 160 Overtime by arrangement.

Shift working is also regularly undertaken 7 days per week to mee specific requirements, (i.e. Ro/Ro vessels in ABP – Millbay Docks).
MEDICAL: No advance notice required; hospital facilities in Plymout
TANKERS: Vessels of the Shell "H" class can be handled at Cattedow Wharves. Max. draft 26 ft. 5 hose connections, diameter 10 in. 2 fo black oil and 3 for white oil.
FRESH WATER: Available from shore at all berths.
FUEL: All normal grades available at short notice.
CONSULS:

Belgium	65154	Italy	63445
Dominican Rep.	63175	Netherlands	64846
France	65154	Norway	65154

AUTHORITY: Associated British Ports, Port Office, Millbay Docks, Plymouth, Devon PL1 3EF. *Tel:* Plymouth (0752) 662191. *FAX:* (0752) 222070. *Contact:* E. S. Chapman, Port Manager. Captain J. R. Willan, Docks and Marine Superintendent.

Cattedown Wharves Ltd. for Cattedown Wharves and Bethyl Gwynn Ltd. for Victoria Wharves.

POOLE: 50.43 N. 01.59 W. (See Plan)

DOCUMENTS: As for other British ports.

PILOTAGE: Pilot compulsory for all vessels over 50 m. LOA, unless Master holds a current Poole Pilotage Exemption Certificate. Pilots board 0.5 mile South of Poole Bar Buoy from cutter. Prefer ladder 0.50 m. from water and a good lee. VHF watch kept on Channel 16 working Channels 9 and 14. As much notice as possible. Address: Pilots, Poole.

ANCHORAGE: Vessels can anchor anywhere in Poole Bay and Studland Bay. Good holding ground and protected in all but Easterly gale.

RESTRICTIONS: Vessels drawing up to 5.2 m. can enter at any state of tide. Drafts in excess of 5.2 m. must wait for the tide.

NOTE: Advertised depth in main shipping channel:

From Base Buoy Entrance to Terminals 2 and 3 is 6.2 m. at Chart Datum, but to Terminal No. 1 it is 5.2 m. at Chart Datum.

MAX. SIZE: Max. length 140 m., beam – no limit, draft 5.2 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Vessels using the Port may call direct on VHF Channel 16 – working frequency Channel 14 call-sign "Poole Harbour Control".

TUGS: 2 tugs, 8 ton and 7 ton bollard pull. Join at Stakes Buoy, by special application arrangements can be made to join at North Haven Point. Ship's lines. No difference in charges.

Pilots will advise whether a tug is necessary or not. Any vessel in excess of 1,000 d.w.t. or 300 ft. LOA due to pass through the Poole Bridge is required to take a tug. The gap in the bridge is 60 ft.

BERTHING: Berthing time depends on draft at some private quays. No restriction at New Quay or Ro/Ro berths.

Ro/Ro Terminal (CFFT):

Size of vessel:

Max. draft 5.5 m.
Max. length 160 m.
Max. depth 5.2 m. at Ro/Ro No. 1 and 6.5 m. Ro/Ro No. 2 and 3 at Chart Datum.

Berths/Equipment: Three linkspan berths for Ro/Ro vessels, Berth No. 1 utilises mooring dolphins, Berth No. 2 has 90 m. long working quay. Berth No. 3 has 130 m. long working quay and a two tier linkspan. Vehicles up to 180 tonnes gross weight can be handled subject to prior approval of Port Authority. A total of some 16 hectares (40 acres) of terminal is surfaced to a high standard, providing parking places for 400 heavy goods vehicles. A further 2 hectares (5 acres) of reclaimed land is available for future port expansion. Warehousing facilities; self weighing weighbridge; fleet of Tugmasters and fork lift trucks; 35 tonne gantry crane in Terminal for handling 20/30/40 ft. containers to/from road.

New Quay:

Length: 158 m.
Depth alongside: 16 ft. (4.9 m.) at Chart Datum.
Equipment: 3 ton capacity level luffing rail-mounted crane, 25 ton and 32 ton Scotch derricks and 35 tonne capacity crawler crane equipped for hook/bulk/grab/spider grab duties giving an operational capacity of 6 tonnes at 18 m.; warehousing 3,000 sq.m. plus open storage; mobile crane capacity up to 200 tonnes.

Yard Quay:

Length: 200 ft. (61 m.).
Depth alongside: 2.6 m. at Chart Datum.
Equipment: Warehousing facilities; limited open storage.

Ballast Quay:

Length: 256 ft. (78 m.).
Depth alongside: 4.0 m. at Chart Datum.
Equipment: 6.5 ton capacity level luffing crane fitted with grab/hook for bulk handling/general cargo duties.

Poole Town Quay:

Length: 1,300 ft. (396 m.).
Depth alongside: 3.6 m. – 4.5 m. at Chart Datum.
Equipment: Mobile crane capacity 40 tonnes.

Bulwark Quay:

Length: 91 m.
Depth alongside: 4.3 m. at Chart Datum.
Equipment: 25 ton Scotch Derrick; warehousing facilities; open storage.

Private Quays:

J. T. Sydenham (Timber Wharf)
Length: 250 ft. (76 m.).
Depth alongside: 4.2 m.
Equipment: Mobile crane capacity 45 tonnes.

Other Private Quays:

Corrals (Fuel)
J. Bolson & Son Ltd. (Marine Repair & Engineering).
South Coast Sand & Ballast (Sea Dredged Aggregates).
Southern Ocean Shipyard Ltd. (Yacht Builders).
Enoxy Chemicals Ltd.
Central Electricity Generating Board.
Dean & Dyball (Marine Construction).
Sydenhams (Timber).

Oil Jetty:

Length: 270 ft. (82 m.).
Depth alongside: 4.9 m. at Chart Datum.

BRIDGES: Poole Bridge (Max. width 60 ft.) at West end of Poole Quay. Will open at any time on request by commercial vessel.

STEVEDORES: Normal notice for gangs.

MEDICAL: Advance notice required for ambulance services. Normal medical and hospital services available. Distance to hospital is 2 miles.

TANKERS: 3 oil berths. Diameter of load/discharge lines 6 in.

DENSITY: 1021.

FRESH WATER: Delivery 25 t.p.h. by 2 in. hose.

FUEL: Gas oil only.

CONSULS: At Southampton.

Belgium	German	Norwegian
Danish	Greek	Spanish
Finnish	Italian	Swedish
French	Netherlands	

REPAIRS: All types deck and engine repairs can be carried out. Slipways (2) available for vessels up to 220 ft. LOA by 40 ft. beam and 120 ft. LOA by 30 ft. beam.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Work carried out by crew.

AIRPORT: Charter flights for crew changes can be carried out from Hurn Airport 9 miles away from port.

POLICE/AMBULANCE/FIRE: Call 999 and ask for service required.

SHIP SUPPLY SERVICE:

Poole Harbour Commissioners: 2 small tugs (448 Kw and 320 Kw) speed 7 knots and 10 knots.

J. Harvey & Sons (Poole) Ltd.: West Quay Road, Poole. Tel: 674063. Operators of small passenger boats.

Crosons Ltd.: New Quay Road, Hamworthy, Poole. Tel: 673201. Operators of passenger vessels carrying up to 200 persons

Hurn Airport: Situated 9 miles from Poole. Full international facilities. Suitable for helicopter landing etc.

IDENTITY CARDS: Required in Ro/Ro terminal.

GARBAGE DISPOSAL: Free skip service available for cargo vessels loading/discharging at the commercial quay. Skips located adjacent to all berths.

WASTE OIL DISPOSAL: Waste oil collection service provided by local road haulier for all ships using the port at all berths. Prior arrangement and charges through local agents.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

(See Plan)

DOCUMENTS: Documentation required for arrival:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Masters Authority (Agents complete)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copies of Manifest and ship's documents at the time of report.

PILOTAGE: Compulsory. Station – Swansea Bay. Usual International signals. VHF Channels 16 and 12.

ANCHORAGES: Swansea Bay.

RESTRICTIONS: *Ore Terminal* in New Harbour, entrance channel 1.5 miles long, 550 ft. wide. Depth 60 ft. MHWS, 53 ft. MHWN.

MAX.SIZE: *Bulk Terminal:* Approximately 100,000 tons d.w.t. bulk carriers fully loaded at draft 48 ft. 6 in. Larger vessels partly loaded at 48 ft. 6 in. draft are accepted.

Largest cargo to date under these conditions: 130,000 tons of iron ore in M.V. "British Steel" (LOA 287 m., beam 47.07 m., full deadweight 173,000 tons).

HEALTH: See "Health – All Ports" before first U.K. port.

TUGS: Join off Breakwater.

BERTHING: *New Harbour:* British Steel Plc provide 3 unloading appliances on the South side of the jetty and also a conveyor-belt system to carry iron ore and coal to stocking grounds. The three discharging appliances can achieve approximately:

Iron ore – maximum 5,000 t.p.h. – average 3,000 t.p.h.

Coal – maximum 2,000 t.p.h. – average 1,000 t.p.h.

The berth on the North side of the jetty has been designed for use by self-discharge vessels equipped with their own conveyor/boom. Draft restrictions at this berth are the same as the grab berth at 48 ft. 6 in.

Discharge rates of 2,800 t.p.h. for iron ore and 1,000 t.p.h. for coal have been achieved.

STEVEDORES: ETA advices sent by vessels to local Agent and then advised to British Steel Corp. as stevedores. Labour ordered by Agent from B.S.C.

DENSITY: Ore Terminal 1025.

FRESH WATER: By gravity 10 t.p.h. Harbour pumping 100 t.p.h.

FUEL: By barge or road tanker. Any grade available.

CONSULS: None at Port Talbot, contact Swansea.

REPAIRS: Facilities exist.

SURVEYORS: Cargo Surveyors available locally.

Hull surveyors available from Swansea and Cardiff.

GANGWAY/DECK WATCHMEN: None, but bye-laws state that vesse must be manned.

OPENING/CLOSING HATCHES: Performed by crew.

CUSTOMS ALLOWANCES: Tobacco, 1 oz. per day/man, max. 8 day Wine/Spirits, 0.25 pint per day/man, every 4 days.

REPATRIATION: All facilities exist.

AIRPORT: Rhoose Airport 25 miles away. Mainly short trips connectin with main airports.

TIME: GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: It is the custom, at the Tidal Harbour, to work on Ba Holidays, except Christmas and New Year.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: Search and Rescue Cent – Mumbles. Tel: Swansea 66534.

BANKS: Lloyds Bank Ltd., Station Road. Tel: Port Talbot 891401.

Barclays Bank Ltd., Station Road. Tel: Port Talbot 887655.

STORING: See "Prelims".

1. Yes.
2. None.
3. Yes.
4. No.
5. Usual regulations.
6. Riggers not available.

SHIP SUPPLY SERVICE: It is the practice for pilot cutters of Swanse and Port Talbot to ferry personnel, stores, etc. to vessel off shore a due to dock at the respective ports.

Contact: Swansea and Port Talbot Pilotage, Port Office, King's Do Lock, Swansea. Tel: 0792-650855

IDENTIFICATION CARDS: Docks Police would require identification be available.

DEVELOPMENTS: Two new 2,800 t.p.h. grab unloaders were installe during 1991 to replace the two oldest units.

AUTHORITY: Associated British Ports, Harbour Office, Lockhea King's Dock Lock, Swansea, West Glamorgan SA1 1QR. *Tel:* Swanse (0792) 650855. *Telex:* 48150. *FAX:* (0792) 650729. *Contact:* Mr. A Klinck, Port Manager. Captain M.Ingamells, Dock and Harbour Mast

PORTLAND: 50.34 N. 02.26 W.

PILOTAGE: Available from Weymouth. Pilot boards in positio Lat. 50° 36′ N., Long. 02° 24′ W.

ANCHORAGE: Vessels seeking shelter from Westerly gales are like to find more room and better shelter outside the breakwaters Weymouth Bay.

VHF: All Harbour movements are controlled on VHF Channel 13.

Traffic Regulations: Due to the frequent movements by naval vesse in the vicinity of Portland Harbour, all vessels approaching Portlan Harbour, which are fitted with VHF, should make reports on th appropriate channel to Queen's Harbour Master, Portland, when passin through various Radio Reporting Points, whose positions can best b seen on the charts. In addition it is mandatory that such vessels shou keep watch on the appropriate channel when within 3 nautical miles "A" Head (50° 35′ N., 20° 25′ W.). For details of frequencies s "Admiralty List of Radio Signals'.

Radio Reporting Points:

Positions 'EE' and 'CB' are for inward bound vessels.

Position 'CH' is for inward bound vessels proceeding to the Nois Range buoys, moored 0.75 miles S.E. of "D" Head, and for outwa bound vessels proceeding between Bill of Portland and Th Shambles.

Position 'CG' is for inward bound vessels, and for outward bou vessels proceeding East of The Shambles.

Position 'CF' is for inward bound vessels approaching Portlan Harbour from East, and for outward bound vessels proceeding in a Easterly direction.

Reports should include the following information:

Inward bound vessels:
- Name of ship.
- Position (i.e. Reporting Point letters).
- Destination and ETA.

Outward bound vessels:
- Name of ship.
- Position (i.e. Reporting Point letters).
- Intended route East or West of The Shambles (if appropriate).

TUGS: Admiralty tugs available.

BERTHING:

Castletown Pier: Castletown Pier is a commercial wharf and leased t A.R.C. for the discharge of fertilisers. Max. LOA of vessel 82.3 m, bea 12 m. with max. draft 5.3 m.

CRANES: 1 mobile crane.

FUEL: Available by road tanker.

GENERAL: The Harbour and the immediate vicinity are classified as Dockyard Port under the supervision of the Queen's Harbour Mast Portland. Attention is drawn to Chart 2268 which gives details of th Restricted Area around the Naval Base, of designated Anchor Bert for H.M. Ships, of Prohibited Anchorage areas and of the numero Admiralty moorings and telephone cables. The Harbour, which protected by breakwaters, is easily accessible by the North Ship Channel (12 m. LWS) or East Ship Channel (12.5 m. LWS). The South Ship Channel is blocked both above and below the surface and is only suitable for small boats.

AUTHORITY: Naval Base Commander, H.M. Naval Base, Portland. *Contact:* Queen's Harbour Master, H.M. Naval Base, Portland, Dorset. DT5 1BQ. *Tel:* Portland (0305) 820311 Ext. 2106/3641.

PORTREE: 57.24 N. 06.07 W. (See Plan)

PILOTAGE: Pilot available with 24 hours notice.

ANCHORAGE: No defined areas, left to the discretion of the ship's Master. Care should be taken not to anchor near sewage line.

RESTRICTIONS: Berthing of larger vessels dependent on state of the tide. Larger vessels tend to anchor off and transhipment carried out by ship's tender.

MAX. SIZE: LOA 65.5 m., beam 11.25 m., draft 4.08 m. (Summer) and 3.99 m. (Winter).

VHF: Harbour Master's office on Channels 16 and 12.

BERTHING: Depth alongside 4.8 m. (Neaps) and 6.3 m. (Springs). Depth at entrance 9.1 m.

TANKERS: Fuel oil discharged to B.P. storage depot by means of fuel line under pier.

MEDICAL: Hospital, doctor and dentist located nearby.

FRESH WATER: There are 2 water supply outlets.

FUEL: Ordinary gas oil available from B.P. Depot during normal working hours.

GANGWAY/DECK WATCHMEN: At the discretion of the ship's Master.

OPENING/CLOSING HATCHES: By ship's crew.

CARGO GEAR: Ship's gear used. 18 tonne mobile crane available.

REPATRIATION: No facilities.

AIRPORT: At Broadford, 50 km. from the harbour.

TIME: GMT in Winter. GMT plus 1 hour in Summer.

HOLIDAYS: January 1st, 2nd and 3rd; Good Friday; Easter Monday; May 1st; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Police Tel: Portree 2888.

EMERGENCY CO-ORDINATION CENTRE: Coastguard: Shetland District for Portree. Tel: Oban 63720. Station at Portree not continually manned.

SERVICES: The following are NOT available: Radio, radar, tugs, stevedores, consuls, repairs, surveyors, telephones.

BANKS: Royal Bank of Scotland plc, Bank Street, Portree.
Clydesdale Bank plc, Portree.
Bank of Scotland, Somerled Square, Portree.

SHIP SUPPLY SERVICE: Launch available.

GENERAL: General stores, fruit and vegetables available in local shops.

GARBAGE DISPOSAL: Skip available on pier.

WASTE OIL DISPOSAL: Oil tank with capacity 150 gallons available.

SEAMAN'S CLUBS: No club available. Contact Harbour Master to arrange football matches. Shops and swimming pool available locally.

AUTHORITY: Highland Regional Council, Department of Roads and Transport, Regional Buildings, Glenurquhart Road, Inverness IV3 5NX. Tel: (0463) 234121. *Telex:* 75313. *FAX:* (0463) 710184. *Contact:* R.Massie.

The Harbour Master, Divisional Engineer's Office, Dunvegan Road, Portree, Isle of Skye. *Tel:* Portree (0478) 2926. *FAX:* (0478) 2255. *Contact:* Captain M. MacArthur, Harbour Master.

PORTSMOUTH: 50.48 N. 01.07 W. (See Plan)

DOCUMENTS: (Those marked* to be produced to H.M. Customs Boarding Officer.)

*1 Maritime Declaration of Health.
*1 Crew's Effects List C142.
2 Ship's Reports by Master.
*1 Home Office Form 1B6.
*1 Stores List.
*1 Certificate of Deck Cargo Tonnage.
*1 Grain Certificate.
1 Light Dues Certificate.
1 Port Dues Certificate.
*1 Passenger List.
*1 Landing Card for each non-British passenger.
*Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).
*Load Line Certificate.
*Safety Equipment Certificate.
Lloyd's Certificate.
*Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
*List C143 for packages not cargo or crew/passenger effects.
*Danish Tollpass for ships arriving from Denmark.
Form of Authority for Agent to make Report and clear vessel outwards for Master.

Note: Where cargo is to remain on board for unloading at another port after Portsmouth, 3 copies of Ship's Report are required by the Customs House.

APPROACHES: *The Main Channel:* The outer part of the main approach channel into Portsmouth Harbour lies between Horse and Dean Sand and Spit Sand. The inner part of the channel lies between Spit Sand and East Sand with a narrow coastal bank fronting the coast North-West of Southsea Castle. The channel is dredged to a depth of 9.4 m. and is well marked by leading marks and light buoys. Within the harbour entrance the main channel is bounded on both sides by the 10 m. line.

Portsmouth Harbour has a mean tidal range of 4.1 m. at Springs and 2.0 m. at Neaps. Particular reference should be made to Admiralty Charts and other publications for information on tidal streams in the Harbour entrance and approaches.

PILOTAGE: The Pilot boards at the Warner Buoy or the North Sturbridge Buoy. The pilot boat has a black hull with orange superstructure with "Portsmouth Pilots" in black letters on the side of the wheelhouse. Pilot boat can be called direct on VHF Channels 11 or 12, and Queen's Harbour Master and Portsmouth Harbour Radio on Channel 11. Pilots require 24 hours' notice of arrival. This notice to include draft, length, beam, particulars of cargo, last port of call and intended berth. Vessels should also contact Pilot 8 hours and 1.5 hours prior arrival at the Warner Buoy.

When leaving the port, the Pilots require 8 hours notice (Tel. No. (0705) 297395).

Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots, who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are not required. Ladders should reach to about 3 ft. from the water, each rung resting firmly against the ship's side; a good lee should be provided whilst making approximately 3 to 7 knots headway.

Notice: The following is part of local Notice to Mariners (No. 34 of 1992), dated 24th June 1992.

Compulsory Pilotage:

3. The following categories of vessels are subject to compulsory pilotage:

(a) A vessel of 48 m. or more in overall length.

(b) A vessel of 20 m. or more in overall length, carrying more than 12 passengers.

4. The following categories of vessels are exempted from compulsory pilotage by Portsmouth CHA:

(a) A vessel in transit through the Solent on passage to or from any position West of the line Gilkicker Point Light to Ryde Pier, provided such vessel does not proceed North of a line from Gilkicker Point Light to Horse Sand Fort Light to Horse Elbow Foul Buoy.

(b) A vessel in Government service, except when berthing or unberthing at any non-Ministry of Defence facility.

(c) A vessel with an Admiralty Pilot embarked while proceeding to or from any Ministry of Defence facility. Such a vessel, proceeding between a Ministry of Defence facility and a commercial facility, is not exempt compulsory pilotage for the berthing or unberthing operation at the commercial facility.

(d) An inward vessel bound to any position West of the line Gilkicker Point Light to Ryde Pier, or going to an anchorage in St.Helen's Roads.

(e) A vessel of an overall length not greater than 150 m., while to the S.E. of the line from Nettlestone Point (Lat. 50° 43.27' N., Long. 01° 06.40' W.) to the Warner Buoy, thence in a N.W.'ly direction to Horse Elbow Foul Buoy, thence due North to the shoreline.

Pilot Boat Recognition and Boarding Points:

5. The Portsmouth Pilot Boat may be recognised by the legend 'Portsmouth Pilots' in black letters on each side of the wheelhouse. There will not be a pilot boat permanently on station.

6. (a) The boarding points for vessels to the South and East of the Isle of Wight are:

(1) For vessels requiring pilotage from the NAB Tower, a position 1 mile to the West of the Nab Tower.

(2) For vessels of an overall length not greater than 150 m., the Pilot will board in vicinity of 1 mile South of the Warner Buoy.

(b) For vessels approaching from the Western Solent, the boarding point for Portsmouth Pilots is approximately 0.8 nautical miles West of the North Sturbridge Buoy.

7. In adverse weather, these points may be altered, and up-to-date information can be obtained from 'Portsmouth Pilots' on VHF Channel 11.

8. Direct communication may be made with the pilot boat on VHF Channel 11 or 12 when on station.

9. Portsmouth Pilots can be contacted on Telex: 9312110368 PMG or on Tel: (0705) 297395. Further details of Ordering Procedures including Notice Required are contained in the Pilotage Arrangements Handbook, obtainable from Port Manager's Department, Harbour Offices, Continental Ferry Port, George Byng Way, Portsmouth PO2 8SP.

Also see "Southampton" – "Notices".

ANCHORAGES: Merchant vessels may only anchor in the Man-of-War Anchorage at Spithead, with the permission of The Queen's Harbour Master, Portsmouth.

If anchorage is prohibited in Spithead, St. Helen's Roads, Ryde Roads or Cowes Roads are the nearest safe anchorages. Mooring Buoy No. 3, off North Corner in the Harbour is sometimes used. Pilots will be fully informed before the vessel's arrival.

RESTRICTIONS: *Speed:* Speed limit of 10 knots in harbour and when within 1,000 yards of shore in any part of the dockyard port; 12 knots within 1,000 yards of any H.M. ships in any part of the Dockyard Port not covered by the 10 knots limit. Dockyard Port boundaries are shown on Admiralty charts.

Also see "General".

MAX. SIZE: See "Berthing".

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a Port Doctor or an officer of H.M. Customs, depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (North European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board, Port Health Authority must be informed, preferably not more than 12 hours nor less than 3 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO/VHF: Dockyard Port of Portsmouth – Local Notice to Mariners – No. 32 of 1991.

VHF Communications in the Solent:

1. The Queen's Harbour Master Portsmouth has overall jurisdiction concerning measures for the safety of navigation within the Dockyard Port of Portsmouth, inclusive of Portsmouth Harbour, the East Solent and Eastern Approaches thereto, as defined on Admiralty Charts. The co-ordination of shipping movements within the Solent is carried out by Southampton Vessel Traffic System (Call sign "Southampton VTS"). Portsmouth Harbour Control (Call sign "QHM") controls the traffic entering or leaving Portsmouth Harbour, North of a line between Fort Gilkicker and Horse Sand Fort.
2. This Notice is issued taking note of current Notices to Mariners issued by the Port of Southampton and when taken together the contents of these Notices provide for continuity of communications and the co-ordination of shipping movements. It is issued in agreement with the Harbour Master Southampton.
3. *Entry to the Solent:* Southampton VTS has radar coverage of the East Solent up to a line joining Horse Sand Fort and No Mans Land Fort (but not the Portsmouth Harbour approach channels, North of a line joining Gilkicker Point and Horse Sand Fort). The Duty VTS Officer, responsible to the Port of Southampton Harbour Master, maintains radar surveillance and VHF communications in accordance with current Notices to Mariners issued by the Port of Southampton.
4. All vessels in excess of 20.0 m. in length bound to or from, or passing through the Port of Southampton, vessels bound to or from Portsmouth or passing through the Dockyard Port of Portsmouth and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF with Southampton VTS as shown on Admiralty Charts and in the Admiralty List of Radio Signals Volume 6, Part 1.
5. *Use of VHF Channels:* All vessels entering and leaving the East Solent are to report to Southampton VTS on VHF Channel 12 when passing Lat. 50° 40′ N., giving their position as a distance East or West of Nab Tower. Vessels proceeding to an anchorage in the Solent for shelter or subsequent berthing must report to Southampton VTS when anchored, together with their approximate position. Whilst at anchor, vessels must maintain a listening watch on VHF Channel 12. Vessels leaving a sheltered anchorage must also report and advise Southampton VTS of their intended destination and whether they are leaving the Solent via the East or West Solent.
6. *Entry to Portsmouth:* After making the appropriate reports, vessels are to revert back to listening watch with Southampton VTS until passing across a line drawn between Fort Gilkicker and Horse Sand Fort when listening watch is to be changed to Channel 11. Vessels not fitted with VHF Channel 11 should remain on VHF Channel 16. Vessels not using the main approach channel are to report before entering the Swashway.
7. *Portsmouth Harbour:* The Queen's Harbour Master Portsmouth will co-ordinate all shippig movements within Portsmouth Harbour and its approach channels to the North of the line joining Gilkicker Point and Horse Sand Fort. Advice will be given regarding other shipping movements and matters affecting navigation in the Harbour. The Queen's Harbour Master maintains a continuous listening watch on VHF Channels 11 and 13 and uses these channels for the co-ordination of shipping movements. Portsmouth is now one of the busiest harbours in the U.K. and the need for strict circuit discipline on Channels 11 and 13 cannot be too strongly emphasised. Routine administration traffic is not to be passed on these channels. The Commercial Port Manager (Call sign "Portsmouth Harbour Radio") also maintains a constant watch on Channel 11. Channel 13 is the Naval Port Operational channel and is used by the Royal Navy to control tugs. In the event of overloading of Channel 11, QHM may authorise the use of Channel 13, in which case it is the responsibility of QHM to rebroadcast pertinent information.
8. *Requirement by all Vessels to maintain a Listening Watch:* All vessels, if more than 20.0 m. overall length when underway in Portsmouth Harbour and approach channels North of the line joining Gilkicker Point and the Horse Sand Fort, are to maintain a continuous listening watch on VHF Channel 11. All such vessels must request permission from the Queen's Harbour Master to sail or move within the Harbour before leaving their berth.

TUGS: Tow-boat services are available for commercial vessels at commercial berths. In addition Admiralty tugs available at commercial berths by arrangement with Queen's Harbour Master.

BERTHING: Commercial berths: Camber – length 80 m., depth 16 ft. Flathouse – length 300 m., depth 7.0 m. below C.D. Vessels up to 156 m. LOA can be accommodated. Albert Johnson Quay – length 195 m. Depth 3.6 m. below C.D. Continental Ferry Port Ro/Ro Linkspans – Max. length 162 m., depth No. 1 – 5.0 m. below C.D., depth No. 2, 3 and 4 – 7.0 m. below C.D.

Vessels at the Camber, Flathouse and Rudmore Wharves must expect to take the bottom in soft mud.

CRANES: 32 ton Scotch Derrick at Flathouse Quay. Mobile cranes provided by stevedoring companies.

STEVEDORES: Available by arrangement with stevedoring companies.

MEDICAL: All medical facilities available. Agent should be advised in advance. (See "Southampton" entry if arrival is solely to land sick personnel).

DENSITY: 1025 salt water.

FRESH WATER: Available.

FUEL: Fuel and Diesel Oil available by road tanker or bunker barge from Fawley.

FIRE PRECAUTIONS: Notices will be delivered to Master if berthing at any jetty where special precautions apply.

CONSULS:

Belgium
Finland
Netherlands
Sweden
Denmark
France
Norway

REPAIRS: Minor deck and engine repairs can be carried out locally Larger repairs and dry dock facilities at Southampton.

OPENING/CLOSING HATCHES: By ship's crew.

CUSTOMS ALLOWANCES: As for "Southampton".

REPATRIATION: All facilities exist.

AIRPORT: Fast train service from Portsmouth to London Airpor Eastleigh Airport local, but mainly short flights to Channel Islands an feeder services.

TELEPHONES: None on board.

GARBAGE DISPOSAL: Vessel operators contract with various was management companies to provide a service for their ships. Separat contracts are maintained by each vessel operator. Bins are provided a Camber Quay.

WASTE OIL DISPOSAL: Vessel operators contract with various was management companies to provide a service for their ships.

SERVICES: All marine, radio and radar services can be obtained fro Southampton.

SHIP SUPPLY SERVICE: J. Butcher & Sons (Port Services) Ltd 19 Pembroke Road, Old Portsmouth PO1 2NS. Tel: (0705) 82258 After hours 821347 and 821033.

The Company provides the majority of the towing services in the commercial port, operating in the Eastern Solent from Cowes to Na Shoal including Spithead, The Mother Bank and St. Helen's Roads. A fleet of 11 vessels is operated, headed by the 525 b.h.p. Kort Nozzle Tugs "Janet James" and "Carol James" providing towing service (including tow boats for smaller ships) and boats for mooring, rope running and berthing purposes. The passenger launch and workboa service transports ships' crews, Agents, technicians, stores an equipment within the harbour area and Eastern Solent.

The tugs and tow boats have been purpose built for berthing an unberthing ships up to 140 m. at the commercial port.

Services of an Admiralty tug available on application to the Queen's Harbour Master.

GENERAL: *Dockyard Port of Portsmouth – Local Notice to Mariners No. 10 of 1992.*

	Signal	*Meaning and Application*	*Hoisted/Displayed by*
1. *Day*	Red Flag with white diagonal bar.	Large vessel underway in Main Channel or Harbour.	Central Signal Station Blockhouse Signal Station.
Night	Red Light over 2 Green Lights vertical.	Other vessels may be required by QHM to wait alongside or hold in a waiting position.	
2. *Day*	Red Flag with white diagonal bar over one black ball.	Large vessel leaving Harbour. Vessels entering Harbour will be kept clear by QHM. Vessels leaving Harbour will be allowed to proceed clear of the large vessel.	Central Signal Station Blockhouse Signal Station.
Night	White Light over Green Light.		
3. *Day*	One Black Ball over Red Flag and white diagonal bar.	Large vessel entering harbour. Vessels leaving harbour will be kept clear by QHM.	Central Signal Station Blockhouse Signal Station.
Night	Green Light over White Light.	Vessels entering harbour will be allowed to proceed clear of the large vessel.	
4. *Day*	International Code Pennant. Superior to Pennant Zero.	Warship or RFA underway in Main Channel or Harbour warning signal to other ships. Specific instructions will be given by QHM.	Warship or RFA.
6. *Day*	International Code Pennant Superior to Pennant NINE.	Warship or RFA underway in Main Channel or Harbour warning signal to other ships. Specific instruction will be given by QHM.	Central Signal Station Blockhouse Signal Station.
Night	Three Green Lights vertical.		
7. *Day*	Flag E	Submarine entering or leaving Haslar Creek. Warning signal to other ships.	Blockhouse Signal Station, Blockhouse Pierhead (Note: The Amber Light at Blockhouse Pierhead will flash when submarines are actually underway).
Night	Red Light Amber Light	Specific instructions will be given by QHM but all vessels less than 20 m. in length are to be kept clear.	
8. *Day*	International Code Pennant Superior to Flag A.	Have divers down	Ships or boats employing divers.
Night	Two Red Lights horizontal (not less than 6 ft. apart).		

NOTES:

(a) Within the context of this Notice, a large vessel is deemed to be on that is constrained by her length or draft to maintain the centrel of the Channel.

(b) Instructions from QHM will be passed on VHF Channels 11 or 13 as appropriate.

(c) Vessels less than 20.0 m. may continue to use the Portsmouth Harbour Entrance Boat Channel (see Notice 11/92) when the signals in paragraph 1, 2 or 3 are being displayed.

Dated: 1st January 1992.
Signed: Queen's Harbour Master, Portsmouth.

DEVELOPMENTS: With the opening of the Portsmouth section of the M27 and M275, there is immediate access to Albert Johnson Quays at the Rudmore Roundabout. At present, P & O operate services to Cherbourg and Le Havre; Brittany Ferries to Caen and St. Malo. C. & M. Shipping operates freight ferries to the Channel Islands and Cherbourg.

AUTHORITY: City of Portsmouth, Port Manager's Department, Harbour Officers, George Byng Way, Continental Ferry Port, Portsmouth PO2 8SP. *Tel:* Portsmouth (0705) 297391 (Administration), 297395 (Operations). *Telex:* 9312110368 PM G. *FAX:* (0705) 861165. *Contact:* Rear-Admiral A.S.George, Port Manager. Captain M.S.Putman, Harbour Master.

RAMSEY, Isle of Man: 54.19 N. 04.21 W. (See Plan)

PORT LIMITS: Line joining Shellag Point (3.25 miles North of harbour entrance) and Cor Stack (2.75 miles S.E. of harbour entrance) defines the port limits.

DOCUMENTS: Same as other U.K. ports.

PILOTAGE: Service provided by Harbour Master and is not compulsory. There is no regular pilot boat. Pilot will board 0.5 miles East of harbour entrance.

Contact Harbour Master direct by telephone (0624) 812245 or by VHF Channels 16 and 12 at tide times only. In all cases as much notice as possible should be given.

ANCHORAGES: No specific anchorages, but anchoring not permitted within 4 cables of harbour entrance or within 4 cables of Queen's Pier (3.5 cables S.E. of harbour entrance). Moderately good holding ground in sand, often used by sheltering vessels in S.S.W. or N.W. gales.

RESTRICTIONS: Harbour dries out each LW.
MHWN: Max. available depth 3.80 m.
MHWS: Max. available depth 5.50 m.

MAX. SIZE: For East Quay and West Quay: Max. length 61 m., breadth 9.0 m. Draft 3.0 m. on Neap tide, 4.0 m. at Spring tides.

For Channel Berth: Max. length 70 m., breadth 13 m.

For all berths max. available depth will vary according to tide.

HEALTH: Standard U.K. procedure.

RADIO: R/T, W/T and VHF through Portpatrick Radio (GPK) or Anglesey Radio (GLV).

VHF: Coverage from Harbour Master's Office includes port and approaches, Channels 16 and 12 at tide times only.

Coverage of North Irish Sea from Snaefell Summit by Douglas Harbour Radio, continuous 24 hour watch on Channel 16. Messages may be passed through Douglas Harbour Radio to amend ETA Ramsey, etc.

RADAR: No port radar.

TUGS: None.

BERTHING: All berths dry out each LW. Bottom is sand and shingle.

Name	*No.*	*Length (m.)*	
Channel Berth	1	76	
East Quay	2 & 3	116	
West Quay	4	80	
North Quay	10	73	For lay-by only. Use restricted by sea conditions.

With exception of North Quay all berths readily accessible to road traffic. Load/discharge by ship's gear or shore equipment at ship's discretion.

CRANES: No cargo handling gear at any berth. Mobile cranes can be arranged through Agents with reasonable notice.

BULK CARGO FACILITIES: Bulk cement handling facility at East Quay No. 2 Berth with 2×500 ton silos. Privately owned.

SPECIALISED CARGO HANDLING FACILITIES: No Ro/Ro or bulk liquid handling facilities. Privately owned container handling facilities available.

BRIDGES: Access to upper harbour through swing bridge, by arrangement with Harbour Master. Sufficient depth of water usually available 2 hours either side of HW. At least 24 hours' notice required to swing the bridge outside normal working hours, weekends and holidays. Within normal working hours less notice is acceptable.

STEVEDORES: Arranged through Agent. A minimum of 24 hours' notice required and all working hours are negotiable in advance. Main commodities discharged are all types of general cargo and coal by mobile crane with grab – average discharge rate is approx. 90 t.p.h. Occasional grain cargo loaded by mobile elevator at approx. 40 t.p.h.

MEDICAL: Hospital and dental facilities available without prior notice.

TANKERS: No tanker facilities or berths available.

DENSITY: 1025.

FRESH WATER: Available by hose at approx. 30 t.p.h. on East, West and North Quays. Labour charge £8.20 per hour (minimum 2 hours) plus £1.55 per 1,000 gallons.

FUEL: Delivery by road tanker from Douglas and Peel to all berths except North Quay. Gas oil and medium fuel oil available at 24 hours' notice. Manx Petroleum (Shell), Tel. 0624-74652. 100 gallons minimum. Total, Tel. 0624-844000. 100 gallons minimum.

CONSULS: None.

REPAIRS: All types of deck and engine repairs possible by small shipyard in upper harbour.

DRY DOCKS: No dry docks but 2 slipways; one for vessels about 200 g.r.t. and one for about 50 g.r.t. Both slipways in upper harbour.

Also a grid in upper harbour which dries out at approx. half tide, length 40 m., breadth 7.5 m. This grid used occasionally by vessels of up to 300 g.r.t. for bottom plate inspection/repairs. At least 72 hours' notice required, more if possible. Grid hire arrangement through Harbour Master.

SURVEYORS: D.H.P.P., Marine Administration. Tel: (0624) 686634.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Normally handled by ship's crew.

CUSTOMS ALLOWANCES: Standard U.K. allowance.

CARGO GEAR: Loading/discharging of general by ship's gear or mobile crane. Discharge of bulk by grab equipped mobile cranes. A wide range of mobile cranes up to 25 tons available for hire at reasonable notice.

REPATRIATION: Facilities available for repatriation of crew members.

Daily scheduled aircraft connections to London and other U.K./Irish airports. Daily ferry services to Heysham. These services operate all year with supplementary air and sea services to other destinations during the Summer.

AIRPORT: 25 miles distant.

TIME: GMT and BST.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Whit Monday, Senior TT Race Day (usually 1st or 2nd Friday in June), Tynwald Day (5th July), August Bank Holiday, Christmas Day, Boxing Day.

Cargo not normally worked on these days but all working hours are negotiable in advance.

POLICE/AMBULANCE/FIRE: All emergency services available by telephoning 999 on any telephone, no charge is made for this call. Assistance possible from H.M. Coastguard on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: Liverpool Coastguard. Tel: 051-9313341. Telex: 629448. Fax: 051-931-3347. VHF: Channel 16.

TELEPHONES: There are no facilities for telephones to be placed on board.

SERVICES: Lloyd's Agent available. Decca, Kelvin Hughes, Furuno, etc., repairs and servicing available locally. Divers available via Harbour Master.

BANKS: Barclays Bank, 52 Parliament Street. Tel: (0624) 813124.
I.O.M. Bank, 20 Parliament Street. Tel: (0624) 812829.
Lloyd's Bank, 71 Parliament Street. Tel: (0624) 812225/814233.
Midland Bank, St. Paul's Square. Tel: (0624) 814000.
Nat. West Bank, Douglas. Tel: (0624) 29292.

Major banking facilities are available in Douglas.

STORING: See "Prelims".

1. Vessel may be stored by barge or truck.
2. No restrictions unless dangerous cargo being handled. If dangerous cargo being handled as cargo or as part of the stores then all other cargo work/storing to cease.
3. Berths accessible to all road traffic.
4. Fork lift trucks may be used on quayside.
5. Bonded stores available through local agent, who will arrange necessary clearance, etc. H.M. Customs may attend at their discretion.
6. Riggers may be arranged through local agent at reasonable notice.

SHIP SUPPLY SERVICE: See "Douglas".

SHORE LEAVE: When Immigration and Customs requirements satisfied (for vessels arriving from a port outside the U.K.), no restriction on crew shore leave provided that they rejoin prior to the vessel's departure.

IDENTIFICATION CARDS: Not required.

DELAYS: Berthing delays are not usual (disregarding awaiting tide) except when strong N.E. to S.E. winds make navigation in the harbour entrance hazardous. These conditions may cause 1-2 days delay if severe.

GARBAGE DISPOSAL: Garbage skip on East Quay, near to Harbour Office. No charge for this service. Access available at all times.

WASTE OIL DISPOSAL: Collection service available at all berths by road tanker operated by Colas (Isle of Man) Ltd. (Tel: 0624-823360) capacity 2,000 galls.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Isle of Man Department of Highways, Ports and Properties, Harbours Division, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-686626. *Telex:* 629335 IOMHARG. *FAX:* 0624-627238. *Contact:* Captain D.M.Cowell, Chief Harbour Master.

Harbour Office, East Quay, Ramsey, Isle of Man. *Tel:* 0624-812245. *FAX:* 0624-812245. *Contact:* Captain M. Brew, Harbour Master.

RAMSGATE: 51.20 N. 01.24 E.

(A) RAMSGATE WESTERN TERMINAL (PORT RAMSGATE)

DOCUMENTS:
2 copies C142, Crew Declaration.
3 copies C13, General Declaration, including stores (normally completed by Agent).
2 copies C16, Cargo Declaration (if no manifests).
1 copy C74, Master's Authority (completed by Agent).
2 copies C1320, Cargo in Unregistered Spaces.

These documents should be completed and presented with copies of all manifests and ship's documents when making report.

APPROACHES: *Approach Channel:* The approach channel extends East from Long. 01° 25.30′ E. for a distance of 2,133 m. from the Ramsgate breakwater heads. The channel has a depth of −6.5 m (CD) with a base width of 110 m.

The tidal range is +0.3 m. (CD) to +6.2 m. (CD) (predicted).

CHANNEL MARKINGS:
East Brake Buoy: East Cardinal QK FL. 3 every 10 seconds W; Lat. 51° 19.46′ N., Long. 01° 29.1′ E.
Starboard Channel Buoy No. 1: Green conical with green conical topmark. FL. every 5 seconds G; Lat. 51° 19.51′ N., Long. 01° 27.2′ E.
Port Channel Buoy No. 2: Red can with can topmark. FL. 4 every 10 seconds R; Lat. 51° 19.45′ N., Long. 01° 27.2′ E.
Channel Buoy No. 3: Green conical with green conical topmark; FL. every 2.5 seconds G; Lat. 51° 19.51′ N., Long. 01° 26.65′ E.
Channel Buoy No. 4: Red can with red can topmark. QK FL. R; Lat. 51° 19.45′ N., Long. 01° 26.65′ E.
Dike Buoy No. 5: South Cardinal. QK FL. 6 plus 1 every 15 seconds W; Lat. 51° 19.51′ N., Long. 01° 26′ E.
Quern Buoy No. 6: North Cardinal. QK FL. W; Lat. 51° 19.45′ N., Long. 01° 26′ E.
East Breakwater Light Tower: Lat. 51° 19.31′ N., Long. 01° 25.34′ E. Day mark red and white. Qk. Fl. Green.
West Breakwater Light Tower: Lat. 51° 19.25′ N., Long. 01° 25.30′ E. Day mark green and white. Qk. Fl. Green.
Front Lead Beacon: Lat. 51° 19.29′ N., Long. 01° 24.59′ E. Occulting 8 secs. on, 2 secs. off. Racon beacon fitted. Coloured sectors light: green 10°, white 2°, red 10°.
Rear Lead Beacon: Lat. 51° 19.29′ N., Long. 01° 24.44′ E. Fl. every 8 secs. White.
Harbour Signals: The harbour has established, at the West Pier Signal Station, signals which conform with the International Harbour Signals Regulations.
Port Ramsgate Turning Basin: Maximum dimensions 500 m. North – South; 550 m. East – West, giving a free swing diameter of 300 m. (ref. to Chart No. 1827 Ramsgate Harbour and Approaches).
VHF: *Vessel Traffic Services:* All arriving vessels are to notify the Ramsgate VTS Office at the West Pier Control Tower on VHF Channels 14 or 16, or by telephone (0843) 592277 (24 hours), of intended arrival and requirements.

Vessels should report when approximately 1 hour from Point "R" (Romeo) which is defined as a radius of 2.5 miles from the centre of a line joining the Channel Entrance buoys.
PILOTAGE: Compulsory for most merchant vessels. Tel: (0843) 592277 (24 hours). VHF Working Channels 16 and 9.

Minimum notice: Inward 12 hours. Outward: 2 hours.
ANCHORAGE: Anchorages available at Margate Roads, Broadstairs Knoll and The Downs off Deal (Chart No. 1828; Dover to North Foreland applies).
TUGS: 1×13 tonne bollard pull and 1×45 tonnes bollard pull.

BERTHING: Berths/Linkspans No. 1, 2 and 3: All have a depth of −6.5 m. (CD). Beam 25 m. (vessels). 9 point mooring system along the centre line of the berthing structure, 4 fenders on each side.

Fender positions from the front face of the pontoon: No. 1 – 38 m.; No. 2 – 63 m.; No. 3 – 80 m.; No. 4 – 100 m. (the outer bollard position 110 m.).

All 3 linkspans are of the same pontoon type, depth moulded 4.4 m., depth working 1.0 m., ship ends freeboard variable.
Ramp Details: Length 40 m., width 9.1 m. – 10.7 m.; free width 7.0 m. – 9.7 m.; axle loads 50 tonnes.

CARGO HANDLING FACILITIES: *Port Plant:*
3 (4×4) terminal tractors, 70 tonnes drawbar pull.
9 (2×4) terminal tractors, 50 tonnes drawbar pull.
Forklifts of 12 tonnes, 7.5 tonnes, 1.5 tonnes and 1 tonne capacity.
Container handling forklift truck of 38 tonnes capacity.
Container transhipment gantry of 32 tonnes capacity, handling 20 ft., 30 ft. and 40 ft. units.
4×80 passenger motor buses.
Baggage trolleys.
Freight shed of 25,000 sq.m. internal area, equipped with full handling equipment.
Cold store facilities for cargo inspection.
Open storage areas, total parking areas of 126,000 sq.m.
Craneage available up to 100 tonnes capacity at 24 hours notice.
Hazardous bund facilities.
Tipping pen and conveyor for handling bulk Ro/Ro cargoes.
MEDICAL: Hospital, doctor and dentists available.
FRESH WATER: Available at all 3 berths.
FUEL: Available at berths by road tanker.
FIRE PRECAUTIONS: Fire hydrants available at all berths.
REPAIRS: Possible.
A. & P. Appledore, Military Road, Ramsgate.
Ramsgate Marine, Royal Harbour, Ramsgate.
Walkers Marine, Military Road, Ramsgate.
REPATRIATION: Possible.
EMERGENCY CO-ORDINATION CENTRE: Coastguards: Based at Dover. Tel: (0304) 210008 – VHF Channels 16 and 11.

Air Sea Rescue helicopters from R.A.F. Manston.
AIRPORT: 3 miles West of Ramsgate is Kent International Airport (Manston).

Having bought a 125 year lease from the Ministry of Defence in 1987, the airport's owner has built a £2 million passenger terminal which was opened in October 1989.

With the longest runway of all regional airports in the Midlands and Southern England, 24 hours Customs, and its easy access to London, the airport is ideally situated for air-freight shipments, or as an inland clearance depot for trucks coming over from Europe.

Currently there is a regular cargo flight from Colombia and holiday flights to Majorca and Jersey.

The airport is in discussions with various airlines, and hopes to develop commuter services to major European destinations.
DEVELOPMENTS: Since commencing operations in 1981 in excess of £24 million has been invested in the development of Port Ramsgate as an all-weather Ro/Ro port. The present land area is 143,000 sq.m., all of which has been reclaimed from the sea.

The port's facilities include a six-bay freight inspection an transhipment shed, a cold store and chilled cargo inspection unit an freight drivers cafe and wash room facilities in addition to the norma ferry passenger terminal buildings and passenger car parks.

In order to handle the increasing demand for container and swap bod traffic, a 38 tonne container handling forklift has been brought in operation to augment the 32 tonne container gantry.

1991 also saw the streamlining of the port's traffic whilst within th port area and the completion of the first phase of the re-developme of the terminal complex, an on-going development which will result i the construction of new accommodation for the port staff and port offic bodies and passenger processing areas.

A new access route, by-passing the town of Ramsgate, linking th port area directly with the A299 trunk road is projected.
AUTHORITY: Thanet District Council, Harbour Office, Military Road, Ramsgate, Kent CT11 9LG. *Tel:* (0843) 592277. *Telex:* 96586 *FAX:* (0843) 590941. *Contact:* Captain J.F.Ewing, Harbour Master.

West Pier Control Tower, Ramsgate Harbour, Ramsgate. *Tel:* (084 592277.
Operator: Port Ramsgate Ltd., Ramsgate Harbour, Ramsgate, Ken CT11 8RP. *Tel:* (0843) 587661. *Telex:* 966340. *FAX:* (0843) 58957 *Contact:* R.Cooper, Managing Director. P.Rangeley, Operation Manager. T.Lofts, Business Development Manager.

(B) ROYAL HARBOUR

ANCHORAGE: Vessels waiting to enter Ramsgate may anchor i Margate Roads or in the vicinity of the Broadstairs Knoll Buoy, paying due regard to the presence of submarine cables.
APPROACHES: *Approach Channel:* The main channel, 110 m. wide a the base, extends 2,133 m. to seaward from the harbour entrance. Additionally a turning area has been dredged West of the harbou entrance and in the vicinity of the ferry terminal. The centre of th channel is indicated by leading lights and marks 090°–270° True.
Harbour Signals: Permission to enter the channel and the Royal Harbou may be requested by radio from the Harbour Control. Harbour signals to conform with the International Harbour Signals, are displayed by th Harbour Control and also at the Lock Head to the marina.
RESTRICTIONS: *Times of Entry:* The main channel has been dredge to a depth of 6.5 m. below datum, allowing unrestricted entry to th Western Terminal. The entrance to the Royal Harbour is maintained a 2.5 m. below datum and vessels are advised that this normally allows entry for at least 2 hours on either side of HW.
MAX. SIZE: Max. LOA 105 m. Max. draft 4.8 m. (2 hours either sid of HW).
VHF: *Vessel Traffic Service:* Vessels wishing to enter Ramsgate Harbour must report to the Harbour Control on Channel 14 when arriving at a point 2.5 miles from the channel entrance buoys. This point is referred to as "Point Romeo" and permission must be obtained to enter the channel before proceeding further.
BERTHING: Commercial Quay: Length 109 m. Width 18.0 m. Berthing possible on the East side.
Ro/Ro Berth: Linkspan available.
CRANES: 1×18 ton crane available. Private cranes up to 130 tons capacity may be hired. Fork lift trucks available.
STEVEDORES: Available locally.
MEDICAL: Hospital, doctors and dentists available locally.
FRESH WATER: Available.
FUEL: Small quantities available by barge. Larger quantities available by road tanker.
CONSULS: See "Dover".
REPAIRS: Minor repairs possible. Slipway for up to 500 tons capacity
SURVEYORS: Available locally.
HATCHES: Opened and closed by crew.
AIRPORT: See "Port Ramsgate".
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: The RNLI maintains a motor lifeboat stationed in the harbour, and Air Sea Rescue facilities are provided by R.A.F. helicopters from nearby Manston Airport.
SERVICES: The following are available: radio repairs, ship chandler diving services, charts, compass adjusting, Derat and fumigation.
GARBAGE DISPOSAL: A collection service is provided daily and skips are provided for all vessels.
WASTE OIL DISPOSAL: A disposal facility for waste oil is available on request for large amounts. This is done by road tanker.
SEAMAN'S CLUBS: There is no seaman's club. The Royal Temple Yacht Club provides certain club facilities for visiting seamen and yachtsmen. There is also a Sailors Church within the harbour (Church of England) holding regular services.
CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.5494 (21.5.91
AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent CT9 1XZ. *Tel:* (0843) 25511. *Telex:* 966182.

Ramsgate Harbour Office, Military Road, Ramsgate, Kent CT11 9LG *Tel:* (0843) 592277. *Telex:* 965861. *FAX:* (0843) 590941 *Contact:* Commander C.H.Marsh, General Manager. Captain D.J.Snook, Harbour Master.

RYE: 50.56 N., 00.47 E. (See Plan)

PORT LIMITS: An imaginary line between No. 2 red light and No. 1 white light.
DOCUMENTS: Usual documents required for Customs.
PILOTAGE: Call "Rye Pilots" 1 hour before to 1 hour after HW. Pilots attend station when vessels expected – ETA 24 hours in advance.
Vessels fitted with VHF Radio should keep watch on Channel 14 when arriving and sailing from Rye and call for instructions on traffic movements.
Pilotage compulsory for vessels over 30 m. LOA.
ANCHORAGES: Vessels may anchor at the Fairway Buoy or shelter from Southwesterly winds in the East Roads (St.Mary's Bay).
NAVIGATION: *Leading Marks:* Inner Leading Light – Occulting Green 4 secs. with white sector 326°T to 331°T.
Tide Signals: Shown from harbour office, 0.75 miles inside harbour entrance on East Bank.
Night – 7 ft. to 10 ft. on bar. Fixed Green.
Over 10 ft. on bar. Fixed Purple.
Day – None, but horizontal timbers on tripod beacon at harbour entrance indicate plus 5 ft., plus 10 ft., plus 15 ft. above Ordnance Datum.
Traffic Signals: Day and Night: Qk. Fl. Yellow above Harbour Office, upstream of Rye Marine Wharf and at West end of Alsford's Wharf denote immediate shipping movement into or out of harbour.
Day – on Flagstaff yard arms behind Harbour Office denotes expected shipping movements on tide.
One Black Ball – ship arriving from sea.
Two Black Balls side by side – ship sailing.
Three Black Balls in a triangle – ships arriving and sailing.
Fog Signals: East Pierhead Horn every 7 secs.
RESTRICTIONS: Night navigation possible for vessels of less than 210 ft. LOA.
Also see "Berthing".
MAX. SIZE: LOA 235 ft. Max. draft 13 ft. 06 in.
VHF: Call sign "Rye Harbour Radio" Channels 16 and 14. 0900 – 1700 hrs. daily. "Dover Coastguard" VHF Channels 16 and 67.
TUGS: None available. Harbour launch will assist if requested.
BERTHING: Cargo vessels entering Rye Bay should follow the coast from Dungeness coming from the East or Fairlight coming from the West keeping at least 2 miles offshore until Rye Fairway Buoy is reached (Spher. R.W. Fl. 10 secs.), position 149° T, 1.8 miles from the harbour entrance. Anchorage 5 fathoms. at MLWS.

The entrance is 42 m. (140 ft.) wide and is recognised by a conspicuous tripod beacon (Fl. 5 secs. Red), 30 m. seaward of the West Groyne which is 240 m. seaward of the East Pier with the light tower (Qk. Fl.(9) 15 secs.). The channel virtually dries and is liable to change. The East Pier submerges at HWS and is marked by starboard hand beacons. There is a strong eddy inside the East Pier during the flood stream.

Inside the entrance the channel narrows to 30 m. and runs straight for half a mile (329°T) to Rye Harbour Village where there is an inner leading light (Occ. W.G. 4 secs.). Strict attention should be paid to Port Hand Beacons (4 with Qk. Fl. Red) which mark a training wall on the West side of the channel (submerged at plus 8.3 O.D.N.)

The Rother has a strong flood stream and as the harbour dries out it should NOT be approached 3 hours either side of LW. In gales from the S.E. through to S.W. waves break across the entrance.

The best time for any vessel to enter or leave the port is 1 hour either side of HW but care is needed because movement of cargo vessels takes place during this period (see "Navigation" – "Traffic Signal"). Visiting yachts may berth at the Admiralty Jetty by the Harbour Office and in mud berths at Strand Quay in Rye by arrangement with the Harbour Master. Subject to weather conditions it is possible for vessels drawing less than 1.5 m. to enter the harbour at HW minus 2.5 hours (before the flood tide flows at maximum rate) to plus 3 hours.

H.M. Customs clear craft entering from abroad at the Harbour Office (This procedure subject to change 1st January 1993).

Alsford's Wharf is located 1 mile from the entrance on the West bank of the river.

Length of quay 600 ft. Berth handles grain, aggregate, fertilisers, general cargo, etc.
CRANES: 2 mobile cranes of 3 tons (SWL) available for cargo handling. Stores are loaded by these cranes.
BRIDGES: No air draft restrictions.
STEVEDORES: Stevedores ordered through vessel's agent. Usual working hours 0730 – 1700 hrs., Monday to Friday. Overtime is possible by arrangement.
MEDICAL: The Royal East Sussex Hospital at Hastings (15 miles) maintains a 24 hour casualty service. Doctors and Port Health Officers available locally.
TANKERS: No facilities.
DENSITY: 1025.
FRESH WATER: Available from the quay by hose.
FUEL: Agent arranges supply through a local supplier.
FIRE PRECAUTIONS: Usual precautions necessary.
CONSULS: None locally.
REPAIRS: Minor engineering repairs possible. Radio and radar repairs by arrangements.
DRY DOCKS: None locally.
SURVEYORS: Cargo inspectors arranged by agent. No Classification Society surveyors locally.
GANGWAY/DECK WATCHMEN: Not available.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Standard British allowances.
REPATRIATION: Possible. Crew may be repatriated through Heathrow or Gatwick Airports, or Dover and Newhaven for continental ferry services.
AIRPORT: Heathrow or Gatwick.
EMERGENCY CO-ORDINATION CENTRE: Contact Dover Coast Guard on VHF Channels 16 and 67.
TELEPHONES: Not available.
SERVICES: Any services required should be arranged with the agent prior to arrival.
BANKS: Major banks located in Rye.
STORING: See "Prelims".

1. By truck.
2. N.A.
3. Yes.
4. Yes.
6. Yes.

SHORE LEAVE: Permitted.
DELAYS: None.
GENERAL: *Tidal Information:* These tide tables are referred to Ordnance Datum Newlyn and GMT.
Chart Datum equals O.D. Newlyn minus 4 m. (13 ft.)
O.D. Newlyn equals Chart Datum plus 4 m. (13 ft.)
Duration of Mean Rise at Rye Harbour:
Spring – 3 hours 15 minutes.
Neaps – 5 hours 00 minutes.

Latest Surveys (September 1987) indicates that the main channel leads E.S.E.'ly from red light marking end West Groyne. Average depth in the channel at the entrance:
At MHWS – 5.5 m. (19.2 ft.)
At MHWN – 4.5 m. (15 ft.)
Depth over bar:
At MHWS – 4.2 m. (13.8 ft.)
At MHWN – 2.5 m. (8.2 ft.)

For depth at HW at Alsford's Quay add 1.52 m. (5 ft.) to predicted height given in tables.

For depth at HW at Strand Quay mud berths deduct 0.6 m. (2 ft.) from predicted height.

The following approximate corrections for level and time of HW should be added/subtracted to convert these tables for use at the undermentioned coastal areas:

Hastings	minus 0.8 ft.	minus 2 minutes
Dungeness	plus 0.9 ft.	minus 6 minutes
Folkestone	minus 1.6 ft.	minus 15 minutes

GARBAGE DISPOSAL: Collection arranged through wharf owners. (Tel: 0797-222501). Closed approved skips on quayside.
WASTE OIL DISPOSAL: Oil disposal arranged through wharf owners. 45 galls. drums available and disposal is via local chemical works.
SEAMAN'S CLUBS: No clubs but town is within easy walking distance.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: National Rivers Authority, Guildbourne House, Chatsworth Road, Worthing, West Sussex. BN11 1LD. *Tel:* (0903) 820692. *FAX:* (0903) 30511.

Harbour Office, New Lydd Road, Camber, Rye, East Sussex TN31 7QS. *Tel:* (0797) 225225. *FAX:* (0797) 226711. *Contact:* Captain C. Bagwell, Harbour Master.

SCALLOWAY: 60.08 N. 01.16 W. (See Plan)

Scalloway is a small port on the Atlantic side of the Mainland of Shetland and is located only 7 miles by road from Lerwick.

The main trade is centred around the catching, processing and export of fish, but there has been a marked increase in general trade since the recent improvement of port facilities.

Most services are available and can be arranged through the local shipping Agents.

Communications: Listening watch is maintained on Channel 16 only during office hours. At other times contact to be made through Shetland Radio. Local shipping agent Tel: Scalloway 636 (office), after hours: Scalloway 304. Pier Master's Office, Scalloway 574, home Scalloway 324. Assistant Pier Master, Lerwick 3485.
ANCHORAGES: Good holding bottom in Scalloway Bay.

Anchorage may also be obtained at several locations within the port approaches and vessels intending to do so should advise the Scalloway Pier Master via VHF who will provide advice on areas encumbered by static fishing gear.
PILOTAGE: Licensed Pilots are available and requests for pilotage should be made at least 12 hours in advance of ETA and confirmed 1 hour before arrival by calling Scalloway Harbour Radio on VHF Channels 12 or 16. Requests for pilotage should be made through Scalloway Harbour Office (Scalloway 574), through Sullom Voe Port Control Tel: 0806 – 242551 or Telex: 75142 (manned 24 hours), or through agents. No particular light or sound signals are required and pilot boat freeboard is 1.5 m. Pilot boarding stations are charted on the current edition of BA. Chart No. 3294. Masters should advise the intended pilot boarding station when confirming ETA and should note that the Northerly station is preferred in bad weather or high swell. Pilotage is not compulsory except for vessels carrying hazardous cargoes for which it is compulsory.
RESTRICTIONS: No night time or tidal restrictions. Largest scale and up to date charts essential.
MAX. SIZE: Maximum length 90 m., max. draft 6.0 m. Vessels exceeding these dimensions may be accepted by prior arrangement. A tide gauge has been installed, and precise tidal heights will be available on request by radio.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Shetland Radio.
VHF: Vessels should listen to Channel 16 VHF when in VHF range.

BERTHING:

Berth No.	*Length (m.)*	*Least Depth (m.)*
1	66	7.5
2	53	4.0
3	77	4.2
4	75	6

Berth No. 1 can accommodate vessels up to 95 m. in length.

CRANES: Mobile cranes available. Ships normally employ their own cranes.

STEVEDORES: Should be arranged through Agents.

MEDICAL: Doctor based at Scalloway. Hospital at Lerwick.

FRESH WATER: Available from standpipe at all berths, rate 10 t.p.h.

FUEL: Marine gas oil by pipe or from road tanker. 1 hour advance notice through Agent.

REPAIRS: Most types deck and engine repairs.

SLIPWAYS: Slip accommodation for vessels up to 180 tons.

SURVEYORS: Lloyd's Agency at Lerwick: Hay and Company (Lerwick) Ltd., 106a Commercial Street. Tel: (0595) 3057. Telex: 75295.

CUSTOMS ALLOWANCES: See "Lerwick".

REPATRIATION: Facilities for effecting crew changes.

AIRPORT: Sumburgh Airport 25 miles. British Airways several times daily. Tingwall Airstrip 3 miles.

HOLIDAYS: Cargo or shipping operations not affected by holidays.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: No arrangement for placing telephones on board. The Port Authority provide a telephone box in the harbour area.

SERVICES: Compass adjusting. Provisions of all kinds can be obtained locally.

SHORE LEAVE: Crew members allowed ashore.

AUTHORITY: Shetland Islands Council, Ports and Harbours Department, Port Administration Building, Sella Ness, Graven, Mossbank, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142. *FAX:* (0806) 242237. *Contact:* Captain G.H.Sutherland, Director of Ports & Harbours. Captain K.J.Radley, Deputy Harbour Master/Deputy Port Director.

SCAPA FLOW (Flotta Terminal), Orkney Isles: 58.53 N. 03.05 W. (See Plan)

DOCUMENTS:

Maritime Declaration of Health (Form supplied by Pilot or Agent).
Vaccination List.
Immigration Form H.O. Form IS6.
Crew Lists — 2 required.
Ship's Stores List.
Crew Personal Effects Declaration, Customs Form C.142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipts.

Customs and Health: Weather permitting, Customs, Immigration, Health and Agent will embark inside Scapa Flow.

Customs House: Customs clearance inward and outward will be the responsibility of ship's Agents.

Light dues will be paid by the vessel.

Cargo Documents: Bills of Lading; Cargo Manifest, Quantity and Quality Report; Tanker Time and Loading Report; Certificate of Origin; Ship's Cargo and Ullage Reports; Master's Receipt for Shipping Documents and Documentation Transmittal Reports will be prepared by Company Representative.

Ship's Agent: All ship's business other than Cargo and Customs documentation and the shipping documents under section above will be conducted by the ship's Agent.

EDP: Early Departure Procedures apply to most vessels. Blank Bills of Lading are signed by the Master on arrival, and the tonnages inserted on completion of loading.

APPROACHES: The approach to the Terminal is through the Pentland Firth from East or West, and then Northward through Hoxa Sound, the main entrance to Scapa Flow. Consult Admiralty Sailing Directions Vol. 1, and Admiralty Tidal Stream Atlas for Orkney and Shetland, Publication No. 209. Principal charts are as follows and Decca coverage is available: Admiralty Chart Nos. 2162, 2581, 35.

PILOTAGE: Pilot vessels *Scapa Pathfinder, Scapa Pilot* and *Scapa Patrol* watch VHF Channel 16.

Inside pilot station (Lat. 58° 46′ N., Long. 03° 07′ W.) located 2 miles 180° from Cantick Head Lighthouse.

Unfamiliar vessels, VLCCs, also any vessel without full information about the unusually strong currents in Pentland Firth is recommended to embark the Pilot at the appropriate outside position (Refer to Tidal Stream Atlas, Admiralty Publication H.O. Number NP 209).

Port Restrictions which may cause delays: Weather preventing embarkation of Pilot at either inside or outside positions.

Local wind conditions in Scapa Flow preventing a safe approach to the berth.

Remarks: In Scapa Flow the weather conditions, in particular the wind, can change suddenly and quickly deteriorate, not only in Winter but at any time of the year.

Mooring Masters: A Company Mooring Master will board vessels to the Northward of the Calf of Flotta or at her designated anchorage within Scapa Flow prior to berthing at any Terminal Facility. A Company Mooring Master will be on board during the time that a vessel is moored and he will liaise between the Terminal and ship personnel throughout any deballasting, loading or discharging operation.

The Company Mooring Master may ensure that Masters of vessels are familiar with, and strictly observe, all local regulations concerning the safety of operations and pollution of the sea by oil whilst laid at the Company's facilities.

Vessels using the Company's facilities are required to provide the Mooring Master with accommodation and messing of a standard equivalent to that enjoyed by the vessel's officers.

ANCHORAGE: Inside Scapa Flow several anchorages are available depending upon prevailing winds. Sea anchorage outside, in the approaches to the Pentland Firth, is not possible.

MAX. SIZE/RESTRICTIONS: The current maximum sizes of crude tankers permissible at Flotta is 200,000 d.w.t. at the SPMs and 150,000 d.w.t. at the jetty.

Since the advent of segregated ballast tankers, an anomaly has arisen between the physical size of tankers, upon which these maximums are based and the deadweight capacity. In order to prevent confusion as to the size of tanker that is acceptable, the following guidelines will be enforced.

	Conventional Ballast Tankers	*Segregated Ballast Tankers*
SPMs	200,000 d.w.t.	170,000 d.w.t.
Jetty	150,000 d.w.t.	130,000 d.w.t.

Prior to accepting crude vessels it must be clarified whether the vessel is a segregated ballast tanker or a conventional ballast tanker. If a segregated ballast tanker then the deadweight must be indicated. If the tanker has been converted from a conventional ballast tanker to a segregated ballast tanker, then the original deadweight should also be indicated.

RADIO: Arrival Notices.

Pilots: By coastal radio station 24 hours and 12 hours prior to arrival. VHF contact at least 3 hours prior to arrival at the pilot station.

Terminal: By coastal radio station 7 days, 72, 48 and 12 hours prior to arrival at the pilot station.

VHF contact should be established at least 3 hours prior to arrival at the pilot station.

The Terminal must be advised by VHF via the "Harbour Control", when the Pilot has boarded or when 6 miles from Stanger Head at the entrance to Hoxa Sound.

INFORMATION REQUIRED PRIOR TO ARRIVAL:

Radio Advice Prior to Arrival: Terminal operated by Elf Enterprise Caledonia Ltd., Flotta Terminal, Telex: 75212 (Eecflo G), via Portishead Radio, of ETA with following details. Also advise Agent of ETA, drafts fore and aft for arrival, and any immediate requirements on arrival.

Standard Message to Crude Vessels (Initial Visit): Masters are advised that reception facilities are available for clean ballast only. All ballast must be discharged to reception facilities ashore. No ballast from either cargo or permanent ballast tanks is permitted to be discharged into Scapa Flow.

Please advise the following details:

AAA	Arriving and sailing drafts and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Grade of previous cargo.
DDD	Quantity of Cargo tank ballast and position uplifted.
EEE	Quantity of permanent ballast and position uplifted.
FFF	Quantity of ballast for discharge ashore.
GGG	Last port and destination.
HHH	Is inert gas system fully operational and cargo tanks inerted?
JJJ	Oxygen level in cargo tanks.
KKK	Gross nett and summer d.w.t. tonnages.
LLL	Maximum loading rate.
MMM	Total time for deballast.
NNN	Number and size of cargo manifolds.
OOO	Availability of reducers to adapt manifolds to suit 16 in. 150 ASA flanges three required.
PPP	Can vessel load and deballast simultaneously while maintaining a minimum of a two valve separation?
QQQ	Is vessel equipped with a patent A.K.D. stopper or similar capable of accepting an 80 mm. end link?

Vessels are required to load part cargo prior to discharging ballast.

Minimum 10 ton SWL derrick required on port side for SPMs. Derrick required at jetty if it is necessary to fit spool pieces to accept loading arms. Ballast manifold is aft of two crude connections on SPM.

Your attention is drawn to the serious view taken by Port and Terminal Authorities of pollution. Heavy fines are imposed to which is added the cost of clean-up operations. Please ensure all crew members are conversant with and comply with pollution requirements.

Principal pollution causes are leaking sea valves overboard discharge valves and cargo or bunker overflows. We recommend sea valves overboard discharge and bilge discharges are checked tight. Prior arrival cargo and bunkering procedures should be reviewed with chief officer and chief engineer. All scuppers to be plugged.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

Standard Message to Liquid Gas Carriers (Initial Visit):

LIQUID GAS CARRIERS ARRIVING AT SCAPA.

LPG vessels arriving at Flotta Terminal with ballast for discharge to Scapa Flow will comply with the following instructions in respect of this ballast.

1. Ballast for discharge must have been taken on board within 24 hours of arrival and at a distance of at least 12 miles off shore.
2. The Master will provide the Terminal with signed advice stating date, time and positions between which ballasting operations were carried out, quantity of ballast for discharge and tanks in which it is contained.

Harbour Authority Officials may board vessels to ascertain that these procedures have been adhered to and the quality of the ballast is suitable for discharge. The Authority's decision as to whether or not the ballast is acceptable for discharge will be final. Non compliance will result in delays being occasioned by the vessel.

Masters are advised that this concession for discharge of permanent ballast relates only to LPG carriers and your attention is drawn to the serious attitude adopted by Port and Terminal Authorities to pollution incidents of any kind.

To prevent problems arising due to surge pressures caused by too rapid closure of emergency shutdown valves (ship side) it is required that the minimum closure rate from fully open to completely closed be 9 seconds when loading LPG or 13 seconds for Ethane loading.

Please advise the following details:

AAA	Arriving and sailing draft and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Previous cargo and quality of tank atmospheres.
DDD	Tank temperature on arrival.
EEE	Time required for cooldown.
FFF	Height of manifold above water line at arrival draft.
GGG	Closure timed of emergency shutdown valves.
HHH	Quantity of ballast and amount to discharge.
JJJ	Last port and destination.
KKK	Gross, nett and summer deadweight tonnages.
LLL	Maximum and cooldown loading rates.
MMM	Availability of deck tanks to accept coolant and quantity required.
NNN	Size of cargo/vapour return manifold and position of vapour return manifold relative to cargo manifold.

Purging and/or coolant is not carried out alongside.

Vessel will require to load sufficient coolant for purging and/or coolant to be carried out at anchor.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

N.B. Launches are fitted with VHF Listening Channel 16.
Working Channels 14, 12, 8, 6

HEALTH: See "Health – All Ports" before first U.K. port.

READINESS: *Notice of Readiness to Load/Discharge:*

Notice of Readiness will be accepted subject to the following conditions;—

a. The Terminal is open (this decision shall be communicated to the Master of the vessel by the Company).

b. (i) The vessel has been boarded by the Company Mooring Master prior to her proceeding towards the berth *or*

(ii) The vessel has anchored within the anchorage area awaiting a berth.

N.B. Although vessels will be loaded in order of acceptance of Notice of Readiness, it should be borne in mind that acceptance of Notice of Readiness is contingent upon complete compliance with all the requirements of Port Conditions.

c. Acceptance of Notice of Readiness may be withdrawn by the Company upon the occurrence of any of the following events:

The decision by the Mooring Master that the vessel's drafts, equipment and/or appurtenances are not suitable for berthing at the Terminal. If this decision has not been taken, for reasons within the Mooring Master's control, within 24 hours from Acceptance of Notice of Readiness, the Company shall be deemed to have waived its right to withdraw acceptance under this sub-paragraph.

Any supervening decision of the Harbour Authority which prevents the vessel from berthing.

N.B. A derrick or crane with a safe working load of not less than 10 tons is required for handling hoses at the SPM berths.

TUGS: 3 tugs (2×50 ton bollard pull and 1×54 ton bollard pull) are available, and compulsory, for berthing. They are fire fighting tugs and equipped with Warren Springs pollution dispersent equipment.

Whenever a tanker is on a berth, 1 stand-by tug is anchored in the close vicinity for safety and pollution purposes. Fire wires must be rigged off-side forward and aft.

1 tug (standby tug) is towing aft whilst tanker is moored to SPM.

BERTHING:
Position:
SPM 1: Lat. 58° 52′ 11.86″ N., Long. 3° 07′ 20.68″ W.
SPM 2: Lat. 58° 52′ 17.72″ N., Long. 3° 05′ 47.79″ W.
Main Control Building (Radio Mast): Lat. 58° 50′ 31.05″ N., Long. 3° 07′ 08.01″ W.
SPM Particulars:
Pillar Type Single Buoy Mooring – 2.
Tanker Size – 35,000 d.w.t. – 200,000 d.w.t.
Minimum Water Depth – 75 ft.
Max. Draft – 72 ft.
Mooring System – 10 m.×3 in. chain, 40 m.×21 in. rope grommet, 10 m.×3 in. chain and 6 m.×2.625 in. chain.
Crude Manifolds – 2×16 in.
Ballast Manifolds – 1×16 in.
Maximum Loading Rate – 80,000 bbls.p.h.
Hose Weight – Minimum 7.5 tons
Ballast connection is positioned aft of the 2 crude connections.

A load monitoring system is fitted to each SPM giving constant strain readings to the Terminal Control Room and the Mooring Master on board the tanker. In adverse weather conditions strain gauge readings will indicate when vessel should prepare to vacate the berth.

LPG/Crude Oil Jetty:
Finger type jetty with breasting dolphins.
Tanker Size – 4,000 d.w.t. – 150,000 d.w.t.
Minimum Water Depth – 63 ft.
Maximum Draft – 62 ft.
LPG Manifolds – 1×10 in. loading plus 1×10 in. vapour return.
LPG Loading Rate – 10,000 bbls.p.h.
Crude Manifolds – 4×16 in.
Crude Loading Rate – 80,000 bbls.p.h. maximum.
Ballast Manifold – 1×16 in. (crude gantry only).
Maximum Deballasting Rate – 40,000 bbls.p.h.

LPG: Gas tankers also load at the jetty and in their case the only relevent restriction is a requirement for the cargo manifold flange to be able to work within the operating envelope of the LPG loading arms which have the following parameters:- Max. Airdraft 13.18 m.; Min. Airdraft 1.75 m.; Max. distance ship's side to flange 7.0 m.; Min. distance ship's side to flange 3.1 m.

Terminal Capacity:

1. Crude Oil:

There are 5 tanks, each of 500,000 bbls. nominal capacity for storage of stabilised crude oil, plus a further 2 of 1,000,000 bbls. each.

2. Liquid Petroleum Gas:

There are 2 tanks, each of 100,000 bbls. nominal capacity for storage of propane.

3. Ethane:

There are 5 ethane tanks, each of 500 cu.m. nominal capacity.

Remarks: Vessels moored to the SPMs are required under conditions to maintain a tug towing astern to keep the mooring system under a tension of 15 tons – 20 tons.

When ship's piping does not permit the pumping of permanent ballast through the manifold, the possibility to load some cargo prior to deballasting the cargo tanks' clean ballast may be granted by prior arrangement with the terminal. In all cases where ships intend to deballast and load simultaneously there must be at least a 2 valve separation.

Lightering Operations: Ship-to-ship lightering operations can be carried out in Scapa Flow on vessels up to 72 ft. draft.

Tug facilities and oil pollution equipment readily available.

DENSITY: 1025.

MOORING AND HOSE HANDLING:

On SPMs: Ship's derrick (SWL 10 tons) and manifold connections will require to be prepared on the port side. An accommodation ladder will be rigged to starboard with a pilot ladder ready to port.

Securing equipment for single chain mooring forward and hose connecting gear will be hoisted on board from Company work launch by ship's derrick. A good mooring line will be required from forecastle head as a messenger for the buoy mooring.

Tanker Loading Pier: The loading pier is equipped with rigid articulated pipe arms mounted on gantries for loading liquid petroleum gas and also for loading crude oil. The crude oil gantry is also fitted with a ballast discharge arm.

There is an access roadway between the Pier head and the shore. Mooring lines are run to dolphins by terminal mooring boats. Vessels with tension winches when moored at the pier must have winches on 'Manual brake'.

Arrival Draft: Vessels must arrive at the Company's facility in an adequate ballast condition compatible with safe manoeuvring during handling. Excessive trim or insufficient ballast could incur delay until such time as an acceptable condition is reached.

BALLAST: All berths are equipped with water ballast discharge lines. There is a water ballast tank of 500,000 bbls. capacity and a ballast treating facility capable of handling 40,000 bbls.p.h. It is prohibited to discharge water ballast into Scapa Flow.

Bilge Ballast Discharge: Vessels should arrive in Scapa Flow with clean ballast only.

The discharge of bilges and/or ballast by vessels into Scapa Flow is strictly prohibited.

N.B. All ballast water including permanent ballast must be discharged through the Terminal ballast reception and cleaning facility.

Discharge of ballast and simultaneously lifting of cargo is not permitted unless approval has been given by the Mooring Master.

The salvage in ballast shall become the property of the Company, in consideration of the Company's operation of the Terminal ballast reception and cleaning facility.

MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital, Kirkwall.

FRESH WATER: Not available.

FUEL: Bunkers not available at present, but lubricants in small quantity available. Ships should cable requirements to Agent as soon as possible.

CONSULS: Denmark, Netherlands, Norway and Germany.

REPAIRS: There are no dry-docking facilities available, but local engineering firms undertake minor repairs to machinery and equipment.

Immobilisation of Engines: Not allowed on any of the berths, and not recommended when at anchor. When at the anchorage, however, in special circumstances, and provided the Harbour Master's permission is first obtained, it may be possible.

TRAVEL: There are daily air services, during the week, to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday, There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.

LAUNCH SERVICES: Launch services from Flotta and SPM berths are available by arrangement with local Agents to Scapa Pier.

SAFETY: Should communications fail, the Mooring Master will authorise continuous soundings of the ship's whistle or siren as a signal to stop loading (ships in the vicinity capable of so doing should inform the Terminal Control by VHF that this signal is being sounded in case it is inaudible ashore). Ships hearing the signal and unable to contact the Terminal should inform "Harbour Control".

SERVICES: Stores are of good quality, and the laundry facilities are good, but limited. Tank cleaning facilities are not available.
GARBAGE DISPOSAL: Skip provided on Scapa Pier free of charge and collected as required, otherwise by arrangement through local agent.
WASTE OIL DISPOSAL: No waste oil disposal facility.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
SHORE LEAVE: There are no restrictions on shore leave for ships' personnel. For vessels moored at SPMs arrangements can be made with the Agent for a launch service to be operated to the shore. For safety reasons, the boat selected for this service must have good stability, to prevent accidents in cases of hazardous boarding due to weather conditions.
GENERAL:
Accidental Spills and Leakage: All oil spills and leakages must be immediately reported to the Mooring Master, who will inform the Harbour Authority forthwith. All deballasting/loading/discharging operations will be immediately suspended until the cause of the spill/leakage has been determined, and rectified to the satisfaction of the Mooring Master, and the Harbour Authority.
Galley and Other Refuse: Dumping of all refuse into Scapa Flow and approaches is prohibited. Refuse must be retained on board in sealed containers. (Vessels in port over a long period may make arrangements with their local Agent for collection).
Lighting: Sufficient lighting must be provided in the way of all overboard discharge points to facilitate detection of leaks or spillage. Adequate lighting must also be provided at the loading manifold.
Lifting of Stores; When tankships are at SPMs, loading or off-loading of stores, provisions, drums or any other goods or articles on, to or from the main tank deck is prohibited while cargo is being lifted.

Under certain circumstances and with the approval of the Company's Mooring Master, stores may be worked on the poop during the cargo lifting.

When tankships are moored at the pier, vessels and boats are prohibited from coming alongside during cargo lifting, unless all cargo operations are shut down, all tank openings are closed and secured, and permission from the Mooring Master has been obtained.

Working of stores over the pier will not normally be allowed.

During Loading/Deballasting Operations at SPMs: Mooring Masters will carry Company communication equipment. Ship's VHF must also be available to the Mooring Master at all times. Ship's whistle must be available throughout the time a Mooring Master is on board.

Emergency signals in the event of complete communication failure will be as follows:

By day: Continuous blasting of ship's whistle accompanied by the hoisting of 2 black balls in a position conspicuous to the Terminal Control Room.

By night: Continuous blasting of ship's whistle accompanied by continuous flashing on an Aldis type signal lamp aimed towards the Terminal Control Room.

In the event of such a communication failure all loading operations shall cease until an effective means of communications has been established.

AUTHORITY: Orkney Islands Council, Department of Harbours, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-873636. *Telex:* 75475. *FAX:* 0856-873012. *Contact:* Captain R. C. Sclater, Director of Harbours. Captain R.S.Moore, Deputy Director.

SCRABSTER: 58.37 N. 03.33 W. (See Plan)

LOCATION: Inside Holborn Head on Thurso Bay.
PILOTAGE: Not compulsory. Pilotage available for Pentland Firth and locally. Pilots can be contacted on Channel 16, working Channel 12.
ANCHORAGE: Excellent anchorage in bay, close to high land on North side. Good shelter.
APPROACHES:
Scrabster Harbour Ro/Ro ferry pier – LT.QK.FL.G4.M.
Inner harbour entrance East pier head – LT.2FG(vert).
West pier head – LT.2FR(vert).
MAX. SIZE: Ro/Ro Berth: LOA 90 m., draft 6.0 m.
Lay-By: LOA 80 m., draft 4.5 m.
LOA 120 m., draft 3.0 m.

The entrance to the tanker berth is 28.0 m. wide and to the inner harbour 15.0 m. wide.
VHF: Multi-Channel VHF set in Harbour Office. Calling Channel 16, working Channel 12 (24 hours).
TUGS: None.
BERTHING:

Berth	*Length* (m.)	*Depth at L.A.T.* (m.)
Deep Water – Ro/Ro	96.0	5.5
Lay-By	100.0	4.5
Tanker Berth	72.0	3.0
Old Fish Market	114.0	1.0
* New Fish Market	123.0	4.5
* New Landing/Lay-By	85.0	4.5

* Completion of construction expected December 1992.
Ro/Ro Facility: Ramp: 100 tonne maximum on 8 axles, 4 m. wide roadway. No height restrictions, all states of tide.
CRANES: Mobile cranes up to 100 tons available.
SPECIALISED CARGO HANDLING FACILITIES: Mineral handling single grab at rate of 500 tons per day direct into lorries. No storag available at present.
STEVEDORES: Cargo worked 24 hours.
TANKERS: Vessels up to 2,000 d.w.t. can use Tanker Terminal.
FRESH WATER: Available at all berths.
FUEL: Available from BP Terminal or Texaco by road tanker. Harbo storage 80,000 litres. No overtime charges.
REPAIRS: Engine and hull repairs can be undertaken at 24 hours notic
AIRPORT: Nearest at Wick, 32 km. away.
HOLIDAYS: Usual U.K. holidays.
GENERAL: *Charts:* B.A. Charts No. 2162 and 1462.
Ice Plant: 50 tonnes per day. Storage 90 tonnes tube ice.
Tidal Reference: H.W. Dover – 2 hours 30 minutes. Range 5.0 m M.H.W.S. and 3.7 m. M.H.W.N.
Stores: Available.
Bonded Stores: Available at 48 hours' notice.

AGENT: Scrabster Harbour Trust, Shipping Agents, see above.

SEAHAM: 54.50 N. 01.19 W. (See Plan

PILOTAGE: Not compulsory. Pilotage Service available with VHF watc on Channel 16 over tidal period. Call sign: Seaham Harbour Pilots Tel: (091) 5813246.
ANCHORAGE: Good anchorage approximately 1 mile N.E. of Nort Pier Lighthouse. Shallow water and rocks to South of South Pier (Lidd Scars). Depth on bar at HWST 6.85 m.
RESTRICTIONS: The entrance to harbour is formed by North and Sout Piers and is 84.34 m. wide. South Dock gates are manned fro 2.5 hours before HW to 1.5 hours after HW. Gateway to South Doc 19.81 m. wide.

No vessel can enter at LW and entrance should not be attempte during strong on-shore winds.
MAX. SIZE: *Largest Vessel:* 106 m. LOA, 16 m. beam and draft subjec to tidal rise.
VHF: VHF watch on Channel 16 over tidal period and during office hour (0800 – 1800 hrs.) Monday – Friday. Working Channels 6 and 12.
TUGS: 1 tug with 8 tons bollard pull available.
BERTHING: *South Dock:* 8 berths. 625 m. quayage with cranage up t 100 tons capacity. Gravity spouts and conveyors for loading vessels u to 6,000 tons. 60 ton weighbridges with 18.4 m. platforms availabl Railway connections.
North Dock: Used by fishing boats only.
CRANES: Five crawler cranes with capacity up to 35 tons.
BULK CARGO FACILITIES: Chute, conveyor and cranage handlin facilities available for loading/discharging bulk cargoes from/to roa transport.
SPECIALISED CARGO-HANDLING FACILITIES: *Container* an *Ro/Ro Facilities:* Area available for handling containers. 42 ton containe handling forklift truck available.
STEVEDORES: *Working Hours:* Monday to Friday 0800 – 1200 hrs 1300 – 1700 hrs. Overtime to be ordered by 1300 hrs.

Saturday and Sunday: Work at overtime rates can be arranged wi 8 hour minimum period. Weekend overtime to be ordered b 1600 hrs. Friday.

Public Holidays: Overtime possible except New Year's Day, Christma Day and Boxing Day.
MEDICAL: Hospital at Sunderland, distance 6 miles.
TANKERS: No facilities.
FRESH WATER: Available on quay.
FUEL: Available by barge or road tanker.
REPAIRS: Facilities available at Sunderland and the Tyne.
OPENING/CLOSING HATCHES: By crew.
AIRPORT: Newcastle Airport, 32 km. Teesside Airport, 40 km.
HOLIDAYS: Christmas Day, Boxing Day and New Year's Day.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE:

Maritime Rescue and Search Centre. Tel: North Shields 091–2572691.
BANKS: Barclays, National Westminster, Lloyd's and Midland.
GENERAL: *Chart:* B.A. Chart No. 1627.
Weather: The prevailing winds are from the West.
Tides: Normal range in enclosed dock: 1.97 m. Spring range 4.42 m Neap range 3.5 m.
Provisions: Available from local chandlers.
Storage: Transit shed of 1,394 sq.m. and warehouse space 16,000 sq.m. Open storage of 10 acres also available.
GARBAGE DISPOSAL: Bins and skips are sited in port area for galle and operational waste. No charge unless large quantities involved.
WASTE OIL DISPOSAL: Road tanker collection service available w Port Authority. Charges are quoted case by case on request.
SEAMAN'S CLUBS: Seaham Seafarers Centre is adjacent to the po entrance, facilities include telephone, television, book exchange, po table and bar.
CURRENCY: U.K.Pound (U.K.£).

Hicks, Operations Director/Harbour Mas T. Elliott, Pier Master.

SHARPNESS and GLOUCESTER: 51.43 N. 02.29 W. (See Plan)

The Port of Gloucester comprises the enclosed Docks at Sharpness and Gloucester connected by the 16 mile ship canal named "The Gloucester and Sharpness Canal" and all waters within.

Gloucester Harbour, the esturial waters of the River Severn, extending N.E. from the limits of the Ports of Newport and Bristol to Bigsweir on the River Severn. Gloucester Harbour Trustees act as the Navigation Authority responsible for all pilotage and conservancy matters.

PORT LIMITS: Sharpness Dock entrance.

DOCUMENTS:

1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B.6.
3 Stores Lists.
1 Cargo Declaration – Non EEC Cargoes Form C1600A.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each passenger.
Ship's Certificate of Registry.
Oil Pollution Certificate.

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Pilotage is compulsory. Masters of vessels bound for the Ports of Gloucester, Sharpness, Chepstow and Lydney requiring the services of a Pilot at the Barry Roads Station must give at least 24 hours notice of their intended arrival at the Pilot Station. Failure to give this notice could lead to a vessel being delayed. Draft and Summer d.w.t. are also required. Masters who expect their passage time to be less than 24 hours should send advice from their sailing port with d.w.t. tonnage, draft, speed and ETA. Masters of vessels bound for Chepstow should also state mast height above the appropriate water line and whether masts can be lowered. (Vertical clearance limited by Bridge to 52 ft. (15.8 m) above MHWS)

Vessels are boarded at Barry Roads by the Bristol and Gloucester Pilot Cutter which is equipped with VHF Channels 16, 6, 8, 9, 11 and 14. Radio contact with the Cardiff Pilot Cutter should be made not later than 1 hour before arrival at Breaksea Buoy. In fog ships sound "9" (4 longs, 1 short). Pilot replies the same. Masters can send ETAs direct to the Duty Pilot. Tel: (0860) 232736.

Dock Pilots: Dock Pilots are available, not compulsory but advisable for berthing in Sharpness Dock, transit of the Sharpness Canal and in Gloucester Dock.

ANCHORAGES: Barry Roads afford good anchorage in moderate weather for vessels awaiting a Pilot.

RESTRICTIONS: 3 ft. (0.9 m.) water clearance over outer sill for vessels of maximum draft 21 ft. 6 in. (6.55 m.) Neap tides impose certain restrictions.

Beam	*Clearance Required*
Less than 10.36 m.	0.61 m.
10.36 m. – 13.71 m.	0.76 m.
13.72 m. – 16.76 m.	0.91 m.

Note: Sharpness Dock sill dries out at LW.

MAX. SIZE: Maximum Length – no restriction. Maximum beam – 55 ft. (16.76 m.) Maximum draft – 21 ft. 6 in. (6.55 m.) fresh water.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Niton Radio, Lands End Radio, Ilfracombe Radio.

VHF: Sharpness Radio Channels 16, 14 and 9. Range normally within pilotage waters only.

TUGS: *(River):* Larger vessels normally pick up tugs off Avonmouth if required by Pilot. *(Dock Tugs):* Not suitable for river work. 3 tugs available in Sharpness Dock and for use between Sharpness and Gloucester if required. All tugs take ships lines.

BERTHING: Max. draft 21 ft. 6 in. (6.55 m.) Fresh Water. Range of dock level 4 in. (0.1 m.)

Available Berths: 10 to 14 berths depending on ship length. This includes a scrap berth. Available length of Quay – 12,000 ft. (3,660 m.).

Cargo Equipment and Methods: Cranes 5×3 tons, 5×6 tons, all Portal and 1 Scotch Derrick of 32 tons. 3×6 tonnes Mobile Cranes, Grabs, Slings and Pallets, etc. Load/discharge by shore gear.

BULK CARGO FACILITIES: 1×10,000 ton grain silo, 2 cement silos, 1 timber terminal, 1 coal terminal, 1 scrap terminal, 255,000 sq.ft. covered storage space, 1 Ro/Ro berth.

Belt driven elevators provided as required.

1×300 t.p.h. mobile hopper for handling fertiliser into 4×2,500 ton storage bays.

At Gloucester: 1×4,000 tonne grain silo, 1 timber wharf, 1 general wharf.

BRIDGES: 16 swing bridges between Sharpness and Gloucester. Mast height restriction 32 m. (105 ft.)

STEVEDORES: British Waterways Board.

Normal Working Hours: Monday – Thursday 0745 hrs. – 1300 hrs., 1400 hrs. – 1700 hrs. Friday 0745 hrs. – 1300 hrs., 1400 hrs. – 1600 hrs. Overtime as requested.

MEDICAL: Absolutely necessary for Agent to have as much notice as possible if any medical attention is required. All facilities available.

DENSITY: 1000/1003.

FRESH WATER: Available by stand pipe, 20 t.p.h.

FUEL: Through Agents, 12 hours notice, most grades available.

FIRE PRECAUTIONS: According to local laws available on request.

CONSULS: See "Bristol".

REPAIRS: All types of deck and engine repairs are possible.

DRY DOCK: 360 ft. by 47 ft. by 14 ft. over blocks.

SURVEYORS: Most Societies are available.

GANGWAY/DECK WATCHMEN: Ship's personnel, but watchmen can be arranged if necessary.

HATCHES: Opened by ship's crew.

CUSTOMS ALLOWANCES: As for other U.K. ports.

REPATRIATION: All arrangements through Agents.

AIRPORT: London or Birmingham within 2 hours. Local taxi service available.

TIME: BST is GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Easter (varies). May Day. Spring Bank Holiday (last Monday in May). August Bank Holiday (varies, usually last Monday in August). Christmas Day (25th December), Boxing Day (26th December). Work can usually be arranged on these holidays although unusual to work 25th/26th December.

POLICE/AMBULANCE/FIRE: Telephone 999 ask for service required.

TELEPHONE: No ship to shore connection. Public telephone kiosks available.

SERVICES: Taxi. Laundry. Ship chandlery.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary unless being repatriated.

GARBAGE DISPOSAL: Garbage skips provided on quays with frequent collections and no separate charges. Any special requirements arranged through agents.

WASTE OIL DISPOSAL: Collection by tanker trucks from working berths. Arranged and charged through ship's agents.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

REGULATIONS: British Waterways Board Byelaws 1962.

GENERAL: *Gloucester and Sharpness Canal and Gloucester Dock:* Maximum size of vessel: Length 205 ft. (62.5 m.), beam 31 ft. (9.45 m.), draft 11 ft. 6 in. (3.5 m.) fresh water. Vessels exceeding these dimensions may be considered subject to Harbour Master's approval.

AUTHORITY: British Waterways Board, Dock Office, Sharpness Docks, Gloucestershire GL13 9UD. *Tel:* (0453) 811644. *Telex:* 43376 BWB SDS G. *FAX:* (0453) 811990. *Contact:* Mr.M.Vale, General Manager. Captain G.A.Boyack, Harbour Master. Captain M.D.Stilliard, Asst. Harbour Master. Mr.D.Simmons, Operations Development Manager.

SHOREHAM: 50.50 N. 00.15 W. (See Plan)

DOCUMENTS and all general information, refer to "London". Distance from London, 80 km.

PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. Send ETA 12 hours and 2 hours in advance, including max. draft. Pilot boards within 2 nautical miles of harbour entrance. Tel: Brighton (0273) 592455. VHF: Channels 16 and 14. Hours: Tidal hours.

ANCHORAGE: Off Harbour. Depths as per English Channel Charts.

RESTRICTIONS: No night restrictions. Locks manned 4 hours either side of HW. According to size and draft these times can be extended by prior arrangement.

Main entrance channel, 122 m. wide, leads into a 91.4 m. channel to the Eastern arm.

Dimensions of Prince Philip Lock: 113.9 m. length, 17.3 m. width.

MAX. SIZE: *Canal:* Length 105.9 m., beam 16.4 m., draft 6.7 m. (subject to tide). Vessels over 103 m. are subject to the Harbour Master's approval.

Western Arm: Length 82.3 m., beam 14.3 m., draft subject to tide.

East Arm: Max. LOA 120 m. Max. Draft 6.4 m., subject to tide and Harbour Master's approval.

HEALTH: See "Health – All Ports" before first UK port.

RADIO: Niton Radio/Northforeland Radio. ETA to Shoreham Harbour Master 24 hours prior to arrival.

VHF: When within VHF range advise Harbour Master (via "Shoreham Harbour Radio"), ETA, draft, beam, LOA and of any circumstances which may affect seaworthiness or handling capacity of the vessel.

Port Operation and Information Service manned continuously, contact by VHF calling Channel 16, working Channel 14. Station is situated on the middle pier. Tel: Brighton (0273) 592366.

TUGS: One tug (Bollard Pull 10 tonnes). Tug lines used for which no extra charge. Communications between vessel and tug take place on VHF Channel 11.

BERTHING: See "Restrictions".

Bulk wine terminals capable of handling 1,653,462 litres of wine are available.

A grain silo terminal with a storage capacity of 13,000 tonnes has been constructed within the canal.

A Ro/Ro berth has been constructed at the East end of Aldrington Basin.

STEVEDORES: Reasonable ETA is sufficient for gangs to be called.

MEDICAL: All facilities available.

TANKERS: Texaco in the Canal.

DENSITY: Approx. 1025.

FRESH WATER: Available at most berths.

FUEL: Available by road tanker.

CONSULS: Denmark.

REPAIRS: Minor repairs possible.

SURVEYORS: Available locally.

GANGWAY/DECK WATCHMEN: Recommended.

HATCHES: Opening and closing by crew.

REPATRIATION: Possible.

AIRPORT: Gatwick Airport.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: There are no arrangements for placing telephones aboard ship.

BANKS: Barclay's, National Westminster, Lloyd's and Midland Bank all have branches locally.

STORING: No restrictions. Stevedores not required to load stores.

SHORE LEAVE: Possible.

GARBAGE DISPOSAL: Individual berth operators provide skips alongside.
WASTE OIL DISPOSAL: Service available from local contractor by tank vehicles only. Contact Hales Waste Control Ltd. (Tel: Burgess Hill 243444).
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Shoreham Port Authority, Harbour Office, Albion Street, Southwick, Brighton BN4 4ED. *Tel:* Brighton (0273) 592613. *Telex:* 878178. *FAX:* (0273) 592492. *Contact:* Captain J. Robertson, Harbour Master. P. Lacey, General Manager.

SILLOTH: 54.52 N. 03.24 W (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" for the purposes of stemming when she arrives at the pilot station off Workington (see Admiralty Chart No. 1346). Laytime normally commences when the vessel berths in the New Dock, Silloth.
DOCUMENTS: Normal U.K. requirements.
PILOTAGE: Compulsory for all vessels of 50 m. in length and over, except for those qualifying for special exemption. Vessels should send their ETA to local Agents or to the Dock Master, Silloth, at least 12 hours before arrival. Pilot boat is stationed off Workington when vessels are expected and listens out on Channels 16, 14 or 12 VHF. Pilot boards vessels between 2.5 hours and 1.5 hours before HW, Silloth.
ANCHORAGES: Vessels may anchor at the pilot station in good weather, but are advised to seek shelter in Ramsey Bay, Isle of Man or Wigtown Bay in adverse weather conditions.
RESTRICTIONS: The port lies in a relatively sheltered position in the Solway Firth, and in consequence, access during adverse weather is mainly governed by the practicability of boarding and landing Pilots off Workington.
MAX. SIZE: *Neap Tides:* Length 90 m., beam 15 m., draft 4 m.
Spring Tides: Length 90 m., beam 15 m., draft 6 m.

Typically, the port is used by vessels of between 500 tonnes and 2,500 tonnes deadweight.
VHF: A "Port Operation" and Information Services operates on Channels 16 and 12 from 2.5 hours before HW, call sign, "Silloth Harbour Radio".
TUGS: There are no tugs available at the port.
BERTHING: The port comprises two docks:

The outer, Marshall Dock is tidal and contains no berths.

The inner, New Dock is enclosed by dock gates which are opened from 1 hour before to 1 hour after HW. Minimum depths in the New Dock are maintained at 5.0 m. on Neaps and 7.0 m. on Springs. The specific gravity of the water in the dock is normally about 1.022.
Cargo Berths: The New Dock contains 7 berths:

Berth No. 1: A "single user" bulk grain import berth operated by Carr's Flour Mills Ltd. Suction elevators, 60 tonnes p.h.

Berth No. 2: A general cargo berth with limited quay space.

Berth No. 3: A specialised bulk molasses import terminal operated by Carr's Flour Mills Ltd. and general cargo berth.

Berth No. 4 'A': A "common user" import terminal for bulk agricultural materials (mainly animal feeds) operated by D. A. Harrison & Co. Suction elevators and grabs; 100 tonnes p.h., automated handling and storage.

Berth No. 4 'B': A specialised import/export bulk cement terminal operated by D. A. Harrison & Co. 100 tonnes p.h., automated handling and storage of cement powders.

Berth No. 5: Main general cargo berth. Mobile cranes and elevator, heated-covered storage.

Berth No. 6: Specialised livestock import terminal operated by Frans Buitelaar Ltd., under the control and supervision of M.A.F.F. officials. Lairaging facilities for 800 cattle. The berth can also be used for general cargo.

Berth No. 7: General cargo berth for small vessels of up to 50 m. in length.
BULK CARGO FACILITIES: See "Berthing".
CRANES: 4 × 30 tonne mobile cranes are permanently available in the port. Larger or additional cranes can be conveniently hired in. Ship's gear is never used.
STEVEDORES: D. A. Harrison & Co., Anvil House, West Newton, Aspatria, Cumbria. Tel: (06973) 20529. Telex: 64493. Working hours in the port are unlimited 24 hours per day, 365 days per year.
Storage: Stevedores D.A. Harrison & Co. also operate a large covered storage facility adjacent to the Port with a capacity of more than 40,000 tonnes, and can provide inland road transport to and from this facility to all parts of the United Kingdom using own vehicles.

W & S Midlands, c/o Pasturefields Garage, Great Haywood, Nr. Stafford, Staffs (Tel: (0889) 270710) with covered storage at nearby Kirkbride.
FRESH WATER: Available at all berths.
FUEL: Fuel oil can be loaded from road tanker.
REPAIRS: Any type of repair which does not require dry dock facilities can be carried out by local contractors.
DRY DOCKS: None.
HATCHES: Always handled by ship's crews.
AIRPORT: Nearest airports are Carlisle, 39 km., Newcastle 140 km., Prestwick 225 km. and Manchester 260 km.
POLICE/FIRE/AMBULANCE: Police: Tel. 31313 or 09002422; Fire: Tel. 999; Ambulance: Tel. 31309 or 999. The nearest public telephone is at the entrance to the docks.
BANKS: The Midland Bank, Station Road, Silloth. The National Westminster Bank, Eden Street, Silloth.
GARBAGE DISPOSAL: Skips are provided alongside and can b ordered through the agent or port authority. Skips delivered and collecte during normal office hours, or outside by arrangement.
WASTE OIL DISPOSAL: Up to 10 tonnes can be collected by roa tanker. Contact D.A.Harrison. (Tel: 06973-44000).
SEAMAN'S CLUBS: No Seaman's club. A small town is with 5 minutes walk, and can provide most requirements.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Associated British Ports, Dock Office, Silloth Dock Cumbria CA5 4JQ. *Tel:* (06973) 31358. *Cables:* Dock Office, Sillot *Contact:* Captain C.Puxley, Dock and Marine Superintendent.

SOUTHAMPTON (Including Fawley): 50.54 N. 01.24 W (See Plan

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Reports by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load Line Certificate.
Safety Equipment and Safety Construction Certificates.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agen direct from loading port.

APPROACHES:

(a) Prolonged high barometric pressure or strong N.E./N.W. winds ma reduce predicted tide levels by 0.45 m. – 0.6 m.

(b) Deep drafted vessels enter via the Nab dredged channel. The tida currents set at almost 90° to this channel, at certain stages of the tide, and, as it is marked by buoys on one side only, care must be taken to keep within the confines of the channel. At its Norther end the channel swings about 45° to the West, but it is not marke on either side.

CAUTION: Dangerous wreck exists in position Lat. 50° 43.1′ N Long. 00° 59.46′ W., marked by N, S, E and W Cardinal Marks (Portsmouth local Notice to Mariners No. 23/91 refers).

(c) When passing Portsmouth, ships should be prepared to encounter crossing traffic to and from that port.

(d) The most difficult part of the navigation between Nab and Fawley is that between Prince Consort Buoy, Cowes Roads, Black Jac Buoy and Calshot, particularly for VLCCs on maximum draft which have to take a wide sweep down to East Gurnard Buoy, before making a 145° starboard turn into Western approach channel which narrows to 305 m. Tidal currents in this area are somewhat uncertain but can reach up to 3.5 knots on a Spring ebb tide and 2.5 knots on a Spring flood tide. In Summer many yachts and other small pleasure craft are encountered. The closest contact should be maintained with Southampton VTS.

(e) VLCCs are not to enter the Thorn Channel on a flood tide when the wind is between West and S.W. and in excess of 30 knots. The Pilot will board VLCCs with the latest weather report and will advise Masters accordingly.

(f) It is also important, before the VLCC enters Thorn Channel, that Southampton VTS is contacted to confirm that no ship which, b virtue of its size or draft, could interfere with the safe navigation and manoeuvring of the VLCC, will be allowed to enter the ma channel between Cadland and Prince Consort Buoys after the VLCC has entered this channel.

PILOTAGE: Pilotage in the Port of Southampton Competent Harbou Authority area (see "Plan") is compulsory, except for Pilotage Exemption Certificate holders, naval vessels and other small exemptions.

In addition to 48 hours notice to local Agent, advise Southampton VTS Centre as appropriate, ETA 48 hours, and again 2 hours to 3 hours immediately prior to arrival. The pilot boarding areas are serviced b fast launches (black hulls, orange wheelhouses) under the control of the VTS Officer at the VTS Centre, Associated British Ports, Berth 3 Eastern Docks, Southampton. The VTS Officer keeps a continuous watch on VHF Channel 16, call sign "Nab", "Sturbridge" or "Lepe Pilot as appropriate. Working frequency Channel 9 only. No medium frequency facility, M/F and R/T messages via Niton Radio. VTS Centre Telephone No. (0703) 632345/6. Telex No. (0703) 477161. Fax: (0703 232991.

The launches only put to sea when required. Failure to send a accurate ETA 2 hours to 3 hours before arrival could cause delay to the offending vessel.

Strict compliance with the requirements of the Merchant Shipping (pilot ladders) Safety Rules is requested by the Pilots who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes a required. Ladders should reach to approximately 1.0 m. from the water each rung resting firmly against the ship's side; and a good lee provided whilst making approximately 5 knots to 7 knots headway.

Eastern Outer Limit: All vessels over 150 m. (492 ft.) LOA, and all vessels carrying LPG/LNG in bulk (i.e. in tanks which form part of the permanent structure of the vessel), pilot boarding point is at the Nab Tower. Vessels exceeding 70,000 d.w.t. may board Pilots 3 miles South of Nab Tower by arrangement.

(Note: Vessels having carried cargo referred to above, and which have not been rendered gas free or the cargo spaces completely inerted, will be subject to the same conditions as specified above).

Eastern Inner Limit: All other vessels for which compulsory pilotage applies not specified above, the pilot boarding point is in the vicinity of the North Sturbridge Buoy area. Voluntary Pilotage is also available from the Nab Tower.

Western Limit: All vessels for which compulsory pilotage applies, the pilot boarding area is in the vicinity of the West Lepe Buoy in the West Solent.

Voluntary/Optional Pilotage: West Solent including the Needles Channel. A facility is available by prior arrangement to engage a Pilot on a voluntary/optional basis from the Needles Fairway Buoy to the Western Compulsory Pilotage Limit of the Port of Southampton CHA pilotage area.

Voluntary/Optional Pilotage: East Solent from Nab Tower to the Eastern Inner Limit and vice-versa. A facility is available, by prior arrangement, to engage a Pilot on a voluntary/optional basis for those vessels under 150 m. (492 ft.) LOA to/from the Inner Compulsory Pilotage Limit in East Solent.

GENERAL NAVIGATION: A VTS Officer, responsible to the Harbour Master Southampton, maintains a continuous watch in the VTS Centre (Berth 37), call sign "Southampton VTS". He is to be informed prior to any movement to, from or within the port area, and will give information on the movement of other vessels.

Harbour radar information and guidance will be given on request. The radar reference line shown on the Admiralty Charts is superimposed on the Harbour Radar displays. Particular attention should be paid by Masters to the designated "Reporting Points" marked on the Admiralty Charts. Reports should be made on VHF to "Southampton VTS", to enable the proper identification and co-ordination of the ship movement, to be made to the benefit of all mariners navigating within the Solent area. This applies equally to naval and non-compulsory vessels.

The following VHF Channels are operated within the port:

Southampton VTS: Channels 16, 14, 12, 9, 18 and 20.

Harbour Patrol Launch (call sign S.P.): Channels 16, 14, 12, 9 and 6.

Southampton Pilot Launches (call sign Nab/Sturbridge/Lepe Pilot as appropriate): Channels 16, 14, 12, 9 and 6.

Tugs when berthing vessels: Channels 71 or 74.

Esso Petroleum Terminal, Fawley: Channels 16, 14 and 19.

BP Oil UK Ltd, Hamble: Channels 16, 19, 46 and 71.

A patrol launch (Harbour Master flag by day, all-round blue light by night) is controlled by the VTS Officer Southampton for pollution detection and keeping channels clear of pleasure craft for the passage of large vessels.

Vessels (a) drawing more than 10.5 m., (b) more than 288 m. in length, and (c) or more than 100,000 d.w.t., exhibit a large black cylinder by day and 3 vertical red lights by night. Vessels showing these signals, and LPG vessels, are not to be passed or overtaken within channel limits between the "West/East Bramble" and "Hook" Light Buoys; these vessels are considered to be constrained by their draft and restricted in their ability to manoeuvre, and may not be able to comply with the Collision Regulations. Will indicate inability by 5 short blasts on the whistle. "Clear Channel" control is exercised by the VTS Officer at the VTS Centre, Associated British Ports, Berth 37, Eastern Docks, Southampton. Also see "Notices".

ANCHORAGES: The Thorn Channel has a limited depth of 12.6 m. at low water datum. Up to 7 vessels, other than LPG vessels (only 3 LPG) of under 91.4 m. in length, are permitted with prior permission to anchor out of the channel to the East of the "Hook" Buoy in the designated Small Ships Anchorage, the limits of which must be strictly observed. Three numbered anchorages are available in an emergency for vessels not exceeding 168 m. in length in Fawley Reach, where vessels must moor to two anchors. Permission to anchor, including within the Small Ships Anchorage and numbered anchorages, must be obtained from the VTS Officer, Southampton VTS Centre.

Also see "Notices".

MAX. SIZE: The largest passenger and container vessels call regularly at Southampton. Tankers: Fawley can accept partly loaded VLCCs up to 14.9 m. draft.

HEALTH: See "Health – All Ports" before first UK Port.

TUGS: 2 firefighting/anti-pollutant tugs are permanently stationed at Fawley. During loading operations at Hamble, an anti-pollutant and a firefighting tug are standing by. If more than 2 tugs are required, it should be noted that weekend requirements have to be advised to the tug operators not later than 1530 hrs. on Friday of each week. If a vessel requires more than 2 tugs and is due to arrive at Fawley between 0001 hrs. Saturday and 0900 hrs. Monday, ETAs must be submitted well in advance of 1530 hrs. on the Friday prior to arrival. It is usual to use the wires provided by the tugs for towing.

All VLCC's bound for Fawley are required to take the services of an escort tug from South of the Nab Tower to the berth.

BERTHING: The Pilot boarding the ship at the Sea Station or anchorage will also berth the ship. Non-compulsory vessels can obtain or disembark a Pilot in the vicinity of the "N.W. Netley" or "Hook" Buoys by contacting "Southampton Pilot" on VHF.

Dock or Quay	*Berths Nos.*	*Nominal Dredged Depth * below Chart Datum†*		*Length of Quays*

	34 – 35	9.1	29.8	284	932
	36	9.9	32.5	200	656

Other berths are available. Lesser draft berths not shown. The depths of water are maintained as far as practicable, but are subject to variation and are not guaranteed.

* To find the depth of water in the berths add the tidal rise to the depths shown in the above table.

† Chart datum is approximately the lowest low water level.

BULK HANDLING FACILITIES: Grain handling at Berths No. 36, 47, 101, 102 and 109.

Berth 36: Southampton Grain Silo: 8×1,600 tonnes capacity cells and 4 cells with total capacity 15,000 tonnes.

Receiving rate by truck 500 t.p.h. 1×1,000 t.p.h. shiploader available with travel of 135 m. (443 ft.).

Berth 47: Continental Grain: 16×1,000 tonnes silos. 1×1,000 t.p.h. shiploader with travel of 220 m. (720 ft.).

Western Docks: 1×32,500 tonne grain silo.

Ro/Ro facilities at Berths No. 105 and 201 – 202 (Linkspan).

Eastern Docks: Ro/Ro facilities at Berths No. 25 and 30 (Linkspan).

CRANES:

Type	*No.*	*Capacity in tonnes*
Container cranes	6	Up to 50
Quayside cranes	26	Up to 10
Floating crane	1	200
Mobile cranes	2	10

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

An organisation exists for hospitalisation of sick seamen from vessels off Cowes, Isle of Wight. Arrange through Niton Radio, Nab, Lepe or Southampton Pilot or through vessel's Agent. Minimum delay to vessel.

TANKERS: Esso Marine Terminal, Fawley.

For further details of information contained herein, refer to Fawley Marine Inspection Group and/or the Fawley Marine Terminal Manoeuvring Guidelines.

All ships normally berth stemming the tide. If the Master/Pilot considers conditions warrant an alteration to this plan, discuss with Esso Headquarters when passing Hook Buoy.

For VLCCs there is a turning width of about 1.5 ship's lengths off Berth No. 5 which is the Pilots' preferred swinging position. Because of these tight turning conditions it is VERY IMPORTANT that:

(a) The ship is in the correct position in relation to the channel before commencing to swing. For this the Pilot uses the 326°–327° leading lights shown on the chart.

(b) THE SHIP MUST BE STOPPED OVER THE GROUND BEFORE COMMENCING TO SWING. For several reasons the Pilots prefer to swing to port, i.e. to the West and towards the jetty and a serious accident has occurred because a VLCC was not stopped over the ground whilst swinging and collided with the jetty,.

In order to protect both ship and jetty, equipment to positively indicate to the ship that it is stopped over the ground is being provided on the jetty.

Procedures: On closing the berth, either after swinging or when berthing port side to, advice as to the bodily speed of approach will be provided for all VLCCs using Berth No. 5 over UHV pocketfone, one of which is also issued to the Pilot acting as communications officer. The MAXIMUM IMPACT VELOCITY SHOULD NOT EXCEED 0.21 knots (21 ft./minute) normal to the jetty faceline.

The doppler speed of approach equipment can also be used to provide accurate speed along the channel axis information up to a point when ship is about 500 m. South of Berth No. 5.

Prior to arrival off the berth, mooring lines should be lowered to 3 m. above the water and the winches of the first ropes on the mooring plan provided by the Pilot to be in gear ready to pay out the moorings to the rope running launches. Prevailing winds are off berth and the emphasis is on the use of springs and breast lines. The number used will depend on the size of the ship, condition of mooring lines and positions of fairleads, but generally minimum requirements are 2 spring lines and 3 breast and 2 level/stem lines each end, or according to the pre-determined mooring plans forwarded direct to the Pilots. Additional head and stern lines may be required. Mooring plans are taken on board VLCC's by the Pilot. These must be closely followed.

Backsprings are always first lines ashore.

Tugs on hooks usually let go and push up on offside during the mooring operation.

Approach: Terminal is approached by either the Nab or the Needles. The Nab with a dredged channel of 43 ft. below chart datum admits the larger vessel. Double HW with an average tidal range of 13.25 ft. (Springs) and 7.75 ft. (Neaps). Rate of Spring tide 2 knots, Neap tide 1 knot.

Anchoring in the Small Ships Anchorage adjacent to the terminal requires permission from Southampton VTS. Approval will only be given to vessels of 300 ft. or under. Usual practice is not to moor with both anchors. This applies to Controlled Anchorage only. Depth of 41 ft. LW is available. Anchorages in the Solent and Cowes Roads are more generally used. Good holding ground with depth of 50 ft. LW.

Accommodation: Terminal has 2 approach trestles, 1,900 ft. long leading seaward to the main pierhead trestle with its 9 berths. This trestle is 4,575 ft. long and lies parallel with the channel. 5 main ocean berths are on the seaward side and the 4 coastal berths on the landward side. Dimensions of the berths are as follows:

Berth	*Length of 'T' Head*	*Distance between centres*
No. 1	222 ft.	800 ft.
No. 2	222 ft.	800 ft.
No. 3	222 ft.	800 ft.
No. 4	222 ft.	800 ft.
No. 5	300 ft.	1,000 ft.
No. 6	80 ft.	395 ft.
No. 7	80 ft.	400 ft.
No. 8	80 ft.	400 ft.
No. 9	100 ft.	440 ft.

Equipment: Suitable cargo hose handling equipment is positioned at each of the 9 berths. To facilitate the handling of mooring lines, air powered hoists are available at each of the berths. Mooring boats are in attendance for running lines. VLCCs are required to meet minimum standards with regard to their mooring equipment. All water ballast containing oil or likely to contain oil must be pumped ashore. 2×67,000 barrel ballast tanks are provided on shore. With the approval of the Terminal Manager minor repairs can be undertaken whilst discharging/loading at the Terminal. Major repairs can be undertaken at anchor or at Southampton Docks. Working is continuous throughout. Facilities installed at the berths and available for use by tankers include fresh water, bunkers, steam, compressed air, nitrogen. Ship's stores of all kinds are available in any quantity at Southampton. All deliveries of stores must be made by water transport. For quarantine purposes vessels are either boarded prior to berthing or immediately after berthing. Two firefighting tugs of at least 2,530 h.p. are permanently stationed at the Marine Terminal. Additional tugs can be provided on notice from Southampton.* All tugs are equipped with Radio Telephone and operate on Channels 8 or 10 of the Port Operations Service. Provision of shore steam is made in exceptional circumstances.

*A stand-by charge is levied on all vessels. Subject to availability, an escort tug, for which a charge will be levied, will be deployed to escort all vessels 70,000 d.w.t. and above on the inward and outward passage. The tug will be attached to the stern of the vessel.

Pilotage: Compulsory. Inward-bound vessels embark Pilots at the Nab or Lepe entrances. Tankers up to 250,000 d.w.t. berthed at any time during the day or night subject to tidal conditions.

Berthing:

1. Cautionary Advice:

Prevailing strongest winds are off berth and a considerable number of large container ships, passenger ships and ferries pass the terminal at close quarters. Drift-offs and excessive surging have been experienced at Fawley berths and have caused damage. It is therefore very important that ships, particularly deep draft or high freeboard ships, pay particular attention to moorings.

2. Mooring Requirements and Procedures:

In the case of VLCCs, minimum mooring rerquirements are laid down. These preclude mixed moorings except under special circumstances agreed prior to acceptance of the ship.

Moorings reeled on winches must be held by brakes hardened up to full torque. Self-tensioning devices are not allowed. The moorings must be reeled in such a direction as to assist the brake, not oppose it. Where split drum winches are used, a minimum of one layer should be on the working drum when the mooring reaches the shore bollards or mooring hooks. Brakes must be in good condition and certificate of brake holding power should be available.

VLCCs should strictly adhere to requested order of running. This is done by motor launches.

There are limits applicable to freeboard both from a windage point of view and also because of the upper reach limit of the hard arms. These together with maximum operable wind speed will be discussed with Masters of VLCCs by a terminal supervisor shortly after the ship berths.

Special attention must be paid to ballasting of permanent ballast spaces and use of over-deck systems into emptied cargo tanks during cargo discharge and, if necessary, and with the agreement of terminal supervision, into emptied cargo tanks using the cargo system, in order to keep the freeboard within reasonable limits.

The ship must be held firmly against the fenders at all times. It is unnecessary and dangerous to slack away lines, even if they appear taut, if the ship is not against fenders.

Rules for Berth Planning: The following limitations are now in force when planning berth movements.

1. Berth size restrictions:
   Berth No. 1: Max. size of vessel 51,000 tonnes displacement.
   Berth No. 2: Max. size of vessel 83,000 tonnes displacement.
   Berth No. 3: Max. size of vessel 66,000 tonnes displacement.
   Berth No. 4: Max. size of vessel 179,000 tonnes displacement.
   Berth No. 5: Max. size of vessel 244,000 tonnes displacement.
   Berth No. 6: Max. size of vessel 4,900 tonnes displacement.
   Berth No. 7: Max. size of vessel 3,600 tonnes displacement.
   Berth No. 8: Max. size of vessel 3,600 tonnes displacement.
   Berth No. 9: Max. size of vessel 8,200 tonnes displacement.
2. Vessels on Berth 6 must not exceed 330 ft. (100.5 m.) in length.
3. Distance between vessels secured on any berths must be 100 f (30.48 m.) or more. (This is required under local by-laws for f regulations.)
4. Distance allowed for berthing vessels must not be less than vessel length + 40% length. (Agreement with Pilots).
5. Maximum draft of vessels:
   Berth No. 1 33 ft. 03 in. (10.2 m.)
   Berth No. 2 41 ft. 00 in. (12.6 m.)
   Berth No. 3 41 ft. 00 in. (12.6 m.)
   Berth No. 4 49 ft. 00 in. (14.9 m.)
   Berth No. 5 49 ft. 00 in. (14.9 m.)
   Berth No. 6 18 ft. 06 in. (5.6 m.)
   Berth No. 7 18 ft. 06 in. (5.6 m.)
   Berth No. 8 18 ft. 06 in. (5.6 m.)
   Berth No. 9 21 ft. 08 in. (6.6 m.)

   These drafts are subject to change and are therefore updated a required. Deep draft vessels must refer to Fawley Draft Memo, to ensure arrival draft will not interfere with berthing prospects.
6. Tide charts are to be prepared for Nab and Thorn Channels fo vessels over 40 ft. (12.19 m.) draft.
7. Check product can be loaded on nominated berth.
8. Check product or ullage availability before berthing vessel.
9. Any maintenance must be sanctioned by the direct permission o the Marine Terminal.
10. No vessels to berth on Ocean Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E. through N.E.
11. On coaster berths with 25 to 30 knot wind from N.W. through S.W. to S.E., then after consultation with Pilot/Master and Marine Superintendent/Deputy, vessels may berth/sail, providing a suitable tug is used.
12. Ensure liaison maintained with VTS regarding sailings coinciding with movement of high speed vessels (catamarans and hydrofoils).

Fawley Coastal Berth Manoeuvring Requirements: Fawley Coastal Berths comprise Berths 6, 7, 8 and 9 and are situated on the inside (Western Side) of the Marine Terminal complex.

Before any manoeuvring is undertaken on these Berths the following requirements are to be followed:

1. Marine Controllers are to be informed of vessel manoeuvring plan
2. Vessels without bow thruster capability should berth stemming the tide.
3. All vessels over 61 m. (200 ft.) LOA must have the assistance of the Esso mooring boat when:
   (a) berthing.
   (b) sailing if berthed starboard side to, if wind on berth is over 15 knots.
4. Vessels over 85 m. (279 ft.) in length will not normally swing West of a line between Fawley Buoy and the S.E. of Fawley Jetty. Exceptions may be made only *after* consultation between Terminal and the Pilot or Master of the vessel. Due account must be made of wind, tide, weather and time. Only then will vessels be permitted to swing West of that line referred to above.
5. Vessels over 85 m. (279 ft.) LOA without bow thruster capabilities must have in attendance when berthing port side to or sailing after being starboard side to:
   (a) Esso mooring boat, *and one tug.*

   Such vessels when berthing starboard side to or sailing after being port side to must have in attendance:
   (a) Esso mooring boat.

   They may also be required to have a tug if prevailing conditions require it.
6. Vessels of 91.5 m. (300 ft.) LOA or more when berthing at Nos. 6 7 or 8 to have at least one adjacent berth vacant during the berthing movement.
7. No vessel to berth when wind is from South to West with mean wind speed above 25 knots, i.e. within S.W. quadrant.
8. The Esso mooring boat will be made available on request to assist with any vessel not covered in these instructions. Its communication Channel is 71 (74 in an emergency). These boats must not be used for towing.

B.P. Terminal, Hamble. Situated immediately opposite Fawley. Lat. 50° 50′ 54″ N., Long. 01° 19′ 32″ W.

Ship's personnel must be transported by bus through the Terminal to the Main Gate. Hamble Village is close by, where public transport to Southampton is frequent.

Limits:

D.W.T.: 110,000 tonnes.
Displacement: 64,000 tonnes.
LOA: 260 m. Draft: 13.10 m.
Depth – approaches: 11.25 m. U.K.C. – 1.30 m.
– alongside: 13.60 m. U.K.C. – 0.50 m.
Loading Arms: Crude oil 5.1 m. to 21.94 m. Operating Envelope.

Fresh Water: Available alongside via a meter.

Type/Moorings: Alongside.

Berth: Coasters acceptable as they lie between dolphins and against fendered jetty head. Minimum height of manifold above waterline 2.74 m., therefore it may be necessary to disconnect over low water period and incur subsequent delay.

Product tankers must comply with "closed loading" requirements.

Length: Minimum parallel mid-body length for crude oil tankers is 47.5 m. forward and aft of manifold centreline; no restriction for product carriers.

Draft: Max. draft 13.10 m., at all states of the tide.

Cargo Grades: 2×16 in. crude loading arms. Vessel must present 16 in. 150 ASA flanges. Height above waterline max. 21.94 m., min. 5.1 m. Manifolds must conform to OCIMF standards.

3×10 in. 150 ASA product loading arms. Vessels must arrive with appropriate reducing pieces fitted. Vessels unable to comply may be acceptable subject to prior check with terminal. Height above waterline max. 15.88 m., min. 2.74 m.

Dirty Ballast: Clean ballast from segregated ballast system may be discharged overboard, subject to Port and Terminal approval and hydrocarbon contamination not to exceed 5 ppm. No shore reception facilities for ballast or contents of slop tank.

General: Berth operated by B.P. Oil U.K.

Products are imported from various size vessels, and on occasions exported. Crude oil is exported (from Wytch Farm), cargo sizes have ranged from 43,000 tonnes to 81,000 tonnes.

Bunkers are not available at the berth.

Also see "Notices".

For further information contact B.P. Oil U.K., Hamble. Tel: (0703) 456654.

CONSULS:

Country	*Status*	*Address/Telephone No.*
Belgium	Consul	c/o P & O Container – Europe, Richmond House, Terminus Terrace, Southampton, SO9 1GG Tel: 635200/310318 Telex: 47384
Denmark	Vice-Consul	c/o Ackerleys, Canute Chambers, Canute Road, SO9 1FJ Tel: 227171
Dominican Republic	Consul	Mascot Ships Agents, c/o MacIntyre Scott & Co. Ltd., West Bay Road, SO9 4NW Tel: 634033
Finland	Vice-Consul	c/o Sandell Bros. Ltd., Ryde Terrace, SO9 2UL Tel: 30966
France	Consular Agent	R. H. Hammond Ltd., 236 Winchester Rd., SO1 2SB Tel: 772442
Germany	Consul	c/o Wainwright Bros. Bowling Green House, 1 Orchard Place, SO1 1BR Tel: 223671
Greece	Vice-Consul	c/o Keller Bryant & Co. Ltd., 21-22 Queens Terrace, SO9 3FD Tel: 28566
Italy	Consular Agent	c/o Herbert Ferryman Ltd., Galen House, 1-9 Oakley Road, SO9 7AT Tel: 788011
Netherlands	Consul	c/o Macship Agencies Ltd., 4th Floor Havelock Chambers, Queens Terrace, SO1 1BP Tel: 229051
Norway	Consul	c/o G. Haswell & Co. Ltd., 28 Queen's Terrace, SO9 2UJ Tel: 23555
Philippines	Consul	Mann & Son (London) Ltd., Test Road, Eastern Docks, Southampton Tel: 637233
Spain	Consul-General	Richmond House, (First Floor) Terminus Terrace, College Street, SO1 1EJ Tel: 35835
Sweden	Consul	c/o Meadows Freight, 12-14 Queens Terrace Tel: 225033

BUNKERS AND WATER: All grades of fuel oil and diesel oil are available and water is piped on all berths. Bunkers and stores can also be obtained by barge in Cowes Roads anchorage, but water is not readily obtainable there.

REPAIRS/DRY DOCKS: All ship repairs can be effected. Largest drydock is 1,141 ft. long overall, 132.5 ft. wide and has 34 ft. over the blocks.

SURVEYORS: Lloyd's Register. Tel: 220353.
Salvage Association, Tel: 227983.
Topmarine, Tel: 220585.
Murray Fenton & Associates, Tel: 229787.
International Shipping Trustees (UK) Ltd. Tel: 37596.

OIL POLLUTION: Southampton Water is an international yachting centre and has many holiday beaches on its shores. Consequently, oil pollution is treated very severely and heavy fines are imposed on offenders.

The Esso Refinery, Williams Shipping and BP Oil Response Base operate a clean-up service, the full economic cost of which is billed to the offending ship.

CUSTOMS ALLOWANCES: By statute, crews of vessels in port are allowed 25 cigarettes per day per man. 0.3 litres (0.5 pint) of spirits and 1 bottle of table wine per day per man.

AIRPORT: Eastleigh Airport. Air U.K. have flights to Guernsey and Jersey.

TIME: British Standard Time is GMT plus 1 hour, reverting to GMT in Winter months.

HOLIDAYS: Good Friday (variable date); Easter Monday (variable date); May Day; Spring Bank Holiday (variable date); Autumn Bank Holiday (variable date); Christmas Day (25th December); Boxing Day (26th December); New Year's Day (1st January).

POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask for service required.

SHIP SUPPLY SERVICE: Williams Shipping Company (Fawley) Limited, Clyde Buildings, Town Quay, Southampton SO1 1LX. Tel: (0703) 225271. Telex: 47436.

Services Supplied: Fast launches for personnel ship to shore, essential small packages and/or sick crew members.

D.O.T. approved to operate; not more than 6 passengers, area Swansea to Selsey, not more than 5 miles offshore.

Motorised barges for all types of supplies, deck and engine, and stores. Also, vessel with U.K. load line that can meet vessels passing in the English Channel with essential stores.

Mainly used for storing vessels in Oil Terminals, Cowes Roads and Motherbank.

Also see "Cowes".

NOTICES: *Notice to Mariners No. 2 of 1992.*

SOUTHAMPTON
VESSEL TRAFFIC SERVICES AND PROCEDURES

VESSEL TRAFFIC SERVICES embracing VHF COMMUNICATIONS, PILOTAGE, NAVIGATIONAL AND RADAR ADVISORY SERVICES, TRAFFIC INFORMATION, DATA COLLECTION/EVALUATION are effective in the PORT OF SOUTHAMPTON and its PILOTAGE AREA.

Messages on Port Operations channels must be restricted to the movement and safety of ships and life. Communications should normally be established on the working channels indicated, avoiding Channel 16.

All signal message traffic concerning Dangerous Substances, Pilotage, EEC Tanker Check List, ETA's and other ship visit information addressed to the Harbour Master – Southampton must be properly addressed.

Registered Telegraphic Address – Harbour Master Southampton:
Telex Number – 477161.
Telephone Number – (0703) 339733.
Facsimile – (0703) 232991.

1. MARINE INCIDENTS AND ACCIDENTS:

A vessel involved in a marine incident must report immeditaly to "Southampton VTS", and state whether assistance is required.

THE SOLENT AND SOUTHAMPTON WATER MARINE EMERGENCY PLAN (SOLFIRE):

This plan has been prepared to deal with any serious marine incident occurring in the Ports of Portsmouth and Southampton or elsewhere in the Solent, and is intended to ensure that adequate Service and Civilian resources are made available to deal with any emergency.

2. VHF COMMUNICATIONS (see "Appendix"):

(a) The Vessel Traffic Services Centre Southampton, call sign "Southampton VTS", maintains watch on Channels 9, 12, 14, 16, 18, 20 and 22, and monitors Channels 71 and 74.

(b) The Queen's Harbour Master Portsmouth, call sign "QHM", guards Channels 11, 13 and 73.

(c) Vessels should maintain watch on VHF Channel 12 and report to "Southampton VTS" when passing the designated reporting points and, in addition if embarking a pilot, when the pilot has boarded.

3. PILOTAGE:

The Port of Southampton is responsible for providing Pilotage Services throughout the East and Central Solent, Southampton Water, Rivers Itchen and Test. Pilotage is compulsory for all vessels exceeding 61 m. LOA (Pilotage is non-compulsory in the West Solent/Needles).

SHIPS requiring a pilot must signal "Southampton VTS" through a U.K. Coastal Radio Station, not less than 12 hours in advance of ETA. Ship Owners, Masters or Agents may order a Pilot by Telex No. 477161, Fax. No (0703) 232991 or Telephone No. (0703) 632345. Destination, draft and BOARDING POINT must be indicated. The ETA should be verified with "Southampton VTS" 2 hours prior to arrival.

3.1 BOARDING POINTS:

(a) NAB PILOT STATION provides pilots for all vessels exceeding 150 m. LOA, bound for the Port of Southampton from the East (embracing all wharves, jetties, docks and oil terminals). Pilots are embarked/disembarked at NAB TOWER in moderate weather, deep draft ships exceeding 70,000 d.w.t. may board 3 miles South by appointment. During stormy weather, the service is withdrawn to ST.HELEN'S or SPITHEAD. Radio call sign "NAB PILOT".

(b) STURBRIDGE PILOT STATION provides pilots for vessels not exceeding 150 m. LOA, bound for the Port of Southampton from the East. Pilots may be embarked/disembarked in the vicinity of North Sturbridge Buoy. Radio call sign "STURBRIDGE PILOT".

(c) LEPE PILOT STATION provides pilots for all vessels exceeding 61 m. LOA, bound for the Port of Southampton from the West via the Needles Channel. Pilots may be embarked/disembarked between East Lepe and West Lepe Buoys. Radio call sign "LEPE PILOT".

NOTE: PILOT BOATS DO NOT CRUISE ON STATION but put-out when their services are required by appointment.

4. CO-ORDINATION OF SHIPPING MOVEMENTS:

(a) A continuous watch is kept by the Duty VTS Officer (VTSO) responsible to the Harbour Master Southampton.

Telephone (0703) 330022, extn: 2440 (office hours).
Telephone (0703) 339733 (other times).
Telex 477161 DHMSPR.
Facsimile (0703) 232991.

(b) The movement of vessels and the general situation in the Port and its approaches are monitored continuously. Information will be passed to Masters and Pilots. The fullest exchange of information is essential to efficient operations, and the need to maintain communications with "SOUTHAMPTON VTS" is emphasised.

(c) In co-ordinating the movement of vessels, it will be necessary for the Duty VTSO to instruct certain vessels to remain alongside or at anchor, or regulate their time of entry, departure or progress.

5. MOVEMENT REPORTING PROCEDURE:

(a) All vessels in excess of 20 m. in length, bound to or from or passing through the Port of Southampton, vessels bound to or from or passing through the Dockyard Port of Portsmouth, and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF with "Southampton VTS" (Call sign "Southampton VTS"). Specifically vessels are to establish contact with "Southampton VTS".

(b) *All vessels in excess of 20 m. LOA, entering or leaving the East Solent, are required to report to "Southampton VTS" (Vessel Traffic Services) on VHF R/T Channel 12 when passing Latitude 50° 40′ N., giving their position as a distance East or West of Nab Tower.*

(c) Vessels proceeding to an anchorage for shelter in the Solent or subsequent berthing, must report to "Southampton VTS" when anchored, together with their approximate position. Whilst at anchor, vessels must maintain a listening watch on VHF R/T Channel 12.

(d) Vessels leaving a sheltered anchorage must also report and advise "Southampton VTS" of their intended destination, and whether they are leaving the Solent via the East or West Solent.

(e) Inbound vessels should establish communications with VTS when approaching Nab or Needles.

(f) Vessels outbound from the Port of Southampton should establish communications at least 15 minutes prior to leaving the berth and obtain permission from "Southampton VTS" before letting go.

(g) Vessels clearing Portsmouth Harbour should establish communications with VTS when passing Southsea War Memorial.

(h) Vessels leaving an anchorage, whether inbound or outbound, should establish communications with VTS at least 15 minutes before getting underway.

(i) Vessels inbound or outbound from Portsmouth Harbour are also required to report to "QHM". See Dockyard Port of Portsmouth – Local Notices to Mariners.

6. MOVEMENT REPORTING POINTS:

(a) Vessels inbound or outbound from the Ports of Southampton a Portsmouth, or other destinations in the area or passing throu the Solent, are required to report by VHF when pass Movement Reporting Points indicated on Admiralty Charts.

(b) The initial report by all inbound vessels should include:

1. Ship's name and International Radio Call Sign (IRCS).
2. Deepest draft.
3. Destination and last Port of Call.
4. ETA at various locations as requested.
5. Deficiences of ship, navigation equipment, machinery a cargo.
6. Additionally tankers should report any change in th information notifiable under the Merchant Shipping (Tanker (EEC Requirements) Regulations 1981, and confirm tha Check List has been completed.

(c) The initial report by vessels outbound from the Port o Southampton should include:

1. Ship's name and IRCS.
2. ETD.
3. Deepest draft.
4. Other information requested.
5. Where applicable, tug working channel to be used.
6. ETA at various locations as requested.
7. Next Port of Call.

(d) The initial report by vessels from anchorages and other location in the Solent should follow the procedure for inbound an outbound vessels as appropriate.

7. HARBOUR PATROL:

The Duty VTSO is supported by a Marine Officer who maintains continuous surveillance of seamarks and shipping channels from harbour patrol launch and guards VHF Channels 12 and 16, call sig "SP". At night, the harbour patrol launch exhibits a blue all round lig at the mast head.

8. HEIGHT OF TIDE:

Automatic tide gauges are located at Calshot, Dock Head and Princ Charles Container Port. Tidal information is available upon request an is recorded.

9. WIND SPEED AND DIRECTION:

Wind speed and direction information is available upon request an is recorded.

10. HARBOUR RADAR:

(a) Remote controlled Radar Stations are situated at Calshot Sp and Hythe. Each station is fitted with a 25 ft. horizontal apertur scanner 110 ft. above MHWS, searching over a 0.3° horizonta and 4° vertical beam width, rotating at 20 r.p.m. in winds up t 80 knots.

(b) Vessels can be supplied with continuous information relating t their progress, approach to navigation marks and other vessels transits and turning marks, channel margins and the manner i which the vessel is progressing round the West Bramble an Calshot turns. Manoeuvring instructions will not be given unless specifically requested by the Master or Pilot.

(c) An independent scanner is fitted at the VTS Centre to monito shipping in the RIVER TEST, but the computer assiste measurement, accuracy of bearings, distance and trackin associated with CALSHOT and HYTHE scanner is not availab

(d) Computer Assisted Measurement System:

This system employs a small digital computer and a variab marker which can be placed over any target on the display t provide the following information:

1. The bearing and distance between the scanner and selecte target.
2. The bearing and distance between any two targets.
3. The course made good by a selected target.

Facilities are available to store up to 24 targets, such a navigation buoys, vessels at anchor, etc. The bearing an distance from any selected target to any one of the stored targe can be quickly obtained, and the closest point of approac determined.

(e) Accuracy of Bearing and Distance Measurement:

Accuracy of bearing from Point A to Point B is to 0.5°, an distances are to ±25 m., or to 0.3% of the most distant echo fro the scanner, whichever is the greater.

(f) Radar Reference Line:

An alternative position fixing system indicates the position of t vessel relative to a Reference Line electronically produced a points one cable apart on the radar display linked to the Calsho Radar only. The Radar Reference Line is shown on the Admiralt Charts of the area as a broken line with points at one cable an circles where the line changes direction.

(g) Radar Coverage:

Effective radar coverage extends to a line joining NO MAN'S LAND FORT and HORSE SAND FORT to the East an STANSORE PT. and SALTMEAD BUOY to the West.

A vessel underway upon request will be given her position usin the distance between the points of the Reference Line as a sca to estimate the position:

1. As a distance RIGHT or LEFT of the Reference Line, relativ to her direction of progress.
2. As a distance along the Reference Line to a navigational mar or marks in transit.

The position of another vessel will be given:

3. As a distance from the Reference Line ON THE SAME SID or ON THE OTHER SIDE.
4. As a distance along the Reference Line.

NOTE: In areas where a Reference Line is not shown, progres will be indicated relative to navigational marks and other vesse

(h) Bearings and Distances:
Bearings and distances will be related to the bow of the vessel concerned unless otherwise stated.

11. CANCELLATION OF PREVIOUS NOTICES:
Notices to Mariners No. 2 of 1989, No. 6 of 1990 and No. 2 of 1991 are hereby cancelled.

This Notice is issued in agreement with QHM Portsmouth.
Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 4 of 1992:

PORT OF SOUTHAMPTON APPROACHES
CALSHOT REACH AND WESTERN APPROACH CHANNEL

NOTICE IS HEREBY GIVEN that:

1. DIRECTIONS TO BE OBSERVED BY MASTERS OF VESSELS WITH LENGTH OVERALL OF 183 M. (600 FT.) OR MORE:
No two vessels each having a length overall of 183 m. (600 ft.) or more shall pass or overtake each other in WESTERN APPROACH CHANNEL, THORN CHANNEL or CALSHOT REACH to seaward of Hook Buoy. (PORT OF SOUTHAMPTON HARBOUR BYE LAW NO. 11 (1) refers).

2. OUTBOUND VESSELS - FLAG SIGNALS:
Yachts and other small craft in the Solent sometimes experience confusion when an outbound vessel in the Thorn Channel is approaching the West Bramble Buoy, as there is doubt whether the vessel will direct its course to the East (Nab) or West (Needles).

To improve safety, outbound vessels shall hoist the following INTERNATIONAL CODE flag signals during daylight hours.

Hoist	Meaning
ECHO over ANSWERING PENDANT	I am bound East (Nab)
ANSWERING PENDANT over WHISKY	I am bound West (Needles)

It is important that these signals should be read as indicating only a local geographical direction.

3. CANCELLATION OF PREVIOUS NTM – Notice to Mariners No. 4 of 1989 is hereby cancelled.
Signed: Dock and Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 7 of 1992:

THE DOCKYARD PORT OF PORTSMOUTH
AND THE PORT OF SOUTHAMPTON
MOVEMENT OF GAS TANKERS IN THE SOLENT

1. NOTICE IS HEREBY GIVEN that these directions have been jointly promulgated by the Queen's Harbour Master Portsmouth and the Harbour Master Southampton to ensure the safe navigation of gas tankers within the Solent.
2. This Notice applies to all gas tankers loaded or partly loaded and gas tankers which have not been rendered gas free.
3. Gas tankers in transit within the Solent may not enter an area in which the visibility is less than 0.5 miles.
4. Before navigation within the area between the North Sturbridge Buoy and the Warner Buoy, all gas tankers must establish communications with the Queen's Harbour Master Portsmouth on VHF Channel 11 to advise of their transit and to ascertain movements into and out of Portsmouth Harbour.
5. Gas tankers when navigating between Hook Buoy and West Bramble Buoy in the Western Approach Channel should be given the sole occupancy of that channel.
6. Gas tankers when navigating between East Bramble Buoy and Calshot Buoy in the North Channel shall be given the sole occupancy of that channel.
7. No vessel may anchor closer to a gas tanker than a distance equal twice their combined lengths.
8. At no time will more than 3 gas tankers be permitted to remain at anchor within the designated Small Ships Anchorage in Southampton Water.
9. Gas tankers exceeding either 8,000 cu.m. total capacity or 6,000 g.r.t. ARE NOT PERMITTED to enter or leave the Port of Southampton by the West Solent.
10. Notice to Mariners No. 7 of 1989 is hereby cancelled.

Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 8 of 1992:

DANGEROUS SUBSTANCES IN HARBOUR AREA
REGULATIONS 1987 (SI No. 37 OF 1987)
RELATED TO THE PORTS OF SOUTHAMPTON, PORTSMOUTH COMMERCIAL DOCKS AND DOCKYARD PORT OF PORTSMOUTH

1. NOTICE IS HEREBY GIVEN that Masters of all vessels carrying Dangerous Substances when entering, leaving or lying in the Port of Southampton or the Commercial Port of Portsmouth, will be required to comply with these Regulations. Failure to do so may lead to the prohibition or removal of the dangerous substance, its container and the vehicle or vessel from the Port in accordance with Clause 7 of the Regulations.

2. APPLICATION:
These Regulations apply in every Harbour and Harbour Area and to any part of a Harbour in the territorial waters of Great Britain. Dangerous Substances are defined at Clause 3 of the Regulations.
NOTE: The expression Harbour Authority when used in the following text shall mean:
(a) Alongside in Southampton, Fawley and Hamble: Harbour Master Southampton.
(b) Underway in the approaches to Southampton or in the East or West Solent: Harbour Master Southampton (call sign "SOUTHAMPTON VTS").
(c) Underway in the Dockyard Port of Portsmouth, North of Outer Spit Buoy: Queen's Harbour Master (call sign "QHM").
(d) Alongside in the Commercial Port of Portsmouth: Harbour Master Commercial Docks.

3. MARKING AND NAVIGATION OF VESSELS:
(a) Flags and Lights to be displayed by vessels:
Vessels carrying Dangerous Substances to which these Regulations apply are required to show a red flag during the daytime and, when moored or anchored, an all round red light at night. The use of the red light at night when a vessel is underway or moving within the Solent will not be permitted.
(b) Vessels to keep a safe distance from moored or anchored vessels displaying the flags or light required by Paragraph 3(a):
A Master shall not bring his vessel alongside a moored or anchored vessel which is displaying any flag or light required by Paragraph 3(a), without the permission of the Harbour Authority and the Master of that vessel, and shall otherwise keep his vessel at a safe distance from that vessel.

(c) Use of VHF:

The Master of a vessel to which these Regulations apply shall ensure at all times in the Port of Southampton or in the approaches to the Port in the East and West Solent, a listening watch is kept on VHF Channels 12 or 14, or when North of Outer Spit Buoy on VHF Channel 11 or 13.

Except
1. When a vessel is at a berth; or
2. for short periods when the radio is tuned to another frequency for operational purposes.

(d) Anchoring and mooring of vessels:

The Master of a vessel which is carrying a dangerous substance or on board which any dangerous substance is to be loaded, shall anchor or moor his vessel only at such places and at such times as the Harbour Authority directs, and shall ensure that any conditions imposed by the Harbour Authority with regard to anchoring or mooring are complied with. The Master shall not permit his ship to be moved from anchorage or berth until he is so authorised by the Harbour Authority.

(e) Mobility of vessels:

The Master of a vessel carrying dangerous substances, must ensure that his vessel is in a state of readiness to be moved at all times, tidal conditions permitting, and shall not immobilise his vessel without first seeking an Exemption Certificate in writing from the Harbour Authority. Any such exemption may be granted subject to conditions and to a limit of time and may be revoked at any time by a certificate in writing. Vessels carrying Class 1 Dangerous Substances (Explosives) will not be given an exemption.

4. FITNESS OF VESSELS:

The Master of a vessel which is designed to carry either Dangerous Chemicals in bulk or Liquified Gases in bulk shall not carry, load or unload any dangerous liquid or dangerous substance in bulk in either Portsmouth or Southampton unless:

(a) The vessel has a valid Certificate of Fitness for the carriage of the substance in bulk issued under the authority of the Government of the country of registration of the vessel, and he complies with any conditions of carriage laid down in that certificate.

(b) The Harbour Authority has given permission in writing.

5. PERMISSION FOR TRANSFER BETWEEN VESSELS:

The Master of a vessel carrying a liquid dangerous substance in bulk shall not cause or permit that substance to be transferred by pipeline to another vessel unless the Harbour Authority, and where the vessel is at berth, the Berth Operator, have given their permission in writing for that transfer to take place.

6. OPERATIONS FORBIDDEN ON VESSELS WITHOUT PRIOR PERMISSION:

(a) The Master of any vessel carrying or which has recently carried, a liquid dangerous substance in bulk shall ensure that none of the following operations are commenced:
1. The discharge of ballast or slops contaminated with any dangerous substance.
2. The cleaning or ventilation of any tank which was last used to carry a dangerous substance.
3. The pumping overside of bilges contaminated with any dangerous substance.

(b) The Master of any vessel carrying or which has recently carried, flammable liquid in bulk shall ensure that none of the following operations are commenced:
1. The gas-freeing of any tank which was last used to carry the substance.
2. The cleaning of such a tank with water, stem, detergents or other chemicals.
3. The purging of such a tank with inert gas.
4. The washing of a tank with crude oil while unloading.

Unless the following conditions have been complied with:

(a) Where the vessel is at a berth:
1. The Berth Operator has given permission, or
2. The Harbour Authority has given permission to manned vessels.

(b) Where the vessel is not at a berth, the Harbour Authority has given permission.

7. UNTOWARD INCIDENTS:

The Master of a vessel carrying any dangerous substance shall immediately inform the Harbour Authority and if the vessel is at a berth, the Berth Operator, of any untoward incident which has occurred on the vessel. Untoward incident means an incident involving or threatening the containment of a dangerous substance.

8. VESSELS LOADED WITH EXPLOSIVES TO BE TAKEN OUT OF THE HARBOUR AREA:

When loading a vessel with explosives has been completed, the Master shall ensure that the vessel is taken out of the Harbour or Harbour Area as soon as reasonably practicable, unless the Harbour Authority and, where the vessel is at a berth, the Berth Operator, otherwise agree.

9. NOTICE OF ENTRY OF DANGEROUS SUBSTANCES ARRIVING BY SEA FOR DISCHARGE OR IN TRANSIT:

Advance notification of dangerous substances arriving by sea into the Solent Area will be required in the form shown in Paragraph 10 by the Harbour Authority from Masters of vessels or their Agents, and must be received at least 24 hours prior to the arrival of the vessel in the Solent. In the case of tankers in excess of 1,600 g.r.t./g.t., this report will combine the details required under the Merchant Shipping (Tankers) (EEC Requirement) Regulation 1981 (SI No. 1077 of 1981).

It should be noted that tankers having carried one or more cargoes and which have not been rendered gas free, purged or cargo spaces completely inerted, will also be required to provide the advance notification.

The advance notification report should be sent to:

(a) In the case of Southampton, the Harbour Master – Southamp and received in writing by one of the following means:
1. Telex: 477161 DHMSPR.
2. Ships Telegram Service – Telegraphic Address: Harbo Master Southampton.
3. By hand to the Harbour Master, Vessel Traffic Servic Centre, Berth 37, Eastern Docks, Southampton.
4. Facsimile: (0703) 232991.

In the event of vessels whose passage time is less th 24 hours inbound to the Port of Southampton, the notificat should be sent by telex from the last port of call, to ensure th details have been received prior to the vessel's arrival at the Na Needles area.

(b) In the case of the Portsmouth Commercial Docks, the Harbo Master Portsmouth Commerical Docks, marked DANGEROU SUBSTANCES NOTICE and received in writing by one of th following means.
1. Telex 265452 MONRES G or electronic mail netwo number 9312110368 PM.
2. By hand to the Harbour Master, Harbour Offices, Continen Ferry Port, Portsmouth.

Where the voyage is less than 24 hours duration, a shor period of notice may be accepted, but notice must ALWAYS b given BEFORE the ship passes the Nab or Cowes inbound t Portsmouth in the form prescribed, except in the case o Dangerous Substances for Albert Johnson Quay, Flathouse Qua and private wharves, and Dangerous Substances of Class 1 an Class 7 for the Continental Ferry Port, for which the minimu period of notice is 24 hours in ALL cases. Only those Class materials which are of Division 1.4 – Compatibility Group 5, o any other explosives (except Compatibility Group L) of to quantity not exceeding 10 kilograms, will be considered t Portsmouth Commercial Docks.

(c) In the case of the Queen's Harbour Master and on the assumptio that the information has already been passed to the Harbou Master – Southampton and the Harbour Master – Portsmou Commerical Docks, the information be passed by VH Channel 11 in the form shown in Paragraph 11, but is on required on sailing from either Southampton or Portsmouth or o passing Nab Tower inbound.

10. NOTIFICATION OF DANGEROUS SUBSTANCES:

(a) Non-Tankers:
1. Ship's name and International Radio Call Sign (IRCS).
2. Flag.
3. Overall length, draft and beam.
4. Destination within the Harbour Area.
5. ETA Nab or Needles.
6. Last Port of Call.
7. Possession of a Certificate of Fitness, where appropriate.

(b) Dangerous Substances being carried:
(Specify for discharge or in transit).
1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.
5. Details of the number and type of packages to be individua handled (where appropriate), including the carrying unit typ e.g. vehicle, container, etc.
6. Flashpoint in degrees Centigrade (where appropriate).

(c) In the case of Explosives:
(Specify for discharge or in transit).
1. UN Number.
2. Class.
3. Division.
4. Compatibility group.
5. Net explosive content.

(d) Tankers (Vessels under 1,600 g.r.t./g.t.):
1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. Destination within the Harbour Area.
5. ETA Nab or Needles.
6. Last Port of Call.

(e) Dangerous Substances being carried:
(Specify for discharge or in transit).
1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.

(f) Tankers (Vessels over 1,600 g.r.t./g.t.):
1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. The harbour where the Master intends first to berth the tank i.e. anchorage or berth.
5. Destination within the harbour area.
6. ETA Nab or Needles.
7. Last Port of Call.
8. Nature and quantity of any chemicals, gas or oil carried by th tanker.
9. Whether tanker is fitted with an inert gas system and, if fitte is fully operational.
10. Whether the cargo tanks have an atmosphere which ha been rendered non-flammable.

11. Whether or not a certificate has been issued in respect of the tanker:
    - (a) If its cargo includes chemicals, that it complies with the IMO Code for Ships carrying Dangerous Chemicals; and
    - (b) If its cargo includes gas, that it complies with the IMO Code for Existing Ships carrying Liquified Gases.
12. Defects in hull, machinery or equipment of the tanker which may:
    - (a) Effect materially the safe manoeuvrability of the tanker; or
    - (b) effect materially the safety of other vessels in or in the vicinity of, the approaches to the harbour; or
    - (c) constitute a hazard to the Marine Environment; or
    - (d) constitute a hazard to persons or property on land or in the vicinity of the harbour.

(g) Dangerous Substances being carried:
(Specify for discharge or in transit).
1. Correct technical name of Dangerous Substance.
2. UN Number.
3. Quantity of each substance.
4. Classification.

11. DETAILS REQUIRED BY THE QUEEN'S HARBOUR MASTER PORTSMOUTH:
Details required by the Queen's Harbour Master Portsmouth on ship's departure from Portsmouth or Southampton or on arrival Nab Tower.
1. Ship's name and IRCS.
2. Flag.
3. Overall length, draft and beam.
4. Either
    - (a) Destination within the Solent, or
    - (b) Time of passing Nab Tower.
5. Reference of the letter, telex or facsimile sent to Harbour Master – Southampton or Habour Master – Portsmouth Commercial Docks, containing the information required by Paragraph 10. If this information has not been forwarded, a full report in accordance with Paragraph 10 is required.

12. This Notice issued jointly by the Queen's Harbour Master Portsmouth, the Harbour Master Southampton and the Harbour Master Portsmouth Commercial Docks.

13. Notice to Mariners No. 8 of 1989 and No. 6 of 1990 is hereby cancelled.
Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 10 of 1992:

THE DOCKYARD PORT OF PORTSMOUTH AND THE PORT OF SOUTHAMPTON
VESSELS CONSTRAINED BY THEIR DRAFT

1. NOTICE IS HEREBY GIVEN that these directions, jointly promulgated by the Queen's Harbour Master – Portsmouth and the Harbour Master – Southampton are compatible with the Collision Regulations to ensure the safe navigation of large vessels in the East Solent and the dredged approach channel to Southampton Water.

2. There are two areas in the Solent in which vessels constrained by their draft inbound from the Nab Tower to Southampton, are in particular danger from outbound vessels; these are when passing the Portsmouth entrance channel, and when passing the North Sturbridge Buoy and shaping course to pass to the South of Ryde Middle Shoal. Vessels proceeding to seaward out of the Portsmouth entrance channel or from Southampton, North of the Ryde Middle Shoal, should take every possible precaution to avoid endangering the movements of these vessels, and in particular to avoid presenting them with a crossing sitation.

3. DEFINITIONS:
In the Dockyard Port of Portsmouth and the Port of Southampton, a vessel having a draft of 10.5 m. (34.5 ft.) or more, a length of 288 m. (945 ft.) or more, or a deadweight tonnage of 100,000 tons or more shall be considered to be a VESSEL CONSTRAINED BY HER DRAFT for purposes of definition within the International Regulations.

4. ACTION TAKEN TO AVOID IMPEDING THE SAFE PASSAGE OF A VESSEL CONSTRAINED BY HER DRAFT:
Vessels are warned that in taking action to avoid impeding the safe passage of a vessel constrained by her draft within the navigationally restricted waters of the Solent and Southampton Water, due regard must be given to the safe navigation of the latter vessel, which may prevent her from keeping her course and speed.

5. SHIPPING MOVEMENT CONTROL:
Vessels constrained by their draft or size, and vessels restricted in their ability to manoeuvre, shall not operate in the Dockyard Port of Portsmouth or the Port of Southampton without the permission of the Queen's Harbour Master – Portsmouth or the Harbour Master – Southampton respectively.

6. SOUTHAMPTON DEEP WATER CHANNEL:
All vessels navigating within the Port of Southampton shall ensure that a vessel constrained by her draft or size shall be given the sole occupancy of the Deep Water Channel between Hook Buoy and the seaward limit of the WESTERN APPROACH CHANNEL.

7. Notice to Mariners No. 10 of 1991 is hereby cancelled.
Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

Notice to Mariners No. 11 of 1992:

SPEED OF VESSELS AND PASSING DISTANCES OFF JETTIES AND BERTHS

1. NOTICE IS HEREBY GIVEN that special care must be exercised by all vessels navigating within the limits of the Port. Vessels should proceed at a reduced speed as safe navigation permits, and in such a manner as not to endanger the lives of persons ashore or afloat, including passengers embarking or disembarking from harbour ferries, or cause damage to vessels alongside or at moorings, or to sea walls and other works. Particular care should be exercised when passing Oil Terminals where vessels are loading or discharging petroleum products and hazardous chemicals.

2. Special consideration should be given to the effects caused by the underwater form and the draft of vessels in order to reduce the resulting pressure waves and displacement of water. Particular attention should be given to the increased effects caused during low water periods.

3. Attention is drawn to Merchant Shipping Notice No. M 930 – INTERACTION BETWEEN SHIPS.

4. The special attention of Masters, Pilots and others having command or charge of vessels is drawn to the presence of vessels loading or discharging petroleum products or stores from small craft at ESSO MARINE TERMINAL – FAWLEY and BP OIL TERMINAL – HAMBLE, and other vessels loading stores or cargo in anchorages. Attention is also drawn to the presence of craft at moorings or alongside the Military installations at HYTHE and MARCHWOOD.

5. As safe navigation permits, vessels drawing 6.0 m. (19.7 ft.) and over when approaching or passing the ESSO MARINE TERMINAL – FAWLEY and BP OIL TERMINAL – HAMBLE must not exceed 7 knots over the ground. All ferries and vessels of less than this draft are reminded of the dangers inherent with oil terminals, and should reduce speed as safe navigation permits (Port of Southampton Bye Law No. 9 refers).

6. Any vessel passing the ESSO MARINE and BP OIL TERMINALS should navigate not less than 130 m. from the face of the jetties. This limit is intended to protect vessels moored alongside, guard against the interaction of passing vessels and the risk of naked lights and sparks within these areas (Port of Southampton Bye Law No. 9 refers).

7. Notice to Mariners No. 12 of 1989 is hereby cancelled.
Signed: Harbour Master – Southampton.
Dated: 1st January 1992.

AUTHORITY: Associated British Ports, Ocean Gate, Atlantic Way, Southampton SO1 1XQ. *Tel:* (0703) 330022. *Telex:* 47334. *FAX:* (0703) 336402. *Contact:* A. Kent, Port Manager. Captain M. J. Ridge, Harbour Master.

STORNOWAY: 58.12 N. 06.22 W. (See Plan)

PORT LIMITS: Extend to a line from Southern end of Holm Island on the East to Rudh A'Bhaigh Uaine on the West – approximately 7.5 cables to seaward of Arnish Point Light.

PILOTAGE: Pilotage not compulsory. Vessels requesting Pilot request same with ETA 24 hours prior to arrival. Confirmation or amendment required 2 hours prior to arrival. Boarding off Arnish Point Lighthouse.

ANCHORAGES: Anchorage in harbour between Goat Island and mouth of Creed River, 8 fathoms.

RESTRICTIONS: Entry night or day and at any state of tide. No bar on entrance.

MAX. SIZE: 400 ft. by 60 ft. by 22 ft. draft to berth alongside, 600 ft. length by 35 ft. draft for anchorage in bay.

HEALTH: The customary flying of "Q" flag.
Also see "Health – All Ports" before first U.K. port.

RADIO: Wick Radio or alternatively Stonehaven Radio.

RADAR/VHF: R/T-VHF established in harbour, call "Stornoway Harbour" on Channels 16 and 12. Emergency messages may be passed through Stornoway Coastguard on 81.8 m. There is a radar set in the watchroom but no V.T.S. service is provided.

TUGS: No tugs available at port. Fishing vessels have been used, when necessary, for this purpose.

BERTHING: Vessels can be berthed at any time, provided berth is free.
Ro/Ro ferry terminal for Stornoway/Ullapool service in operation.
Depth of Water at Low Water Spring Tides: West side No. 1 Pier: 24.5 ft. shallowing to 12 ft. at junction of North Beach Quay. East side No.1 Pier: 24.5 ft. shallowing to zero at inward end. West side No. 2 Pier: 17.5 ft. shallowing to zero at inward end. East side No. 2 Pier: 16.5 ft. shallowing to zero at inward end. Inner Harbour decreases from 12 ft. at junction of Esplanade Quay to 8 ft. at upper end of Cromwell Street Quay.

STEVEDORES: Arranged by Agents on receipt of ETA.

MEDICAL: Advance notice desirable, Hospital facilities available in the town.

TANKERS: Normal safety requirements. One tanker berth only 15 ft. mean draft, max. length 220 ft.

DENSITY: Practically always dead salt; 1025 density.

FRESH WATER: Fresh water available by hose at 15 t.p.h.

FUEL: 24 hours notice required.

CONSULS: French, Swedish, Norwegian; Tel: Stornoway 2920, 2054, 3173 respectively.

REPAIRS: Minor deck and engine repairs can be carried out locally.
DRY DOCKS: No dry dock but one slipway of 750 tons displacement.
SURVEYORS: Marine & Engineer Surveys (Hebrides) Ltd., Stornoway.
GANGWAY/DECK WATCHMEN: Service of watchmen not necessary. Watchmen from shore may be employed if required.
OPENING/CLOSING HATCHES: Normally crew.
REPATRIATION: Facilities exist for this service.
AIRPORT: 3 miles from port, served regularly by British Airways from Glasgow and Inverness.
HOLIDAYS: New Year's Day, Christmas Day and all other local Bank Holidays. Cargo work can be arranged except New Year's Day. (No Sunday work.)
POLICE/AMBULANCE/FIRE: Police, Stornoway 2222 (can deal with all three services).
EMERGENCY CO-ORDINATION CENTRE: Stornoway Coastguard Tel: 2013 or 2014.
TELEPHONES: Can be arranged by prior application through Aberdeen office.
STORING: See "Prelims".

1. By truck. 4. Yes.
2. – 5. Notice No. 69.
3. Yes. 6. Yes.

IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Skips available at no charge.
WASTE OIL DISPOSAL: Only small amounts by tanker truck (7,000 litres capacity). Service carried out by local authority, but arranged through Port Authority.
SEAMAN'S CLUBS: Royal National Mission to Deep Sea Fishermen, North Beach Street, Stornoway. Tel: (0851) 704424.
GENERAL: ETA to be sent 24 hours beforehand so that necessary arrangements can be made.
AUTHORITY: Stornoway Pier and Harbour Commission, Amity House, Esplanade Quay, Stornoway, Isle of Lewis PA87 2XS. *Tel:* (0851) 702688. *Cables:* Harbour Commission. *FAX:* (0851) 705714. *Contact:* M. Macleod, General Manager. Captain A.M. Mackenzie, Harbour Master.

STRANRAER: 54.55 N. 05.02 W. (See Plan)

DOCUMENTS: As for other British ports.
PILOTAGE: Not compulsory.
ANCHORAGE: Deep water anchorage at Lady Bay.
MAX. SIZE: Largest vessel handled 420 ft. long. Working draft 5.0 m.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: VHF watch kept on Channel 16 at Sealink Scotland Ferry Terminal. Working Channel is 14.
TUGS: Not available.
BERTHING: *East Pier:* 3 berths, depth 5.0 m. at L.A.T. One with vehicular ramp (single tier).
Ross Pier: Length 500 ft. Dredged to 16 ft. at L.A.T. Double tier vehicular ramp at this berth.
CARGO GEAR: Mobile crane of 15 tons maximum capacity.
MEDICAL: Medical Centre and hospital in town.
FRESH WATER: Available at all berths.
FUEL: Limited quantities of fuel oil can be supplied from road tankers.
REPAIRS: Small repairs can be carried out by local engineering firm.
GENERAL: Inshore lifeboat based at Stranraer.
AUTHORITY: *East Pier:* Sealink (Scotland) Ltd., Sea Terminal, Stranraer Harbour, Stranraer DG9 8EL. *Tel:* (0776) 2262. *Telex:* 778125. *FAX:* (0776) 6586. *Cables:* Sealink Port Stranraer. *Contact:* E. S. Bird, Ship and Port Manager.
West Pier: Dumfries and Galloway Regional Council, Ailsa House, Sun Street, Stranraer. DG9 7JL. *Tel:* Harbour Office (0776) 2460. *Contact:* John C. Colvin, Harbour Master.

SULLOM VOE: 60.27 N., 01.17 W. (See Plan)

GENERAL: The Port of Sullom Voe is a major deep water harbour. It is owned and operated by the Shetland Islands Council as Harbour Authority.

The Sullom Voe Oil and Gas Complex is located within the port limits on Calback Ness in position 60° 27.5′ N., 01° 17.0′ W. and is operated by BP Petroleum Development Limited on behalf of several oil company participants. The oil delivered to Sullom Voe through the Brent and Ninian pipelines is collected from a group of oilfields located in the East Shetland basin.

The Port Administration Building, from which all marine operations are monitored and controlled, is located on Sella Ness in position: Lat. 60° 26.8′ N., Long. 01° 16.5′ W.

Services offered by the Harbour Authority and financed through conservancy charges include port radar, navigational advice to Shipmasters, intensity controlled navigational lighting to assist in poor visibility, meteorological advice and shore access gangways at all oil and gas jetties. Services offered and financed through separate charging structures include pilotage and mooring boat services. Boat hire can be arranged for vessels anchored or standing off. Helicopter hire is also available at times. The towage service is operated by a separate towage company and financed directly through towage charges.

The harbour is presently designed to routinely accept tankers up around 365 m. LOA, with a draft of up to 22.6 m. and LPG carriers to around 260 m. in length with a draft up to 15.9 m. In addition to liq bulk and LPG cargo, the port is designed to handle general, dry bu Ro/Ro, containerised cargo and quarried rock.

There are 2 entrances to Yell Sound. The primary Northern rou suitable for oil and gas tankers, lies on the Western side of Yell Sou and is marked by leading lights situated on Gluss Isle. The South Easte approach is considered suitable for vessels of up to 200 m. LOA a having a draft of not more than 11.6 m.

Both routes merge at the entrance to Sullom Voe; the lead into th Voe is indicated by leading markers located on Fugla Ness. In the ca of vessels other than coasters, all manoeuvres South of Lamba Isla will be assisted by tugs.

Ships will generally be berthed starboard side alongside at the loading berths. This will involve swinging each vessel within the Voe areas adjacent to the tanker jetties. Vessels may be berthed port sid alongside during adverse wind conditions.

For the purpose of manoeuvring within the harbour area a minimu under keel clearance of 2.0 m. is required at all times.

Although current rates of up to 7 knots may be experienced in area of Yell Sound, records indicate that the maximum current likely to b experienced within Sullom Voe on the deep draft route, is unlikely t exceed 1 knot.

The maximum tidal range within the Harbour Area is 2.3 m. at Spring and minimum 0.6 m. at Neaps. The main tidal current flows to the Sou on the flood and to the North on the ebb.

Moorings: Strong winds are frequently experienced at Sullom Vo and may be accompanied by sudden gusts from any direction. Th prevailing wind direction is S.W.

It is essential that whilst alongside the jetty, moorings are tende carefully and regularly and conform with the mooring requirements. (Se "Plan").

SHIP SYSTEM FAILURES: Following the main engine problem experienced by the vessels in Sullom Voe, the following addition regulations are in effect:

1. In the event of a vessel suffering a machinery failure affectin seaworthiness or ability to manoeuvre prior to berthing or whils alongside, an independent survey must be commissioned in the ability of the ship's machinery to perform after repair. An surveyor appointed must be approved by a recognise classification society; be fully able to certify the integrity of th machinery or repair and must not, at the time of survey, be member of the vessel's crew. The vessel will not be permitted sail until the Director of Ports and Harbours is satisfied by th surveyor that the vessel is fully operational in every respect that there are satisfactory arrangements in place to ensure th the vessel may depart from Shetland waters safely. All surve and other costs involved in this matter will be for the ship account.
2. In the above circumstances, the vessel will be required to emplo 4 tugs for sailing, which will remain in attendance until the vesse has cleared port.
3. No large scale crew changes for vessels stemmed for Sullo Voe will be permitted in Shetland waters.

CONDUCT OF VESSELS ENTERING YELL SOUND:

(a) Masters of tankers and gas carriers entering the Port of Sullo Voe are advised to refer to Charts B.A. 3298, 3297 and 3292.
(b) Navigation within the Harbour Area is prohibited unless the vesse is mechanically and navigationally sound, anchors are ready fo letting go and there is a responsible person who can speak an understand English on the bridge.
(c) The berthing of tankers and gas carriers is suspended when win speeds are regularly and frequently gusting in excess of 30 knots Masters will be advised by Port Control in the event of suc suspension.
(d) Vessels should afford a safe lee for the pilot boat during boardin and landing operations.
(e) When inbound tankers are at Reporting Point B ('Bravo') th Master should alert the crew in preparation for securing tug while speed is reduced accordingly.
(f) The bow and stern tugs will be made fast when it is considere safe to do so, soon after passing the Outer Skerry.
(g) The alongside tugs shall be secured as soon as possib thereafter.
(h) The vessel's speed must not exceed 5 knots South of a line joinin Skaw Taing and Trumba Point.
(i) Standard practice requires vessels to be swung on arrival (excep when weather conditions dictate otherwise) and berthe starboard side alongside the jetty designated (see "Plans" fo mooring guidelines).

Note: Tugs will use their own lines for securing.

MINIMUM REQUIREMENTS: In order to avoid delays, all vesse programmed for Sullom Voe should comply with the recommendatio of the Council of the European Committee for Vessels Transitin Community Seaports, and be fitted with:

(i) Fully operational radar.
(ii) Fully operational VHF with Channels 16, 14, 20 12, 10 and
(iii) Sufficient crew to handle tugs' lines and moorings efficiently.
(iv) Efficient propulsion and deck machinery.
(v) Efficient and adequate moorings to secure vessels safely.
(vi) Efficient signalling equipment.
(vii) Fully operational tachometer, rudder and helm indicators.
(viii) Efficient mooring stations communications systems.
(ix) An efficient anchor windlass and anchors.
(x) A complete and valid set of Safety Certificates.
(xi) All officers to be properly qualified and carry recognis certificates of competency.

Note: If any vessel cannot comply with any of the above, Sullom Vo Port Control should be advised prior to arrival or departure.

DOCUMENTS:
General Declaration (C13). In duplicate.
Cargo Manifest (if appropriate).
Crew Declaration (C142). In duplicate.

Procedure:
(i) The Master of a ship is responsible for making Report.
(ii) The Report is to be completed in duplicate on arrival.
(iii) If the ship is visited on arrival, the Report is to be handed to the visiting Officer.
(iv) If the ship is not visited on arrival, the original copy of the Report is to be lodged at the Designated Place (H.M. Customs & Excise, Charlotte House, Lerwick), not later than 3 hours after the ship has arrived at its place of loading or unloading.
(v) Form IMO FAL 5 or equivalent is to be submitted with the Ship's Report.

PILOTAGE: Pilotage is compulsory within the Sullom Voe harbour area.

Pilots: Authorised Pilots are available on a 24 hour basis. A continuous VHF watch is maintained. Call "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

Pilot Boarding Arrangements: In all normal circumstances the boarding and landing of Pilots at Sullom Voe will be carried out by the Authority's pilot vessels, which are approved for this purpose. Helicopters may be used at certain times and under certain conditions as set out below.

Harbour Area: The Sullom Voe Harbour Area is defined in 'The Sullom Voe Harbour Revision Order 1980' as: "The entire area of Yell Sound and Sullom Voe and adjacent inlets within a line commencing at Ell Wick thence in a Northerly direction along the line of the low water mark on the West side to a point in Latitude 60° 38.27′ N., Longitude 01° 18.27′ W. on the line of low water mark at the Northern extremity of the Point of Fethaland, thence in an Easterly direction following a straight line to a point in Latitude 60° 38.23′ N., Longitude 01° 11.13′ W. on the line of low water mark at the Northern extremity of Fogla Lee on the Island of Yell, thence generally in a Southerly and Easterly direction along the line of low water mark on the East side to a point in Latitude 60° 29.15′ N., Longitude 01° 05.80′ W. on the line of low water mark at the South–eastern extremity of the Ness of Copister, thence in a Southerly direction to a point in Latitude 60° 28.68′ N., Longitude 01° 05.97′ W. on the line of low water mark at the South–Eastern extremity of the Island of Orfasay, thence in a South–westerly direction following a straight line to a point in Latitude 60° 27.73′ N., Longitude 01° 08.37′ W. on the line of low water mark at the Southern extremity of Samphrey Island, thence in a Westerly direction following a straight line to a point in Latitude 60° 27.75′ N., Longitude 01° 10.82′ W. at the root of Mossbank Pier and thence generally in a Northerly and Southerly direction following the line of low water mark to the point of commencement.

Pilot Boarding Areas: Ships arriving from sea which are compelled to take a pilot in compliance with this Direction, or otherwise require a pilot, shall take the pilot on board in the following areas:
(a) Ships approaching the North Entrance of Sullom Voe Harbour Area should rendezvous with the pilot in position Lat. 60° 38.3′ N., Long. 01° 14.8′ W., with Point of Fethaland lighthouse bearing 260° (T)×1.8 miles.
(b) Ships approaching the South East Entrance of Sullom Voe Harbour Area should rendezvous with the pilot in position Lat. 60° 28.5′ N., Long. 00° 56.5′ W., with Firths Voe lighthouse bearing 260°(T)×7 miles.
(c) Ships may take a pilot on board in other areas only if expressly directed to do so by an authorised pilot or the Harbour Master.

Note: Vessels boarding pilots by helicopter will usually carry out such operations near North of the normal boarding position for the North Entrance given in (a) above. This may be varied due to weather or other cause and vessels should proceed in accordance with advice from Sullom Voe Port Control when helicopters are used.

Exemption from Compulsory Pilotage: Without prejudice to the generality of the foregoing, the following ships shall be exempt from compulsory pilotage within the Sullom Voe Harbour Area unless as may otherwise be directed by the Harbour Master:
(a) All ships of not more than 300 tons gross registered tonnage which do not have on board dangerous substances to which the provisions of the Dangerous Substances in Harbour Areas Regulations 1987 apply.
(b) All fishing vessels.
(c) All tugboats operating as such exclusively within Sullom Voe Harbour Area.
(d) All ships *in transit* through the Sullom Voe Harbour Area which do not pass South of a line joining the most Northerly point of Gluss Isle and the most Northerly point of Calback Ness.
(e) All ships belonging to Her Majesty.

Pilotage Exemption Certificates: The Secretary of State has directed that the Shetland Islands Council may refuse to grant such Certificates in respect of vessels using Sullom Voe Harbour Area.

Pilot Boats: The Authority has 3 boats for use at the Port of Sullom Voe.
(i) "Sullom Mareel" LOA 16.2 m., service speed 16 knots.
(ii) "Sullom Spindrift" LOA 19.8 m., service speed 20 knots.
(iii) "Sullom Shoormal" LOA 19.8 m., service speed 20 knots.

All boats are of GRP construction and are fully equipped with modern navigational aids.

The freeboard of each boat is approximately 1.5 m.

Pilot Ladder Requirements: All vessels calling at the Port of Sullom Voe must comply with "The Merchant Shipping (Pilot Ladders and Hoists) Regulations 1987 (S.I. 1961)".

The following points are stressed:
(i) The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible deck officer of the ship.
(ii) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.
(iii) Every pilot ladder shall be secured in a position where the Pilot can gain safe and convenient access to the ship after climbing not less than 1.5 m. and not more than 9.0 m.
(iv) Whenever the distance from the water to the point of access to the ship exceeds 9.0 m., access to the ship must be by means of a combination of a pilot ladder and an accommodation ladder, or an equally safe and convenient means.
(v) Owners, Charterers and Masters of vessels should be aware that Sections 6 and 7 of the M.S. (Pilot Ladders and Hoists) Regulations 1987 specifies very clearly the conditions under which accommodation ladders are permitted to be used in combination with a pilot ladder when the freeboard exceeds 9 m. The attention of those involved is drawn particularly to Section 7(2)(A) of these regulations which reads as follows ". . . the lower end of the accommodation ladder rests firmly against the side of the ship within the parallel body length of the ship and, as far as is practicable, within the mid-ship half section *and leading aft*". Masters are advised that these regulations will be strictly enforced by the Harbour Authority. Any vessels unable to comply with the above section in every particular way should contact their Agent in good time before arrival in order to arrange alternative means for embarking the Pilot.
Any delays and/or additional costs incurred by vessels unable to comply with the above regulations will be strictly to the ship's own account.
(vi) Adequate lighting shall be provided at night so that the pilot ladder overside and also the position where the Pilot boards the ship shall be properly illuminated.
(vii) Actual sea conditions for small craft are not always appreciated when viewed from the bridge of a large vessel. Boarding and landing of pilots is a potentially hazardous operation which requires whole-hearted co-operation between those in control of both the tanker and pilot boat. Hard and fast rules cannot be laid down to fit every set of circumstances but the following points of guidance should be noted.
(a) All vessels being serviced should be at the pilot station at the agreed time and not significantly early or late.
(b) All vessels being serviced should be ready to respond to all reasonable requests from the pilot boat to ensure a safe transfer. Agreement as to how and where the transfer is to take place should be reached in ample time and the manoeuvre executed where sufficient sea room exists.
(c) All vessels being serviced should inform the pilot boat of their intention to change their heading and when that change of heading has been completed.

Pilot Hoists: Pilots are not obliged to use pilot hoists. Any use of these devices must only be at the option of the Pilot, and in general, pilot hoists are not acceptable for the boarding and landing of Pilots at Sullom Voe.

Any pilot hoist offered must, in any case, comply fully with IMO recommendations on performance standards for mechanical pilot hoists and also with the recommendations of the European Maritime Pilots Association.

Note: Because of the low ambient air temperature combined with strong wind conditions, experience has shown that it is not uncommon for pilot hoists driven by compressed air to freeze. Careful attention should be paid to this equipment during the Winter months.

Pilot Transfer by Helicopter: Sea conditions at the North Entrance to Yell Sound can at times prevent the boarding and landing of Pilots by boat even though wind speeds may be within operational limits. Helicopters may be used at the discretion of the Authority to carry out Pilot transfer when such conditions exist. Helicopters may also be used in cases where a vessel is unable to provide a satisfactory pilot ladder/accommodation ladder. Factors affecting the use of helicopters for these purposes are set out below.

1. At present an MBB Bolkow 105 helicopter is contracted to the Authority on a sole user basis for purposes of Pilot transfer. This helicopter may also be available for ad hoc use by application to the Director of Ports and Harbours.
2. The first choice helicopter is capable only of landing on vessels to be serviced. Winching operations cannot be carried out by this aircraft. It is a small twin-engined helicopter of approximately 2 tonnes weight and with a rotor height of 3 m. Experience has shown that this helicopter can safely land on 90% of vessels calling at Sullom Voe.
   Winch-capable helicopters may be available but will take much longer to obtain and delays could result to the requesting vessel.
3. The permission of the Master and/or Agents as appropriate will be obtained prior to any transfer taking place using the MBB Bolkow 105 helicopter.
4. All transfers by helicopter will be carried out strictly in accordance with the U.K. CAA Regulations and the Procedures set out in the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping (see extracts reprinted below).
5. Any helicopter service is available only to crude carriers and combination carriers provided with suitable helicopter operating areas. It is not available to LPG carriers.
6. Any helicopter service is available during daylight hours only. Service by winch – capable aircraft may be available only during ordinary airport opening hours which are typically 0730 – 2030 weekdays and 1045 – 1430 Sundays.
7. No extra charge will accrue to the vessel when pilots are boarded and landed by the MBB Bolkow 105 helicopter for reasons of weather and/or adverse sea conditions. The regular and published boarding and landing fee is applied.
8. When the MBB Bolkow 105 Helicopter is used to service a vessel with defective boarding and landing equipment, a charge of £1,500 plus the regular published boarding and landing fee per operation plus re-charges at cost will be applied.

9. Helicopter operations are co-ordinated by Sullom Voe Port Control. Vessels serviced in this manner should follow instructions issued by Sullom Voe Port Control to facilitate such transfers.
10. Helicopters used at Sullom Voe are operated only by the well-established companies, currently Bond Helicopters Ltd. and British International Helicopters Ltd., which operate to the highest standards and are approved by the Harbour Authority to carry out transfers of personnel.
11. Only experienced aircrew are used and Marine Pilots of this Authority are all experienced in this mode of transfer and trained in accordance with Section 8(h) of the ICS Guide to Helicopter/Ship Operations.
12. When continuous service by MBB Bolkow 105 Helicopter is not available, vessels which require helicopter services for reasons of defective pilot boarding equipment must give early and specific advice of this requirement if delays are to be avoided. Helicopters may be obtained on an ad hoc basis for this purpose subject to availability and will generally transfer by winching only. Only helicopter operators approved by the Harbour Authority will be used.

Note: The Sullom Voe Harbour Authority will endeavour to advise a vessel's Agent or Operator when an additional cost is likely to be incurred due to use of a helicopter for pilot transfer(s). However, all Agents and Operators should be aware that notwithstanding the above, the Harbour Authority will, at its sole discretion, secure helicopters for the purpose of pilot transfers when they deem such service is required. The costs of such operations will be charged to the vessel as appropriate.

For convenience of ships Masters the following extracts from the current "Guide to Helicopter/Ship Operations" are reproduced by kind permission of the International Chamber of Shipping:

5.1 Operational Checks

The Officer in charge should check all operational requirements on deck shortly before the arrival of the helicopter. Different types of ships may require specialist checks.

The general requirements for all types of ships are listed below.

5.1.1 Ship Checks
- (a) All loose objects within and adjacent to the operating area must be secured or removed;
- (b) All aerials and standing or running rigging above or in the vicinity of the operational area should be lowered or secured;
- (c) Fire pumps should be running with sufficient water pressure on deck;
- (d) Fire hoses should be ready. (Hoses should be near to but clear of and, if possible, upwind of the operating area pointing away from the helicopter);
- (e) Foam equipment operators (at least 2 wearing the prescribed firemen's outfits) should be standing by, and have foam nozzles pointing away from the helicopter;
- (f) A rescue party should be detailed with at least 2 members wearing firemen's outfits;
- (g) The man overboard rescue boat should be ready for immediate lowering;
- (h) The following items of equipment should be to hand:
  - (i) Portable fire extinguishers.
  - (ii) Large axe.
  - (iii) Crowbar.
  - (iv) Wirecutters.
  - (v) Red emergency signal/torch.
  - (vi) Marshalling batons (at night).
  - (vii) First aid equipment.
- (i) The correct lighting and signals (including special navigation lights) should be switched on prior to night operations;
- (j) The deck party should be ready, and all passengers clear of the operating area;
- (k) Hook handlers should be equipped with electricians' strong rubber gloves and rubber soled shoes to avoid electric shocks from static discharge;
- (l) All the deck crew should be wearing bright coloured life vests and protective helmets securely fastened with a chin strap;
- (m) The Officer of the watch on the bridge should be consulted about the ship's readiness.

5.1.2 Landing On (These checks are additional to those in 5.1.1):
- (a) The deck party should be made aware that a landing is to be made;
- (b) The operating area should be free of heavy spray or seas on deck;
- (c) Awnings, stanchions and derricks and, if necessary, side rails should be lowered or removed.

As outlined under "Pilot Transfer by Helicopter" the Port Authority uses a MBB Bolkow 105 Helicopter for boarding and landing of pilots in certain circumstances.

The primary purpose is to provide a service when sea and swell conditions at the boarding stations are such that boatwork must be suspended, but it is also used when vessels are unable to provide the correct pilot boarding equipment.

This helicopter cannot carry out pilot transfer by winching and must land on the vessel to be serviced. The arrangements approved by the United Kingdom Civil Aviation Authority for the MBB Bolkow 105 to land on vessels are shown in the "Plan Section". However, for a trial period, approval has been given by the CAA which allows the helicopter to land on vessels to be serviced at Sullom Voe without the necessity for the vessel to lower the shipside rails. This temporary approval may not continue in the longer term and owners and managers of vessels trading to Sullom Voe who wish to continue to avail themselves of the service must now consider carrying out the minor structural modifications shown in the "Plan Section".

The modifications required are adaptation of the ship-side rails in wa of the landing area to allow these to fold down inboard and rema secured in the folded down position and the application of non-skid pa to the landing circle. Both items are inexpensive and may be carried ou without waiting for the next drydock or repair schedule.

Operators of ships trading regularly to Sullom Voe are hereby strong urged to ensure that their vessels are adapted and equipped to comp with this requirement at the earliest opportunity.

Should further clarification be required this may be obtained b contacting the Port Authority.

APPROACHES: *Routeing and Aerial Surveillance in Shetland Water*

Vessel routes in Shetland Waters:

Applicable to all tankers, combination carriers and LPG vessels callin at Sullom Voe.

Shetland Islands Council, conscious of the dangers to navigatio around the Shetland coast, due largely to offshore obstructions, stron tides, rapid weather changes and the presence of fishing vessels vigorously discourages navigation within 10 miles of the coastline. Th International Maritime Organisation has now ratified this "area o avoidance" as from 16th November, 1991.

An agreed procedure has been reached between the Oil Industry an Shetland Islands Council of which the following is an extract:

1. Masters are strongly recommended to keep at least 10 miles o the Shetland Islands, including Foula and Ve Skerries, whe approaching or leaving Yell Sound. Since Fair Isle is part o Shetland Islands it is recommended that vessels navigate th Fair Isle Channels approximately midway between Fair Isle an either Mainland Shetland or North Ronaldsay, Orkney.
2. It is further recommended that passage between off-lying islands skerries etc., including Foula and Mainland Shetland should no be attempted.
3. For the final approach to/departure from the North entrance o Yell Sound, vessels are strongly recommended to navigate on the offshore side of the boundaries joining the following co-ordinates:

When approaching from/proceeding to the West:

A. Lat. 60° 42.5′ N., Long. 01° 42.0′ W.
B. Lat. 60° 42.5′ N., Long. 01° 22.0′ W.
C. Lat. 60° 40.0′ N., Long. 01° 17.0′ W.

When approaching from/proceeding to the East:

D. Lat. 60° 40.0′ N., Long. 01° 14.0′ W.
E. Lat. 60° 56.5′ N., Long. 01° 14.5′ W.
F. Lat. 61° 01.5′ N., Long. 00° 59.5′ W.
G. Lat. 61° 01.5′ N., Long. 00° 48.0′ W.
H. Lat. 60° 56.5′ N., Long. 00° 27.0′ W.

4. Vessels which use the pilot station at the S.E. entrance to Yel Sound are requested to navigate as follows:

   A. Vessels approaching the Shetland Islands from the Sout and making for the pilot station at the S.E. entrance to Yell Soun or wishing to anchor in Colgrave Sound are advised to navigat to a position 10 miles East of Out Skerries before altering course to the pilot station or to Colgrave Sound.

   B. Vessels approaching from the North and making for the pilo station at the S.E. entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 10 miles East of Fetlar before altering course to the pilot station o Colgrave Sound.
5. Where, for any reason of safety or emergency, it is not possib to comply with the foregoing, you are required to notif immediately your intentions with reasons, to Sullom Voe Por Control by VHF Channel 16 or via Agents.
6. Charts should not be cleaned off before berthing at Sullom Voe to allow checking by Harbour Authority.
7. In the event of breakdown and your vessel drifts, or is likely t drift, within 10 miles of the coastline, you must contact Sullo Voe Port Control or Shetland Coastguard by VHF Channel 16 a the earliest opportunity.

ANCHORAGES: There are no suitable anchorages available for larg tankers in the Port of Sullom Voe.

However, certain vessels may be anchored in the harbour at the discretion of the Harbour Master.

Vessels are permitted to anchor in Colgrave Sound (Lat. 60° 35′ N. Long. 00° 57′ W. approx.) when circumstances dictate that this i appropriate. In doing so, Masters should make reference to charts B.A. 3282 and 3292, the North of Scotland Pilot – NP. 52, page 99 and "Routeing and Aerial Surveillance in Shetland Waters", se "Approaches".

In addition, the following guidance to the usage of Colgrave Sound i relevant and all vessels intending to anchor there should comply wit the advice given herein.

1. Colgrave Sound is used extensively by fishing craft throughou the year and Masters of other vessels are requested and require to give such fishing vessels a wide berth.
2. Three designated anchorages in Colgrave Sound have bee identified as being suitable for large vessels and clear o established fishing grounds. These anchorages should be use in preference to any other area of Colgrave Sound. (See "Plan")
3. Colgrave Sound is outside the Sullom Voe Harbour Area and als outside the extended area of coverage of the Harbou surveillance radar. It is however observed several times each da by the surveillance aircraft. Therefore any information given b Sullom Voe Port Control to vessels proposing to anchor i Colgrave Sound is given in good faith and on the understandi that neither the Harbour Authority nor its servants will accep liability for the consequences of any vessel dragging ancho colliding with any other vessel, stranding, causing pollution, o any other occurrence occasioned by or to the vessel concerne whilst navigating or at anchor within Colgrave Sound and it approaches.

4. Sullom Voe Harbour Authority will, however, give every assistance to any vessel seeking information about the Colgrave Sound area with the objective of establishing orderly navigational disciplines in the area for the benefit of all users.
5. To this end any vessel (including oil rigs, oil exploration vessels, barges and supply craft) wishing to anchor in Colgrave Sound is requested, in the first instance, to contact Sullom Voe Port Control. The vessel will then be advised which designated anchorage is believed to be unoccupied and which may therefore be used by the vessel.
6. The designated anchorages are identified by the numbers 1, 2 and 3 (see "Plan") and also by bearing and distance of the White Hill Lighthouse (Lat. 60° 34.9′ N., Long. 01° 00.1′ W.) as follows:
   Anchorage 1: White Hill Lighthouse bearing 238°T×1.50 miles.
   Anchorage 2: White Hill Lighthouse bearing 253°T×0.95 miles.
   Anchorage 3: White Hill Lighthouse bearing 260°T×1.68 miles.
7. Masters of vessels making use of any of the designated anchorages are requested to provide Sullom Voe Port Control with details of their anchorage position when brought up.
8. Masters of vessels approaching or at anchor within Colgrave Sound are requested to strictly observe the regulations prohibiting the dumping of industrial debris, offensive and noxious substances and oil pollution.

Masters should beware of 2 submarine oil pipe-lines on the East Side of Shetland shown on the latest charts and referrred to in "North Coast of Scotland Pilot", pages 94 and 95.

Except when advised otherwise, Masters should proceed to a point 10 miles off Gruney Island (Lat. 60° 39′ 00″ N., Long. 01° 18′ 00″ W.). Thereafter, Masters should follow directions in "North Coast of Scotland Pilot", page 54, noting, however, that there are areas of poor VHF communication with Sullom Voe Harbour Radio to the West and North of Yell Sound.

MAX. SIZE: See "Berthing", "Loading/Discharging Facilities" and "Liquefied Petroleum Gas Facilities".

HEALTH: The following Port Health procedure applies at the Sullom Voe Terminal.

The Master has no need to obtain health clearance unless:
(i) An authorised officer otherwise directs.
(ii) A death or illness has occurred as defined in the Public Health (Ships) (Scotland) Regulations.
(iii) An abnormal mortality among rats or mice on board has occurred.

Where it is necessary to obtain "Free Pratique" for health purposes, the Master should provide the following documents:
(i) Maritime Declaration of Health.
(ii) A list of passengers and crew leaving the ship, together with the addresses they are going to in the United Kingdom.

Derat Exemption Certificates: The Sullom Voe Terminal is an "approved" Port, and Derat Exemption Certificates will be issued by the Director of Environmental Health and Trading Standards of the Shetland Islands Council.

Also see "Health – All Ports" before first U.K. port.

RADIO:

ETA Requirements: Vessels bound for Sullom Voe are required to provide the Harbour Authority with the following information.
(i) An estimated time of arrival at least 24 hours prior to arrival or on leaving the last port (whichever is later). In addition to this ETA, Masters are to include the estimated time of crossing Lat. 58° 20′ N. and estimated longitude on crossing that latitude, and the intended inward courses and turnpoints from that position to the Pilot Station. Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.
(ii) Confirm the vessel's ETA at least 6 hours before arrival at the seaward limit of the Harbour Area and thereafter notify any significant change in excess of 1 hour.
(iii) On coming within range of "Sullom Voe Harbour Radio", the ETA to be given by VHF (Channel 16 or Channel 14).

Pre-Arrival Information: 24 hours prior to arrival, all vessels calling at Sullom Voe should cable "Portcontrol Sullomvoe" the following information (metric units to be used where appropriate):
(i) Ship's name and call sign.
(ii) Port of Registry.
(iii) Name of Master.
(iv) G.R.T.
(v) Summer deadweight (metric tonnes).
(vi) Length overall and beam (metres).
(vii) Draft fore and aft.
(viii) Bunkers/Fresh Water/Stores quantity on board.
(ix) Whether loaded or in ballast. If loaded, nature and quantity of cargo.
(x) Whether vessel is carrying segregated ballast.
(xi) If so, quantity and at which port taken onboard.
(xii) Dirty ballast quantity (tonnes).
(xiii) Berthing deadweight as a percentage of the Summer d.w.t. (minimum acceptable 35%).
(xiv) Which pilot station on arrival.
(xv) Pilot boarding arrangements.
(xvi) Number of crew.
(xvii) Last Port of call.
(xviii) Does ship have a fully operational inert gas system and are all cargo/deep tanks inerted to a maximum of 8% oxygen content (2% for LPG carriers)?
(xix) Your vessel will be required to "closed-load" at all times even during topping off, can you comply? Y/N.
(xx) P & I Club name.
(xxi) Is all navigation, safety, anchoring and mooring equipment fully operational and ready for use? If not, specify. All anchors to be cleared away on arrival at the pilot station.
(xxii) Confirmation to be given that vessels are complying in all respects with "The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981".
(xxiii) Confirm that engines will be tested to come astern before pilot boards.

VHF Radio Communications:
1. Sullom Voe Harbour Radio maintains a continuous listening watch on the following VHF Channels: 16, 9, 10, 12, 14 and 20. Vessels should, where possible, only use Channel 16 for initial calling and refrain from using Channel 10, which is designated for emergency purposes and Channel 9 which is the primary pilotage/tug working channel.
2. ALL vessels entering or leaving the Sullom Voe Harbour Area are requested to contact "Sullom Voe Harbour Radio" initially on VHF Channel 16, or Channel 14. This includes all vessels in transit through Yell Sound.
3. Any vessel intending to use the deep water channels marked by the leading lights of Gluss Isle, the white sector of Queyfirth Light, the white sector of Skaw Taing Light, the Fugla Ness leading lights or the Sella Ness leading light, for the purpose of fishing must report such intentions to "Sullom Voe Harbour Radio" and report at intervals not exceeding 2 hours while fishing.
4. Any vessel may receive traffic information on request by contacting "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.
5. Brief local weather forecasts will be broadcast on request. Call "Sullom Voe Harbour Radio" on Channel 16 or Channel 14.

Misuse of VHF Radio:

Owners, Masters and Skippers are reminded to read Merchant Shipping Notice No. M1026, which refers to the misuse of VHF Radio.

The improper use of VHF is illegal and can cause serious disruption to communications concerned with the movement of shipping in the port area.

The co-operation of all port users is requested to ensure that such misuse does not occur.

VHF: *Port Operation and Control Services:* All shipping movements within the Harbour Area are monitored from a Port Control Room in the Port Administration Building at Sella Ness.

The Port Control Room is manned on a 24 hour basis by Marine Officers who are licensed Pilots.

These Marine Officers, in their capacity as Port Controllers, maintain a continuous VHF and radar watch. They provide advice to Masters and Pilots on all navigational aspects (including weather forecasts) within the area, direct shipping movements within the port, and liaise with the Terminal Operator and emergency services.

The following VHF Channels are continuously monitored in the Port Control Room:

Channel 16	Calling, Safety and Distress.
Channel 9	Tanker pilotage and tug handling.
Channel 10	Port emergency, fire or oil pollution.
Channel 12	Secondary Port Control working frequency.
Channel 14	Main Port Control working frequency.
Channel 20	Secondary Port Control working frequency.

The call-sign for Sullom Voe Pilots is "Sullom Voe Harbour Radio".

In addition, Sullom Voe Terminal monitors Channels 16 and 19. Pre-arrival information will be given on Channel 19. Initial contact should be made on Channel 16 using call sign "Sullom Voe Terminal".

It is emphasised that Masters should try to contact the Terminal as soon as possible prior to arrival at the Pilot Boarding Area, so that loading information may be exchanged before commencing the inward passage through Yell Sound.

Channel 24 — Link calls for commercial radio traffic can be arranged on this channel. Call-sign "Collafirth Radio".

Control of Traffic: The Port Controller may direct the movement of any vessel within the Harbour Area. Overtaking and passing is prohibited in the Deep Water Channel within an area bounded by a line joining Queyfirth Light and the Northern extremity of Lamba Island and a line joining Skaw Tang Light and the front leading light on Gluss Isle.

No vessel having an overall length in excess of 50 m. shall navigate so as to pass or overtake an LPG carrier underway anywhere within Yell Sound or Sullom Voe between lines drawn between the Northern extremity of Muckle Holm (Lat. 60° 35.1′ N., Long. 01° 15.8′ W. approximately) and the Northern extremity of the North Holm of Burravoe (Lat. 60° 35.4′ N., Long. 01° 18.2′ W. approximately) and between the Northern extremity of Lunna Holm (Lat. 60° 27.5′ N., Long. 01° 02.4′ W. approximately) and the Southern extremity of Heoga Ness (Lat. 60° 29.4′ N., Long. 01° 02.4′ W. approximately).

Reporting Positions: During transits of Yell Sound and approaches to Sullom Voe, all vessels are required to report to Port Control when passing the following positions:
A. Lat. 60° 38.25′ N., Long. 01° 14.82′ W. with Point of Fethaland Lighthouse bearing 260° T×1.8 miles.
B. Lat. 60° 34.95′ N., Long. 01° 16.56′ W. with Muckle Holm Lighthouse bearing 105°T×0.35 miles.
C. Lat. 60° 31.35′ N., Long. 01° 18.49′ W. with Queyfirth Lighthouse bearing 285°T×0.49 miles.
D. Lat. 60° 29.32′ N., Long. 01° 17.47′ W. with Skaw Taing Lighthouse bearing 118°T×0.41 miles.
X. Lat. 60° 28.50′ N., Long. 01° 10.70′ W. with Mossbank Lighthouse bearing 175°T×1.25 miles.

RADAR: Full radar coverage exists for Yell Sound and Sullom Voe. Comprehensive coverage includes the 'funnel' of approach to the Northern Pilot Boarding Station and also the S.E. entrance channels and the associated seaward approaches.

The main scanner is located on the Hill of Vats Houlland (Lat. 60° 27.96′ N., Long. 01° 17.49′ W. and the secondary scanner, which provides coverage of the S.E. entrance and Western approach channels, is located near Brough (Lat. 60° 28.90′ N., Long. 01° 13.04′ W.). Both scanners are connected by microwave links to displays in the Port Control Room.

Port Control maintains a continuous radar watch, and the passage of each vessel is monitored and recorded. Advice is available to vessels on request.

TUGS: At present a fleet of harbour tugs provide a towing service for vessels at the Port of Sullom Voe. These are stationed at the Sella Ness Jetty adjacent to the Port Administration Building.

The fleet is operated by Shetland Towage Ltd., a private company owned and operated by a joint venture between Shetland Islands Council, Clyde Shipping Company and Cory Ship Towage.

The fleet consists of 3 twin screw 3,800 h.p. vessels, each having a bollard pull of 55 tons. These vessels are fully equipped as fire-fighting tugs and pollution control vessels and were built by Hall Russell and Company Ltd., in Aberdeen, in 1978. Named after Shetland birds, they are:

"Stanechakker", "Swaabie", "Lyrie"

Two additions to the fleet are Voith water tractors, built in 1983 by Ferguson Ailsa Ltd., at Port Glasgow. These vessels have twin 32G Voith units developing 4,000 b.h.p. and a bollard pull of 45 tons. Also given bird names, they are:

"Tirrick", "Shalder"

The use of tugs and their numbers will be as directed by the Harbour Master. Prior to arrival, vessels should ensure that heaving lines of adequate length and breaking strain are readily available to assist in securing the tugs.

Tugs will normally meet incoming vessels at a position close South of Outer Skerry. Officers and crew should be standing by to receive lines and all necessary tugs must be secured before the vessel's ability to manoeuvre becomes restricted.

When a vessel is berthing, tugs will be secured to the bow and stern of the vessel with towing lines and alongside in a push pull mode. Their mode of operation and disposition will be fully explained by the Pilot on arrival. Tug lines will normally be used throughout, either from towing hook or towing winch.

It is requested that wherever possible tug orders for movements before 0900 hrs. be placed before 1700 hrs. on the preceding day.

BERTHING: The following criteria apply to conventional vessels loading at crude and gas jetties at Sullom Voe.

The minimum under-keel clearance permitted is 1 m. alongside jetties and 2 m. elsewhere in the Harbour Area.

Oil tankers/combination carriers in the range of 18,000 tons deadweight to 350,000 tons deadweight may be accepted at Sullom Voe, as a matter of routine.

Vessels outside the parameters listed below and vessels of unconventional design may be accepted at Sullom Voe subject to individual consideration by the Harbour Master and Terminal Operator.

Limiting Vessel Sizes:

Jetty No. 1:	**Crude Oil Carriers**
LOA	170 m. to 280 m.
Depth alongside	16.9 m.(minimum)
Max. allowed draft	15.9 m.
	LPG Carriers
LOA	140 m. to 260 m.
Capacity	10,000 cu.m. to 75,000 cu.m.
Jetty No. 2:	**Crude Oil Carriers**
LOA	210 m. to 365 m.
Depth alongside	23.1 m. (minimum)
Max. allowed draft	22.1 m.
Jetty No. 3:	**Crude Oil Carriers**
LOA	170 m. to 365 m.'
Depth alongside	23.6 m. (minimum)
Max. allowed draft	22.6 m.
(Jetty No. 3 was taken out of service in September 1989)	
Jetty No. 4:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
Depth alongside	23.6 m. (minimum)
Max. allowed draft	22.6 m.

Note: (i) Vessels entering in ballast or partially loaded conditions should ensure that their draft does not exceed 13 m. as this is the draft normally allowed in the South Turning Area.

(ii) In all cases where the arrival draft is likely to exceed 13 m., prior permission from the Harbour Master shall be obtained before the vessel is fixed to load at Sullom Voe.

Loading Systems:

All crude loading arms are 150 ASA 16 in. hydraulic connections. This includes Jetty No. 1 where 16 in. connections are attached to 12 in. arms. All LPG loading arms have 150 ASA Camlock connections.

No. 1	Crude	4×12 in.	Loading arms	hydraulic connections.
	LPG	2×12 in. 1×8 in.	Loading arms	hydraulic connections.
No. 2	Crude	4×16 in.	Loading arms	hydraulic connections.
No. 3	Crude	4×16 in.	Loading arms	hydraulic connections.
(Jetty No. 3 was taken out of service in September 1989)				
No. 4	Crude	4×16 in.	Loading arms	hydraulic connections.

Manifold Heights:	*Heights above chart datum*	
	Max.	*Min.*
No. 1 Crude	22.70 m.	1.80 m.
LPG	21.50 m.	3.50 m.
No. 2 Crude	31.30 m.	2.60 m.
No. 3 Crude	31.30 m.	4.23 m.
(Jetty No. 3 was taken out of service in September 1989)		
No. 4 Crude	31.30 m.	4.23 m.

Maximum allowable pressure on lines and connections: 150 p.s.i.

Jetty Orientation:

No. 1	280°/100°
No. 2	135°/315°
No. 3	135°/315°
No. 4	145°/325°

Gangway: Shore tower type gangways are provided at all times. If for any reason, a shore gangway will not be available, ships will be advised in good time.

MOORING: The 4 loading berths are located in deep water on t Northern shores of Sullom Voe, adjacent to the Terminal complex Calback Ness.

The berths are numbered 1 to 4 in sequence from East to West. Je No. 1 has facilities for both crude and LPG carriers and ca accommodate vessels up to 120,000 d.w.t. Jetties No. 2, 3 and 4 ha crude loading facilities only and are designed to accommodate tanke up to 350,000 d.w.t. range. (Larger tankers may be accepted at t discretion of the Harbour Master and Terminal Operator). Jetty No. was taken out of service in September 1989.

Each jetty is of conventional "T" shaped construction with 4 breasti dolphins in line with the jetty head. The mooring dolphins are offset fro the line of breasting dolphins to provide an optimum lead for moori lines. Vessels may land at a maximum angle of 8° to the jetty face. Qui release mooring hooks are fitted on all dolphins. For use with larg vessels, quick release mooring pulleys have been fitted on Berths No. 2 3 and 4. These pulleys, one at each end of the berth are designed t accept a ship's mooring wire in the form of a bight.

Large flexible rubber fenders are fitted to the outer faces of eac breasting dolphin. Each has a generous energy absorbing capacity.

Each mooring operation will be assisted by a purpose-built moori boat.

ACTIONS TO BE TAKEN IN SEVERE WEATHER CONDITIONS

1. At least 1 tug shall be called out by the ship's Master to assist keeping *any* vessel alongside when all the following conditions exist
   (a) Where the mean freeboard height of the vessel exceeds the mea draft.
   (b) When the wind is of sufficient speed for loading to be suspende
   (c) When the wind is from a direction within an arc extending fro 10° seaward of the berthing line through North to 10° seaward the berthing line.

2. At the time of suspending loading/deballasting operations becaus of deteriorating weather conditions, the Terminal Loading Supervisor wi advise Port Control immediately of any vessels in the condition state in 1(a) above.

3. When a tug is called out under the conditions stipulated in (above:
   (a) The Terminal Loading Supervisor will notify the Master of th situation and request that the vessel be brought to a state o immediate readiness.
   (b) With the exception of the Port Controller, such Pilots as a available will station themselves aboard those vessels which a considered to be most vulnerable, and any vessel with a tu alongside must be attended by a Pilot throughout the period tug is required.
   (c) The Duty Harbour Master will be notified by the Port Controlle

4. Tugs may be necessary to assist in keeping vessels alongsid when some of the conditions in (1) above are absent, and may or ma not be called for by the vessel. In such circumstances any vesse requiring tug assistance will also be attended by a Pilot who will boar the vessel as soon as possible and remain on board throughout th whole period a tug is in attendance. In these circumstances the Du Harbour Master will be informed by the Port Controller.

5. Notwithstanding anything contained in 1 – 4, the Duty Po Controller may, *before consultation with the Harbour Master,* call ou such tugs as are required, at any time, if he feels the situation warran this action. In the case of large vessels in light condition for example may be prudent in certain circumstances to call out the tugs when th wind off the berth is less than that stated in paragraph 1(b) above. I such cases the Duty Port Controller should exercise his discretion.

6. In all situations where tugs are required to assist a vessel moore alongside, a Pilot will also be stationed on board that vessel as soon a possible after tugs are called out, and will remain on board throughou the whole period the tugs are in use.

General Mooring Requirements:

1. Masters should ensure that mooring lines are in good conditio Winch brakes or securing devices should be in efficient operati order and should have a holding power of at least 60% of th breaking load of the vessel's mooring lines. (On vesse constructed before 1978 these conditions may be met by placi the winch in gear and applying power in addition to applying th brake).
2. Any known defects in the vessel's mooring system or limitatio of mooring winch brakes should be reported to the Pilot and th Terminal before arrival in order that, if necessary, additio precautions may be agreed.
3. In order to avoid damage to loading arms and the seriou consequences of oil pollution, the vessel should be kept clos alongside at all times.
4. It is recommended that wires (or wires fitted with synthetic fib rope tails of at least 25% greater breaking load than the wire should be used for all mooring lines.
5. The following mooring requirements shall apply to all crude an gas tankers in excess of 10,000 tons gross and in general a mooring operations shall be conducted in accordance with th OCIMF "Guidelines and Recommendations for the Safe Moori of Large Ships at Piers and Sea Islands".
   5.1 Where a crude or gas tanker has undergone a mooring aud on a previous visit to Sullom Voe, the ship must be moo exactly in accordance with the mooring plan. If for a reason this is not possible the ship should be secured compliance with Section 5.2, 5.3 or 5.4 as appropriate a the details reported to the Port Controller for the attentio of the Director of Ports and Harbours. Audited mooring pla shall not be altered, amended or edited without the appro of the Director of Ports and Harbours.

5.2 Where a crude or gas tanker is equipped with synthetic mooring lines or a random mixture of synthetic and wire mooring lines, the ship shall be secured by a minimum of 4 head lines/stern lines, 4 breast lines and 2 springs at each end of the ship.

5.3 Where a crude or gas tanker is equipped with wire mooring lines only, the ship shall be secured in accordance with the appropriate mooring guide plan (See Plan).

5.4 Where a crude or gas tanker has not undergone a mooring audit and is not designed or equipped to comply with the requirements outlined in Section 5.2 and 5.3 it shall be secured as near to these requirements as possible and in any case to the satisfaction of the Master, the Pilot and the Loading Supervisor. If such ships cannot be secured satisfactorily, the loading arms must not be connected and the duty Harbour Master shall be contacted immediately.

5.5 Mooring lines leading in the same directon of restraint shall be of similar material and construction throughout their lengths from jetty mooring point(s) to vessel's securing point(s).

6. Particular care should be taken to ensure sufficient transverse restraint from breast moorings. When synthetic fibre mooring lines are used, pre-tensioning of these lines on making fast will help prevent drift of the vessel away from the berth in "off the berth" wind conditions.

7. As soon as the vessel is secured, brakes on all mooring winches should be firmly applied. Winches must not be left on automatic tensioning. Full steam pressure or power to all mooring winches should be maintained at all times when alongside. On split drum mooring winches only one layer of rope shall be permitted on the working half of the drum. *Notwithstanding any of the foregoing it is the Master's responsibility to ensure that his vessel remains securely moored at all times.*

8. An efficient watch must be maintained on the vessel's moorings at all times to ensure that all lines are properly tensioned and tended when required. The deck watch should make regular checks that mooring winch brakes are applied at the correct setting.

LOADING: *Maximum Loading Rate per Arm:*

Crude:		
Jetty 2	16 in. loading arm	5,000 metric t.p.h.
Jetty 4	16 in. loading arm	4,100 metric t.p.h.
Jetty 1	12 in. loading arm	2,500 metric t.p.h.
LPG:		
Jetty 1	8 in. loading arm	900 cu.m./hr.
Jetty 1	12 in. loading arm	2,100 cu.m./hr.

Connection of Loading Arms: Confirmation to be given that vessels will arrive with the required spool pieces fitted to their manifold for either crude or LPG fitting.

Manifolds should comply with latest OCIMF Standards. As a minimum there must be 500 mm. between faces of spool/reducer presented for connection. Reducers must be equally tapered.

Failure to present correct reducer/spool will result in delays. The Terminal does not have reducers, but does have 16 in. to 16 in. spool pieces. Should it be necessary to use the Terminal's spools a charge will be levied.

CRUDE The connection of loading arms will be undertaken by shore personnel. Vessels should arrive with 16 in. 150 ASA manifolds, ready for connecting to the loading arms.

LPG The connection of loading arms will be undertaken by shore personnel. Vessels must have 150 ASA manifolds for connection to the loading arms. Sizes will either be 12 in. or 8 in. as directed by the Terminal.

Ships manifolds should be presented as Class 150 ASA using ship's reducers.

Failure to present correct reducer/spool will result in Terminal levying a charge for their own equipment, if available.

Masters should ensure that the deck firemain is pressurised at all times and fire extinguishers and fire hoses are ready for use at the ship's manifold in accordance with Jetty Regulations.

Crude Oil Storage: 16 conventional floating roof storage tanks are constructed, each with a capacity of 600,000 bbls. These provide storage facilities in the event of berthing delays and ensure sufficient stocks to enable tankers to load without delay.

The storage tanks have been constructed with bases as much as 30 m. above sea level, to allow gravity loading. However 6 oil loading pumps are installed to increase the loading rate as may be required by the vessel.

Loading Rates: A maximum loading rate of 30,000 t.p.h. can be provided by the Terminal with a maximum of 20,000 t.p.h. to any one berth.

The LPG loading system delivers up to 3,000 cu.m./hr.

Cargo Measurement: Meters are installed for cargo measurement. Bill of Lading quantities are calculated from meter readings.

LIQUEFIED PETROLEUM GAS FACILITIES: There is a single LPG insulated pipe-line from the LPG storage area to Jetty No. 1 for tanker loading. The LPG tankers using Jetty No. 1 will range in size from 10,000 to 75,000 cu.m. capacity and they will transport butane and propane under refrigerated conditions as in the onshore tankage.

Navigation, Mooring, Berthing: Except by permission obtained from the Harbour Master, no LPG ship shall at any time be navigated in, lie in, or be moored in any part of the harbour.

No LPG ship shall be anchored or moored except

(a) at a quay duly approved by the Harbour Authority

or

(b) in such position as the Harbour Master shall from time to time direct

and no LPG ship shall be removed from such last mentioned position except in accordance with the order or permission of the Harbour Master or for the purpose of leaving the harbour forthwith.

An LPG ship shall at all times lie safely afloat.

While an LPG ship is at a quay

(a) it shall be securely made fast as close alongside as possible in a manner approved by the Harbour Master.

(b) its moorings shall be adjusted from time to time to allow for the rise and fall of the tide and for the loading and discharging of cargo.

Except in accordance with such conditions as may from time to time be prescribed by the Harbour Master, no ship or harbour craft shall, when moored, unmoored or anchored, lie or pass within 30 m. of any LPG ship which is moored or anchored, without permission of the Harbour Master.

Loading and Discharging: All jetty LPG drains and ships' scuppers whereby LPG can, in case of spillage, escape to the Harbour shall be open before loading or discharging commences and shall be kept open during the whole period of such operations.

All vessels calling at Sullom Voe Terminal must be in possession of a Certificate of Fitness under the terms of the IMO code for the construction and equipment of ships carrying liquefied gases in bulk, and be in possession of an appropriate Classification Society's Certificate.

Also see "Report" dated October 1983.

DRY CARGO FACILITIES:

Construction Jetty: A concrete pier suitable for coastal traffic is located in Garths Voe, East of Jetty No. 1.

This pier, orientated on a 108°/288° axis is 100 m. long and can accept ships on both the North and South faces.

The North Berth is equipped with a fixed Ro/Ro ramp which has a width of 10.7 m., a total length of 23.7 m. and a fixed gradient of 1:22. The height of the sill is 1.67 m. above MHWS.

The pier is well fendered with patent fenders and tyres. The depths at the pier range from 9.9 m. at the Eastern extremity, rising to 3.9 m. at the Ro/Ro ramp.

Bunkers can be supplied by road tankers to vessels using this jetty.

There is no permanent dock labour force available on site at Sullom Voe. However, stevedoring services can be obtained as and when required from Lerwick, arrangements for which should be made through the local ships' Agents or receivers of cargo, as appropriate.

Garths Pier: This 2 finger jetty is situated adjacent to Sella Ness Industrial Estate.

The inside berths have a length of 41 m. and the outside berth a length of 65 m. Each finger is 7.3 m. wide. There is a depth of 4 m. alongside for the lengths stated; thereafter the depth decreases rapidly.

Graven Pier: A small concrete fishing pier is situated on the Southern shore of Garths Voe. The pier has been designated as an unsafe structure and must not be used. Vessels previously using Graven Pier should now use Garths Pier.

Tug Jetty: Harbour tugs and pilot boats are stationed at an "L" shaped jetty located on the Southern shore of Garths Voe adjacent to Sella Ness. This jetty, of cellular design is constructed of concrete and steel.

Fendering arrangements consist of used tyres suspended at intervals along the jetty face. This pier is suitable for coastal traffic but is not used as such on a regular basis.

The present minimum depth off the main face of the jetty is approximately 6.9 m.

Limited supplies of gas oil are available from a bunkering point on this jetty. Further supplies are available by road tanker.

Gaza Jetty: (Lat. 60° 26′ 10″ N., Long. 01° 21′ 02″ W.).

A small jetty has been constructed at Gaza near Sullom for the purpose of exporting aggregates from nearby quarries. The jetty face is located on the N.E. side of the seaward extremity of a rock armoured causeway. The jetty face is 30 m. in length and is well fendered. The orientation is on a 111°/291° axis. The depths alongside the pier range from 4.5 m. to 3.7 m. below chart datum at the landward extremity.

An anchor with cable and clump weight has been laid S.W. of the jetty head. A wire is attached to the cable for the purpose of attaching the vessel's mooring lines.

At the Harbour Master's discretion vessels up to 75 m. in length may use the jetty.

Colla Firth Pier: (Lat. 60° 32′ 24″ N., Long. 01° 20′ 47″ W.).

A small jetty has been constructed in the North West corner of Colla Firth which is located on the West side of Yell Sound. The pier is utilised by both fishing and commercial vessels and is licensed to handle explosives.

The main berthing face is 55 m. in length and has an orientation of 100°/280° and a minimum depth of 6 m. Berthing for smaller vessels is also available on the Northern side of this pier.

OIL POLLUTION SURVEILLANCE: Only clean ballast contained in tanks completely segregated from main cargo tanks will be allowed to be discharged into the Harbour, but then only after testing by the Terminal Operator and approval by the Port Authority.

Recent pollution of beaches and serious damage to wildlife around the shores of Orkney and Shetland suggests that certain vessels have disregarded the IMO Conventions on Oil Pollution and discharged dirty ballast whilst approaching or immediately after sailing from Sullom Voe.

Such procedures cannot be condoned by the U.K. Department of Transport, Local Authorities or the Terminal Operator, and with the object of preventing this practice (which is contrary to internationally agreed rules) air surveillance of all shipping in waters around Orkney and Shetland has been introduced.

As detailed in the section entitled "ETA Requirements" (see "Radio"), Masters are requested to advise Sullom Voe Port Control (Telex: Sulvoe 75142. Telegraphic Address: Portcontrol Sullomvoe) of their ETA 24 hours in advance of arrival. In addition, this message is to include the estimated time of crossing Lat. 58° 20′ N., Longitude on crossing this Latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station (Lat. 60° 38.6′ N., Long. 01° 15.3′ W.). **Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.**

Prior to sailing from Sullom Voe, all vessels are requested by the Harbour Authority to indicate intended outward bound courses and turnpoints until South of Lat. 58° 20′ N. or 200 miles from the pilot station as appropriate. This should be detailed on the Tanker Safety Check List provided by your Agent.

Any vessel sighted discharging dirty ballast will be immediately reported to the U.K. Government Authorities for appropriate action to be taken. In such circumstances, vessels may be liable to extensive delay until investigations have been completed.

Prevention of Oil Pollution: Prior to arrival, vessels must ensure that all crew members are conversant with the anti-pollution regulations, which must be complied with at all times.

Principal causes of pollution are leaking ship side valves, cargo/bunker overflows and pumping engine room bilges. Therefore it is recommended that sea valves, overboard discharges (which should be shut) and ballast/cargo/bunker/bilge operations are checked by the Chief Officer and the Chief Engineer before arrival. Scuppers must be plugged on main and poop decks in respect of vessels loading/discharging bulk oil.

On arrival the terminal will give all assistance necessary but are empowered to take action in the event of contravention of pollution prevention requirements.

Masters must advise if their vessel has sustained any damage which could cause oil pollution and confirm any known oil losses from hull or sea valves.

Vessels are required to arrive at the Sullom Voe Terminal with a total deadweight of not less than 35% of Summer d.w.t including bunkers, fresh water and stores.

Vessels should confirm in advance the amount of ballast, including the quantities of segregated ballast, and cargo tank ballast, separately. (See "Radio" – Pre-arrival information).

BALLAST:

Ballast Requirements: For the purpose of manoeuvring, all vessels are required to maintain a reasonable ballasted condition, subject to the requirements specified in the section dealing with Oil Pollution Surveillance.

Vessels should carry sufficient ballast so that the propeller remains immersed whilst maintaining a reasonable stern trim.

Masters are advised that the Port Authority requires, unless otherwise directed by the Harbour Master, that the propeller of any ship to be immersed at all times when vessels are alongside. When operations permit, the proportion of cargo loaded to ballast remaining onboard must be such as to ensure that the vessel can be safely manoeuvred at any time whilst in the harbour. It must be understood that shifts of wind and changes of wind force in Sullom Voe are at times violent and the adoption of an adverse trim in relation to the ship's optimum manoeuvring characteristics will not be accepted.

Ballast Reception Facilities: It is prohibited to discharge any ballast other than segregated clean ballast into the waters of Sullom Voe.

All dirty ballast or non-segregated ballast will be discharged ashore for treatment.

Non-segregated ballast includes ballast contained in any tank designed for or capable of being used for the carriage of crude oil. Tanks having a permanent connection to the cargo piping system are not considered to be segregated ballast tanks.

The Terminal can accept dirty ballast whilst providing the vessel with cargo. Ballast will initially be pumped into settling tanks where excess oil will be skimmed off into recovered-oil tanks. The remaining ballast will undergo further treatment before being discharged into Yell Sound. The ballast water will be monitored throughout the cleaning process.

The Terminal is unable to accept tank washings or slops from a cargo which has been heated or where the pour point is such that heating is required.

Inert Gas: A random check of the quality of the inert gas in several of the vessels' tanks will be made on arrival alongside to ensure the vessel complies with the statutory requirements regarding inert gas. If any of the tanks are found to have an oxygen content in excess of 8% the vessel will be required to vacate the berth and return to sea to complete inerting.

Purging of tanks whilst alongside is not permitted.

Vessels must arrive at the berth with positive I.G. pressure.

Discharge of Dirty Ballast Water: The discharge of ballast water from oil cargo tanks or non-segregated ballast tanks or any ballast water containing quantities of oil or high levels of mineral or chemical pollutant, into the waters of the harbour is prohibited.

The discharge of ballast water from segregated or permanent ballast tanks into the waters of the harbour will be permitted provided that:

1. The Master of the vessel advises the Harbour Authority prior to arrival:
   - (a) The place at which the ballast was taken.
   - (b) The quantity of the ballast.
   - (c) That to his knowledge the ballast is free from oil contamination.
2. Samples have been taken and analysed by the Terminal Operator. Hydrocarbon level to be 5 p.p.m. or less.

The Oil Pollution Control Officer of the Harbour Authority will on occasions board vessels carrying segregated ballast to obtain samples. Analysis will be made of these samples to ascertain the quantity of hydrocarbon, colliforms and heavy metal pollutants within the ballast. The Harbour Authority may, as a result of information so obtained, refuse permission for the discharge of segregated ballast water taken on board in certain locations.

The discharge of segregated ballast is not to commence before permission has been received from the Loading Supervisor. He will have confirmed with the laboratory that the hydrocarbon level is 5 p.p.m. or less.

MASTERS ARE STRONGLY ADVISED TO CLOSELY MONITOR THE DISCHARGE OF SEGREGATED BALLAST AT REGULAR INTERVALS TO ENSURE THAT OIL IS NOT ENTRAINED IN THE BALLAST WATER.

CONSULS: In Lerwick.

MEDICAL: Medical attention for ship's crews is available on reques through Agents. Some specialist services including inoculation an vaccination are available.

FRESH WATER: Potable water can be supplied to tankers at Sullo Voe in an emergency. A small charge is levied for the use of the facili

Vessels requiring fresh water should inform their Agents prior arrival.

FUEL: There are no bunkering facilities available for tankers calling the Port of Sullom Voe.

REPAIRS: Engineering facilities are available to carry out repairs afloa to hull and machinery. Drydock facilities do not exist for vessels ove 120 ft.

Electronic Navigational Aids and Radio: All major companies hav agencies in Shetland. Repair facilities exist for all types of electron equipment.

Engine Readiness: Main engines must be maintained in a state readiness for vacating the Terminal at short notice at all times excep in the cases of approved repair work as detailed in Regulation 19 "Jetty Safety Regulations".

CUSTOMS: A selective system of boarding commercial vessels arrivin from a non-U.K. port, will apply at the Sullom Voe Terminal.

REPATRIATION: Crew changes can normally be arranged. Air and se connections are available to mainland destinations.

It should be borne in mind, however, that during the Winter month delays to air traffic are not uncommon due to prevailing weathe conditions whilst in Summer delays can be experienced due to lo visibility.

Ships will not be permitted to retain their berth awaiting the arrival crew members.

Also see "Ship System Failures".

AIRPORT: Shetland's airport network is within easy reach of Sullo Voe and scheduled flights are available daily to all major U.K. citie with connections to worldwide destinations.

BANKS:

Bank of Scotland. Tel: Lerwick 2624. Telex: 75309.
Clydesdale Bank. Tel: Lerwick 5664.
The Royal Bank of Scotland. Tel: Lerwick 4520.

GENERAL:

The following services can be provided for vessels by the Shippi Agencies. Masters are requested to provide notice of requirements pr to arrival.

Compass Adjusting: A service is available for large vessels. Reques should be made in good time to ship's Agents in order that the adjust may board with the Pilot on arrival.

Storing: Due to the high berth occupancy at Sullom Voe it is not possib to carry out major storings. However, a limited amount of fresh provisio for immediate store requirements can be supplied providing it can easily handled by the ship's crew.

Fresh and frozen meat can be supplied in any quantity with Shetla lamb a speciality. Shetland knitwear goods of high quality are availab at reasonable prices. Other local products include sheepskin rug traditional jewellery, handicrafts and salmon (fresh and smoked).

Bonded Stores: Bonded stores are available in any quantity.

Lubricating Oils: Most major oil companies have authorised dealers Shetland. Lubricating oils of all grades are available at competit prices.

Charts and Nautical Publications: Available on application to shi Agents. Advance notice is required for the supply of large sets.

Lloyd's and Salvage Association: If service or survey is required, th may be obtained through their Shetland Agents, Hay & Co. (Lerwick) L

Sea Travel: P&O Ferries maintain a regular Ro/Ro and Passenger fe service between Lerwick and Aberdeen.

Provisioning: This service is provided by ship's Agents on request.

Shore Leave/Taxis: All personnel proceeding ashore must be possession of a shore pass, a supply of which is handed to Masters the vessel's arrival.

Transport is provided free from the root of each jetty to Seafare Centre, and taxis can be arranged for those wishing to travel furth afield in Shetland.

There is a limited public transport service serving the Sullom V area.

Telephones: This facility is provided at the Seafarers' Centre operated by the British Sailors' Society and situated outside the main gate.

There are public telephone boxes on the roadside adjacent to the end of each jetty. There are portable telephones available for use aboard a vessel, however, these are NOT intrinsically safe and must only be used within the accommodation spaces. The ship's Agent will supply a list of all call details after use.

Weather Routeing: This service is available to Shipmasters on application to Shetland Weather Centre.

British Sailors' Society: The British Sailors' Society has a Seafarers' Centre just beyond the Terminal Entrance. A free mini-bus service is provided between the jetties and the centre which is open from 1100 hrs. to 2300 hrs. Monday to Saturday and from 1230 hrs. to 1430 hrs. and 1900 hrs. to 2300 hrs. on Sundays.

Amongst the facilities provided are the following: A Chapel, Library, 3 International Telephones, Television Room, Snooker and Pool Tables, Darts, Shop, Fully Licensed Bar and Light Meals.

The resident manager, Mr. David Hughdie, is there to assist all seamen whatever their Nationality, Colour or Creed and there are 3 Honorary Chaplains whose services are also available.

Any Seafarer in need of practical, spiritual or welfare help is invited to contact the manager or his staff on Sullom Voe 242715.

NOTICES:

Landing in Great Britain of Live Animals, Live Birds and Meat:

The attention of Masters is drawn to "Notice to Masters of Vessels and Commanders of Aircraft (IM24 (Rev 79))" of which the following are extracts:

Diseases of Animals Acts 1950 and 1975, Rabies Act 1974, Destructive Imported Animals Act 1932 and Ponies Act 1969.

WARNING: Her Majesty's Government exercise strict controls at ports and airports to prevent the introduction of animal disease and destructive animals into Great Britain. Severe penalties may be applied to those who do not comply with the import regulations.

Dogs, cats and other mammals (including ship's pets) brought to Great Britain on board a vessel which are not intended to be landed do not need a licence, but must at all times be securely confined in an enclosed part of the ship so as to prevent their escape and must not come in contact with any other animals except those similarly confined. The authorities must be informed immediately if any animal should escape.

Notice to Mariners 4/82:

Spur Booms

Anti-Pollution Spur Booms have been established at several permanent sites around the shores of Sullom Voe, and mooring buoys have been laid to facilitate quick deployment at each location as follows:

Location	*Boom Layout*	*Buoy Position*	
		Latitude	*Longitude*
Tivaka Taing	Spur Boom	60° 28′ 41″ N.	01° 18′ 37″ W.
Fugla Ness	Spur Boom	60° 27′ 04″ N.	01° 18′ 50″ W.
Lang Ayre	Twin Boom	60° 26′ 53″ N.	01° 20′ 12″ W.
Voxter Voe	Twin Boom	60° 24′ 36″ N.	01° 20′ 40″ W.
Calna Taing	Spur Boom	60° 26′ 26″ N.	01° 19′ 21″ W.
Scatsta Voe	Twin Boom	60° 26′ 38″ N.	01° 16′ 50″ W.
R.A.F. Jetty	Spur Boom	No buoy used.	
Roe Clett	Spur Boom	60° 28′ 56″ N.	01° 17′ 19″ W.

Buoy Description: Body: Yellow Pillar; Character: Gp. Fl. (4) ev. 12 sec.; Daymark: Yellow St. George's Cross; Range: 3 miles; Light: Yellow.

Notice to Mariners 5/82:

Bight of Haggrister: Mooring Buoy. A permanent barge mooring has been established in position: Lat. 60° 24′ 37″ N., Long. 1° 22′ 02″ W. Description: Yellow cylindrical; unlit.

Mariners are requested to exercise caution when navigating in the vicinity of these locations.

Notice to Mariners 5/88:

Navigating Large Vessels in Areas where Fishing Vessels Operate:

Masters of vessels which load at Sullom Voe Oil Terminal are advised that a significant number of fishing vessels operate in the sea routes which are regularly used by the tankers and it is recommended that due vigilance and caution be exercised at all times on passage to or from Sullom Voe.

Masters should note in particular that use of Deep Draft Route West of the Hebrides does not give deep draft vessels any privileges whatsoever when navigating this Route and responsibilities in relation to other vessels, as set out in Rule 18 of the 'International Regulations for Preventing Collisions at Sea 1983', still apply.

HYDROGRAPHIC NOTES:

Prohibited Anchorages

1. Owing to the existence of the tanker turning area within the vicinity of Sella Ness and Scatsta Ness, Mariners are advised that anchoring East of a line joining the following positions is prohibited, viz.:

From Position: Lat. 60° 26′ 57″ N., Long. 01° 19′ 17″ W.
To Position: Lat. 60° 26′ 32″ N., Long. 01° 18′ 10″ W.

2. Owing to the existence of an outfall pipe between Skaw Taing and Swarta Taing, all vessels are advised that fishing and anchoring is prohibited within the area bounded by Little Roe and lines produced seawards from 2 sets of day transit marks diamond in shape and yellow in colour which are established in the following positions:

A: Lat. 60° 29′ 15″ N., Long. 01° 16′ 42″ W.
Lat. 60° 29′ 10″ N., Long. 01° 16′ 44″ W.
B: Lat. 60° 29′ 10″ N., Long. 01° 16′ 21″ W.
Lat. 60° 29′ 06″ N., Long. 01° 16′ 21″ W.

Outfall Marker Buoy – Calback Ness: A yellow spherical navigational buoy with a yellow St. Andrews cross topmark and a radar reflector showing a light Gp. Fl. 4(Y). ev. 12 secs. has been established in position:

Lat. 60° 29′ 29″ N., Long. 01° 16′ 08″ W.

This buoy marks the seaward end of the ballast water outfall pipe.

Permanent Navigation Marks at Tanker Jetties – Sullom Voe

Permanent navigation marks have been established on the mooring dolphins at either extremity of the tanker jetty complex as follows:

Jetty No. 1 East end dolphin in position Lat. 60° 27′ 21″ N., Long. 01° 17′ 02″ W., two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

Jetty No. 4 West end dolphin in position Lat. 60° 27′ 56″ N., Long. 01° 18′ 20″ W., two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

SAFETY: *Smoking:* Smoking is prohibited in vessels during loading operations, except in 2 or at most 3 smoking rooms allocated by the Master and approved by the Terminal Representative.

Matches and lighters must not be carried by personnel outside the approved smoking areas, or on the jetties or anywhere within the terminal.

The Seaman's Pass issued to personnel going ashore by Sullom Voe Terminal carries the information that matches are available at the Main Gate for use outside the Terminal premises. The matches are issued free of charge.

Special arrangements have been made for ship's personnel leaving or joining vessels at the terminal, details of which are in the Terminal Regulations, or can be advised by the ship's Agent.

Fire Precautions: Every vessel's fire-fighting appliances, (including main and emergency fire pumps) must be kept ready for immediate use with at least 1 fire pump maintaining pressure on the main.

Before deballasting and loading/discharging operations commence, and during periods when permitted repair work is being carried out, at least 2 fire hoses must be uncoiled and connected to the fire main. One of the fire hoses must be sited forward and the other abaft the manifold.

An International Shore connection shall be available on the vessel's fire main in the vicinity of the gangway.

Jetty Fire-Fighting Facilities: The oil loading jetties are each equipped with 2 independent fire-fighting systems, one for water alone and the second for either water or foam mixture.

These jetties supply hydrants which are spaced along the jetty access road and jetty head.

Monitors are installed to provide a water curtain in the area of the jetty head and between the access tower and manifold area. Elevated monitors are also positioned at the top of the access and monitor towers. A sprinkler system protects the access tower.

Hose couplings are 2.5 in. standard instantaneous female type and the fire main to the access tower can accept international connections.

The working pressure of the fire system is 250 – 260 p.s.i. A fire hose connection is situated on the construction jetty to allow fire-fighting tugs to link into the system.

POLLUTION: It will be appreciated that oil spillages are viewed seriously by Government, Local Authorities, Port Authorities and Terminal Operators. Spillages will be investigated by the appropriate authorities and the Master and/or Owner may be liable to prosecution. Delay to the vessel could well arise.

Masters are therefore requested to ensure that every precaution is taken to prevent oil spillages at the Sullom Voe Terminal.

COASTGUARD SERVICES: H.M. Coastguard is the authority responsible for initiating and co-ordinating all sea and coastal search and rescue operations in the Shetland sea area. They also keep in close touch with the S.A.R. organisations of all countries in adjoining sea areas.

Regular stations are maintained at Lerwick M.R.S.C. (Marine Rescue Sub-Centre), with sector offices in the Port Administration Buildings at Sella Ness and Lerwick. Stations manned by Auxilliary Coastguards are maintained at Baltasound, Mid Yell, Gloup, Fetlar, Out Skerries, Whalsay, Bressay, Noness, Sumburgh, Fair Isle, West Burra Isle, Walls, Huxter, Hillswick, North Roe and Papa Stour.

N.B. Sector Offices and Auxilliary stations are not constantly manned. All enquiries should be directed to Lerwick MRSC. A 24 hour radio watch on VHF Channel 16 is maintained by Lerwick MRSC which enables safety and distress calls from up to 40 miles out from Shetland to be picked up on the Coastguard VHF network.

On receiving a call for assistance or advice, the Coastguard can instantly alert the appropriate facility.

Weather forecasts are broadcast every 4 hours on VHF Channel 67 at 0105, 0505, 0905, 1305, 1705 and 2105 GMT, followed by a ship movements broadcast.

Other VHF Channels available are 0, 6, 10, 67 (working) and 73.

A VHF/DF facility on Channels 0, 6, 10, 67 and 73 is maintained at Compass Head.

A Civilian SEARCH AND RESCUE HELICOPTER is based at Sumburgh, contracted by the Department of Transport (H.M. Coastguard) for long range search and rescue purposes. The helicopter is fitted for winching, and carries comprehensive rescue equipment including a de-watering pump and inflatable dinghy capable of being dropped to vessels in distress.

It has a speed of about 110 knots and a radius of action of approximately 150 nautical miles from Sumburgh. Navigation equipment includes V.O.R., I.L.F., Decca A and D/F Console. Communications facilities are:

MF	2182, 3095 and 3023 kHz.
VHF AM	118/135.95 MHz.
VHF FM	Marine frequencies.

R.N.L.I. STATIONS: The following lifeboats are on station:

Lerwick: 52 ft. Arun Lifeboat 'Soldian'.
Details: Speed 18 knots, range approximately 220 nautical miles. Navigation – Radar, Decca, VHF/DF, MF/DF. Communications – MF and VHF/FM (Marine Band) 60 channel set.

Aith: 52 ft. Arun Lifeboat 'Snolda'.
Details: Speed 17 knots, range approximatel 220 nautical miles. Navigation – Radar, Decca, MF D/F, VHF D/F. Communications MF and VHF/FM (Marine Band) 60 Channel set.

All requests for lifeboat or helicopter assistance should be routed through Shetland Coastguard M.R.S.C.

MEDICOS: Vessels requiring medical advice or medical assistance should adhere to the radio regulations and contact either Collafirth or Shetland Radio on Channel 16 VHF. If unable to contact the radio station, vessels can contact Shetland Coastguard direct on Channel 16 VHF.

EMERGENCY SERVICES AND PROCEDURES:

Fire....................	Tel: Sullom Voe 242798
Oil Pollution	Tel: Sullom Voe 242798
Ambulance...............	Tel: Sullom Voe 242798
Security...............	Tel: Sullom Voe 242798

All emergency services at the oil terminal are co-ordinated by the "Emergency Response Control Room" situated at the Terminal fire station.

On vessel's arrival at the Terminal, the responsible ship's officer and the Loading Supervisor will discuss action to be taken in an emergency situation. The Master of the vessel should study and comply with the 'Jetty Safety Regulations', a copy of which will be supplied.

Safety inspections will be undertaken by Terminal personnel throughout the vessel's stay alongside. Spot checks will also be made by the Terminal's Operations Support Branch.

In the event of an emergency, vessels should immediately contact Sullom Voe Port Control 242494/242495/242551 or VHF Channel 10 and emergency messages will be passed to the Terminal Emergency Response Control Room.

GARBAGE DISPOSAL: Skips are provided on board, and collected. No charge is currently made. Arrangements made by Shetland Islands Council.

WASTE OIL DISPOSAL: Available on request. Contact ship's agent.

SEAMAN'S CLUBS: British Sailors Society, Tel: 0806-242715, is situated just outside the terminal.

Norwegian Seamen's Mission, "Havly", Lerwick, Shetland, Tel: Lerwick 4369, situated about 30 miles from terminal.

Also see "General".

CURRENCY: U.K.Pound (U.K.£).

SHIPMASTER'S REPORT: 1983.

It is necessary to provide access to the vessel on the offshore si in the form of accommodation ladder with vessels having high freeboa at all times when alongside.

All crew members require passes for shore leave and must u transport from the jetty. This transport is arranged by the security gua in the hut at shore end of jetty.

Usually with moorings it is springs first then breast lines. The Termi is not concerned with head or stern ropes. Some of the dolphins a fitted with shore based pulley systems and these count as 2 ropes f mooring purposes.

Telephone calls may be made from the Mission (U.K. a International) and paid for in pounds sterling.

REPORT: October 1983.

Gas Carriers: Gas carriers shall conform to the following requiremen and the pipe-line operators concerned shall, at the time of nominatio confirm to the terminal operator that the carrier nominated so confor throughout the time she will be within the port limits.

a. The tanker conforms to the standards required in the EE memorandum of understanding or to state control.
b. The tanker complies with the Statutory Instrument 1981 No. 107 Merchant Shipping, Merchant Shipping (Tankers) (EE requirements) Regulations 1981.
c. The tanker can comply with the conditions of carriage as specifie on her IMO Certificate of Fitness.
d. The tanker will during the loading and simultaneous handling ballast follow the procedures as outlined in her approval trim a stability document.
e. The tanker can be adequately moored to equivalent OCIM standards, i.e. resisting loads due to any of the following curre conditions acting simultaneously with a 60 knot wind from a direction:
   3 knots at 0° and 180°
   2 knots at 10° and 170°
   3/4 knots from direction of maximum beam current loading.
f. The tanker can accept a minimum bulk loading rate per hour 3% of her total cargo carrying capacity up to a maximum 3,000 cu.m./hr.
g. The tanker reliquefaction units are capable of handling a minimu bulk loading rate per hour of 3 per cent of her total cargo carryin capacity up to a maximum of 3,000 cu.m./hr.:
   (a) without venting to atmosphere and:
   (b) without the use of a vapour return line to shore.
h. All cargo tanks will be cooled down on arrival and the vesse ready to commence loading. Any vessel that cannot comply a requires to purge and/or cooldown prior to loading will only b accepted on the basis of prior agreement having been reache between the terminal operator and the pipe-line group nominatin the vessel.
i. That the following tests will be carried out within 24 hours befo arrival and any defect, and any change in the status of th systems thereafter, be reported to the Port Authorities:
   (a) ventilation of compressor/pump/control room.
   (b) gas detection system
   (c) emergency shut down system
   (d) pressure and temperature control units
   (e) cargo tanks' safety relief valves setting.

SHIPMASTER'S REPORT: August 1984 (Updated 1988).

Vessel: 140,000 d.w.t.

Tugs: Normally 4 tugs for berthing and 2 tugs for sailing, tugs' lines. A tugs make fast and 2 push. On arrival the forward tug requires a heavin line from the main deck, he then steams forward to pass his line u through the centre fairlead.

Moorings: Under normal conditions first 2 back springs, then 2 to breasts, then 2 to 3 head/stern lines.

Gangway: Shore gangway.

Departure: On departure Pilot normally boards 1 hour after completio of loading. EDP is standard procedure.

Surveyor: Lloyd's Surveyor comes from Aberdeen and requires 2 to days' notice.

AUTHORITY: Shetland Islands Council, Ports and Harbou Department, Port Administration Building, Stella Ness, Mossba Graven, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Tele* 75142 Sulvoe G. *FAX:* Sullom Voe (0806) 242237. *Cables:* Portcont Sullomvoe. *Contact:* Captain G. SUNDERLAND: 54.55 N. 01.21 W. (See Pla

DOCUMENTS:

Crew List. 1 Form I.B.6A to be delivered to an Immigration Offic within 24 hours of arrival.
Passenger Lists. Form P.R.4. in duplicate and Form P.R.10 duplicate.
Customs Documents. Crew Declaration Form C.142 in duplicate.
Cargo Manifests, triplicate.

Ship's Papers:

Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.
Customs Light Bills.

PILOTAGE: Call Sunderland Harbour Radio, Channel 16, working channel for port is 14. Pilotage compulsory in South Docks and upriver of Corporation Quay. Pilotage also compulsory on all vessels carrying dangerous goods or with mechanical defects, under tow. Pilots maintaining continuous watch on VHF Sound signals for vessel requiring Pilot is Morse Code No. 6. Pilot boards 0.5 to 0.75 miles off piers. In bad weather pilot cutter leads vessel into inner harbour, and Pilot boards there.

ANCHORAGES: 0.5 to 0.75 miles N.E. of Roker Pier Lighthouse.

RESTRICTIONS: Vessels may enter South Dock from 2 hours before until half an hour after high-water. Vessels may lock in outside of these times depending on draft and state of tide. For North Dock and Corporation Quay restrictions depend on draft and state of tide.

MAX. SIZE: South Dock – length 142 m. beam 18.9 m., draft 8.08 m. with Spring tides, 7.16 m. with Neap tides.

River – length 183 m., beam – no restriction, draft 8.38 m. subject to siltage.

HEALTH: Pratique procedure: Pratique granted by Port Health Authority on arrival.

Suspected disease or fever: All ships from suspected areas must radio Port Health Authority 24 hours in advance of arrival, stating general condition of crew members. Pratique is automatic when ships arrive from other U.K. ports.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats.

TUGS: Join vessel at or outside harbour entrance. Tug's ropes normally used.

BERTHING: In South Dock vessel must arrive from 2 hours before up to 30 minutes after high water. Vessels may lock in as under "Restrictions". At Corporation Quay small vessels berth at any time. Large vessels usually berth at same time as mentioned for South Dock. Bridge swung to allow vessels to pass through.

BRIDGES: In South Dock bridge swung to allow vessel to pass through. Railway Bridge clearance, 25.1 m. MHWS.

STEVEDORES: A close knit dedicated labour force is engaged on cargo handling operations.

Arrangements and Hours of Working:

Normal hours of operation are:

0800 – 1700 hrs. (Monday to Thursday).

0800 – 1600 hrs. (Friday).

Work outside these core hours (overtime working) may be ordered as required.

On bulk cargo a continuous working day is available from:

0700 – 1900 hrs. (Monday to Thursday).

0700 – 1600 hrs. (Friday).

Weekend working on Saturday and Sunday and Bank Holiday working can be arranged as necessary, with the exception of Christmas Day, Boxing Day and New Year's Day.

MEDICAL: Well served with General practitioners and hospital facilities, and attention can be arranged at very short notice. However, unless urgent, 24 hours notice desirable.

TANKERS: 4 installations (lines either 0.16 m. or 0.2 m.) 3 installations in South Dock and 2 berths, the S.E. Oil Berth 98 m., the S.W. Oil Berth 89 m. 1 vessel of maximum length 142 m. can use this berth, draft 8.08 m. Spring tides; 7.16 m. Neap tides. At Corporation Quay vessel 183 m. long, draft 8.58 m.

DENSITY: Usually 1025. May be less after heavy rain.

FRESH WATER: Available. Arrangements can be made to supply water at any time.

FUEL: Bunkers supplied at Corporation Quay pipe-line from Petrofina. All grades available – Corporation Quay and Hendon Dock. Viscosities range from 32 secs. to 3,500 secs., and can be blended to any requirement in this range. 12 hours' notice necessary. Rate 250 t.p.h.

REPAIRS: All repairs possible.

DRY DOCKS: One dry dock in use, length 112 m., breadth 16.5 m. Floating dock, length 65.5 m., breadth 13.72 m.

GANGWAY/DECK WATCHMEN: Watchmen's services recommended.

OPENING/CLOSING HATCHES: This work is normally carried out by ship's crew, otherwise shore riggers.

CERTIFICATES:

Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: As per H.M. Customs and Excise Regulations.

REPATRIATION: Facilities available for effecting repatriations, with good rail, road and air communications.

AIRPORT: Approximately 20 miles. Newcastle Airport served by regular airlines, all the year round, to all parts of the world. Air UK operate flights to Amsterdam.

HOLIDAYS: Official Holidays for General Cargo ships: New Year's Day (no work except by special agreement); Good Friday; Easter Monday; May Day; Spring Bank Holiday; Summer Bank Holiday; Christmas Day (no work except by special agreement); Boxing Day (no work except by special agreement).

POLICE/AMBULANCE/FIRE: Police Station Tel: Wearside (091) 567-6155; Ambulance Control Tel: (091) 567-9337; Fire Tel: (091) 261-6523, or call 999 from any telephone and ask for service required.

TELEPHONES: Permanent arrangements do not exist, but a temporary arrangement can be made at any time.

IDENTIFICATION CARDS: Not required. Must possess valid Seaman's Book and/or Passport.

GARBAGE DISPOSAL: Skips placed at all working berths and changed when requested by port authority. Charges included in port dues.

WASTE OIL DISPOSAL: C.M.R. Ltd. provide this service in the South Dock. (Tel: 091-5653827, Fax: 091-5140628, Telex: 537371). Discharge via pipeline is available at SE Oil Berth, Hendon Dock.

SEAMAN'S CLUBS: None.

CURRENCY: U.K.Pound (U.K.£).

DEVELOPMENTS: A Ro-Ro terminal is to be constructed on 30 acres of reclaimed land. Initially a single berth of 150 m. length will be available.

AUTHORITY: Port of Sunderland Authority, Barrack Street, Sunderland SR1 2BU. *Tel:* (091) 5140411. *Telex:* 53483. *Fax:* (091) 5108351. *Contact:* Harbour Master.

SWANSEA: 51.37 N. 03.56 W. (See Plan)

DOCUMENTS:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (Agents complete)
C1320	2 copies	Cargo In unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Compulsory for vessels of 1,600 g.r.t. (Based on International g.r.t. in Lloyd's Register) and above. Request Swansea Bay Pilots by telephone call. Telegraphic address for Swansea Pilots is "Pilority, Swansea".

Advance notice of ETA required at least 12 hours. VHF Channels 14, 11 and 6. Pilot boat has bright yellow hull with red boot-topping or black hull; superstructure painted white. Pilot cutter's sound signal is "SM", 3 short and 2 long blasts. The area of boarding is usually 1 mile S.E. of Mumbles Lighthouse in all weathers. Usual requirements for ladders are in force, and Pilots require ladder to be about 4 ft. to 5 ft. above water.

ANCHORAGE: About 1 mile S.E. of the Mumbles Lighthouse.

RESTRICTIONS: Berthing is in accordance with tide. King's Dock Lock operates for a maximum of 8 hours on Spring tides. River-side berths and Swansea Ferryport Terminal operate over a greater period.

No night-time restriction of entry.

MAX. SIZE: Max. size for entry is 655 ft. long, 88 ft. beam, 32 ft. 6 in. draft.

These vessels are docked over HW period. Any vessel whose dimensions are approaching maximum for port should advise Port Manager well in advance. Special arrangements may be necessary, such as daytime only docking.

HEALTH: Usual international health regulations are to be observed. Any vessel which is suspect should inform Port Medical Officer of Health.

RADIO: All communications for ship movements through "Swansea Dock Radio" VHF Channel 14 calling and working. Agents, receivers, etc., can be called through usual coastal radio stations – this includes Ilfracombe Radio.

TUGS: Towage undertaken by private operators. The Alexandra Towing Co. Ltd., at present use a modern fleet of tugs at Swansea and Port Talbot. It is optional whose lines are used, but if tugs line is taken, an extra charge will be made.

BERTHING:

Dock	*Quay Length (Total)* (m.)	*Depth of Water (Absolute Min.)* (m.)	*Maximum Size of Vessel* *Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Approx. d.w.t.*
Kings Dock	2,268	10.1	199	26.5	9.9	30,000
Prince of Wales Dock	1,219	8.1	122	20.7	7.3	—
Queen's Dock	Oil Jetties (Operated by BP Co.)	10.7	199	26.5	9.9	30,000

Ro/Ro Berth: Situated on the East bank of the River Tawe, this facility provides a 137 m. berth, hinged shore bridge 76 m. long, with a 6 m. roadway. Adequate vehicle marshalling areas and Customs/ passenger facilities are available. The nose of the bridge can be lowered through 12.95 m. to allow for variation in tides and ship's flotation.

Containers: Swansea Container Terminal plc operates a full container terminal with a 35 tonne crane.

BULK HANDLING FACILITIES: *Petro Chemicals:* One jetty in Queen's Dock and 4 jetties for bulk liquid fuels, feedstock, etc. operated by BP Chemicals International Ltd.

Bulk Cargoes (Sulphur, coal, ores, etc.): Two berths in King's Dock equipped with 5×7.5 ton and 5×10 ton grabbing cranes. Operated by Associated British Ports. Private berths use mobile cranes.

Ferryport: On East bank of River Tawe.

CRANES: 2×25 ton and 9×11.5 ton, 4×7.5 ton and 9×6 ton electric cranes. 2×4 ton mobile cranes also available.

40 fork-lifts up to 11.5 tons, 1×25 tonnes capacity, and 1×40 tonnes capacity.

BRIDGES: One in dock bridge is under direction of duty Assistant Dock Master. A vessel which has to pass will be informed by the Assistant Dock Master as to the availablity.

STEVEDORES: Stevedoring services are provided by Associated British Ports and Swansea Container Terminal plc. Advice of labour requirements must be received by the following times:

General Cargo: By 0700 hrs. to start work at 0700 hrs.

Weekend work to be ordered by 1030 hrs. on Friday.

MEDICAL: Port Medical Officer of Health has an office on King's Dock Lock. Medical attention can be obtained at short notice. In emergencies, the duty Assistant Dock Master can be communicated with, to obtain medical help. Hospital facilities available, and there is a first-class medical centre on the Prince of Wales Dock. Vaccination and fever certificates will be examined when receiving Pratique.

TANKERS: All tankers arriving, working cargo, and departing are required to observe port's Petroleum By-laws and Oil in Navigable Waters Act. British Petroleum Company has further private directives for oil tankers. 5 main tanker berths, 1 petrochemical berth, 2 coastal tanker berths and 2 lay-by berths in Queen's Dock. 1 tanker/general cargo berth in King's Dock. Deepest draft permitted is 32 ft. 6 in.

Tankers of 1,600 g.r.t. and over to observe Merchant Shipping (Tankers – E.E.C. Requirements) Regulations 1981.

DENSITY: King's Dock Lock density is 1025.

FRESH WATER: Fresh water supplied from hydrants on quays by watermen. Rate of delivery is 2,000 g.p.h., approx., depending on the demand.

FUEL: Various grades of gas oil and diesel can be supplied by barge or road vehicles, or it can be delivered ex-pipeline at Queen's Dock.

FIRE PRECAUTIONS: All matches and lighters must be declared at entrance to oil installation. There are arrangements at the Queen's Dock depot for shore cooking and eating. There is an oil boom between the King's Dock and Queen's Dock to serve as an oil fire break between two docks.

CONSULS:

France	Tel: Swansea 650021
Norway	Tel: Milford Haven 2313
Vice-Consuls:	
Belgium	Tel: Milford Haven 2313
Sweden	Tel: Gorseinow 895881

REPAIRS: All types of deck and engine-room repairs are possible.

DRY DOCKS: 2 dry docks in port are entered from King's Dock. Dry docks: "Duke of Edinburgh" 670 ft.×92 ft.; "Palmers" 560 ft.×75 ft. Palmers only used as a wet dock.

SURVEYORS: Cargo Inspectors available locally.

Ship Surveyors located in Swansea and Cardiff.

GANGWAY/DECK WATCHMEN: Under Port Regulations, there shall always be on board sufficient men to move or take care of the vessel. Some vessels employ watchmen.

OPENING/CLOSING HATCHES: Normally done by the ship's crew, but if riggers are employed by vessel for general duties they open up hatches.

CUSTOMS ALLOWANCES: At discretion of local H.M. Customs Inspectors.

CERTIFICATES:

Certificate of Freeboard.
Certificate of Registry.
Certificate of Pratique.
Light Bill.
Manifest.
Bill of Health.
Bills of Lading.

REPATRIATION: Arrangements can be made for repatriation through the Consular Channels.

AIRPORT: Nearest airport at Swansea, 8 miles from Docks. Next are Rhoose (Cardiff) and Bristol Airports where regular scheduled flights are handled.

TIME: Local time is British Standard Time which is plus 1 hour to Greenwich Time. Reverting to GMT during Winter months.

HOLIDAYS: Christmas (25th December); Boxing Day (26th December); New Year's Day; Easter, Good Friday and Monday (movable dates); Spring Holiday, May Day, Summer Bank Holiday (both movable dates). No cargo is worked on these days.

POLICE/AMBULANCE/FIRE: Call 999 from any telephone, and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: S.A.R. Centre based at Mumbles. Tel: Swansea 66534.

TELEPHONES: Arrangements at most berths for placing telephones on board ships in port.

BANKS: Lloyd's Bank Ltd., 25 Wind Street, Swansea. Tel: 475555.

Barclays Bank Ltd., 57 Wind Street, Swansea. Tel: 465007.

STORING: See "Prelims".

1. Yes
2. No interference with cargo work.
3. Yes
4. Yes
5. —
6. Yes.

SHIP SUPPLY SERVICE: It is the practice for the Swansea and Port Talbot pilot cutter to ferry personnel, stores, etc., to vessels offshore and due to dock at the respective ports. Alternative arrangements have to be made for large quantities and heavy items (contact A.Doig & Co.).

Swansea and Port Talbot Pilotage, Port Office, King's Dock Lock, Swansea, West Glamorgan, South Wales. Tel: (0792) 650855.

IDENTIFICATION CARDS: Not compulsory, but they are helpful if a crew member has to identify himself to Authorities.

GARBAGE DISPOSAL: Arranged through local Agents.

Brisco. Tel: (0792) 584585.

Dragon Skip Hire. Tel: (0792) 310688.

WASTE OIL DISPOSAL: Arranged through local Agents.

Max Recovery. Tel: (0792) 649358.

SEAMAN'S CLUBS: Flying Angel, Prince of Wales Dock, Swansea Tel: (0792) 653436. Hours: 1900 – 2300 hrs. Full facilities, except accommodation.

GENERAL: Entrance lock is 875 ft. in length, 90 ft. across at cope lev The inner sill is 7 ft. higher than the outer sill. The outer sill is 2.8 below Admiralty Chart datum (Chart No. 1161).

Tugs are available at the port for in-dock as well as sea towage.

A diver can usually be obtained by enquiry to the A.B.P. Port Engineer Swansea.

Port Manager: Tel: 650855/200. Port Engineer: Tel: 650855/27 Dock Master and Fire Officer: Tel. 650855/260.

AUTHORITY: Associated British Ports, Harbour Office, Lockhead, King Dock, Swansea, Glamorgan SA1 1QR. *Tel:* (0792) 650855. Tele 48150. *FAX:* (0792) 650729. *Contact:* Mr. A.R. Klinck, Port Manage Captain T.E.W. Boyd, Harbour Master.

TEES RIVER: 54.39 N. 01.08 W. (See Plan

PORT LIMITS: The Port facilities extend from the river entrance to th I.C.I. Billingham Oil Jetty 16 km. up river.

Arrival in the port is accepted as time of passing South Gar Lighthouse inward, or time of anchoring in the Tees Bay.

DOCUMENTS: Ship's official papers including:

Register.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Construction Safety Certificate.
U.K. Light Dues.
Oil Pollution Certificate. (Tankers).
Crew List.
C14 Ship's Stores List.
C13 Arrival General Declaration.
C142 Crew Declaration.
Tanker Check List (Tankers over 1,600 g.r.t.)

APPROACHES: Vessels are prohibited from anchoring:—

(i) inside the dredged channel.
(ii) within a radius of 1,113 m. of the Tees Fairway Buoy.
(iii) within the limits of 2 divergent lines starting and extending from the dredged channel limits 244 m. apart at the South Gare Ligh Station, to 550 m. apart between their respective points o intersection with the circumference of the circle defined in (ii).

Small vessels can anchor close N.E. of Light Buoy No. 4: large vessels at Fairway Buoy and in all cases outside the 20 m. contou Vessels waiting Pilots anchor in these areas.

Anchoring in the vicinity of the Ekofisk and Amoco Pipelines is to be avoided. See Notices to Mariners No. 2724 of 1977 and No. 715 of 1991.

PILOTAGE: The Tees Pilotage Area is that part of the harbour for the time being, as specified in the Tees & Hartlepool Port Authority Act 1966 and all statutory modifications thereto falling within an area from the waters of the River Tees below the Newport Bridge at Middlesbroug including all docks and tidal creeks connected therewith and the waters of the sea bounded by a line bearing 047°(True) from the Port Boundar Stone at Seaton Carew and extending seaward from that stone for a distance of 3.95 miles, thence clockwise along a circle of a radius of 3.5 miles from the South Gare Lighthouse at the mouth of the River Tees to the shore at Redcar, always excluding any port of the area enclosed by a circle of radius of 1.5 miles from the seaward end of the Hartlepool Breakwater.

Official address: The Tees & Hartlepool Pilotage Co. Ltd., 13 – 14 Bridge Street East, Middlesbrough, Cleveland, TS2 1NS. Tel Middlesbrough 242924 (during office hours). Pilots should be ordered through Redcar 485648 (all hours).

Pilot station is situated at South Gare and pilot cutter on duty is moored there. Cutters are painted blue with white or orange upper structure and fly the pilot flag by day when on duty and International Regulation lights by night. The duty cutter is equipped with VHF Radio, call sign "Tees Pilots" on Channel 16. Radar is also fitted.

As much advance notice of a vessel's arrival as possible should be given to Pilots. Minimum requirement for vessel arriving is 1 hour and for vessel sailing 1 hour 15 minutes.

Pilot boards in vicinity of Tees Fairway Buoy although smaller vessels are occasionally boarded off the South Gare lighthouse. During severe weather the duty cutter may move to Tees Dock and the Pilot will board as far seaward as the conditions permit.

Pilotage is compulsory for certain classes of vessel.

Class of ship requiring a Pilot:

1. (a) Ships of 95 m. LOA and over, navigating in the "Tees Approach Channel" and the "Tees River Channel" seawards of Light Buoy No. 27 (Position: Latitude 54° 35′ 02.2″ N., Longitude 01° 11′ 46.8″ W.).
   (b) Ships of 80 m. LOA and over, navigating in the "Tees River Channel" between Light Buoy No. 27 and Tees "Newport" Bridge.
2. Ships navigating in the "Tees Approach Channel" or "Tees River Channel" up to Tees "Newport" Bridge.
   (a) Of 20 m. LOA and over, having on board a dangerous substance.
   (b) Requiring the services of a tug.

Pilotage Exemption Certificates: Certain Masters and Mates may be entitled to a "Pilotage Exemption Certificate" upon application to the Tees & Hartlepool Port Authority. Details are obtainable from the Harbour Master, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland, TS6 6UD.

RESTRICTIONS: *Traffic Control:* This is operated by the Harbour Master when vessels over 200 m. in length are moving within the river limits. The primary purpose is to allow the subject vessel to negotiate the channel without embarrassment from other traffic. Overtaking/passing is decided by the Harbour Master when circumstances favour such actions.

Restricted Transit Control: This is imposed by the Harbour Master upon vessels carrying certain hazardous cargoes. The subject vessel is intended to proceed from sea to berth or from berth to sea without meeting other traffic. As a consequence such vessel must be restrained from entering the main channel until an 'all clear' route is available. Some regulated passing.

Port Safety Control: Masters of ALL vessels before committing their vessels to the River Tees Channel are required to satisfy the Harbour Master in respect of shipboard equipment by affirming to the following questionnaire:—

Question No. 1: Your vessel is in all respects seaworthy.

Question No. 2: All secondary power or mechanical systems are in operation and *immediately* available in the event of failure of any primary system.

Question No. 3: Steering is under direct manual control.

Question No. 4: Anchors are ready for use.

In view of the controls it is essential for contact to be made with the Harbour Master before considering entering the river, leaving the berth. VHF Radio use Channels 22, 16 or 14 to contact. Tel: (0642) 452541. Telex: 58145.

MAX. SIZE: This matter is constantly under review. At present the largest dimensions acceptable are quoted as: Length 305 m. (1,000 ft.); Beam 45.7 m. (150 ft.); Draft 16.76 m. (55 ft.). This depends on the berth nominated, tidal influence and prevailing weather.

Vessels requiring in excess of 16.15 m. (53 ft.) draft should be the subject of prior consultation with the Harbour Master.

A vessel with unusual dimensions e.g. oil rig, or any vessel with dimensions approaching the port maxima, must be the subject of consultation with the Harbour Master.

HEALTH: New Regulations. The Public Health (Ships') Regulations in force from 1.4.78.

See "Health – All Ports" before first U.K. port.

RADIO: Ships approaching from the North or at anchor in Tees Bay use Cullercoats Radio. Ships approaching from Southward use Humber Radio or Whitby Radio which is a slave-station to Cullercoats.

VHF Station	*Call Sign*	*Channel Fitted (min.)*
Harbour Master's Office	TEES HARBOUR RADIO	22,16,14,12,11,8
Harbour Master's Launch	TEES HARBOUR LAUNCH	16,14,12,11,9,8,6

Tees Pilot Cutter	TEES PILOTS	16,14,12,9,8,6
Tees Pilot Station (South Gare)		16,14,9
Tees Tugs	NAME	16,14,12,8,6, etc.

Tees Harbour Radio is manned 24 hours per day and is also available to Hartlepool shipping for relaying port operational messages.

Channel	*Use*	*Channel*	*Use*
22	Port Operations	11	Domestic Port Operations
16	Calling and Safety	9	Pilot Port Operations
14	Port Operations	8	Intership
12	Port Operations		

Vessels should listen on Channel 14 at all times when underway in the port.

RADAR: 3 scanner sites give full radar coverage from Tees Offshore Base/Tees Dockyard Ltd. to Fairway Buoy and up to 20 miles to seaward. Advice/information available to Masters/Pilots at any time. Advice in poor visibility in prescribed form. Call "Tees Harbour Radio". (See "VHF").

The Ekofisk oil pipeline runs 220 miles from the Ekofisk oilfield to Teesside, coming ashore just North of the Tees Entrance; the Amoco high pressure gas pipeline runs from the Central Graben gas/oil field, coming ashore just South of the Tees Entrance; the inshore sections are vulnerable to anchor damage from large ships and to give the pipelines optimum protection, a computerised radar has been installed in the Harbour Office.

TUGS: Official Address: Cory Towage (Tees) Ltd., Tees Wharf, Dockside Road, Middlesbrough, Cleveland TS3 6AB. Tel: Middlesbrough 247277 day and night.

Fleet of 7 tugs between 2,200 h.p. and 3,650 h.p. Tugs join vessel in Redcar Reach between Buoys No. 9 and No. 17 depending on size, draft and destination. Tug's lines are used.

Tugs are on duty daily and available on 6 hours' notice for sailing and arriving after normal office hours.

BERTHING: Small vessels can usually berth at any stage of the tide. Deep drafted vessels enter in accordance with the tide.

T.H.P.A. General Cargo Facilities:

Tees Dock: Quay No. 1: 4 conventional general cargo berths each of 183 m. length, 1 of 208 m. in length with flush faced quay. Road and rail access to all vessels. Ample cranage and spacious sheds/open ground. Nominal dredged depth 10.9 m. below LAT.

Quay No. 2: Two berths, one at 183 m. in length and one at 208 m. in length, equipped with electric luffing cranes up to 25 tonnes capacity. Nominal dredged depth 10.9 m. below LAT.

BULK HANDLING FACILITIES: *Redcar Ore Terminal:* Handles iron ore imports for British Steel. Berth dredged to nominal 17.30 m. and able to accommodate vessels up to 305 m. in length, approx. 150,000 d.w.t. 3 ore dischargers capable of handling 2,000 t.p.h.

Teesbulk Handling Ltd.: Built on the East side of Tees Dock, this loading/discharging facility is for the export of Potash mined in North Yorkshire. Dredged to a nominal depth of 10.90 m., the quay is intended to accommodate vessels simultaneously. The main loader is capable of 1,500 t.p.h. or 1,000 t.p.h. each to 2 vessels. A silo on the site has a storage capacity for 56,900 tons. Grain is exported from the terminal utilising a 7,500 ton silo as well as direct transport. Coal, soda ash and bentonite also handled.

ROLL-ON/ROLL-OFF FACILITIES: A link span Ro/Ro berth in Tees Dock can accommodate ships of up to 160 m. in length and 23.7 m. beam. Nominal dredged depth of 8.7 m.

Designed for loads up to 182 tonnes (when carried on 4 axles).

A second Ro/Ro pontoon is located at Tees Dock, Berth No. 5 and can accommodate vessels of up 200 m. LOA, and has a nominal dredged depth of 10.4 m. below LAT.

CONTAINER FACILITIES: A privately operated (Bell) purpose-built Container Berth utilising 2 gantry cranes of 32 tonnes and 45 tonnes capacity is established downstream of Tees Dock.

CONSTRUCTION FACILITIES: There are a number of yards specialising in oil-rig module construction work, all capable of handling flat-top barges up to 92 m. and unit loads to 4,000 tons.

Whessoe Offshore, Redpath Offshore South, Davy Offshore and Davy Normanby are on the South side of the river, while Redpath Offshore North are on the North side.

STEVEDORES: In order to prepare for loading/discharging, i.e. ordering of gangs, transport, etc., it is necessary to give ETA through their Agents not less than 24 hours before arrival.

In Tees berths, the port works 2 shifts daily, i.e. 0600 – 1400 hrs. and 1400 – 2200 hrs. Mondays to Fridays, with voluntary overtime at weekends.

MEDICAL: All medical facilities available. Vessels requiring doctor to board are advised to give maximum notice. Emergency medical attention can be arranged through VHF radio contact to Tees Harbour Radio on Channels 22, 16 or 14.

TANKER BERTHS:

Clarence/Deep Water Wharves also handle tankers.

Report: *Cautionary Advice:* Vessels approaching River Tees should have B.A. Charts 2566 and 2567. Both are large scale charts, having complete coverage of River Tees and associated terminals, and Tees Bay. B.A. Charts 134, 152 and 1191 are recommended for use from seaward to the Tees Bay area.

It should be noted that there are two 15 m. wrecks outside the 30 m. line in positions within 3 miles of the Fairway Buoy (54° 41′ N., 1° 02′ W. and 54° 42.5′ N., 1° 24′ W. (PA)). Tides in the vicinity of the Fairway Buoy and the pilot boarding areas set at approximate right angles to the channel, with rates up to 1.5 knots. Great care should be exercised when slowing down to embark the Pilot.

During or after Northeasterly gales, a heavy ground swell can build up in this area.

North Sea Petroleum Teesside: Docking and Berthing: It is the normal practice to berth port side to. The vessel is swung in Seaton Channel turning circle and backed into the berth. There are no approach speed indicators on the jetties. Mooring boats are used to run the lines ashore (usually spring lines first, followed by a head line and a stern line). All moorings should be of the same construction and material.

ICI North Tees: Docking and Berthing: Vessels may berth either side to any of these jetties, according to tide and weather conditions, but port side to is favoured by Harbour Authorities so that the vessel is heading seaward. If the vessel is berthing port side to, normal practice is to swing off Tees Dock. There are no approach speed indicators. Also see "Shipmaster's Report" – April 1988.

Tees Storage Terminal: Docking and Berthing: Vessels may berth either side to at No. 2 Jetty according to tide and weather conditions prevailing, but port side to is favoured by Harbour Authorities so that the vessel is facing seaward. Vessels berthing port side to are swung in the Tees Dock turning circle and then pushed into berth with the aid of tugs.

Teesport Oil Jetties: Docking and Berthing: Vessels may berth either side to these berths according to tide and weather conditions prevailing, but starboard side is favoured by Harbour Authorities so that the vessel is facing seaward. If the vessel is berthing starboard side to, it is swung in the Tees Dock turning circle. There are no approach speed indicators.

Billingham Oil Jetty: Docking and Berthing: Vessels may berth port or starboard side to depending on weather and tidal conditions prevailing at the time.

If vessel berths port side to, an anchor is sometimes used when swinging the vessel off the berth. 2 springs are run from each end of the vessel, then 2 messengers are passed from jetty deck to vessel, one to bow and one to stern. 2 shore head lines and 2 shore stern lines are brought on board and made fast.

B.A.S.F. Terminal: Docking and Berthing: Vessels may berth either side to according to tide and weather conditions prevailing at the time, but port side is favoured by Harbour Authorities so that vessel is facing seaward. If vessel is berthing port side to it is swung in the turning circle off Tees Dock and then pushed into the berth with the aid of tugs.

DENSITY: The density of the river water fluctuates with the seasons and rain amount, being between 1015 and 1025 mainly. Below Tees Offshore Base/Tees Dockyard Ltd. the fresh water influence is minimal.

FRESH WATER: Plentiful from wharf and small quantities available from tug in emergency, approx. 20 t.p.h.

FUEL: All grades available by road or river delivery. 48 hours notice of requirements is requested for barge delivery.

CONSULS: Sweden, Norway, Denmark, Netherlands, Germany, Finland. Also French Consular Agency.

REPAIRS: Facilities available for all deck or engine repairs.

DRY DOCKS: Tees Dockyard Ltd. has 2 dry docks:

No. 1 Dry Dock 175 m.×22.25 m., capacity 26,000 tons.
No. 2 Dry Dock 83.21 m.×17.31 m.
No. 4 Dry Dock 137.16 m.×20 m.

Cranage: 5 tons, 10 tons, 15 tons and 30 tons.

SURVEYORS: 1. SGS Redwood Ltd., and Caleb Brett cargo inspectors available.

2. Lloyd's Register, American Bureau, German Lloyd, Bureau Veritas, Salvage Association, U.S. Salvage, N.K.K., RIMA and Corporation of China available.

GANGWAY/DECK WATCHMEN: Recommended. Majority of berths are tidal with 5 m. range at Springs.

OPENING/CLOSING HATCHES: Always by crew. Riggers available.

CUSTOMS ALLOWANCES: 0.5 lb. tobacco or 200 cigarettes. (0.25 lb. tobacco for coasters). 1 spirit and 1 wine bottle (0.5 bottle spirit and 0.5 bottle wine for coasters).

REPATRIATION: All facilities exist.

AIRPORT: Teesside Airport with regular flights to London, etc. is 12 miles from Middlesbrough Centre.

Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Humberside, Norwich and Stavanger.

TIME: GMT in Winter months. BST (GMT plus 1 hour) operates between late March and mid-October as decided by government.

HOLIDAYS: Normal English Bank Holidays. On certain holidays work can be arranged if suitable notice is given.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency. If no phone available contact the Harbour Master on VHF Radio Channel 16 or 14.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coast Guard Maritime Rescue Sub-Centre, Tyne/Tees. Tel: Tyneside (091) 257-2691. Telex: 58839.

TELEPHONES: Many berths can be connected to telephone system using coin boxes; a connection charge is made.

BANKS: All major U.K. banks have branches in Middlesborough, Redcar and Hartlepool.

STORING: See "Prelims".

1. Both.
2. Tankers – No.

Storing may take place before or after cargo operations, while all tanks are battened down.

3. No. Distance varies from 100 yards to half mile depending on berth.
4. No.
5. Applicable to spirits, cigarettes, tobacco and bonded meat only.
6. Yes, but normally by suppliers/ship's crew.

IDENTIFICATION CARDS: Not used in Tees.

GARBAGE DISPOSAL: There are several reputable firms in the area. Collection service is available by arrangement through local shipping agencies, but must be sanctioned by the berth operator (this is particularly important at tanker berths). Skips are usually about 6 cu.m. and charges vary according to time involved, but average about £35 to £40 per skip in normal working hours.

WASTE OIL DISPOSAL: Collection can be arranged by local shipping agencies, however it is necessary to specify what oils and chemicals are present in the waste oil. Usually collected by road tankers of about 20 tons capacity and charges would vary according to quantity and content. Typical current charge for Lub and Fuel Oil waste, £150 per 1,000 galls.

SEAMAN'S CLUBS: The Missions to Seamen, The Flying Angel Club, Tees Dock, Grangetown, Middlesbrough, Cleveland, TS6 6UD. Tel: 0642-460994, 468527, 460244.

German Seamen's Mission, 67 The Avenue, Linthorpe, Middlesbrough, Cleveland, TS5 6QU. Tel: 0642-825084.

Swedish Missions Church, 386 Linthorpe Road, Middlesbrough, Cleveland, TS5 6HA. Tel: 0642-819878.

Seafarers Christian Friends Society, 7 Lampton Road, Stockton on Tees, Cleveland, TS19 0ER. Tel: 0642-603247.

CURRENCY: U.K.Pound (U.K.£). U.S.$ 1.00 = U.K.£ 0.5128 (19.4.91).

DEVELOPMENTS: The Port Authority is undertaking a feasibility study into provision of a coal terminal on the redundant oil terminal site. The terminal is to be a common user terminal for 80,000 d.w.t. and 140,000 d.w.t. (part loaded) vessels.

SHIPMASTER'S REPORT: April 1988.

Chart: BA. Chart No. 2566.

Pilot: Pilot boards at Tees Fairway Buoy (Racon) from a fast sea cu If the weather is poor the Pilot boards inside South Gare.

When leaving, extra charges are incurred if the Pilot has to stand for more than 1 hour.

Entry: It is about 30 minutes from the Pilot to ICI North Tees.

Tugs: There are several powerful tugs available. Tugs are not norma used by small vessels. When ordering tugs, 2 hours' notice required

Berthing: For ethylene, Jetty A only can be used, depth of wa approximately 7.5 m. at low water.

When berthing, side alongside is dependent on the tide, but in gene vessels berth starboard side to. Vessels swing off the berth a sometimes the anchor is used. Good fendering is provided by 3 lar 'Yokahama' type fenders which ride up and down with the tide on t wooden quay face. Mooring boat assists with running the lines.

Great care should be taken when lining vessel up with the manifold as shore personnel alignment may not be accurate. The ICI Jetties ca handle Gas Ships up to a maximum of 60,000 cu.m.

Cargo: There is an 8 in. liquid line and a 6 in. vapour line. The shor personnel connect and disconnect the Chicksan arms. There are ofte long delays between connection of arms and commencement operations.

The shore compressor extracts ship's vapour, so can use all ship plant for internal cooling.

Negative cool down on completion. We had a temperature −101.7° C on completion of loading. This can vary from −101° C t −102° C, depending on the time of year.

Average loading rate 124 t.p.h. (shore maximum). We stopped loadin 12 tonnes before being full (there is a stop button at the ship's manifold and the remaining product was blown to the ship in about 45 minutes

Oxygen samples taken before loading.

All documentation, including Bills of Lading, handled by Surveyor, wh accepts Notice of Readiness and Protests. The Supervisor is located i a cabin near the vessel and was very helpful.

General: Fresh water is obtainable from a hydrant on the Jetty and i free.

Transport delivering stores is permitted to within 25 m. of the ship's side.

Ship's gangway used but was troublesome due to the rise and fall o the tide.

There is a public telephone near the vessel. Collect calls may b made via the operator (no coin box). The Master is able to use th telephone in the Supervisor's office for any local official business.

Customs are very strict, all forms are to be completely correct.

AUTHORITY: Tees and Hartlepool Port Authority, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland TS6 6UD *Tel:* (0642) 468127. *Telex:* 58145 HMTees G. *FAX:* (0642) 467855 (offic hours only). *Contact:* Captain P. J. Lewis, Harbour Master.

TETNEY MARINE TERMINAL: 53.32 N. 00.07 E.

LOCATION: Tetney Marine Terminal is the deep water crude oil termina of Crude Oil Terminals (Humber) Limited, operated by Conoco Limited

The position of the mono-buoy is 53° 32′ 18″ N., 00° 06′ 48″ E., lying in approx. 60 ft. of water at low water and about 2.5 miles offshore.

Tetney is an open roadstead in the entrance of the River Humber o the East coast of England. The tidal rates in the vicinity of the mono buoy reach 3.5 knots during Spring tides and the direction of the ebb and flood tides is generally East and West respectively. The tidal range varies between 7 ft. and 22.5 ft.

DOCUMENTS: The following documents should be completed fo arrival:

General Declaration – Form C13 (duplicate).
Crew Declaration – Form C142 (duplicate).
Crew List – IMO (duplicate).
Tanker Check List Log 22.

Normally the Agent will board the tanker from one of the berthing tugs prior to berthing, and the previously mentioned documentation, with the exception of the Tanker Check List (which will be handed to the Berthing Controller, together with cargo documents) will be handled by him.

Stores can be taken at the berth provided the Agents are given the order at least 72 hours before arrival.

The Master of the tanker shall notify to the Harbour Master prior t arrival the information required under S.I. 1981 No. 1077, The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981.

PILOTAGE: Vessels are requested to send ETA and draft to Spurn Pilo 12 hours before arrival and any adjustment to that time at least 2 hours before arrival. Spurn Pilots listen continuously on VHF Channel 16 and use Channel 14 as a working frequency.

Additionally, Agents should be advised of ETA 72 hours before arriva and the following information should be included in the cable: Arriva draft, bow to manifold distance and cargo manifold size.

Pilotage is by Humber Pilots who board in the vicinity of the Humber Light Vessel from a fast launch. Additional berthing information can be obtained from Tetney Base.

The Berthing Controller and his Assistant will board as the vessel approaches the mono-buoy and will assist the Pilot in the mooring operation. He will advise the ship's Officers during the mooring operation, hose connection and disconnection, and will act as Company representative throughout the vessel's stay in the berth.

Vessels must provide a pilot ladder for the Pilot and Berthing Controllers to board and whilst in the berth a suitable gangway with a pilot ladder near the end in order to board from a small boat. The ladder must be clean and conform to SOLAS Regulations.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Pre-Arrival Procedure:*

In addition to the ETA requirements the following information is required by the terminal within 6 hours of clearing the previous port, or as soon as receiving orders for Tetney.

(a) Name of ship.
(b) Name of the last port from which the vessel cleared and the name of the loading port if different from above.
(c) Estimated date and time of arrival at Humber.
(d) Cargo loaded (barrels and metric tons – gross and nett).
(e) API and gravity.
(f) Arrival draft fore and aft.
(g) Lifting capacity of derricks.
(h) Size of manifolds.
(i) Slops in cargo.

About 48 hours from the pilot station a second cable should be sent to the Agent with the following information:

(a) Name of Ship and Master.
(b) Amended time of arrival.
(c) Names of crew leaving the vessel.
(d) Requirements in way of doctor and dentist.
(e) Stores and water.
(f) Additional requirements.

About 24 hours from the pilot station a final cable should be sent to the Agent confirming:

a) Time of arrival.
(b) Ship's bond remaining on board.
(c) Amendments.

VHF: There is a VHF station at Tetney which is manned 24 hours a day and has the call sign, 'Tetney Base'. A continuous watch is kept on VHF Channels 16, 19 (156.8/156.95), and 48 (163.00/158.40). Channel allocation is as follows, 16 calling, 19 ship to shore, and 48 port operations. UHF (467.725 MHz) is allocated for use by the Conoco Berthing Controller, Tetney Terminal and the Conoco owned work boats.

The Pilot and Berthing Controllers carry portable VHF hand sets for use during berthing for inter-ship and ship to tug communications, Channel 9 (156.45 MHz).

Portable radios can be provided for vessels not having a VHF set and the Agents should be so informed in order to allow time to dispatch a set to the ship on arrival. A vessel arriving without suitable means of communication and not having informed the Agent of the fact could incur delays.

BERTHING: Hose hang-off chains and securing equipment are placed aboard the vessel when the Berthing Controller boards from the Conoco service craft, "Spurn Haven".

Vessels will moor using an OCIMF Approved Mooring Stopper suitable for use with 76 mm. chafe chain.

The vessel approaches the mono-buoy on a Westerly heading. A messenger (min. 40 mm. diameter) should be lowered to the water and this will be picked up by the Conoco mooring launch "Monogirl" when approx. 150 m. from the mono-buoy. This messenger will be made fast to a 64 mm. × 90 m. polypropylene pick up rope which should be heaved up as the vessel makes the final approach to the buoy. When the chafing chain is in the fairlead it is secured to the bow stopper.

HOSES: Hoses are taken on the port side and the port derrick (minimum S.W.L. 10 tons) should be rigged and ready for use on arrival.

2×16 in. hoses are taken aboard, manifolds should be 16 in. 150 ASA and 10 in. and 12 in. 150 ASA can be accommodated by the provision of reducers. Should a vessel have any other size of manifold or be unable to provide adaptors to suit one of the sizes, Tetney Terminal will need to be notified at least 72 hours before arrival.

Hose connection and disconnection is carried out by the ships crew under the supervision of the Berthing Controller. Upon completion of discharge the hoses will be filled with sea water by the ship after which disconnection can commence. When the hoses are blanked off they will be hung off until just before sailing when they will be lowered to the Spurn Haven for towing clear.

POLLUTION: It is the Master's responsiblity to see that no oil of any kind is pumped or spilled overboard from his vessel. This includes oil water from the bilges, crude residues from previous voyages or any other matter that may result in the pollution of the sea. Owners and Masters should comply with any international regulations and recommendations concerning the prevention of pollution of the sea, especially in regard to the river Humber.

SHORE LEAVE: None of the officers or crew shall be allowed shore leave and no boats of any kind, except in an emergency, shall be lowered during the vessel's stay in the berth.

GARBAGE DISPOSAL: Skip provided, arranged through Agent.

WASTE OIL DISPOSAL: No facilities.

OPERATOR: Tetney Marine Terminal, Crude Oil Terminals (Humber) Ltd., Tetney Lock Road, Tetney, Nr. Grimsby, South Humberside DN36 5NX. *Tel:* (0472) 814101. *Telex:* 527055 Coth G. *FAX:* (0472) 210275. *Contact:* Captain B.R.Stephenson, Harbour Master & Terminal Superintendent.

TYNE DISTRICT: 55.01 N. 01.24 W. (See Plan)

(Including Newcastle, North and South Shields, Jarrow, Tynemouth, Wallsend and Gateshead).

PORT OPERATIONS AND INFORMATION SERVICE: VHF: Call sign "Tyne Harbour Radio" on Channel 16, frequency 156.80 MHz and on Channel 12, frequency 156.60 MHz. The control station is situated at the Harbour Master's Office, North Shields (Tel: 091 – 2572080, 2570407), and is manned on a 24 hour basis. Vessels must obtain permission by VHF from the control station before entering the port, similar permisson must be obtained before movement within, or before sailing from the port. A service is provided for the passing of information to shipowners and Agents.

DOCUMENTS:

1 Crew List for H.M. Immigration Office.
1 Form C.142 (Tobacco List) supplied by H.M. Customs.
1 List of Private Addressed Packages not manifested (C.143), supplied by H.M. Customs.

Details of Oil in double bottom tanks, also measurement in cubic feet of cargo in non-registered spaces.

PILOTAGE: Pilotage is compulsory for all vessels over 50 m. LOA. The Port of Tyne Authority pilotage district includes the port and its seaward approached within a radius of 3 miles from the North and South Piers. Pilot will board by arrangement either inside piers or at sea.

24 hours advance notice via agent required.

Call 'Tyne Harbour Radio' on VHF Channels 16 and 12 to order Pilot. Efficient pilot ladder required as per D.O.T. Regulations.

ANCHORAGE: Off entrance River Tyne, recommended 1.5 mile N.E. of North Pier. Minimum 12 fathoms.

RESTRICTIONS: Depths below Chart Datum (L.A.T.) from piers to Jarrow Quay Corner 8.6 m. thence to West end of Jarrow Staith 6.0 m., thence to Swing Bridge 5.2 m. (except in main channels of Swing Bridge and High Level Bridge) thence to Redheugh Bridge 5.61 m. West of Redheugh Bridge there is no authorised dredged depth.

MAX. SIZE: Harbour entrance, length and breadth: no limit. Draft 8.0 m. any state of tide: up to 11.0 m. at high water.

Riverside Quay, draft up to 10.00 m.
Esso Oil Terminal, draft up to 9.00 m.
Newcastle Quay, 27 – 28 berths – 6.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio W/T "GCC." Cullercoats Radio on R/T.

TUGS: Normally join inside piers, tow ropes optional except manufactured of man-made fibres. Orders for week-end arrivals must be given before 1030 hrs. Saturday. Rates on application to Tyne and Wear Tugs Ltd. Tel: (091) 4553361.

BERTHING:

Albert Edward Dock:
Warehouse Quay: 356 m. long, depth of water 7.9 m.
East Dock Wall: 162 m. long, depth of water 7.9 m.
Ro/Ro Berth No. 1, East Dock Wall: depth of water 7.5 m.
Heavy Load Berth (Ro/Ro No. 2) for heavy unit loads on transporters up to 510 tonnes; depth of water 7.9 m.
Tyne Commission Quay: 335 m. long, depth of water 7.11 m.
Tyne Commission Quay Extension: 118 m. long, depth of water 6.21 m.

Car Ferry Terminal:
Ro/Ro No. 3: 125 m. long, depth of water 7.11 m.
Ro/Ro No. 4: 140 m. long, depth of water 7.5 m.
Whitehill Point Jetty: 90 m. long, depth of water 5.5 m.

Tyne Dock:
North West Quay: 243 m. long, depth of water 8.2 m.
Factory Quay: 196 m. long, depth of water 7.0 m.
Riverside Quay: 514 m. long, depth of water 10.5 m.
Tynegrain Ltd. (Extension of Riverside Quay): Terminal, 37,000 tonnes silo capacity. Loading rate 1,000 tonnes per hour. Max. size 40,000 d.w.t. Depth of water 10.51 m.
Tyne Coal Terminal: 1 berth, depth of water 10.5 m. Loading rate 2,800 tonnes per hour.

Newcastle Quay:
Spillers Tyne Mill: 237 m. long, depth of water 6.0 m., discharge rate 75 tonnes per hour. Silo capacity 34,000 tons.

STEVEDORES: Principal Stevedores Port of Tyne Authority. All arrangements through Agent. Stowage plan required prior to arrival.

Plant pool as follows:–

Albert Edward Dock:
Warehouse Quay – 4 cranes, 6 tonnes – 10 tonnes.
East Dock Wall – 3 cranes, 5 tonnes.
Tyne Commission Quay Extension – 2 cranes, 6 tonnes.
Ro/Ro Berths – 4 terminal tractors.

Tyne Dock:
Riverside Quay – 6 cranes, 10 tonnes – 40 tonnes. 1 container handling crane 32 tonnes.
North West Quay – 5 cranes, 5 tonnes – 10 tonnes.
Factory Quay – 1 crane, 3 tonnes.

There is a pool of 32 fork lift trucks of 5,000 lbs. – 25 tonnes capacity available for any location. These trucks can be fitted with attachments for handling paper, pulp, etc.

Also see "Dry Docks".

MEDICAL: Hospitals available, Advise Agent in advance if medical attention required on arrival.

TANKERS:

Esso Petroleum Company Limited, Howdon:–
Ocean Jetty: 274 m. long, depth of water 9.51 m.
Coaster Jetty: 167 m. long, depth of water 6.0 m.
Jarrow Oil Jetty: Length 189 m.
Rohm & Haas Ltd. Jarrow: Chemical Berth, length 180 m. Depth 5.6 m.
Velva Liquids Limited, North Shields: 248 m. long, depth of water 7.11 m.

Report: *Cautionary Advice* – Port Approaches: The approach to the Tyne Piers is clear of danger and adequate navigation aids are provided and well maintained. The entrance, however, is exposed to Easterly winds and early contact should be made with "Tyne Harbour Radio" on VHF when bad weather prevails to facilitate boarding and avoid unnecessary delays.

In addition to close attention to other coastal traffic, a sharp lookout should be maintained for local fishermen whose craft are often badly lighted and poorly painted, with colours which may blend rather than contrast with the background.

Entry: Provided that the out-going stream is not making strongly, which causes maximum turbulence, there should be no difficulty entering the port with winds between N.E. and S.E. It is preferable to enter while the in-going stream is still running although at that time it also sets across the entrance. This precaution is especially necessary during N.E. gales, which cause the heaviest seas at the entrance. In Northerly gales vessels should keep close under the lee of North Pier and in Southerly gales, especially with the out-going stream running, close under the lee of South Pier.

Entry: After embarking Pilot prior to entry, vessel proceeds at half to full speed keeping leading lights in line 258°(T).

Normal entry times for maximum draft vessel (although sufficient water at any state of tide) from 3 hours before HW to HW River Tyne North Shields.

During this period tide sets across entrance from North to South in a 160° direction with Spring rates up to 1 knot.

Vessels must approach entrance with sufficient speed and set allowed to maintain a true course of 258°(T) keeping leading marks and lights in line.

Leading line must be disregarded as soon as the Tyne Piers are passed, when a vessel should reduce speed and be guided by the light buoys and beacons.

Inside the piers, tidal streams tend to run with the channel at rates up to 3 knots during Spring tides.

Vessels should pass in mid channel between Nos. 1 and 2 light buoys on the North side and Herd Light Buoy and Herd Groyne Light Structure on the South side.

Regulations also state that vessels are to keep Southward of mid channel when proceeding to sea and Northward of mid channel when entering, so as to pass each other port side to port side.

Distance from Tyne Piers to Herd Groyne 0.8 miles, course approx. 255°(T).

Tugs meet vessel in the area between Tyne Pier and Herd Groyne.

Passage up river from Herd Groyne to Esso Tynemouth is approximately another 2 miles. Vessels speed when transitting this region should be between Dead Slow and Slow. This tends to be a very busy area with numerous riverside berths. Two bends, one to port and one to starboard, are negotiated before vessel reaches the swinging area off Esso Tynemouth Terminal.

Vessels coming up river on the flood tide swing in the turning area and berth port side to Esso Tynemouth Terminal.

Vessels late for the tide are accepted on a spot basis and have been berthed up to 2 hours after HW. In these cases, vessels go straight alongside, starboard side to, and swing in the turning area outward bound.

Prescribed turning area is 360 m. in diameter.

Tugs are made fast between Herd Groyne and the swinging area, and normal practice is to swing to starboard heading vessel to the jetty when all way is off the vessel.

Mooring boats are employed for running the ship's lines to shore. Normal practice is to hold vessel alongside with tugs. First lines ashore are usually breast lines forward and aft, followed by springs, and finally the head lines and stern lines. Riggers will board vessel on arrival to secure 2 shore springs. (Esso Ocean Jetty only).

BRIDGES: At Newcastle 10 miles from entrance, Swing Bridge negotiated against tide; other bridges, maximum mast height 24.7 m. above MHWS.

DENSITY: Entrance/Tyne Dock – 1025; Tyne Dock/Jarrow 1020; Newcastle Quay 1005/1010.

FRESH WATER: Available ex-water boat, rate of delivery up to 150 t.p.h.

FUEL: All grades ex-installation, or by barge, 24 hours notice required.

GANGWAY/DECK WATCHMEN: Available if required.

OPENING/CLOSING HATCHES: Crew allowed open and close.

CERTIFICATES:

Register.
Load-line.
Safety Construction.
Safety Equipment.
Safety Radio.
Trinity House Light Bills.

CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent of 0.5 lb. tobacco per man and equivalent to 1 bottle wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.

WARRENPOINT: 54.06 N. 06.16 W. (See Pla

PORT LIMITS: Seaward to a line from Ryland River (South Coast) t Ross Memorial (North Coast) approximately 3,000 m. from Warrenpoi

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
1 Stores List.
Vessel's Papers and Certificates.
1 Manifest or Bill of Lading.

PILOTAGE: Not compulsory, if required Tel. (06937) 62549. Pilot stati at Greencastle Pier at entrance (North side) to Carlingford Lough. VH (Warrenpoint Pilot) radio, Channels 16 and 12. Notice to Agents of ET at 48 hours and 24 hours.

ANCHORAGES: Safe anchorage at Fairmont Roads S.E. Greenore an also inside Carlingford Lough N.W. of Buoy No. 13.

RESTRICTIONS: None except draft of vessel. Advise Agents.

HEALTH: No certificate necessary. In event of disease or fever conta Agent in advance. Hospitals available.

Also see "Health-All ports" before first U.K. port.

RADIO: All messages to Agents through Portpatrick Radio or Angles Radio.

VHF: Pilot station (Warrenpoint Pilot) and Port Radio (Warrenpo Harbour) on Channels 16 and 12.

TUGS: 1 tug available, contact Pilot Station.

BERTHING: All berths except Town Dock have 17 ft. at LWOST.

STEVEDORES: Warrenpoint Harbour Authority. Telepho Warrenpoint 73381. Fax: (06937) 73962.

CARGO HANDLING FACILITIES:
2×35 tonne Liebherr Transporter container cranes;
1 Poclain HC300 hydraulic crane;
1 Jones 971 HLB dockside crane;
2 Babcock Wilcox Luffing grabbing cranes;
1 Gottwald 25 tonne harbour mobile crane;
1 NCK Rapier 605 – 5 tonne grabbing crane.

BULK CARGO FACILITIES: Coal – 2 Luffing Grabbing Cranes at 150 t.p.h.

Grain discharged at up to 250 t.p.h. to Grain Silo of 8 bins, total capacity about 4,800 tonnes. Flat grain store capacity 4,000 tonnes also available.

SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro berth with 17 ft. at LWOST. Ramp 6 m. wide Marshalling area about 6 acres.
FRESH WATER: Available from pipes on quay.
FUEL: Available by road tankers. 48 hours' notice usually required.
CONSULS: Finland.
REPAIRS: Small repairs can be undertaken.
DRY DOCKS: None.
SURVEYORS: Lloyd's – Jos. Fisher & Sons, Ltd. Warrenpoint 73500.
GANGWAY/DECK WATCHMEN: Gangway and safety net obligatory. Watchmen advisable.
HATCHES: Opening and closing by crew.
CUSTOMS ALLOWANCES: As permitted by U.K. Customs and Excise.
REPATRIATION: Air and sea passenger services available from Belfast and Dublin. Both are about 1.5 hours by road from Warrenpoint.
AIRPORTS: Belfast (Aldergrove) 60 miles. Dublin 75 miles. Schedule flights daily to London.
TIME: GMT. GMT plus 1 hour in Summer.
HOLIDAYS: New Year's Day; St. Patrick's Day (17th March); Easter Monday and Easter Tuesday; 1st Monday in May; 12th July; 13th July; 15th August; Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.
TELEPHONES: Not possible to place telephones on board.
SERVICES: Check with Agents. Most services can be supplied given 24 hours' notice.
SHORE LEAVE: After clearance inwards, Crew members allowed ashore without restriction. No passes issued.
DELAYS: Delays in loading or discharging are minimal and infrequent.
GARBAGE DISPOSAL: Shore skip for dry garbage. Wet garbage arranged with ship's agent.
WASTE OIL DISPOSAL: Service available by road tanker. Prior notice required by ship's agent.
SEAMAN'S CLUBS: None. Usual local facilities.

WATCHET: 51.11 N. 03.20 W. (See Plan)

DOCUMENTS: Crew List, Stores List, Ship's Register, Manifest or Bills of Lading.
PILOTAGE: West Somerset District Pilotage Authority. Compulsory, ETA 24 hrs. before arrival to Harbour Master's Office, Watchet (0984) 31264, after hours Minehead (0643) 3430.
ANCHORAGE: Safe anchorage Blue Anchor Road.
RESTRICTIONS: Accordance with state of tide and draft. Vessels enter 2 hours before HW.
MAX. SIZE: Max. permissible length 95 m., breadth 16 m., draft restrictions according the height of tides, max. draft Neap tides 12 ft. and Spring tides 14 ft. – 18 ft.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: It is best for vessels to give ETA by R/T to Lands End or Ilfracombe Radio.
VHF: Watchet Radio Channels 16, 12, 14 and 9.
TUGS: None.
BERTHING: 2 quays, 1×150 m., 1×120 m.
CRANES: 3 cranes, 2×5 tons, 1×10 tons.
BULK CARGO: Cranes with grabs.
STEVEDORES: Watchet Marine Ltd.
MEDICAL: Port Doctor in Watchet.
DENSITY: Salt 90%.
FRESH WATER: Available on the quay.
FUEL: All grades, advance notice required.
FIRE PRECAUTIONS: Normal port precautions.
CONSULS: At Bristol.
REPAIRS: Normal repairs to ships possible notice required.
SURVEYORS: West Marine Surveyors & Consultants Limited, Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (STD 08045) 2604. After normal office hours Tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 – Survey G.
OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: Decided by the Customs Officer in charge.
CARGO GEAR: Shore gear, cranes and forklifts.
REPATRIATION: Facilities exist for crew changes.
AIRPORT: Nearest airport at Bristol.
TIME: GMT and British Summertime.
HOLIDAYS: Cargo work can be arranged.
POLICE/AMBULANCE/FIRE: Phone 999 for all three services.
TELEPHONES: None on quay.
SERVICES: Chandler available.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: None required.
GARBAGE DISPOSAL: Collection service available. Skips are provided alongside the quay. Contact Tel: 0984-33695 for details.
WASTE OIL DISPOSAL: Collection service is provided by Waste Disposal Services (Tel: 0272-552286). No shore facilities within the port area.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: West Somerset District Council, East Wharf, Watchet, Somerset. *Tel:* (0984) 31264. *Cables:* Port of Watchet. *FAX:* (0984) 33022. *Contact:* Captain C. Muller, Harbour Master.

WEYMOUTH: 50.36 N. 02.27 W.

LOCATION: Situated to the North of Portland Bill, midway between Southampton and Plymouth. Weymouth is the nearest U.K. port to Cherbourg and the Channel Islands.
PORT LIMITS: The area within a line drawn 090° (T) from the Nothe Fort distance 1.7 miles and the Sluice Gate Beacon at Preston Beach Road Sluice.
PILOTAGE: Compulsory for all vessels exceeding 150 ft. LOA. The Pilot boards 1.0 miles East of the Harbour entrance. Notice of ETA and request for a Pilot must be advised at least 24 hours in advance and any amendment of this ETA must be made not less than 2 hours prior to vessel's arrival at the Pilot Station. Weymouth Pilot listens on VHF Channel 16 and working frequency is Channel 9. Messages for the Pilot may be relayed via Weymouth Harbour Radio (VHF 16/12) or Portland Coastguards (VHF 16/67) or Queen's Harbour Master, Portland (VHF 16/13).
ANCHORAGE: Good holding ground can be found 1.5 miles to 1.0 miles East of the Harbour entrance.
RESTRICTIONS/MAX. SIZE: Vessels up to 125 m. LOA with a maximum draft of 5.2 m. can enter or leave at all states of the tide, entrance being made to a sheltered harbour between two piers. The Pier Heads are 137 m. apart and the channel is 76 m. wide.
HEALTH: Weymouth Port Health Authority offer facilities for food/meat examination and health clearance requirements.
RADIO: Weymouth Harbour Radio, hours of duty when vessel expected or during working hours 0630 – 2200. Calling Channel VHF 16, Working Channel VHF 12.
VHF: See "Pilotage" and "Radio".
TUGS: Several tugs are available from the Naval Dockyard at Portland.
BERTHING: There is a deep-water berth inside the pier heads with a dredged depth of 5.2 m. (Berth No. 1). This berth can take vessels of up to 115 m. LOA and is used for Lo/Lo operations of bulk cargoes and Ro/Ro side loading/discharging.

Linkspan and Ro/Ro facilities are available at Berth No. 3 with further general cargo/lay-by berths at Berths No. 5 and 6.

CRANES: Berth No. 1 has a 20 tonne SWL Mobile Crane. Other cranes can be hired locally up to 80 tonnes SWL.
STEVEDORES: As required.
MEDICAL: Full hospital facilities are available without notice.
TANKERS: No facilities.
FRESH WATER: Available at all berths.
FUEL: Available at all berths by road tanker.
CONSULS: All consulates and agencies are at Southampton.
REPAIRS: Hull and engine repair facilities are available.
DRY DOCKS: None.
SURVEYORS: At Southampton.
HATCHES: Opened and closed by crew.
REPATRIATION: Possible.
AIRPORT: Hurn and Exeter Airports.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE: Contact U.K. Coastguard, Tel: (0305) 760439.
TELEPHONES: Not available.
SERVICES: Radio and radar repairs. Charts and publications available.
SHORE LEAVE: Permitted.
GARBAGE DISPOSAL: Collection service available by hired skip or contractor facility. Contact Drinkwater Sabey Ltd.
WASTE OIL DISPOSAL: Collection service available by mobile tanker from contractors. Contact Drinkwater Sabey Ltd., or Cleansing Service Group. Tel: 04892-2232/6.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Weymouth and Portland Borough Council, Harbour Master's Office, Municipal Building, North Quay, Weymouth, Dorset DT4 8YA. *Tel:* (0305) 206422, 206278. *FAX:* (0305) 760971. *Contact:* Captain P.C.Tambling, Harbour Master.

WHITBY: 54.30 N. 00.36 W. (See Plan)

PORT LIMITS: Within 2 miles of the entrance.
DOCUMENTS: C13 Master's Declaration, C142 General Declaration, 1 Crew List and all normal trading certificates.
PILOTAGE: Pilotage is compulsory for all vessels over 30 m. LOA entering the harbour. Call Whitby Harbour Radio on Channel 16/11 during office hours. To arrange a Pilot in advance, telephone Whitby Harbour Office on 0947-602354. Vessels can enter 2 hours either side of high water.
ANCHORAGES: Vessels may anchor safely to the West of the Fairway Buoy. Holding ground moderate, untennable in heavy weather from N.E. to N.W.

MAX. SIZE: LOA 80 m., beam 14.0 m. and draft 4.5 m. Larger vessels and deeper draft possible on Spring tides by arrangement.
HEALTH: See "Health – All Ports" before first U.K. port.
TUGS: None. Pilot boat can provide some assistance.
BERTHING: Endeavour Wharf, upper harbour, West side, 203 m.
Eskside Wharf, upper harbour, East side, 122 m.
Vessels will sit aground on soft mud at L.W. on both berths.
BRIDGES: Commercial berths and marina are in the upper harbour above the swing bridge. The bridge is manned 2 hours either side of H.W. and can be contacted on VHF Channels 16/11.
STEVEDORES: Available by arrangement with Agents, Whitby Port Services. Tel: 0947-602272.
Cranes and Cargo Handling Gear: Cranes up to 20 tons. Higher capacity mobile cranes can be brought in, if required, with suitable notice. Forklifts up to 28 tons. Container spreaders. Bulk grabs. All usual equipment.
MEDICAL: Routine matters by arrangement with Agent. Emergencies handled at local hospital.
FRESH WATER: Available on all berths.
FUEL: Available by road tanker.
REPAIRS: Most repairs can be carried out by local firms.
DRY DOCKS: One floating dock, max. lifting capacity 300 tons.
HATCHES: Opened and closed by ship's crew.
CUSTOMS: Standard U.K. allowances.
REPATRIATION: Fully available, good road and rail links, nearest airport Teesside (40 miles).
TIME: GMT in Winter. BST (GMT + 1 hour) in Summer.
HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Spring Holiday, Late Summer Holiday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999, ask for the service required.
STORES: Provisions available locally, stores by truck alongside.
SHORE LEAVE: Allowed.
AUTHORITY: Scarborough Borough Council, Harbour Master's Office, Pier Road, Whitby, N.Yorkshire YO21 3PU. *Tel:* 0947-602354. *FAX:* 0947-604101. *Contact:* Captain W. Estill, Harbour Master.
Operator: Whitby Port Services Ltd., Endeavour Wharf, Whitby, N.Yorkshire YO21 1DN. *Tel:* 0947-602272. *Telex:* 58295. *FAX:* 0947-606229. *Contact:* T. Johnson, General Manager.

WHITEHAVEN: 54.33 N. 03.36 W. (See Plan)

DOCUMENTS: Usual required for clearing a vessel from foreign port, i.e. Crew List, Passenger List, Customs Documents, Ship's Register, Manifest and Bills of Lading.
PILOTAGE: Request for Pilot is made by International Code signal G, sound and visual. ETA should be sent 12 hours in advance either to ship's Agent or Harbour Master or both. Area for taking Pilot on board 4 to 5 cables West of Harbour. Pilot boats are Trinity House Pilot Boats – "Viking" and "Cumbria". VHF is installed.
ANCHORAGE: Same area as for boarding Pilot according to draft.
RESTRICTIONS: Vessels may dock from 1.5 hours before HW till 1 hour after HW according to draft.
MAX. SIZE: 270 ft. length, 40 ft. beam and 17 ft. draft (deepest) on Spring tides, 14 ft. draft (deepest) on Neap tides.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Port Patrick and Anglesey Radio Stations.
TUGS: No tugs.
CRANES:
2×10 tonnes lifting capacity.
1×15 tonnes lifting capacity.
2×5 tonnes lifting capacity.
MEDICAL: Agent should receive notice in advance of any medical treatment required. Hospital services are readily available.
DENSITY: Any state of tide density is 1025.
FRESH WATER: Fresh water is available on all berths, any quantity on request to ship's Agent.
FUEL: Most grades and types available.
FIRE PRECAUTIONS: Usual precautions taken when inflammable cargo is being loaded or discharged.
CONSULS: Norway, Sweden, Denmark and the Netherlands.
REPAIRS: All types of deck and engine repairs carried out.
GANGWAY/DECK WATCHMEN: Advisable to have a watchman but not absolutely necessary.
OPENING/CLOSING HATCHES: Always opened and closed by crew.
CERTIFICATES: Derat Certificate, Load Line Certificate, Radio R/T Certificate, etc.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits.
REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriations.
AIRPORTS: Nearest airports are at Manchester, Newcastle and Prestwick, all approx. 130 miles away.
HOLIDAYS: Cargo may be worked on following days: New Year's Day, Good Friday, Easter Monday, Whit Monday, August Monday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Telephone numbers of these services in order are: Whitehaven 692616, 693181 and 692151.
TELEPHONES: No special arrangements exist for placing telephones on board vessels.
SHORE LEAVE: Crew members may come and go at all times.
IDENTIFICATION CARDS: None required.
GARBAGE DISPOSAL: Skips are available for garbage disposal at two sites in the Queens Dock.
WASTE OIL DISPOSAL: A road tanker service can be made availa for waste oil disposal. There is no special berth for this purpose b berth can be made available.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
DELAYS: There are very seldom any delays in berthing and none loading, discharging or bunkering.
AUTHORITY: Whitehaven Harbour Commissioners, Harbour Off Pears House, 1 Duke Street, Whitehaven, Cumbria CA28 7H *Tel:* Whitehaven (0946) 692435. *Contact:* Captain B. Ashbrid Harbour Master (*Tel:* 692436). R. Rigg, General Manager.

WHITSTABLE: 51.21 N. 01.02 E. (See Pla

APPROACHES: Vessels are advised to arrive at the Whitstable Stre Buoy not later than 1.5 hours before HW.

To ensure that vessel's approach on the correct heading, (122.5 and to assist in identifying the entrance, the Whitstable Oyster Buoy ha been established in a position bearing 310°×1,950 ft. from the light o the Dolphin on the Western side of the Harbour. This is a red ca flashing 2 red every 10 seconds.

The entrance to the Harbour is marked by a Sector Light fixed to th West Quay Dolphin and shows White, Green and Red. The outer en of the East Quay is marked by 2 fixed Vertical Red Lights. The out end of the West Quay is marked by 2 fixed vertical green lights. Ther are fixed Red Leading Lights on the South Quay bearing 122.5° fro seaward.
Harbour Signals: A fixed Red Light shown below the fixed Harbour Whi Light at night means entry of vessels is prohibited. A fixed White Lig *only* means Port open for entry.
PILOTAGE: Pilotage is available but Pilots must be ordered through th local Agent. A minimum of 4 hours notice is required as Pilots are fro Medway Ports Authority.
MAX. SIZE: The Harbour is tidal and dries out at LW with berths of so mud capable of accepting vessels of up to 2,000 tonnes capacity (large vessel: LOA 95 m., max. draft 4.5 m. and 3,274 d.w.t.). There are quays having a total overall length of 2,205 ft. (679 m.), wi accommodation for up to 8 vessels at drafts of 15 ft. 6 in. (4.72 m.) a Spring tides and 12 ft. 0 in. (3.66 m.) at Neap tides.
VHF: Ship to shore communication is maintained by VHF Radio, th call sign being "Whitstable Harbour Radio", listening on Channel 16 an working Channels 12 and 9. The station is manned for 3 hours befor HW to 1 hour after HW and daily from 0800 hrs. – 1700 hrs.
In event of VHF Breakdown: On day tides between the hours of sunris to sunset (from 3 hours before until 1 hour after HW), a Docking Lig Signal may be in operation, exhibited from the Light Tower in positio Lat. 51° 21′ 48″ N., Long. 01° 01′ 39″ E. Character to indicate Po Closed: Fixed White. Character to indicate Port Open and Clear fo Entry: One flash every 3 seconds.
TUGS: The services of a tug can be made available via Lloyd's Agen 24 hours notice is required.
BERTHING:
East Quay: Length 228 m. 3 berths.
Bins – Stone, Slag and Ballast.
South Quay: Length 500 ft. (152.4 m.). 2 berths.
Storage – 1. Warehouse 9,000 sq.ft. (836 sq.m.)
2. Warehouse 7,000 sq.ft. (650 sq.m.)
Open Storage – Bulk Stone, etc. – 2,000 tonnes.
Open Storage and Trailer Park – 5,000 sq.ft. (464 sq.m.)
North Quay: Length 58 m. Fishing vessels only.
West Quay: Length 172 m., width 40 m.
Depth of Water:

Quay:	*HWS*	*HWN*
North	13 ft. 6 in. (4.11 m.)	10 ft. (3.05 m.)
South	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
East	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
West	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)

CRANES: Cranes are privately owned and consist of 2 mobile crane on tracks. SWL up to 10 tonnes.
FRESH WATER: Available.
FUEL: Available.
GARBAGE DISPOSAL: Skips are provided. Black plastic bags a available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: U.K.Pound (U.K.£).
AUTHORITY: Canterbury City Council, Whitstable Harbour Offic Harbour Street, Whitstable, Kent CT5 1AB. *Tel:* Whitstable (022 274086. *Contact:* Captain J.E.Clayton, Harbour Master.

WORKINGTON: 54.39 N. 03.34 W. (See Plan)

DOCUMENTS: Standard U.K. documents.

PILOTAGE: Compulsory. Minimum notice 12 hours via vessel's Agents. Pilot boards 1 mile West of entrance.

ANCHORAGES: 1.5 miles to 2 miles N.W. of the entrance.

MAX. SIZE: 10,000 d.w.t., length 137.2 m. beam 62 ft. and draft 25 ft.

HEALTH: Standard U.K. procedure.

VHF: Workington Harbour Radio operates on Channels 16, 14 and 11. A listening watch is maintained daily from 2.5 hours before HW until 2 hours after HW.

TUGS: Vessels over 92 m. LOA shall, if the Harbour Master so requires, be assisted by a tug or tugs.

A tug is no longer berthed at the port. Shipowners/agents are responsible for making their own arrangements. In the event of a tug being required, the Harbour Master shall be provided in writing, with the tugs specification, at least 48 hours in advance.

The Port Authority also reserves the right to appoint a tug or tugs to attend any vessel if, with due regard to the prevailing circumstances, the Harbour Master deems it necessary.

BERTHING: *Tidal Harbour:* 853 m. of quayage for fishing vessels and other small craft. Depths are from 4.1 m. Neap tides to 7.2 m. Spring tides.

Prince of Wales Dock: Enclosed dock, width of entrance 21.2 m. There is 772.7 m. of quay frontage with depths from 7.2 m. Neaps to 10.2 m. Springs. The dock is 97.8 m. wide at the West end, 76.2 m. at the East end. There is a transit shed situated at the general cargo berth.

CRANES: 1 × 7 tonnes and 1 × 10 tonnes cranes are available. There are also 2 new dockside cranes with a capacity of 12 tonnes at 28 m. radius and 28 tonnes at 13 m. radius.

BULK CARGO FACILITIES: The new automated coal terminal is capable of handling 1,750 tonnes of coal per hour.

SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro facility available.

STEVEDORES: Normal working 0800 hrs. – 1700 hrs. with 3 hours evening overtime if requested. Shift working is available on request from 0600 hrs. – 1400 hrs. and 1400 hrs. – 2200 hrs.

FRESH WATER: Available.

FUEL: Available.

TIME: GMT plus 1 hour (late March – late October), otherwise GMT.

GARBAGE DISPOSAL: One large skip provided by port which is emptied every Friday. Garbage skip's can be hired from Alco and placed immediately alongside ship (Tel: 0900-602205). Rates by agreement.

WASTE OIL DISPOSAL: No shore tanks. Disposal is by tanker trucks, capacity 20 tonnes. Contact Alco (Tel: 0900-602205, Fax: 0900-601886) or Unblock (Tel: 0900-825549).

SEAMAN'S CLUBS: None available. The port is 10 minutes walk from town of Workington.

CURRENCY: U.K.Pound (U.K.£).

AUTHORITY: Cumbria County Council, Port of Workington, Dock Office, Prince of Wales Dock, Workington, Cumbria CA14 2JH. *Tel:* (0900) 602301. *Telex:* 64253. *FAX:* 0900-604696. *Contact:* Captain W.S. Worthington, Harbour Master and General Manager. D.P.Cousins, Operations Manager.

NOTES

United States of America

GENERAL

SHIPMASTER'S REPORT: January 1987.

Preparation for arrival in U.S.A. Ports

Refer to:

1. Annual Summary of Notices to Mariners (British) No. 22 – Charts and Publications.
2. C.F.R. Title 33, Part 164 (especially 164.25/164.30/164.33, 35, 37, 38, 41, 53, etc. Also 159.59 and 155.440, 700, 740, 750).

Action Required:

Purchase (if necessary) large scale U.S. charts, current Coast Pilot and Light Lists, Tide Tables, Loran Charts, Tidal Stream Tables; but British publications are usually acceptable if up to date and charts are of largest scale.

Arrival Preparations:

U.S. Department of Agriculture prepare for inspection of:

1. Galley, storerooms, and possible sealing of prohibited fruits and meats.
2. Covered and leakproof garbage cans.
3. Rat guards.
4. Declare all animals and birds.
5. Hold inspections for grain, etc. Carried out by teams of 2 men, and extremely severe. Failure of holds will result if loose paint scale, loose rust scale, insects or deposits of past cargoes are found. High powered flash-lights used to probe the most remote corners. They are very experienced and know where to look!

U.S. Public Health Service: Ship not boarded unless sickness is reported or vessel is from an infected area.

U.S. Coast Guard: Do a preliminary check, using a "Vessel Compliance Check-List" or an old "Vessel Inspection Form". Before arrival ensure navigation equipment is tested as per C.F.R.33, Part 164.25 and a good Log entry has been made. Check Oil Record Book (151.35); Placard re-discharge of Oil (155.440); Oil transfer procedures are posted (155.750); Marine Sanitation device is working and instructions for use are visible.

Read British Annual Notice to Mariner 4B (The Amver System), especially paragraph 5, (Constructive compliance with C.F.R.33, Part 161.7).

U.S. Customs: Will examine all Certificates.

U.S. Bureau of Labour: Will examine Cargo Gear Register and Certificates.

Documents:

4 Crew Lists (Form I-418).
4 Passenger Lists (Form I-418).
4 Ship's Stores Declarations (Form 1303), to include Shop and Bond Lists, Steward Stores Lists, Medicine Lists, Fire-arms Lists.
4 Crews' Effects Declarations (Form 1304).
1 Master's Oath (Form 1300).
3 Cargo Manifests (Form 1302), if cargo on board original showing all cargo on board and 2 copies showing only cargo for this port.
1 General Declaration (Form 1301), usually completed by Agent.

All ship's certificates should be to hand. Also Last Port Clearance and previous Tonnage Tax Vouchers.

All entry papers must be prepared on proper U.S. Customs Forms, with no attachments permitted.

The Crew List must be made out correctly in alphabetical manner as prescribed. Also a Crew List must be prepared at the previous port and visaed by the U.S. Consulate. For this purpose 2 copies are made.

The original has Columns 1 to 3 completed as usual, but the duplicate must list in Column 4 the date, city and country of birth, and in column 5 the Place and Authority issuing the crew member's passport or document. If this visaed Crew List cannot be produced on arrival a waiver can be granted, for which the Agent must pay U.S.$15 in cash. If the vessel has crew from the People's Republic of China or other communist countries, then shore leave will not be granted at all, without that visaed Crew List. No waiver will be issued for them.

Crewman's Landing Permits (Form I-95A) must be prepared before arrival for each man. Previously used shore passes can be used again, but only if the seaman is still on the same ship.

Some ports require less than the number of documents stated above. The Mississippi consists of 3 Custom areas (New Orleans, Gramercy, and Baton Rouge). If the the ship moves to another area, then new forms may be needed, so extra copies are useful, in the case of Forms 1303 and 1304.

AGRICULTURE: All ports.

Arrival Notification: The vessel's Master or Port Agent must provide advance notification of intent to arrive. Notice is to be received by the U.S. Department of Agriculture (USDA) no less than 12 hours before the estimated time of arrival and must include:

1. The name or other identifying feature of the vessel.
2. The date and estimated time of arrival.
3. The specific location of arrival (dock, pier, mole, anchorage, etc.).
4. The names of all foreign and noncontinental United States ports where any cargo, crew or passenger destined for the continental United States has been boarded since the vessel's most recent arrival in the United States.

Changes in the above information must be communicated as soon as known. If the place of arrival is an anchorage; subsequent movement to a pier, wharf, etc., must be reported as soon as known.

Documents: The cargo, stores, and crews' effects lists or manifests must be available for review by the boarding USDA Inspector.

Inspection: The USDA Inspector will examine the galleys, storerooms, lockers, mess areas, and crew quarters in some instances for prohibited plant materials (fruits, vegetables, and plants) and meat products. Also, inspections may be made of on-board cargo and cargo holds.

Stores Sealing: The USDA Inspector will place under seal certain fre
fruits and vegetables in stores aboard vessels calling at ports in Flor
Mississippi, Alabama, Louisiana, Texas and California. Routine seal
will be limited to fruits likely to carry exotic tropical fruit flies. In addit
USDA Inspectors at any port may require sealing of any vessel sto
when pest infestations are detected. It is recommended that each ves
construct a special compartment for sealing fruits and vegetables
that it will not be necessary to seal the entire vegetable locker.

Garbage: All food wastes aboard vessels arriving from foreign
offshore areas (except Canada) must be handled in accordance
USDA Regulations. Garbage must be held aboard vessels in leakpro
covered containers inside the rails for later disposal or, it may
removed with permission and under supervision of a USDA Inspec
for incineration or sterlisation in approved facilities.

Penalties: Monetary civil penalties may be imposed for violation of US
Regulations including, but not limited to:

1. Failure to provide adequate arrival notification.
2. Breaking U.S. Department of Agriculture seals.
3. Unauthorised or unsupervised removal/disposal of garbage.
4. Unauthorised removal of fruits, vegetables, meats or animal produ or live plants.
5. Failure to keep garbage in other than closed, leakproof containe

Treatments: If quarantine-significant pests are found aboard a ves
an Emergency Action Notification may be issued to the Master. It
prescribe what treatments are required to the affected articles or a
of the vessel and when this treatment must be accomplished.

Honeybees: Honeybees may not be brought into the United States.
is a precaution to keep out Africanised bees, which could gravely up
beekeeping in North America. Do not disturb any signs of bees on bo
such as live swarms, dead bees, or hives. Contact the ship's Ag
before entering U.S. ports for appropriate instructions regarding disp
and treatment from the USDA inspector.

Animals/birds: All live animals or birds aboard vessels must be retai
on-board and reported to the USDA Inspector.

For additional information: Write to "Quarantines", U.S. Departme
Agriculture, Federal Building, Hyattsville, MD 20782. Tel: (3
436–8295, 436–8455.

Notice

To: Ship's Masters:
From: United States Department of Agriculture, Animal and Plant He
Inspection Service.

On April 1st, 1985, the Animal and Plant Health Inspection Ser
(APHIS) will implement routine sealing of certain fresh fruits
vegetables in stores aboard vessels calling at ports in Flor
Mississippi, Alabama, Louisiana, Texas and California. Routine sea
will be limited to fruits likely to carry exotic tropical fruit flies. In addi
APHIS Officers at any port may require sealing of any vessel st
when pest infestations are detected.

This is an interim measure in preparation for full implementation
new Maritime Clearance and Monitoring Guideline on or about June
1985. You will receive additional information in the near future.

It is recommended that each vessel construct a special compartm
for sealing their fruits and vegetables so that it will not be necessa
seal the entire vegetable locker.

You are reminded that the following may result in a civil/mone
penalty:

1. Breaking U.S. Department of Agriculture seals.
2. Unauthorised or unsupervised removal/disposal of garbage.
3. Unauthorised removal of fruits, vegetables, meats or an products, or live plants.
4. Failure to keep garbage in other than closed, leakproof contai

Further information can be obtained by calling (713) 229-3541.

Purser's Note: It is advisable to have a locker ready prior to arriv
order that fruit and vegetables may be transferred for sealing.

ALCOHOL:

OPERATING A VESSEL WHILE INTOXICATED
COMMERCIAL VESSELS (33 CFR PART 95)

1.	*Applicability:*	Any crew member, pilot, or watchstander a regular crew member, on any U.S. ves anywhere or any foreign vessel in the national waters of the U.S. (out to three miles offshore).
2.	*Standard of intoxication:*	Blood alcohol concentration of 0.04% or more by weight; *OR* Effect of intoxicant (drug or alcoholic) on person's manner, disposition, speech, muscular movement, general appearance behaviour is apparent by observation.
3.	*Evidence of intoxication:*	Chemical test or personal observation.
4.	*Who may require testing:*	Law enforcement officer or marine emplo when reasonable cause exists.
5.	*Reasonable cause for testing:*	When individual is directly involved in ma casualty; *OR* Individual is suspected of being intoxicate
6.	*Refusal to submit to test:*	Is admissible as evidence in any administrative procedure if ordered by marine employer *and further* will be caus for presumption of intoxication if ordered law enforcement officer.
7.	*Prohibited acts of individual while aboard vessel:*	A. Be intoxicated at any time. *B. Perform or attempt to perform any scheduled duties within four hours of consuming any alcohol. *C. Consume any intoxicant while on wat or duty.

8. *Penalties (46 USC 2302(C):* A. Civil penalty of up to $1,000.
B. Criminal penalty of up to $5,000 and/or imprisonment for up to one year.

The U.S. Public Health Service, Quarantine, station in Miami, Florida is also responsible for Ports in Puerto Rico and the U.S. Virgin Islands.

Masters of Vessels arriving at United States ports

Effective July 1, 1973, Radio Pratique as a method of Quarantine Clearance was discontinued at all ports under control of the United States.

Vessels Subject to Public Health Inspection

The only vessels that will be subject to on-board public health inspection upon arrival or during stay at ports under control of the United States are those carrying crew or passsengers having:

1. Temperature of 100°F.(38°C.) or greater, accompanied by a rash, glandular swelling, or jaundice, or which has persisted for more than 48 hours; or

2. Diarrhoea, defined as the occurrence in a 24-hour period of three of more loose stools or of greater than normal (for the person) amount of loose stools; or

3. On-board occurrence of death, regardless of the signs and symptoms above.

Procedures. In accordance with regulations you must inform the quarantine station, through your vessel's Agent, at or nearest the intended port of your vessel's first arrival in the United States of the occurrence of illness as specified above. Arriving vessels no longer need to complete a Maritime Public Health Declarataion.

These changes reflect our confidence that you will continue to report, in advance of arrival in the United States, the on-board occurrence of: death or illness compatible with the signs and symptoms specified above, or death or illness while in port if such occurs after arrival.

AUTHORITY: Department of Health and Human Services, Centers for Disease Control, Program Operations Branch, Division of Quarantine CPS (EO3), Atlanta, Georgia, GA. 30333. *Tel:* (404) 639 – 1437.

PILOTAGE: North West Coast of U.S.A.
Columbia River Bar Pilots are "Sea Pilots" for all ports in Columbia and Willamette Rivers. Namely, Astoria and Portland (Oregon), Longview, Kalama and Vancouver (Washington) – when entering from sea and if providing above Astoria, Columbia River Pilots relieve Bar Pilots for balance of transit.

COLUMBIA RIVER BAR PILOTS
Foot of 14th Street,
P.O.Box 87, Astoria, Oregon 97103
TWX 9104668014
FAX (503) 325-5630
Marisat 00259104668014+
Telephones (503) 325-2641 or 325-2642

RADIO FACILITIES

Pilot Boat Peacock	WS 7217
Pilot Boat Columbia	WYE 7344
Bar Pilots Office, Astoria	KOK 360
(Ch. 16) (156.80 MHz)	
Astoria Marinephone "KFX"	
Ship's Call on	2206 kHz
KFX Answers on	2598 kHz

Or call on and receive KFX on Channel 26.

In order there be no delays, vessels due to arrive at the Columbia River and desiring a Bar Pilot, must cable or telephone the Columbia River Bar Pilots. (Pilot normally not on station unless cable or telephone message received.) USE RADIO STATION KLB, EVERETT, WASHINGTON at least 12 hours before arrival at the lightship. Code address, "BAR PILOT ASTO, STATING THE TIME OF ARRIVAL" If transmitted by any other radio station, delay may occur. If vessel is equipped with VHF, use Channel 16 (156.80 MHz) to call the pilot boat or Bar Pilots' Office, Astoria (KOK 360) and shift to Channel 13 (156.65 MHz).

PILOT LADDER INSTRUCTIONS

1. Please contact the pilot boat via voice radio (Channel 16 or Channel 13 approximately 30 minutes prior to arrival for desired lee and boarding instructions.

2. The Columbia River Bar Pilots have 2 pilot vessels; the "Peacock" and the "Columbia". When the "Peacock" is on station, Masters will be instructed to rig their pilot ladder 4 ft. above the water's edge. When the "Columbia" is on station, the Master will be instructed to rig the ladder 10 ft. – 12 ft. above the water's edge. The above-mentioned distances above the water are of the utmost importance, particularly in the case of the "Columbia", as the pilot boat can and has pulled the ladder down when it becomes pinched between the pilot boat and the side of the vessel. Pilot ladders and boat ropes shall not be permitted to drag in the water. No tag lines, pull ropes or trailing lines shall be attached to the bottom of the ladder. All pilot ladders must comply with SOLAS Regulations.

3. Pilot ladders shall be rigged amidships, over "draft marks" clear of all obstructions, such as accommodation ladders, and clear of overside discharges from the engine room and deck scuppers.

4. The pilot ladder should be kept clean and used for embarking and disembarking Pilots only. The ladder shall be made in one continuous length, not 2 sections shackled or lashed together. The ladder shall be equipped with spreaders approximately 10 ft. apart in accordance with SOLAS regulations. The ladder must be in good condition, the treads horizontal and the upper surface of rough non-skid quality.

5. The ladder must be adequately lit at night by means of a light shining well over the ship's side in the vicinity of the ladder. The area of the deck where the Pilot boards and leaves should be free of debris and well lighted. Where portable stanchions and bulwark steps are used, they shall be rigidly attached to the ship's structure. A life ring with water light and lifeline attached should be ready at hand. Rigging of the ladder and embarking and disembarking of the Pilot must be under the supervision of a licensed officer.

6. Boat ropes are not to be used, all pilot boats are power propelled.

7. Manropes shall be of manila 3 in. circumference. The manropes shall be free of any knots including the lower end. The manropes should be rigged 1 ft. – 2 ft. longer than the pilot ladder. Manropes are not to be rigged for boarding unless otherwise advised.

8. If vessel is to take a deck load of logs, please discuss with your Agent the building of a catwalk to provide safe passage to and from the pilot ladder.

Long Island Sound and Connecticut Ports:
The Connecticut State Pilots Association is offering pilot service for all foreign and registered vessels en route to and from Connecticut Ports via the Long Island Sound. U.S. enrolled vessels will continue to be services by Interport Pilots using the same boats and pilots. Pilots are licensed by the Federal Government and the State of Connecticut.

The Pilot Station established off Montauk Point provides a more direct route to Long Island Sound ports. Vessels using Connecticut State pilots through the mile wide, 58 ft. deep, Montauk Passage, will save between 1 hour and 3 hours steaming time as opposed to being diverted to pilot stations at Point Judith or Brenton Reef, Rhode Island.

The U.S. Navy uses the Montauk Passage for its nuclear submarines bound to and from Connecticut ports and, as Interport Pilots, we have used this route for vessels in the coastwise trade for over 30 years.

Notice of Arrival is required. A 24 hour to 36 hour advance notice ETA is suggested. A 12 hour update and a 6 hour update is necessa in order to co-ordinate dispatching of pilots.

The Pilot boarding point is 3 miles East of Montauk Sea Buoy.

Connecticut State Pilots Association, State Pier, New London, C 06320. Tel: 1 (800) 346-4877 or in New Jersey 1 (201) 291-131 Cables: Port Pilots, Atlantic Highlands, N.J. Pilot Boat: Call Sign "Connecticut Pilot".

Constitution State Pilots Association also offer pilot service in Lon Island Sound and all Connecticut ports.

Constitution State Pilots Association, formed in 1986, offer a pilotag service in Block Island Sound, Long Island Sound, the Harbours Bridgeport, New Haven and New London, Connecticut. They als provide docking pilot services in the afore-mentioned harbours, and hav 2 Pilot Stations, one located at Montauk Point in Block Island Soun (Lat. 41° 01.7′ N., Long. 71° 41.8′ W.), and the other station at Blo Island (Lat. 41° 18′ N., Long. 71° 35′ W.). These stations are service by the Pilot Boat "Constitution", a 65 ft. blue and white vessel whic monitors VHF Channels 16 and 9.

Constitution State Pilots Association, 500 Waterfront Street, New Haven, Connecticut 06512. Tel: 203-783-5991 (24 hours). Fax: (51 582-6327. Telex: 940103 WU Pubtlx BSN.

The Long Island Sound State Pilots Association is offering total pil service for all foreign and registered vessels on Long Island Sound an Connecticut Harbours, also New York Platforms.

U.S. Enrolled Vessels will also be served by Long Island Sound Pilo Association. Licensed by the U.S. Federal Government and State o Connecticut, Long Island Sound State Pilots Association hav established the first pilot boat station off Montauk Pt., Long Island, New York, for a shorter route to the Sound and Connecticut (See "Plan").

Vessels using Long Island Sound State Pilots Association will sav between 2-3 hours of steaming time, as opposed to being diverted t pilot station at Pt.Judith, Rhode Island.

Long Island Sound State Pilots have been serving the Industry fo over 30 years.

Long Island Sound State Pilots Association Inc., (Formerly Intersta Pilots Assoc. Inc.), 1440 Whalley Avenue, Suite 123, New Haven, Connecticut 06515. Tel: (203) 772-0101 (24 hours). Cables: Lispilot New Haven, Connecticut. Fax: (302) 629-9392.

AUTOMATIC RADAR PLOTTING AIDS: With effect as from July 1st, 1982, vessels carrying oil or hazardous materials in bulk must hav automatic radar plotting aids.

A fine for failure to carry an ARPA could be multiplied by the numbe of days of the violation.

The United States Coast Guard has stressed, however, that its offici policy is enforcement by denial of entry and restriction of operation an not primarily by the enforcement of fines.

While the Coast Guard recognises that the Public Law enable financial penalties to be incurred, it is believed that the terms of the Po and Tanker Safety Act under which the U.S. Coast Guard operate directs it to monitoring and identification of previous offenders an enforcement by prevention of entry into U.S. ports or subseque restriction of trade and departure.

COAST GUARD REGULATIONS: The U.S. Coast Guard has announced its intention to develop the following regulation implementing sections of the 1978 U.S. Port and Tanker Safety Ac requiring:

1. Existing crude oil carriers of 20,000 d.w.t. or above but less tha 40,000 d.w.t. to have segregated ballast tanks (SBT) or a crude o washing system (COW) by January 1st, 1986, or when they reac 15 years of age, which ever occurs later; and

2. Existing product carriers of 20,000 d.w.t. or above but less tha 40,000 d.w.t. to have SBT or dedicated clean ballast tanks (CBT) b January 1st, 1986, or when they reach 15 years of age, whichever occur later.

POLLUTION: Any vessel which does not have a valid I.O.P.P. Certifica on board will not be allowed to transit U.S. waters.

NOTICE: *B.A. Notice to Mariners No. 3013(T) of 1983:*
UNITED STATES OF AMERICA – Chart and Publication requiremen

A statement concerning the U.S. Navigation Safety Regulatio relating to Navigation, charts and Publications has been issued in th U.S. Notices to Mariners Weekly 44/83. This is reproduced belo Admiralty Annual Notice to Mariners No. 22 will be amended a appropriate in the 1984 edition.

CHART AND PUBLICATION REQUIREMENTS

Sections 164.30 and 164.33 of Title 33 of the Code of Feder Regulations Part 164 (33 CFR 164), which detail requirements for th carriage of nautical charts and publications, are amended effecti October 28, 1983. The regulations contained in these sections a applicable to each self-propelled vessel of 1,600 g.r.t. or more, operati on the navigable waters of the United States, except the St. Lawren Seaway, and are reprinted as follows:

§164.30 Charts, publications, and equipment: General.

No person may operate or cause the operation of a vessel unless th vessel has the marine charts, publications, and equipment as requir by §§164.33 through 164.41 of this part.

§164.33 Charts and publications.

(a) Each vessel must have the following:

(1) Marine charts of the area to be transited, published by the Natio Ocean Service, U.S. Army Corps of Engineers, or a river authority th

(i) Are of a large enough scale and have enough detail to make sa navigation of the area possible; and

(ii) Are currently corrected.

(2) For the area to be transited, a currently corrected copy of, applicable currently corrected extract from, each of the followi publications:

(i) U.S. Coast Pilot.

(ii) Coast Guard Light List.

(3) For the area to be transited, the current edition of, or applicable current extract from:

(i) Tide tables published by the National Ocean Service.

(ii) Tidal current tables published by the National Ocean Service, or river current publication issued by the U.S. Army Corps of Engineers, or a river authority.

(b) As an alternative to the requirements for paragraph (a) of this section, a marine chart or publication, or applicable extract, published by a foreign government may be substituted for a U.S. chart and publication required by this section. The chart must be of large enough scale and have enough detail to make safe navigation of the area possible, and must be currently corrected. The publication, or applicable extract, must singly or in combination contain similar information to the U.S. Government publication to make safe navigation of the area possible. The publication, or applicable extract must be currently corrected, with the exceptions of the tide and tidal current tables, which must be the current editions.

(c) As used in this section, "currently corrected" means corrected with changes contained in all Notices to Mariners published by Defense Mapping Agency Hydrographic/Topographic Centre, or an equivalent foreign government publication, reasonably available to the vessel, and that is applicable to the vessel's transit.

SHIP'S OFFICER'S REPORT: The information given for the port of New Orleans (U.S.A.) applies to all the ports in the U.S.A. in the event of the vessel arriving from abroad or from a previous U.S. port. All the documents such as Crew List, Passenger List (Form I-418), Deck, Engine, Steward's and Bonded Stores Lists (Form 1303), Crew's Effects Declaration (Form 1304), are required in duplicate at each port for entry inward.

ALBANY, New York: 42.40 N. 73.45 W. **(See Plan)**

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Albany cargo, 3 Crew Lists, 3 Stores Lists, 3 Curio Lists, Ship's Register, Load Line Certificate and Tonnage Tax Certificate.

PILOTAGE: Hudson River Pilot boards vessel off Yonkers, N.Y. Cable address: "Hudpilots, Yonkers, N.Y."

ANCHORAGES: Several anchorage areas in Hudson River en route to Albany if required due to weather. Vessels cannot anchor at Port of Albany.

RESTRICTIONS: Hudson River Channel to Albany has controlling depth of 32 ft. MLW. Vessels with draft in excess of 28 ft. will be required to transit river on favourable tide as directed by Pilot.

MAX. SIZE: Max. permissible length 750 ft., breadth 110 ft., draft 30 ft. Turning basin at Albany 1,100 ft. in width.

HEALTH: See "Health: All Ports" before first U.S.A. port. Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port.

TUGS: One 2,500 h.p. tug stationed at port at all times; additional tugs available upon advance request. Normally 1 tug is sufficient for turning and docking. Tug's lines are used.

BERTHING: 5,000 linear ft. of marginal wharf available at APDC terminal for general cargo, grain, lumber, etc., 30 ft. alongside wharf. Various privately operated deep-water petroleum terminals in port area.

Facilities: 13.5 million bushel grain elevator. 17 million gallon molasses storage – 2 terminals. Scrap Iron Terminal, 300,000 sq. ft. covered warehouse space.

Equipment: Available at the Port of Albany:

2 Gas powered 5,000 lb. lift trucks.
8 Diesel powered 9,000 lb. lift trucks, all are available with bale clamps.
1 Diesel powered 30,000 lb. lift truck.
1 Diesel powered 50 ton top loader.
1×225 ton capacity crawler type crane.

BRIDGES: Minimum vertical clearance of bridges on Hudson River en route to Albany is 135 ft.

STEVEDORES: Rates and information can be obtained from Meehan Overseas Terminals, Ltd.

TANKERS: Bray/Getty Terminal:

Location: The Bray/Getty Terminal is located approximately 126 miles from the Battery (NYC), about 0.8 miles Northward of Island Creek. It is an offshore wharf 250 ft. long with a dock height above the waterline of 11 ft.

Berthing: Normal berthing is starboard side to with the use of only one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the berth from midstream on approximately a 30° angle to the pier. The tug is used on the port bow to control the direction of the vessel during the approach. Once alongside the pier, spring lines are run out and the vessel is held in position with her own engines until the tug is secured. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this terminal.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: Although an oil boom is permanently in place inside the dock area, outside contractors must be contacted for clean-up in the event of the oil spill.

Firefighting: The terminal is equipped with one 150 lb. dry chemical extinguisher with additional firefighting support by shorebased fire trucks.

Cirillo Terminal:

Location: The Cirillo Terminal is located approximately 125 miles from the Battery (NYC), about 0.5 miles Northward from Island Creek. It is a bulkhead wharf 280 ft. long with a dock height above the waterline to 10 ft. It is owned by Albany Port District Commission and operated by Cirillo Brothers.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug, may be required if adverse weather conditions exist. The vessel approaches the berth on the ebb tide and slowly approaches the marginal berth in the usual manner. The current in this area sets fair with the dock face creating an ideal docking environment. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: The terminal can supply fresh water upon request.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although an oil boom is readily available for oil spill containment, all clean-up must be performed by outside contractors.

Metropolitan/Arco Terminal:

Location: The Metropolitan/Arco Terminal is located approximately 126 miles from the Battery (NYC). The dock is of an offshore wharf construction with dolphins.

Berthing: Normal berthing is starboard side to with the use of 2×1,800 h.p. tugs. All ships are usually docked at Slack High Water. The vessel approaches the dock from the centre of the channel and is carefully breasted alongside the pier, using her tug and the current to slide over against the breasting dolphins. Spring lines are run first, followed by breasts, then head and stern lines. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available.

Bunkers: Fuel is not available at the dock.

Slop/Deballast: The terminal is not equipped for slops or dirty ballast receipt.

Security: The terminal is fenced and guarded. The main gate is locked when no vessels are at the dock. When a vessel arrives the dock is continually manned by terminal employees.

Pollution: The terminal is equipped with a workboat and 1,000 ft. of boom for spill containment. Local contractors must be contacted for clean-up operations.

Firefighting: The dock is equipped with one 150 lb. dry chemical extinguisher. Additional back-up is supplied by local firefighting departments.

Niagara/Mohawk Terminal:

Location: The Niagara/Mohawk Terminal is located approximately 125 miles from the Battery (NYC).

Berthing: Normal docking is port side to with the assistance of one 1,200 h.p. tug. The vessel approaches the marginal berth at minimum velocity with the ship's engines used to maintain relative position of vessel while lines are passed. The tug assists in the breasting of the vessel towards the dock. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Piped fresh water is available at the dock.

Bunkers: Fuel is not available at this terminal.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded.

Pollution: The dock is equipped with 2,500 ft. of boom for oil spill containment.

Firefighting: Portable CO_2 extinguishers provide adequate firefighting capabilities.

Sears Terminal:

Location: The Sears Terminal is located approximately 124 miles from the Battery (NYC), about 1.2 miles Southward of Island Creek. It is an offshore wharf 191 ft. long with a dock height 10 ft. above waterline.

Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the dock on the first of the ebb tide, slowly stemming the tide during the approach. The tug is positioned on the starboard bow to control the vessel's movements. After a normal approach, the vessel is spotted and spring lines are led out. The vessel is then held in position with the tug and own engines while the breast, head and stern lines are led out. See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at this dock.

Bunkers: Fuel is not available.

Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.

Security: The terminal is fenced and guarded at all times.

Pollution: Although the terminal is equipped with a workboat and boom for oil spill containment, all clean-up equipment and personnel must be secured through local contractors.

Roseton, N.Y.: Central Hudson Gas & Electric Terminal:

Location: The Central Hudson Gas and Electric Terminal is located on the Hudson River approximately 74 miles from the seabuoy.

Berthing: Normal berthing is starboard side to with use of one 3,500 h.p. tug. An additional tug may be required during adverse weather conditions. The vessel proceeds to a point opposite to or a little above the dock, turns midstream with the aid of the tug and comes down parallel to the dock. She is then breasted in and held alongside by the tug while the spring and breast lines are led out. The tug then handles the head and stern lines (synthetic required). See "Plan".

Gangway: The terminal does not provide a gangway.

Fresh Water: Not available at the dock.

Bunkers: Fuel is not available at this terminal.

Security: The terminal is fenced and guarded.

Pollution: Booms and absorbent materials are available on the dock in the event of an oil spill.

Firefighting: The dock is equipped with one 250 lb. purple K extinguisher, 2×2.5 in. fire hoses with fog nozzles on a 6 in. main.

Ravena, N.Y. (Port of Albany): Atlantic Cement Terminal:
Location: The Atlantic Cement Terminal is located on the Hudson River approximately 127 miles from the seabuoy and is under the jurisdiction of the Port of Albany.
Berthing: All vessels must dock and undock during daylight hours only. Normal berthing is port side to with the use of one 2,100 h.p. tug. An additional tug may be required during adverse weather conditions or when docking on a rising tide. The dock is of a marginal design, parallel to the channel axis. Normal approach is with a tug breasting the vessel onto the dock.
Gangway: The terminal does not provide a gangway.
Fresh Water: Not available at the dock.
Bunkers: Fuel is not available at this terminal.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: Although the terminal is not fenced or guarded, dock personnel are in attendance at all times.
Pollution: In the event of an oil spill, the containment and clean-up equipment available at the dock consists of:

1. 7,400 ft. of 12 in. collar boom.
2. Oil retention gate mounted on dock.
3. 23 ft. 150 h.p. tow boat.
4. 30 ft. deck barge for oil boom.
5. 500 ft. of 2.5 in. fire hose.
6. 100 bags of oil absorbent material.
7. 15 bags plastic "Oil Snares".
8. Air bubbling system along dock face.

Firefighting: The dock is equipped with one 500 lb. dry chemical extinguisher, 350×2.5 in. hose and fog nozzles located adjacent to the dock manifold.
FRESH WATER: Supplied during regular working hours daily, except Saturdays, Sundays, and holidays, at $2.75 per 100 cu. ft. plus $22.00 service charge per daily delivery on straight time. Additional charge if supplied during other periods.
CONSULS: Italian Vice-Consulate located at Albany, other consulates available at New York City.
REPAIRS: Minor deck and engine repairs can be handled.
GANGWAY/DECK WATCHMEN: Available via ship chandler, not required but recommended.
AIRPORT: 7 miles distant from port: served by Allegheny, America, Altair and Executive Airlines.
TIME: Eastern Daylight Saving, (GMT minus 4 hours) from first Sunday in April till last Sunday in October.
HOLIDAYS: Standard U.S. holidays; cargo work can be arranged on all holidays at overtime rates, except July 4th, Labour Day and Christmas Day.
SHORE LEAVE: Crew members allowed ashore unless restricted by Customs or Immigration requirements.
GARBAGE DISPOSAL: Service not available.
WASTE OIL DISPOSAL: Arranged through local Agents.
SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: February 1980.
Pilotage: Compulsory. Pilot boards at Ambrose Light Tower and Hudson River Pilot boards at Yonkers.
Restrictions: Vessels able to enter and leave during darkness at any stage of the tide.
Max. Size: LOA 750 ft. (Approx). Max. Draft: 31 ft. to 32 ft. depending on height of river.
Tugs: One tug stationed at Albany (approx. 2,500 h.p.). Additional tugs come from New York.
VHF: Tug only listens out on VHF before vessel arrives.
Services: Following services available: Fresh water, fresh provisions, small repairs, machine shop, airport, Lloyd's surveyor (from New York), Salvage surveyor (from New York), lubricating oil, groceries and meats.
Berthing: Pier No. 2 Albany: Berth located 3 miles from Albany and 145 miles from the entrance. Vessel's size limited by draft and space available in swinging room in basin. Max. size approx. LOA 600 ft., draft 31 ft. Least depth of water in channel from sea to berth 33 ft. (approx). Vessels able to dock and undock at any stage of the tide, day or night.
Grain Loading Facilities: Available.
Ro/Ro Facilities: Available in New York Harbour.

AUTHORITY: Albany Port District Commission, Administration Building, Port of Albany, Albany, N.Y. 12202. *Tel:* (518) 463-8763. *FAX:* (518) 463-8767. *Contact:* F. Keane, General Manager.

ALEXANDRIA, Virginia: 38.48 N. 77.03 W. **(See Plan)**

LOCATION: On the Potomac River 7 miles from Washington D.C.
DOCUMENTS/PILOTAGE: Refer to "Hampton Roads".
RESTRICTIONS: Anchoring necessary between 2200 hrs. – 0600 hrs. Berthing daylight only.
Channel: Width 200 ft. Depth 24 ft. Turning basin: length 6,700 ft. Width 300 ft.
MAX. SIZE: Governed by draft only – max. 22 ft. 6 in. all times.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: WMH Baltimore, Md.
TUGS: None required.
BERTHING: 2 open piers. Berthing 0600 hrs. to 2200 hrs.
BRIDGES: 1 bridge, closed Monday through Friday 1600–1830 hrs. a 0630–0900 hrs.
STEVEDORES: Informally arranged through Receivers or Shippe Agents.
MEDICAL: Hospital available.
FRESH WATER: Available at berth – 10 t.p.h.
FUEL: Not available.
REPAIRS: Minor facilities.
GANGWAY/DECK WATCHMEN: Shore watchman provided.
OPENING/CLOSING HATCHES: Stevedores. Vessel – depending understanding.
REPATRIATION: Facilities exist.
AIRPORT: 3 miles. Washington National – multiple flights.
TIME: GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Agents arrange. Watchmen on duty.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required by Immigration.
DELAYS: No unusual delays.
SERVICES: Searle Consortium, Ltd. in Alexandria (Tel: (703) 768-602 and their sister company, Seaward Marine Services can provide t following: Diving and general underwater inspection service underwater hull cleaning; Salvage survey and underwater repairs o salvage nature; assistance in the refloating of stranded vessels an assistance in the arranging/engineering of towage.
AUTHORITY: Virginia Port Authority, 600, World Trade Center, Norfol Va. 23510. *Tel:* (804) 683-8000. *Telex:* TWX 710-881-123 *Cables:* Vastports-Norfolk.*FAX:* (804) 683-8500. *Contact:* J.Robe Bray, Executive Director.

ANACORTES, Washington: 48.31 N. 122.36 W. **(See Pla**

STEVEDORES: Request 24 hours' notice. Working hours: 0800 – 12 and 1300 – 1700.
Weekend work on overtime rates.
FRESH WATER: Available from city water system.
FUEL: Available from Shell and Texaco (Bunker "C" and light diese
REPAIRS: Minor repairs only.
DRY DOCKS: Synchrolift (300 ft. × 75 ft.) with capacity 5,250 tons.
GANGWAY/DECK WATCHMEN: Not required by port.
OPENING/CLOSING HATCHES: Stevedores or crew before vesse arrival.
CUSTOMS ALLOWANCES: No definite quantities prescribe reasonable allowance at discretion of Customs Inspector.
CARGO GEAR: ILWU requirements.
AIRPORT: 75 miles Seattle International.
TIME: GMT minus 8 hours. From end April to end October, Pac Daylight Saving Time, GMT minus 7 hours.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire dial 911.
TELEPHONES: Available at Pier 2 and at Pier 1 by Phone Co.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
AUTHORITY: Port of Anacortes, P.O.Box 297, Anacortes, Washingt 98221. *Tel:* (206) 293 – 3134 (Scan System 576 – 6371). *FAX:* (20 293-9608. *Contact:* M. Hardy, Marine Terminal Supervisor.

ANCHORAGE, Alaska: 61.12 N. 150.00 W. **(See Pla**

DOCUMENTS:
3 copies Cargo Manifest (Form 1302), the original showing all ca on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
Customs Boarding Officer will also examine Ship's Register and Lo line Certificate. In addition, the following documents will be required f formal entry to be made within 48 hours of arrival from abro or 24 hours from arrival from a United States port:
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 100
Certified Crew List.

PILOTAGE: The pilot station for Anchorage is at Homer, Alaska. Vessels may contact Pilot by radio telephone. Telegraphic address "Almarrpilot", ETA notice requested 24 hours. Listens VHF Channel 10. Pilot boat green and white. Pilot flag by day, pilot light at night. Pilot boat 1 mile South of Homer Spit (Coal Point), Homer, Alaska. In bad weather, wait inside Homer Spit and advise via radio-telephone.

Also see "Homer".

ANCHORAGES: The best anchorage for deep-draft vessels is West of Anchorage in depth of 10 fathoms to 12 fathoms, silt bottom. Holding ground is good.

TIDE AND CURRENTS: The diurnal range of tide is 29.6 ft., currents from 1.7 knots to 6 knots or more in mid-channel.

RESTRICTIONS: Flow and pan ice is encountered in the Cook Inlet from approximately the end of November until the end of February. This ice does not freeze solid due to the tidal action. The port is in year-round use and expert information on Winter conditions may be obtained from any of the highly qualified licensed ship pilots available in the area.

MAX. SIZE: All berths 35 ft. MLLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Port of Anchorage "KBT-42" on HF-AM and SSB. "WHJ-82" on VHF-FM.

Radio Advice: Masters must notify Agents at Anchorage of ETA at Homer Spit, Alaska, as early as possible. Homer Spit position: 59° 35′ N., 151° 40′ W. To avoid confusion ETA message to Anchorage should indicate Time Zone used. Alaska Communication System Stations are located at Juneau – call sign AKM – Keeping watch on 500 kHz and working on 452 kHz. This station is reported to be very difficult to contact and is closed during weekends.

The fastest way to forward radio messages in the North Pacific is via San Francisco Radio KPH.

The U.S. Coast Guard Station Kodiak – call sign NOJ – keeps W/T watch on 500 kHz, working on 470 kHz.

Due to difficulties reported in contacting local Alaskan stations, Masters of vessels engaged on trans-Pacific crossings are advised to route radio messages to Alaska and Europe via Singapore Radio or Choshi Radio until the dateline, thereafter via San Francisco radio.

TUGS: Join vessel 1.5 miles S.W. of docks.

BERTHING: 600 ft. General Cargo Terminal No. 1, apron width 95 ft., live road limit 600 lb. per sq. ft. General Cargo Terminals No. 2 and 3, 610 ft. and 893 ft. respectively, apron width 69 ft. Depth alongside face at MLLW 35 ft.

SPECIALISED CARGO HANDLING FACILITIES: 2×30 ton Paceco and 1×40 ton Mitsubishi container cranes servicing general cargo Terminals 1, 2 and 3; private bulk cement pipe-lines to shore silos. Ro-Ro service available.

CRANES: Shore Cranes: Level luffing gantry, Paceco and Mitsubishi container cranes. Capacity: Level luffing gantry 7.5 tons and 40 tons (5 ton high-speed whip lines). Container cranes 30 tons and 40 tons.

Outreach from fender face is 70 ft. for the gantries and 81 ft. on the Paceco. Clear height above MLLW is 132 ft.

STEVEDORES: *Working Hours:* Stevedores do not work on January 1st, September 6th, November 25th and December 25th. The first 6 hours of any shift between 0800 hrs. and 1500 hrs. is at the straight time rate. Work performed on Saturdays, Sundays, holidays and between 1700 hrs. and midnight is at overtime rate. Meal breaks are 1145 hrs. to 1300 hrs. and 1745 hrs. to 1900 hrs. Stevedores work between 0100 hrs. (double overtime rate) and 0700 hrs.

MEDICAL: All facilities available. 3 local hospitals.

TANKERS: Petroleum Terminal No. 1 at the Port of Anchorage is contiguous to the general cargo piers. The POL Pier is 612 ft. long and contains multiple petroleum manifolds. Depth alongside 35 ft.

Petroleum Terminal No. 2 is a new "T" Pier located South of the existing facility. POL No. 2 is 645 ft. long including dolphins and contains multiple manifolds. Pier will accommodate vessels to 600 ft. Depth alongside 35 ft.

DENSITY: From 1009 to 1010.

FRESH WATER: Public Health Service certified water station.

FUEL: All grades available.

SURVEYORS: B. J. Logan and Associates, (Lloyd's Agency; correspondence to AIMU; National Cargo Bureau), 237 E. Third Avenue, Anchorage, Alaska 99501. Tel: (907) 272-7724.

GANGWAY/DECK WATCHMEN: Required shipside.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: At the discretion of Customs Officer. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

AIRPORT: 5 miles; served by regular foreign and domestic airlines.

HOLIDAYS: New Year's Day (January 1st); Lincoln's Birthday; Washington's Birthday; Seward's Day (March 30th); Memorial Day; Independence Day (July 4th); Labour Day; Columbus Day; Alaska Day (October 19th); Veterans' Day; Thanksgiving Day; Christmas Day (December 25th).

POLICE/FIRE/AMBULANCE: Police 786–8900; Ambulance/Fire 267–4900.

BANKS:

Alliance Bank
First National Bank of Anchorage
Key Bank
National Bank of Alaska
Ranier Bank Alaska

STORING: See "Prelims".

1. Yes.
2. No restrictive regulations.
3. Yes: Immediately adjacent to ship.
4. Yes.
5. No.
6. Yes.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Anchorage, Alaska 99513. Tel: (907) 271-5137.

TELEPHONES: Telephones available shipside.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I – 95 to be made up for each crew member on arrival. Not necessary for crew men already holding Form I–95, issued for the same vessel.

GARBAGE DISPOSAL: No skips or drums provided. Agents to make arrangements.

Service provided by Dynair Service Inc., c/o D.J.Orr, P.O.Box 190-408, Anchorage, AK 99519-0408. Tel: (907) 243-3403.

WASTE OIL DISPOSAL: 7,000 gallons per day per tanker truck. Rate $ 0.50 per gallon (oil). Contact: Alaska Pollution Control, P.O.Box 10-374, Anchorage, AK 99510. Tel: (907) 344-5036.

SEAMAN'S CLUBS: None.

AUTHORITY: Port of Anchorage, 2000 Anchorage Port Road, Anchorage, Alaska 99501. *Tel:* (907) 272-1531. *Telex:* 090-26-431. *FAX:* (907) 277–5636. *Contact:* H. Glenzer, Jr., Port Director.

ASHTABULA, Ohio: 41.53 N. 80.48 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Nearest pilot station is the Welland Canal, Canada.

ANCHORAGES: No anchorage inside boundaries. Good anchorage outside to East of the entrance, depth approx. 20 fathoms.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Contact Lorain, Ohio ship-to-shore station for local connections.

TUGS: Tugs normally join vessels just inside harbour entrance. Use ship's or tug's lines optional; if tug lines used an additional charge of 10% of the tonnage will be added. For tug service call ship-to-shore tug Idaho, FM Channel 51.

BERTHING: Pinney Dock and Transport Co.: Dock No. 4 – length 2,000 ft., depth 27 ft. 2×45 ton cranes

Pinney Dock and Transport Co. (Ex-Con Rail Minnesota slip): Re-aligned berth with length 1,500 ft. and depth 28 ft.

Con Rail: Dock No. 10 – length 1,200 ft., depth 27 ft. 1 shiploader, rate 7,000 t.p.h. Max. size: LOA 1,000 ft., beam 105 ft. and max. draft 26 ft.

STEVEDORES: Work gangs for loading and unloading provided by the Pinney Dock and Transport Company.

MEDICAL: Vessels requiring medical attention call U.S. Coastguard station located in the main river by calling AM Channel 20. Ambulance and hospital service available. No inoculation, vaccinations, or fever certificates required.

DENSITY: Fresh water.

FRESH WATER: Available at stevedoring dock.

FUEL: Available on 24-hour notice.

FIRE PRECAUTIONS: City fire department. Also water line on face of the dock available.

CONSULS: Nearest at Cleveland.

REPAIRS: All types of deck and engine repairs available; also topside shell repairs.

GANGWAY/DECK WATCHMEN: Overseas stevedoring dock enclosed wire fence, watchmen on dock at all times, guard at main gate.

OPENING/CLOSING HATCHES: Optional by crew or stevedores.

CUSTOMS ALLOWANCES: Only allotments per person consumed aboard allowed.

REPATRIATION: Can be arranged.

AIRPORT: Nearest airport approx. 10 miles South with commuter services to Cleveland Hopkins Airport. Cleveland Hopkins Airport approximately 70 miles West.

TIME: Local Eastern Standard Time except from first Sunday in April till last Sunday in October – Daylight Saving Time.

HOLIDAYS: Stevedoring docks double time on holidays and time plus one-half on Saturdays and Sundays.

POLICE/AMBULANCE/FIRE: Police, 998-2221; Ambulance, 998-2345; Fire, 998-2121.

TELEPHONES: No provisions for placing telephones aboard vessels.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Required.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available. 72 hours notice required.

WASTE OIL DISPOSAL: Service available using tanker trucks. 72 hours notice required.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

AUTHORITY: Ashtabula Port Authority, P.O.Box 889, Ashtabula, Ohio 44044. *Tel:* (216) 992 8428. *Contact:* Robert Weiner, Chairman. Nicholas Paulchel, Harbour Master.

ASTORIA, Oregon: 46.11 N. 123.50 W. (See Plan)

PILOTAGE: Columbia River Bar Pilots, Astoria, Oregon, 97103. See "General – Pilotage" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs are available for assisting ships at the option of the vessel.

BERTHING: The 3 piers, including Ro-Ro facilities and barge ramp, comprising the Port of Astoria Terminals are located in the Western part of the City of Astoria at the confluence of Youngs Bay and the Columbia River. Astoria is served by 1 railroad, 3 major highways and 6 barge lines. The piers extend to the main ship channel, allowing vessels to berth or sail at any time. The terminals are operated by the Port of Astoria Commission as a public property open to all carriers and shippers.

Pier No. 1:
Location: Foot of Portway Street, adjacent to Pier No. 2, and separated therefrom by a water slip 400 ft. in width.
Principal Commodities: General commodities, break bulk, plywood, frozen tuna, grain, sacked goods.
Berths: 2 vessels. 875 ft. face or Northerly end; 1,000 ft. slip or Westerly side, depth 40 ft.
Pier Apron: Width 24 ft., slip side; 70 ft., face or end. Dock is 16.1 ft. above MLW.
Equipment: Dock tractors, 2 container straddle carriers, fork lift trucks, trailer trucks, hand trucks and other necessary miscellaneous cargo handling equipment.
Water Services: Portable meters and hose connections for vessel service. Rates of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Complete automatic dry pipe sprinkler system and hose stand pipes.
Electric Current: Face Pier No. 1 – 440 volt, 3 phase. Lighting 110 volt, 2 phase, 60 cycle, 35 amperes, alternating current. Portable meter and plug-in service available at all berths.

Pier No. 2:
Location: Between Piers No. 1 and 3. Separated from Pier No. 1 by a water slip, 400 ft. wide, and from Pier No. 3 by a water slip, 350 ft. wide.
Warehouse Shed: 65,000 sq.ft. steel building with foundation and sprinkler system.
Principal Commodities: Lumber, logs, general cargo, break bulk, bulky cargo in open storage.
Berths: 5 vessels; 425 ft. face or Northerly end; 1,307 ft., slip Easterly side, 40 ft. depth; 1,445 ft., slip Westerly side, 35 ft. depth.
Open Dock: 535,000 sq.ft. Dock level 16.1 ft. above MLW.
Equipment: Modern lighting. Tractors, fork trucks, etc. as listed under Pier No. 1, when required. Portable meters and hose connections. Pipe lines on pier for bunkering.
Barge Ramp: A barge ramp capable of handling loads up to 50 tons is now in operation at the outer berth of Pier No. 2. The ramp is utilised for transfer of cargo from barge or vice versa.
Water Service: City service. Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Electric Current: Lighting 110 volt, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service at all berths.

Pier No. 3:
Location: Foot of Hamburg Avenue, (adjacent to and separated from Pier No. 2 by water slip 350 ft. wide).
Principal Commodities: Canned goods, wood pulp, paper products, general cargo, break bulk, dry bulk.
Berths: 2 vessels. 1,750 ft. slip on Easterly side; 35 ft. in depth.
Warehouse Transit Shed: Floor area 248,000 sq.ft. Floor load 600 lbs. East side; 1,000 lbs. West side, per sq.ft.

Shed width 160 ft. Shed length 1,550 ft. Mill type reinforced concrete walls and floor construction. Concrete and blacktop floor. Complete automatic sprinkler system.
Pier Apron: Width, slip side 24 ft. Dock level, 16.1 ft. above MLW.
Equipment: Tractors, trailers, fork trucks, etc., as listed under Pier No. 1, when required.
Water Supply: Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Automatic dry sprinkler system. Hose stand pipes.
Electric Current: Lighting 110 volts, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service available at all berths.

CONTAINER HANDLING: Container Yard (West of Pier No. 3) 11.5 acres paved, fenced and lighted.

CRANES: 30 ton crane on Pier No. 2.

STEVEDORES: Stevedore Services of America and Jones-Oregon-Rogers.

FRESH WATER: Available, delivery to vessel through portable hose.

FUEL: Bunkering oil facilities for ocean vessels are maintained at Pier No. 2. The rate of delivery for heavy fuel oil is 1,500 b.p.h., and for diesel oil, 800 b.p.h.

GARBAGE DISPOSAL: Garbage disposal is available locally for American vessels; foreign vessels calling at Port of Astoria can contract this service through companies located in Portland, Oregon.

WASTE OIL DISPOSAL: Waste oil disposal not available on location. This service may be obtained through companies located in Portland, Oregon, who can truck/barge waste disposal away.

SEAMAN'S CLUBS: Mariner's Center, 1 Portway Street, Astoria. Tel: (503) 325-4756. Information, telephone, washers and dryers, stamps and mail, books and magazines, pool tables, table tennis, bycycles, snacks, television and video. Hours: Monday to Friday, 1600 hrs. – 2000 hrs.

GENERAL: The Port of Astoria Terminals are located 10 miles upstream from the mouth of the river and 86 miles downstream from the City of Portland, Oregon.

The channel in the Columbia River, from the ocean to Astoria, has a width of 600 ft. and project depth at low water of 53 ft.

At Astoria, the mean range of tide is 7.5 ft. with extreme tidal range of about 12 ft. On a flood tide a velocity of 2 knots is seldom exceeded, but the velocity sometimes attains 5 knots during the ebb tide. This variation is due largely to the strength of the river discharge, with maximum velocity during the freshets which occur during the months of May, June and July. These freshets, however, do not effect the height of water at Astoria. The Columbia River is navigable throughout the year.

A total of 9 berths at the Port of Astoria Terminals are periodically dredged to 35 ft. and 40 ft. at zero tide, but depths vary from time to time.

AUTHORITY: Port of Astoria, 1 Portway, Astoria, Oregon 97103. *Tel:* (503) 325-4521. *FAX:* (503) 325-4525. *Contact:* R.L.Miller, Director.

BALTIMORE, Maryland: 39.17 N. 76.35 W. (See Plan

PORT LIMITS: North Point is the outer limit of Baltimore Harbour fo arrival purposes. The anchorage off Annapolis at Thomas Point, fo vessels assigned thereto, is considered arrived for charter purposes.

DOCUMENTS:
3 copies Cargo Manifest (Form 1302).
Direct Arrival – 2 All Cargo on Board.
1 Cargo this Port.
Coastwise Arrival – 1 All Cargo on Board.
2 Cargo this Port.
3 copies Crew Manifest (Curio List) (Form 1304).
3 copies Stores Lists (Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Loa Line Certificate. In addition, the following documents will be required fo formal entry to be made within 48 hours of arrival from abroad or 24 hours from arrival from a United States port.
Master's Oath (Customs Form 1300) 3 copies.
General Declaration (Customs Form 1301) 3 copies.
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
U.S. vessels from foreign ports to submit Form 226 "Foreign Repairs" in order to calculate duty.
Certified Crew List (Visa Crew List – U.S. Immigration).

PILOTAGE: Each vessel entering the Chesapeake Capes under foreig flag or carrying foreign cargo is required to employ a Pilot of the Association of Maryland Pilots. Pilots are furnished with a smal transistorised portable radio unit, which provide ships' bridge to bridge communication system to ensure navigational safety while traversing the waters of Chesapeake Bay. It is a positive means of communicatio to ensure ship's position reporting, the safety and movement of vessels as well as messages related to the operational needs of vessels proceeding to the port, and provide the Pilots' communications instructions expediting operations of vessels when they are aboard.

Send ETA via Telex to pilots or vessel's agent, 48 hours before arriva and confirm 24 hours before arrival.

The ETA message should state whether arriving via Chesapeake and Delaware Ship Canal or Cape Henry, and deepest draft and speed o vessel.

Cable address of Pilot: "Marpilot Baltimore". Cape Henry Pilot Towe on VHF Channels 11, 13 and 16. Telex: 87-574. Telephone: (410) 342-6013. Fax: (301) 276-1364.

The large ocean station pilot vessel has been removed from station. Inbound and outbound traffic is monitored by the new Cape Henry Pilo Tower on shore just seaward of Cape Henry Light. The Pilot Towe maintains both a radar and radio watch for the area. Vessels shoul contact the Pilot Tower on VHF Channel 16 whence they will be directed to a working frequency. Vessels are requested to contact the towe 2 hours prior to arrival at the pilot boarding area.

Pilots are despatched from Lynnhaven Inlet by high-speed all-weathe boarding launches and will rendezvous with vessels at CBJ Buoy approximately 2 miles ENE of Cape Henry Light.

Pilots may request a relief pilot during transit who will board the vesse at the Pilot Transfer Station located 90 miles Northward near the Patuxent River. Under certain conditions of speed and draft, 2 pilots may be provided at the outset of the transit. Relief pilots are provided at no extra charge.

ANCHORAGES: Numerous anchorages located within harbour limits for ocean-going vessels. 6 such areas are available for vessels of ligh and deep draft. 4 of these anchorages are located on the East side o the main ship channel between the entrance channel to the Canton Gra Elevator and Fort Carroll. 2 are on the West side of the main shi channel. At Thomas Point, approximately 22 miles South of Baltimore there is an emergency anchorage in natural deep water with depth o 50 ft. or more. The U.S. Coast Guard is responsible for the anchorages but in practice, the Pilots make the assignments.

RESTRICTIONS: There are two different approaches and exits to the sea lanes. The principal route is by way of the Southerly course throug the Chesapeake Bay and Cape Henry to the ocean. The distance b this route is approximately 150 nautical miles. There is a main shi channel 20 miles long from Baltimore to the Chesapeake Bay; the channel is 700 ft. wide and 50 ft. deep.

The other route to the sea lanes is via the Chesapeake and Delawa Ship Canal. This offers a short protected route between Baltimore an other leading North Atlantic ports by way of Delaware Bay and allow ships serving North Atlantic European ports to save about 125 mile sailing distance.

Entrance to the Chesapeake and Delaware Ship Canal is locate about 50 miles North of Baltimore. Depth of channel 35 ft. The width o the channel is 450 ft. Max. LOA 960 ft. Vessels longer than 760 ft. mus have bow thruster. Max. draft 33 ft. The canal itself is 15 miles in lengt and from the Delaware Bay side the distance to sea lanes is about 6 miles. Navigation lights are maintained so the canal is open to navigatio day and night. Mean range of tide is 1.1 ft. at Baltimore. Currents a 0.8 knot on flood and ebb tides.

MAX. SIZE: Length 1,250 ft., draft 50 ft. at Consolidated Coal Sales an Bayside Coal Piers. No restriction on beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to New York.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: See "Pilotage".

TUGS: The port has an efficient fleet of tugs in operation. The tug usually take vessel in tow at Francis Scott Key Bridge. Tug's lines a used at no extra charge.

BERTHING: Major piers and terminals:

BRIDGES: The Chesapeake Bay Bridge-Tunnel is located across the entrance to the Bay, between Cape Henry and Cape Charles. This vehicular crossing consists of fixed causeways and bridges 15 miles in length, and 2 tunnels – one under the Chesapeake Channel and one under the Thimble Shoal Channel. A horizontal clearance of 1,400 ft. at 60 ft. water depth exists.

The Francis Scott Key Memorial Bridge crosses the main ship channel in Baltimore Harbour and is 8,640 ft. long, with main channel horizontal clearance of 800 ft. and vertical clearance of 185 ft. Vessels en route to the harbour from the ocean via the Chesapeake Bay pass under the Chesapeake Bay Bridge (2 parallel bridges), about 138 statute miles above the ocean entrance to the bay. This bridge is 3.7 miles long from shore to shore; its Western end is 0.5 miles S.W. of Sandy Point and its Eastern end is on Kent Island, 4 miles S.W. of Love Point. Least clearance width of 1,500 ft. and vertical clearance 186 ft.

By way of the Chesapeake and Delaware Canal the least horizontal clearance is 500 ft. and vertical clearance to + 136 ft.

The Curtis Creek and Middle Branch sections of harbour are each crossed by highway and railroad bridges (lift and swing).

DENSITY: Brackish (1005 – 1008).

MEDICAL: All facilities available.

TANKERS:

Apex: The Apex Oil Terminal in Baltimore Harbour is located 153 miles from the Sea Buoy and consists of one berth. The controlling depth at this terminal is:

Navigation Channel – 49 ft. Berth 40 ft.

The max. size vessels received:

LOA 800 ft.
97,179 d.w.t.

Vessels dock and undock at all stages of the tide. Constant Northwesterly winds may cause some variation in tide.

At this terminal there are terminal personnel on the scene at all times who will advise vessels of any critical conditions.

When docking and undocking, vessels normally use 2 tugs.

On approach to the berths, vessels transit the Fort McHenry Channel with a controlling depth of 50 ft. MLW and minimum width of 700 ft.

Shell: The Shell Oil Dock is located in Fairfield, Maryland Harbour, 152 miles from the Sea Buoy. Although the controlling depth for vessels in the navigation channel is 39 ft., the max. allowable draft is limited to 33 ft. 6 in. due to the water available alongside the berth. The average size vessel normally received at this terminal is 28,000 d.w.t. Vessels can dock and undock at any stage of the tide. Passing traffic at this terminal could cause vessel to surge. When docking vessels utilise 2 tugs, and when undocking normally 2 tugs unless weather conditions permit 1.

The terminal is located on the port hand at Fort McHenry Channel on approach to berth. Vessels make a 90° turn to port and enter approach channel to berth. The distance from the main channel to the berth is approximately 270 ft. When undocking, vessels are backed down Approach Channel to the Main Channel where they are then turned.

Also see "Berthing".

FRESH WATER: Can be supplied at berths.

FUEL: All grades supplied by numerous oil companies by barge, tanker truck or ex-wharf at the oil berths.

CONSULS:

Belgium
Denmark
Dominican Republic
Ecuador
Finland
France
Guatemala
Honduras
Italy
Netherlands
Norway
Senegal
Spain
Turkey
Venezuela

REPAIRS: *Bethlehem Steel Corporation:* At the Sparrows Point Shipyard vessels up to 300,000 d.w.t. are repaired, and the facilities include all the necessary equipment for the construction of large and small vessels.

In addition to the above mentioned facilities there are numerous companies specialising in minor ship's repairs, tank cleaning, repair of all types navigational and optical instruments, fumigation.

DEVELOPMENTS: Brewerton Extension Channel to Baltimore is dredged to 35 ft. and widened to 450 ft., with portions to 600 ft.

SHIPMASTER'S REPORT: October 1991.

Charts:

Delaware: B.A. Charts No. 2564 and 2603.
Chesapeake and Delaware Canal: B.A. Chart No. 2922.
Chesapeake: B.A. Charts No. 2919, 2920, 2921 and 2850.

Pilotage: If vessel is coming from the North it is best to take Delaware Pilot at Cape Henlopen and transit the Delaware River, and Chesapeake and Delaware Canal. This reduces the distance to the port by some 153 miles, as opposed to entering through Chesapeake Bay.

The Delaware Pilot embarks at Buoy No. 8 from a fast cutter which is stationed in the breakwater harbour.

Pilots have radar coverage which extends out to Five Fathoms Light Float. The Delaware Pilot takes the vessel to Chesapeake City in the Chesapeake and Delaware Canal. The Maryland Pilot takes over about 13 miles from the Delaware entrance.

The distance from Cape Henlopen to Locust Point berths at Baltimore is 106 miles.

From Baltimore to Cape Henry using Chesapeake Bay is 150 miles (or about 12 hours at 13 knots). For vessels with a speed below 15 knots, 2 pilots are required. In this case either 2 pilots board or a single pilot changes at Patuxent River which is 75 miles above Cape Henry. The pilot launch is stationed at Solomon's Island in the river mouth and the actual boarding position is Lat. 38° 20' N., Long. 76° 20' W.

Channel: The Delaware River allows transit for vessels drawing 40 f (FW) and transit for deep-draft vessels takes place on a rising tide.

Deep-draft vessels occasionally have to wait outside Cape Henlope if there is a swell, to avoid "bottoming" off Cape Henlopen.

The Chesapeake and Delaware Canal is continuously being improve with bend straightening, and dredging in the Western part. The presen maximum draft is 32 ft. (FW), with Panamax vessels usually being th largest vessels to transit. At the present time traffic is reduced to 3 o 4 ocean-going vessels per day.

Transit from the Delaware River entrance (Dutch Neck) to Tolcheste Channel takes about 5 hours at 10 knots (46 miles). The Canal is unde the control of a Despatcher on the South bank opposite Chesapeak City. There are video cameras at intervals along the Canal and spee is strictly observed. The Canal is open throughout 24 hours each da of the year, except at times of fog and if the vessel is already in th Canal it proceeds at its own risk.

Chesapeake Bay has been dredged to 50 ft. from Baltimore to th sea at Cape Henry and the present maximum draft is 47 ft. but may b increased to 48 ft. in the near future.

Anchorages: Bigstone Beach Anchorage (B.A. Chart No. 2564) on th Delaware River can accommodate 12 large tankers with up to 55 f draft.

There are numerous anchorages in the upper reaches for smalle vessels.

The Chesapeake and Delaware Canal has anchorages in the Wester part.

Vessels have been known to anchor in the Canal itself if proceedin against the current.

Chesapeake Bay has numerous anchorage areas.

Berths: Baltimore is the largest latex port in the U.S.A. Two of the mos commonly used berths are Locust Point No. 3 (Goodyear) and Locus Point No. 10 (Ennar Latex).

Locust Point No. 10: The berth is an old railroad dock which has bee modernised and has a reported depth of 31 ft. at MLW, tidal range abou 1 ft. Vessels can berth either side alongside. The berth is nearest to th city and is in the Northwest Harbour, about 1.5 miles from the Inne Harbour. Whilst alongside we found the least depth to be 27 ft. 06 in (see "Plan").

There are a lot of old pier piles near the berth so the berthing operatio is to be conducted very carefully.

There is above ground latex tankage for about 300,000 U.S. gallon (10,500 tonnes). Shore pumps and lines used. Cargo is also discharge into rail cars.

Fresh water only available by barge. Brow gangway required. Storin is difficult as trucks are not allowed alongside. Asphalt also handled a this berth.

Locust Point No. 3: The berth is situated at the end of Pier No. 3 an is about 0.5 miles East of Berth No. 10.

Vessels berth starboard side alongside in order that they may leav the berth without tugs.

If weather conditions are favourable, Masters are requested to leav the berth without a pilot or tug in order to save expense (pilot no compulsory). The Bay pilot takes over once the vessel is in the Northwes Harbour. When we left the berth, the wind was very squally so w obtained a pilot and tug for departure.

The fenders on the quay were good. The berth is an old general carg quay with 19 latex tanks above ground. Capacity of each tank is 30,00 U.S. gallons (1,000 tonnes).

Discharge is with shore pumps and lines, either direct into the tank or to rail cars. The berth is very busy with product being continuousl shipped out by road and rail tankers.

Depth alongside the berth reported to be 35 ft.

Brow gangway required. Stores truck can proceed alongside.

Fresh water is available from a shore hydrant through a meter at a reasonable rate. Ship's hoses and an international shore connection ar required.

Fresh Water: There is a water barge with capacity 400 tonnes, earl booking is recommended.

Fuel: Fuel is available by barge, or tank truck at Locust Point No. 3, bu is reported to be expensive.

Health: Health inspectors may make lightning visits to the vessel an will impose fines for the slightest violations. One vessel was fine U.S.$300.00 when discarded fruit was found on the after deck.

Airport: Baltimore Washington International Airport is about 15 mile S.W. of Baltimore.

Chart Corrections: Maryland Nautical Supplies (Tel: 1-800 572) is a British Chart agent and offers Class A correction.

AUTHORITY: Maryland Port Administration, World Trade Cente Baltimore, Baltimore, Maryland, 21202, U.S.A. *Tel:* (301) 333-455 *Telex:* 710-234-1075. *FAX:* (301) 333-1126. *Cables:* Marpor *Contact* : Adrian Teel, Executive Director.

BANGOR (including Brewer and Orrington), Maine: 44.49 N. 68.47 W. (See Plan

LOCATION: Bangor is located on the West bank of the Penobscot Rive at the head of navigation. Brewer is on the East bank of the river opposi Bangor and Orrington is on the East bank of the river 2 miles belo Brewer.

DOCUMENTS:

1 copy of Crew List.
1 copy of Passenger List.
2 copies of Stores Lists.
2 copies of Foreign Purchase Lists.
2 copies of Inward Foreign Manifest.
1 Form 1300 (Master's Oath on entry of vessel).
2 Forms 1374 Outward Foreign Manifest.

PILOTAGE: Pilotage is compulsory for all foreign vessels and U.S. vessels under register in the foreign trade, with a draft of 9 ft. or more, entering or departing from any port or harbour within the waters of Penobscot Bay and Penobscot River North of a line drawn from Marshall Point Livat Port Clyde, thence to Matinicus Rock Light, and thence to Western Head, Isle Au Haut. Pilotage is optional for vessels powered by sail.

Cable PENBAY via Chatham Radio. Ship's Agent usually notifies Pilot 48 hours and 24 hours before arrival at the pilot station. Pilot boat usually stands by on their radio 1 hour before ETA on RT 2182 kHz and VHF Channel 16. Pilot boards at Monhegan Is., Lat. 43° 45′ N., Long. 69° 22′ 5″ W. Pilot uses a white boat 36 ft. long and displays "H" by day and the Pilot signals at night. Vessels awaiting Pilot in bad weather must heave-to outside.

ANCHORAGES: The usual anchorage for vessels waiting at the river entrance for a towboat or favourable wind and tide is Northward of Fort Point on the West side of the channel.

Vessels bound up the river anchor anywhere in the channel where soft bottom is found. Vessels towing to Bangor, if the tide does not serve, often anchor off Winterport. On account of the strong ebb current, it is better for vessels going to Bangor, particularly large vessels, to anchor off Fort Point and start up the river about 3 hours after LW.

RESTRICTIONS: CHANNEL:– The controlling depth in the marked channel in Penobscot River from Bucksport to Bangor is 19 ft. to Winterport, thence 13 ft. to Bangor. The channel is marked by buoys to a point about 1.5 miles below South Brewer.

Caution: Deep-draft vessels should exercise caution above Fort Point as depths of 31 ft. to 32 ft. are in mid-channel, about 0.5 miles Eastward of Sandy Point, and rocky ledge, covered 34 ft., also in mid-channel, is reported about 0.2 miles S.W. of Odom Ledge Daybeacon.

The most difficult sections for vessels are off Lawrence and Luce Coves just North of Bucksport where it is difficult to mark the best water and off Frankfurt Flats where large vessels experience difficulty with the sharp turns.

The channel in Penobscot River is crooked and narrow in places, and frequent changes occur. Vessels should not attempt to carry drafts greater than 10 ft. to Bangor at LW. With a deeper draft a Pilot or towboat should be used; 14 ft. or 15 ft. is carried to Bangor and Brewer at HW, and deeper drafts occasionally to the oil berth at South Brewer. The safest time is on a rising tide. Navigation of the river at night is extremely dangerous due to lack of lighted navigation aids. After unusually high tides many logs, dangerous to small craft, are in the river. At times of maximum ebb currents, buoys are occasionally pulled under.

Tides: The mean range of tide varies from 10.3 ft. at Fort Point to 13.1 ft. at Bangor. Currents of 3 knots are not unusual from Odom Ledge to Orrington, and during Spring runoff currents approaching 5 knots may be encountered. Because of these currents, larger vessels should use caution navigating the river. Passage up the river is more advisable during flood current.

Ice impedes but usually does not prevent navigation above Winterport for nearly 5 months each year, beginning about December. During extreme Winters the river is closed to the mouth. The most difficult place below Winterport is abreast Fort Knox, where ice jams occur. If vessels can pass this point, they usually can go to Winterport. The river is kept open by an icebreaker, which prevents much of the damage that might otherwise be caused by ice and freshets. However, in recent years, according to local information, there has been very little ice and the river has seldom frozen over below Bangor. The brackish water formed by tidal action and the river current no doubt have contributed to this.

Freshets occur in the river during March and April; at times they are dangerous to vessels.

MAX. SIZE: At present ships of 560 ft. are taken up the river 2 hours before HW during daylight. Size and draft of ship depend on the berth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving Bangor use radio station at Chatham, Mass., or call on the R/T through station WOU at Boston, Mass.

TUGS: 4 tugs available up to 1,200 h.p. Tugs join at Belfast to assist in turning and berthing.

BERTHING:

Texaco Oil Co. Terminal: A timber pile, timber-decked pier, approximately 5,250 sq.ft., used for berthing oil tankers. There are 8 storage tanks and 1 warehouse/office building with 1,920 sq.ft. of floor space.

Mobil Oil Co.: A timber crib pier approximately 8,500 sq.ft., used for berthing tankers. There are 10 storage tanks and a garage at this facility.

Webber Terminal Inc.: A timber crib pier, approximately 2,340 sq.ft. used for berthing tankers. Adjacent to this pier, there is another timber crib pier, approximately 5,280 sq.ft., also used for berthing tankers. There are 2 storage tanks and a storage building with 480 sq.ft. of floor space.

Astroline Petroleum Corp. of Maine: There is a log filled bulkhead used for berthing tankers. This facility includes 5 storage tanks and 1 tool shed.

Bangor Municipal Dock: A new wooden and steel float with gangway, 1,500 sq.ft. located just below the Joshua Chamberlain Bridge; also 4×4 ton guest moorings are available for recreational use.

Webber Tanks Inc. – Brewer: A rock and timber crib, timber decked pier, approximately 7,200 sq.ft., used for berthing tankers. There are 5 storage tanks and a warehouse with approximately 3,850 sq.ft. of floor area.

C. H. Sprague – Brewer-Orrington: A timber pile wharf, approximately 1,600 sq.ft., used for berthing tankers. The wharf is in Orrington and fuel is pumped to 3 storage tanks located in Brewer. There is one building, a pump house, approximately 600 sq.ft.

Hampden Recreational Boating Facility: 2 launch ramps with ground float; landing dock; 2 guest moorings, 8 ft. MLW to ramps, 80 ft. wide channel.

Town Launch Ramp – Orrington. This is a paved launch ramp; no docking facilities. There is a 40-space (30 car – 10 trailer) gravel parking area.

BRIDGES: 1 suspension bridge below Bucksport with a height of 135 ft. at HW. Horizontal clearance is 750 ft.

The overhead power cable that crosses the river just above Bucksport has a clearance of 145 ft.

MEDICAL: No advance notice required. There are 3 large hospitals.

TANKERS: 1 berth for ocean-going vessels. 1×8 in. hose with a 10 in. line. 22 ft. at low water. Also see "Berthing".

DENSITY: Nearly fresh water.

FRESH WATER: Supplied at ocean-going berth at the rate of 50 t.p.h.

FUEL: Only available at oil berth.

CONSULS: None.

REPAIRS: Only machinery repairs.

CERTIFICATES:

Load Line.
Foreign Clearance.
Safety Certificate.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: 200 cigarettes per man, 1 bottle wine/spirits per man.

REPATRIATION: Arrangements must be made ahead of time by telegram.

TIME: GMT minus 5 hours in the Winter and minus 4 hours from first Sunday in April till last Sunday in October in the Summer.

AIRPORT: Bangor International is 2 miles from the city.

POLICE/AMBULANCE/FIRE: Police 9427377; Ambulance 9893311; Fire 9422293.

TELEPHONES: None put aboard. 1 pay phone on ocean-going berth.

SHORE LEAVE: Allowed subject to Immigration approval.

IDENTIFICATION CARDS: Form I – 95 must be filled out upon arriving unless seaman has made one out before on a previous trip.

AUTHORITY: State of Maine, Department of Transportation, State House Station No. 16, Child Street, Augusta, Maine 04333. *Tel:* (207) 289-2841. *FAX:* (207) 289-2896. *Contact:* Robert D.Elder, Director.

BATON ROUGE, Louisiana: 30.28 N. 91.12 W.

(See Plan)

DOCUMENTS:

Original and 3 copies Crew Lists.
Original and 3 copies of Passenger Lists.
Clearance from last foreign port.
Original and 3 copies of Inward Manifest.
Derat Certificate.
Load Line Certificate.
Safety Certificate.
Ship's Register.
3 copies Curio List.

PILOTAGE: Advise Agents ETA sea-buoy 48 hours in advance. Agent then makes arrangements for Pilots. Seven 46 ft. pilot boats – red hulls white cabins, flying white and blue pilot flags. Suggest pilot ladder 6 ft. above water level, no life-line. Call on 2738 kHz or VHF Channel 9, 30 miles to 40 miles out. Safe anchorage within 2 miles South Pass or S.W. Pass entrance.

ANCHORAGES: Anchorages within the river are limited; therefore, whenever possible, vessels should utilise the large anchorage area located East of the entrance of Southwest Pass.

RESTRICTIONS: No night-time restriction for entry or clearance, docking or undocking.

Caution should be exercised when anchoring in the vicinity of pipelines.

MAX. SIZE: Federal Project Depth of 45 ft., from the entrance to the jetties to Head of the Passes and up to Mile 180, is obtained through continuous maintenance dredging.

Exxon Terminal: LOA 810 ft. (246.8 m.); Beam, no restriction; Displacement, 90,000 ton; Draft, normally 45 ft. alongside.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: ETA cables can be routed through Tropical Radio WNU New Orleans.

If destined for Exxon Terminal, send ETA messages to "Stanship Baton Rouge"; 72 hours, 48 hours and 24 hours in advance of arrival at Southwest Pass. Telex: 510-993-3575, Answerback: HOBRM. Also, contact Exxon Docks (KZA 891) on VHF Channel 16, 3 hours prior to berthing. Berthing instructions will be provided on Channels 9 or 18.

TUGS: Available at Baton Rouge for docking and undocking. Ship's lines used.

At Exxon, 2 tugs are required for all vessels in excess of 12,000 d.w.t., for docking and undocking.

BERTHING: No time restrictions on berthing. One general cargo dock with total 400,000 sq. ft. transit shed and 3,000 ft. long, 40 ft. wide apron with double marginal tracks; grain elevator and bulk terminal at Burnside, for handling ores, concentrates, etc.; container marshalling yard adjacent cargo docks; also 20-acre paved staging area for project cargo.

BULK HANDLING FACILITIES:

Grain: Cargill Grain Elevator: Max. draft 40 ft. Loading rate 1,000 t.p.h. Silo storage 160,000 tons.

Dry Bulk: Burnside Terminal: 2 unloading gantries for bauxite. Rate 2,000 t.p.h. Max. draft 40 ft.

Molasses: Molasses terminal, leased to Manard Molasses Company, has an 11 million gallon capacity.

Coal: Coal Monitor One: The ultimate in the midstream transfer of coal, Coal Monitor One is a venture of International Marine Terminal. The device has the ability to sample and blend as well as aerate and cool the coal as it is transferred from barge to vessel.

Coal has become a major commodity at the Port with the safe, convenient anchorage buoy facility for ocean going vessels and the connection through major rivers and waterways to the primary coal-producing states.

Coal Monitor One can handle vessels with air draft of 65 ft. and beam 135 ft. Loading rate 1,800 tonnes per hour.

Midstream Transfer: The Port's midstream anchorage buoy facility is located in the Mississippi River just opposite its docks for the transfer of cargo between barges and ships. Primarily for the transfer of export coal, the operation is capable of handling import or export steel, salt, coke, unitised cargoes in slings and other bargeborne commodities by the use of floating cranes.

BRIDGES: Sufficient clearance for all stages of river at all times; 3 bridges cross at New Orleans, 1 at Baton Rouge, 1 at Donaldsonville, and 1 at Luling-Destrehan.

CRANES: 4×150 ton crawler; 2×70 ton crawler; 1×50 ton motor crane; 1×45 ton motor crane; 2×35 ton motor crane and 1×100 ton rail car pusher.

STEVEDORES: May be obtained by Agent with 4 hours' notice.

MEDICAL: Agents should receive 24 hours' notice when medical attention is required. 2 excellent hospitals at Baton Rouge, U.S. Public Health Hospital at New Orleans.

TANKERS: *Exxon Refinery Terminal:* 4 tanker berths available with 2,260 ft. of berthing space. Normally handles 3 tanker simultaneously. See "Max. size".

Exxon also have a gas dock on the West bank of the river opposite the tanker terminal.

Oil slop facilities available, but 48 hours advance notice required to be given to terminal.

Baton Rouge Port Authority: 4 berths; 914 m.; Apex Oil – heavy fuel oil; and Westway – Molasses.

Placid Oil Company: Crude and products, 330 m. berthing space.

Formosa Plastics: Caustic soda, ethylene dichloride, 240 m. berthing space.

Report:

Approaches – Cautionary Advice: Vessels make arrival at the S.W. Pass Sea Buoy located in position Lat. 28° 52.7′ N., Long. 89° 26′ W. Approach to the Sea Buoy should be made from the South to S.E. Vessels should remain in the fairways because of numerous structures in the approach area. Pilots board just South of the Sea Buoy. Precautions should be taken to remain to the East of the Sea Buoy, Buoy No. 1, and Buoy No. 3, when approaching the bar. At times strong cross-currents are encountered in the area of S.W. Pass Channel Entrance and precautions should be taken to prevent the vessel from being set onto shoal grounds on the West side of the channel. There is a large anchorage area to the East of the S.W. Pass Entrance Channel.

Exxon Refinery Terminal:

Docking: 1 tug is used for docking and 1 is used for undocking. On a very high river with a swift current 2 tugs should be used to turn the vessel when sailing, due to the close proximity of the Baton Rouge Highway Bridge as well as the limited turning basin. 2 tugs should also be used when the ship must be berthed between 2 other vessels. Vessels berth starboard side to. Vessels should not drop anchor due to numerous submerged pipe-lines.

A normal mooring configuration should be used with additional head lines in view of the river current.

Cautionary Advice: Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

Exxon U.S.A. Refinery Terminal: 232 miles AHP: The refinery dock, consisting of 5 berths, is a concrete and steel structure 50 ft. wide and running in a North – South direction along the river bank for about 2,750 ft. The berths are numbered 1 through to 5 from South to North. All products are transferred through hoses or 10 in. hydraulically operated steel loading arms. The loading arms for crude oil at No. 1 Berth, however, are 12 in. connections. Cargo hoses are handled by electric hoisting equipment. Vessels are moored to 50 ton quick release hooks located on the dock. Electric capstans are used for hauling the mooring lines to the mooring hooks.

The loading arms and hose connections are manifolded to permit washing into a slop line for change of grade.

All hose diameters are 4 in., 6 in. and 8 in. The 10 in. loading arms have 8 in. reducers.

Each berth has an office equipped with a telephone which is tied into a public address system. In addition, each berthman is equipped with a portable radio for communicating with the dock as well as all control centres. The emergency shut down system for the dock can be operated from each office.

The main control centre for the entire dock is equipped with telephones, a process radio, an FM and AM marine radio and the control station for the public address system. All loading line pressures are displayed on a panel. The public address system provides communication with each transfer location or berth office. The dock emergency shutdown system may also be operated from the control centre.

Cargo Handled and Shore Installations: Berth No. 1 handles nearly all products except lubes and some chemicals. It is also the primary berth for receiving crude oil.

Berth No. 2 handles specialties, chemicals, carbon black, asphalt and wax. Caustic soda is not handled at this berth.

Berth No. 3 handles clean products, lubes, chemicals, carbon black and dirty products.

Berth No. 4 handles clean and dirty products, chemicals and carbo black.

All berths can handle crude.

Pipe-lines range from 4 in. to 24 in.

Berthing: The River Pilot berths the vessel starboard side to.

Approach to Berth No. 1 should never be attempted from direct below the dock, due to a shoal area. This shoal area is known to th Pilots and must be given a wide berth. The Pilot should be consulted as to the exact location of the shoal area.

Vessels should approach dock at dead slow ahead and as parallel t it as possible.

All vessels over 30,000 d.w.t. must use 2 tugs for docking and undocking. Light vessels under 30,000 d.w.t. must dock and undock with at least 1 tug. A bow thruster does not substitute for a tug. A normal mooring configuration should be used with additional head lines due t the river current. Minimum mooring requirements are 4 bow lines, 2 breast lines, 2 forward springs, 2 after springs and 2 stern lines. Mixed moorings in the same direction are discouraged.

When the Baton Rouge River gauge is 30 ft. and above, vessel greater than 30,000 d.w.t. must use a minimum of 6 bow lines plus breast lines. In addition, all vessels over 60,000 d.w.t. must be attended by a tug actively pushing on the bow until the vessel has discharged 75% of its cargo.

When the Baton Rouge gauge is above 40 ft. a tug is required during entire time vessel is alongside Berth No. 1, regardless of ship size.

In the event of an emergency, tugs are readily available within 15 minutes. Tugs can be contacted via VHF Channel 13.

Mooring: Mooring is provided through the use of fairleads and quick release hooks at all of the ship berths. These hooks are rated at 38 tons and 50 tons throughout the berths.

The refinery provides a line handling crew for each ship berthing unberthing. The line handling crew is assisted by electric driven capstans. This service is provided at no extra charge to the vessel.

Normal mooring line sequence: Forward springs, head and forward breast lines, after springs and stern lines. It is the ship's responsibility to provide all mooring equipment.

Terminal monitors mooring throughout operations and provides each vessel with a standard mooring plan.

Terminal has no requirements to limit wind area of vessel; however in the event of unexpected high winds, vessel may be required to ballast down.

Manifold Criteria: The vessel's manifold must not be allowed to get more than 42 ft. above or below the dock deck. When connected to a vessel the end of the arm should be positioned between 13 ft. and 19 ft. from the edge of the vessel if the 12 in. loading arms are used; between 4 ft and 10 ft. for the 8 in. arms. The vessel's flanges to which the arms are to be connected must be spaced at least 3 ft. 6 in. apart and be vertical and parallel to the vessel's side. The vessel's flange should be no more than 3 ft. from the last permanent support and it should be attached t that support.

Before a vessel arrives at the dock, vessel personnel are advised o the size of flanges needed for connection to the loading arms or hoses

Dock Communications: The Baton Rouge dock is equipped with a positive ship-to-terminal radio communications system. On arrival vessel will be provided with a radio for which a signed receipt is required The radio must be monitored by the English-speaking person in charge at all times. The ship's personnel will be instructed in the proper use o these radios at the time of receipt. If these radios are not returned i good condition, a charge of $2,000 will be levied against the vessel.

Each berthman is equipped with a portable radio on the same frequency as the radio provided to the ship. This will be the primary means of communication.

The main control centre for the entire dock is equipped with telephones, a radio on the same frequency as the berthman and a AM/FM marine radio with Channels 9, 16, 18 and 22.

Bunkers and Fresh Water: Bunker C, diesel and fresh water are available.

Ballast Facilities: Ballast facilities are limited to 20,000 barrels.

DENSITY: No tide – fresh water at all times.

FRESH WATER: At public docks. At Exxon, water available for flat fee presently $300. Ship's crew to make water connections.

FUEL: All grades subject inquiry. Barging essential.

No fuel available at Exxon.

FIRE PRECAUTIONS: Usual fire lines and sprinkler systems. Fireboat "Exxon Bayou State" on station.

Ship's fire plan should be available at gangway.

CARGO GEAR: Safety Certificate required for ship's gear.

IDENTIFICATION CARDS: Usual Passports.

CONSULS: Norwegian only, all other consuls at New Orleans – 85 miles distant.

REPAIRS: All types of deck and engine repairs may be carried out.

At Exxon, no repairs allowed without permission from terminal Vessels shall be able to get underway as soon as possible.

SURVEYORS: *Testing, Sampling, Weighing and Cargo Certification*

Caleb Brett USA Inc., P.O.Box 46039, Baton Rouge 70895.
Tel: 927-0020.

Chas. Martin, Inspectors of Petroleum, 2835 Plank Rd., Baton Rouge

Transport Management & Consulting, Inc., 4137 Sherwood Fores
Blvd., Suite 110, Baton Rouge 70816. Tel: 293-3025.

USDA, FGIS, Port Allen. Tel: 389-0373.

USDA, FGIS Field Office, Lutcher. Tel: 536-2811.

Marine Surveyors:

McAnally Engineering Co., Box 66012, Baton Rouge 70809.
Tel: 766-8992.

National Cargo Bureau, 7414 Perkins Rd., Suite 180, Baton Roug
Tel: 769-6353.

GANGWAY/DECK WATCHMEN: Only if Master requires.
OPENING/CLOSING HATCHES: Depending on terms of charter, usually by ship's crew.
CUSTOMS ALLOWANCES: Tobacco, each crew member allowed 1 carton cigarettes. Master allowed reasonable quantity. Wine and/or Spirit, each crew member allowed 1 bottle each of wine and spirits. Master allowed reasonable quantity.
REPATRIATION: Crew repatriation and crew changes may be made.
AIRPORT: 6 miles to Ryan Airport, served by regular airlines.
TIME: Local time is Central Standard Time – GMT minus 6 hours; from April through October local time is CS daylight saving time, GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Tel. Nos. Public Dock: Police 343 – 9234; Ambulance 343 – 6691; Fire 343 – 6691.
TELEPHONES: No arrangements for placing telephones aboard.
SERVICES: Because of restricted river width inadvisable adjust compasses. This is usually accomplished below New Orleans where river of sufficient width to permit large vessels to swing. 3 firms engaged in tank cleaning, namely, Watson Marine, Robin Hood Fleeting and Port Allen Marine Cleaning Plant. Slop facilities available at the Exxon Oil & Refining Co. dock.
SHIP SUPPLY SERVICE: *Launch Service:*
Capital Marine Supply, Inc., Box 3018, Baton Rouge. Tel: 343-8379.
Tri-G Marine Supply, Inc., Box 3808, Baton Rouge. Tel: 344-7664.
SHORE LEAVE: Shore leave permitted except when detained aboard by U.S. Immigration.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Collection service available through Browning-Ferris Industries (Tel: (504) 356-2478). Garbage disposal boxes and liners are available at $2.00 each. Disposal of each box is $49. 24 hours notice is required before providing this service, collection as required. The boxes can be placed on board. The vessel's agent will make all the necessary arrangements with Browning-Ferris Industries.
WASTE OIL DISPOSAL: Waste oil will be received by Port Allen Marine Services Inc., for disposal. 24 hours notification period is required. The barge will come alongside the vessel to receive the waste oil and has the capability to pump from the vessel. The cost of this service depends on the mixture to be disposed of. The agent will make the necessary arrangements for this service.
SEAMAN'S CLUBS: A Seaman's Center is located on port property and a minibus is provided for transportation to and from the Center. The facility has indoor recreation such as table tennis and pool tables. Transportation is provided to the various locations within the area for shopping. International telephone service is available. The Seaman's Center is a function of the Ministries to Internationals. Judson Baptist Association located in Baton Rouge, Tel: (504) 927-6500. Rev. Joel Hilburn is the Center's coordinator who will arrange for seaman's activities at the Center.
CURRENCY: U.S.Dollar (U.S.$).
DELAYS: Normally no delays at Exxon Oil docks in berthing except when vessel's tanks unsuitable for loading. Normally no delay at city wharf.

Vessels loading Isopropanol Alchohol must have tanks approved before berthing.

NOTICE: To all Masters from a Ship's Agent:

Please be advised that the Agent will need a copy of the Notice of Readiness and Dry Tank Certificate. The Agent will pick these two certificates up from the Master on sailing of vessel. These are needed by the Agents to send out to the Owners and/or Charterers along with the other documents. We have been having problems receiving these documents from the terminal and/or Cargo Surveyor. The terminal will require, on the vessel's arrival at the berth, one copy of the Bill of Lading and/or Customs Manifest. It would be appreciated if you could make an additional copy of these documents when they are prepared by your vessel.

GENERAL: Tankers in ballast advised of drift wood conditions in river and ballast their vessels accordingly so as to avoid propeller damage.
AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 380, Port Allen, Louisiana 70767-0380. *Tel:* (504) 342-1660. *FAX:* (504) 342-1666. *Contact:* Gary C. Pruitt, Executive Director. Wesley Knox, Director of Trade Development. Richard Savoy, Director of Terminal operations.

BAYTOWN, Texas: 29.44 N. 95.01 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Houston".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO/VHF: Exxon Dock "KNQ-Baytown" on VHF Channel 19.
TUGS: Available if required. Tel: 713-928-5406.
BERTHING: All berths at Baytown 40 ft. (Fresh water). Agent should verify safe arrival/departure draft with Exxon Docks prior vessel arrival.
STEVEDORES: Available. Call L. S. Mitchell Co. Tel: 713-426-4575.
MEDICAL: All medical assistance available.
TANKERS: *Caution:* Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

The terminal prefers the use of self-stowing winches with mooring wires.

Berthing: Tugs of up to 3,200 h.p. and bollard pull of up to 46 tons are available. Tugs use the "alongside" method. Tugs normally use a head line and quarter line; however, larger tugs will usually use 2 head lines.

By pre-planning discussions with the Pilot, Masters are to assure themselves that a sufficient number of tugs, each with sufficient horsepower, are ordered well in advance by the Pilot.

Depending on the size and draft of the vessel, 2 – 4 tugs will meet the vessel in the vicinity of the tunnel about 1 mile below Baytown and escort the vessel into the turning area. Vessels scheduled to Berth No. 1 will moor starboard side to, bow up stream. Vessels at Berth No. 2 will be turned about and moor port side to. Vessels scheduled to Berths No. 3, 4, 5 or 6 will be turned and backed into the berth, bow out. There are virtually no exceptions to these mooring rules.

Tidal height is monitored by the Baytown Dock Co-ordinator. This information may be obtained prior to berthing by calling KNQ.

This information is particularly important when turning ship and backing into Berth No. 5.

Exxon Berth No. 1: Vessels assigned to this berth must dock starboard side to, bow upstream. Winch mounted wires are preferred, however, mooring ropes are acceptable. Additional lines will be required for vessels not equipped with all wire moorings. Vessels in this berth are passed close to by ships transitting the Ship Channel, therefore, all moorings must be well-tended and tight.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berth No. 2: Bow to manifold should not exceed 320 ft. and stern to manifold is limited to 400 ft. due to berth overhang and interface with Berth No. 3.

Vessels assigned to this berth must dock port side to, bow downstream. Winch mounted wires are preferred, however, ropes are acceptable, though vessels with ropes will be required to use more lines than wire-equipped ships. Vessels in this berth are passed close to by ships transitting the Houston Ship Channel, therefore, all moorings must be tended and kept tight to prevent breakout or damage to hoses.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berths No. 3 and 4: Berth No. 3 has a beam restriction of 105 ft. and Berths No. 3 and 4 have a restriction of maximum displacement of 32,400 tons.

Vessels assigned to these berths are backed alongside the berth and then pushed by tugs against the dock. Extreme care should be taken not to approach the berth at too great an angle, and every effort should be made to manoeuvre into position prior to making contact with the breasting works. 2 or more tugs are required depending on vessel size and weather conditions.

Vessels always manoeuvre stern first into the slip utilising the turning area adjacent to the docks. Vessels are moored starboard side to Berth No. 3 and port side to Berth No. 4.

Winch mounted wires are preferred, but ropes are acceptable. Usually the spring lines are taken first followed by the stern then bow moorings.

Berthing of vessels at Berth No. 4 is predicated by the presence of a ship or tows at adjacent Berth No. 5. Terminal regulations are based upon the sum of the beam of vessels in adjacent berths to allow sufficient room for manoeuvring.

Products handled at Berth Nos. 3 and 4 include motor fuels, aviation fuel, distillates, solvents, petro-chemicals and bunkers. All products are transferred through 6 in. and 8 in. hoses, and 12 in. arms. Maximum pumping pressure for all products is 125 p.s.i. Ballast and slops are handled at both berths.

Exxon Berths No. 5 and 6: Vessels always manoeuvre stern first into the berth, utilising the turning area adjacement to the berth. 3 or 4 tugs are usually used to assist the vessel, depending on vessel size and weather conditions. Vessels are moored starboard side to Berth No. 5 and port side to Berth No. 6. Products handled include crude oil, process gas oil and fuel oil.

Docking: There is a large round mooring dolphin at the head of the finger-pier forming Berth Nos. 5 and 6 where loaded 80,000 – 90,000 d.w.t. vessels normally berth.

Although this dolphin has a fender system its sole purpose is to provide mooring points. It is not suitable to land on nor can it be used as a turning dolphin. On several occasions ships have come into contact with this structure resulting in both hull damage and damage to structure itself.

To prevent recurrence of such incidents it is necessary that the Master:

1. Before the berth approach is made reviews with the Pilot the intended docking manoeuvres which provide the widest possible berth to the mooring dolphin.

2. Monitors the docking manoeuvre carefully and plans corrective action in a timely fashion so that ship's contact with the dolphin will be prevented.

Tug Assistance: 4 tugs of minimum 3,000 h.p. each are to be used for loaded 80,000 – 90,000 d.w.t. vessels. The tugs making fast on the outward side – not facing the berth – should use 2 headlines and a quarterline.

The Master should include these tug requirements in his first ETA message to the port Agent and ask for confirmation that such arrangements have been made.

Tidal Information: Having knowledge of tidal conditions in the Baytown area is of particular importance with regard to the docking manoeuvre.

Information on the velocity and direction of the current should be obtained from the Pilot.

Water level information should be obtained from the Baytown Dock Co-ordinator by VHF radio.

DENSITY: Mainly fresh.
FRESH WATER: Available ex-wharf.

FUEL: No bunkering by barge.
REPAIRS: Should be cleared with terminal before vessel arrives at dock.
GANGWAY/DECK WATCHMEN: Required only if crew detained by Immigration.
CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.
STORING: Permissible with advance notice/approval.
SHORE LEAVE: No restrictions. Terminal bus transports crew from dock to refinery entrance.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available. Contact BFI - Tel: 635-6225.
WASTE OIL DISPOSAL: Ballast system can only handle clean ballast.
SEAMAN'S CLUBS: None.
AUTHORITY: Port of Houston Authority.
Operator: Exxon Company, U.S.A., P.O.Box 3950, Baytown, Texas 77520. *Tel:* 425-4452, 425-4453. *Telex:* 510-891-7885 Exxon Dock-Bton. *Contact:* Dock Co-ordinator.
Secondary Contact: Exxon Shipping Company, P.O.Box 3251, Baytown, Texas 77520. *Tel:* 713-427-7370. *Contact:* Department Head.

BEAUMONT, Texas: 30.05 N. 94.05 W. (See Plan)

LOCATION: On Neches River, above Sabine Lake.
DOCUMENTS, PILOTAGE, RADIO, etc., Refer to "Port Arthur".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.
BERTHING:

Wharf	*Length* (ft.)	*Depth* (ft.)	*Remarks*
1	580	30	
2, 3 and 4	1,373	38	Ro-Ro Ramp
5, 6 and 7	1,483	36	
Harbour Island Marine Terminal	1,200	40	Ro-Ro Ramp
Carroll St. Wharf	765	40	
Grain Wharf	543	40	3.5 million bushel grain elevator Loading Rate: 1,875 t.p.h. (grain); 1,100 t.p.h. (soya).

CARGO HANDLING FACILITIES: For container ships, conventional break-bulk ships, heavy lift ships or side-loading Ro-Ro ships, the Harbour Island Marine Terminal – 1,200 linear ft. berthing space; 120,000 sq.ft. transit shed; 93 ft. wide apron facing transit shed; 240,000 sq.ft. open wharf space; 8 acres heavy duty hard stand adjacent to open wharf, backed up by 25 more acres for vehicle marshalling; twin marginal rail tracks for full length of wharf; 220 ton capacity truck-mounted mobile crane for containers and heavy lifts; 40 ton forklift machine with, expandable spreaders for container handling and 3-high container stacking or, blades for heavy cargo; 600 ft. undercover working track for all-weather rail car unloading inside transit shed; 200 linear ft. of truck height unloading platform along rear of open wharf; 20 ft. high × 18 ft. wide shed doors for high wide loads and entry for all-weather truck unloading or container stuffing; 40 ft. of water alongside; 1,200 lbs. per sq. ft. deck load capacity.

For stern loading Ro-Ro vessels, wharves 2 and 3 – 758 ft. in length with 75 ft. wide Ro-Ro platform at one end of the wharf. Ro-Ro platform deck elevation +15.89 ft. above mean low Gulf. (12 ft. 7 in. above average tide) 36 ft. of water alongside wharf; convenient roadway access to Ro-Ro platform from 15 acre storage area adjacent to the wharf; double marginal rail tracks for full length of wharf; 60 ton capacity gantry crane travels 700 ft. along face of wharf; 120,000 sq. ft. open wharf space; wharves 2 and 3 may also be used as an alternate to Harbour Island Wharf for containers, conventional break bulk, heavy lift or side loading Ro-Ro vessels. Covered wharf 4 is adjacent, extending total wharf length to 1,300 ft. and offering 57,000 sq. ft. covered area.

For security of cargo, all Port of Beaumont wharves are entirely within a chain link, barbed wire topped security fence, and all vehicular access is through the port's main gate, guarded 24 hours a day. The port is an approved outport of the Military Traffic Management Command, Eastern Areas, U.S. Army, is heavily used for shipments of military material, equipment and supplies, and is subjected to regular security inspections by Army personnel who have given the port high ratings.

For security of small, high value items that are considered especially subject to possible pilferage, the port will permit fencing and shelving of a limited designated security area within a transit shed.

For heavy lift requirements beyond the capacity of the 60 ton gantry (at Wharf No. 2 & 3) or the 220 ton mobile crane (at Harbour Island Marine Terminal), a 500 ton capacity derrick barge is available.
STEVEDORES: *Public Wharves:* Normal working hours 0800/1200 and 1300/1700 Monday to Friday.
MEDICAL: All facilities available.
TANKERS: *Amoco:* Terminal is located on the Neches River Channel 44 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. while the controlling depth for the North and South berth is 35 ft. The water is fresh (density 1000). The maximum size vessel normally received at the terminal is approximately 28,000 d.w.t. The limited strength of the docks combined with passing traffic should be noted. Vessels dock and undock day and night. A minimum of 2 tugs are used to dock and undock vessels. Pilings are not to be used as turning points. Vessels in ballast are turned prior to berthing starboard side to. Loaded vessels are berthed port side to and turned after discharge. Judicious use of tugs during turning manoeuvres is essential as vessels have a tendency to "overshoot" the pier when turning. Several mooring dolphins have been knocked out of position. Short w springs are accepted. All other lines must be rope due to the weak p clusters. Docks do not have winches nor do they supply a gangwa

Fuel and water are not available.

The terminal is fenced and guarded.

Pollution Control: Consists of 2,000 ft. of spill booms and a launc Amoco is a member of Neches River Oil Control Committee.

Fire Protection includes a foam system with a tank on the dock. Wa monitors and hoses are kept in readiness.

Mobil: Terminal is located on the Neches River Channel 56 miles fro the sea buoy. The controlling depth for the channel and turning bas is 40 ft. The water at the terminal is brackish. The maximum size vess normally received at the terminal is 50,000 d.w.t. Depth alongside 36 The berths are subject to passing traffic and Master's are advised keep mooring lines tight. No repair work may be done while transferr cargo at this port.

While berthing, a minimum of 2 tugs are used. 1 tug is needed whe unberthing. 3 hours advance notice is required when ordering tugs.

Vessels normally proceed to the berth directly from the channel, pro communications establish whether ship will berth head-up or head-dow the channel depending upon the LOA and hose connections. Ships ca berth starboard side to; however, port is preferred. A normal compleme of mooring lines is used. Wire lines are accepted with nylon pendan recommended. A mooring contractor is employed. The vertical range hoses is 40 ft., 50 ft., if vessel uses its own derrick.

Fuel and fresh water are available at the Mobil Terminal.

The terminal is fenced and guarded.

Pollution Control consists of 1,500 ft. of spill boom and a launc Terminal has vacuum trucks.

Fire protection is provided by a terminal fire brigade. Monitors a situated on the shore, foam and water along with dry chemical a located on the dock. Fire hose is on reels, water is under pressure an spray nozzles are located under the wharf.

Also see "Smith's Bluff".
DENSITY: Fresh water.
FRESH WATER: Available at berths, or by barge.
FUEL: Available ex-wharf at Mobil Terminal. All grades available b barge to other locations.
CONSULS: Nearest at Houston.
REPAIRS/DRY DOCKS: Beaumont's Bethlehem Shipyard offers a types ship repair or reconditioning – plus vessel conversion an jumboizing. 2 side-launching ways over 800 ft. each. Floating dry doc with extreme length of 648 ft.; length on bottom 576 ft.; breadth a entrance, 87 ft.; and lifting capacity 17,500 tons. Active in design an construction of mobile drilling platforms and oil and gas production an storage facilities for service offshore.
GANGWAY/DECK WATCHMEN: Not required unless crewme detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine/spirits each man.
HOLIDAYS: Longshore holidays are: New Year's Day: Martin Luthe King's Birthday (January 15th); Lincoln's Birthday (February 12th Washington's Birthday; Texas Independence Day (March 3rd St. Patrick's Day (March 17th); Good Friday; Memorial Day (last Monda in May); Emancipation Day (June 20th); Fourth of July; Labour Da Columbus Day; Veteran's Day (November 11th); Thanksgiving Da Christmas Day.
IDENTIFICATION CARDS: Foreign crew require only Immigratio landing permit.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. po (Albany). Service provided by Browning-Ferries Ind. Waste System 100 Ginger St. & Hwy. 69, P.O.Box 1056, Nederland. Telex: 7762 Services provided: Shoreside and ship generated garbage collectio alongside as required. Collection service provided. Reference: MARPOL Annex V. No monies involved.
WASTE OIL DISPOSAL: Service available from Carotex Inc., 110 Yac Club Rd., P.O.Box 3901, Port Arthur, Texas 77642. Services provide Provide for the receipt of oily waste from ships at the Port of Beaumo in accordance with MARPOL 73/78 (33CFR 154-156) Annex V.
SEAMAN'S CLUBS: Beaumont International Seamen's Cente 102 Milam St., Beaumont, Texas. Tel: (409) 833-8931. Service available: International telephone services, minibus transportatio postage service, games available, library books, give-a-way bibles languages, snacks available free of charge.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: Port of Beaumont, P.O.Drawer 2297, Beaumont, Texa 77704. *Tel:* 409-835-5367. *FAX:* 409-835-0512. *Contact:* Billy Masters, Port Director.

CRANES: 1 × 50 ton floating crane.
STEVEDORES: 8 local gangs. Additional gangs imported if require
MEDICAL: All medical facilities available. 2 local hospitals.

TANKERS: Cherry Point: 48° 52′ N., 122° 30′ W. 3 oil jetties.

Arco Jetty: Depth 70 ft. Intalco Jetty: Depth 37.5 ft. Mobil Jetty: Depth 43 ft.

Deadweight limit in Puget Sound is 125,000 tons.

DENSITY: Salt water.

FRESH WATER: Available at all wharves.

FUEL: Available. Barge delivery only.

REPAIRS/DRY DOCKS: *Fairhaven Terminal:* Home to Maritime Contractors, Inc., large vessels repair and the Port's 2,800 ton capacity floating dry dock, which can accommodate vessels up to 116 m. length and 18 m. beam.

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

AIRPORT: 3 miles from the city.

HOLIDAYS: See "Tacoma".

TELEPHONES: Available.

GARBAGE DISPOSAL: Ship's Agent makes arrangements.

WASTE OIL DISPOSAL: See above.

SEAMAN'S CLUBS: None.

AUTHORITY: Port of Bellingham, P.O.Box 1737, 625 Cornwall Avenue, Bellingham, Washington 98227-1737. *Tel:* (206) 676-2500. *FAX:* (206)

BENICIA, California: 38.03 N. 122.10 W. (See Plan)

DOCUMENTS: Health and all General Information: Refer to "San Francisco".

PILOTAGE: Port located about 25 miles above Golden Gate Bridge. River Pilot joins at San Francisco, using VHF for traffic information. Passage includes passing under 2 bridges, Carquinez Strait Bridge having the least clearance, with 146 ft. (HW) and 151 ft. (LW) (using North Channel). River passage is timed to arrive at Benicia at the first of ebb tide; this is approximately 2.5 hours after HW at Fort Point (Golden Gate).

ANCHORAGE: At San Francisco.

RESTRICTIONS: Tankers must lighten to 36 ft. fresh water draft. This is done at No. 7 Anchorage, 1.5 miles East of Alcatraz Island. This cargo will later be pumped back to the tanker as barges cannot overcome shore back pressure. Turning basin off the berths, radius 1,800 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: 1 small tug assists berthing. Only 1 normally required for unberthing.

BERTHING: Continuous wharf 2,404 ft. long with berth for 3 vessels. The West berth is used for the loading of petroleum products, and the centre and East berths are equipped for handling general and bulk cargoes. East of this facility is another berth that will accommodate one tanker for discharge of crude oil (Exxon), depth alongside – 38 ft.

MOORINGS: 2 head wires, 4 breasts and 2 springs forward. This is necessary because of current off the bank during ebb tide. 2 stern lines, 2 breast lines and 2 springs aft.

BULK HANDLING FACILITIES: Waterside silos' capacity 26,000 tons with loading conveyor belt capacity 1,000 t.p.h.

TANKERS: Crude oil discharge through 2×12 in. Chicksan arms and 36 in. shoreline, 2.5 miles long. Shore tanks are situated 164 ft. above sea level, initial back pressure 65/70 p.s.i.

FRESH WATER: Available from shore lines.

FUEL: Can only be delivered by barge. Averate rate 300 t.p.h.

DEVELOPMENTS: Current plans call for development of a complete container terminal.

AUTHORITY: Benicia Port Terminal Company, P.O.Box 315, Benicia, California 94510. *Tel:* (707) 745 – 2394. *FAX:* (707) 746-1485. *Contact:* J. A. Gaidsick, Vice-President.

BOCA GRANDE, Florida: 26.43 N. 82.15 W. (See Plan)

LOCATION: On the Eastern side of the Southern end of Gasparilla Island, about 60 miles South of Tampa Bay.

DOCUMENTS: See "Tampa".

Government Officials must travel from Tampa to Boca Grande at vessel's expense.

APPROACHES: The oil tanks are clearly indicated on the radar at approximately 25 miles distance.

PILOTAGE: Compulsory for all foreign-going merchant vessels. The Pilot boards vessel near the sea buoy. Pilotage available 24 hours a day.

Request should be made to ship's Agents via Tampa Marine Operator. VHF Channels 16, 12 and 13.

ANCHORAGES: Good holding ground near the sea buoy (Lat. 26° 39.8′ N., Long. 82° 19.6′ W.)

RESTRICTIONS: The channel is less than 300 ft. wide in some places. Project depth 32 ft. at MLW. The traffic is one way and vessels enter only when the stream is half strength or less. Strong Westerly winds may cause a swell which prevents vessels using the channel.

MAX. SIZE: Beam: 80 ft. with 24 ft. max. distance from outside ship's hull to inside hatch coaming.

Draft: 28 ft. recommended by Pilots. The channel is 30 ft. deep at MLW.

Length: 700 ft. should be a maximum.

HEALTH: Same procedure as for any other U.S. port.

A U.S. Public Health physician is located on the island.

RADIO: Tampa Radio – WPD.

VHF: Pilots on VHF Channels 16, 12 and 13. U.S. Coast Guard on Channel 16.

TUGS: A small tug for light towing operations is available.

BERTHING: An oil handling berth with 28 ft. depth is located close Southward of the phosphate pier.

TIDES: Approximately 2 ft. variation.

TANKERS: *Oil Terminal:* Depth 28 ft.

Vessels enter and berth only when currrent is at half strength or less. The strength of the current has been reported to reach 4 knots. The current generally flows in 030°–210° direction, although the flood tide varies in direction. The pier face lies in a 060°–240° direction. A vessel uses an anchor to swing around and then to hold its head up into the current while mooring lines are run out to mooring buoys and the breasting cells. 2 mooring buoys forward for headlines and 2 mooring buoys aft for stern lines are used. A total of 14 mooring lines are required to safely tie up. Wires are permitted as spring lines only. Lines must be carefully tended and maintained in a tight condition with vessel snug alongside at all times.

Also see "Berthing".

DENSITY: Salt water.

FRESH WATER: Available.

FUEL: No local facilities. Prior arrangements with ample notice must be made via the ship's Agent at Tampa.

CONSULS: See "Tampa".

REPAIRS: No local facilities. To be arranged via Agents with ample notice.

SURVEYORS: The nearest Lloyds' office is at Jacksonville. American Bureau available from Tampa.

STORES AND PROVISIONS: No facilities available for normal ship chandlering. Prior arrangements should be made via Tampa.

GENERAL: All agents are based at Tampa, about 100 miles by road.

AUTHORITY: Robert W. Johnson, Harbour Master. P.O.Box 274, Boca Grande, Fl. 33921. *Tel:* (813) 964-2348. *FAX:* (813) 964-2245.

BOSTON, Massachusetts: 42.21 N. 71.05 W. (See Plan)

DOCUMENTS:

- 3 copies Cargo Manifest (Form 1302), 2 copies showing all cargo on board, and 1 copy showing only cargo for this port.
- 3 copies Crew Manifest (Form 1304).
- 3 copies Stores List (Form 1303).
- 3 copies Passenger List (Form I-418).
- 3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register, Safety Equipment Certificate and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

- General Declaration (Form 1301).
- Health Pratique.
- Master's Oath (Customs Form 1300).
- All foreign clearances.
- Certificate of Financial Responsibility (Oil Pollution).
- U.S. Certificates of payment of tonnage tax (Customs Form 1002).
- Certified Crew List.

PILOTAGE: Pilotage is compulsory for all foreign vessels, with few exceptions, and for United States vessels under register in foreign trade. It is optional for coastwise vessels which have on board a Pilot licensed by the Federal United States government for these waters.

Pilot boats meet vessels within sight of Boston Lighted Horn Buoy B. During Winter, with a Northwesterly wind, pilot boats may meet vessels to the Northwestward of Boston Approach Light Buoy BG. Pilot boats often land or pick up Pilots at the town wharf at Nahant Harbour.

Both the 70 ft. (21.3 m.) "Boston Pilot" and the 52 ft. (15.8 m.) "Thomas Knox" have black hulls with the word "Pilot" in black letters on either side of the white superstructure. Both are equipped with radar and maintain a 24 hour radio watch on VHF Channel 16 and a 0700 to 1800 hrs. watch on VHF Channel 11.

Vessels are asked to give a 4 hour advance notice of their time of arrival. Pilots for Weymouth, Quincy, Lynn and Saugus are obtained from the Boston pilot boat. Pilots can be notified by radio, telegraph or by radiotelephone through the Boston Marine Operator.

Boston Pilots: Pier 1, Bremen Street, East Boston, MA. 02128. Tel: (617) 569-4500. Cable: BOSPILOT.

ANCHORAGES:

ANCHORAGE No. 1. *Upper Harbour Anchorage:* Steam and motor vessels permitted to anchor in this basin anchor within the following area: S.E. of a line bearing 205° True from N.E. corner of Boston and Albany Pier No. 5, East Boston; N.E. of a line bearing 122° True from S.E. corner of Lewis Wharf, North Pier; S.W. of a line bearing 292° True from N.E. corner of Southernmost Airport Approach Pier; N.W. of a line bearing 025° True from Buoy No. 12, Fl.R.6 sec.

ANCHORAGE No. 2. *President Roads Anchorage* (40 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 237°, 522 yards from Deer Island Light; thence to a point bearing 254°, 2,280 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; thence to a point bearing 279°, 2,438 yards from Deer Island Light; thence to a point bearing 319°, 933 yards from Deer Island Light; thence to a point bearing 319°, 666 yards from Deer Island Light; and thence to point of beginning.
President Roads Anchorage (35 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 256°, 2,603 yards from Deer Island Light; thence to a point bearing 258°, 3,315 yards from Deer Island Light; thence to a point bearing 264°, 3,967 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; and thence to point of beginning.

ANCHORAGE No. 3. *Nantasket Roads Anchorage:* Vessels anchoring in this anchorage basin anchor within following area: Westerly of a line bearing 143° from wharf at Gallups Island to Bell Buoy No. 2, S.W. of Georges Island; Northerly of a line bearing 260° from Bell Buoy No. 2, Georges Island, to the Northerly end of Rainsford Island; Northerly of a line bearing 273° from the Northerly end of Rainsford Island to Bass Point, Long Island; Southerly of a line bearing 270° from the wharf at Gallups Island to Long Island.

ANCHORAGE No. 5. *Peddocks Island and Explosive Anchorage:* Vessels anchoring in this anchorage basin anchor within following area; S.W. of a line bearing 122° True from the Easterly end of Rainsford Island to the N.E. end of Rainsford Island to the N.E. end of Peddocks Island, N.E. of a line bearing 165° True from the Westerly end of Rainsford Island to the S.E. end of Peddocks Island.

RESTRICTIONS: There are 3 main entrance channels from sea to President Roads.
Broad Sound North Channel from Broad Sound to President Roads from N.E. Dredged 35 ft. deep and 1,500 ft. wide and is deepened to 40 ft. in a width of 900 ft. to 1,100 ft. It is well marked by lighted buoys.
Broad Sound South Channel from Broad Sound S.W. and Westerly to President Roads. Dredged 30 ft. deep and 1,200 ft. wide. This channel is well marked by buoys and ranges but most aids to navigation are not lighted.
The Narrows is channel leading into Boston Harbour from S.E. between Boston Lighthouse and Lovells Island on the N.E. and Point Allerton, Georges Island and Gallups Island on S.W. Depth is 27 ft. Width is generally 1,000 ft. except in a section between Narrows Light and Georges Island where shoaling on N.E side limits it to 700 ft. Channel is well marked.
The Main Ship Channel of Boston Harbour extends from President Roads to the mouths of the Chelsea and Mystic Rivers and to Charlestown Bridge on the Charles River. Channel has been dredged 35 ft. deep and 1,200 ft. wide to the inner end where widths decrease near the river mouths. It has been deepened to 40 ft. for 600 ft. width from President Roads to the mouth of the Mystic River, with a widening to 1,200 ft. at the bend just Northerly of Commonwealth Pier No. 5, South Boston.
Charles River is approach by water to Cambridge and Watertown. About 0.5 mile above the lower bridge there is a dam with a lock 45 ft. by 350 ft. with depth of 17 ft. over the lower sill. Depths above dam decrease gradually to 9 ft., basin level, at head of navigation.
Mystic River is approach by water to Everett, Malden and Medford. Controlling depths are 35 ft., from Mystic River bridge to approximately 1 mile above, thence 20 ft. from the 35 ft. channel to 800 ft. above the Malden Bridge to a point abreast Monsanto Chemical Company plant.
Chelsea River is approach to City of Revere. Channel from entrance to a point opposite the Belcher Oil Co. Terminal has a controlling depth of 35 ft.
Weymouth Fore River is approach by water to Quincy and Weymouth. Controlling depth is 30 ft. to Fore River Bridge. Controlling depth for a distance of 2,800 ft. above Fore River Bridge is 30 ft.
Town River extends N.W. from Weymouth Fore River at Quincy Point. River has a controlling depth of 34 ft. from deep water in Weymouth Fore River to a point opposite the Quincy Oil Co. Terminal. Opposite Quincy Oil Co. Terminal there is a turning basin 34 ft. deep, 400 ft. wide and 1,000 ft. long.

MAX. SIZE: The primary entrance to Boston Harbour is via the North Channel and President Roads. Controlling depth is 35 ft. MLW. Average rise of the tide in Boston is 9.5 ft.

Generally speaking, vessels drawing 40 ft. are taken at the top of the tide to Belcher Oil Terminal and Exxon only. Vessels going to berths in the Mystic River above the Mystic River Bridge are limited by the bridge's vertical clearance of 135 ft. MHW.

Vessels consigned to berths in the Chelsea Creek are limited to a length of 661 ft., beam of 90.5 ft. and draft of 36 ft. high water docking. Furthermore, vessels which exceed 630.5 ft. length and 85.5 ft. beam going above the Chelsea Street Bridge are restricted to daylight docking. Daylight sailing is required from the berths above the McArdle Bridge if the vessel is over 585 ft. long.

As a rule, vessels are docked bow in at the Chelsea Creek berths. If docked between the bridges, departure is stern first through the McArdle Bridge. If docked above the Chelsea Street Bridge, then on sailing, the vessel is turned in the basin West of the B.P. and Belcher Terminals.

The controlling depth in the channel leading to Weymouth Fore River is 28 ft. MLW. Vessels with a max. draft of 33 ft. 6 in. will be taken at high water, but it should be noted that docking and undocking in Fore River are daylight operations – between sunrise and sunset – and no vessel longer than 628 ft. will be handled.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: *Advance Notice of Arrival:* 24 hours advance notice of arrival be given. This notice is made to the office of the Captain of the Port – 223-3025.

The information to be provided consists of: Vessel's Agent's nam Vessel's name, type, flag, and call sign; the ETA; Berth; Last port a next port; Dangerous cargo on board. In return the Captain of the P will assign a consecutive log number to the vessel.

In event the vessel's ETA is changed by more than 24 hours fro first notice, the Captain of the Port should be so notified, identifying th vessel by its assigned log number.

VHF: The following VHF Channels are able:

Coast Guard, Boston pilot boat and shore station: 6, 10, 11, 12, 1 14, 16, 21, 22, 23, 81 and 83.

Distrigas: 16 and 10.

In the event of an emergency, Channel 16 or 13 will be guarded.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Vessels can proceed from the sea to Boston Upper Harbo under own power. Barges usually left by the outside tugs at th anchorage grounds, to be docked later by harbour tugs.

Tugs up to 4,300 h.p. are available at Boston for towing, dockin undocking and shifting. Tugs maintain radio communications on VH Channel 18. Inbound vessels are usually met in the vicinity of Anchorag Areas 1 or 2. Arrangements are usually made in advance through ship Agents.

BERTHING: There are 114 piers or wharves in the Port of Boston. Man of them have railroad connections. The depths of water availab alongside these terminals range up to a maximum of 40 ft. at mean lo water. Practically all terminals fronting on main ship channel are in clos proximity to storage warehouses, both cold and dry which grea facilitates transfer of cargo between vessel and warehouse.

Conley Terminal, Castle Island, South Boston:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Stevedore – John T. Clark and Son. Tel: 330-7810.

Type of Pier – Single face. 6 berths 3,705 ft. (Berths No. 11 – 16 Berths No. 12 – 15 handle break bulk general cargoes. Berth No. 11 containers. Berth No. 16 – automobiles. 4 million sq.ft. open storag (including 32 acres fenced in automobile storage), total 103 acres. 50 t crane, rail service. Terminal equipped with 2×40 ton gantry cranes an 1 × 30 ton Paceco portal crane.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's sid Minimum 40 ft. apron.

Products handled – General cargo, containers.

J. F. Moran Container Terminal, Charlestown:

Operator – Massachusetts Port Authority. Tel. 973-5354.

Type of pier – Single face, 1,100 ft. long. 1×45 ton container cran 1×70 ton container crane, 38,000 sq.ft. container stuffing shed, 50 ac container storage area, rail service.

Depth alongside at MLW – 40 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side.

Products handled – Containers.

Boston Army Base, South Boston:

Operator – Port Terminals, Inc. Tel. 542-4500.

Type of Pier – Single face, three sides: South 3,705 ft., East 351 North 964 ft., 950,000 sq.ft. covered storage, rail service, 2×27.5 t rail mounted cranes.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's sid 50 ft. apron incorporates rail lines.

Products handled – General cargo, containers.

Massport Marine Terminal – South Boston:

Owned and operated by: Massport, Maritime Department. Tel: 97 5391.

Adjacent to the former South Boston Naval Annex, this termi features a 47 acre (19 ha.) site used for discharge and handling automobiles; 800 ft. (244 m.) face; 38 ft. (11.58 m.) alongside dep 16 ft. (4.88 m.) deck height; 750 lb./sq.ft. (340 kg./sq.cm.) load capac Railway track connection; stevedore equipment available as needed. estimated 50,000 imported cars processed here yearly.

Black Falcon Cruise Terminal, South Boston:

Operator – Massachusetts Port Authority, Maritime Departme Tel. 330-1500.

Type of Pier – Single face, 600 ft.

Depth alongside at MLW – 32 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side. 20 apron incorporates rail lines.

Used for docking excursion vessels, and occasional passen vessels.

Pier 1, East Boston: No cargo activity.

Operator – Massachusetts Port Authority. Tel. 567-0331.

Type of Pier – Single face, three sides: East and West 605 South 390 ft., 196,000 sq.ft. covered storage.

Depth alongside at MLW – 35 ft.

Normal ship side to dock – Varies.

Line handling boat not required.

Access to vessel (for stores and repairs) – trucks to ship's side.

Coastal Oil New England, South Boston:
Operator – Coastal Oil New England. Tel. 284-4494.
Type of Pier – Single face.
Depth alongside at MLW – 40 ft.
Normal ship side to dock – Port (bow in).
Line handling boat – required.
Access to vessel (for stores and repairs) – limited, trucks can approach only to within 150 ft. of gangway or ship's side.
Products handled – Avjet, Heating Oil, No. 6 Oil, Molasses.
Size and number of pipe-lines – Numerous – 24 in., 20 in., 16 in., 12 in.
Bbls. per hour discharge capacity – 12,000 to 18,000.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat, 300 absorbent pillows, 2,000 gallon pumpout truck.

Atlantic Fuels Marketing Corp., Chelsea:
Operator – Atlantic Petroleum. Tel. 729-3000.
Type of Pier – Timber pile, offshore.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard (bow in).
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Heating Oil, No. 6 Oil.
Size and number of pipe-lines – 2 × 8 in.
Bbls. per hour discharge capacity – 6,000 to 8,000.
Storage tanks adjacent to berth.
Pollution control equipment – 1,000 ft. boom, 18 ft. boat, 50 absorbent pillows, 150 gallons Aqua-clene.
Note:– Bow to manifold 370 ft. No wire ropes used to moor vessel.
Vessels require 3 tugs while docking, depending on the deadweight of the vessel. A minimum of 2 tugs are required for undocking. Caution is advised while docking and undocking due to traffic congestion in this area of the channel.

Exxon Company U.S.A., Everett:
Operator – Exxon Company U.S.A. Tel. Marine Department 387-1733, Marketing Terminal 381-2828.
Type of Pier – Timber pile wharf with caissons.
Depth alongside at MLW – 42 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – by rail-mounted hand cart.
Products handled – Asphalt, Chemicals, Diesel Oil, Jet Fuel, LPG, Kerosene, Gasoline, No. 2 and No. 6 Oil.
Size and number of pipe-lines – numerous.
Bbls. per hour discharge capacity – Up to 35,000.
Average distance to storage tanks – 5,000 ft.
Pollution control equipment – 1,500 ft. boom, skiff.
Vessels meet tugs and Docking Master off Castle Island and then proceed up the main channel. Vessels pass under the Mystic Bridge on the approach to the berth and then dock starboard side to. If the vessel is equipped with a bow thruster 2 tugs are required when docking and undocking, otherwise 3 tugs are required. The vessel turns on departure from berth. A gangway is provided by the Terminal.

Distrigas of Massachusetts Corporation, Everett:
Operator – Distrigas of Mass. Corporation. Tel. 381-9444.
Type of Pier – Single face, 165 ft. long, with 900 ft. berthing space with dolphins and use of adjacent wharves. Concrete platform contains 5 Chicksan Marine LNG unloading arms.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Line handling boat is required.
Access to vessel (for stores and repairs) is limited.
Products handled – Liquefied Natural Gas.

Prolerized New England, Everett:
Operator – Prolerized New England Company. Tel. 389-8300.
Type of Pier – Straight face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Access to vessel (for stores and repairs) – trucks to ship's side, but access may be limited due to vessel's position at conveyor.
Products handled – Ferrous scrap (including Prolerized shredded scrap).
General notes: Pier is equipped with 2×50-ton cranes. Shredded scrap is loaded from fixed conveyor requiring vessel to be shifted as each hatch is served.

U.S. Gypsum, Charlestown:
Operator – U.S. Gypsum Co. Tel. 241-9100.
Type of Pier – Single face. (410 ft.).
Depth alongside at MLW – 27 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – access to berth.
Products handled – Gypsum rock from Nova Scotia, carried in company's own vessels, specially fitted and adapted for discharge at this berth. Silo storage 25,000 tons. Open storage 38,000 tons.

Mobil Oil, East Boston:
Operator – Mobil Oil Corporation. Tel. 567-9080.
Type of Pier – Straight face, with centre relieving platform.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 950 ft. boom.

Amerada Hess Oil Terminal – East Boston: (No cargo activity).
Owned and operated by: Amerada Hess Corp.
For receiving and shipping petroleum products; 20 ft. (6 m.) face, 296 ft. (90.2 m.) total berthing space with dolphins, 35 ft. (10.67 m.) alongside depth, 13 ft. (3.96 m.) deck height. Pipe-lines extend from wharf to 10 steel storage tanks with total capacity of 595,250 bbls.

Gibbs (B.P.) Oil Company, Revere:
Operator – Gibbs (B.P.) Oil Company. Tel. 289-4201.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 10 ft. – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 3×10 in., 2×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
3 tugs are normally used for docking and undocking vessels at this berth. Vessels normally dock starboard side to.

Belcher New England Ship Pier – Revere:
Owned and operated by: Belcher New England, Inc.
Used for receiving and shipping petroleum products, the South side of pier has 600 ft. (182.88 m.) of berthing space; 37 ft. (11.27 m.) LW alongside depth; 15 ft. (4.57 m.) deck height. Pipe-lines extend to storage tanks with 1.25 million barrel capacity.

Coastal Oil New England Inc., Revere:
Operator – Coastal Oil New England Inc. Tel. 284-4494.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 37 ft.
Normal ship side to dock – Port.
Line handling boat required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Mogas, Alcohol, No. 6 Oil.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat. (Shared with B.P., Arco, Northeast.)
Vessels meet tugs and Docking Master in vicinity of Castle Island. The maximum size vessel which can be safely accommodated at this berth is about 38,000 d.w.t. Vessel normally require 2 tugs when docking and undocking at Union Oil Terminal. Vessels dock starboard side to, and when undocking are turned in the turning basin. Vessels must utilise their own gangway at this berth. Fully loaded vessels are docked or undocked at HW only, day or night.

Gulf Oil Company, Chelsea: (Cumberland Farms)
Operator – Gulf Oil Company. Tel. 884-5980.
Type of Pier – Single face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline, Jet Fuel.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat.
Vessels require 3 tugs when berthing and normally 2 when unberthing. Vessels dock daylight only, normally port side to, and when undocking proceed up river to the turning basin and are turned before proceeding outbound.

Atlantic Fuels, Chelsea:
Owned and operated by: Atlantic Petroleum Inc.
Used for receiving and shipping petroleum products, bunkering vessels; can accommodate vessels up to 690 ft. (210.3 m.) in length; 33 ft. (10 m.) alongside depth; 14 ft. (4.26 m.) deck height. Pipe-lines extend from wharf to 14 steel storage tanks with total 660,000 barrel capacity.

Coastal Oil New England, Chelsea:
Operator – Coastal Oil New England. Tel. 289-4494.
Type of Pier – Single face.
Depth alongside at MLW – For 575 ft. vessels: 31 ft. fwd., 34 ft. aft. For 624 ft. vessels: 21 ft. fwd., 34 ft. aft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Avjet, Diesel Oil, Gasoline.
Size and number of pipe-lines – 7×12 in.
Bbls. per hour discharge capacity – 5,000 to 10,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – Automatic boom being installed.
3 tugs are normally required for berthing and 2 for unberthing. Vessels require a 300 ft. messenger fore and aft for handling lines. Vessels normally dock port side to. Due to the limited manoeuvring area adjacent to the berth, vessels when unberthing are towed out stern first and then turned in the main channel.

Quincy Oil, Quincy:
Operator – Quincy Oil Company. Tel. 773-2500.
Type of Pier – Timber pile, timber deck, offshore wharf.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – 2×8 in.

Bbls. per hour discharge capacity – 6,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 800 ft. boom, work boat.

Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore and Town Rivers to the Quincy Terminal.

Vessels should enter Town River at S.W. Extreme caution should be used when turning into Town River because of the narrow channel. Narrow channels demand extreme caution when navigating up to the terminal. Vessels normally berth port side to, and are swung around in the turning basin when unberthing. 3 tugs are required when docking or undocking. Vessels must utilise their own gangways.

Proctor and Gamble, Quincy:
Operator – Proctor and Gamble. Tel. 770-3155.
Type of Pier – T-head with dolphins.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Palm Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – shared with Sprague.

C.H. Sprague & Son Co., North Weymouth:
Operator – C.H. Sprague & Son Co. Tel. Terminal 337-2040, Offices (603) 431-1000.
Type of Pier – Timber pile, concrete deck.
Depth alongside at MLW – 35 ft. 06 in.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – No. 6 Oil.
Size and number of pipe-lines – 2×12 in.
Bbls. per hour discharge capacity – 10,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 500 ft. boom, 16 ft. boat. (Shared with Mobil.).

Vessels dock and sail during daylight only. 3 tugs are required when berthing and unberthing. Vessels met the tugs and Docking Pilot in the vicinity of Nantasket Roads and then proceed to the manoeuvring area near the berth where the vessels are turned and berthed starboard side to. Vessels must utilise their own gangway at this berth.

Citgo Petroleum Corp., Braintree:
Operator – Citgo Petroleum Corp. Tel. 848-2595.
Type of Pier – 4 cylindrical caissons.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 1×10 in., 4×12 in.
Bbls. per hour discharging capacity – 10,000.
Average distance to storage tanks – 2,500 ft.
Pollution Control Equipment – 1,500 ft. boom, work boat.

Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore River, through the Fore River Bridge, and berth starboard side to at the terminal. Vessels dock and undock during daylight hours only. 3 tugs are normally required when docking and undocking. Vessels must utilise their own gangways.

Bulk Cement Piers:
There are 2 berths in Boston used exclusively for the discharge of bulk cement from barges. Both are in the Mystic River.
No. 28: Independent Cement Corp.
No. 33: Blue Circle Atlantic Cement Company, Inc. Tel: 241-9040.

CRANES: 1×60 ton floating crane and mobile cranes up to 150 tons capacity.

STEVEDORES: Available at various rates.

SPECIALISED CARGO HANDLING FACILITIES: Also see "Berthing".

Berthing at all berths normally effected on a rising tide. It is the practi of the port for deep draft vessels to pump part cargo overtide in ord to bring vessel to a safe draft by the next Low Water. Berthing a Sprague, North Weymouth is usually starboard side to, which involve swinging vessel.

LNG/LPG: Handled at Distrigas on the Mystic River, Everett.

U.S. Coast Guard Instructions: The following is only part of th instructions. Full copies may be obtained from U.S.C.G. Marine Safe Office, 447 Commercial Street, Boston, MA 02109-1096. Tel: (617) 56 9000.

Foreign flag vessel owners intending to transport liquefied gases i U.S. ports must obtain a Certificate of Compliance from the Coast Guar The procedures for obtaining a Certificate of Compliance are detaile in 46 CFR 154. Both U.S. and foreign flag vessels must meet essential the same requirements. Most requirements conform to the IMO Ga Carriers Code, but some construction requirements are more stringen

PART A – LNG/LPG VESSEL OPERATIONS IN BOSTON HARBOU

I. NOTIFICATION

The Master of an LNG/LPG vessel notifies COTP Boston 72 hours i advance of arrival at Broad Sound Anchorage. This advance notice arrival is by message and includes the vessel's Agent in Boston, distanc from keel to highest projection, maximum draft, and a statement by th Master to the effect that:

"To the best of my knowledge and belief, there are no know casualties to this vessel or its machinery which might affect he seaworthiness. I further state that all cryogenic handling and detectio equipment is in proper operating condition and has been operating f the duration of this passage."

Signed
Master____________

Should any deficiency develop after the 72 hour advance notice i given, another message describing the discrepancy or condition in deta is sent to COTP Boston immediately.

Telex 910-2506309 (Answerback "US CG")

In addition to the certification of equipment, the Master includes th names and qualifications of crew that have changed since the last po visit.

The Vessel Movement Office (VMO) at the U.S. Coast Guard Marin Safety Office, Boston is the contact point for all notifications and reques of the COTP. Upon notification of arrival, the VMO:

a. Initiates an action file including vessel data, messages, letter etc.
b. Reviews the vessel history and communicates any speci requirements with the Coast Guard inspectors.
c. Notifies appropriate Coast Guard units.
d. Maintains daily updates of the vessel's estimated time of arriva
e. Arranges and co-ordinates Coast Guard inspection, escort an monitoring details.
f. Passes any unusual or additional information to intereste parties.
g. Obtains a long range weather forecast for the period of trans and transfer and compiles updates as they occur.

One day prior to arrival of the vessel, the VMO:

a. Firms up probable transit time for planning purposes.
b. Prepares and transmits Oporder and marine informatio broadcast messages, and
c. Notifies other concerned parties of the estimated time of harbo transit and any special requirements affecting harbour transit.

II. ARRIVAL AND ENTRY

U.S. Coast Guard inspectors from MSO Boston board and inspe each vessel prior to its entry into port. The purpose of this inspection to ensure that the vessel meets the requirements of its certificate an that all cargo control equipment and safety equipment is operati Vessels will normally anchor in Broad Sound pending inspection.

The vessel's Master must provide safe access for the Coast Gua inspectors. Should sea conditions preclude a safe boarding wh anchored, the LNG/LPG vessel may be required to resume manoeuvri and provide a lee. A combination of the vessel's accommodation ladd and pilot ladder is acceptable.

While the vessel is at anchor, a live bridge watch shall be maintaine LNG/LPG vessels arriving at the Port of Boston must maintain a rad guard on VHF-FM Channels 13 (156.65 MHz) and 16 (156.8 MHz). round of bearings fixing the vessel's position shall be taken and recor at least hourly, followed by a report if there is a significant change position or other problem aboard the vessel. The report may be ma to COTP Boston by radio via the U.S. Coast Guard Group Boston via the vessel's agent if timely notification is possible.

An LNG/LPG vessel must have its cryogenic sensing and indicating instrumentation and gas detection system in operation while the vessel is in U.S. waters. The Master of the ship must be prepared to demonstrate that the cryogenic handling and gas detection equipment is in proper working order. The vessel shall have on board a cylinder of properly certified span gas for testing the gas detection system.

In addition to a valid Certificate of Compliance, vessels must have onboard all required ship's documents and an up-to-date set of plans, in English, specifying:

a. Cargo tank arrangement
b. Cargo tank venting arrangement
c. Cargo piping arrangement
d. Capacity plan
e. Firefighting plan
f. Up-to-date cargo system operating and safety procedures.

The vessel may enter the harbour only after the vessel equipment, publications and documents are inspected, confirmed to be in satisfactory condition, and COTP Boston has cleared the vessel for entry.

The U.S. Coast Guard, Captain of the Port must ascertain that crews are qualified to carry out transfer operations safely. On U.S. flag vessels carrying LNG, the Master, Chief Engineer, Chief Mate and First Assistant Engineer must be licensed and certified by the Coast Guard. On vessels other than U.S. flag, a valid Certificate of Compliance issued by the Coast Guard and a valid Certificate of Fitness (issued in compliance with the IMO Gas Carriers Code) is evidence of compliance with specific U.S. equipment requirements and home state requirements for certification.

Crew training standards of the Code (Chapter 18) require that personnel involved in cargo operations be adequately trained. All officers should be trained to deal with emergencies involving cargo leaks, spills or fires. The code also refers to the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978.

Each officer and rating with specific duties involving cargo and cargo equipment should complete a course of instruction, or undergo onboard training, applicable to his or her duties. As crew members change, the operator must keep the Coast Guard apprised of the new members' training. A company initiated letter or message indicating the completion of an administration approved formal training course will serve as evidence of this training. All crew members should have formal training, or onboard instruction, in the special hazards of LNG and LPG and an awareness of the general safety features of the vessel.

Serious discrepancies found during any boarding or examination which affect the safety of the port must be corrected prior to vessel entry or cargo transfer operations. Examples of serious discrepancies are leaking cargo tanks, inoperative leak detectors or inoperative fire-fighting equipment. Determination to permit or deny port entry or cargo transfer is made by the COTP. In unusual circumstances, however, Commandant (G-MTH) may be requested to advise or furnish a technical representative.

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations. The LNG/LPG vessel may not enter the main ship channel until clearance is received from COTP Boston and a U.S. Coast Guard escort vessel is in position to begin the escort.

III. LNG/LPG VESSEL TRANSIT MANAGEMENT

Fully or partially loaded LNG/LPG vessels may transit the harbour only during the hours between sunrise and sunset and then only during periods of adequate visibility.

One hour prior to scheduled LNG/LPG vessel transit, the Vessel Movement Officer assumes the watch in Group Boston Communications Centre, to perform the following duties:

a. Ensure that the tugs and the Coast Guard escort vessel are in position, two emergency towing lines are rigged fore and aft on the LNG vessel within 6 ft. of the water, and the inspectors have found no discrepancies in the condition of the vessel.
b. Contact the LNG/LPG vessel and initiate the transit.
c. Ensure that the Marine Information Broadcast is being properly sent by Group Boston and the escort craft. Keep Group Boston Duty Officer informed of LNG/LPG vessel position as reported by the escort vessel.
d. Notify Logan Airport Control Tower of the LNG/LPG vessel transit when the vessel approaches Deer Island.
e. Monitor Channel 13 VHF-FM and communicate with vessels to ensure no unauthorised vessels get underway in violation of the safety zone.
f. Address all vessel movement questions received via radio and telephone during the transit.
g. Keep the COTP informed of the progress of the evolution.
h. Notify Group Boston Duty Officer when safety broadcast can be terminated.
i. Maintain a logbook with appropriate entries (transit commenced, escort craft and adequate number of tugs on scene, emergency tow lines rigged, names of Boston Pilot and Docking Master onboard, vessel moored etc.).

The Vessel Movement Officer (VMO) can be contacted at the Marine Safety Office (565-9000) or by radio (Channel 13 VHF-FM)

If the visibility falls to less than 2 miles at any point in the transit, the Master shall notify the VMO of the situation and request authorisation to proceed.

When the LNG/LPG vessel enters Boston North Channel inbound, the Master notifies the Vessel Movement Officer via Channel 13 VHF-FM. The VMO will then notify the Chief or Assistant Chief Controller at Logan Airport. The Federal Aviation Administration imposes flight restrictions over the LNG/LPG vessel in keeping with the desire to maintain maximum standards of safety during an LNG/LPG vessel movement.

The vessel's Master shall ensure that calculations are made comparing the air draft of the LNG/LPG vessel to the height of any fixed objects under which it must pass. These calculations are to be made available to the Docking Master as an assurance that the LNG/LPG vessel can safely transit Boston Harbour.

Tugs meet the incoming LNG/LPG vessel at the Eastern end of President Roads and are used as needed during the vessel's transit of Boston Harbour. During the docking and undocking operation the tugs will be strategically positioned consistent with the Master's sound judgement and consultation with the Docking Master. Emergency towing lines must be rigged fore and aft within 6 ft. of the water during transit.

For vessels under 60,000 cu.m. cargo capacity, a minimum of 3 tugs with total of 5,400 shaft horsepower or greater shall attend the needs of the vessel.

Vessels of 60,000 cu.m. or over will be required to use a minimum of 5 tugs. Two of the tugs must be 3,000 h.p. or greater. The remaining 3 tugs must be 1,200 h.p. or greater. Note that the referenced 3 or 5 tugs are minimums. Nothing herein should be construed to overrule the Master's sound judgement in employing additional tugs.

While a fully or partially loaded LNG/LPG vessel is underway in the harbour, all other vessels in the harbour are required to remain moored unless otherwise authorised by the COTP. The COTP has given permission for towing vessels without tow and other vessels under 100 gross tons to transit outside the main ship channel:

> IF they establish bridge to bridge radio contact with the LNG/LPG vessel upon their approach and advise the Master of their intent, AND they can safely navigate outside the main ship channel.

Other examples of vessel movements that may be allowed are:

a. A cargo ship requests permission to get underway in the main ship channel and transit Boston Harbour outbound while a LNG/LPG vessel is inbound. Permission may be granted by the COTP for the transit outbound if the cargo ship will not approach within 2 nautical miles ahead or one nautical mile astern of the LNG/LPG vessel.
b. A tankship requests permission to get underway for inbound transit of the harbour at the same time an LNG/LPG vessel is inbound. Permission by the COTP may be given for the tanker to proceed but to remain at least one nautical mile astern of the LNG/LPG vessel.

During an LNG/LPG vessel transit, the maximum allowable speed for any vessel permitted within the moving Safety Zone will be 8 knots. This speed applies to all vessels within the restricted area. At least one Coast Guard escort craft will be present to enforce the safety zone restrictions. Additional craft may be assigned to the escort if conditions warrant.

Marine information broadcasts will be made on Channel 16 VHF-FM, switching to Channel 22, beginning 24 hours prior to the ship's harbour transit. The escort craft will issue a broadcast bridge to bridge on Channel 13 at the beginning of the transit and every 30 minutes thereafter until the LNG/LPG vessel is moored. At the end of each broadcast, the escort craft will state the current location of the LNG/LPG vessel.

The escort craft should normally take station several hundred yards ahead and to one side of the bow of the LNG/LPG vessel and precede it through the harbour. The escort craft is responsible for enforcing the vessel movement requirements of the safety zone. The escort craft will monitor and use Channel 13 VHF-FM to provide vessel traffic control during the transit of the LNG/LPG vessel.

An officer from MSO Boston will be assigned to ride each LNG/LPG vessel during the inbound transit. The senior member of the pre-arrival inspection team will assume this role when the inspection and transit occur on the same day. When these events occur on separate days, arrangements will be made to place an officer aboard the vessel prior to commencing the harbour transit.

This officer will remain in the pilothouse, maintain radio communications with the VMO via Channel 13 VHF-FM, and shall be responsible for the following:

a. Serve as a direct communications link to the VMO to report any casualties or unusual incidents, obtain amplifying information, and relay instructions to the vessel's Master or Pilot as directed by the VMO.
b. Assist in making determination as to the nature and seriousness of a casualty and if the inbound vessel should be directed to exit the harbour and return to anchorage in Broad Sound or if it should be permitted to proceed to its berth.
c. Remain vigilant and report any situation that could affect the safety of the port or that could adversely impact the safety zone and vessel escort.

Should an emergency situation occur aboard the LNG/LPG vessel (loss of steering, grounding, fire, etc.) the Master/Pilot will immediately notify the MSO Officer on board who will inform the VMO of the emergency via Channel 13 VHF-FM. The escort craft will then provide traffic control to keep all vessels (other than tugs, fireboats, etc.), clear of the LNG/LPG vessel.

IV. CARGO TRANSFER OPERATIONS

The COTP will provide personnel to ensure safety during the process of cooling down and to monitor the progress of transfer operation. A Coast Guard patrol craft will also be present to provide continuous waterside safety zone enforcement to prevent any vessel approaching within 50 yards of the LNG tanker while it remains in a loaded condition or is conducting cargo operations.

LNG/LPG vessels must moor bow to seaward with at least 2 wire cable mooring lines (firewarps) at the water's edge, fore and aft on the outboard side, for emergency towing hook-up if the need should arise. The vessel must be maintained in a state of readiness with sufficient crew on board to enable the ship to get underway and clear the pier in an emergency within 30 minutes of notification. The LNG/LPG vessel must also be capable of navigating out of the Port of Boston, using the main ship channel, at all times and under all prevailing tidal conditions.

The following minimum personnel must be on board the vessel during transfer operations:

a. Two Licensed Officers, fully qualified to supervise cargo transfer operations.
b. Two deckhands.
c. One Licensed Deck Officer for duties other than cargo transfer.

The officers on the vessel supervising cargo transfer operations should be fully rested prior to commencing tranfer operations. A minimum of 8 hours sleep is recommended. All ship's personnel directly involved in the transfer operation must be able to communicate in the English language, or be provided with an interpreter.

Venting cargo gas to the atmosphere is not permitted in port. However, nothing in this instruction should be construed to require or authorise elimination of installed ship safety equipment. If emergency venting is necessary, the officer supervising cargo transfer on the vessel will immediately notify the COTP Boston. This notification should include location and amount of venting, the cause of the emergency venting, wind velocity and direction at the time of venting.

All LNG/LPG facilities in the Port of Boston shall meet the requirements of 33 CFR 127. The facility will be responsible for controlling access to the vessel while it is at the dock.

The facility and the vessel must discuss arrangements for emergency shutdown of cargo transfer and emergency breakway of the vessel from the facility.

During cargo transfer, the facility shall have at least one person onboard the vessel and one person in the facility control centre who will be in constant communication with each other at all times. In addition to sufficient personnel to safely conduct all physical transfer operations, a person specially trained and certified as knowledgeable in the properties and hazards of the cargo to be tranferred shall oversee all discharge operations.

The permission of the Captain of the Port is required before loading stores or bringing vessels alongside the LNG/LPG vessel during cargo transfer operations. Bunkering or other transfer of petroleum products or other compressed or liquefied gases is prohibited while the vessel has gas or liquid cargo in the transfer piping.

The transfer of liquid cargo shall not begin until the Coast Guard inspector is satisfied with cooldown. The inspector must certify that all items in the Cooldown Inspection List are examined. The primary function of this inspection is to ensure that all connections, piping, pumps, etc. are in satisfactory operating order and that no deficiencies develop during the cooldown phase. Full pumping may commence upon satisfactory completion of cooldown operations.

The monitoring detail supervises the LNG/LPG transfer operation from hookup to disconnect and maintains an official logbook. The primary function of the monitor is to ensure compliance with safety requirements during the transfer and to maintain an alert security posture.

The individual Coast Guardsmen that make up the monitoring detail represent the Captain of the Port. Their responsibility is to keep informed of the progress of transfer and to oversee the safety of the operation. The person representing the facility onboard the vessel and the vessel cargo officer *must* promptly report all problems or abnormal conditions encountered during transfer operations, on the vessel or facility, to the Coast Guard watchstander. Updates of the condition and corrective action planned are also required.

The monitoring detail logs the commencement of pumping, completion of pumping, disconnecting times and any unusual occurrences and informs the COTP at each stage in the operation,

All cargo operations must cease if electrical storms are observed nearby. However, cargo transfer connections should be maintained. If gale warnings are posted, additional mooring lines and/or tug assistance may be required.

Should an emergency occur, the monitoring detail should immediately get clear and inform the COTP of the situation. Detailed emergency instructions to the monitoring detail can be found in Part B (Emergency Operations) of this plan.

The safety zone enforcement craft will be located so that vessel movements within a mile of the LNG/LPG vessel can be readily observed in order to detect any unusual waterborne activities that may pose a threat to either the vessel or the facility. Any unusual circumstances such as suspicious craft in the vicinity of the LNG/LPG vessel, approaching thunderstorms, sudden changes in the direction or increase in wind speeds, or any leaking gas vapour cloud wil be reported to the monitoring detail.

All firefighting equipment on the safety zone enforcement craft will be on standby, ready for immediate use in the event of an emergency. In the event of a threat of or actual fire or explosion, the enforcement craft will be positioned upwind and clear of the danger area to assist in response efforts.

Upon completion of the transfer operations when all cargo transfer piping is disconnected, the monitor on watch will notify COTP Boston. The MSO Duty officer will ensure that the safety zone broadcast is cancelled. A safety zone will normally be continued after cargo operations are complete and until the LNG/LPG vessel clears Deer Island Light *only* if the LNG/LPG vessel is partially loaded. When the vessel is empty, the VMO notifies Group Boston Communications Centre and releases the safety zone enforcement vessel.

V. LNG/LPG VESSEL DEPARTURE

A fully or partially loaded LNG/LPG vessel will always transit the harbour within a moving safety zone. This concept enhances safety by avoiding crossing or passing situations involving other vessels in the harbour. A U.S. Coast Guard escort craft will enforce the safety zone until the outbound LNG/LPG vessel clears Deer Island Light. The same requirements set forth in Section A-III will be used for transit of LNG/LPG vessels if a safety zone is set for departure.

LNG/LPG vessels departing the Port of Boston that are empty heel) will not require a safety zone. A Coast Guard escort or oth additional requirements may be established in certain circumstances the discretion of COTP Boston. Empty LNG/LPG vessels may tran the harbour during darkness.

When an empty LNG/LPG vessel gets underway outbound, the Mast notifies the Vessel Movement Officer. The VMO will then notify the Ch or Assistance Chief Controller at Logan Airport. The Federal Aviati Administration imposes flight restrictions over the LNG/LPG vessel keeping with the desire to maintain maximum standards of safety dur an LNG/LPG vessel movement.

REPAIRS/DRY DOCKS: Any type of repair undertaken.

East Boston, Massachusetts	Length	Capacity
Floating Dry Dock No. 1	622 ft.	18,000 tons
Floating Dry Dock No. 2	479 ft.	20,000 tons
Graving Dry Dock No. 4	256 ft.	

Modern facilities for repair, overhaul, and conversion of vessels of a sizes:

(a) a 10,000 ton capacity floating dry dock serviced by 2×150 t overhead cranes with a yoked capacity of 350 tons. The 5-sectio dock is 415 ft. long, 120 ft. wide, and has an inside dimension 85 ft. 7 in.

(b) 3 building basins (actually a 3-positioned graving dock). 2 a 132 ft. wide, 867 ft. long; 1 is 150 ft. wide, 938 ft. long. Each bas serviced by 2 Whirley type cranes of 75 and 50 ton capacity.

(c) 4 outfitting piers capable of handling up to 10 shi simultaneously provide adequate space for dockside work a

(d) for mooring personnel or service barges. 3 conventional "sliding" ways capable of handling ships up 1,000 ft. in length.

Major Shops: 2-bay fabricating shop served by 17 bridge crane Machine shop equipped with large vertical and horizontal mills plane lathes and a complete small machine complement. Fully equipped she metal, joiner, boiler, blacksmith, pattern foundry, galvanising, pipe a copper, and electrical shops. Complete facilities for inspection of a types including non-destructive testing such as radiography, magne particle, liquid penetrant and ultrasonic.

General Ship Corporation, East Boston: Dry docks for vessels up 680 ft. × 90 ft. Damage and voyage repairs.

CUSTOMS ALLOWANCES: At the discretion of Customs office Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wi or spirits per man. Additional allowances may be given if conside necessary, due to length of vessel's stay in port.

GANGWAY/DECK WATCHMEN: Available at prevailing prices.

OPENING/CLOSING HATCHES: Performed by stevedores.

REPATRIATION: Good facilities exist.

AIRPORT: Logan International Airport, East Boston.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight sav time from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (1st January); Martin Luther Kin Birthday (15th January) Washington's Birthday (3rd Monday February); Evacuation Day (17th March); Patriots' Day (3rd Monday April); Memorial Day (last Monday in May); Bunker Hill Day (17th Jun Independence Day (4th July); Labour Day (first Monday in Septemb Columbus Day (8th October); Veteran's Day (11th Novemb Thanksgiving (fourth Thursday in November); Christmas Day (2 December).

Note: "Or any day celebrated in lieu thereof".

POLICE/AMBULANCE/FIRE: Boston Fire Dept. 725-2880; Bos Police Dept. (Harbour Master) 242-6096; Everett Fire Dept. 387-74 Everett Poice Dept. 3878-1212; Chelsea Fire Dept. 884-1410; Chel Police Dept. 884-1212.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through the following contractors:

BFI Waste Systems (Brown-Ferris Industries), 170 Market Street, Brighton, MA 02135. Tel: (617) 254-1800.

Laidlaw Waste Systems, 66 Cambridge Street, Charlestown, MA 02129. Tel: (617) 445-8383.

Waste Management of MA, Inc., 530 East First Street, South Boston, MA 02127. Tel: (617) 269-5800.

Charles Lee Disposal, Inc., 1 Ellery Street, So. Boston, MA 02127. Tel: (617) 361-3900.

WASTE OIL DISPOSAL: Oil Pollution Clean-up Contractors:

Clean Harbors, 900 East First Street, Boston, MA 02127. Tel: (617) 269-5830.

Jet Lines Services, 441 Canton Street, P.O.Box 180, Stoughton, MA 02072. Tel: (617) 344-2510.

SEAMAN'S CLUBS: Boston Port and Seaman's Aid Society, Mariners' House, 11 North Square, Boston, MA 02113. Tel: (617) 227-3979.

New England Seaman's Mission, Inc., Bremen Street, E.Boston, MA 02128. Tel: (617) 569-6179.

Boston Seaman's Friend Society, 45 Church Street, Boston, MA 02116. Tel: (617) 426-1665.

Massachusetts Port Authority, Maritime Department, Fish Pier East II, Northern Avenue, Boston, MA. 02210. *Tel:* (617) 973-5354. Telex: 940365. *FAX:* (617) 973-5357. *Contact:* Anne D. Aylward, Maritime Director.

BRIDGEPORT, Connecticut: 41.07 N. 73.11 W. **(See Plan)**

DOCUMENTS: Refer to "New York".

APPROACHES: *Via New York:*

Charts: 12339, 12366, 12367, 12363, 12369.

Vessels leaving New York bound for Bridgeport will be transitting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transitting this area. There are several dangers to be wary of when making the passage from New York to Bridgeport. In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in Southwesterly direction. Vessel drawing up to 35 ft. may transit Hell Gate at slack High Water only. Sluggish handling vessels should arrange for tug assistance up the East River and through Hell Gate.
2. 26-ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.

Via Block Island:

Charts, 13205, 13215, 13209, 12354, 12369.

Block Island's Southern shore high rock cliffs provide a good radar target. Also, bearings can be taken from the RDF station at S.E. Light. Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to East in views of the numerous shoals on the Western side of the Island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to Bridgeport. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.
3. Great caution should be exercised during the Summer months when transitting through Block Island and Long Island Sound due to the heavy small boat traffic, especially the area in proximity to The Race.
4. Dense fog is prevalent during the Summer months. Good judgement should be used before transitting the area during fog.

Good water is found in Long Island Sound from The Race to Bridgeport as long as the mid-channel Buoys "P1" and "CF" are passed close aboard and care is taken so as not to pass North of Twenty-Eight Foot Shoal buoy.

Vessels usually pass one mile to the South of Stratford Shoals light before altering course for Bridgeport. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used in conjunction with echo sounder readings to ascertain positions.

PILOTAGE: Vessel usually notifies Agent 48 hours before arrival, who will arrange Pilot boarding. Pilot boards either at Brenton Reef in position Lat. 41° 25′ N., Long. 71° 23′ W. or Point Judith in position Lat. 41° 17′ N., Long. 71° 29′ W.

Note: Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour - Block Island.

Notice from State of Connecticut, Department of Transportation:

Pilotage is compulsory for vessels transitting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours in Long Island Sound. Vessels bound for Bridgeport via Block Island/Long Island Sound usually board a pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W., 2 miles South of the Point Judith R "2" whistle buoy) or the Montauk Pilot Station (41° 02′ N., 71° 42′ W., 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound pilots also serve as pilots for Bridgeport Harbour. If a local harbour pilot is to be boarded, he will usually board vessel in vicinity of Bridgeport Sea Buoy, marked "BH" – short and long flash; red and white vertical stripes.

ANCHORAGE: 2 miles South of the entrance with depths in excess of 50 ft.

RESTRICTIONS: Entrance channel has a project depth of 35 ft. at MLW, is 400 ft. wide and 3 miles in length.

Normal time allowed for transit from outside to off the dock is 30 – 40 minutes. Docking time varies from 30 minutes to 1 hour, dependent on which terminal is the destination, and weather conditions.

The New Haven – Bridgeport Pilots Association believe 4 ft. of water in excess of the ship's draft is needed. As a rule of thumb, 31 ft. at low to 37 ft. at high. Any variations from this, a Pilot should be directly consulted. The range of tide is 6.7 ft. Wind strongly affects the tide in the main entrance channel. Flood and ebb cross the channel at a right angle, and velocities depend on the rise of tide for the day.

Vessels up to 70,000 d.w.t. and LOA 825 ft. call at the port.

MAX. SIZE: See "Berthing and Restrictions".

HEALTH: Vessel to cable Agent 24 hours prior to arrival of any illness on board, otherwise Radio Pratique not necessary.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving from North use Chatham Radio. Vessels from South use Amagansett Radio on Long Island.

BERTHING: *Cilco Terminal:* Cilco is a bulkhead dock, length approximately 1,100 ft. Vessels dock port or starboard side to. Two ships can moor at the same time. This is a dry cargo facility. Ships load or discharge all kinds of products. Several mobile cranes are available. Depth 33 ft. at MLW. Bunkers are only available by truck. Fresh water is available.

TUGS: Tugs available from Red Star. The Despatcher monitors VHF and is available 24 hours a day through Channel 24 at Bridgeport.

MEDICAL: All facilities available.

TANKERS: *Bridgeport Shell – Buckley Bros.:* The Shell berth is located on the East side at right angles to the main entrance, and ships must be turned 90° to approach the dock. The dock is approximately 200 ft. long with 2 main dolphins and catwalks to shore. Head lines and stern lines are run ashore by a messenger. The size of vessels is governed by manifold distance. Light oil products 300 ft. and heavy oil 350 ft. Vessels of length 700 ft. have been moored, 38 ft. at MLW in ship berth. Ships dock port side to.

Bunkers and fresh water are available.

United Illuminating: Berth is 0.6 miles inside the breakwater on the West side of the channel. A turn to port of 120° must be made into a dredged cut 140 ft. wide. The dock is concrete caissons on pilings with catwalks and centre platform. Depth 32 ft. to 37 ft. at MLW. Vessels of 70,000 d.w.t. call, but bow to manifold distance governs size of vessel. (350 ft. – 375 ft.). Vessels dock starboard side to.

Fresh water is available, but bunkers are not. Every tanker, when moored here, has an anti-pollution boom placed around it.

FRESH WATER: Available at all berths.

FUEL: No fuel barge service available. In emergency, tank truck delivery can be arranged.

CONSULS: All countries represented in New York.

AIRPORT: Bridgeport Airport about 3 miles away. New York airports about 50 miles distant.

TIME: Daylight Saving Time, GMT minus 4 hours from April to October.

HOLIDAYS: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (18th February); Good Friday; Memorial Day; Independence Day (4th July); Labour Day; Columbus Day (14th October); Veterans' Day; Election Day (5th November); Thanksgiving Day (28th November); Christmas Day (25th December).

SERVICES: Ship's stores and launch service available from New Haven. Vessels must provide their own gangway at all docks.

AUTHORITY: City of Bridgeport, Office of the Harbour Master, City Hall, Room 223, 45 Lyon Terrace, Bridgeport, Connecticut 06604. *Tel:* (203) 576-7611 (office), 347-7795 (residence). *Contact:* Joseph C. Savino, Jr., Harbour Master.

BROWNSVILLE, Texas: 25.54 N. 97.28 W. **(See Plan)**

DOCUMENTS: See "Houston".

PILOTAGE: When a vessel is scheduled to arrive at Brownsville, the vessel's Agent notifies the Harbour Master's office of the approximate ETA. Later, when a firm ETA is received, the Harbour Master's office notifies the pilot office that the vessel is expected on the bar at a certain time and also gives the time which she would like to enter.

The telegraphic address of the pilot office is: Brazos-Santiago Pilots, c/o Harbour Master, Port of Brownsville, Brownsville, Texas.

If possible, it is desired that the Harbour Master's Office be notified 2 hours in advance of the ETA of any vessel.

The VHF Channel to be used when contacting the pilot boat and Harbour Master is 16. When contact is made, this will be switched to Channel 12.

The pilot boat is a steel hull length 43 ft., beam 16 ft. and draft 8 ft. 250 h.p. diesel. Gross tonnage 36 tons.

No light or sound signals are necessary from vessels requiring a Pilot, although light signals may sometimes be used at night – ordinarily a vessel is picked up by visual sighting.

The pilot boat is located on the South tip of Padre Island – the Pilot station is adjacent to the entrance to ship channel with a clear view of the approach to the jetties.

The Pilot is taken on board an incoming vessel at the sea buoy which is located 2 miles off shore.

The anchorage for a vessel awaiting Pilot is 1.5 miles North of sea buoy.

ANCHORAGES: Anchorages are marked on charts.

RESTRICTIONS: *Brazos Island Harbour:*

Name of Channel	*Dredged Dimensions*			*Minimum depths in channel entering from seaward*		
	Width (ft.)	*Length* (miles)	*Depth* (ft.)	*Left Outside Quarter* (ft.)	*Middle Half of Channel* (ft.)	*Right Outside Quarter* (ft.)
Brazos Santiago Pass:						
Entrance Channel	300	1.9	38	40.0	39.0	37.0
Channel across Laguna Madre	200	2.9	36	38.0	38.0	38.0
Brownsville Channel:						
Junction Basin to Boca Chica Passing Basin	200	4.0	36	38.0	38.0	38.0
Boca Chica Passing Basin to Goose Island Passing Basin	200	5.4	36	38.0	38.0	38.0
Goose Island Passing Basin to Brownsville Turning Basin	200	2.8	36	37.0	38.0	37.0
Brownsville Turning Basin (extension)	500	1.4	36	37.0	38.0	37.5
Brownsville Turning Basin	500-1000	0.5	36	36.0	37.0	35.0

MAX. SIZE: The max. permissible length 875 ft., beam 135 ft., draft 35 ft.

RADIO: ETA cables to Agent, etc., should be addressed to the Agent via WLC – Galveston, WLO – Mobile or Slidell Radio. When within 60 miles range of the port, calls may be made through the Harbour Master's office on VHF Channel 16 and the calls will then be transferred to land lines to any point. Also Brownsville Marine Operator, VHF Channel 26.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A vessel approaching the Port of Brownsville may contact the Harbour Master's office on VHF Channel 16.

TUGS: Tugs normally join an incoming vessel 1.25 miles before she enters the turning basin. The tug's lines are used for which there is no charge.

BERTHING: Cargo facilities include over 7,500 ft. of modern, marginal dry cargo wharves, 14 deep sea docks and 10 barge berths, together with over 583,000 sq.ft. of transit shed space. In addition there is 242,000 sq.ft. of open storage space at the deep-draft docks and 271,000 sq.ft. of open storage at the shallow draft docks.

BULK HANDLING FACILITIES:

Public Grain Elevator: Located at the approach to the Turning Basin, the privately and operated elevator has a capacity of over 3,800,000 bushels. An adjacent bulk plant provides flat storage for all types of dry bulk commodities.

Two large gantry cranes handle the loading of vessels. The maximum spout clearance for loading vessels is 45 ft. above the water.

Equipped with two truck dumps and two hopper car dumps, the elevator has the rated loading capacity of 1,200 short tons per hour (1,000 L/T per hour on bulk carriers without wing tanks and 600 L/T per hour on tween deckers).

The 400 ft. wharf is 12 ft. above water and has an unlimited berth length. The draft at dockside is 34 ft. and the channel control depth is 36 ft.

The grain elevator also has the flexibility of unloading vessels (barge unloading capacity is 300 t.p.h.).

Liquid Bulk Handling: Total liquid bulk storage available for petrochemicals and combustible oils is 3.4 million barrels, tank capacities from 1,000 to 200,000 barrels, at Itapco, Statia, Petro Liquids, and Brownsville Refinery terminals. Additionally, Star (Texaco), Champlin and Interlube maintain private terminals. Four liquid cargo docks on the North side of channel and one on the South side serve these entities. Three terminals, Itapco, Petroliquids and Statia, have Foreign Trade Zone status.

CRANES: Two large floating cranes, rated at 150 metric tons each, are available for heavy lifts at any dockside location in the port area.

STEVEDORES: To arrange for gangs the vessel needs to notify the ship's Agent of ETA; the Agent will in turn notify the stevedores. It is necessary that the Agent be advised of an ETA before 1900 hrs. for an 0800 hrs. start.

Main commodities and average load discharge rates:

Grain	Bulk carrier 1,200 t.p.h.
Grain	tween deck 600 t.p.h.
Cotton	100 bales per hour per gang
Lead and zinc pigs	40 tons per hour per gang
Citrus in boxes	22 tons per hour per gang
Onions and carrots in bags	22 tons per hour per gang
General cargo	25 tons per hour per gang

MEDICAL: When medical attention is required, advance notice should be given to the Agent by ship's radio.

TANKERS: Ballast facilities are available up to 6,000 barrels per hour. The port loads refined petroleum products. The port has 4 tanker berths, with max. draft 34 ft. 7 in.

Vessels proceeding to Brownsville normally turn in the basin and berth Port side to. Berthing at Port Isabel Oil Wharf also generally Port side to.

Mooring boat employed.

DENSITY: The average density is 32 parts per 1,000.

FRESH WATER: Fresh water is available and can be delivered to a vessel through hose or pipe-line at 150 gallons per minute.

FUEL: No fuel is available locally. It must be barged in from Corpus Christi – advance arrangements are necessary.

FIRE PRECAUTIONS: Preferred berthing for tankers, head out.

CONSULS: Mexico: Tel. 542-4431.

REPAIRS: Amfels, located at the port, is equipped to handle all norm temporary ship repairs.

DRY DOCKS: None available.

GANGWAY/DECK WATCHMEN: Such services are necessary o when detainees are held on board.

OPENING/CLOSING HATCHES: This work is done by the stevedor

REPATRIATION: There are facilities for this service.

AIRPORT: The regional airport, Valley International, is located 30 mi from the port. American, Southwest and Continental Airlines prov passenger service.

Brownsville – South Padre Island International Airport, 5 miles fr seaport, provides freight/package service via Federal Express a Burlington Northern.

TIME: Local Time is 6 hours behind GMT.

HOLIDAYS: The following holidays are observed here: Veterans' D (4th Monday of October); Thanksgiving; Christmas; New Ye Washington's Birthday (Feb. 22nd); Texas Independence Day (Ma 2nd); Emancipation Day (June 20th); July 4th; Labour Day (1st Mond in September); Decoration Day (last Monday in May).

No work shall be performed on Labour Day or Christmas Day exce in case of fire or where property is in danger. When holidays fall Sunday, the following day will be recognised as the holiday. Also, work will be performed between 1600 and 1900 hrs. on election day

POLICE/AMBULANCE/FIRE: Sheriff 544-0860; Emergency Fire a Ambulance, dial 911.

TELEPHONES: Telephones are not available for placing on ships.

SERVICES: Tank cleaning service is available at the port. Balla facilities are available at Oil Docks 1, 2 and 3. P.I.B. can take care compass adjusting, etc.

IDENTIFICATION CARDS: Immigration requires Form No. I- Landing permit.

GARBAGE DISPOSAL: BFI Waste Systems. Tel: 512-542-5550.

Containers provided by reservation, alongside or may be lifted abo ship. Collection as required.

WASTE OIL DISPOSAL: Bilge water and contaminated ballast wa discharge available at Oil Dock No. 1. Contact party, S.A.Beckwith, P Safety Director/Environmentalist. Tel: 512-831-4592. Fax: 512-83 5006. Vessel must provide hoses to manifold. List of waste engine disposal companies available upon request.

SEAMAN'S CLUBS: Port of Brownsville International Seaman's Cent P.O.Box 4033, Brownsville, Tx. 78520. Tel: 512-831-4304. Rev. Wilb Aten. Facilities: Shop, international telephone service for seafare church services, mini-bus collection, postage facilities, games.

DELAYS: There are no delays unless an incoming ship has bee assigned to a berth now occupied. Bunkers must be barged arrangements may be made ahead of time to avoid delay.

DEVELOPMENTS: The Federal Government has commence deepening the channel to 42 ft., widening up to 400 ft., and enlarg the turning basin to 1,200 ft. Anticipated completion da December 1994.

The Port of Brownsville/Mexico International Truck/Rail Bridge Proje is awaiting Presidential Permits from the U.S. and Mexican Fede Governments. Funding for the project is in place.

AUTHORITY: Brownsville Navigation District, Port of Brownsvi P.O.Box 3070, Brownsville, Texas 78523-3070. *Tel:* (512) 831-45 *FAX:* (512) 831-5006. *Contact:* C. James Kruse, Port Direct E. E. Cockrill, Deputy Port Director – Marine Services. Rey Ramir Harbour Master. Judy Adams, Foreign Trade Zone Manager.

BRUNSWICK, Georgia: 31.09 N. 81.30 W. **(See Pla**

DOCUMENTS:

Crew Lists: 1 certified copy for Immigration; 2 copies uncertified Customs.

1 copy Pratique.

3 copies Inward Customs Manifests.

3 copies each Stores, Curio & Narcotics List.

APPROACHES: The harbour is located about midway betwe Savannah and Jacksonville. The harbour is reached by a channel fr the Atlantic Ocean, running between St. Simons and Jekyll Island. T channel has a minimum width of 500 ft. and a depth of 32 ft. St. Simon's Sound, thence a width of 400 ft. and a depth of 30 ft. Sidney Lanier Bridge, where the channel divides, 13 miles from se The Northern branch leads to Lanier Dock, State Dock and the c 400 ft. wide and 30 ft. deep. The other branch leads N.W. to the p plant dock, chemical docks and electrical generating plant, 300 ft. w and 30 ft. deep.

PILOTAGE: Compulsory. 24-hour Pilot service arranged by Agent w 48 – 24 hour prior notice from ship. Pilot boards vessel day or ni approximately 1 mile outside "STS" Buoy (Lat. 31° 03′ 20″ N., Lo 81° 15′ 20″ W.). Distance to East River Terminals is 13 miles. P contacted on VHF Channels 12, 14 and 16. Pilot boat is 25 ft. white h Marking is "Pilot" on hull.

Brunswick Bar Pilots' Association, 411 Arnold Road, St. Sim Island, Ga. 31522. Tel: (912) 638 2380.

ANCHORAGES: 3 miles S.E. of Buoy "STS", sand and mud bott In event of deep draft (30 ft.) and high winds, anchorage obtained n Ocean Buoy "2B" and inform Pilot as in "Pilotage". Vessels in ne or for other good reason, may anchor in St. Simon's Sou depth 10 fathoms.

RESTRICTIONS: Vessels with a draft of 28 ft. may enter at any t and over 28 ft. on flood tide. Max. size vessel is Panamax. Vessels w draft of 34 ft. may proceed to or from Colonel's Island on high t Vessels with 30 ft. draft berth in the East River on high tides. Tidal ra 6 ft. – 8 ft.

MAX. SIZE: Max. permissible length 650 ft. Max. d.w.t. over 33,000 tons.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Prior arrival, use Commercial Lantana, Chatham Radio for advices to Agent, 48-24 hours in advance.
TUGS: Tugs join vessel near Sidney Lanier Bridge if inbound for the East River and Mayor's Point Terminals and just West of Lanier Bridge if bound for Colonel's Island. Harbour pilot on board vessel carries out the docking manoeuvre with tugs. 3 small tugs (500 h.p.)
BERTHING: 1,600 ft. continuous marginal wharf; steel and concrete construction, 57 ft. wide apron. Vessels normally turned to moor port side alongside unless deck cargo or other vessel obstruction means cargo may not be worked over port side. Gantry crane of 27 tons capacity available.

The Brunswick Port Authority operates a bulk commodity terminal at Lanier Dock. The facility is 500 ft. long and constructed of steel and concrete, with a project depth of 30 ft. MLW (mean low water), equipped with a grab bucket, conveyors and marginal tracks for handling bulk cargoes at rates up to 600 t.p.h. It operates covered warehouses with a capacity of approx. 60,000 tons. A limited amount of open storage space is available equipped with a conveyor system and reclaim facilities. Lanier Dock lies directly adjacent to the Brunswick State Docks and warehouses. Both wharves have a turning basin of 1,000 ft. in length and 600 ft. wide with a project depth of 30 ft. MLW also Barge Dock facility 250 ft. long.

Colonel's Island: Multi-product dry bulk facility. 1×2,400 t.p.h. travelling ship-unloader, outreach 100 ft. Length of berth 600 ft. Storage area 135,000 sq.ft.

Mayor's Point: 3 berths. Total length 1,500 ft. 235,000 sq.ft. of transit sheds and 5 acres of open storage.
BRIDGES: Lanier Bridge lift bridge; 235 ft. horizontal clearance between fenders, 139 ft. vertical clearance in up position at HW. Vessels under control of Pilot and tugs when passing through.
STEVEDORES: Radio to Agent 48-24 hours prior arrival with number of gangs, working hatches and space in hatch, and special factors, e.g. pilferable cargo, autos, heavy-lifts, etc.
MEDICAL: Advance notice to Agent, or notify on arrival.
TANKERS: Liquid bulk cargo is pine oil distillates loading. Petroleum storage 310,000 barrels, 3 tanks.

Outward Passage – Cautionary Advice: The berth is located just up river from the Sidney Lanier Bridge.

In view of the short distance to the bridge and the fact that a considerable course alteration must be made to port just before reaching the bridge, it is essential that the ship is properly lined up on the bridge before proceeding into the bridge passage.

It is advisable that the Master acquaints himself with the Pilot's plan for the approach and passage of the bridge.

An anchor party should be standing by and anchors should be ready to let go. Special attention should be given to make certain that the helmsman accurately follows the Pilot's orders.
DENSITY: Average 1016 (high) to 1014 (low). Water inside considered brackish.
FRESH WATER: From shore connections at 20 t.p.h.
FUEL: Bunker "C" available at piers. Distillate and blends by barge, if required. 72 hour advance notice to Agent, giving type and quantity.
CONSULS: None. Consulates at Savannah, Ga., and Jacksonville, Fla., may be used as required by vessel.
REPAIRS: Limited to minor replacement parts to engine, radio, radar of standard makes. Major repairs may be arranged with shipyards of Savannah or Jacksonville.
DRY DOCKS: None.
SURVEYORS: American Bureau of Shipping (912) 232-3793. Atlantic Marine Surveying, Inc. (912) 354-9938. Coleman, Kenney & Silas, Inc. (912) 352-7420. International Adjusters Southern Ltd. (912) 352-7420. National Cargo Bureau, Inc. (912) 236-1527. SGS Control Services, Inc. (912) 232-1995. L. O. Smith, Inc. (912) 233-9876. Southeastern Marine Surveying Company (912) 233-4157. J. W. Tarver, Jr. (912) 233-6661. Charles T. Theus, Inc. (912) 233-3588.
GANGWAY/DECK WATCHMEN: Not required but available.
OPENING/CLOSING HATCHES: "MacGregor" hatches must be opened by vessel prior working. All others may open at discretion to save turn-around time.
CERTIFICATES: Registry, U.S. tonnage tax, CFR Pollution, Load line, SOLAS, Derat.
CUSTOMS ALLOWANCES: Tobacco, 2 cartons. Customs will open bonded stores on request. Spirits, reasonable amount.
REPATRIATION: Through Agent.
AIRPORT: 20 minutes' drive from quays; 4 flights daily.
TIME: GMT minus 5 hours. Daylight Saving Time from first Sunday in April till last Sunday in October. April: advance; October: retard.
HOLIDAYS: 1st January, 22nd February, 30th May, 4th July, 1st Monday in September, 4th Thursday in November, 25th and 26th December.
POLICE/FIRE/AMBULANCE: Numbers given in Boarding Brochure.
TELEPHONES: None placed aboard. Public pay (coin) telephones on quay clearly marked.
IDENTIFICATION CARDS: U.S. Immigration Landing Permits.
GENERAL: Brunswick, Georgia, is a small port specialising in export of woodpulp in bales, pine-tree products in drums. Imports bulk salt, oil, fertiliser materials and gypsum, some break-bulk general cargo. Vessel requirements handled by Agent in residence, communication by wireless or R/T essential in advance.
AUTHORITY: Brunswick Port Authority, P.O.Box 1039, South Yards, Brunswick, Georgia 31521-1039. *Tel:* (912) 265-3700. *Telex:* TWX 810-7825071. *Contact:* Robert W. Turner, General Manager.

BUFFALO, New York: 42.55 N. 78.55 W. (See Plan)

DOCUMENTS: For vessels arriving from foreign ports:
3 Unfreighted copies of Complete Manifest covering all cargo to be discharged in the Great Lakes.
4 Personal Effects Lists.
4 Crew Lists.
4 Narcotics Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
PILOTAGE: Not compulsory. Seaway Pilots will assist if required.
ANCHORAGE: Inside South Breakwater, depth 27 ft.
RESTRICTIONS: St. Lawrence Seaway navigation season. Approximately from 1st April to 15th December. Controlling depth 27 ft.
MAX. SIZE: Limited by Seaway Locks. 730 ft. length and Seaway draft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: WBL – Buffalo.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, but not normally required.
BERTHING: Outer Harbour: Total berth space 2,400 ft.; depth alongside 27 ft. LW. 2 transit sheds – total of 184,000 ft. dry dock space; sprinkler system equipped, seaway piers for bulk cargoes. South and North Piers 3,506 ft. of berth space, 200 acres open storage area. Depth alongside 27 ft.
BULK HANDLING FACILITIES: *Grain:*
Frontier
Operator: General Mills, Inc. Berthing Space - 705 ft. Max. OA Dimensions (with turning) 647 ft.×70 ft. Storage Capacity: 4,200,000 Bushels.

Stone, Sand and Dry Bulk:
Gateway Metroport: Operator: Gateway Trade Centre, Inc.
Dock Length: 3,900 ft. Depth: 26 ft. Storage Capacity: (West side) Coke – 40,000 tons; salt – 25,000 tons; steel – 100,000 tons. (East side) stone – 300,000 tons; steel – 200,000 tons; salt – 25,000 tons. Loading Equipment: (West side) 1×100 tons movable crane; 2 portable conveyors (800 t.p.h. each). (East side) 1×100 tons movable crane and 1×230 tons gantry crane.
SPECIALISED CARGO HANDLING FACILITIES: A mobile gantry crane capable of handling lifts of 55 tons at 40 ft. and portable bulk conveyors. Crawler crane, capacity 230 tons. Conveyor, capacity 2,200 t.p.h. Additional heavy lift equipment available from the Port of Buffalo and commercial sources.
STEVEDORES: Gangs to be ordered by 1700 hrs. for 0800 hrs. start following day, ample gangs available.
MEDICAL: U.S. Public Health Outpatient Clinic as well as numerous hospital facilities.
DENSITY: Fresh water.
FRESH WATER: Available at most berths.
FUEL: All grades available by tank truck delivery or by harbour tank barge.
CONSULS: Canada, Costa Rica, Ecuador, France, Germany, Italy, Mexico, Netherlands and Sweden.
REPAIRS: Machinery and above-water repairs available.
AIRPORT: 5 miles, served by 4 regular airlines.
SHORE LEAVE: No restrictions when cleared by U.S. Immigration Officials.
GENERAL: Refer to "Great Lakes Pilot".
AUTHORITY: Gateway Metroport, 2544 Clinton Street (P.O.Box 880), Buffalo, NY 14224. *Tel:* (716) 826-2890. *FAX:* (716) 826-1342. *Contact:* Fred W.Finger, Marketing Director.

BURNS HARBOUR, Indiana: 41.38 N. 87.11 W.

(See Plan)

The entrance to Burns International Harbour is at Lat. 41° 38′ N., Long. 87° 11′ W., and is located on the South shore of Lake Michigan at Portage, Indiana, some 30 miles East of Chicago in an area known as the Indiana Dunes.

PILOTAGE: Available.

RESTRICTIONS: Average Navigation Season: Domestic cargo by lake freighters – March 15th to February 1st. Ocean going vessels via Seaway – April 1st to December 15th. Lake river barges – 12 months.
Approach to Harbour: Controlling depth of water at harbour entrance 30 ft., entry is from deeper water. Length and beam limitations – none. Approach open 24 hours per day.
Harbour: Controlling depth of water for outer harbour 28 ft.; East and West harbour arms 27 ft. Turning basin – 1,600 ft. radius with water depth of 28 ft. Accessible 24 hours a day. Length and beam limitations – none.

TUGS: Available if required.

BERTHING: The port provides 30 ft. depth at the entrance channel, 28 ft. at the inner harbour, and 27 ft. at berths. The harbour is protected by an all weather breakwater.

The port has 10 modern berths plus a mooring facility specifically designed for self-unloader ships. Ultimately the port will have 15 ship berths. Recently completed are 2 modern, heated, sprinkler-equipped transit sheds providing 146,000 sq.ft. of space for general cargo, which are being operated by competent stevedores.

A refrigerated storage building is in operation.

CRANES: 3×150 ton crawler cranes; 3×75 ton crawler cranes; 3×60 ton crawler cranes.

FRESH WATER: Available.

DEVELOPMENTS: 1 berth, length 700 ft. under construction.

AUTHORITY: Burns International Harbour – Port of Indiana, Indiana Port Commission, 150 West Market Street, Suite 603, Indianapolis, IN. 46204. *Tel:* (317) 232-9200. *Telex:* 510-601-4224. *Contact:* James H. Hartung, Port Director.

BURNSIDE, (including Convent and St. James), Louisiana: 30.08 N. 90.55 W.

(See Plan)

Also see "South Louisiana".

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made out to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Normally required, see "Tankers".

BERTHING: Bulk Marine Terminal: Berth 877 ft. long, 45 ft. depth.

Ormet Corporation: Situated at Mile Point 169. Max. LOA 305 m. Max. beam 41 m. Max. draft 12.19 m. (60,000 d.w.t. or 130,000 d.w.t. part load) 2 travelling gantry cranes (1,000 t.p.h. each) and 1 shiploader (1,500 t.p.h.). Height above LWL 27.5 m. outreach 19.2 m. Travel 198 m. Loading rate 600 – 1,000 t.p.h.

Rogers Terminal and Shipping (Cargill Inc.): Floating feed transfer facility at Convent. 330 ft.×75 ft. Loading rate to vessels 1,300 t.p.h.

TANKERS: *Shell – St. James:* The facility is located on the West bank of the Mississippi River at Mile 160 above Head of Passes (AHP).

There are 2 berths, one of which is 800 ft. long and the other 1,100 ft. long. At the newer dock there are 2×16 in. arms and the berth is capable of unloading 28,000 bbls.p.h.

The depth alongside these berths is 55 ft. to 60 ft. However, the draft of the vessel is limited to that available at Southwest Pass.

It is important to note that due to the design of this terminal it is impracticable for vessels to receive stores at this location. Additionally there are no bunkers provided at this terminal nor is there any fresh water available from the terminal and there is no authorised anchorage in the immediate area of this facility. Vessels expecting less than 24 hours delay awaiting berth are generally anchored at New Orleans and then proceed to the terminal (which is a different port of entry for Customs) otherwise vessels would have to anchor at Burnside which is about 10 miles up river from St. James.

Because of an underwater pipe-line near the dock, the terminal management requires all vessels using their facility to have at least 1 tug of 1,800 h.p. to assist in docking and undocking.

As a point of reference it generally takes approximately 15 or 16 hours transit from Southwest Pass to St. James Terminal for most vessels.
Texaco – Convent: The Texaco Dock is located 167 miles AHP. The berths are located near the edge of the navigable channel and interaction caused by downbound laden vessels can result in excessive surge by deeply loaded vessels docked alongside.

Current in the river at this location varies between 3 and 8 knots, depending on the height of the river.

The docks are located near an area of revetment, therefore anchors should not be used while alongside.

Cargo Handled and Shore Installations: Berth No. 1 handles ma clean products and petrochemicals, e.g., aviation gas, jet fuel, unlea gasoline, hi-test gasoline, etc., and serves mainly as a loading dock

Berth No. 2 handles clean as well as dirty products including cru oils, charge stocks, petrochemical feed stock, furnace and fuel oils, e This dock both ships and receives cargoes.

All cargo transfer is made through 12 in. Chicksan arms which a bolted at the ship's manifold. Maximum rail pressure for discharg vessels is 125 p.s.i.

An emergency loading stop control is located in each dock house a portable unit is provided for vessels docked at the berths.

Docking: Docking is always performed by the River Pilot or Dock Master, with the aid of at least 2 tugs. 2×1,800 h.p. tugs are requi for vessels up to 60,000 d.w.t. docking and undocking, vessels lar than 60,000 d.w.t. are required to use 3×1,800 h.p. tugs for the operations. Approach is made parallel to the berths, stemming t current with 2 or 3 tugs on the port side. Mooring lines, either wire synthetic, are run to mooring dolphins by boat.

At least 12 mooring lines are required for all vessels, i.e., 2 head line 2 stern lines, and a combination of 4 breast and or spring line depending on available leads, both forward and aft.

Nylon messengers or heaving lines are not permitted and will refused by line handlers in the boats or on the docks.

Bunkers and Fresh Water: Bunker-C and fresh water are availab upon request; however, no barges are allowed alongside vessels at a time.

Ballast/Slop Facilities: A maximum of 10,000 bbls. of oily slops m be discharged ashore for storage/treatment.

DENSITY: Fresh water, 1000.

FRESH WATER: Available ex-berth.

FUEL: Not available.

NOTICE:

Agent to Shipmaster:
Vessels over 100,000 Summer Deadweight:

This is to advise you that the Pilots will not allow your vessel to tran outbound between Pilottown and Southwest Pass during darkness hou if your vessel is at a draft in excess of 35 ft. fresh water upon arrival Pilottown outbound. The times involved are from 1600 hrs. un 0700 hrs. the next day.

We feel certain with various ballasting procedures you will be able comply with this draft upon reaching Pilottown even though you m leave the *St. James Berth* at a greater draft. If you cannot comply, plea advise your Agent boarding with this letter in order that he may infor all parties interested.

By anchoring at Pilottown you will be costing yourself an additio $3,500 minimum in tug and Pilot expense. Therefore, we sincere require your utmost co-operation.

SHIPMASTER'S REPORT: February 1979.
Location: St. James – West Bank.
Documents: Ship's stamp on cash receipts.
Anchorage: Usually at Grandview in the Customs District of Gramerc where launch service available and about 1 hour's drive to New Orlea

From Capline (St. James) about 45 minutes' drive to Baton Roug
VHF: All berthing and river pilotage on Channel 13.
Tugs: 3 tugs recommended.
Berthing: Always port side to. No shore gangway, moorings 4, 2, 2 ea end for tankers of 100,000 d.w.t. and upwards.
Cranes: Not available.
Tankers: Require ship's gangway at Berth No. 2.
Consuls: Honorary British Consul at New Orleans. (321 St. Char Avenue). Open 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs.

AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 38 Port Allen, Louisiana 70767. *Tel:* (504) 342-1660. *FAX:* (504) 342-166 *Contact:* Gary C. Pruitt, Executive Director.

Burnside Bulk Marine Terminal, P.O.Box 25, Highways 44 2 Burnside, Louisiana 70738. *Tel:* (504) 473-0793. *Contact:* Dan Hal Vice-President and General Manager. Glenn Schernayer, Sales.

The Port of South Louisiana, 152 Belle Terre, P.O.Box 909, La Pla Louisiana 70069-0909. *Tel:* (504) 652-9279, 568-6269. *FAX:* (504) 65 9518. *Contact:* Virginia D.Simons, Assistant Port Director - Econo Development.

Note: The Port of South Louisiana has jurisdiction from River Mile 114 A.H.P. to River Mile 168.5 A.H.P. which area includes St.Char St.John the Baptist and St.James parishes.

CAPE COD CANAL, (including Sandwich Oil Termina Massachusetts:

(See Pla

The Cape Cod Canal is a sea-level canal, extending from a point Cape Cod Bay about 50 miles S.E. of Boston Harbour, Mass. Cleveland Ledge Lt., Buzzards Bay, Massachusetts.

PILOTAGE: The Corps of Engineers, Department of the Army , do not maintain pilot service but independent Pilots, licensed by the U Coast Guard, are usually available at the canal. Messages wil transmitted to Pilots with the understanding that the Government assume no responsibility in connection therewith.

Pilotage is compulsory and available 24 hours.

Pilot boards:
1. East Entrance: Position Lat. 41° 47.9′ N., Long. 70° 28.5′ W., midway between the Sea Buoy and the breakwaters.
2. West Entrance: Near West end of Cleveland Ledge.
3. By special request: Near Brenton Reef Light (Lat. 41° 25.6′ N., Long. 71° 23.4′ W.) or 2 nautical miles South of Point Judith Light Buoy No. 2 in position Lat. 41° 19.2′ N., Long. 71° 28.5′ W.

Pilots are available from the following associations:
Northeast Marine Pilots Incorporated, Newport, Rhode Island (Tel: 401-847 9050 (HJ), 401-331 4824 (HN) and 800-274-1216).
Interport Pilots Associates. Tel: 201-291 1310 and 800-346-4877.
Boston Pilots, East Boston. Tel: 617-569 4500.
Associated Coast Pilots. Tel: 201-887 7114.
Association of East Coast Pilots. Tel: 609-435 1239.

NAVIGATION: Navigators are warned to be on the alert for possible "bank suction" and "bank cushion", the effects of which may cause a vessel to take a sudden and decided sheer. Shipmasters are directed to notify the Marine Traffic Controller in advance of entering the channel of any known defects their ship may have which would effect the handling of their vessel in the Canal.

(a) Vessel traffic drawing 25 ft. and over are directed not to enter the Canal Channel at the Cleveland Ledge Light entrance and shall lay-to or anchor in the vicinity of Buzzards Bay Buoy No.11 (FL.W & Bell) until clearance is granted by the Marine Traffic Controller.
(b) Vessel traffic with drafts in close proximity to the 32 ft. mean low water project depth of the Canal should make themselves fully aware of the controlling dimensions of the waterway and transit the Canal during the maximum stages of high water at a speed consistent with safe navigation.

Aids to Navigation:

(a) Aids to navigation for the Cape Cod Canal approach channels are under the jurisdiction of the First Coast Guard District, Boston, Massachusetts, and are shown on U.S.Coast & Geodetic Survey Charts No. 13230, 13236, 13246 and 13218, and are described in Department of Transportation, U.S.Coast Guard, "Light List, Atlantic Coast of the United States, Volume I, CG-158", and amendments thereto.
(b) The channel limits of Cleveland Ledge and Hog Island Channels are defined by buoys. The navigation beacon lights in Hog Island Channel No. 3, 5, 7, 9 and 11, and No. 4, 6 and 8, are located 125 ft. outside the limits of the channel, in shoal water. Beacon lights No. 12, 18 and 20 are located on Hog Island, Basset Point, and Greenwood Point, respectively, and are South of the Southerly limit of the channel as follows: No. 12, 481 ft.; No. 18, 100 ft. and No. 20, 90 ft. Beacon Light No. 27 is a fixed yellow mercury light located 120 ft. North of the Northerly channel limit at Canal Station 391 (Canal Administration Area).
(c) The Canal in the Land Cut Section is lighted at night by Lamps 500 ft. apart, 140 ft. from the edge of the channel and 25 ft. above mean high water. The lights are yellow on the North bank and white on the South bank.
(d) Red navigation lights are installed on the lower chords of the Bourne and Sagamore Highway Bridges 250 ft. North and South of the centre line to mark the 480 ft. wide channel. Green lights denote the centre of the channel.
(e) Immediately preceding the lowering of the Railroad Bridge span, the operator will sound 2 long blasts on an air horn. Immediately preceding the raising of the span, the operator will sound one long blast on an air horn. When the bridge span (normally maintained in an open or raised position) is in a down or lowered position, during periods of low visibility, there will be 4 blasts on an air horn on the span every 2 minutes. The navigation lights (360°) are fixed green when the lift span is in a fully raised position and stay green until the span starts to lower (6 ft. to 8 ft.) when it becomes a fixed red. The 4 red flasing lights affixed to the top of the bottom chord on both East and West sides of the bridge start flashing when the centre light becomes red and continue to flash red until the bridge returns to the raised position, when the centre light becomes green.

RESTRICTIONS:

	Width bottom (ft.)	Length (miles)
Easterly Entrance (Station -75 to Station -12)	540	1.2
Canal Land Cut, (Station -12 to Station 413)	480*	8.1
Hog Island Channel, (Station 413 to Station 661)	500	4.7
Cleveland Ledge Channel, (Station 661 to Station 880)	700	4.1

*Except narrows to 450 ft. opposite State Pier (Buzzards Bay) and 466 ft. through the railroad bridge.

The canal and approach channels have been dredged to the project depth of 32 ft. below MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO/VHF: Direct communications with the Cape Cod Canal are available at all hours by means of telephone and radio telephone. The telephone number is 508-759-4431. Direct radio communications may be made with the Cape Cod Canal office on VHF radio telephone. Call the Cape Cod Canal office on Channel 13 to establish contact. The radio transmissions will then be switched to Channel 12 or 14 as the working channels to pass information. Channel 16 is also available at the Canal office; however, Channel 16 use should be limited to emergency situations or whenever vessels do not have one of the other above channels.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: The U.S. Army Engineer Division, New England, Corps of Engineers, Cape Cod Canal Field Office does not supply towage service, except in emergency situations

BERTHING: *Mooring Basins:* Mooring basins are located at the East and West ends of the Canal Land Cut.

The East Mooring Basin is located on the North side of the Canal at Sandwich. It is 550 ft. wide and 1,660 ft. long at the line of dolphins and approximately 3,000 ft. in length at the approach to the basin from the Canal channel and has been dredged to a depth of 25 ft. at M.L.W. There are 9 steel mooring dolphins located along the Northerly basin limit, spaced approximately 85 ft. apart.

The West Mooring Basin is located on the S.E. side of Hog Island Channel, Buzzards Bay. It is 350 ft. wide and 2,700 ft. long at the line of dolphins and approximately 4,000 ft. in length at the approach to the basin from the Canal channel and has been dredged to a depth of 32 ft. at M.L.W. There are 7 steel mooring dolphins along the Southerly limit of the basin for a length of 775 ft. Vessels moored at the Sandwich Bulkhead and East and West Mooring Basins shall have sufficient crew aboard at all times to ensure the safety of the vessel.

Small Boat Basins and Channels:

(a) The East Boat Basin located on the South side of the Canal opposite the East Mooring Basin has been dredged to 13 ft. at M.L.W. for 4.3 acres and 8 ft. M.L.W. for 4 acres.
(b) An improved channel, 15 ft. at M.L.W. and 100 ft. in width leads from the N.W. side of Hog Island Channel, abreast of Hog Island, to the existing harbour for small vessels in Onset Bay.
(c) An improved channel, 7 ft. deep at M.L.W. and 100 ft. wide, leads from a point opposite the Easterly end of the West Mooring Basin at approximately Canal Station 435 and extends to deep water in Cohasset Narrows at the approach to Buttermilk Bay. The natural channel leading into Buttermilk Bay is crossed by 2 fixed bridges, having a least horizontal clearance of 25 ft. and a vertical clearance of 6 ft. at M.L.W.

Seasonal Yacht Facilities:

(a) At the Easterly entrance of the Canal in the East Boat Basin, water, fuel, oil and gasoline are obtainable for the convenience of vessels from private sources.
(b) At the West end of the Canal Land Cut, there is a 15 ft. improved channel into Onset Harbour where water, fuel and supplies of all kinds are obtainable from local, private sources.

Coast Guard Station: A U.S. Coast Guard Station is located near the Easterly entrance of the Canal on the South bank.

BRIDGES: 2 fixed span high-level highway bridges and 1 vertical lift railroad bridge cross the canal. The horizontal distance between channel piers is 550 ft. at the highway bridges and 500 ft. at the railroad bridge.

The minimum bridge clearance for the available width of channels are as follows:

	Horizontal Clearance	*Vertical Clearance (MHW)*
Highway Bridges	480 ft.	135 ft.
Railroad Bridge	466 ft.	135 ft. (open)
(vertical Lift)		7 ft. (closed)

TANKERS: See "Shipmaster's Report".

GENERAL: *Tides:* The mean tidal range in Cape Cod Bay is 9.4 ft., and in Buzzards Bay it is 4.0 ft. Predicted times and heights of tides for each day of the year can be obtained from the National Oceanic and Atmospheric Administration publication, "Tide Tables, Atlantic Ocean, East Coast of North and South America, (including Greenland)". A Canal Tide book is published annually and is available from the Cape Cod Canal Field Office at Buzzards Bay, Massachusetts.

Currents: Strong tidal currents occur in the Canal. Predicted times and velocities of maximum Eastward and Westward currents and predicted time of slack tide for each day of the year are given in the National Oceanic and Atmospheric Administration Tidal Current Tables publication, "Current Tables, Atlantic Coast of North America".

Cable Crossings: A submarine telephone cable crosses the Hog Island Channel, positioned in a direction of 319° True at a point on the centre line of the channel, 1,000 ft. West of Hog Island Beacon No. 9. The least depth of water over the utility is 36 ft. at M.L.W. Two aerial power cables cross the Canal at Bournedale, 1.2 Statute Miles West of the Sagamore Bridge and have a least vertical clearance of 160 ft. above M.L.W.

Traffic Lights: Red, Green and amber yellow signal lights, visible for a distance of about 2 miles in clear weather, day or night, are located at the following points:

(a) Eastern (Cape Cod Bay) entrance on the South side of the Canal with a mean elevation of 55 ft. above M.H.W.
(b) Western (Buzzards Bay) entrance to Hog Island Channel at Wings Neck, East side of the Canal at a mean elevation of 48 ft. above M.H.W.

Two Way Traffic: Two way traffic through the Canal will be allowed when, in the opinion of the Division Engineer's representative charged with controlling traffic, conditions are suitable.

SHIPMASTER'S REPORT: September 1984.
Sandwich Oil Terminal: 41° 46.3′ N., 70° 30.9′ W. (See "Plan").
Location: 2,200 m. inside North Breakwater from Cape Cod Bay, South side of Cape Cod Canal.
Max. Draft: 40 ft. (salt water).
Salinity: 1025.
Anchorage: Good anchorage N.E. of Breakwater.
Berthing: Berthing and unberthing only when slack tide.

Berthing port side alongside when arrival from Cape Cod Bay.
Berth must be approached with care.
Ship's gangway to shore.
Derrick rigged to take onboard two cargo hoses 10 in. diameter.

After discharging, vessel to proceed through Cape Cod Canal as there is no turning basin. Max. draft 28 ft. Airdraft 135 ft. when passing 3 bridges.

Vessel can also enter from Buzzard Bay but draft according to Canal Control is 28 ft.

AUTHORITY: Department of The Army, New England Division, Corps of Engineers, Cape Cod Canal Field Office, P.O. Box J, Buzzards Bay, Mass. 02532-1809. *Contact:* Engineer-in-Charge.

CASTLE ISLAND, Alaska: 56.39 N. 133.11 W.

Located in Duncan Canal off Kupreanof Island between Wrangell and Petersburg. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: From sea via Dixon Entrance up Clarence Strait to Guard Island. Under pilotage from Guard Island.
ANCHORAGE: Fair weather anchorage only.
MAX. SIZE: Harbour depth 45 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TIDES: Diurnal range 16 ft. Also see "Berthing".
CUSTOMS: Quarantine and Immigration available from Guard Island. Customs available from Petersburg or Guard Island.
TUGS: From Wrangell, 3 available 500 h.p. each.
BERTHING: Alaska Barite facility: Dolphins and 2 floats. Present facilities limited to about 22,000 ton ships. Loading equipment consists of 1 loading spout for bulk cargo. Production average of 1,000 t.p.h.
STEVEDORES: Sufficient to work ore loading facility 24 hours a day when necessary.
MEDICAL: Facilities available in Petersburg or Wrangell.
REPAIRS/WATER/FUEL: None.
AIRPORT: Charter airplane only.
AUTHORITY: Chromalloy Mining and Minerals, P.O.Box 650, Petersburg, Alaska 99833. *Contact:* D.Brant, Harbour Master.

CHARLESTON, South Carolina: 32.47 N. 79.56 W.

(See Plan)

DOCUMENTS:
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
3 Manifests.
At least 1 copy of Bill of Lading, if provided by shipper, and 1 copy of Parting Crew List.

PILOTAGE: Shipmasters to notify Agent 48, 24 and 12 hours prior arrival at C-2 Buoy. Pilot may be contacted by VHF Channels 16 and 18. Pilot boards on lee side from black-painted launch with "Pilot" painted in white letters on the side. Normally vessel is berthed by Docking Master from tug company.
Charleston Branch Pilots Association: 2 North Adgers Wharf, Charleston. Tel: (803) 577-6695. Monitors VHF Channel 16 and 18A, Channel 14 also available.

Masters please advise ETA and deepest draft and changes in ETA as soon as possible. If no contact is made please announce ETA and draft over the air. Savannah and Cape Fear Pilot Stations will also pass on this information for you.

Pilot vessels: Call sign WZF 7266 "Carolina" 55 ft. length; "Palmetto State" 55 ft. length; "Sis" 37 ft. length.

Pilot vessel when on station guards following frequencies: VHF Channel 16; VHF Channel 13; VHF Channel 18A, 156.95 MHz.

Location of pilot station: Charleston C-2 Buoy Lat. 32° 40.7′ N., Long. 79° 42.9′ W., in 42 ft. of water.

Pilot ladder requirements: Have ladder in good repair, clean and approximately 6 ft. above water. Please provide escort to and from bridge. Personal portable VHF transceivers are carried by Pilots.

Distances from pilot station to all berths approximately:

	Nautical Miles
Union Pier	12
Columbus Street	12.5
Exxon Dock	14.5
Wando Terminal	14
Ship Yard River	15 – 16
Navy Yard	16 – 19
Other Oil Docks	19 – 20
State Port Terminals of North Charleston	21
Army Transportation Docks	22
Naval Weapons Station	25
Cainhoy	22.5

ANCHORAGES: Rarely required.
RESTRICTIONS: Only restriction affecting operation relates to channel depth of 35 ft. at low tide.
MAX. SIZE: Can handle vessels 930 ft. long. Present private tanker facilities measure 475 ft. from centre of discharge pipe-line to end of dock.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Normal procedure. No special or unusual procedures required.
RADAR/VHF: Services required are handled through Agent.

Tug Companies: Marine Contracting and Towing: 723-7442 Radio frequency Channel (7A).

White Stack Towing: 577-6556 Radio frequency Channel 19A.

Marine operator on Channel 26 VHF.

Weather Station on Channel 39 VHF.

TUGS: Tugs usually join tankers between Cooper River Bridge and Coal Pier, approximately 0.5 miles from dock. Tug lines used. No charge made for this service.

Tugs are required for any vessel docking at or sailing from any state port berth which has a crane.

BERTHING: *Union Pier:* State Pier No. 2: 4 berths. Break-bulk termi length 2,470 ft. (752.86 m.) Depth 35 ft. 1×30 ton gantry. LASH ba handling capabilities, and 12 acres (48,561 m.) of open storage area
Columbus Street Terminal: State Pier No. 8. 6 berths. Length 3,875 (1,181 m.) Depth 35 ft. Terminal handles break-bulk and containe 1×75 ton gantry crane, 1×50 ton gantry crane and 1×150 ton gan crane serve 1,940 ft. of berthing space along the South end of the pi 1×475 ton capacity sheer-leg, 1×90 ton truck crane and 3×40 long t container cranes.
North Charleston Terminal: State Pier No. 15: Total length 2,500 f 3 container berths, 6 container cranes, one grain elevator, capac 1.5 million bushels. 185 acres (748,644 sq.m.) open container suppo space.
Wando Terminal: 3 container berths, each 809 ft. length. 4 contai cranes each 40 tons capacity and 2 IHI container gantry crane Max. draft 35 ft. Paved container storage area of 167 acres.
BULK HANDLING FACILITIES: *Shipyard River Coal Termina* Operator: Massey Coal Terminal Corp. Max. size: 50,000 d.w Max. draft 38 ft.

Accommodation includes a single ship berth at the confluence of th Shipyard and Cooper Rivers. The pier is served by a travelling an shuttling shiploader with telescopic chute, which has a maximu capacity of 2,500 t.p.h. and loads at an average of 1,650 t.p.h.

CRANES: 1×40 ton, 1×90 ton, and 2×140 ton mobile cranes a available to work any Port Authority Terminal. 1×67.5 ton floating cran at Wando Terminal.
BRIDGES: *Cooper River Bridges Specifications:* Main Channel Spa 150 ft. above MHW at Centre Line, 750 ft. horizontal.

Town Creek Span: 135 ft. above MHW at Centre Line, 750 f horizontal.

STEVEDORES: *Working Hours:* Labour may be ordered for work t start at the following times: 0800, 1000, 1200 and 1900 hrs. Labour wi usually work as long as necessary; shift system not used in this port.
MEDICAL: Advance notice when possible.
TANKERS: *Private Facilities:* Discharge lines all 8 in. dia. and 1 solve line 8 in. Adapter to conform to ship's discharge lines supplied. Draft no to exceed 35 ft. low tide. Tanker berths operated by Humble Oil, She Oil, Hess Oil, BPT, and Phillips Petroleum, all suitable for 35 ft. dra Gulf Oil Berth, max. draft 30 ft. Texaco Berth, max, draft 32 ft.
Report: *Exxon Terminal:* The berth, located 14.5 miles from the Se Buoy, is of marginal type construction, and traffic passes in clos proximity to the facility. Passing traffic combined with tidal condition experienced on ebb tide require that a vessel be moored as follows

Vessels arriving at the Port of Charleston with a draft in excess 33 ft. (salt) are scheduled to commence channel transit 2 hours afte LW slack at the channel entrance. This schedule allows the vessel t berth and be fully secured prior to the start of the strong ebb current o of Shipyard Creek. (See Chart: US 11524).

On arrival, the vessel is breasted into the berth port side to, and forward spring run to assist in spotting and maintaining vessel's positio

With vessel positioned, attending tug will work bow of vessel in. Onc an angle of 5° is attained, vessel will then run 5 head lines and 3 forwa breast lines. Efficient stoppers shall be available to "stop off" moorin lines during transfer from winch to bitts without loss of tension. Wi aforementioned lines all fast, attending tug will then work stern of vesse in; any required adjustment of head and/or breast lines to attain equa tension on all leads shall be undertaken during this period. With vesse in position, an additional forward spring line will be used. Recommende stern leads are as follows:

(a) 2 spring lines.
(b) 2 breast lines.
(c) 3 stern lines.

Mooring lines are to be kept taut during cargo transfer. Any require slacking of head lines shall only be attempted during flood tide. Vesse to consult tide tables for times of HW and LW. Also see "Plan" f mooring arrangements.

Vessels arriving with a draft of less than 33 ft. begin trans approximately 1 hour after LW slack at the channel entrance and follo the same procedures when mooring.

The U.S. Coast Guard has recommended that moored vesse maintain a listening watch on VHF Channel 13 and to pay close attentio to moorings while deep draft vessels are transitting the North Charlesto and Filbin Creek Reaches. Since maintaining a bridge watch to monito VHF during the entire discharge is not practicable, nor is it permissib to operate radio equipment at any time during cargo transfer, it i suggested that vessels consult with the Agent to obtain advice o expected times of transit of passing vessels. Prior to vessels passin crews should exercise particular care in maintaining a close watch o mooring lines to make certain vessel is alongside and mooring lines a in taut condition.

Failure of vessels to moor in a safe and proper manner will result i terminal's refusal to connect cargo hoses. Tidal conditions experienc at the berth require a full deck and engine room watch be kept; failu to comply will result in suspension of cargo transfer.

FRESH WATER: Available via 2.5 in. hose at a rate of 500 bbls.p.h.
FUEL: Bunker "C" at API of 14.4 to 16.6 (approx.) and blended Bond Intermediate grades from 1 to 30.
FIRE PRECAUTIONS: Normal precautions.

6. Yes

SHORE LEAVE: Subject to Shipmaster's permission and existing Immigration Regulations.

DELAYS: Normally, no delays beyond normal time required to connect/disconnect hoses.

DEVELOPMENTS: The main navigation channel is to be deepened to 40 ft.
Floating Ro/Ro ramp in operation.

SHIPMASTER'S REPORT: April 1989.
Chart: B.A. Chart No. 2806.
Approaches: Found to be as charted and described in the Pilot book.
Depths: Controlling depth in Charleston Harbour is given by the Pilots as 37 ft. MLWS. Dredging is underway to increase this to 40 ft.
Pilotage: Pilots require a minimum of 2 hours notice of arrival and departure. Radio signals show 2 days notice required.

Pilot Office monitors VHF Channels 16 and 18A and capable of using Channel 14.

Pilot vessels guard VHF Channels 16, 13 and 18A.

Pilot station is at the Sea Buoy with Racon 'K'.

Pilot ladder to be rigged 8 ft. above the water.

Pilots board from a large launch and request a speed of about 7 knots, instructions will be given for any special requirements due to weather conditions.

Pilots leave either in the buoyed channel or at the Sea Buoy depending on weather conditions and entering traffic.

The dock Pilot boards from a tug.

Sea Pilot will leave by launch and will request a pilot ladder to be rigged.

Tugs: When going to Shipyard River Coal Terminal, tugs will join the vessel just above the fixed bridges.
Berth: The Shipyard River Coal Terminal is on the South side of the entrance to Shipyard Creek, and is marked on the chart as dolphins. (Dns).

The face of the berth is well fendered and long enough for this vessel to be loaded without shifting.

Accommodation ladder can be used at high water when light, but due to the dockside saveall and discharging conveyor belt, it is difficult to land on the dockside, so a short brow is required for access at most times.

Ship's cranes will reach over the conveyor belt for storing, and access for trucks is good.

Mean tidal range is given as 5.2 ft. (1.6 m.), but it is as much as 2.0 m. at Springs.

The dockside fenders are above the maindeck level when loaded at low water and for this reason every effort should be made to complete on high water or considerable damage could be done to shipside rails, tank vents and timber stanchions. Possibly this could be considered not a safe berth according to the Charter party, at low water.

The foreman advised that vessels had been loaded to 38 ft. on the Coal Berth and that dredging was expected to increase this to 40 ft. at high water. There is therefore adequate water at all states of the tide for this vessel.
Berthing: Vessel berthed starboard side to, turning with tug's assistance inside the Shipyard Creek.

One line boat is in attendance, taking lines first to the forward dolphins and then coming aft for the stern lines.

Similar procedure for departure, letting go the head lines first then the stern lines.
Loading: Loading is by chute on a movable gantry and as mentioned before, all hatches can be loaded without shifting. Loading capability is about 600 tonnes per hour.
Cargo: All available cargo was loaded.

Stoker coal stowing at 52/53 cu.ft./ton (1.4498/1.4776 cu.m./tonne).
Total cargo loaded by shore weights 6755.556 tonnes.
by draft survey 6761.71 tonnes (Ship's figure).
6760.28 tonnes (Surveyor's figure).

The Surveyor's figure was used for the Mate's Receipt and Bill of Lading.
Hold distribution:

	Pre-stow Estimate	Actual	Slack	Possible Max.
No. 1	1531	1624.28	Nil	1624.28
No. 2	1800	1639.94	181	1820
No. 3	1800	1778.43	43	1820
No. 4	1697	1717.63	Nil	1717.63
Totals	6828	6760.28		6981.91

Pre-stow estimates were calculated using the untrimmed grain capacities of the holds, charter party calling for spout trimmed stowage.

Hold No. 4 was filled giving a stowage factor of 1.46 cu.m./tonne (52.37 cu.ft./ton). Foreman's estimate of space remaining in Hold No. 3 was 40 tonnes and in No. 2 170 tonnes, working on the stowage factor from Hold No. 4, these holds would take 1820 tonnes, being close to the Foreman's estimate.

Estimating Hold No. 1 with the same stowage factor, it would take 1550 tonnes, however this hold was filled and shore weights of 1624.28 tonnes were given, a stowage factor of 1.393 cu.m./tonne (49.86 cu.ft./ton). Either the shore weights are incorrect or there is an overestimation of the void space left in Hold No. 1. This is likely as the distance to the fore and after ends of the hold are shorter than in Holds No. 2 and 3 and the fore end has less width, but the same percentage loss is used as for the larger hatches although Hold No. 4 also with shorter ends but less taper has a smaller percentage loss. Therefore estimate that in future 6,982 tonnes of this coal could be loaded and the arrival draft of 21 ft. maintained with full bunkers at Charleston.
Fresh Water: Available from the berth, but delivery is reported to be slow.
Services: All services expected in a United States port are available.

CHICAGO, Illinois: 41.50 N. 87.45 W. (See Plan)

DOCUMENTS:
For Agent in Montreal:
3 unfreighted copies of Complete Manifest for Seaway Toll purposes, covering all cargo to be discharged in the Great Lakes.
In first U.S. port: a "Traveller" is made up by the Customs Inspector with the following documents:
2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.
1 set Manifest of Cargo for first U.S. port.
4 Stores Lists.
4 Personal Effects Lists.
4 Firearms and Ammunition Lists.
4 Crew Lists, Form I-418.
4 Narcotics Lists.
4 Vessel's Itinerary Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
2 sets Bills of Lading.
3 copies Stowage Plan.
In subsequent U.S. ports the following are required:
5 sets Manifest of Cargo for that port.
The "Traveller" and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

PILOTAGE: Compulsory unless Master holds Exemption "B" Licence. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In Chicago Harbour, Anchorages A and B designated for merchant ships and marked on charts. In Calumet Harbour vessels should not anchor within 1,000 ft. of the breakwaters.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 27 ft.

Inland waterways to New Orleans open 12 months.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft. Depth alongside terminals 27 ft.

Inland waterway handles barges with draft 9.0 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: Port can be contacted by Illinois telephone station WAY. Vessels are required to give notice on radio upon entering Calumet River.

Notice of Arrival: Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S.A. discharge port is required.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory and not required at Iroquois Landing Terminals, but recommended for downriver transit to Lake Calumet berths.

BERTHING: 2×100,000 sq. ft. terminal warehouse facilities. 90 acres of the 194 acre site has been set aside for maritime operations adjacent to the 3,000 ft. of berthing space on the South side of the Calumet River entrance from Lake Michigan.

Calumet River Terminals: Iroquois Landing Lakefront Terminals. Operator: Ceres Marine Terminals. Facilities at the mouth of the Calumet River. Handles general cargoes, steel products and containers. The terminal has 3,000 ft. of berthing space. Heavy lift cranes run from 75 to 140 tons in capacity. Also numerous lift trucks, with capacities to 46,000 lb.

Federal Marine Terminals Inc. handles general cargo, steel products and containers. This facility has 730 ft. of berthing space, 34,000 sq. ft. of covered storage space and 11 acres of open storage space. Heavy lift cranes at Federal Marine range from 20 tons to 150 tons. Lift truck capacities range up to 52,000 lb.

KCBX Terminals Co. on the Calumet River specialises in handling, storing and distributing raw materials or dry bulk commodities. KCBX's twin bulk loading facilities offer 2 deep-water berths, each more than 700 ft. long. The facility has railroad yards that accommodate 2,200 rail cars adjacent to the dock. The twin loading towers provide fast handling at up to 2,500 t.p.h.

Lake Calumet Terminals: Stolt Terminals (Chicago) Inc. in Lake Calumet transfers liquid bulk cargoes – animal fats, vegetable oils and chemicals. Bulk Terminals has 600 ft. of berthing space, with storage capacity of more than 750,000 barrels and 16,000 sq. ft. of drumming warehouse space. This facility has a transfer capacity of approximately 200 t.p.h. Bulk also has 5 miles of internal railroad trackage and a switch engine.

Ceres Terminals (North), Inc. at Lake Calumet handles steel, ores, pig iron, scrap and containers. The terminal was designed for easy interchange of cargoes to and from deep sea vessels. Mississippi River barges, Great Lakes vessels, railroads and trucks – both local and interstate. Truck and railcar weighing services are available also. Ceres has 1,500 ft. of berthing space; 45,000 sq. ft. of covered storage and 27 acres of open storage. Heavy lift equipment includes 5 cranes ranging from 125 tons to 150 tons. Lift truck capacities range up to 50,000 lb. per unit.

Reserve Warehousing, Inc. on Lake Calumet has 100,000 sq.ft. of general covered storage with access to additional 68,000 sq.ft. Equipment includes lift trucks to 52,000 lbs. capacity, cranes 100 tons – 150 tons; 1,000 ft. of berthing for deep-draft vessels and inland barges. Speciality in steel, lumber, pulp and general cargoes.

Prairie Maritime on Lake Calumet specialises in bagged exports with 68,000 sq.ft. covered storage with rail to loading dock capability, serving deep-draft vessels and inland waterway barges.

Emesco (Dockside) Terminals warehousing and marine term facilities on Lake Calumet are designed for efficient handling of ste machinery, containers, scrap, pig iron, ferro-alloys and other meta bulk commodities. Emesco's 800 ft. of heavy duty bulkhead a 2×75 ton gantry mounted cranes operating over 3,700 ft. of trac provide more than 1,000,000 sq. ft. of open storage under cran Emesco has 100,000 sq. ft. of heated warehouse. Other features a 25 acres of open storage, miscellaneous auxiliary cranes, an electro truck and rail scale, 25,000 ft. of railroad track, ship to barge transfe

Port District operates Foreign Trade Zone No. 22 for warehousin storage and distribution. 526,000 sq.ft. covered warehouse and 20 acr of open storage area have FTZ designation.

BULK HANDLING FACILITIES: Continental Grain Company's Eleva "B" on the Calumet River has a storage capacity of 6,800,000 bushe Elevator "B" has 5 loading spouts with a shipping capacity of 40,0 bushels per hour. Unloading capacity from barges is 15,000 bushels p hour. Receiving capacity from rail cars is 10,000 bushels per hour a from trucks 15,000 bushels per hour. The berthing space at Eleva "B" is 1,025 ft.

The Cargill Inc. grain elevator on the Calumet River has a capac of 23 million bushels. In addition to grain, this facility handles sa molasses, and grain by-products. Cargill has 3,600 ft. of berthing spa – 1,200 ft. of this for elevator use, and 20 acres of open storage. Loadi capacity is 60,000 bushels per hour, while unloading is 12,500 bushe per hour. Cargill has 3 marine legs, and 5 loading spouts.

The Gateway Elevator of the Indiana Grain Co-Operative at La Calumet offers storage capacity of 6,500,000 bushels for bulk grai The 8 loading spouts have a capacity of 20,000 bushels each per hou Unloading speed is 10,000 bushels per hour. Berthing space is 1,000

Continental Grain's Elevator "C" at Lake Calumet has a capacity 6,500,000 bushels of bulk grain and grain products. The 8 loading spou have a capacity of 20,000 bushels each per hour. Unloading capac is 10,000 bushels per hour. This facility has 1,000 ft. of berthing spac

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

2 Crew Lists.
2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

It is especially important that vessels try to have their visaed Crew List on board, which is required by U.S. Immigration at first U.S. port. Failure to have this visaed Crew List can result in all personnel being detained on board. Visa waivers are applied for and granted fairly regularly but Immigration has the discretion to refuse these at will.

PILOTAGE: Compulsory, unless Master has a "B" Certificate on board. Vessels are not permitted to transit the lakes from Port Colborne to Cleveland without either a "B" Certificate on board or a special Waiver from the U.S. Coast Guard.

ANCHORAGE: In the outer harbour, 28 ft. depth, mud and sand bottom.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 25 ft. to 27 ft. Access to berths in the River is limited by height restriction of 97 ft. above waterline.

MAX. SIZE: Limited at Seaway Locks, 730 ft. length, 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: U.S. Coast Guard can be contacted by R/T on 2182 kHz.

Notice of Arrival: Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S. discharge port is required.

AGRICULTURE: See "Agriculture" first U.S.A. port (Albany).

TUGS: Available and use is compulsory in Cuyahoga River and Old River Channel.

BERTHING: See "Tables" below and overleaf.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: Marine gas oil and diesel oil readily available, ex-wharf or delivered by barge.

COOS BAY, Oregon: 43.22 N. 124.13 W. (See Plan)

DOCUMENTS: Local Port Authority does not require any documents from merchant vessels entering this harbour. This does not preclude United States Customs requirements for documents.
PILOTAGE: No specified amount of advance notice of ETA required. Radio contact may be made on frequency 8182 kHz, also on frequency 2182 kHz. Most used frequency is VHF Channel 16. Pilot will be taken on board at entrance to Coos Bay Channel. No designated anchorages for vessels awaiting a Pilot.
ANCHORAGES: North of Entrance Buoy.
MAX. SIZE: Max. permissible length is 725 ft., breadth 110 ft. A 2 ft. clearance under keel is considered necessary for safe navigation. Vessels entering Coos Bay from sea draw down about 0.166 in. per foot of draft because of difference in density.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
RADIO: Pilots, Agents and stevedores monitor VHF Channel 16.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Pilot vessel acts as Tug. Emergency small harbour tugs available and ship's lines generally used.
BERTHING: *Note:* All berths with the exception of oil berths dredged to 35 ft. in 1979.
T Dock: Distance from entrance 6 miles.
Barge Facility: Distance from entrance 6.5 miles.
Roseburg Lumber Co. Dock: Length 1,000 ft. Depth alongside at MLW 38 ft. No fresh water available. Distance from entrance 8 miles.
Ocean Terminals Dock: Length 400 ft. Depth alongside at MLW 39 ft. No dock cranes available. Fresh water available. Distance from entrance 11 miles.
Export Services: Length: (Lumber Dock) 1,433 ft. (Wood Chip Dock) 694 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 12 miles.
Bayshore Dock: Length 504 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13 miles.
Dolphin Terminals: Vessels moor to dolphins adjacent to apron 60 ft. long and 26 ft. wide which is joined to the shore by a causeway length 190 ft. and width 12 ft. Depth alongside at MLW 36 ft. Fresh water available. Distance from entrance 13 miles.
Central Dock: Length 1,380 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13.5 miles.
Portland Dock: Length 576 ft. Depth alongside at MLW 36 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
Coos Bay Dock: Length 1,326 ft. Depth alongside at MLW 37 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.
BRIDGES: 2 bridges cross the main ship channel. The Southern Pacific railway drawbridge 9 miles from the entrance and the Coast Highway Bridge 9.6 miles from the entrance. Clearance height of the Highway Bridge is 149 ft. in the centre of the span at MLW. Clearance width of swinging railway bridge 197 ft.
STEVEDORES: Should have minimum of 48 hours to arrange gangs. Also see "Radio".
MEDICAL: Advance notice of required medical attention is desirable, in order to expedite use of ambulance, if necessary.
TANKERS: 2 tanker berths, Standard Oil and Union Oil Co., draft 35 ft. Tankers discharge into tank farms. Union Oil Co. is the bunkering Agent.
FRESH WATER: Available. Cost per ton is negotiable.
FUEL: 24 hours advance notice desirable, both bunker and diesel fuel available.
CONSULS: None.
REPAIRS: Only minor deck and engine repairs possible.
DRY DOCKS: Largest dry dock handles vessels not exceeding 220 ft.
GANGWAY/DECK WATCHMEN: Service of watchman at discretion of ship's Master.
OPENING/CLOSING HATCHES: Normally by stevedores.
REPATRIATION: Repatriation through local Customs and Immigration Office.
AIRPORT: All docks within 5 miles of airport. Airport served by regular airlines.
TIME: GMT minus 8 hours, clocks advanced 1 hour on first Sunday in April, clocks retarded 1 hour last Sunday in October.
HOLIDAYS: All legal holidays observed, plus state-wide elections. Cargo work through negotiations with stevedore contractors.
POLICE/AMBULANCE/FIRE: Police: Coos Bay 269-1181, North Bend 756-3161; Ambulance 756-3234; Fire: Coos Bay 267-4123, North Bend 756-6111. Emergencies: Dial 911.
SHORE LEAVE: Crew members allowed ashore except when Federal Directives may be applied to a specific vessel.
IDENTIFICATION CARDS: Not required by local authorities.
SHIP SUPPLY SERVICE: For general ship stores: Day Ship Supply, 602 W. Hemlock St., Coos Bay, Oregon 97420. Tel: (503) 267-3813.

For transportation of personnel: The Coos Bay Pilots' Association, P.O.Box 254, Coos Bay, Oregon 97420. Tel: (503) 267-4186 would be the initial contact.

There are also numerous charter boat operators who provide charter services.

For emergency services the U.S. Coast Guard maintains a helicopter squadron in port. They bring sick crew members directly to the hospital. Their information phone number is (503) 756-4142, and their emergency number is 756-4141.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through local contractors. Contact:
Coos Bay Sanitary Service. Tel: (503) 267-6675.
Les's Sanitary Service. Tel: (503) 267-2848.
North Bend Sanitation, Inc. Tel: (503) 756-5211.
WASTE OIL DISPOSAL: Service available through local contractor. Contact: Environmental Services, Tel: (503) 269-5050. Services for emergency spills, oil, gas, diesel, bilge cleaning, sewage disposal.
SEAMAN'S CLUBS: The Seamen's Centre of the Port of Coos Bay is a non-profit organisation and is sponsored by thirteen area churches, Local No.12 of the International Longshoremen's and Warehousemen's Union, United Way of Coos County and other donations. The Centre is open every night, including holidays, from 1800 hrs. to 2300 hrs. Each church serves for one week and supplies hosts/hostesses and free refreshments, and transportation between ships and the centre in a fifteen passenger van. Information sheets have been printed in the languages of seamen who call in the port and these are posted on board the ships.

Telephone, postage, local maps, and church services are among the facilities provided, also a games room which includes two pool tables, two table tennis tables, a football table, a table shuffleboard, a bumper pool table and darts. There are also two coin operated video games. A television set, snack bar, table games, magazines, telephones, souvenirs, post cards and foreign language bibles are all available in the "front room".

The Seamen's Center is located at 171 N.Broadway, Coos Bay, Oregon 97420. The mailing address is: P.O.Box 628, Coos Bay, OR 97420.
DELAYS: No delays in berthing, loading or discharging, or bunkering can normally be expected.
GENERAL: New enterprise zone and foreign trade zone within port district.
DEVELOPMENTS: Depth of channel at entrance 45 ft. MLLW. Inner channel, to head of channel 35 ft. MLLW. An additional anchorage (Turning Basin) will be installed, directly East of Beacon 17.
AUTHORITY: Oregon International Port of Coos Bay, Port Building, 326 N. Front Street, Coos Bay, Oregon 97420. *Tel:* (503) 267-7678. *FAX:* (503) 269-1475. *Contact:* Paul W.Vogel, General Manager. Don Yost, Harbour Master.

CORDOVA, Alaska: 60.33 N. 145.46 W.

Located at S.E. side of Prince William Sound at the head of Orca Inlet. Open harbour year round.
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Via Prince William Sound.
PILOTAGE: Compulsory. Pick-up point is Sheep's Point. Prior arrangements required.
ANCHORAGES: Good holding ground. Mud bottom between Spike Island and Municipal dock.
MAX. SIZE: Recommend max. draft 25 ft. Tidal variation: 18 ft. – 19 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact port on VHF Channels 16 and 68; Citizens Band, Channel 5 or SSB 2509 kHz.
TUGS: Limited availability. Prior arrangements need to be made.
BERTHING: Berthing Permit required. Advance notice of 48 hours requested.

Municipal Dock: 25 ft. deep, 408 ft. long, 72 ft. wide. Open storage of 10 acres. 1×45 ton crane.
Container and Ro/Ro Facilities: Movable ramp, 4.57 m. wide, available for Ro/Ro operations. 4 ha. container staging area.
STEVEDORES: ILWU No. 66, Box 335, Cordova, Alaska, 99574. Tel: (907) 424-5447.

Working hours – 24 hours.
MEDICAL: 23 bed hospital and a medical clinic, with 3 doctors, 1 dentist also public health nurse.
REPAIRS: Radio, radar, welding, machining and light engine repairs can be effected.
FRESH WATER: Available at docks.
FUEL: No bunker "C" available. Fuel oil available.
CUSTOMS: Quarantine – local. Immigration and Customs from Anchorage, Alaska.
AIRPORT: 13 miles from city centre. Daily scheduled flights to Anchorage and Juneau.
TIME: Alaska Standard time.
HOLIDAYS: None.
POLICE/FIRE/AMBULANCE: All available. Tel: (907) 424–6100.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Dumpsters are provided at the dock. Charges for this service are paid by the port. Collection daily.
WASTE OIL DISPOSAL: Tanker truck available upon request, contact Tel: (907) 424-6400. For quantities under 100 galls. there is no charge. For quantities over 100 galls. which meet standards for oil to be burned for energy recovery, the charges are $40.00 /man hour. If oil is unsuited for energy recovery, then the charges are $30.00/galls. plus $40.00/man hour plus cost of shipping and handling.
SEAMAN'S CLUBS: None.
CURRENCY: U.S.Dollar (U.S.$).
AUTHORITY: City of Cordova, Box 1210, Cordova, Alaska 99574. *Tel:* (907) 424-6400. *FAX:* (907) 424-6000. *Contact:* Dale Muma, Harbour Master/Port Director.

CORPUS CHRISTI, Texas: 27.48 N. 97.23 W.

(See Plan)

PORT LIMITS: Corpus Christi's port limits include all of Nueces County, which has been officially designated as Port of Corpus Christi Authority of Nueces County, Texas. The Corpus Christi Turning Basin, Avery Point Turning Basin, Chemical Turning Basin, Tule Lake Turning Basin and the Viola Turning Basin are interconnected by the Industrial Canal; the Tule Lake Channel and the Viola Channel constitute the Corpus Christi Inner Harbour. Other Bay points included in the Port of Corpus Christi area are: Harbor Island, the North end of Mustang Island, near the inner end of the Aransas Pass Entrance, and Port Ingleside and La Quinta along the route of dredged deepwater channels on North side of Corpus Christi Bay; and the Rincon Barge Canal System. All of the ship channel has now been deepened from 40 ft. to 45 ft.

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Form 1304).
2 copies Stores List (Form 1303).
2 copies Passenger List (Form I–418).
copies Crew List (Form I–418).

Customs Boarding Officer will also examine Ship's Register, Load-Line Certificate, Safety Equipment Certificate and Certificate of Financial Responsibility. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Master's Oath (Customs, 2 copies Form 1300).
General Declaration (2 copies Form 1301).
All Foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilot boards off Port Aransas.

RESTRICTIONS: No restrictions, 24 hour service. The Port of Corpus Christi is situated on the West side of Corpus Christi Bay, in South-Western Texas. Port facilities at Inner Harbour lie along a 9.5 miles stretch of dredged channels and basins about 18 miles from Aransas Pass entrance at the Gulf of Mexico. Channel depth 45 ft., width 400 ft.

Turning Basins: 5 turning basins in the Inner Harbour are each minimum 1,000 ft. wide and more than 1,000 ft. in length.

MAX. SIZE: Cargo vessels: 45 ft. draft. Tankers: 45 ft. draft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

RADIO: KLC ITT-Radio-Arcadia, Texas. KLC RCA-Radio-Galveston, Texas.

VHF: KKQ 769 – Harbour Master – Channels 12 and 16. WR 8879 – Pilot Boat. KQU – Pilot Office – Aransas-Corpus-Christi Pilots Channels 12 and 16. KBP 384 – Harbour Tugs – Channel 12. U.S. Coast Guard – Channels 16 and 22. Pilot Office KQU 371.

TUGS: Tug assistance available. Tugs join vessels berthing at Harbor Island in Jetty channel. Tugs accompany vessels entering Inner Harbour outside Corpus Christi Harbour Bridge.

BERTHING: The Corpus Christi Turning Basin is over a mile long and 1,000 ft. wide. There are 4 additional basins in the Inner Harbour, which extends Westward from Corpus Christi Harbour Bridge for 9.5 miles. The water in all basins, channels and canals is 45 ft. deep.

Draft for public docks will be furnished upon request to the Harbour Master or steamship Agent. Draft for private docks will be furnished upon request to the dock owners or steamship Agents.

Also see "Port Limits" and "Developments".

Inner Harbour – Public Docks: The length limit indicator is not of necessity the max. length for a vessel as larger vessels can berth if adjacent berth is not occupied.

Cargo Docks No.	*Length Limit* (ft.)
2	700
3 – 5	912
8	1,060
9	750
10	700
12	700
14 – 15	1,000
Bulk Materials Dock	835
Public Grain Elevator Dock	900

Inner Harbour – Private Docks: (Other than oil docks).

PPG Industries Inc., Cargo Dock: Length of pier 450 ft. Length of Head 100 ft.

Producers Grain Port Terminal Elevator Dock; Lone Star Cement Corp. Dock; Berry Contracting Company; Centex Cement Company.

CONTAINER FACILITY: New container facility in operation located on 6 acres behind Cargo Dock 14. Terminal provides full service for receiving, delivering and handling of marine containers. Containers are handled with new Kalmar lift machine with capacity of 90,000 lb. Kalmar has telescopic spreader for handling 20 ft. or 40 ft. units. U.S. Customs maintain on site inspection facilities.

BULK CARGO FACILITIES: *Ore, Minerals, Coal, Petroleum Coke:* Bulk Materials Dock with travelling unloading tower capable of direct discharge from vessels to railcars or trucks at rate of 1,000 t.p.h.

A new Bulk Loading Terminal to load vessels directly from trucks, railcars or stockpiles at rate of 1,500 t.p.h. is in operation. The new dock has a 45 ft. draft alongside, 63 ft. airdraft and 1,300 ft. slip length.

Grain: 2 export grain elevators are located in the Inner Harbour. The Corpus Christi Public Elevator has a 5,000,000 bushel capacity. Rated truck unloading capability is 1,000 t.p.h.; railcars can be unloaded simultaneously at 2,000 t.p.h. The Interstate Grain Port Terminal Elevator is privately owned and has a 6,400,000 bushel capacity.

MEDICAL: Ample hospital and dental facilities available.

TANKERS: Between Corpus Christi Turning Basin and Viola Basin 11 public and 10 private Oil Docks, some capable of berthing tan of 150,000 d.w.t. capacity. Also see "Berthing".

Inner Harbour – Public Docks:

  Du Pont Ship Liquid Chemicals Barge Dock No. 2.
  Reynolds Metals Co. Bauxite Unloading Pier. (Also see "Shipmaster's Report" – dated April 1988.)
  Reynolds Metals Co. Alumina Loading Dock. (Also see "Shipmaster's Report" – dated April 1988.)

Report: *Cautionary Advice:* Special precautions and procedures a required for all vessels calling at Exxon's Harbor Island Dock No because of tidal current, wind conditions and passing traffic. Maste must ensure that their vessels are properly moored at all times minimise the effect of these conditions and prevent the vessel fr breaking out of the berth.

The special precautions and procedures, for deep-loaded vess (34 ft. draft or deeper) are:

Deep-loaded vessels experience maximum effect from tidal curr during the flood tide which forces the vessel away from the doc particularly when clearance between the keel and bottom is 5 ft. or le

Accordingly, deep draft vessels are docked at the end of the flo tide to allow ample pumping time so that maximum underkeel clearan be attained before the next flood tide reaches full strength.

(Vessels should anchor off the sea buoy to await the suitable sta of the tide.)

Vessels equipped with segregated ballast capability should n commence ballasting these systems until draft is 30 ft. or less.

If during the flood tide the vessel's draft is in excess of 34 ft. (mea a tug should be in attendance to assist the vessel in staying alongs the dock. To ensure tug availability, the Master should advise the Ag 3 hours in advance if planned pumping does not proceed to perm lesser draft than 34 ft. at the full strength of the next flood tide.

Vessels with drafts that exceed 34 ft. (mean) should be equipped w 12 mooring wires. If they are not so equipped, the Dockmaster w require the vessel to use additional mooring ropes.

Wind Conditions: Winds from the Northern quadrants, which occ particularly during the Winter months, place heavy loads on moor lines when a vessel is in a fully light condition.

A contract weather service provides an alert to Masters (via the Ag and/or Dockmaster) and to the Dockmaster when abnormal weat conditions are predicted. The Dockmaster will require cargo trans shutdown when wind velocity exceeds established limits.

In order to minimise wind effect, the vessel's segregated ballast tan should be filled before completion of cargo discharge.

Combined Wind and Tide Conditions: Particular attention should paid to unfavourable combinations of wind, tide and current which place high loads on mooring lines.

Passing Traffic: The close proximity of the Exxon Berth to the Corp Christi Channel results in interaction from passing traffic. This can severe, depending on the speed and displacement of the passing vess

Propeller wash from vessels (mooring/unmooring) at the Petro Berth and the wash from assisting tugs also have an unfavourable eff Special attention must be given to spring lines to ensure they are k taut at all times.

The Exxon Terminal at Harbor Island has established wind and curr limitations at which cargo operations should be stopped. Ca operations are also stopped if a vessel moves off the berth. Hoses disconnected by the terminal when required due to wind, current, a

Port Approaches: Vessels should approach Aransas Pass through the prescribed Safety Fairways, exercising due caution at all times as the lanes are unmarked. Numerous fishing vessels may be encountered. The low shore lines will start to show on radar at a range of between 15 and 20 miles. A large number of shore lights in the background make it difficult to distinguish the navigational aids. The entrance channel through Aransas Pass is protected by jetties. The outer bar channel, the Jetty channel and the inner harbour basin have project depth of 45 ft.

Tugs: Tugs will come alongside at Buoys No. 9 and 10. A minimum of 3 tugs are usually required for a loaded vessel and 2 for a vessel in ballast under good conditions. Tugs up to 3,200 h.p are available.

CARGO GEAR: 7 locomotive cranes including 4×30 tons, 1×25 ton, and 1×45 ton. Heavy lift facilities: Mobile crane located at Dock No. 8 with a capacity of 275 tons; can handle containers and heavy lifts; otherwise ship's gear used. Heavy lift facility also available at Bay, Inc.

Facilities are available for all types of liquid cargo, dry bulk and general cargo, but cannot handle restricted cargo such as ammunition and explosives.

BRIDGES: Corpus Christi Harbour Bridge: Vertical clearance at MHW is 138 ft.

Upper Harbour Lift Bridge: Vertical clearance at MHW when raised is 138 ft.

FRESH WATER: Water available at all public docks for $2.50 per 1,000 gallons; minimum charge of $25.00 for each connection.

FUEL: 24 hours notice required.

Bunker C, Marine diesel, Light diesel – Pipe-line or Barge, Truck.

FIRE PRECAUTIONS: No working barges alongside (except bunkering barges) and normal precautions such as shut down cargo operations during lightning, storm, etc.

CONSULS: Danish Consul, 4517 Baldwin. Tel: (512) 884-6344.

German Consul, 5440 Old Brownsville Rd. Tel: (512) 289-2416.

Mexican Consul, 1740 First City Tower I. Tel: (512) 882-3375.

Spanish Consul, 19833 Melissa Lane. Tel: (512) 887-7246.

REPAIRS: See "Services".

SURVEYORS: American Bureau of Shipping; J. E. Orrell, Lloyd's Sub-Agency and National Cargo Bureau.

GANGWAY/DECK WATCHMEN: Not necessary.

HATCHES: Hatches may be opened by crew before entering harbour, after the ship has entered harbour it is carried out by stevedores.

CUSTOMS ALLOWANCES: 300 cigarettes per man. 1 quart liquor per man.

AIRPORT: Approximately 7.75 miles from Port. Serviced by 3 regular airlines.

TIME: Daylight Saving Time from first Sunday in April till last Sunday in October (minus 5 hours GMT). Central time remainder of year (minus 6 hours GMT).

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (3rd Monday of February); Texas Independence Day (March 2nd); Good Friday (varies); Memorial Day (last Monday of May); June 20th; July 4th; Labour Day (First Monday of September); Columbus Day (2nd Monday of October); Veterans' Day (4th Monday of October); Thomas W. Gleason's Birthday (November 8th); Thanksgiving (4th Thursday of November); Christmas Day (December 25th).

Possible to work on any holiday, except Labour Day or Christmas, only in case of fire or danger to property. If holiday falls on Sunday, Monday is observed.

POLICE/AMBULANCE/FIRE: Police 882-1911, Ambulance 882-5571, City Fire 884-5563 or 911, Refinery Terminal Fire Co. 882-7801.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard Marine Emergency (512) 937-1898.

TELEPHONES: No arrangements exist.

Pumpkin Air, Inc., P.O.Box 10264, Corpus Christi, TX. 78410. Tel: (512) 289-6363.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Standard Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for same vessel.

GARBAGE DISPOSAL: Shipboard garbage service is available through vessel's Agent.

WASTE OIL DISPOSAL: Collection service is available through SDC Services, 7330 Greenwood, Corpus Christi, Texas. Tel: (512) 855-4551. Fax: (512) 855-5419. Ability to handle ballast water, environmental waste (oil rags, etc.); vacuum truck service.

Barge dock to be located in Ingleside division of the port by end of 1992.

SEAMAN'S CLUBS: Corpus Christi International Seamen's Center, 1501 Mesquite Street, Corpus Christi, Texas 78401. Tel: (512) 883-5011, 883-8405. Services: Shop, international telephone service, church services, mini-bus collection, postage facilities, games.

CURRENCY: U.S. Dollar.

DEVELOPMENTS: Port plans include deepening the Inner Harbour to 45 ft.

SHIPMASTER'S REPORT: September 1987.

Vessel: Tanker, 95,000 d.w.t.

Coastguard: For U.S.C.G. annual tank inspection, the authorities need to inspect the Cargo Gear Book, in addition to all other documents. Additionally U.S.C.G. require that for tankers, stores, gas cylinders, etc., must not be on cargo tanks.

Pilot: The Pilot requires the ladder 8 ft. above the water.

Berthing: Berthing carried out 24 hours a day.

At the Petrofina Berth at Harbour Island, fresh water and telephone are not available. Due to strong currents and passing vessels, the moorings consisted of 4 head/stern lines, 2 breast lines and 4 springs at each end. Three tugs assisted in berthing. Bunkers may be taken whilst alongside but this will usually depend on the Charterers or Receivers permission.

Just off the Petrofina Berth there is a shallow patch where deep draft vessels usually touch the bottom, but it appears to be soft mud.

The pilots, tugs and linesmen all require 2 hours notice.

At Oil Dock No. 8, 2 tugs are required and if vessel turns before berthing then only 1 tug will be required when unberthing. Moorings consisted of 3 head/stern lines, 2 breast lines and 2 springs at each end.

The ship's gangway was required at both berths.

If vessel is cleared for a foreign port and diverted to another U.S. port, the Agent at the sailing port should be informed, in order that he may advise the authorities accordingly. If the authorities are not advised the vessel is liable to a fine of U.S.$1000.00. Vessels have to pay a user fee to U.S. Customs of U.S.$397.00 regardless of size. Also if vessel is diverted to another U.S. port after being cleared for a foreign port, advise the Agent of any slops on board for Customs purposes.

SHIPMASTER'S REPORT: April 1988.

Berth: Gregory.

Location: 27° 52′ 43″ N., 97° 15′ 38″ W.

The private docks of Reynolds Metals Co. are located on the North side of Corpus Christi Bay, Texas, on Chart No. 11309. The facility is known as Gregory Reynolds Sherwin Plant Dock.

Weather: Humid sub-tropical climate with prevailing winds onshore from East and Southeast at 10 – 15 knots. "Northers" may be expected from November to March with winds over 20 knots. These may be severe from December to February and up to 50 knots. Generally lasting from 1.5 – 3 days. Tropical storms/hurricanes may occur from June to October, reaching a peak in September, infrequently in May and November.

Communications: Reynolds Metal Co., Richmond, Va. Telex No. 827448 AAB REMETCOGO RCH, or via Agent.

Pilot: Aransas Corpus Christi Pilots are on VHF Channel 12, call sign "KQU 371".

Time: GMT minus 6 hours. Summer time of GMT minus 5 hours is applied from first Sunday of April to last Sunday of October each year.

Channel: Navigation to Sherwin Dock is via Main Corpus Christi Channel from Aransas Pass inlet, thence via La Quinta Channel to the Dock. Total distance 22 miles. Several commercial marine installations and private homes border the channel. These are susceptible to wash damage from vessels' wakes. Vessels are cautioned to reduce speed on approaching such installations and enter the reduction in the ship's log book.

Draft: Channel controlling depths are published in Notice to Mariners. Draft is presently restricted to 45 ft. Bauxite Pier Facility No. 5 – depth of water 45 ft. Alumina Pier Facility No. 90 – depth available 38 ft. at MLW (subject to shoaling).

Density: Generally 1022.

Tidal Range: 1.4 ft. Strong winds also affect water levels in Corpus Christi Bay as much as the tides.

Bauxite Pier Facility No. 5:

Max. LOA: 800 ft.

Max. beam: 106 ft. (larger vessels by arrangement).

Air draft: Max. of 50 ft. from top of hatch cover in open position to water line.

Hold depth: Max. of 66 ft. from top of hatch cover in open position to bottom of hold.

Min. hatch size 39 ft. × 39 ft.

Max. overhang into wings: 36 ft.

Min. distance after end last hatch to front of accommodation: 10 ft.

Washing of holds at the berth is permitted but the wash water cannot be pumped overboard or a fine will result. Free surface in the holds is also detrimental to the clean up process, as the vessel must be kept as level as possible because of the rotary motion on the tank top by unloader as it makes its final pass. Gantry travel of the Sumitomo Continuous Unloader is 606 ft. Max. unloading rate 2,000 tonnes per hour. Overall average rate 1,000 – 1,200 tonnes per hour. Plant personnel used exclusively. Plant labour make a good job of residue removal, but at the same time 2 or 3 crew may work in hold during final clean-up.

Vessel design: Deck should be clear of obstructions such as cranes, raised deck houses, light stands at side, log racks, etc.

Alumina Pier Facility No. 90:

Max. LOA: 680 ft. but this depends on distance from forward hatch to stern, which should not exceed 550 ft.

Loading chute outreach from fender line: 67 ft.

Air draft: Max. of 31 ft. 06 in. at ship's rail/bulwark.

The chute travels out on an incline so can usually accept 33 ft. 06 in. at hatch coaming, depending on distance in from side of vessel. If necessary list the vessel to meet this requirement. A list of 5° – 7° is considered the maximum allowable by plant personnel for working safely and ballasting cannot be started until boarding party is off the vessel and a draft survey complete. Most large vessels find it necessary to fill one cargo hold with water ballast to meet this restriction and caution must be taken when deballasting not to exceed loading rate. Loading rate about 500 tons per hour. Cargo stows at 55 lb./cu.ft. or 41 cu.ft. – 43 cu.ft./ton. Cargo is very dusty and abrasive. Wheelhouse should be sealed and accommodation ventilation "air washers" should be used if fitted. It is also helpful if a positive pressure of about 1 p.s.i. can be maintained in the accommodation by adjusting the supply/exhaust fans. There is no shore scale and although Plant may use a Surveyor to determine Bill of Lading quantity, vessel is responsible to advise terminal when loading is complete.

Hatches must be clean, fresh water washed and dry, with no residue in hold or underside of covers. A Surveyor will carry out a "Cleanliness" inspection before the vessel will be accepted. Crew must open/close hatches and haul ship alongside berth during loading operation. Gangway of the vessel used and safety net is recommended. Vessels normally turn and berth head out, port side to, using 2 tugs.

Fuel oil and Diesel oil are available by barge and small amounts of diesel oil available by tank truck, but some vendors do not like to deliver during cargo operations due to dust. U.S.C.G. also prohibits tank truck hose from loading over water so coordination with loading sequence is essential at Alumina Berth. Barging cost from Corpus Christi is about U.S.$3,600.

Fresh water may be taken in quantities up to 300 – 400 tons at no cost, but ship's crew must connect/disconnect and use own hose. Connection must be tight with no water leaking to dock.

AUTHORITY: Port of Corpus Christi Authority, P.O.Box 1541, Corpus Christi, Texas 78403. *Tel:* (512) 882-5633. *FAX:* (512) 882-7110. *Contact:* Harry G.Plomarity, Executive Director. Ed Altemus, Director of Trade Development. Fred Bingham, Harbour Master.

DESTREHAN, Louisiana: 29.56 N. 90.21 W.

Also see "South Louisiana".

East bank of Mississippi River about 121 miles from sea.

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans."

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: At least 1 tug required for mooring/unmooring.

BERTHING: (a) St. Charles Elevator, berth 1,000 ft. length, Minimum 41 ft. depth. Loading rate, Max. 75,000 bushels per hour; 2 loading belts. Storage capacity 168,000 tonnes.

(b) Bunge Grain Elevator, berth 700 ft. length, Minimum 41 ft. depth. Loading rate, Max. 70,000 bushels per hour; 2 loading belts. Storage capacity is 115,000 tonnes.

(c) ADM Midstream loading buoys – 2 mooring facilities.

DENSITY: Fresh (1000).

FRESH WATER: Available ex-berth.

FUEL: Not available.

GARBAGE DISPOSAL: Service available from Reliable Disposal Co. in New Orleans, who are a private contractor. Tel: (504) 835-1696.

WASTE OIL DISPOSAL: Service available from Sea Horse Marine of Louisiana, Belle Chase, who are a private contractor. Tel: (504) 393-1330.

SEAMAN'S CLUBS: See "New Orleans".

SHIPMASTER'S REPORT: March 1991.

Location: Destrehan is an area on the right ascending bank of the Mississippi River about 120 miles above Head of Pass.

St. Charles Elevator: Close above Bunge Elevator. Berth has 7 spouts with loading rate 1,000 t.p.h. A 720 ft. vessel is secured with 3 headlines to a buoy, 3 breastlines and 2 backsprings to the wharf, 3 backsprings, 2 breast ropes which led forward and 2 sternlines to the wharf. A forward facing gangway can reach the wharf, but the ship is fendered off about 3 ft. Minimum airdraft under the spouts may be 42 ft. at highest river stage, increasing as the level falls. Stores can be taken from the wharf only at the forward hatch. Fresh water from the wharf by 1.5 in. hose at 2 t.p.h. – 3 t.p.h. Taxi fare to nearest city is U.S.$25.00 each way. Vessel loaded corn gluten pellets with spout trimming only. This cargo does not run freely and large voids were left, the ship had a 1.5° list on completion, away from wharf. There is a small convenience store with telephones.

Bunge Elevator: The elevator is equipped with 7 spouts, possibly 2,000 t.p.h. Berth is said to be capable of berthing 1,000 ft. ships. Headlines go to buoys.

A.D.M. Buoy Systems: Located between the St. Charles Elevator and the Highway Bridge. There are 2 systems of buoy moorings. These are served by floating elevator "Gemini" which has a rate of 500 t.p.h., with one Buhler arm. Vessel dropped port anchor outside port head buoy, then starboard anchor inside starboard head buoy. 4 or 6 headlines are run to the 3 head buoys according to season. 2 sternlines are run to each buoy aft. The lines to the same buoy must be hove up together, which may require preparation on board. Vessel waited nearly 2 days for corn gluten to settle, and topped up all 7 hatches in 5 hours.

The elevators at AMA, Bunge and St. Charles and the 2 buoy systems are operated by A.D.M.

AUTHORITY: The Port of South Louisiana, 152Belle Terre, P.O.B 909, La Place, Louisiana 70069-0909. *Tel:* (504) 652-9279, 568-62 *FAX:* (504) 652-9518. *Contact:* Virginia D.Simons, Assistant P Director - Economic Development.

DETROIT, Michigan: 42.19 N. 83.05 W. (See Pla

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Compulsory unless Master holds Exemption "B" Licen 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In depths from 29 ft. – 51 ft. in the Detroit River off th marine terminals and away from main channel.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. fro April 15th to December 15th. Controlling depth 27 ft. Minimum depth 25 ft. in the Detroit River. The Amherstburg Channel has a depth 27 ft. 6 in. for upbound traffic.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory but recommended for some termina

BERTHING: *Detroit Marine Terminals (Scotten Street):*

2,100 ft. dock with 27 ft. LW depth.
2 berths.
Container Freight Station – U.S. Customs approved. 45,000 sq covered storage.
Total 32 acres of which 20 acres dedicated to container operation
1×200 ton heavy lift crane with automatic container spreader.
3×85,000 lb. top-loading container handlers.
1×25,000 lb. empty container handler.
1×250 ton diesel crawler crane.
1×200 ton diesel crawler crane.
1×50 ton diesel electric travelling gantry crane.
1×25 ton diesel electric travelling gantry crane.
1×15 ton diesel electric travelling gantry crane.
Lift trucks up to 80,000 lb. capacity.
1×80,000 lb. top loader for 20 ft. – 40 ft. containers.

Detroit Marine Terminals (River Rouge):

1,400 ft. dock with 27 ft. LW depth.
2 berths.
121,000 sq.ft. covered storage.
200,000 sq.ft. storage pads.
Total 45 acres.
3×250 ton crawler cranes.
4×140 ton crawler cranes.
1×50 ton gantry crane.
3×40 ton railroad cranes.
1×25 ton gantry crane.
2×600 h.p. switch engines.
1 rail scale 212,000 lb. capacity.
1 truck scale 212,000 lb. capacity.
7 magnets.
8 clam buckets.
Yard and warehouse lift trucks up to 70,000 lb. capacity.

Harridon Terminal, Inc:

790 ft. dock.
1 berth.
2×250 ton crawler cranes.
1×50 ton hydraulic crane.

Michigan Marine Terminal:

650 ft. dock.
Liquid bulk products (from No. 2 Oils to heavy residual fuels).
17 storage tanks.
Can ship and receive by water, truck and rail. Can receive by Bucke pipeline.

Hickman, Williams and Co.:

1 berth.
Load bulk materials with conveyor. Unloading by self-unloaders.

Nicholson Terminal & Dock Company (Ecorse Dock):

3,400 ft. dock with 27 ft. LW depth.
4 berths.
275,000 sq.ft. covered storage.
Total 50 acres.
2 cranes, 70 ton capacity at 40 ft. radius and 50 ton capacity at 60 radius.
4×12 ton gantry cranes.
6×30 ton diesel locomotive cranes.
1×85 ton mobile crane.
1×200 ton crawler crane.
3×1,000 h.p. diesel yard engines.
1×290 h.p. diesel yard engine.
1×150 ton railroad scale.
1×72 ft. combination rail and truck scale 400,000 lb. capacity.

2×87 in. magnets.
11×65 in. magnets.
5×55 in. magnets.
12 buckets: 1.5 yds. to 15 yds. capacity.
1 forklift truck, 50,000 lb. capacity.
1 forklift truck, 40,000 lb. capacity.
25 forklift trucks, various capacities.
3×12 yd. bucket front end loaders.

Nicholson Terminal & Dock Company (Summit Street Dock):
1,530 ft. dock with 28 ft. LW depth.
2 berths.
250,000 sq.ft. covered storage.
Total 16 acres.
2 crawler cranes, 200 ton capacity.
12 forklift trucks; 12,000 lb. to 45,000 lb. capacity.
1×60 ft. truck scale 300,000 lb. capacity.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

DONALDSONVILLE, Louisiana: 30.05 N. 91.00 W.

(See Plan)

Also see "South Louisiana".

SHIPMASTER'S REPORT: September 1980 (updated 1988).

The report was compiled over 4 visits between August 1979 and August 1980.

APPROACHES: The coastline is low at the mouth of the river and consequently does not give a good radar return. The Racon on East jetty shows up between 12 to 17 miles. Fog and mist is a complication as it is very prevalent with the added problem of the oil rigs. These are located mainly on the East side of the safety fairway but in August 1980 construction was proceeding on a structure right on the Western boundary of the safety fairway about 4 miles S.W. of the East pier.

The Sea Buoy is difficult to locate, vessel should approach as per the leading line indicated.

A strong West flowing current across the entrance can be encountered.

Draft restriction varies throughout the year and should be ascertained in good time. August 1980 at 40 ft.(FW) but patches of 39 ft. 6 in. in places. (Mud, so no difficulty.)

Officially the Bar at the S.W. Pass is the limiting factor but in practice other areas of the river up to New Orleans are as much of draft restriction factor.

Above New Orleans to Baton Rouge a battle is being fought against silting up and a large dredging programme will have to be commenced soon, otherwise the draft will be severely limited – still at 40 ft. officially.

A new road bridge about 15 miles above New Orleans is under construction called 'Ascension', clearance is likely to be 150 ft., the lowest on the river, at zero gauge or about 130 ft. at High River.

PILOTAGE: Pilot boards at Sea Buoy from a fast cutter. Ladder/gangway arrangements 6 ft. from water, normal port gangway at S.W. Pass.

Change at Pilot Town about 1 hour 45 minutes above S.W. Pass and New Orleans about 6 hours above Pilot Town.

If at anchor and requiring a Pilot a minimum of 3 hours' notice is required. Normally order Pilot through Agent. The Baton Rouge-New Orleans Pilots may only berth ships at Donaldsonville about 3 times per month.

ANCHORAGES:

Belle Chase	Mile post	75	1 hour below New Orleans
12 Mile Pt.	Mile post	81	30 minutes below New Orleans
Bonte Carre	Mile post	128	2 hours above New Orleans
Burnside	Mile post	169	4 hours above New Orleans

All anchorages are standing moor operations, if proceeding down river 2 tugs will be required to swing vessel into current, this is *essential* in High River season.

The bank is steep and muddy and as long as vessel lies quietly onto bank little damage can result. In fact this is preferable to hanging out in midstream and getting hit by passing barge strings and shipping.

VHF: Public correspondence as per ALRS. Moving upriver-Venice, New Orleans, Convent (Channel 25) and Baton Rouge. Just about in coverage all the way up from Pilot Town to berthing, all stations very busy in working hours.

Pilot ordered through Agent and on Channel 16.

USCG: Follow VTS booklet.

Boat service: At 12 Mile Point anchorage a launch service operates on Channel 20. Pilots and Agent board by this service.

TUGS: 'Crescent' tugs of around 2,000 h.p. are stationed at Burnside which are available if not handling larger vessels.

BERTHING: *Berth approach and depths:* This is the cause of most concern at Donaldsonville. The channel is at its narrowest off Triad Berth (the downstream berth 0.5 miles below C.F. Industries at Mile Post 173.5), having a minimum depth of 30 ft. (Zero Gauge at Donaldsonville) over a width of 140 ft. and is steep to, falling to 20 ft. over 180 ft. in width.

Gauge reading can vary from about +5 ft. after a dry Summer to +26 ft. or more at the end of the Winter season when the snows to the North are melting.

There is a set onto the Triad Berth varying with the main current. Again as the river height increases, the current varies from 0.5 knots in late Summer to upwards of 5 knots or more in late Winter. Effect is increased by a Northerly wind.

Berth Approach: Head upriver on berthing, unberth stern first until clear of shoal, approximately when bow is 50 ft. downriver of lower Dolphin on Triad Berth, then swing with aid of tugs. Actual depth alongside (Zero Gauge) C.F.I. Berth = 44 ft. (minimum) Triad Berth = 41 ft. (minimum).

Guidelines for berthing as follows:

C.F.I. Berth: Berthing or unberthing at night possible. No vessels to be on Triad, berthing or unberthing.

Triad Berth: Night movements dependent on wind, tug power, etc.

The question of taking bunkers thereby increasing the draft arises. If berthing at Triad only, can take before berthing. If also berthing at C.F.I. it is best left until clear of C.F.I. berth.

Berths: C.F.I. Berth: Reasonable condition. Short steel jetty with 2 dolphins plus mooring buoy at either end, the nearest dolphins either side of the jetty are interconnected by a catwalk.

At 26 ft. the maindeck is level with dolphins so gangway must be turned in. B.O.T. type gangway by pilot ladder position to after dolphin. Port side alongside.

Berth also used for loading bulk fertiliser. Watch the bulk boom as it is left unsecured and can be fouled.

Triad: 0.5 miles downstream from C.F.I. (plants back onto each other).

Basically the same as C.F.I. but dolphins not connected to jetty. No mooring buoys, all dolphins, not as good condition as C.F.I. Bulk fertiliser also loaded. Port side alongside, B.O.T. type gangway amidships.

Moorings: Basically 3, 2, 2, crossed after springs each berth. Mooring boat which moors forward first then aft. Lets go aft first – very handy as propeller is clear quickly. (See "Plan") – have moorings ready before arrival.

CARGO: Ammonia only at both berths plus bulk fertiliser. Labour on both berths assists in connecting up.

C.F.I.: Ship's 12 in. to 8 in. reducer plus shore 150 – 300 ASA spool piece.

No vapour return line, no venting. Loading at 450 t.p.h. but depends on pumps available, normally two. Emergency stop for ship operation.

Triad: Ship's 12 in. to 8 in. reducer. No VRL, no venting. Loading at 350 t.p.h. but again depends on available pumps. Shore tanks are set back further than C.F. Industries and line heating is apparent.

FRESH WATER: Not available at Triad Berth. Available at C.F.I. Berth (Rate 1 t.p.h.). Barge from New Orleans costs about $1,500.

TELEPHONE: On both berths through the terminal operator. Local calls free, long distance calls collect.

GENERAL: Donaldsonville Town nearby, about $5.00 in a taxi. Baton Rouge about 45 minutes away. The International Airport at New Orleans is about 1.5 hours away.

Stores: Lorries can back down jetty roadway to within a few feet of manifold area. A permit has to be obtained at both berths.

USCG: Usual pre-arrival hazardous ship reports to Coast Guard Captain, New Orleans.

Necessary to have a Coast Guard escort through New Orleans. Check must be made that the Pilot is advising the USCG of the vessel's position and that she requires an escort. Escort with blue flashing light (fast patrol launch) joins off Algies Point and goes through to Huey P. Long Bridge, and vice versa.

THE FOLLOWING REPORT (Dated November 1980) IS TO BE READ IN CONJUNCTION WITH THE REPORT ABOVE.

SW Pass: The West flowing current is very strong, about 5 knots across entrance and in region of Fairway Buoy. Steer well to the East.

9 Mile Anchorage: Boat charges $35.00 per boat, any number persons, 24 hour basis. Runs on hour every hour for shore leave purposes by arrangement. Call 'Port Ship Services Poydras' on Channel 20. Minibus to New Orleans at $5.00 per person can be arranged.

Tugs/Pilot: Minimum 2 hours' notice, order through Agent.

VHF: Agent: On Channel 16 and 73, Tricon (Trammo Agent) on Channel 16 and 73. Chandler: Sarussen Marine, on Channel 16 and 9.

Films: Sea View Films: Best to cable direct as per Walport Instructions. Also change Vidpack. Change from launch if required when passing New Orleans.

Burnside Anchorage: Boat Charges: $20 per boat plus $5 per person. Call "Webber Marine" Burnside on Channel 16 and 18A.

Agents: Call Tricon Burnside on Channel 16 and 73 (Trammo Agents).

Donaldsonville: Depths – See latest chart, shoaling alongside CF Industries and off Triad.

Berthing/Leaving scraped alongside Triad berth, maximum 30 ft. off.

Turn when one ship's length below "Triad", lower dolphin.

Three "Parish" tugs used in and out.

To line up manifold at C.F.I., pilot ladder gate should be in line with gangway on lower dolphin.

Water rate is 5 t.p.h. from fire hydrant stand pipe, not hose.

Water by barge from Baton Rouge at $4.00 per tonne. Minimum 100 tonnes plus $85.00 per hour for tug. Minimum 4 hours =$740.00.

No bunkers officially allowed alongside, but can probably take diesel at night.

Agents: Tricon in Burnside are now Trammo Agents.

AUTHORITY: *Operator:* C. F. Industries, Inc. P.O.Box 468, Donaldsonville, Lousiana 70346. *Tel:* (504) 473-8291. *Contact:* Arne M. Christiansen, Port Captain.

DULUTH-SUPERIOR, Minnesota: 46.49 N. 92.09 W.

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: U.S. or Canadian Pilot compulsory except when Master or officer specially qualified to navigate waters concerned. Pilots obtained from Upper Great Lakes Pilots Inc., 802 Garfield Avenue, Duluth. Duluth entry – Pilots picked up at point 2 miles due East of pierhead lights. Superior entry – pick up Pilot 2 miles N.N.E. of lighthouse. Advise Agents 24 hours in advance of ETA for scheduling Pilot, Customs, Immigration, and Agricultural Inspection. Masters should hold to the South of convergence of shipping lanes at the Duluth Entry and to North of this convergence at Superior Entry when approaching to embark a Pilot.

ANCHORAGES: Anchorage areas near Duluth and Superior entries are South and Eastward and North and Eastward respectively of main channel through harbour. Marked by anchorage buoys. Vessels must only anchor clear of channels at all times.

RESTRICTIONS: Because of varying conditions of wind and current, no restriction placed on speed passing through entry piers at either Duluth or Superior entry. Speed throughout harbour limited to 7 knots. Speed through bridges other than the Aerial Bridge at Duluth entry limited under normal conditions to 6 miles per hour. Because of current conditions at inner end of Duluth entry, both inbound and outbound vessels must leave vertical black/white striped mid-channel or traffic buoy on starboard hand. This gives outbound ships maximum straight run.

MAX. SIZE: Draft 26 ft. Duluth Harbour Entry: Duluth ship's canal, minimum width 300 ft. Superior Entry: Minimum width 500 ft. minimum depth at inner end of 27 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

RADIO: Prior to entering harbour vessels must make "Security Call" on Channel 51 from 10 to 20 minutes in advance advising intended movement. All vessels should monitor Channel 51 at all times when under way to determine position and intent of other vessels moving in constricted areas within harbour and approaches.

BRIDGES: Aerial Bridge spanning Duluth entry vertical clearance of 138 ft. Signal for opening bridge shall be given by vessels approaching from lakes, in all circumstances, when not less than 1 mile from bridge. A flashing amber light on harbour side of Aerial Bridge warns outbound vessel of approach of inbound vessel in lake.

TUGS: Available, not compulsory.

BERTHING: *Clure Public Marine Terminal.* Also see "Developmen

Length of dock: 6,600 lineal ft., 7 ship berths, 4 for unloading/loadi 3 for fitting, cleaning, standby, etc. Water depth: 30 ft. 2×90-ton Cly gantry cranes for container handling. 12 grain loading berths.

MEDICAL: All medical assistance available.

DENSITY: Fresh water.

FRESH WATER: Available at most docks in both ports.

FUEL: Available from dock or by barge.

FIRE PRECAUTIONS: No open fire permitted on deck of any vess while in harbour. This restriction does not apply to a vessel at a shipya which will be governed by the shipyard's local rules, nor to vessels lay-up or fit-out status at ore docks.

Ocean vessels, upon docking, shall put on off-shore side of vess wire rope lines fore and aft as tow lines for use in pulling ship off doc face in case of fire. Such tow line shall be securely made fast to bi with eye about 1 ft. above the water.

REPAIRS: All ship repairs can be effected.

DRY DOCKS: At Superior: Fraser Shipyards: one 831 ft. by 95 ft. a one 628 ft. by 76 ft.

CERTIFICATES: Masters are required to present Safety Inspectio Certificate of cargo handling equipment and gangways to stevedor companies and other employers of harbour labour upon request.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required by Immigration.

GARBAGE DISPOSAL: North Star Marine Operato N. 7th Avenue W., Duluth, MN. 55806. Tel: 218-727-6969.

WASTE OIL DISPOSAL: See "Garbage Disposal".

SEAMAN'S CLUBS: Twin Ports Ministry to Seafarers In 2024 W. Third Street, Duluth, MN. 55806. Tel: 218-727-5897.

AUTHORITY: Seaway Port Authority of Duluth, P.O.Box 16877, Dulu Minnesota 55816 – 0877. *Tel:* (218) 727-8525. *Telex:* 910-561-00 Norcenter Dul. *FAX:* (218) 727–6888. *Contact:* Davis Helbe Port Director.

EL SEGUNDO, California: 33.54 N. 118.27 W.

OPERATOR: El Segundo is a Chevron U.S.A. offshore multi-buoy marine terminal and refinery.

LOCATION: The terminal Sea Buoy is located approximately 600 yards W.S.W of Berth No. 3 in 102 ft. of water at Lat. 33° 54′ 28″ N., Long. 118° 27′ 29″ W. This lighted bell buoy is painted red with 6 in. high white letters reading, "2 ES". It exhibits a white flashing light every 4 seconds (flash 0.4 secs., eclipse 3.6 secs.). The lantern is 11 ft. above water.

In addition to the many tanks of the El Segundo Refinery, the chimneys of power plants adjacent to the Marine Terminal form prominent landmarks. 2×334 ft. chimneys painted with alternating red and white horizontal stripes mark the Los Angeles Department of Water and Power Scattergood Steam Plant located just North of the Terminal. Directly South of the Terminal is a set of 4 shorter chimneys at the Southern California Edison Co. Power Plant.

DOCUMENTS: Five copies each of the following documents are required for entry and clearance:

Crew List (I-418)
Crew's Effects Declaration (1304)
Ship's Stores Declaration (1303)
Inward Foreign Manifest (1302: If vessel is to discharge at more than one port, each port, with its cargo, must be listed on a separate manifest).

MAX. SIZE:

Berth No.	*Maximum Draft* (ft.)	*Maximum Length* (ft.)	*Vessel Tonnage* (d.w.t.)	*Water Depth at MLW* (ft.)
1	28	550	Up to 30,000	38
2	42	650	Up to 50,000	50
3	51	1,000	Up to 150,000	63
4	56	1,000	Up to 150,000	65

RADIO: *Pre-arrival radio message to ship:*

The vessel's Agent will normally advise the vessel by radio of the following general information when the vessel is approximately 3 days out:

Mooring Master boards 2 miles S.W. of sea buoy in Lat. 33° 54.5′ N., Long. 118° 27.5′ W.

Have starboard hose boom derrick rigged (if so equipped) and 7 good strong mooring lines ready – 3 main deck forward, 3 main deck aft, 4 poop deck (polyester lines only).

Sumatran Crude average cargo temperature must be 125°F on arrival.

Anchor in Anchorage "A" or "B" as directed by message from shore.

Have pilot ladder rigged on starboard side.

Assure 125 p.s.i. pressure on riser during discharge.

Any Customs, quarantine, etc., special information.

Advise if all cargo pumps are in good operating condition, and best average discharge rate.

Radio Communication Prior to Arrival:

Estimated time of arrival (ETA) and requirements for services should be directed to the ship's Agent. ETAs should be sent 7 days, and repeated 3 days and 24 hours, prior to arrival.

Within 2 hours of arrival, communications may be established with the mooring launch via VHF radio Channel 10.

Radio and Telephone Ship to Shore Communications:

UHF Radio. The Mooring Master is equipped with a UHF radio for direct communications with the Terminal Control room at all times from the start of mooring until the vessel has cleared the mooring on departure.

BERTHING: It is expected that the vessel will provide berthing and messing facilities for the 3 man launch crew as well as for the Mooring Master.

Mooring Gear: Each anchor shall be equipped with no less than 10 shackles of chain. Vessels over 50,000 d.w.t. shall have at least 12 shackles on each anchor. Wires on mooring winches should be at least 1,000 ft. (preferably 1,200 ft.) and should be 1.25 in. to 1.625 in. in diameter, depending upon the size of the vessel. Constant tension winches must be braked by means of manual brake.

Synthetic fibre lines of dacron or polyester must be at least 9 in. in circumference and 120 fathoms in length.

NOTE: Polyester/Dacron lines are the only lines acceptable. If vessel is not so equipped polyester mooring lines can be rented from the terminal.

Mooring lines should be located as follows:

1. At least 3 lines on the main deck forward
2. At least 3 lines on the main deck aft
3. At least 4 lines on the poop deck.

If vessel over 100,000 d.w.t. fittings must permit doubling of all lines. Each synthetic line requires a separate bitt.

Mooring Facilities: Berth No. 1 is a 6-point mooring and is used for transfer of refined stock, primarily lub oils and chemical. The unlighted spar buoys mark the offshore end of the pipe-lines and is located approximately 1 mile East of the sea buoy and 1,100 yards offshore. There are also 3 hose marker buoys, one for the end of the chemical hose string and one for the end of each lub oil string. The chemical hose string consists of seven 8 in. diameter × 25 ft. lengths. The lube oil strings are a parallel set of seven 8 in. diameter × 25 ft. lengths which are connected at the ship-end by a piping manifold which the ship provides.

Berth No. 2 is a 6-point mooring and is used for transfer, of light oils (primarily gasoline and jet fuel). It is located approximately 700 yards N.W. of Berth No. 1 and 1,600 yards offshore.

Berth No. 3 is a 7-point mooring used for the transfer of fuel and crude products. It is located approximately 750 yards West of Berth No. 2, and 2,400 yards offshore.

Berths No. 2 and 3 are each equipped with 1 unlit spar buoy and a can buoy. The seaward spar buoy marks the location of the offshore end of the submarine hose when the hose is on the bottom. A can buoy, or hose marker buoy, is connected to the end of the submarine hose by a chain. The submarine hose string in Berth No. 2 consists of nine 12 in. diameter × 25 ft. lengths of which one is over-the-rail, connected to the seaward end of a 16 in. submarine pipe-line leading to the shore facility. The submarine hose string in Berth No. 3 is connected to the seaward end of a 26 in. submarine pipe-line and a 12 in. line for circulation, by seven 16 in. diameter × 25 ft. lengths of hose followed by one 12 in.×25 ft. length hose and one 12 in. diameter × 30 ft. long over-the-rail hose.

Berth No. 4 is equipped with 1 unlit spar buoy and 1 unlit can buoy. The inshore spar buoy marks the end of the 36 in. submarine line and 14 in. circulation line. One hose string comes off the main 36 in. submarine line. The hose string consists of 5×35 ft. long lengths of 20 in. hose, followed by a reducer and then 2×25 ft. long lengths and 1×30 ft. long over-the-rail length of 16 in. hose. The end of the hose string is connected to a can buoy by a chain.

NOTE: All berths are equipped with UHF direct dial radio telephones VHF marine operator is also available, marine operators are located at Redondo Beach and San Pedro.

Hose Handling: The vessel will be expected to have suitable equipment on deck and ready for making the connection to the submarine hose.

Berths No. 1 and 2 require lifting capacity of at least 5 long tons.

Berth No. 3 requires a lifting capacity of at least 7 long tons for vessels up to 30,000 d.w.t. and at least 8 long tons for vessels over 30,000 d.w.t.

Berth No. 4 requires a lifting capacity (calculated load) of 10 long tons.

Procedure for Discharging: At the completion of most cargo discharges the vessel will be required to receive a 150 bbl. hose wash displacement of cutter stock or gas oil. This is to prevent the hose from plugging while not in use.

Product Transfer Rates, Pressure and Temperature: Lubricants and chemicals are transferred at Berth No. 1 at varying rates depending on the particular product, the maximum rate being approximately 2,100 bbls.p.h. Hoses are rated to 275 p.s.i.

Gasoline and jet fuel loaded at Berth No. 2 are usually transferred at 7,000 – 12,000 bbls.p.h. with a pressure at the ship's rail not to exceed 50 p.s.i. Gasoline and jet fuel are discharged at Berth No. 2 with a pressure not to exceed 125 p.s.i. at the ship's rail. Hoses are rated to 150 p.s.i.

Fuels and crude are loaded at Berth No. 3 at rates to 20,000 bbls.p.h. No. 3 Berth hoses are heavy duty 275 p.s.i. rated. Vessels are expected to maintain discharge pressure of at least 125 p.s.i. at the ship's rail and/or a flow rate of 20,000 – 25,000 bbls.p.h.

No. 4 Berth hoses are heavy duty 275 p.s.i. rated, and the system has a normal working pressure of 180 p.s.i. On this one hose system, vessels are expected to maintain flow rates of up to 50,000 bbls.p.h.

Sumatran Crude cargo will not be accepted by the facility unless the ship's average tank temperature is at least 125°F. However, the average temperature for Sumatran Crude should not exceed 130°F. in order to avoid excessive vaporization of the light fractions in the crude. Heavy viscous residue fuel cargo will not be accepted from a ship unless the ship's average tank temperature is at least 130°F.

MEDICAL: Several hospitals are available in the area. U.S. Coast Guard or local ambulance service may be expected to know what hospital is best suited to handle a particular emergency.

FRESH WATER: Potable water is not available at this mooring. Water barge service is not available in the area. Closest supply is the harbour at San Pedro.

FUEL: Bunker fuel for ship's use is not available in the moorings of the El Segundo Marine Terminal, but may be arranged through Chevron International, San Pedro.

BALLAST: No ballast can be accommodated at the Terminal.

CONSULS: Consulates of most of the maritime Nations are maintained in both the cities of Los Angeles and Long Beach.

AIRPORT: The Terminal is located approximately 2 miles South of Los Angeles International Airport.

TIME: Standard Time along the entire West Coast of the United States is GMT minus 8 hours. Daylight Saving Time is from first Sunday in April till last Sunday in October. Clocks are advanced 1 hour in Summer.

WINDS/TIDES/CURRENTS: *Winds:* Westerly, onshore winds usually prevail. Gales are very rare in Santa Monica Bay, but the local thermal winds blowing from a Northerly direction sometimes necessitate interruption of transfer operations and require moving a ship from the mooring to anchor.

Northerly winds occur during the period from October through May.
In the Autumn and Spring, duration averages 4 to 6 hours
In November, December and January, duration averages 10 hours.
Velocities up to 52 knots have been recorded.

Tides and Currents: Normal tides of approximately 6 ft. pose no significant problems in this open roadstead.

Currents run unpredictably North or South along the coast in the vicinity of the Terminal. The current is most commonly from North to South and is stronger in Summer than in Winter.

TELEPHONE: Each berth is equipped with telephone service. To call El Segundo Terminal, ask Mooring Master. To call local outside numbers within the Los Angeles area, ask Mooring Master.

GENERAL: *Supplies:* Modest quantities of supplies may be taken aboard while at the moorings if absolutely necessary, provided the Mooring Master gives prior approval. This practice is discouraged in view of the sea swell and wind conditions that can develop in the open roadstead of the moorings, as well as the long distances to normal marine supply facilities.

Launch service: A company operated launch may be chartered for vessel's use through the vessel's Agent at the option of the Owner's representative. This launch operates between the moorings and the Port-O-Fino Dock in King Harbour, Redondo Beach, on a published 4 hours' schedule which may be obtained from the Mooring Master. A one-way trip takes approximately 40 minutes. There is a waiting room for use by all tanker personnel awaiting the launch. The waiting room is in the second building facing the yacht moorings. Blue arrows are painted on the side walk between this waiting room and the launch ramp, to assist in identifying the waiting room.

Pilot Ladder: The vessel shall rig a safe and secure pilot ladder or pilot hoist (not accommodation ladder) for the Mooring Master and Government Officials to use in boarding and leaving the vessel.
Air Pollution: Any vessel showing visible smoke in excess of 3 minutes is in violation and may expect to be cited and required to pay substantial fines.
Dumping of Garbage: Dumping of rubbish or garbage overboard within 50 miles of the coastline is prohibited.
AUTHORITY: *Operator:* Chevron Shipping Co., P.O.Box 910, San Pedro, California 90733, U.S.A. *Tel:* (213) 832-6478. *Telex:* TWX 910-345-6396. *Contact:* Captain Gary R. Roberts, Port Superintendent/Mooring Master.

U.S.C.G., Captain of the Port, Los Angeles/Long Beach, 165 N. Pico Avenue, Long Beach, CA 90802. Tel: (213) 590-2315.

El Segundo is an open roadstead marine terminal with no official Port Authority other than U.S.C.G.

ERIE, Pennsylvania: 42.10 N. 80.05 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Not compulsory. Seaway Pilots will assist if required.
RESTRICTIONS: Navigation season from 14th April to 26th December approx. The port is connected to Lake Erie by an entrance channel, depth 28 ft. Vessel's size restricted by Seaway locks.
MAX. SIZE: 730 ft. length; 26 ft. draft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station. Quarantine procedure undertaken at Quebec City for incoming vessels from foreign ports.
RADIO: Master must give at least 24 hours' notice to Commander, 9th Coastguard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required.
TUGS: Available. Not compulsory, but sometimes necessary in bad weather.
BERTHING:
Erie Marine Inc. (Subsidiary of Litton): New ship assembly yard with graving dock (largest on Great Lakes), available for dry dock repairs.
Ore Dock: 1,000 ft. long, 26 ft. – 27 ft. of water alongside. The ore dock has 400,000 ton storage pad available for lease.
Port Authority East Bay Industrial Site: 75 acres available for sale or lease.
Erie International Marine Terminal: Leased to Codan Corporation, stevedores for the Port of Erie; 1,400 ft. long, with 28 ft. of water. Terminal used for bulk and general cargo; 23 acres; 750,000 sq. ft. of warehousing and transit sheds with truck and rail loading facilities; 2×200 ton and 1×230 ton mobile cranes equipped with magnets, buckets and gear for heavy lifts, also 300 ton stiff leg crane. Terminal served by ConRail with reciprocal switching for N&W and B&LE railroads. A total of more than 100 acres of waterfront property is available where an industrial complex may be constructed.
DENSITY: Fresh water.
MEDICAL: All facilities available.
FRESH WATER: Obtainable by pipe-line at all docks.
FUEL: All grades available by pipe-line at all docks.
REPAIRS: Local shipbuilding company can handle most repairs. Dry dock available.
GARBAGE DISPOSAL: Service not available.
WASTE OIL DISPOSAL: Service not available.
SEAMAN'S CLUBS: None.
AUTHORITY: Erie-Western Pennsylvania Port Authority, 17 West Dobbins Landing, Erie, Pa. 16507 – 1424. *Tel:* (814) 455-7557. *FAX:* (814) 455-8070. *Contact:* Larry Morosky, Executive Director.

EUREKA, California: 40.48 N. 124.10 W. (See Plan)

DOCUMENTS: In addition to the documents detailed below, Agent will present to Master normal Customs forms to be signed, such as Master's Oath, Permit to Lade, Inward & Outward Manifest, etc. These forms will be filled out by local Agent and Customs Broker and presented to local Customs house when entering and clearing vessel:
Foreign Flag Vessels:
I. Entering from another U.S. port:
3 Crew Lists.
3 Passenger Lists (only if passengers on board).
3 Curio Lists.
3 Stores Lists.
Permit to Proceed (issued at last U.S. port).
Travelling Manifest (only if there is foreign cargo on board).
Ship's Register.
II. Entering from a foreign port:
3 Crew Lists.
3 Passenger Lists (only if passengers are on board).
3 Curio Lists.
3 Stores Lists.
Travelling Manifest.
Permit to Proceed.
Ship's Register.
Ship's Tonnage Tax Certificate.
Clearance from a foreign port.

PILOTAGE: Telegraphic address of Pilot station "Humbar". 24 ho advance notice of ETA; in case of change in ETA give minimum 4 h notice. Contact pilot boat on VHF 156.8 MHz (Channel 16). Radio wa is maintained 2 hours prior to arrival at sea buoy on Channel 16. Work Channels are 13, 10 and 77.

No Pilot boat on station. Local Pilots use tug "Atlas" length 75 1,125 h.p. Tug colours: red funnel, red and white superstructure a black hull. As no Pilot boat on station, sound signals not required. Vis international flag and light signals observed. Pilot will board vessel wi 1 mile radius North, South and West of sea buoy. Sea-buoy loca 1.4 miles from end of North jetty lined up with range lights bea 105 degrees true.

Specific requirements: *(a)* Pilot ladder with spreaders in accordan with Solas Regulations, and 9 ft. above water. *(b)* At night – brilliant li to illuminate ladder. *(c)* Recommended anchorage outside Humbo Bay located 1 mile South of sea-buoy in 15 fathoms of water.
ANCHORAGES: Inside harbour, weather permitting. Light draft vess (22 ft. or less) South of Fairhaven Dock (Simpson) and West of Standa Oil Dock.
RESTRICTIONS: Humboldt Bay is a 24 hour port; restrictions if a would depend upon manoeuvrability and horsepower of vessel dur peak tide. Range of tide normally 8 ft., extreme cases 10 ft.
MAX. SIZE: Max. LOA 740 ft., max. beam 115 ft. Max. draft 35 ft.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illne Reports made to San Francisco Quarantine Station.
RADIO: Send cables through one of the following stations:

ITT World Communications, Inc. – San Francisco Marine Rad Station KFS.

RCA Global Communications – San Francisco Marine Radio Stati KPH.
TUGS: 2×1,125 h.p. and 1×2,400 h.p. tugs available, 1 tug acts as pi boat, other tug joins vessel when in harbour. Tug's lines are norma used, occasionally a ship's line is used. No extra charge assessed f use of tug's line. Two tugs minimum are used.
BERTHING: No specific requirements relating to berthing; norm procedures prevail. Vessel normally docks stemming the tide.

Berths presently available at Eureka as follows:
Simpson Pulp Co.
Eureka Forest Products.
Louisiana-Pacific Corporation.
Olson Terminal.
Standard Oil of California.
Union Oil of California.
North Coast Exporting Co.

Harbour channels maintained to 35 ft. zero tide except for South Ba Channel to Olson Terminal which is maintained at 26 ft. Most of bert at above-mentioned docks also maintained at 35 ft. zero tide; howeve some occasionally fill in and recommended check with Agent as to dep available at specific dock where vessel intends moor and load.
STEVEDORES: 6 local gangs available. Groups ordered at 0630 hr in the morning for both day and night gangs. Therefore essential th local Agent or stevedore company receives accurate ETA by 0600 hr in the morning. Normally, vessel will advise arrival sea-buoy with 24-hour ETA and correct ETA at a later time if necessary. The bas commodities exported from Eureka are woodpulp, woodchips, logs a lumber.

Westfall Stevedore Co. Cable Address: Westfall, Eureka. Tel. (70 443-5688.
MEDICAL: Not necessary for Agent to receive advance notice required medical attention unless ambulance and doctor are requir on arrival. 3 hospitals in immediate area. Inoculation and vaccinati certificates should be up-dated.
TANKERS: 2 tanker berths available: Standard Oil of California – Barg only. Union Oil – deepest draft 30 ft. at zero tide. Normally only Compa tankers use own facilities. Facilities privately owned and are not availab for bunkering other vessels.
DENSITY: 1024-1027 (depending on time of year).
FRESH WATER: Available all berths. Delivery by hose. Rate of delive 10 t.p.h.
FUEL: If bunkers required, Agent must go through major contracto who in turn will inform their local supplier of requirements. Genera speaking bunkers are only supplied to vessels on an emergency bas in limited quantities. The bunkers usually diesel grade and delivered truck on a prearranged schedule.
CONSULS: None. Nearest consuls at San Francisco.
REPAIRS: Small welding jobs, and minor machine work on Major repairs normally carried out in San Francisco.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Services of gangway gua available if required by ship.
OPENING/CLOSING HATCHES: Normally stevedores' work unle done prior to docking. Vessel's crew may assist in opening and clos hatches, if hatches require special attention.
CERTIFICATES:
Ship's Register.
Load Line Certificate.
Derat Certificate.
Cargo Gear Certificate.
Tonnage Tax Certificate and all other usual certificates required.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes and 1 lb. tobacco. Wine and/or Spirit, 1 bottle (approx. 1 quart).
CARGO GEAR: Must be in good order and safe operating cond and all cargo gear certificates must be valid.
REPATRIATION: Normally done in conjunction with San Francis Portland, Los Angeles or Seattle Agent.
AIRPORT: Airport located approximately 20 miles North of Eure Limousine service available. Major airline, Republic Air Lines. At pres 3 flights per day to San Francisco and 1 flight per day to Portland.

TIME: Local time is Pacific Standard Time and is GMT minus 8 hours. However, from first Sunday in April till last Sunday in October, Eureka is on Daylight Saving Time.
HOLIDAYS: No work performed on following holidays: New Year's Day (January 1st); Thanksgiving Day; Christmas Day (December 25th).
POLICE/AMBULANCE/FIRE: Eureka City Police 442-4545; Eureka City Ambulance 442-4551; Eureka Fire Department 443-5656; Humboldt County Sheriff Department 443-5671; Arcata Fire District 822-2424; Humboldt Fire District No. 1 442-1212.
TELEPHONES: No arrangements for placing telephones on board; however, there are pay phones nearby at each dock as well as phones in nearby offices.
SERVICES: Specific services such as tank cleaning, compass adjusting, tank washing,etc., are not normally performed in the port of Eureka and are usually performed in one of the close major ports such as San Francisco; however, there are facilities available for minor repair.
SHORE LEAVE: Crew members allowed ashore unless restricted for Customs or Immigration reasons.
IDENTIFICATION CARDS: Alien seamen require Crewman Landing Pass (U.S. Form I-95).
DELAYS: Berthing delays seldom incurred primarily due to the fact that the prime Agents are always in contact with the local Agent at Eureka informing them of vessel's ETA and prime Agent is always advised with regard to all arrivals and possible berth conflicts at this port.
AUTHORITY: Humboldt Bay Harbor, P.O.Box 1030, Eureka, California 95502-1030. *Tel:* (707) 443-0801. *Contact:* Jack B. Alderson, Chief Executive Officer.

EVERETT, Washington: 47.59 N. 122.13 W. **(See Plan)**

DOCUMENTS, PILOTAGE, etc.: Refer to "Tacoma".
PILOTAGE: Pilot boards off Port Angeles Pilot Station. Tel: Seattle 728-6400, dispatcher 448-4455.
ANCHORAGE: Unlimited deep water anchorage in Possession Sound.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
VHF: Pilots on Channels 13 and 14.
TUGS: Available, join vessel off berth. 17 tugs, 150 to 900 h.p.
BERTHING:
South Terminal: Length 700 ft. Approach depth over 40 ft. Depth alongside 39 ft. Transit shed 45,000 sq.ft.
Pier No. 1 South: Usable berth length 520 ft.; Approach water depth over 40 ft.; Water depth at pier 28 ft. MLLW; Plank and piling; 20 ft. Apron; Transit shed with 57,960 sq.ft. on pier; Access by road, barge and rail.
Pier No. 1 North: Usable berth length 570 ft.; Approach water depth over 40 ft.; Water depth at pier 36 ft. MLLW; Multi-purpose 35-ton bridge crane (Containers – convertible for bulk cargo handling); Rail spur on dock; Plank and piling; 40 ft. Apron; Transit shed with 36,000 sq.ft. adjacent to pier; Access by road, barge and rail.
Pier No. 3 South: Usable berth length 650 ft. Depth alongside 38 ft. Pier of concrete construction.
Pier No. 3 North: Usable berthing length 650 ft. Depth alongside 40 ft. Pier of concrete construction.
Pier "D": Usable length 450 ft.; Approach Water depth 32 ft.; Water depth at pier 40 ft.; Two 35-ton Whirley cranes; Plank and piling construction; 45 ft. Apron; Access by road and barge.
Pier "E": Usable length 450 ft.; Approach water depth 32 ft.; Water depth at pier 35 ft.; Plank and piling construction; 45 ft. Apron; Access by road and barge.
Norton Terminal: Usable length 1,100 ft.; Approach water depth 32 ft. Channel and berth depth 32 ft. 20 acres terminal, 16,000 sq.ft. chill facility. Rail spur on terminal.
STEVEDORES: 11 local gangs, additional gangs may be imported if required.
MEDICAL: Doctors and local hospital available.
DENSITY: Changes daily as port is at the mouth of a fresh water river.
FRESH WATER: Available at wharves.
FUEL: Available by barge from Seattle or by road tanker.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
AIRPORT: Seattle – Tacoma International Airport is 45 miles South of City of Everett on excellent highway. Driving time is approx. 45 minutes.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Port of Everett Security: 259 – 3164; Everett City Police: 259 – 8711; Everett City Fire Dept.: 252 – 1111; Ambulance Service: 252 – 1234.
TELEPHONES: Will be placed on board vessel on request. Charges are only for calls made. Arrangements should be made through ship's Agent.
SHORE LEAVE: Crew members are able to visit Everett at all times.
GARBAGE DISPOSAL: Tel: 259-0044 for service.
WASTE OIL DISPOSAL: Handled by tanker trucks from Seattle.
SEAMAN'S CLUBS: Nearest are at Seattle.
AUTHORITY: Port of Everett, 2928 Terminal Avenue, P.O.Box 538, Everett, Washington 98206. *Tel:* (206) 259 – 3164. *Telex:* 4740140-Poeui. *FAX:* (206) 252-7366. *Contact:* Phil Bannon, Executive Director.

FALL RIVER, Massachusetts: 41.42 N. 71.10 W.

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Fall River cargo; 3 Crew Lists; 3 Stores Lists; 3 Curios Lists; Ship's Register, Load Line Certificate and Tonnage Tax Certificate.
PILOTAGE: Vessel first contact ship's Agent for Pilot and tug arrangements. Northeast Pilots' Association radio call letters KDF-375 on frequency 156.9 MHz, Channel 18. Usual Pilot pick-up is at Brenton Reef Light Tower off Newport, R.I.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
RADIO: Chatham Radio or Amagansett Radio.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Tugs for N.E. Power Station meet at Buoy 6; all other berths North, meet tugs at Buoy 10. Tugs provide own lines at no extra charge.
2 tug companies serve Narragansett Bay and Port of Fall River.
4 tug boats – 24 hour dispatching service. 2×3,000 h.p. boats.
BERTHING: *State Pier:* Principal maritime cargo terminal at State Pier. Berth 600 ft. long with depth of 35 ft. MLW alongside.
Ro-Ro facility 80 ft. wide by 42 ft. inboard depth. (8° incline at water's edge – concrete deck on wood piling).
All utility services available. Further information telephone 617-674-5707 or ship Agents.
BRIDGES: All bridges have 135 ft. clearance with exception of Brightman Steel Bridge at approach to Montaup Electric Co. and Shell Oil docks. This bridge has a draw clearance of 97.5 ft. and passage allowed for vessels with less than 75 ft. beam. No unusual requirements. Practice is to depart on flood tide. (See "Developments".)
TANKERS: Berth at Shell Oil Docks. Depth alongside 35 ft.
FRESH WATER: Available at most berths. State Pier delivery is at 125 pounds pressure.
OPENING/CLOSING HATCHES: Usually performed by stevedores.
CERTIFICATES: All certification of vessel, safety conditions and radio facilities should be available for U.S. Coast Guard.
CARGO GEAR: No additional safety requirements.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time GMT minus 4 hours from first Sunday in April till last Sunday in October.
HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriots' Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th); or any day celebrated in lieu thereof.
TELEPHONES: Available at most berths. Contact Agents.
SHORE LEAVE: Permitted, but consult Agents.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 issued for the same vessel.
DEVELOPMENTS: Plans for construction of a new 150 ft. wide draw bridge to replace the existing Brightman Street Bridge. This will mean unobstructed use of the entire port area.

SHIPMASTER'S REPORT: October 1991.
Charts: B.A. Charts No. 2730, 2731 and 2732.
Pilotage: The pilot boards 2.5 miles S.E. of Brenton Reef Light Tower from a fast cutter. On departure the pilot officially leaves in the same position but in practice he normally disembarks just North of the tower. The boarding position is an official position required by State law due to environmental requirements.
The pilot boards and disembarks in all types of weather and a good lee is always required. The pilot is ordered through the agent.
"N.E. Marine Pilot" can be called on VHF Channels 16, 18A, 14 and 10. The pilot office is located at Newport, Rhode Island and is manned between 0800 hrs. and 1600 hrs. (local time) from Monday to Friday. At nighttime, weekends and public holidays the Despatcher can be called at home (Tel: (401) 331-4824). He can also be obtained through local radio station. The pilot office is located at 243 Spring Street, Newport, Rhode Island. (Tel: (401) 847-9050), Cables "Rispilot Providence".
The pilot boat is manned 2 hours before the latest ETA. The pilot takes the vessel through Narragansett Bay and berths and unberths the vessel.
The Pilot Association covers all Long Island Sound from New York Harbour Eastern limits, East to the Cape Cod Canal and all ports in between, including all Narrangansett Bay.
Anchorages: If vessel is waiting for pilot or orders the anchorage is 1.5 miles – 2.5 miles S.E. of Brenton Reef Light Tower. The anchorage can experience large Southeasterly swells so additional anchor chain is recommended. There is little shelter from Southerly winds and the holding ground is only fair.
There are a number of anchorages in Narragansett Bay and all require a pilot when anchoring.
A popular anchorage when waiting for a berth is Prudence Island Anchorage which is located in position Lat. 41° 36.5′ N., Long. 71° 17.2′ W. (see B.A. Chart No. 2730).
Channel: The maximum draft for vessels proceeding to Providence is 39 ft. The channel in the bay is wide.
From Brenton Reef Light Tower it is about 20 miles to Fall River State Pier and 24 miles to Providence.
Restrictions: LPG vessels only berth during daylight hours and are subject to U.S.C.G. Inspection at the anchorage before berthing (inner or outer anchorage, depending on weather).
Tugs: Tugs up to 3,000 h.p. are available.
Berths: Borden and Livingstone Wharf: The berth is about 500 m. South of the State Pier (see B.A. Chart No. 2732). The minimum depth alongside was 23 ft. 09 in. at MLW on the S.W. end of the berth (see "Plan"). The tidal range is about 4 ft.

Vessels can berth either side alongside and generally use 2 tugs for berthing and unberthing. Vessels berth against 3 or 4 breasting dolphins, depending on length. The latex and caustic soda manifolds are on the centre breasting dolphin. The dock is a private facility and has its own linesmen. Vessels are berthed and unberthed throughout 24 hours.

Cargo Operations: Discharge is through shore pumps and lines into 36 underground tanks and 30 above ground tanks of various capacities. The total capacity is 350,000 U.S. gallons (12,500 tonnes).

Caustic soda is also discharged into the underground storage.

Density: Density at H.W. was 1020.

Fresh Water: Fresh water is available at no charge. Ship's hoses are used and the rate is moderate.

Also see "Providence" – "Shipmaster's Report dated October 1991".

AUTHORITY: Fall River Port Authority, State Pier, Water Street, Fall River, Massachusetts 02721. *Tel:* (508) 674-5707. *Contact:* William J. Torpey, General Manager.

FERNDALE, Washington: 48.49 N. 122.43 W. **(See Plan)**

DOCUMENTS/HEALTH/etc.: Refer to "Seattle".

PILOTAGE: Compulsory. Pilot boards at Port Angeles.

TUGS: Tug escort required if vessel is loaded and is larger than 40,000 d.w.t. Tug horsepower must be 5% of d.w.t. Available up to 3,000 h.p. Additional tugs ordered from Seattle if required.

RESTRICTIONS: Vessels enter any hour day or night.

Regulations prohibit tankers larger than 125,000 d.w.t. in U.S. waters East of a line from Discovery Island Light to New Dungeness Light.

MAX. SIZE: Length 1,000 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING: Terminal used for crude and product discharging. Vessels berth alongside finger pier, lines to quick release hooks. Inner berth for barges only. Outer berth 900 ft. long, depth alongside 40 ft. at MLW. Dirty ballast water 3,000 long tons with prior notification.

OPERATOR: B. P. Oil Company, Ferndale Refinery, P.O.Box 8, Ferndale, Wa. 98248-0008. *Tel:* (206) 384-1011. *Telex:* 910-449-2412. *Contact:* P. W. Oves, Refinery Manager.

FORT PIERCE, Florida: 27.27 N. 80.19 W.

PILOTAGE: Compulsory. Pilot boards at sea buoy. Send vessel's ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival.

ANCHORAGE: Vessel anchors and awaits Pilot 0.5 miles seaward of sea buoy.

RESTRICTIONS: Vessels are able to berth and unberth during hours of darkness if the weather is clear. The leading lights are good but the channel is narrow and a number of buoys are unlit. Diameter of turning basin 1,000 ft. Least depth of water in the channel from sea to berth 25 ft. Some shoaling occurs and from time to time the Harbour Master requires vessels over 24 ft. 6 in. draft to depart and arrive at high water only.

MAX. SIZE: Max. draft 25 ft. Range of tide averages 2 ft.

RADIO: Tampa Radio.

VHF: Channels 16 and 13. Watch only maintained when vessel expected.

TUGS: One 500 h.p. tug and one 1,000 h.p. tug available. Large vessels should use tugs when berthing.

BERTHING: Berthing at Fort Pierce is at Indian River Terminal. This privately owned facility has berths of 454 ft., 330 ft., 150 ft. and 200 ft. The city operates an adjacent facility with mooring for small vessels including a Ro-Ro ramp used by a landing craft trading with the Bahamas.

Vessels up to 560 ft. have safely berthed at the terminal facility which is well maintained and fendered. Vessels can arrive or depart at any stage of the tide, however, the Harbour Master has temporarily restricted vessels over 24 ft. 6 in. draft to high water movements only.

CARGO HANDLING FACILITIES: Indian River Terminal provides excellent facilities for general cargo. The pierside refrigerated warehouse serves the citrus industry. Shore side cranes are available on request but most cargoes are discharged and loaded at this facility with ship's gear. The terminal and local stevedores are fully equipped with forklifts, hand trucks, slings and pans for handling palletised or breakbulk products, most particularly fruits and vegetables. Containers and heavy lift cargoes have also been loaded at this facility which is serviced by a rail spur directly from the FEC railroad main line. The adjacent city facility provides berthing for several small craft and presently accommodates a cross state waterway inland cruise vessel and a small island trader.

A tug/barge bulk facility that handles argonite occupies an area North of the Indian River Terminal. This facility has a 3-dolphin mooring system for vessels up to 16 ft. draft.

MEDICAL: Doctor and hospital available.

FRESH WATER: Available.

FUEL: Light diesel is available by truck from nearby facilities. Heavier fuel must be barged or trucked from Port Canaveral or Port Everglades.

REPAIRS: No facilities available.

AIRPORT: Local airport 5 miles from port, nearest international airport is within 2 hours by car.

SERVICES: Fresh provisions, laundry services, groceries and me available.

GENERAL: The Port of Fort Pierce is on the threshold of developme The present level of activity at Indian River Terminal indicates a ne for additional facilities to accommodate the expanding export citrus tra and other business. The United States Corps of Engineers has recen approved a harbour deepening and expansion project to allow vess up to 28 ft. draft to berth. Local community leaders are working to acqu port side undeveloped land that is presently privately held. The P Authority at the present time does not own or operate any port proper

Stevedores at Indian River Terminal excel in handling breakbulk a palletised citrus fruit. Production and quality of stow are excelle

Agency and stevedoring personnel are keen, helpful and anxious co-operate fully.

For more information contact: Curtis King, St. Lucie Country Port a Airport Authority or John Butler, General Manager, Indian River Termin Company, P.O.Box 1208, Fort Pierce, FL 34954. Tel:-(407) 465-770

AUTHORITY: St. Lucie Port Port and Airport Authority, 2300 Virgi Avenue, Fort Pierce, Fl. 33482 5652. *Tel:* (407) 461-789 *Contact:* Curtis King, Director.

FREEPORT, Texas: 28.57 N. 95.21 W. **(See Pla**

DOCUMENTS: See "Houston".

PILOTAGE: VHF Channels 6, 8, 12, 13, 14, 16 at sea buoy. Pilot Offi (tel. 233-1120), 200 West 2nd, Freeport, Texas; Pilot boards 0.25 mi North of sea buoy. Anchor 1 mile from sea buoy if awaiting Pilot.

ANCHORAGES: 1 to 2 miles from sea buoy.

RESTRICTIONS: Depth 45 ft. at bar.

MAX. SIZE: Length 670 ft., draft 43 ft. for ships from bar to within upp turning basin, 36 ft. from upper turning basin to Public Faciliti Tide governing these dimensions – plus or minus 3 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Miami Quarantine Station.

RADIO: Galveston Marine Operator.

TUGS: Join vessel at shore line. Tug's lines to be used, and no char for use of lines.

BERTHING: 1 hour to reach berth. Deep water terminals at Pub Facilities consist of 1,250 linear ft. of deep water bulkhead wharf with modern transit sheds consisting of 200,000 sq.ft. 1 berth of 250 line feet of deep water bulkhead wharf with transit shed of 36,000 sq.ft. addition a back-up warehouse is available consisting of 60,000 sq The large transit sheds and back-up warehouse have railroad trac under cover, permitting all-weather work and preventing cargo damag

Ro-Ro facility in operation.

A new public liquid barge dock and tank farm in operation connection with the Old River Co.).

The Navigation District owns a total of 9,700 acres of land for futu Port and industrial development, 6,500 ft. of this land is situated on t Brazos River.

CRANES: Vessel is required to use own gear, shore cranes a available in area for hire.

STEVEDORES: Obtained through Agent.

MEDICAL: Obtained through Agent and advance notice require Doctors, hospital available.

TANKERS: Facilities operated by Phillips Petroleum, Dow Chemical a Seaway Pipeline Inc.

Report: Entering and Berthing: Vessels inbound over 630 ft. LOA are enter harbour only during daylight hours from sunrise to:

1. 30 minutes before sunset going to berths below Phillips Termi
2. 1.5 hours before sunset going to berths at Phillips Terminal a above when loaded.
3. Vessels under 630 ft. judged unsafe for handling after dark will limited to daylight hours.
4. Inbound operations will be suspended during times when weath conditions do not permit safe navigation.

DENSITY: 1020.

FRESH WATER: Available ex-wharf at Brazos Harbor.

FUEL: All grades available by barge from Houston.

CONSULS: None. Nearest at Port Arthur or Houston.

REPAIRS: Available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: None required but available throu Agent.

OPENING/CLOSING HATCHES: Stevedore contract.

CUSTOMS ALLOWANCES: Local Customs Agent control.

REPATRIATION: Possible, through Agent.

AIRPORT: Houston Intercontinental Airport – Houston, Texas (80 miles to Brazos Harbor); Metro Airlines – Shuttle to Angleton, Te (15 miles from Brazos Harbor).

TIME: GMT minus 6 hours. Daylight saving time starts last Sunda April and ends the last Sunday in October – GMT minus 5 hours.

HOLIDAYS: New Year's Day (January 1st); Martin Luther Ki Birthday (January 15th); Lincoln's Birthday (February 12 Washington's Birthday (Third Monday in February); Good Friday; Te Independence Day (March 2nd); St. Patrick's Day (March 17 Decoration Day (Last Monday in May); Emancipation Day (June 19 Independence Day (July 4th); Labour Day (First Monday in Septemb Columbus Day (Second Monday in October); Veteran's Day (Novem 11th); Thomas W. Gleason's Birthday (November 8th); Thanksgi Day (Fourth Thursday in November); Christmas Day (December 25 No work on Christmas Day or Labour Day.

If any of the above holidays fall on Saturday or Sunday the follo Monday will be recognised as the holiday.

POLICE/AMBULANCE/FIRE: Police 239-1211; Fire 233-2651; Ambulance Service 233-2651.
TELEPHONES: No arrangements exist for placing telephones on board.
BANKS: First Freeport National. Tel: (409) 233-4401.
SERVICES: Tank-cleaning facilities available locally. Compass adjusting available from Houston.
SHORE LEAVE: Crew members allowed ashore.
GARBAGE DISPOSAL: Garbage collection service according to Marpol Annex V Regulations, arranged by the Port Authority. Rates for services charged according to Port Tariff. Collection times set by Port Authority.
WASTE OIL DISPOSAL: Collection service available by commercial tank trucks. No special berths available for this service. Service provider will quote rates at time of service.
IDENTIFICATION CARDS: None needed.
SEAMAN'S CLUBS: Seaman's Service Center, 230 East Fifth Street, Freeport, TX 77541. Tel: (409) 233-5641. Contact: Rev. Joe Jones.
DEVELOPMENTS: The port has commenced a dredging and widening project, which will on completion give a channel depth of 45 ft. and an alongside depth of 36 ft. The main channel will be widened to 400 ft.

Berths No. 1 and 2 to be extended Eastward to provide a new berth (Berth No. 3) with a length of 640 ft. Berth will be dedicated to rice export.

Berth 'A' is to be extended by 400 ft.
AUTHORITY: Port of Freeport, Brazos River Harbor Navigation District of Brazoria County, 1001 Pine Street, P.O.Box 615, Freeport, Texas 77541. *Tel:* (409) 233-2667. *FAX:* (409) 233-5625. *Contact:* A. J. Reixach, Port Director.

GALVESTON, Texas: 29.17 N. 94.50 W. (See Plan)

DOCUMENTS:
1 visaed Crew List.
3 Passenger Lists.
3 or more copies of complete Manifests of Cargo for discharge at all United States ports.
2 or more copies of Manifest of Cargo for each United States port.
2 Souvenir Lists.
2 Stores Lists.
Ship's Register.
Tonnage Tax.
Load Line Certificate.
Nationality Certificate.
Certificate of Financial Responsibility.
I.O.P.P. Certificate.
No health document required.

APPROACHES: Mariners are advised that ship-to-ship lightering activity is regularly conducted in the following general vicinities which are 50 – 60 miles from the Galveston Sea-Buoy.
Lat. 28° 35′ N., Long. 94° 15′ W.
Lat. 28° 25′ N., Long. 94° 34′ W.
Mariners are urged to use caution when transitting these areas, as they make their way to the Port of Galveston.
ANCHORAGES: In Bolivar Roads, 6.7 miles inwards from sea buoy No. 1. Depths 32 ft. – 34 ft.
PILOTAGE: Radio to local Agent who arranges Pilot and specifies boarding time. United States Coast Guard require 24 hours' notice of arrival at Galveston Bar. Contact pilot boats and pilot station on VHF Channel 14. Pilot boats can be signalled by light in international code. Pilot taken on board at sea buoy No. 1 located 6.7 miles from Galveston.
RESTRICTIONS: Prolonged North winds can reduce water level as much as 4 ft. in Winter. Channel depth 40 ft. F.W.
MAX. SIZE: No length or height restrictions. Draft according to berth depth.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
RADIO: International Telephone and Telegraph station Galveston, call sign KLC.
TUGS: Available if required.
STEVEDORES: Order before 1800 for 0700 or 0800 hrs. following day. During day can be ordered at 2 hours' notice. Gangs must be ordered before 1800 hrs. on Saturday for Sunday or holiday.
MEDICAL: All medical assistance available.
FRESH WATER: Available at all wharves.
FUEL: All grades available from Galveston Terminals Inc. Tel: (409) 744-6351.
CONSULS: Italy and Norway.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.
OPENING/CLOSING HATCHES: By stevedores only.
CUSTOMS ALLOWANCES: Each man 300 cigarettes, or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.
TIME: Central Standard Time. Daylight Saving Time effective from April to October.
HOLIDAYS: *ILA Holiday:* January 1st; Martin Luther King Day, President's Day; Texas Independence Day; Good Friday; Memorial Day; Emancipation Day; July 4th; Labour Day; Veterans Day; Thanksgiving Day; Christmas Day.

East End Container Terminal, wharf 1,346 ft. length, equipped with 4 container cranes handling 40 tons under the spreader or 60 tons with cargo hooks at 100 ft. outreach – depth alongside 40 ft.

Bulk loading rate at Union Equity is 2,000 t.p.h. (2 spouts) and at Bunge 1,700 t.p.h.

Note: Water depths are based on MLW. Depths may be less due to siltation.

POLICE/AMBULANCE/FIRE: All services provided. Tel: (409) 766-2100.
SHORE LEAVE: No restrictions unless detained by Immigration.
IDENTIFICATION CARDS: Immigration Form I-95 required.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

The following information was received from the Port of Galveston: "To arrange for garbage and trash pickup, contact the Harbour Master.

Any vessel whose previous port of call was outside the continental limits of the United States, or who has residue of food stuffs purchased outside the continental limits of the U.S. on board, must have their agent arrange for garbage pickup by an authorised transporter previously approved by the Department of Agriculture. All such garbage must be inspected by the Dept. of Agriculture prior to being discharged ashore.

Trash and garbage from coastwise vessels, outer continental shelf supply and seismograph boats, and other nondescript water craft will normally be picked up by the Galveston Wharves maintenance department. 150 cu.ft. trash trucks and garbage containers will be provided alongside on the dock upon request, availability permitting.

All trash and garbage must be retained onboard until suitable containers are available. Under no circumstances shall trash or garbage be deposited directly onto the pier aprons. All garbage must be wrapped or packaged in leak-proof containers or plastic bags. All empty cardboard boxes shall be broken down flat to conserve space.

No lead-acid batteries containing liquid will be discharged. No waste oil, chemicals, or other hazardous material shall be dumped or mixed in with trash and garbage. Trucks shall not be loaded within 6 inches below the top of the sideboards.

The tariff for hauling away trash and garbage will be $125.00 for the first truck load and $75.00 for each truck load thereafter.

In the event no Galveston Wharves equipment is available to receive trash and garbage at the time requested, the Harbour Master may authorise vessels to contract directly with commercial garbage transporters who are properly franchised with the City of Galveston in accordance with Section 15-61 of the Galveston City Code. A complete list of those authorised contractors will be provided by the Harbour Master upon request.

The Harbour Master will also authorise an outside contractor to provide containers at any time for large amounts of scrap metal, used cable or any other material which because of size or weight makes it beyond the capability of wharves equipment to properly handle.

Any vessel not in compliance with the above procedure will be directed to vacate its berth."

The following is a list of authorised contractors:

Affordable Disposable Company, 1624 Avenue M., Galveston, Texas. Tel: 762-5842.

Best Waste Systems, 1555 F.M. 517 West, Dickinson, Texas. Tel: (713) 337-3903.

Browning-Ferris Industries, P.O.Box 1379, La Porte, Texas. Tel: (713) 471-9142.

William Blue, 6806 Woodrow, Texas City, Texas. Tel: 938-8037.

Freddie Swanson, 1109 46th Street, Galveston, Texas. Tel: 765-5462.

Trashmasters, Galveston, Texas. Tel: 762-5392.

WASTE OIL DISPOSAL: Service available from Malone Company, P.O.Box 709, Texas City, Texas 77592. Tel: (409) 945-3301, (713) 487-6500, under requirements of 33CFR 158. 130 barrel vacuum tractor trucks and 50 barrel vacuum bobtail trucks available at any berths. This contractor meets response time, transfer rates, and capacity requirements under 33CFR 158.
SEAMAN'S CLUBS: United Ministry to the Port of Galveston, Inc., 2002 Mechanic, Galveston. Tel: (409) 762-0026. Facilities include ship's store, international telephone service, church services when requested, games organised (soccer), postage facilities, bus collection to and from ship, hospital transportation, pool, videos, table tennis, TV, restaurant, and bibles provided in numerous languages.
CURRENCY: U.S.Dollar (U.S.$).
DEVELOPMENTS: Future plans include the expansion of the container terminal by filling and paving the slip area between Piers No. 12 and No. 14 and resurfacing Pier No. 14, adding approximately 9 acres. Additionally, the extension of the container dock to 3 full berths is proposed.
AUTHORITY: Port of Galveston, P.O.Box 328, Galveston, Texas 77553. *Tel:* (409) 765-9321, 766-6119. *Telex:* 765436 Prt. GEISMAR (Including Sunshine), Louisiana:
30.13 N. 91.01 W. (See Plan)

East bank of Mississippi River, about 187 miles from sea.
DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available if required; normally not used (see "Tankers").
BERTHING: BASF Corporation: Berth 620 ft. long, 32 ft. depth. BASF Corporation Chemical Division, P.O.Box 457, River Road, Geismar, Louisiana 70734. Tel: (504) 473-9871. Telex: 510-600-7967. Contact: Plant Security.
DENSITY: Fresh water (1000).
TANKERS: *BASF Corporation: – Geismar:* General: The BA Chemical Dock is located on the North side of the river, approxima 180.4 miles above Head of Passes (AHP). A series of mooring dolph interconnected by rubber faced steel pile fenders form a 615 ft. berth face. Electric driven warping winches on the dock and mooring dolph handle vessel's mooring lines.

Cargo Handled and Shore Installations: Various chemicals a handled at this dock, e.g., methanol, ethylene dichlor perchloroethylene, caustic soda, etc. All chemicals are generally load through 6 in. hoses connected to shore lines which are generally 6 diameter and vary in length from 0.5 miles to 4 miles.

An emergency loading stop control is located on the dock.

Docking: All vessels are required to use a 600 h.p. tug for assistan in docking and undocking. Vessels should approach the dock stemm the current with a tug on the port bow. The vessel is then manoeuv alongside for a starboard side to docking.

Docking and undocking are generally performed by the River Pilo *Nordix/No. 1 – Sunshine:* General: The Nordix Dock is located on t left descending bank of the Mississippi River, approximately 170 mi AHP. The dock consists of a hose platform attached by catwalk a fender system to several mooring dolphins for a total dock length 960 ft.

River current at the dock varies from 1 knot to 4 knots, depending the height of the river.

Cargo Handled and Shore Installations: Crude is transferred throu 2×8 in. hoses at a maximum discharge pressure of 100 p.s.i. on t dock.

Docking: Docking is strictly starboard side to and is performed by t River Pilot. 2×1,200 h.p. tugs are required for all docking/undocki operations.

The normal mooring arrangement calls for 2/3 head lines, 2 ste lines, 1 spring line forward and 1 spring line aft. The leads for brea lines are poor.
Willow Glen/No. 1 – Sunshine: General: The Willow Glen Termin approximately 180 miles AHP is on the left descending bank of t Mississippi River. The dock consists of a 150 ft. hose handling platfor 2 breasting dolphins and 4 mooring buoys. All mooring points a equipped with electric capstans for line handling. The dock is norma served by barge but is capable also of handling tankers.

Current at this dock varies between 1 knot and 4 knots, dependi on river height.

Cargo Handled and Shore Installations: No. 2 and No. 6 fuel oil a the only products handled. These are transferred to the dock throu 4×8 in. Chicksan arms at a maximum discharge pressure of 100 p.s Portable jacks are provided by the terminal to support the cargo arm on the ship.

Docking: Docking is performed by the River Pilot and is stric starboard side to, vessels of 30,000 d.w.t. or greater are required to us 2 tugs for docking and undocking; smaller vessels are required to us a single tug for these operations.

The normal mooring arrangement calls for 2 head lines, 1 breast li forward and 1 aft, 1 spring line forward and 1 aft and 2 stern line Wire or synthetic mooring lines may be used.
Petro United – Sunshine: General: The Petro United Dock is locate approximately 170 miles AHP on the left descending bank of t Mississippi River. The dock consists of a 65 ft. hose handling platfor and 6 mooring dolphins interconnected by 2 catwalk and fender system

At high river the current often causes swirling eddies off the doc which should be accounted for when approaching, docking an undocking.

Shore Installations: 4×10 in. and 2×12 in. hoses are available for t transfer of cargo.

Docking: 2 tugs are normally required for docking and undocki operations. All tugs must come from St. James or Baton Rouge so th a minimum of 2 hours advance notice must be given to the terminal an Agent prior to docking or undocking. Extensive delays have been know to occur due to tug unavailability and insufficient advance notice docking/undocking requirements.

Docking is performed by the River Pilot and is strictly starboard side t

The terminal generally requires the use of 3 head lines, 2 stern line 2 breast lines forward, 2 breast lines aft, 3 spring lines forward an 2 spring lines aft.
FRESH WATER: Available ex-wharf.
FUEL: Not available.

SHIPMASTER'S REPORT: December 1990.
Berth: Arcadian (formerly Allied Chemical) located at Mile Statute 1 above Head of Passes.

The private wharf is said to be 1,175 ft. long. It is equipped with o travelling gantry crane and grab. Conveyor belt to yard storage wit chemical plant. Phosphate rate is about 12,000 tonnes per day. Vess guaranteed 39 ft. fresh water and berthed against 5 "Bridgestone" ty inflated fenders. Vessel was 12 ft. from wharf and 12 ft. – 15 ft. belo safety rails on arrival in low river. Ship's MOT type gangway and shi bulwark steps are required on shore. Fenders were removed when shi draft less than 32 ft. Gangway required frequent adjustment, and wa changed to short size, then changed again to long size when afterm hatch finished. Vessel moored with 4 headlines, 1 breast rope, 2 forwa back springs, 2 after back springs and 4 stern/breast ropes aft. Ste nearly level with end of berth.

No fresh water available from quay, but a water barge can be hir from Burnside. Cost was U.S.$140 per hour for towage and $3.50/4 per ton for the water.

Only limited provisions allowed across dock, no chemicals hazardous materials.

Visitors require prior authorisation, insurance, safety helmet, gogg and lifejacket.

No bunkering allowed.

Density ranges from 0.994 in Summer to 0.999 in Winter.

GEORGETOWN, South Carolina: 33.22 N. 79.17 W. **(See Plan)**

PILOTAGE: Available. Make contact on VHF Channel 16. Pilot boards at Sea Buoy "2WB" in position 33° 11.6′ N., 79° 05.4′ W. for the 14 mile passage to Georgetown.
ANCHORAGE: Vessels wait for berth at Buoy "2WB".
RESTRICTIONS: Vessels over 600 ft. LOA dock during daytime only.
MAX. SIZE: Max. LOA 700 ft. Max. beam 100 ft. Depth at all terminals 27 ft. MLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.
VHF: Pilot and tug on Channel 16. Port Authority have no facilities.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 2×1,000 h.p. tugs assist vessels from Buoy 28 to the dock.
BERTHING:

Berth No.	*Wharf Length* (ft.)	*Depth at LW* (ft.)
1	500	27
2	700	27
Steel Dock	600	27

CRANES: 1×90 ton P & H truck crane at the terminal. A 140 ton P & H truck crane available at 72 hours notice.
BULK CARGO FACILITIES: Delta Cement Corporation: Bulk storage facility with capacity 20,000 tons. Discharge rate for cement 700 t.p.h.
STEVEDORES: Advise requirement 1600 hrs. day prior to arrival in order to commence work 0800 hrs. next day.
MEDICAL: Georgetown Memorial Hospital 3 miles from port.
TANKERS: No facilities.
FRESH WATER: Available.
FUEL: Bunkers available through ship's Agent.
CONSULS: None locally.
REPAIRS: Minor repairs and small engine repairs possible.
DRY DOCKS: Tugs and barges only.
SURVEYORS: Available.
GANGWAY/DECK WATCHMEN: Ship's gangway used. Watchman available.
OPENING/CLOSING HATCHES: Opened by crew or stevedores.
REPATRIATION: Facilities available.
AIRPORT: 35 miles from port.
TIME: Eastern Standard Time. Daylight Saving Time from first Sunday in April till last Sunday in October.
POLICE/AMBULANCE/FIRE: Police 527-4454. Ambulance 546-8140. Fire 546-5151.
DEVELOPMENTS: Delta Cement Corporation: Bulk storage facility recently completed. Capacity 20,000 tons. Discharge rate for cement 700 t.p.h.
AUTHORITY: South Carolina State Ports Authority, Port of Georgetown, Dock Road, State Pier 31, P.O.Box 601, Georgetown, South Carolina 29442, U.S.A. *Tel:* (803) 527-4476. *FAX:* (803) 527-2601. *Telex:* 810-677-2265. *Contact:* D. Claude Baker, Port Director.

GOOD HOPE (including Norco), Louisiana: 29.59 N. 90.24 W. **(See Plan)**

Also see "South Louisiana".
East bank of Mississippi River, 126 miles above Head of Passes.
DOCUMENTS: For all general information, refer to "New Orleans".
ANCHORAGES: South of berth in river for unlimited number of ships.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 tug used for mooring/unmooring.
BERTHING: General American Tank (GATX) storage terminal; 4 tanker berths, 40 ft. depth alongside. 2 × 12 in. arms or 8 in. hose. Loading 20,000 bbls.p.h. No ballast facilities.
Norco: Shell Oil Co. 2 tanker berths (80,000 d.w.t., 900 ft. LOA downstream, 55,000 d.w.t., 750 ft. LOA upstream) 16 in. and 8 in. loading arms for transfer, transfer rate variable, ballast line 12 in., capacity 20,000 bbls.

Berthing always starboard side to. Requires 2 tugs to assist in berthing. Forward and aft mooring lines handled simultaneously.

Report: *Norco – Shell/Amoco:*

General: The berth at Norco is approximately 126 miles AHP and consists of a single dock constructed of steel pilings and a concrete deck. A continuous fender system of wood-faced steel piles provides continuity between the dock and mooring dolphins.

All cargo is handled through 6×12 in. loading arms with 8 in. reducers. The arms are arranged so as to permit washing of the arms into a slop tank ashore; thus, grade changes may be made without removing the arms.

Cargo Handled and Shore Installations: Various products are handled through a common shoreline including crude, clean products, jet fuel, kerosene and heating oil.

The maximum allowable rail pressure for discharging vessels is 150 p.s.i.

An emergency shutdown system to stop loading is located in the dock office and at the levee in the guard office.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. 1×800 h.p. tug is required for both docking and undocking operations.

Vessels should approach the dock with a tug on the port bow, stemming the current, at a maximum angle to the dock of 10° and at a velocity no greater than 5 ft./sec.

Communications: A public telephone located at the head of the dock is available for use by ship personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available.

Fresh water is available at Norco.

Ballast/Slop Facilities: Ballast and slop facilities are available. The shore storage/treatment tank has a 150,000 bbls. capacity and is connected to the dock manifold by a 14 in. shore line.
DENSITY: Fresh water, 1000.
FRESH WATER: Available ex-wharf at Shell Oil Co. Berth.
FUEL: Bunker "C" not available ex-wharf at Shell Oil Co. Berth.
SURVEYORS: Surveyors and Cargo Inspectors available.
STORING: See "Prelims".

1. Yes.
2. Not allowed when loading Grade A and B products.
3. Alongside ship at loading manifold.
4. Yes.
5. Yes.
6. Yes.

SHIPMASTER'S REPORT: February 1979.
Restrictions: Not allowed to take bunkers, lub oils or stores from dock while alongside. Large tankers often require 2 tugs pushing all the time to keep them alongside, especially when river is in flood. This at GATX No. 4.
VHF: Standby on Channel 13 during pilotage and when anchored. Agents normally place walkie-talkie aboard for their direct communication.
Berthing: Always starboard side to. Forward will have 2 backsprings to jetty, 4 headropes, 2 breasts to buoys, lashings not required, same aft. Only one boat used and secures the bow first.
Telephones: Not available at GATX No. 4 but there is one on next jetty upriver.

OPERATORS: General American Tank.

Location:	River Mile 138 A.H.P., between New Orleans and Baton Rouge, above the Head of Passes on the Mississippi River.
Depth of water:	50 ft.
Wharf:	454 ft. long. 43 ft. wide.
Mooring dolphins:	754 ft. centre to centre.
Upstream buoy:	1,000 ft. centre to centre.
Gantry cranes:	2 × 18,000 lb. Peco gantry cranes, equipped with 8.5 cubic yard buckets with 45 second cycle time. Capacity 340 t.p.h. per crane of 53 lb. per cu. ft. free digging material. 1×80 ton barge mounted crawler crane. 1×200 ton barge-mounted Lima crane.
Maximum crane outreach (from ship fenders):	61 ft.
Height of crane (above low water):	94.34 ft.
Bottom of bucket (at low water): (High water 22 ft.)	79.04 ft.
Transfer capabilities:	Ship to barge or storage. Barge to ship or storage. Storage to ship, barge, rail or truck.
Conveyor System:	42 in. (45°).
From dock to storage:	Heavy duty nylon rubber belt with travel speed of 431 ft. per minute.
Barge loader:	60 in. (45°) nylon rubber belt with travel speed of 431 ft. per minute.
Barge fleeting:	140 barge fleeting area.
Harbour boats:	1,200 h.p., 800 h.p., 2 × 2,600 h.p.

Floating cranes:	Barge mounted crawler, 80 ton 100 ft. boom. Barge mounted 200 ton, Lima with 12 yard bucket.
Rail spar:	24,000 ft. of rail and one yard locomotive.
Weighing scales:	Rail (300,000 lb. capacity). Truck (100,000 lb. capacity). Front end loader scale mounted on IH 80 Hough.
Auxiliary equipment:	International Hough 80 (4 yd. bucket). 3 × 916 cat front end loaders. 931 D-4D cat dozer. Dump trucks. Bobcat 980. Payloaders.
Bulk open storage area:	100 acres of flat ground surface and one acre concrete pad.
Covered storage:	Over 300,000 sq. ft. of covered storage facilities with maximum 80 ft. ceilings, storage racks, climate control, rail docks, truck docks, 4,000 sq. ft. of office suites, stacking and reclaiming capabilities.
Silos:	3 concrete silos, each 79.5 ft. tall, 50 ft. in diameter. Kathbar air provided to Silo No. 3, warm air to walls of Silos No. 1 and 2.
Rail facilities:	Served by Illinois Central and Kansas City Southern Railroads.
Truck facilities:	Property is within 7 miles of Interstate 10 and 55, and 2 miles from U.S. 61; 25 miles from New Orleans International Airport.
Water purification plant:	7,000,000 gallons per day.
Waste water treatment:	250,000 gallons per day capacity.
Liquid transfer:	Barge to rail; rail to barge or truck.

TANKERS: *Garyville:* The Marathon Dock is located on the right ascending bank of the Mississippi River, Mile 140. It consists of 5 separate berths (each 1,000 ft.) fitted with quick connecting hydraulic Chicksan arms for cargo transfer and quick release hooks on all mooring points. Depth alongside 45 ft.

Each dock is equipped with an emergency stop at the Chicksan arm assembly.

Cargo Handled and Shore Installations: Both docks handle asphalt, No. 6 fuel oil, unleaded gasoline and No. 2 diesel oil. Each dock can effect the transfer of No. 6 fuel oil through 2×16 in. arms, No. 2 diesel oil through 2×16 in. and/or 3×12 in. arms, unleaded gasoline through 2×12 in. arms and asphalt through a 1×16 in. arm. All cargo is transferred to or from storage tanks 1 mile away through 16 in. to 24 in. shore lines.

Docking: The River Pilot normally docks vessels at these berths; docking is strictly starboard side to. Vessels of 600 ft. LOA or greater are required to use 2 tugs for assistance in docking and undocking; smaller vessels may use a single tug.

Approach to the docks is made with the vessel stemming the current at slow speed. Tugs assist in positioning the vessel alongside.

The Marathon Terminal requires that vessels use 2 head wires or synthetic head lines, 3 forward spring lines (wire or synthetic), 2 spring lines aft (wire or synthetic) and 2 stern wires or 3 stern ropes. All mooring points are equipped with quick release hooks.

Communications: Public telephones are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker C and diesel fuel are available on request; however, no bunker barges are allowed alongside a vessel docked at either berth.

Ballast/Slop Facilities: Ballast and slops can be received by the docks in limited quantities.

DENSITY: 1000.
FRESH WATER: Available ex-wharf.
FUEL: Not available.
GARBAGE DISPOSAL: Contact: BFI Waste Systems, 808 L&A Road, Metairie. Tel: (504) 837-8950.
WASTE OIL DISPOSAL: Contact: A3M Vacuum Service Inc., 110 Airline Hwy., Reserve, LA. Tel: (504) 536-7448.
SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: December 1979 (Updated 1992).
Port: Paulina.
Location: 3 miles up river from Gramercy at St. Elmo Point. River Mile 120.6 A.H.P.
Anchorage: A waiting anchorage is situated 2 miles down river from the elevator at Grand View Reach.
Tugs: Available from Gramercy.
Berth: Peavey Grain Elevator. Depth of water alongside is 45 ft. Loading rate with one spout is 1,000 t.p.h.

The berth is a concrete pier on steel girders with 4 weak fenders. Spring lines are run to the pier, and head and stern lines to dolphins.
Fresh Water: Available from pier, rate 6 t.p.h. (approx.)
Fuel: Not available from quay.
Services: Provisions available from New Orleans, will be delivered by launch from Gramercy as pier can only be reached on foot over a catwalk 700 ft. long including stairs.

AUTHORITY: Port of South Louisiana, 152 Belle Terre Boulevard, P.O.Box 909, Laplace, Louisiana 70069-0909. *Tel:* (504) 652-9278, 568-6269. *FAX:* (504) 652-9518. *Contact:* R.J. Clements, Executive Director. Virginia D.Simons, Assistant Port Director – Economic Development.
Note: The Port of South Louisiana has jurisdiction from River Mile 114.9 A.H.P. to River Mile 168.5 A.H.P. which area includes St.Charles, St.John The Baptist and St.James parishes.

GRAYS HARBOR, Washington: 46.55 N. 124.08 W.

(See Pla

DOCUMENTS, etc.: Refer to "Tacoma".
PILOTAGE: *Boarding Area:* Near Grays Harbor Buoy.
Pilot Ladder: Near midships, 3.0 m. – 4.0 m. above water. No manrop Automatic ladders are acceptable for boarding. Use only Jacob's lad for disembarking.
Pilot Boats: "Chehalis": 20 m. orange and green steel boat, pilot hou aft. "Grays Harbor": 18 m. orange and green steel boat, pilot hou amidships.
Notification: To be sure of service give maximum advance notice, least 24 hours via the Marine Exchange, Seattle, WA., VHF Chan 20. Pilot boat does not cruise on station. Keep pilots advised of chang in arrival time. Four hour minimum notice required on pilot orders. Ord for pilots on weekends should be received by 1700 hrs. Friday.
Communications: Pilot radio station (call WRD 709 or Grays Harb Pilots (206) 532-2761). Guards Channels 12 and 16. If contact is ma on Channel 16, be prepared to switch promptly to another chan preferably Channel 12. Same procedure applies to pilot boats wh manned. In emergency, a message may be relayed through U.S. Coa Guard Station, Westport, using above procedure.
Maximum Draft: Loaded vessels are limited to 11.0 m. visible draft departure at flood tide. In case of severe silting in channel this figu may be reduced. The allowable draft for incoming vessels is substantia less because of difficulty in turning around. The safe handling of load ships outbound through the bridge requires a little trim by the stern.
Maximum Width and Length: Vessels passing through the bridges ov the Chehalis River are restricted to 26 m. beam and 183 m. length.
Vessel Condition: All vessels arriving or departing Grays Harbor a asked to have all hatches covered. Deck cargo must be properly stow and secured. A safe walk-way must be provided to pilot boarding are
ARRIVED VESSEL: Vessels must be inside Grays Harbor Bar to b considered an "arrived vessel".
ANCHORAGES: No specific areas in Grays Harbor have be designated as anchorage grounds. The best area is Southward of San Island Shoal in depths of 35 ft. to 40 ft.; the holding ground is good.
RESTRICTIONS: Bar Channel depth 48 ft. MLLW, and Approac Channel depth 36 ft. MLLW. Turning Basin width of 900 ft. Mean tid range of approximately 10 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available.
BERTHING: Three deep-draft berths with depths of 41 ft. MLLW an one shallow draft berth with depth of 34 ft. MLLW. The channel maintained at a depth of 36 ft. MLLW.

Terminal No. 4: (Wharf-Dolphin).

2 berths: Each 700 ft. in length.

Deck height: 18 ft., berth depth 41 ft. MLLW, depth continuous maintained with water-jet system.

Alignment of pier: 274°.
Fender spacing: Continuous.
Bollard/cleat spacing: Variable.
Two × 60 ton cargo cranes.

New on-dock rail system with 4 parallel spurs, 50 railcar capaci serviced by 2 main line railroads and connected to transit sheds.

Two new 30,000 sq.ft. transit sheds adjacent to on-dock rail syste
Services: Water, lights, taxi.
Use: Bulk, breakbulk, neobulk, Ro-Ro, general cargo, cruise ships

Terminal No. 2: (Wharf-Dolphin).
1 berth: Length 600 ft.
Deck height: 18 ft., berth depth 41 ft. MLLW.
Alignment of pier: 274°.
Fender spacing: Continuous.
Bollard/cleat spacing: Variable.
50,000 sq.ft. and 40,000 sq.ft. warehouses behind Terminals 2 and
Services: Water, lights, taxi.
Use: Bulk, breakbulk, neobulk, Ro-Ro, general cargo, cruise ships

Terminal No. 1: (Dolphin).
1 berth: Width 50 ft., length 480 ft. with dolphins.
Deck height: 18 ft., berth depth 34 ft. MLLW.
Alignment of pier: 302°.
Fender spacing: None, 3 dolphins parallel to face.
Bollard/cleat spacing: Variable.
Services: Water, lights, taxi.
Use: Barge services, small cruise ships and others.

All 3 Port Terminals are backed up by 175 acres of lighted, partia paved cargo yard. In addition, a total of 150,000 sq.ft. of covered storag is available on-dock or adjacent to the terminal areas. The feder navigation channel up to the Port docks is federally maintained at depth of 36 ft. MLLW. Major commodities handled through the Port Grays Harbor are forest products, metals, equipment, liquid produc and other bulk, breakbulk and neobulk commodities.

Private: *Name*	*Length*(ft.)	*Use*
ITT-Rayonier Pulpmill Dock	475	Pulp and oil.
ITT-Rayonier Sawmill Dock	600	Pulp and logs.
Citifor Dock	500	Logs.
Weyerhaeuser Bay City Dock	800	Logs.
Weyerhaeuser Sawmill Dock	900	Lumber.

BULK CARGO FACILITIES: All berths (see "Berthing") are availab for bulk, Ro-Ro, and general cargo activity, and are backed up 150,000 sq.ft. of warehouse space as well as 175 acres of lighte partially paved cargo yard. Two × 60 ton cargo cranes are also availab at Terminal No. 4, as well as an on-dock rail system.
STEVEDORES: Jones Washington Stevedoring, Tel. Steve Bou (206) 533-2561; and Stevedoring Services of America, Tel. W Sheahon, (206) 532-4650. 20 local gangs available. Additional gan brought in if needed.
MEDICAL: All medical facilities available. Local hospital.

DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available at berth or anchorage. Capacity of barge 15,000 bbls.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Dial 911 for emergencies.
Ambulances: Aberdeen 532-1252, Hoquiam 532-3311.
Hospitals: Grays Harbor Community Hospital 532-8330.
Fire Departments: Aberdeen, Cosmopolis 532-1252, Hoquiam 532-3311.
Police Departments: Aberdeen 533-2123, Hoquiam 533-2244, Cosmopolis 532-9232.
GARBAGE DISPOSAL: The vessel/Agent is responsible for ordering garbage service through Harbor Disposal Company Inc., 4201 Olympic Highway, Aberdeen, WA. 98520. Tel: (206) 532-3240. Containers, drop boxes and compactors are available.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: Seamen's Service of Grays Harbor, 313 South "I" Street, Aberdeen, WA. 98520. A wide variety of services are available.
AUTHORITY: Port of Grays Harbor, P.O.Box 660, Aberdeen, Washington, WA. 98520-0141, USA. *Tel:* (206) 533-9528. *FAX:* (206) 533-9505. *Contact:* Russ R.Richardson, Commission President. Clifford C. Muller, Executive Director. Leonard Barnes, Operations Director.

GREEN BAY, Wisconsin: 44.32 N. 88.02 W. (See Plan)

For important general information refer to St. Lawrence Seaway.
DOCUMENTS: No special documents required. All necessary Customs and St. Lawrence Seaway documentation should be accomplished prior arrival.
PILOTAGE: Pilot not compulsory although some Masters prefer Pilot aboard. Pilot boards prior to arrival.
CHANNEL: From Grassy Island, outside mouth of Fox River, to C&NW Railway bridge, channel is maintained 24 ft. below low-water-datum (576.8 ft. above Father Point, Quebec) and 300 ft. width except through bridges. Above C&NW Railway bridge channel and turning basin is maintained at 20 ft. below low-water-datum. From Grassy Island lakeward channel maintained at 26 ft. below low-water-datum varying in width from 300 ft. to 500 ft. for approximately 8 miles. 24 ft. deep turning basin maintained at confluence of Fox River and East River opposite Leicht's North Dock. Currents will flow up and down river and will influence channel depths at times. Present high-water will add 1 ft. – 2 ft. to channel depths.
RESTRICTIONS: Entry may be made at any time of day or night subject to Master's discretion.
MAX. SIZE: Subject water depths and width of bridge openings.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

Pratique may be obtained prior to entry of St. Lawrence Seaway. Suspected disease should be reported locally.

Rat guards required on all lines.
RADIO: Ships' Agents located at Milwaukee and Chicago, ETA should be directed accordingly.
TUGS: Join vessel at any designated point. Charges should be obtained from tug operators. Use ship's lines.
BERTHING: General cargo at Leicht's North Dock, 1,500 ft. length, full channel depth. Discharge by ship's gear and shore based equipment. Bulk cargo handled at several docks.
CRANES: Shore based lifting devices to 20 tons. 100 ton stiff-legged derrick available for heavy cargo.
BULK CARGO FACILITIES: Available at several places for coal, salt, fertiliser, chemicals, liquid cargo, stone, pig-iron, etc.
BRIDGES: No bridge opening restrictions for railroad bridges. Highway bridges permit vessels of 300 tons or over to transit at any time. However, heavy land traffic occurs about 0730 – 0830 hrs., 1145 – 1315 hrs. and 1630 – 1730 hrs., and co-operation of Masters is urged during these times so that city bridges may remain closed.
STEVEDORES: Services performed by Leicht Transfer and Storage Co. and arrangements should be handled by ship's Agent or directly with Leicht's.
MEDICAL: Subject to regulations of U.S. Customs and Immigration and St. Lawrence Seaway Authorities. 3 excellent hospitals.
TANKERS: The major oil companies have facilities. Limited only by harbour dimensions.
DENSITY: Fresh water.
FRESH WATER: Available through ship's Agent and water company.
FUEL: Fuel oil available in any quantity. Normal fire precautions.
CONSULS: No consuls. Nearest are at Milwaukee, Chicago, and Minneapolis.
REPAIRS: Topside and engine repairs available. Complete repair service available at Sturgeon Bay, 45 miles North.
DRY DOCKS: No local facilities. Available at Sturgeon Bay, Wisconsin.
SURVEYORS: Available through ship's Agent.
GANGWAY/DECK WATCHMEN: Available at ship's option.
OPENING/CLOSING HATCHES: By stevedores.
REPATRIATION: Available through local Immigration officials.
AIRPORT: 8 miles from port. Served by regular airlines with over 30 flights daily.
TIME: Central Standard Time. Central Daylight Saving Time in effect from the first Sunday in April to the last Sunday in October.
HOLIDAYS: January 1st (New Year's Day), May 31st (Memorial Day), July 4th (Independence Day), 1st Monday in September (Labor Day), Last Thursday in November (Thanksgiving Day), December 25th (Christmas).
POLICE/AMBULANCE/FIRE: Police: Green Bay – Administrative calls 448-3200, Emergency 911, Sheriff 911, Ambulance 432-0305, Fire Dept. Rescue – 911, Fire: 911.
TELEPHONES: On board service. Contact Wisconsin Telephone Co.
SERVICES: Tank cleaning, fumigation, waste disposal, chandler.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Proper identification should be carried.
GARBAGE DISPOSAL: Service available on request.
WASTE OIL DISPOSAL: Service available on request.
SEAMAN'S CLUBS: Seafarer's Ministry of Green Bay, P.O.Box 4054, Green Bay. Tel: 494-0958.
DELAYS: Expect no delays for berthing or harbour movement.
AUTHORITY: The Port of Green Bay, Brown County Board of Harbor Commissioners, P.O.Box 23600, 305 E. Walnut Street, Green Bay, Wisconsin, 54305-3600. *Tel:* (414) 448-4290. *FAX:* (414) 448-4036. *Contact:* Alan T. Johnson, Port Director.

GULFPORT, Mississippi: 30.21 N. 89.05 W. (See Plan)

DOCUMENTS: See "New Orleans".
PILOTAGE: Compulsory from Outer Sea Buoy to docks, provided by Gulfport Pilots Association, arranged through Agent. Pilot boards at Sea Buoy.

Pilot boat has red hull, white superstructure with "Pilot" in black lettering. When pilot boat is underway, contact can be made by VHF Channel 16.
RESTRICTIONS: The Gulfport Channel is 12 miles long running between Ship Island and Cat Island. Channel is 225 ft. wide and has a minimum depth throughout of 36 ft. at MLW. Harbour is dredged rectangular basin about a 0.25 mile wide and 0.5 mile long, this area being protected by piers. Depth in harbour and along wharves is 36 ft. with a 2.5 ft. tide variation. No entry restrictions as to time.
MAX. SIZE: Length of vessel is restricted to approximately 900 ft. by turning basin, no breadth restrictions.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
RADIO: Gulfport Radio KJC 768 – VHF Channel 16. Continuous service.
TUGS: 2 tugs (1,200 h.p. and 2,000 h.p.) available but not required unless requested to assist in berthing.
BERTHING: 5,000 linear ft. of berthing space.
CARGO HANDLING: 50,000 sq.ft. transit shed refrigerated facility.

2 container cranes, 1×30 ton and 1×35 ton, in operation. Ship's gear usually used but mobile cranes available with 48 hours' notice.
STEVEDORES: Must have 12 hours' notice to arrange stevedore gangs. Normal work day 0800 – 1200 hrs., and then 1300 – 1700 hrs. Monday to Friday.
MEDICAL: No advance notice required for medical attention, doctor and hospital care readily available.
DENSITY: Brackish.
FRESH WATER: Fresh water is available. Rate 10 t.p.h.
FUEL: Suppliers of marine fuel at the port provide direct barge to ship service. A 185,000 gallon fuel barge is moved from its mooring and placed alongside the vessel for refuelling. The barge is manoeuvred by an 800 h.p. twin screw push boat. Once alongside, pumps on the barge deliver fuel at a rate of 32,000 gallons per hour. Shallow draft coastal traffic can be fuelled at the port or 6 miles South in the Intra-coastal Waterway.
CONSULS: Many countries have consuls within a 100 mile radius of Gulfport.
REPAIRS: Most deck and engine repairs could be arranged within port facilities.
SURVEYORS: Available from Mobile or New Orleans.
GANGWAY/DECK WATCHMEN: Port guards.
REPATRIATION: Can be arranged.
AIRPORT: Gulfport Municipal Airport is approximately 4 miles from the port and served by regularly scheduled airlines.
TIME: The Port of Gulfport is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months.
HOLIDAYS: United States national holidays are observed, cargo work can be arranged on these days at a penalty time.
POLICE/FIRE/AMBULANCE: Telephone number for all emergency services is 911.
TELEPHONE: Can be placed aboard only by special arrangement; not normally available.
GARBAGE DISPOSAL: Waste Management of Mississippi, Inc., P.O.Box 3869, Gulfport, Ms. 39505. Tel: 601-832-3144. Service available 0800 hrs. – 1700 hrs.

Browning-Ferris Industries, P.O.Box 550, Ocean Springs, Ms. 39564. Tel: 1-800-443-6562, 601-392-5108. Service available 0800 hrs. – 1700 hrs.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: The International Seamen and Truckers Center (under construction at this time).
CURRENCY: U.S.Dollar. U.S.$ 1.00 = Yen 126.85 (18.6.92).
AUTHORITY: Mississippi State Port Authority at Gulfport, P.O.Box 40, Gulfport, Mississippi 39502. Street Address: Corner Highway 90 and 30th Avenue (Shipping) *Tel:* (601) 865-4300. *Telex:* 785197 Gulfp Port Gup. *FAX:* (601) 865-4307. *Contact:* William W. Edwards, Port Director.

HAINES, Alaska: 59.15 N. 135.25 W. (See Plan)

In Lutak Inlet. Located 5 miles N.W. of Haines. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Lynn Canal to Lutak Inlet.
PILOTAGE: Pilot pick-up point located in vicinity of Point Retreat.
ANCHORAGE: Lutak Inlet.
MAX. SIZE: Harbour depth 36 ft. at zero tide. Tides: Diurnal range 16 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 3 available.
BERTHING:

1. Haines Dry Cargo Dock can be secured by request through City of Haines (Telephone: Area code 907 number 766-2231). Berthing length – 967 ft. and an open surface of over 300 ft. in width. Depth at face of dock – 36 ft. MLLW. No covered sheds, 6 acre open staging area. Crane may be available. Continuous to 300 ft. Alaska State Ferry facility.

Ro/Ro cargo facility at N.W. end of Dry Cargo Dock.

2. Schnabel Lumber Co. Dock: Berthing length – 640 ft. long and 80 ft. wide. Depth at face of dock – 45 ft. No covered storage. Open storage. 35,000-ton capacity for bulk cargo storage. Chip loader with 350 t.p.h. capacity. Crane available.

STEVEDORES: 4 gangs.
MEDICAL: Doctor/dentist available.
FRESH WATER: Available in small quantities in temperate seasons only.
FUEL: Not available.
REPAIRS: None.
CUSTOMS: Quarantine, Immigration and Customs locally.
TRANSPORTATION: Air, ferry. Haines Highway principal route connecting Southeast Alaska with the Alcan Highway leading to the interior of Alaska and Canada.
AUTHORITY: City of Haines, P.O.Box 1049, Haines, Alaska 99827. *Tel:* (907) 766–2448. *FAX:* (907) 766-3179. *Contact:* Robert Stokley, Harbour Master.

HAMPTON ROADS DISTRICT, Virginia: (See Plan)

NORFOLK: 36.51 N. 76.19 W.
NEWPORT NEWS: 36.59 N. 76.26 W.
PORTSMOUTH: 36.50 N. 76.17 W.

DOCUMENTS:
3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List.

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from a United States port:
Health Pratique.
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
F.M.C. Certificate of Financial Responsibility.

PILOTAGE: Compulsory; is generally arranged through port Agent. Vessels approaching port may use VHF telephone, Channel 16, radio telephone 2738 kHz. Advance notice of 24 hours is required of ETA. Pilot Lookout Tower located at Cape Henry, Virginia, the entrance to Chesapeake Bay.

The Virginia Pilot Association can be contacted by telephone at (804) 496-0995. Pilot monitors tower VHF-FM Channel 11 and VHF-FM Channel 16.

ANCHORAGES: 4 deep draft anchorages have been dredged at Hampton Roads. Two of the anchorages at Sewell's Point, one of which was dredged to 45 ft. and the other to 40 ft. The other 2 anchorages at Newport News are each 40 ft. deep.

Additional deep draft anchorages exist in the protected waters of the Chesapeake Bay at Cape Charles and Lynnhaven. These 2 anchorages, located near the entrance to the Hampton Roads harbour, have a water depth ranging to 47 ft. and can accommodate approximately 120 vessels. In addition, the inner harbour anchorage areas of lesser depth can accommodate up to 40 vessels.

Anchorage Regulations: A change in U.S. Coast Guard Regulations permits colliers and other bulk carriers, such as grain ships, to use the Big Stone Anchorage in Delaware Bay. Previously, the anchorage was open only to oil tankers. The new rules are advantageous to super colliers that are able to carry up to 150,000 tons, taking advantage of the anchorage's minimum natural depth of 55 ft. The super colliers then can be partly loaded up to about 90,000 tons, at Hampton Roads, Virginia, and topped off at the Stone Anchorage by two 30,000 ton barges.

RESTRICTIONS: Ships entering Hampton Roads from the sea follo
course between the Virginia Capes, across the lower end of Chesapea
Bay via Thimble Shoal Channel into the deep waters of Hampton Roa
Thimble Shoal Channel: Extends from the Virginia Capes across t
lower end of Chesapeake Bay into the deep waters of Hampton Roa
Thimble Shoal Channel is presently 1,000 ft. wide and approxima
13 miles long. The channel is 50 ft. deep within the 650 ft. wide outbou
lane and 45 ft. deep within the remaining 350 ft. wide inbound lane.

Two channels extend through Hampton Roads, one southward t
Norfolk, Portsmouth and Chesapeake, and one Westward to Newpo
News and up the James River.

Norfolk Harbour Channel: Extends from Hampton Roads into Southsi
cities via the Elizabeth River into Norfolk, Portsmouth and Chesapea
Beginning at the Hampton Roads Bridge Tunnel, the Norfolk Chan
is 19.6 miles long. Between deep water in Hampton Roads and Sewel
Point the Channel is 1,000 ft. wide and 50 ft. deep. Between Sewel
Point and a point just South of the Norfolk Southern Railway coal pi
at Lambert's Point the channel is 50 ft. deep within the 650 ft. to 800
wide outbound lane. Opposite the Naval Base at Sewell's Point a
extending upstream to Norfolk International Terminals, the channel
45 ft. deep within the 600 ft. wide inbound lane. Authorise
improvements provide for deepening the Norfolk Channel to 55
between Hampton Roads Bridge Tunnel and Lambert's Point. A 40
channel extends from the coal piers to the N&W Railway Bridge on th
Southern Branch. Beyond this point a 35 ft. channel extends 4.6 mil
to a point 0.8 miles above the Interstate 64 Bridge, where the chan
connects with the Atlantic Intracoastal Waterway route through th
sounds of North Carolina to the South Atlantic Coastal States. Fundi
is available for the engineering and design study of deepening th
portion of the Norfolk Harbour Channel to 45 ft., deepening a portion
the Southern Branch to 40 ft. and enlarging the turning basin at th
Southern end of the channel.

The width of the Norfolk Harbour Channel is 1,000 ft. from its out
end to a point opposite Norfolk International Terminals; thence 1,250
to the N&W Railway coal piers; thence 750 ft. to the junction of th
Eastern and Southern Branches; thence up the Southern Branch 450
wide to the Belt Line Railroad Bridge; thence 375 ft. wide for one mi
to the N&W Railway Bridge; thence 250 ft. wide to its junction with th
Atlantic Intracoastal Waterway route.

Newport News Channel: Extends 6.0 miles Westward from Hampto
Roads to Newport News and thence up the James River, 68 miles an
90 miles respectively to the ports of Hopewell and Richmond. Th
Channel to Newport News has a depth of 50 ft. over a width of 800
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes
Reports made to New York Quarantine Station.
RADIO: Radio-telephone communications in the Hampton Roads are
are furnished by the Chesapeake and Potomac Telephone Company
Virginia. A regular ship-to-shore channel transmits to ship on 2538 kH
and the ship returns the call on 2142 kHz. A "day-time" ship-to-sho
channel transmits to ship on 2450 kHz and the ship returns the call o
2366 kHz. In the very high frequency band, "XY" ship-to-shore
available which transmits to the ship on 161.9 MHz and the ship retur
the call on 157.3 MHz. A second "day-time" ship to shore chann
transmits on Channel 20 and monitors Channel 16.
TUGS: Tugs are arranged for by the vessel's Agent according to ET
information. The required number of tugs and the horsepower a
determined by the assigned tonnage, handling characteristics and fin
berth destination. Should vessel be unable to manoeuvre normal
Master to advise the Agent and request additional tug power. There a
17 tugs with horsepower up to 4,300 available in the port.

Safe working height of arm 55 ft. at MLW. Storage capacity 20 million gallons. Also see "Shipmaster's Report dated June 1992.

Amoco: The terminal of the Amoco Company is located on the Southern Branch of the Elizabeth River, in Chesapeake, about one mile South of the Norfolk Naval Shipyard. This company has a site comprising 80 acres, with a splendid waterfront, on which are erected a ship and barge pier, pipelines, storage tanks, boiler house, tank-car and truck loading racks, and other facililties requisite to a modern petroleum storage terminal.

The terminal has storage capacity of 655,000 barrels for handling gasoline, light fuel oil, bunker C and asphalt.

Vessels carry petroleum products to its terminal from various refineries located in the U.S.A. and from abroad. Petroleum products are also received through the Colonial Pipeline system.

Fuel oil deliveries may be made to vessels at the company's wharf. Deliveries are also made by water to any section of Hampton Roads, Richmond, various other points in the Chesapeake Bay area and its tributaries. Loading equipment for making such delivery consists of barges with the necessary pumps, hose, flanges and other equipment for making up connections.

Mobil: The Mobil Oil Corporation's terminal is located on the Southern branch of the Elizabeth River. Terminal facilities include bulk storage for 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel, and 11 million gallons of bonded bunker and marine diesel fuel.

The Mobil Oil terminal can accommodate vessels up to 32,000 d.w.t. Maximum length allowed is 660 ft. with maximum beam up to 90 ft. Maximum draft allowed is 35 ft. Water at this berth is brackish.

Swann: The Swann Oil terminal complex is located on the Southern branch of the Elizabeth River. This is a deep water port that can accommodate vessel drafts of 35 ft. and lengths up to 630 ft. with beams to 90 ft.

The Company's facility has a storage capacity of more than 850,000 barrels and handles a complete range of industrial fuel oils including No. 2 fuel oil, No. 4 fuel oil, No.6 fuel oil and bunker oils. The terminal operates around-the-clock and is connected with the Colonial Pipeline system.

Koch: The Koch Terminal is situated adjacent to the C&O Railroad yards in Newport News. It has a storage capacity in excess of 520,000 barrels for handling diesel fuel, No. 2 fuel oil, No.4 fuel oil, No.5 fuel oil, No. 6 fuel oil, bunker fuels and asphalt.

Products are received into the terminal by tanker and barge. This is a deep water port that is located 24 miles from the sea buoy. Maximum draft allowed is 34 ft. Max. length of vessel allowed is 630 ft. with a beam up to 90 ft.

Limitations from environmental factors on berth operations do not exist. The tidal current sets across the approach. Vessels generally sail at any stage of the tide. Controlling depths in the navigation channel are 45 ft. and at the berth the controlling depth is 33 ft. Flood tide is in a N.W. direction, ebb tide is in a S.E. direction. Current velocities are between 1.1 knots and 1.4 knots.

Equipment available at the terminal to contain oil spills include: 200 ft. of boom, launch, oil snares, and absorbent material. Firefighting equipment on the pier is limited, but includes: 2×150 lb. dry powder extinguishers, and 2×20 lb. dry powder extinguishers. There is no water under pressure on the pier. A public telephone is the only means on the pier used for fire emergencies.

DENSITY: Average 40% fresh.

FRESH WATER: Available at all berths. Barge service available if required.

FUEL: All grades available at oil company berths. Delivery by barge to all other locations.

CONSULS: The following countries are represented at Norfolk:

Belgium
Brazil
Denmark
Finland
France
Germany
Great Britain
Iceland
Italy
Mexico
Netherlands
Norway
Panama
Sweden

GANGWAY/DECK WATCHMEN: Not required unless crew members detained by Immigration.

CERTIFICATES: Cargo Gear Certificate, Derat, Radio, Safety Equipment, and Ship's Register.

REPAIRS: Newport News Ship Building and Dry Dock Company in James River; 5 outfitting piers up to 1,160 ft. length. Floating cranes up to 67 tons capacity. Gantry crane to 900 tons capacity. Other repair facilities and cranes also available.

Norfolk Ship Building and Dry Dock Corporation, situated on East Branch of Elizabeth River. Channel depth 25 ft.; 7 piers equipped for ship's repairs. 4×30 ton diesel locomotive cranes.

Other repair companies in addition.

DRY DOCKS: Norfolk: 1 dry dock 450 ft. long, 57 ft. beam. Berkley plant features the Titan Steel floating dock 950 ft. long, with lifting capacity of 54,250 long tons and second floating dock 670 ft. long, 126 ft. wide lifting capacity 20,000 tons.

Newport News: Dry docks:

	Length inside gate	*Width of entrance*	*Depth of water over sill MHW*

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: *Authorised Channel Improvement:* Ma improvements to the channels serving Hampton Roads were authorise in August 1985 and construction began in March 1987 on the fir element of these improvements, consisting of a 50 ft. outbound channe The authorised improvements provide for deepening the Norfolk Harbo Channel from 45 ft. to 55 ft. deepening the Newport News Channel fro 45 ft. to 55 ft, and constructing a new channel in the Atlantic Ocean a depth of 60 ft. The authorised improvements also provide deepening the Norfolk Harbour 40 ft. channel to 45 ft. and a portion the Southern Branch 35 ft. channel to 40 ft. A deep draft anchora opposite the City of Hampton will also be constructed in connection wi the 55 ft. channel improvements.

Port Expansion: Plans include extension of Pier C on the North side allow for the berthing of large container and breakbulk shi simultaneously. Extending the pier by 186 ft. will provide an additio 68,000 sq.ft. of open cargo storage space. In order to increase the apr widths of the piers, the transit sheds will also be modified and update allowing for more productive material handling. Pier 8, which lies Sou of Pier C, will be demolished to allow more manoeuvrability for the larg cargo vessels calling at the terminal.

Expansion is also being undertaken at the coal piers. Domini Terminal Associates announced plans to expand its facility area nearly 50%, from it's current 68 acres to 101 acres, in order accommodate demand for coal. The additional space will serve a wid variety of coal qualities and will accommodate more transhippe interested in moving coals to export and domestic markets.

SHIPMASTER'S REPORT: June 1992.

Berth: Atlantic Energy – Norfolk.

Charts: B.A. Charts No. 2919, 2814 and 2813.

Approach: From the South, the new IMO approved buoyed channel very well marked and shows up well.

Chesapeake Lt. Tower and Racon is conspicuous from South or Ea

Pilots: As per ALRS. Call "Virginia Pilot" on VHF Channel 16, genera works on Channel 11. Pilot control is in Radar Tower, which controls pilotage movements at the Chesapeake Bay Entrance. It is manned both Virginia and Maryland Pilots. Position: Lat. 37° 55.6' Long. 76° 00' W., close by Cape Henry Lighthouse.

Virginia Pilots operate four fast modern cutters of 23 knots spe (although Pilots report that they have been downrated to 19 knots assist maintenance). The Cutter Base is in Lynnhaven Inlet (37° 54.4' 76° 05.6' W.).

Pilots generally board in the vicinity of "CB" Buoy.

One Pilot takes vessel near the berth, where Berthing Pilot boa from a tug.

Anchorage: Numerous anchorages available, all at the entrance Chesapeake Bay, which is very exposed to Easterly and North Easte winds.

All Gas Carriers under Gas Vapours and Liquids are required U.S.C.G. to anchor in Lynnhaven Roads for inspection. This mandatory, before proceeding to the berth.

The numerous old wrecks and obstructions in Lynnhaven Roads a "off-putting", but Pilots report all sunk and no hindrance to anchorin

Pilot is required both Inwards and Outwards, to and from Lynnhav Anchorage.

Gas Carriers under Vapours and Liquids cannot anchor in Hamp Roads.

All stores, etc., and engine maintenance has to be done in Lynnhaven Roads.

Another acceptable anchorage, with U.S.C.G. approval for laden Gas Carriers, is off Cape Charles Township to the North. At present (1992), U.S. Navy Rapid Deployment Ammunition ships are taking the most suitable anchorages, and the U.S.C.G. does not permit Gas Carriers to presently use the area.

As mentioned, Lynnhaven is very exposed, and there is always a swell running, even in calm conditions.

We used 5 shackles whilst our engine was undergoing a bearing check.

Tugs: Many tug companies available. We used Moran, taking 2 tugs. Tugs joining and leaving at Town Point, Norfolk City. Tugs lines used forward and aft.

If a loaded Gas Carrier has to immobilise, a stand-by tug is required under U.S.C.G. Rules. We had to engage a stand-by tug (Moran) at Lynnhaven Anchorage for 9 hours whilst doing a main engine bearing inspection.

Channel: From Cape Henry to Atlantic Energy Berth (Chesapeake) is 30 miles, or about 3.5 hours pilotage.

Maximum draft in Channel is 35 ft. from Jones Creek Southwards. North of Jones Creek, 40 ft. can be accommodated to the Grain Berth in Jones Creek. For the first stage in Thimble Channel, maximum speed is called for.

Stand-by forward is required from and to Old Point Comfort.

For Gas Carriers under Vapours or Liquids, the U.S.C.G. only permits daylight navigation. Such ships can anchor at Lynnhaven Anchorage during darkness.

Ocean navigation is available in Elizabeth River as far as Mains Creek Turning Basin (36° 46.2′ N., 76° 17.9′ W.).

To Atlantic Energy Berth, 3 lift-bridges have to be passed through. The Southern most bridge (Norfolk and Western Rail Road) is the most restrictive. Vertical clearance (air draft) is 134 ft. H.W. (not 135 ft. as charted). Horizontal (breadth) clearance is 218 ft. (not 220 ft. as charted). This bridge is about 1.5 miles North of Berth. Therefore, restrictions as far as the berth are 35 ft. draft, 134 ft. air draft and 218 ft. breadth. For breadth calculations, there is a tug strapped alongside.

In general, Panamax size vessels are a maximum normal for size. Gas Carriers of 52,000 cu.m. partly loaded, regularly use the berth.

U.S.C.G.: Very restrictive. As previously mentioned, the U.S.C.G. require Gas Carriers transiting Hampton Roads to load or discharge LPG/LNG, to undergo Arrival Inspection at Lynnhaven Roads. This is mandatory, even if the vessel has just had an inspection the day before at another U.S. port.

Daylight transit inwards and outwards for all Gas Carriers under Vapours or Liquids.

U.S.C.G. conducts inspections from 0700 hrs. to 1600 hrs. Generally inspections take about 3 – 4 hours, with all safety items checked as per standard U.S.C.G. Check List, but with particular emphasis on the Gas Analyser and Emergency Shut Downs.

U.S.C.G. escort is provided inwards and outwards from Old Point Comfort.

U.S.C.G. will not allow fuel deliveries by either tanker truck or barge whilst on the berth and vessel connected. No boats alongside whilst connected.

With special permission, U.S.C.G. allowed fresh water from a tanker truck to be pumped aboard and provisions to be loaded with ship's derrick from jetty whilst loading in progress.

U.S.C.G. in attendance whilst connecting and disconnecting, and have a "rule" about the use of non-sparking tools.

Berth: A trestle (concrete and steel structure) which has been upgraded over the years. Minimum depth alongside quoted as 31 ft. We found density to be 1005 with 3 ft. tidal range.

Vessels up to 750 ft. LOA would have head and stern lines leading as breasts, otherwise moorings good.

Port side alongside.

Ships midship accommodation ladder/gangway can be landed.

Cargo: 1 × 12 in. Chicksan with auto-disconnect commissioned in early 1992, with 4 in. VRL attached, but not at present in use.

Shore connect/disconnect.

One Loading Master in hut on jetty at all times whilst connected.

Terminal personnel generally helpful and cooperative.

A storage facility only, comprising of 2×1,000,000 U.S. gallon refrigerated tanks (about 4,000 tonnes each) with road and rail tanker discharge/loading facilities. As a general rule, Propane is imported and Butane exported. We loaded Butane at −5°C at 85 tonnes/hr., which is the maximum loading rate with terminal's 2 pumps. Going down to one pump barely gets product up the arm and into the ship.

The ship after us was going to discharge Propane, discharge rate about 400 tonnes/hr.

When road tankers are discharging into the facility, this decreases the loading time by 15 minutes a tanker truck. Product from Amoco Refinery near by.

Saybolt Surveyor very strict and knows his job.

Terminal Official Title: Atlantic Energy Inc., 2901 South Military Highway, P.O.Box 1156, Chesapeake, VA.23320-1156. Tel: 804-485-1018. Fax: 804-487-5084.

Facilities: Generally poor.

No public telephone at Terminal. Nearest public telephone is outside gate to the right and about 1.5 miles away.

Officers can use Terminal Office telephone for local calls or for international calls, if they have a credit card.

Fresh Water: Not available on berth. Barge available, 200 tonnes minimum, no matter how little taken. Cost U.S.$ 2,900 for 200 tonnes, including barge. We arranged road tanker delivery and obtained U.S.C.G. permission to pump whilst loading cargo. Truck can back-up to about 75 m. from ship's side. Ship's hoses used. We took 4 loads of 23 tonnes nominal capacity each, actually delivered about 80 tonnes in all. First load very expensive with connecting time and truck preparation (U.S.$ 243.00), then next 3 loads at U.S.$ 160.00 each. We obtained 5% discount for cash. Overall charge was U.S.$ 7.50 per tonne for 80 tonnes.

Stores: Trucks cannot get within 75 m. of ship's side. U.S.C.G. will not give permission for stores derrick/crane to be used for lifting metal objects (pipes, steel, bottles, drums) whilst Chicksan connected. Stores barge also not allowed alongside.

We obtained permission to use derrick to load provisions and liferafts whilst connected. Fortunately our derrick was well aft of Chicksan. Otherwise stores have to be taken when Chicksan disconnected or at Lynnhaven Anchorage.

Fuel: Not available by barge or truck whilst connected. This applies to lub oil. Another restriction for lub oil is that barge will not deliver to Lynnhaven Anchorage, due to swell.

Chandler: With experience over 2 visits, the best chandler is a local firm, Virginia Marine (Telex: 212356. Tel: 804-623-1036). Excellent service and cooperation, good prices.

Out of town chandlers are generally from Baltimore.

Repairs: Phillyship provide good service for commercial shipping in Chesapeake Bay area. Local machine shop at Portsmouth, VA. (Tel: 804-397-7400. Telex: 901086).

Norshipco, near Norfolk City, with extensive engineering and large docking facilities tend to be more orientated to U.S. Navy work, and put too many restrictions in way of commercial repair work.

Charts: There is a local firm, W.T.Brownley & Co., who can supply local U.S. Publications, but are not comprehensive.

The nearest Admiralty "A" Class Agent is Maryland Nautical. Found to be very good. Despatch to Norfolk by UPS or Federal overnight.

Mall: Greenbrier Mall about 4 miles away, is the nearest good shopping. Cost U.S.$ 12.00 in taxi. Loading Master will arrange taxi.

Surveyors: The National Cargo Bureau can provide an independent survey service (they also do Liberian and Panamanian Annuals) (Tel: (804) 622-2393. Fax: (804) 622-8193).

Lloyd's have an exclusive Surveyor at Norfolk. DNV use a freelance or an exclusive from Baltimore.

Airport: Norfolk Airport to North of city, near the Bay coast. About 45 minutes in taxi, outside rush hour.

Boat Service: At Lynnhaven Anchorage, a stores and personnel launch service operates out of Lynnhaven Inlet. Very expensive, especially in overtime hours.

Authorities: Officials will board at Lynnhaven Anchorage if weather fair. Customs and Immigration board with Agent and U.S.C.G.

We found Immigration quick and no difficulties encountered. We had Visaed Crew List done by U.S. Consul in Recife and couriered to U.S.

U.S. Public Health Inspector boards on berthing and each day. Very particular. Vessel is fined U.S.$ 250.00 for any fresh food garbage not in sealed drums, and checks disposal of plastics.

Liberian Inspector: Home of Liberian Inspection Division nearby at Reston, Va. We had Liberian Annual Safety by National Cargo Bureau, very particular over documentation, particularly Officers Licences and Discharge Books. Required Safety/Boat muster and boat lowered. Also required emergency forward fire pump run with water jets and emergency generator run on load.

Notices: Notice from Agent to Master (dated May 1992).

Below is a copy of a letter from the U.S. Immigration and Naturalisation Service dated November 30th 1990, which outlines higher fines and penalties for violations of INS Laws.

Quote:

Please note, if you are going to more than one (1) U.S. port, it is the responsibility of the Agent at the last U.S. port to file with the Immigration Service a "Departure Crew List". This Crew List will show all crew changes made during this voyage. Furthermore, it is your responsibility to advise your Agent at your last U.S. port of all crew changes made at the previous U.S. ports. He should collect the Shore Passes for joining crew members only and pick up a copy of Immigration Form 1-408 (Applicaton to pay-off or discharge alien crewmen). Failure of the above taking place will result in an Immigration fine against the vessel.

Unquote.

This letter is meant to assist you and bring your attention to laws that may not have been enforced in the past, but are *definitely* being enforced presently.

Letter from Atlantic Energy, Inc., to ship's Agent (dated June 1992):

Quote:

Prior to the arrival of the vessel (under your Agency), which is scheduled to arrive in Norfolk on or about 1st June 1992, would you please contact the ship's Master and advise him of Atlantic Energy's cargo connections as follows:

Liquid connection: 12 in. ASTM A150.
Vapour connection: 4 in. ASTM A150.

We request that the vessel advise Atlantic Energy of their cargo manifold sizes, should they be unable to adapt to our flanges. If the vessel has the correct adaptors onboard, would you please ask that they be in place upon arrival at our berth.

Please advise all interested parties that the vessel shall be docked "port-side-to" at our berth.

We request that you arrange for line handlers for both the ship's arrival and departure.

Enclosed is information that should be of interest to the Master of the vessel. Would you please see that this information is given to the Master upon the vessel's arrival at anchorage or before, if at all possible (see "Plan Section").

AUTHORITY: Virginia Port Authority, 600 World Trade Centre, Norfolk, Virginia 23510, U.S.A.. *Tel:* (804) 683-8000. *FAX:* (804) 683-8500. *Cables:* Vastports. *Contact:* J.Robert Bray, Executive Director.

HILO, Hawaii: 19.46 N. 155.06 W. (including Kawaihae 20.02 N. 155.50 W.) (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registration or Enrolment.
Annual Inspection Certificate.
Load Line Certificate.
Derat Certificate.
Drinking Water Certificate.
Radio Certificate and Licence.
4 Stores Lists.

PILOTAGE: Pilots boats have VHF. Contact is made on VHF Channel 16, then switch to Channel 12. Pilot service is provided on a 24-hour basis upon suitable advance notice.

At Hilo, Pilot boards on starboard side in position 0.75 mile due East of Paukaa Light. In picking up Pilot, vessels should be on Southerly course with enough speed for steerageway. Special instructions will be given by radio telephone.

At Kawaihae, Pilot station in position 1 mile 287° true from Buoy No. 2. Pilot usually boards on port side with vessel on course for the entrance at dead slow speed.

ANCHORAGES: No safe anchorages either Hilo or Kawaihae for vessels awaiting Pilot. In this situation, a vessel should heave to or steam. Under good weather conditions, safe anchorage can be had in Hilo Bay. Anchorage is inside pilotage waters and requires local knowledge for safety; vessels should not anchor without Pilot.

RESTRICTIONS: At Hilo, under good weather conditions, vessels with draft up to 32 ft. 6 in. can be handled at any time.

At Kawaihae, vessels with draft up to 33 ft. handled anytime.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.

RADIO: Communicate through RCA or ITT stations in Honolulu.

TUGS: Tugs join vessels at entrance at Kawaihae and at Coconut Island at Hilo. Tug's lines are usually used at no extra charge.

BERTHING: There are many factors which affect berthing at Hawaii Island ports, the most important of which are surge and wind. Vessels should be well equipped with long mooring lines and sufficient additional line to make up 2×900 ft. buoy lines. In all instances, berthing instructions will be given after details concerning vessel and her cargo are received.

Pier No. 1 in Hilo handles bulk sugar vessels and container vessels, 1,220 ft. of berthing space.

Pier No. 3 in Hilo handles tankers, 575 ft. of berthing space.

Kawaihae has one overseas berth which handles both bulk sugar vessels and tankers, 605 ft. of berthing space.

CRANES: Shore cranes available, max. capacity 90 tons.

STEVEDORES: Hilo Transportation and Terminals Co. (Hilo) and Kawaihae Terminals Inc. (Kawaihae).

MEDICAL: All facilities available.

DENSITY: Variable in Hawaii area due to fresh water run-off.

FRESH WATER: Available from county of Hawaii by pipe-line.

FUEL: Can be supplied subject advance notice.

REPAIRS: Limited repair service available; almost any type of machine work, welding and ordinary electrical repairs can be handled.

GANGWAY/DECK WATCHMEN: Required for tankers. Other ships as may be necessary due to special circumstances.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one U.S. quart bottle, wine or spirit.

REPATRIATION: Direct air service to Continental United States and to Honolulu International Airport.

AIRPORT: About 1 mile from Port of Hilo and is served by regular airlines.

POLICE/AMBULANCE/FIRE: *Hilo:* Police 9353311; Ambulance and Fire 961-6022.

Kawaihae: Police 8857334; Ambulance 885-7334; Fire 961-6022.

TIME: GMT minus 10 hours all year round.

TELEPHONES: Special arrangements may be made with Hawaiian Telephone Co.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen's Passports only required.

AUTHORITY: State of Hawaii, Department of Transportation, Harbours Division, Port of Hilo, Hilo, Hawaii 96720. *Tel:* (808) 935-4877. *Contact:* Ian Birnie, District Manager.

AGENT: See "Honolulu".

HOMER, Alaska: 59.36 N. 151.25 W. (See Pla

DOCUMENTS: See "Port of Anchorage, Alaska".

APPROACHES: Via Cook Inlet. Port located at mouth of Kachemak B on Kenai Peninsula.

PILOTAGE:

(1) Southwest Alaska Pilots' Association, Radio KTE 21, Tel. 2 8783.

Pilot boards 1 mile South of Homer Spit Light on Coal Point.

(2) The Southwest Alaska Pilots' Association serves all ports in Co Inlet, Prince William Sound, Resurrection Bay, Kodiak Island, Aleutian Islands, Bristol Bay and Bering Sea. The pilot station for vesse entering Cook Inlet waters is Lat. 59° 36.2′ N., Long. 151° 24.5′ approximately 1 mile South of Homer Spit Light on Coal Point. The pi station cable address is "Homerpilot". The pilot station stands by VHF Channels 10 and 16, 24 hours a day; call sign "WAB-917 Southwe Pilots". The pilot station also stands by on single side band radio follows:

8284.4 kHz between 0800 and 1200 hrs. Alaska time, weekdays.
4136.3 kHz between 1300 and 1700 hrs. Alaska time, weekdays.
Call sign "WAB-917 Southwest Pilots".

ANCHORAGES: Kachemak Bay is excellent anchorage for vessels any size. Foreign vessels may enter bay to anchor, but must have Pilot aboard to come to dock.

MAX. SIZE: Harbour depth 40 ft. MLLW. Tidal range 28 ft. (−6 ft. +22 ft.) Max. draft for berthing 30 ft. at MLLW.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illne Reports made to Seattle Quarantine Station.

RADIO: Homer Port Radio monitor CB Channel 17. Call sign "KO 7188 Port of Homer".

VHF: Homer Port Radio monitor Channel 16. Call sign "WHG-651".

TUGS: 1 tug available.

BERTHING: Homer City Dock, 410 ft. long and 50 ft. wide. Limited draft of 30 ft. at MLLW. 3 privately owned mobile cranes availab Capacity 15, 35 and 70 tons.

410 ft. face with sloping bottom suitable for vessels with 20 ft. draft less at chine. Inside and outside storage is available for holding a staging. Water, gasoline and diesel are available on dock.

MEDICAL: Homer Hospital is a 38 bed hospital with 5 full-time doctor

FRESH WATER: Available from the berth.

FUEL: Available for small craft only.

REPAIRS: No facilities for repairs.

EMERGENCIES: Police department and a volunteer fire department a available plus a rescue truck.

AIRPORT: Daily air service.

GARBAGE DISPOSAL: Skips are provided. Port Authority reques prior notification for large quantities of rubbish.

WASTE OIL DISPOSAL: Service not available.

SEAMAN'S CLUBS: None.

AUTHORITY: Port of Homer, 4350 Homer Spit Road, Homer, Alask AK 99603-7624, U.S.A. *Tel:* (907) 235-3160. *FAX:* (907) 235-315 *Contact:* Richard David, Harbour Master.

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health.
Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registry.
Annual Inspection Certificate.
Load Line Certificate.
Derat Certificate.
Radio Certificate and Licence.
4 Stores Lists.

Vessels scheduled to call at Pearl Harbour are required to furn 6 copies of Crew Lists and Passenger Lists, if applicable, at lea 1 working day prior to arrival, for Naval security requirement.

The United States Immigration Service requires that the Master vessels manned by alien crew members arriving from a foreign po present the United States Immigration and Naturalisation Servic Officer with a current Crew List (Form I-418) properly visaed in th possession. An I-94 should be prepared for each passenger prior vessel's arrival.

U.S. Immigration Department representatives are not stationed at a Hawaiian outports. Customs Officials, however, are stationed at all en ports and accomplish both Customs examination and Immigration.

The United States Agriculture Service examines and seals sh stores from restricted ports. Special arrangements for garbage dispo may also be required by this Agency, if for example meat aboard h been purchased in a port where there is a high incidence of "hoof a mouth" disease. All garbage should be disposed of prior to arrival port.

All regulatory bodies assess overtime charges for services of th personnel if rendered on Saturdays, Sundays, holidays or after ho on week-days.

PILOTAGE: Pilot requested by Agent. Channels 16, 12 and 9, call "WXZ 456". Pilot boat, 37 ft. cabin cruiser, yellow with black striping. Only "H" flag necessary for vessel requiring Pilot. Pilot station, Lat. 21° 16′ 12″ N., Long. 157° 53′ 24″ W., no alternative.
ANCHORAGE: Except during strong Kona (Southerly) winds, anchorages for deep-draft vessels exist outside the harbour in Mamala Bay off Sand Island and West of the Main, or Fort Armstrong Channel. The anchorage is located within 600 yards on either side of an underwater sewer outfall line. Anchorage is not permitted inside the harbour due to the limited swinging room. An explosives anchorage area lies 1.3 miles West of Sand Island's Kalihi Channel, directly off Keehi Lagoon.
RESTRICTIONS: Entry at any time subject to harbour control signals. 24 hours' notice of arrival is obligatory.
MAX. SIZE: *Entrance Channel:* Depth 45 ft. *Harbour:* Depth 40 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.
RADIO: VHF Channel 16, call KFQ907, Aloha Tower Harbour Control Station.
TUGS: 30 tugs. Tugs normally join vessel within harbour limits. Both ship's lines and tug's lines used depending on conditions.
BERTHING: Berthing given on a "first-come-first-served basis" according to type of vessel and particular requirements as to cargo, bunkering, etc. Must be arranged through a local shipping Agent.

Pier No.	*Length* (ft.)	*Depth* (ft.)	*Use*

34	209	31	Petroleum products, bulk cement, bunkering vessels.
35	705	18-28	Scrap metal and general cargo.
36	978	20–35	Pineapples and general cargo.
38	62	12	LPG.
39	2,139	13-33	Autos, steel, general and bulk cargoes.
40	2,260	26-34	Autos, lumber, cement, grain, general and bulk cargoes.
51A	556	38	Containers and jet fuel.
51B	800	38	Containers.
52–53	1,746	41	Containers, general cargo, molasses, autos and Roll-on/Roll-off.

STEVEDORES: Gangs must be ordered 24 hours in advance. General cargo, average load per hour: 15 long tons; average discharge per hour: 15 long tons.
MEDICAL: Agents would like as much advance notice as possible. Complete medical facilities available. Vaccinations in accordance with U.S. Public Health requirements.
TANKERS: 4 tanker berths, max. draft 36 ft. No slop discharge facilities. *Pearl Harbour:* U.S. Navy Terminal. Max. LOA 800 ft. Max. draft 38 ft. 6 in.

Also see Sections "B" and "C".
DENSITY: Pure salt water, no fresh water allowance.
FRESH WATER: Delivered via 2.5 in. fire hose with meter on pier. Rate of delivery between 30 t.p.h. and 60 t.p.h., depending on the berth.
FUEL: All U.S. grades available, no advance notice other than establishment of credit.
FIRE PRECAUTIONS: Fire wires required by tankers berthed alongside. Permit required for hot work whilst in port.
CONSULS: The following countries are represented in Honolulu:

American Samoa
Australia
Austria
Denmark
Finland
France
Germany
Great Britain
Guatemala
India
Indonesia
Italy
Japan
Korea
Mexico
Monaco
Nauru
Netherlands
New Zealand
Norway
Panama
Philippines
Portugal
Sweden
Switzerland
Thailand
Western Samoa

REPAIRS: All types of deck and engine repairs possible. Hull repairs below water-line in accordance with dry dock capacities.
DRY DOCKS: Commercial within Honolulu Harbour. Dry dock: 2,800 long ton lifting capacity, 385 ft. long, 56 ft. wide. Floating Dock: Lifting capacity 2,620 tons. Length 200 ft. Width 100 ft. Marine railway: 1,400 long ton lifting capacity, 223 ft. long, 65 ft. wide.

Commercial within Barber's Point Harbour. Dry dock: 7,875 long tons lifting capacity, 516 ft. long, 110.5 ft. wide.
GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.
OPENING/CLOSING HATCHES: Normally carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle, U.S. quart, wine or spirits.
REPATRIATION: All facilities, crews generally leave State within 24 hour period.
AIRPORT: International airport, served by all major airlines, 5 miles from harbour.
TIME: GMT minus 10 hours all year round.
HOLIDAYS:

New Year's Day	January 1st or following Monday
Dr.Martin Luther King, Jr. Day	Third Monday in January
President's Day	Third Monday in February
Kuhio Day	March 26th or nearest Monday or Friday
Good Friday	Friday before Easter

(B) HAWAIIAN INDEPENDENT REFINERY INC. (HIRI) – BARBER'S POINT

LOCATION: The HIRI CALM – Type Single Buoy Mooring (SBM) is approximately 2 miles bearing 146° True from Barber's Point Light on the Island of Oahu, Hawaiian Islands. Position: Lat. 21° 16.4′ N., Long. 158° 05.5′ W.

DOCUMENTS: *Arrival and Departure Requirements:* All arrival and departure requirements are handled through the ship's Agent. All matters related to arrival or departure should be referred to that Agent.

VESSEL ACCEPTANCE: In order to maintain safe control, all vessels must be nominated to and accepted by HIRI prior to arrival. HIRI reserves the right to refuse any nomination due to vessel's specifications or previous experience with vessel or similar vessels. As a guide, vessels calling at the HIRI SBM should be in compliance with the "OCIMF" publications "Recommendations for Equipment Employed in the Mooring of Ships at Single Point Moorings", and "Standards for Oil Tanker Manifolds and Associated Equipment".

The minimum SWL for the vessel's port hose handling boom or crane should be 10 tons for all vessels.

Tankers should have sufficient clean ballast for safe manoeuvring.

Officer accommodation should be available for 2 Pilot/Mooring Masters and one Inspector, meals are to be provided for all three.

PILOTAGE: The area of the HIRI and Chevron moorings at Barbers Point were designated as a Federal Pilotage Area, effective 1st May 1991. Tankers will be boarded by a team of 2 HIRI Pilots/Mooring Masters approximately 3 miles South of Barbers Point light, or at anchorage if the vessel is proceeding to the SBM from waiting at anchor. The pilot ladder should be rigged to provide an adequate lee for safe boarding. The vessel, if underway should maintain minimum headway. The end of the ladder should be 1.0 m. above the water and crew should be standing-by on deck with a heaving line, in order to take aboard the Pilots' equipment and gear. The Pilot/Mooring Masters will usually board from a small assist mooring tug.

The Pilot/Mooring Masters will initially meet with the Master and advise on approaches to the SBM berth, mooring and unmooring and all cargo operations to be undertaken by the vessel. Manoeuvring of ships within the limits of the terminal shall be done with the advice of the pilot, subject to the understanding that in all cases the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's owners for the safety and proper manoeuvring of the vessel. The Master or a qualified Deck Officer must be on the bridge at all times when the vessel is manoeuvring.

ANCHORAGE: Vessels have anchored in the vicinity of 21° 16.6′ N. and 158° 03.5′ W. while waiting for their berthing opportunity. In doing so they are cautioned to remain clear of the approaches to both the HIRI and Chevron offshore terminals. Vessels are also cautioned not to anchor within the charted restricted anchorage to the East of the mooring area.

The Honolulu Harbour Master has directed that all tankers awaiting their turn at the Barber's Point moorings shall anchor in the vicinity of the moorings in lieu of the anchorages off-port Honolulu.

As this is a Federal Pilotage Area, the vessel should contact its Agent regarding pilotage requirements and a proper anchorage location so as not to interfere with ongoing tanker operations at the two petroleum berths in the area.

RESTRICTIONS: Berth and terminal operate 24 hours a day. Mooring and unmooring during hours of darkness is customary. At times weather and sea conditions can deteriorate to the extent that mooring operations are suspended and/or vessel must be unmoored.

MAX. SIZE: In general, tankers having these maximum particulars are acceptable:

LOA	945 ft.
Summer d.w.t.	150,000 tons
Bow to centre manifold	470 ft.
Draft	Depth of water at the berth is in excess of 80 ft.

TUGS: Two mooring assist boats are used during the mooring operation. One boat will assist with lifting the mooring hawser/chain to the vessel, while the other will tend the floating hose string. Following mooring, one vessel will remain at the berth made fast to the vessel's stern to prevent the vessel from over-riding the SBM buoy, while the other will assist with lifting the floating hose string to the vessel, and will then standby as an emergency/oil spill response boat.

By order of the U.S. Coast Guard Captain of the Port, all laden or partially laden tankers, mooring or unmooring at the HIRI SBM must have adequate tug assistance standing by until safely moored or unmoored and well clear of the terminal.

Tugs are available from Honolulu and can be arranged by the vessel's agent.

RADIO: 72 hours, 48 hours and 24 hours prior to arrival, tankers should advise HIRI/Primarine (Telex 7431356) of their ETA.

VHF: During loading/discharging operations, the Pilot/Mooring Master will have 2 portable VHF transmitter/receiver radios for communications between the tanker and HIRI Pumphouse Control Station.

Pacific Resources Terminals, Inc. and Hawaiian Independent Refinery Inc. have been licensed to use the following Simplex VHF frequencies:

Channel 6	Emergency	156.30 MHz
Channel 9*	Ship to Shore (primary)	156.45 MHz
Channel 16	Calling/Emergency	156.80 MHz
Channel 19A*	Ship to Shore (Secondary)	156.95 MHz

(*Either 9 or 19A may be used as working Channel).

HIRI Pumphouse	Call Channel 16, Communicate Channel 9/19A, Call sign: "KTD 466".
Pacific Resources, Inc.	Call Channel 16, Communicate Channel 9, Call sign: "KIZ 799" (Not guarded).

Other useful VHF Channels are:

Aloha Tower, Honolulu Harbour Control:	Call Channel 16, Communicate Channel 12, Call sign: "KFQ 907" (Guarded 24 hours)
Honolulu Pilots:	Call Channel 16, Communicate Channel 12, Call sign: "WXZ 456"
Chevron Shipping:	Call Channel 16, Communicate Channel 10, Call sign: "KEN 778"
Davies Marine Agencies:	Call Channel 16, Communicate Channel 11, Call sign: "KXJ 712"
Hawaii Pacific Maritime:	Call Channel 16, Communicate Channel 10, Call sign: "KMC 208"
P & R Water Taxi	Call Channel 16 Call sign: "WYH 6327"
Hawaiian Tug & Barge (Pier 21)	Call Channel 16, Communicate Channel 18A Call sign: "WLX" (Guarded 24 hours)
Uakewai Diving, Salvage & Fishing, Inc./Marine Logistics, Inc.	Phone: 947-6881 or 737-4312
M/V "Nene"	Call sign: "WSR 3068"
M/V "Na'ina"	Call sign: "WAD 9752"
M/V "Nahiku"	Call sign: "WTE 4880"
M/V "Nanui"	Call sign: "WBD 2554" Call Channel 16, Communicate any working Channel

TERMINAL FACILITIES: Hawaiian Independent Refinery, Inc. (HIRI) located onshore to the East of Barber's Point Light about 2 miles fro the offshore marine terminal.

The offshore terminal consists of a CALM type single point moori buoy. A 30 in. crude pipeline, a 20 in. clean product pipeline and a 16 i bunker pipeline connect the SBM to the shore. 3×840 ft. long 16 i floating hoses reduced to 12 in. over the rail, connect the tanker to th SBM. Flanges on all hoses are standard 150 pound ANSI-B 12 in. la ring type.

Crude oil is normally discharged through 2 hoses with a ma operating pressure of 150 p.s.i. and a max. flow rate of 33,000 bbl./h per hose. Loading rates vary between 6,000 bbl./hr. and 12,000 bbl./h depending on the product.

BALLAST: Normally, no dirty ballast is accepted. However, with pr notification, facilities can be made available to receive limited quantities The vessel will be charged for use of the refinery ballast facilities.

Tankers must arrive with sufficient clean ballast for safe handlin having due regard to existing weather and sea conditions. It is th responsibility of the Master to ensure that no oil or contaminated balla of any kind is pumped overboard. Inspection of ballast is strict. Any trac of oil on the surface of the ballast will preclude overboard discharges

Tankers equipped with a segregate ballast system are permitted t discharge cargo and load ballast simultaneously with prior approval the Pilot/Mooring Master.

MOORING/UNMOORING: Prior to mooring, the Pilot/Mooring Maste will deliver a copy of the "General Instructions, Discharging/Loadi Orders and Indemnification Letter" to the ship's Master for his signatu (see Appendix). By his signature he agrees, on behalf of his owners, t comply with all relevant terminal conditions.

The ship will moor to a single hawser through the forward centreli Panama fairlead. The hawser is 165 ft. long, connected to a 40 ft. lon chafe chain. A 350 ft. long 10 in. poly pick-up line is attached to th chain for heaving it on board. The chafe chain will be secured usi either a bow chain stopper, Smit-type bracket or vessel's bitts with terminal supplied nylon snotter, depending on the type of moori equipment installed on the vessel.

The deadweight tonnage and size of mooring equipment on the vess will determine whether she is moored to the 76 mm. (3 in.) or the 54 m (2.15 in.) portion of the chafe chain.

The ship's crew is responsible for securing the mooring chafe cha with advice from the Pilot/Mooring Master. A suitable messenger li should be available on the fo'castle to retrieve the mooring hawser pic up line. A ship's deck officer shall be on the bow during mooring an unmooring operations. The Pilot/Mooring Master will be stationed on th bridge to advise the Master and crew during approach and moori operations. A second Mooring Master will be stationed on the bow.

HOSES/CARGO OPERATIONS: The ship's crew is responsible f connecting and disconnecting hoses. A ship's deck officer shall be i the area of the cargo manifolds during hose handling operations. A Pil Mooring Master will be available to advise crew during hose operatio

The ship's crew is responsible for all cargo operations. The Pil Mooring Master will advise with respect to operating conditions an hazards, but will not direct the loading or unloading.

It is dangerous to close ship's valves against the oil stream. Such procedure creates excessive pressure which may damage termi facilities. Tankers will be held liable for damages resulting from failu to observe this precaution.

The Pilot/Mooring Master reserves the right to suspend oil transf operations, if necessary, to protect the terminal facilities or th environment.

All rules and regulations concerning safety, local conditions, termi operations and oil transfer will be carried aboard the tanker by the Pil Mooring Master.

The following are specific requirements for all vessels while moori at the HIRI SBM:

1. The vessel's main engines, steering gear and all necess equipment shall be maintained in a condition to allow immedi manoeuvring of the vessel.

2. A qualified live bridge watch shall be maintained at all times while moored to the SBM.
3. A qualified bow/SBM lookout shall be maintained to report if the ship begins to encroach upon the buoy. This lookout shall be in radio contact with the bridgewatch.
4. A suitable towing line shall be available on the stern for towing, to maintain clearance between the vessel and the SPM buoy.
5. Sufficient crew shall be available to disconnect hoses, unmoor and get underway at all times.
6. An officer fluent in English shall be on duty at all times.
7. Oil transfer shall cease if radio communication with the terminal is lost.
8. Oil transfer shall cease and the U.S. Coast Guard notified if oil is spilled.

All tankers are expected to unmoor as soon as practicable after completion of cargo operations. The ship's crew will disconnect hoses and unmoor. During unmooring a Pilot/Mooring Master will be stationed on the bridge to advise the Master. A second Mooring Master and will assist from the bow.

FRESH WATER: Not available at SBM. Available at limited locations in Honolulu Harbour.

FUEL: Subject to availability, bunker and diesel fuel can be supplied at the SBM. Prior arrangements with HIRI are required. Fuel can be delivered by barge in Honolulu or off port.

Bunker orders: Telex 7430292 or Telephone 808-547-3269, 3205.

MEDICAL: Honolulu has many excellent medical facilities and hospitals. Services can be arranged by local agent.

REPAIRS: Limited ship repair facilities are located in Honolulu.

STORES: Stores are available in Honolulu. Stores cannot be loaded while the tanker is in the mooring, except with express permission of the Pilot/Mooring Master.

AIRPORT: Honolulu International Airport has regularly scheduled flights to all parts of the world.

TIME: The Hawaiian Islands observe "Hawaiian Standard Time" year round which is GMT minus 10 hours. Daylight Savings Time is not observed.

WEATHER/TIDES: The Master is referred to published sailing instructions for this area for information on tides, currents, wind and weather.

The Hawaiian Islands are dominated in all seasons by tradewinds from the N.E. These tradewinds are present about 75% of the time and their average velocity is 12.5 m.p.h. They exceed 20 m.p.h. approximately 2% of the time; however, gusts approaching 100 m.p.h. are possible.

Hawaii's average temperature ranges from about 74°F in March to 79°F in September. Almost everywhere in Hawaii, the warmest and coolest months differ, on the average, by only 9° or less.

"Kona" weather refers to the Southerly winds which occur most frequently during the months of October through April. During these storms, heavy rainfall and cloudiness can be expected. Moorings scheduled during these months may be subject to delay.

The predicted times and heights of the high and low tides are published for Honolulu. The periodic tides around Barber's Point average only 1 ft. to 2 ft. and are normally mixed. The effect of strong winds added to normal tidal action may cause water levels to fall considerably below chart datum and/or rise considerably above MHHW. At Barber's Point where the trades usually blow directly off the land, a shift to Kona winds or to a calm has been observed to raise the tide level a few tenths of a foot.

Currents at the mooring normally run parallel to shore in an Easterly and Westerly direction. The maximum velocity varies from 3.0 ft. per second on the surface to 1.3 ft. per second 3 ft. above the sea bottom.

Tsunamis or tidal waves are possible in this area although quite infrequent. On receipt of a tsunami warning, tankers will be unmoored and will proceed to safe locations until the warning is lifted or the danger is passed.

APPENDIX:

TO: Master

SUBJECT: GENERAL INSTRUCTIONS, DISCHARGING/LOADING ORDERS AND INDEMNIFICATION

Welcome to Hawaiian Independent Refinery, Inc. (HIRI) Marine Terminal, Barbers Point, Hawaii. Please be advised that in addition to those Regulations mandated by the U.S. Coast Guard for vessels operating in U.S. waters, the following instructions and guidelines are provided to encourage safe operations while your vessel is moored at the HIRI Marine Terminal.

A. GENERAL. It is expressly understood and agreed that at all times and under all circumstances, the Master of the vessel will remain solely responsible to his vessel and her Owners for manoeuvring, mooring and unmooring of the vessel, connecting and disconnecting cargo hoses, discharging and loading cargo, ballasting and deballasting, pollution prevention and adherence to Coast Guard Regulations as well as to these instructions.

B. POLLUTION PREVENTION. A Mooring Master team has been assigned to assist in the mooring of your vessel, connecting of cargo hoses, discharging/loading of cargo, disconnecting cargo hoses, unmooring and departing from the Marine Terminal, as well as to provide information on matters relating to the Terminal facilities. The Mooring Masters additionally will act as a Pollution Prevention Officer. In this capacity, he will maintain surveillance over cargo operations and require that all regulations be observed. The Mooring Masters may direct your vessel to discontinue cargo operations or unmoor at any time they deem it necessary for the safety of the vessel or the Marine Terminal, or to prevent violations or infringement of U.S. Coast Guard Regulations or these instructions.

C. INDEMNIFICATION. It is understood and agreed by you on behalf of the vessel and its owners that the Mooring Master(s), operators and crews of tugs, assist and standby boats and said boats and tugs, are supplied upon the condition that in the performance of any service they may render to your vessel, they are the servants of the vessel and its owners in every respect and not the servants of BHP Transport, Hawaiian Independent Refinery, Inc., Pacific Resources Terminals, Inc., Pacific Resources, Inc., or its subsidiaries, or the owners of said boats and tugs. It is further agreed that the vessel and its owners shall indemnify and hold harmless BHP Transport, Hawaiian Independent Refinery, Inc., Pacific Resources Terminals, Inc., Pacific Resources, Inc., or its subsidiaries, or the owners of the assist and standby boats, from any liability, loss claims or damages arising out of the rendering of services to your vessel by said Mooring Master(s), operators, crews and boats, whether or not arising out of the fault of said Mooring Master(s), operators, crew or said indemnitees. In addition, it is expressly agreed that the presence of the Mooring Masters(s) on board in no way relieves you, the Master of the vessel, of any of your legal responsibilities. FINAL DECISIONS REMAIN YOUR PEROGATIVE.

D. CHARGES. Charges for the service of the Mooring Master team will be for the account of your vessel and owners, in accordance with the Mooring Master Service Statement provided to you.

E. LANGUAGE OF PORT. The official language of the Marine Terminal is English. The ship will provide personnel available at all times capable of communicating in English with the Mooring Master and between the ship and personnel ashore.

F. DISCHARGING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. When the vessel is ready in all respects to commence cargo operations, and the HIRI personnel have indicated their readiness to receive cargo, the vessel shall commence the discharge of cargo at the rate of approximately 12,000 U.S. bbls.p.h. in order to displace the material in the pipe-line. Thereafter, upon receipt of instructions from the Mooring Master, vessel shall increase to maximum pumping rate using all main cargo pumps, but not exceeding either 150 p.s.i. at the vessel's rail or a flow rate of 34,000 b.p.h per 12 in. cargo hose.

G. LOADING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the ship's manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. Prior to commencement of loading, the tanks must be inspected by an independent third party inspector to determine whether the tanks are in suitable condition to receive cargo. When the vessel is ready in all respects to receive cargo, it must notify the Mooring Master who, in turn, will co-ordinate the commencement of loading with the refinery. The refinery will commence loading at the rate acceptable to you and will increase the loading rates as per your instructions. The maximum refinery loading rate is approximately 12,000 b.p.h.

H. BALLASTING. For the safety of your vessel and at your discretion based upon the weather, sea and wind conditions, etc., the discharge of cargo should be arranged so that when approximately 65% of the total cargo has been discharged, there will be sufficient empty and dry tanks to accommodate ballast as required to produce a mean draft of approximately 25 ft. and in a trim condition, not to exceed 6 ft. by the stern upon the completion of discharging operations. The independent third party inspector will conduct the inspection of the tanks prior to the loading of ballast and again upon the completion of discharge of all cargo.

I. OIL SPILL/OTHER POLLUTION. It is unlawful to pollute the waters of and adjacent to the State of Hawaii. It is the responsibility of the Master of the vessel to assure that no oil (crude oil, bunker fuel, diesel, bilge oils, etc.) is spilled or pumped overboard. Drip pans must be provided at the flange connections. In the event of an oil spill, or any other occurrence which results in pollution of the sea, the U.S. Coast Guard, the Mooring Master and the vessel's "Agent" must be notified immediately. The Mooring Master will notify the U.S. Coast Guard immediately if the ship's Master fails to do so. By Federal Order CFR 153.305, no dispersants will be applied to an oil spill without U.S. Coast Guard approval. Failure to report pollution, regardless of the extent thereof, will result in severe penalties being imposed by the State of Hawaii and the U.S. Coast Guard. Please note that no garbage or trash will be discharged in the mooring.

J. EMERGENCY UNMOORING. A sufficient number of officers and crew members must be on board at all times to disconnect the hoses, unmoor, and vacate the berth, should such action become necessary, or be deemed advisable. The main engine shall be ready to manoeuver on immediate notice during the time the vessel is in the berth. Under no circumstances are engine repairs to be undertaken while the vessel is moored in the sea berth.

K. MISCELLANEOUS. 1. Under the order of the Captain of the Port, the vessel shall maintain a qualified live bridge watch at all times.
2. The vessel shall maintain a full-time lookout on the forecastle, who is in continuous radio communication with the bridge watch officer to report if the ship begins to encroach upon the buoy.
3. We desire that the discharge and/or loading of cargo will be done safely and efficiently and that your stay in Hawaii will be pleasant. To this end, please do not hesitate to call upon us for any assistance we may be able to render.

You are requested to sign and return the attached copy of these instructions in acknowledgement of receipt, understanding, and agreement therewith.

Pacific Resources Terminals, Inc.
Port Superintendent.

____
Master

____
Date and Time

GENERAL: All tankers calling at United States ports must undergo inspection by the United States Coast Guard. Upon successful completion they will be issued a "Tank Vessel Examination Letter" that is valid for one year. No tanker is permitted to transfer oil without a valid "TVEL".

"Notice of Readiness" will not be accepted at time of arrival unless the tanker is in all respects ready to load or discharge.

Laws of the United States govern this terminal and all personnel are required to abide by them. Regarding any matter in question, it is the responsibility of the Master to obtain the necessary clarifications from his local agents.

OPERATOR: Hawaiian Independent Refinery, Inc., 733 Bishop Street, P.O.Box 3379, Honolulu, Hawaii 96842. *Tel:* (808) 547-3395/3715. *Telex:* ITT 7431356. *FAX:* (808) 547-3807. *Cables:* Primarine. *Contact:* Captain William Aldenderfer, Port Superintendent.

(C) CHEVRON U.S.A. INC. – BARBER'S POINT:

LOCATION: Chevron U.S.A. Inc. has been granted the use of the following anchorage for its Barber's Point Offshore Tanker Terminal:

The waters of the Pacific Ocean within an area beginning at a point in Latitude 21° 16′ 58″ N. and Longitude 158° 04′ 39″ W., thence on a bearing of 090° true, 850 yards, thence on a bearing of 180° true, 450 yards, thence on a bearing of 270° true, 850 yards, thence on a bearing of 000° true, 450 yards to the point of commencement.

The centre of the above described area is on an "approximate" bearing of 119° true, 2.3 miles from the Barber's Point Light. The four corners of the mooring are marked by buoys. The two Southerly corners of the area are marked by lighted buoys which are painted yellow and red and are in 84 ft. of water. The Northerly corners of the area are marked by white spar buoys and are in 66 ft. of water. The area is designated as Area "C" – See "Plan".

The offshore terminal facilities in the above described area are owned and operated by the Chevron U.S.A. Inc., Hawaiian Refinery, and serve to handle cargo between the refinery at Barber's Point and tankers calling at the terminal.

The offshore tanker terminal is the responsibility of the Blending and Shipping Area Supervisor, Chevron U.S.A. Inc., Barber's Point, Oahu, Hawaii. The marine representative in Hawaii is the Chevron Shipping Company Port Captain. He is responsible for all ship operations.

DOCUMENTS:

A. *For Immediate Entry for Customs* (for Preliminary Entry Certificate Issuance):
 Original and 3 copies of I–418, Crew List and Passenger List.
 Original and 3 copies of CF–1304, Customs Crew Effects Declaration.
 Original and 3 copies of CF–1303, Customs Ship's Stores Declaration.
 Original and 3 copies of CF–1301, Customs General Declaration.
 Original and 3 copies of CF–1302, Customs Inward Foreign Manifest.
 Original and 3 copies of CF–1300, Customs Master's Oath of Entry.
 For Immigration Inspector:
 Visaed Crew List (Form I–418) or Waiver prepared in lieu – fee U.S.$15.00.
 Form I–95, completed for each crew member for issuance of D–1.
 For USDA Inspector (when entering Honolulu Harbour):
 Shipmaster's Declaration (AIQ–43) – (Inspector will bring on board).

B. *Required for Formal Entry and Clearance at U.S. Customs House:*
 Entry:
 Original set of Preliminary Entry Manifest as prepared dockside (see above).
 Port Clearance (last port).
 Vessel's Certificate of Registry.
 U.S. Tonnage Tax Receipts (CF–1002), prior voyages.
 SOLAS Certificate (Safety Equipment Certificate).
 Load Line Certificate.
 Certificate of Financial Responsibility (CFR).
 Clearance:
 Master's Oath of Clearance, original and 2 copies, CF–1300.
 General Declaration, original and 2 copies, CF–1301, signed by Master.

PILOTAGE: Pilotage is compulsory for all vessels using the berth. This service is performed by the Chevron Shipping Company Mooring Master who remains aboard the vessel the entire time the vessel is in the berth. The Mooring Master will advise the vessel's Master on approaching and departing the berth, mooring, and unmooring. With the concurrence of the vessel's Master, this advice may take the form of directions to members of the vessel's crew. All manoeuvring within the mooring area should be done in accordance with the advice of the Mooring Master. Nevertheless in all cases the Master of the vessel shall remain solely responsible on behalf of the vessel's owner, for the safety and proper manoeuvring of the vessel. The vessel's Master and a qualified deck officer must be on the bridge at all times while the vessel is manoeuvring.

Pilot Station: When not anchoring on arrival, a Chevron Shipping Company Mooring Master will board arriving vessels. For vessels arriving, the Mooring Master boards about 2 miles South of the anchorage area.

ANCHORAGE: Pilotage is not required for anchoring in the Barber's Point Terminal area. Foreign flag vessels, however, should not enter inland waters North of a line connecting Barber's Point Light to Diamond Head Light and all vessels must remain clear of several prohibited anchorage areas. Masters should be aware that this is a very limited area for anchorage with deep water and poor holding ground. Vessels awaiting berth may anchor, however, in such a position so that the approach to and departure from the berths is not impeded. Chevron recommends (but does not warrant the safety of) anchoring within a 500 yard radius circle centred on position: Latitude 21° 16.2′ North, Longitude 158° 03.7′ West (approximately 3.2 miles East–Southeast of Barber's Point Light). Vessels should not anchor directly South of the Chevron U.S.A. Berth unless next scheduled for berthing as notified by Chevron Shipping Company, Honolulu.

RESTRICTIONS: Mooring operations are conducted in daylight on Unmooring operations can be conducted at any time, day or nig weather permitting.

MAX. SIZE: *Berth Capacity:*

A. Maximum length overall 1,000 ft.
B. Maximum distance stern to centre manifold 500 ft.
C. Maximum deadweight tonnage 150,000. Chevron may allow vess of a larger size under special circumstances to be determined on case–by–case basis by Chevron Shipping Company.
D. Maximum draft 50 ft. (salt water) in the Summer. Max. draft is 52 in the Winter. Vessels with a draft greater than 50 ft. (salt water) ma be accepted on a case–by–case basis.

HEALTH: Vessels arriving from a foreign port must clear with U.S Customs and Immigration before handling cargo. This is normally don with the assistance of a local agent. Either the vessel or the agent required to furnish the U.S. Coast Guard at least 24 hours' advanc notice of the ship's arrival time.

The agent brings the port authorities to the mooring area in a launc where they board.

Should a vessel arrive from a foreign port with sickness on board, th U.S. Public Health Service must be notified. This is usually done throug the agent.

TUGS: It is a U.S.C.G. requirement that all laden tankers are require to use tugs for mooring and unmooring. A mooring launch is used t attach the vessel's lines to the mooring buoys and assist in picking u the submarine hoses. A mooring launch stands by continuously to assis in unmooring and in any emergency which may arise while the vess is in the berth.

BERTHING: Within the mooring area there are 7 mooring buoy Vessels should moor by using both of the ship's bow anchors and t running lines to the mooring buoys.

Mooring Equipment: Chevron U.S.A. Inc. reasonably believes, but doe not warrant, that vessels meeting the following criteria may safely moo at the berth.

A. All ground tackle must be in good working condition. Vessels up t 50,000 d.w.t. must have at least 10 shackles of chain on each ancho Vessels over 50,000 d.w.t. must have at least 12 shackles of cha on each anchor.
B. Mooring wire and rope requirements are shown on the "Summa of Minimum Wire and Rope Requirements" – See "Appendix".
C. To accommodate wires and/or ropes, winches, fairleads, bitts an chocks must be so placed that mooring lines (wires or ropes) ma be handled as follows:
 1. Vessels smaller than 80,000 d.w.t.:
  (a) 3 lines on the forecastlehead or main deck forward (2 t weather side, 1 to lee side).
  (b) 3 lines on the main deck aft (2 to weather side, 1 to lee side It is desirable that winch or warping head arrangement b capable of working one line or wire out of each sid simultaneously.
  (c) 4 lines on the poop deck (2 to weather side, 1 aft and 1 t lee side).
 2. Each synthetic line must be secured to a separate bitt.
 3. For vessels larger than 80,000 d.w.t., fittings must permit doubli of all lines for a total of 14 mooring lines.
D. Each mooring winch must be capable of heaving the first layer wire or rope on the drum at a no–load speed of at least 150 ft./mi and a loaded speed of at least 75 ft./minute. The respective wind speed must be maintained during simultaneous operation of on winch on the main deck forward, one winch on the main deck a 2 winches on the stern and one anchor windlass operating.
E. Mooring winches must be capable of warping the vessel in positi without tug assistance. On a case–by–case basis the Mooring Maste may waive this requirement and utilise tug assistance instea Tugs will be for vessel's account.

Berthing Procedures: The procedure is modified to fit conditions of th berth, wind, current, sea state, vessel size/loading, limitations of vesse mooring gear, and other factors as recognised with the advice of th Mooring Master.

In general, the following procedure is followed for typical berthing

Vessel approaches the mooring on a due North heading, passi approximately 200 yards East of No. 6 mooring buoy.

Starboard anchor is let go at Point A and 9 – 9.5 shackles of cha are paid out on the run, starboard chain is then held.

When starboard chain fetches up leading aft, port anchor dropped at Point B and stern is worked into berth as the starboa chain is held and the port chain is paid out to approximate 8 shackles and the lines are run to the mooring buoys. Then bo chains are adjusted as necessary to position the vessel properly the berth.

Wind and current will largely govern usage of tug assistance a which mooring lines are run out first.

Miscellaneous Vessel Requirements:

A. Vessels should be equipped with a searchlight on each bridge wi to assist in illuminating buoys during mooring and unmooring at nig
B. The ship's crew is required to perform all hose handling wo (including raising, connecting, adjusting, disconnecting, and lowerin the hoses), and adjusting of mooring wires and anchor chains addition, the crew will be required to take aboard a gear basket a to return it to the mooring launch before departure. All of this wo will be done with the advice of the Mooring Master.
C. All vessels are required (at their expense) to provide food a accommodation for the Mooring Master and up to 3 mooring launc personnel for the duration of the visit.

D. All vessels shall comply with regulations and procedures set forth in the Operations Manual for the Chevron Barber's Point Offshore Tanker Terminal in addition to U.S. Coast Guard Regulations set forth in Title 33 of the Code of Federal Regulations (33 CFR). In the event of conflicts between the Operations Manual and the USCG Regulations, the provisions of the USCG Regulations shall prevail, except when provisions set forth in the Operations Manual are more stringent than USCG's and other government regulations.

E. All vessels are subject to inspection to confirm their suitability for the Barber's Point berth. Vessels not meeting any one of the requirements may be refused berthing.

F. Vessels may be required to unberth and/or otherwise incur delay during adverse weather conditions.

Departure from Berth: The procedure for leaving the berth is conventional for such moorings and includes the following steps:

Hose is disconnected, blinded and lowered to the sea bottom.

Lines to buoys are slacked by the vessel's crew then released at the buoy by the mooring launch crew.

Anchors are either heaved in simultaneously or the port anchor is heaved in first, while No. 5 line is held until the vessel's stern is well clear of the spar buoys.

Mooring Master leaves the vessel after it is underway and clear of the moorings.

HOSES: Two pipelines serve to transfer products between the terminal and the refinery, 1×20 in. diameter and 1×30 in. diameter. Hose strings attached to the ends of each of these pipelines are raised by lifting the free end of the hoses by their attached buoys and chains. When the free end of the hose string is above the vessel's deck, the hose string is secured to the vessel by an attached chain bridle between the end and second lengths of the hose string. The end of the hose is then lowered in a smooth curve to the deck, the cap removed and the hose connected to the vessel's manifold. Both pipelines and hose strings terminate on the port side of the vessel.

The hose string description is as follows:

Pipeline	*Hose Order from Shore*	*No. of Sections*	*Hose Diameter* (in.)	*Hose Length* (ft.)	*Total Length* (ft.)
20 in.	1	1	16	25	25
	2	5	16	30	150
	3	2	12	30	60
	Total	8		Total	235
30 in.	1	1	16	25	25
	2	10	16	30	300
	3	2	12	30	60
	Total	13		Total	385

Each hose string is terminated on the free end of the last 12 in. diameter section by a lever–operated, blanked butterfly valve and a standard 12 in. 150 ANSI flange. The 20 in. system is normally used for transferring gasoline products. The 30 in. system is normally used for transferring crude oil and fuel oil.

The submarine pipelines extend nearly 2 miles to the shore and then approximately one additional mile across flat land to the Chevron Refinery. Both submarine pipelines contain internal gut water lines which can be used to provide heat when hot water is circulated through them. Water is pumped out one gut line from the refinery and returns through the other. The two gut lines are connected at the seaward end by a short submarine hose.

Hose Handling/Cargo Transfer Equipment Requirements:

A. Port hose boom and related equipment shall have minimum safe working load capacity of 10 long tons except that vessels up to 30,000 d.w.t. may have 7 long ton minimum safe working load capacity.

B. Bitts for hanging-off the hose chain should be provided in front of the port side manifold. If the vessel is to load bunkers while handling cargo, separate bitts shall be provided for the bunker hose, also on the port side.

C. Rail to manifold distance should not be less than 15 ft. Top of roll bar should not be higher than the lower lip of the manifold flange(s).

D. All fittings, piping and valves outside of and including the first valve on the ship's cargo and bunker systems must be of steel construction and properly supported by a permanent installation (i.e., vessel must meet the Arco Cast Iron Clause). No more than one reducer outside the vessel's permanent installation will be allowed and in any case all connections must be made inside the oil drip pan.

E. All vessels must have the capability of loading segregated ballast during discharge equal to at least 30% of vessel deadweight. Those with the capability of handling segregated ballast quantity above 30% will be less subject to delay during adverse weather conditions. Vessels may load segregated ballast during discharge of cargo. Ballast may be loaded into unsegregated systems either during cargo discharge or when discharge is interrupted, but only if piping used for ballast is segregated from cargo piping by at least two valves. Single valve separation is acceptable if it can be shown that no leakage will occur through the valve except that in this case ballast cannot be loaded concurrently with transfer of cargo. Vessels not capable of meeting these requirements may be forced to vacate the berth prior to completion of discharge.

BALLAST: There are no shore facilities for handling either dirty or clean ballast at the terminal.

Pollution: It is imperative that no oil or pollutants of any type escape into the water. All regulations regarding pollution of the sea or air must be complied with.

Reporting Oil Discharges or Spill: Any oil spill into the water from a vessel in the moorings, at anchor, or underway in the vicinity of the Terminal shall be immediately reported to United States Coast Guard and the Terminal facility. If a Mooring Master is onboard, he shall notify the shore facility by radio as appropriate. In addition, the ship's Master shall in all cases notify the vessel's agents of the occurrence of the spill, no matter how small nor from what cause. If no Mooring Master is aboard, the vessel shall inform the Terminal facility by the most expeditious means available. Any other notifications required of the vessel by law shall also remain the responsibility of the vessel to carry out.

MEDICAL: Arrangements must be made with the ship's Agent for medical services. Medical services are normally obtained by taking the patients to Honolulu by launch. This is a distance of 12 miles (one way). Ambulance service is provided by the City & County of Honolulu through the island–wide emergency telephone No: 911.

WEATHER: *Normal/Storm Conditions:* The local weather is usually moderate with temperatures between 75°F. to 85°F. and N.E. trade winds between 10 to 15 miles per hour. Tropical storms and hurricanes occasionally affect the islands between June and November. They cause high surfs and wind conditions at the mooring. In Winter months, storms with strong southerly winds called "Kona" winds may render the berth unusable for several days at a time. All vessels must be especially alert to the dangers caused by this type of weather condition.

Other violent winds may occur with the passing of a frontal system or a trough. These are more localised and occur from either the North or the South with violence and little warning.

A complete discussion of local weather is contained in the U.S. Coast Pilot No. 7. Up-to-date weather information is broadcasted by the National Weather Service on 162.55 MHz.

Any changes in the weather should be immediately brought to the attention of the Mooring Master so he may take appropriate action.

Tides and Currents: The maximum tidal range at the Mooring Area is approximately 3 ft. Mean higher high water is 2.0 ft., mean tide level is 0.8 ft. and mean lower low water is 0.0 ft. The extreme low water is −1.0 ft.

Currents normally set from East to West and are unpredictable. However, they do sometimes reverse.

Visibility: The visibility in the mooring area is usually excellent with only rare occasions of limited visibility.

APPENDIX: SUMMARY OF MINIMUM WIRE AND ROPE REQUIREMENTS.

	Wires				Synthetic Lines					
Vessel Size d.w.t.	*Number*	*Diameter* (in.)	*Length (Note 2)* (ft.)	*Breaking Strength* (lb.)	*Number*	*Circumference* (in.)	*Length* (ft.)	*Material*	*Breaking Strength* (lb.)	
Up to 50,000	7	1.25	1,000	130,000	4	8 (minimum) 10 (maximum)	720	Note 3	130,000	
					OR					
	any combination of wires and ropes (per above)									
					OR					
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	Note 1
50,000 to 80,000	7	1.5	1,000	165,000	4	8 (minimum) 10 (maximum)	720	Note 3	175,000	
					OR					
	any combination of wires and ropes (per above)									
					OR					
					11	9 (minimum) 10 (maximum)	720	Note 3	175,000	Note 1
Over 80,000	7	1.5	1,000	165,000	7	8 (minimum) 10 (maximum)	720	Note 3	175,000	

Notes:
(1) Vessels equipped with fewer than 7 wires may be required to unberth and/or otherwise incur delay during adverse weather conditions.
(2) Synthetic rope pendants may be used to achieve the necessary length if the breaking strength of the pendant is at least 1.25 times that required for the wire.
(3) Polyester required. Nylon or polypropylene not acceptable.

FRESH WATER: Not available.
FUEL: Bunkering is not permitted or available at the mooring.
REPAIRS: Repairs which render the vessel incapable of getting underway are prohibited while the vessel is in the berth.
TIME: All islands in the State of Hawaii are on Zone plus 10 (10 hours slow of Greenwich Mean Time) throughout the year. All communications should be in local time.
SAFETY:
Fireboats: A fireboat is available only from Honolulu harbour. Because of the distance to the harbour, this fireboat would be called upon only in the event that the ship's equipment cannot control a fire.
Crude Washing: Crude washing should be undertaken only with approval of Mooring Master. The Shore Control Operator shall also be notified.
Inert Gas Systems: Normally a vessel fitted with an inert gas system (IGS) will not be permitted to carry on cargo operations unless the inert gas system is in good order and in operation. When an IGS equipped vessel arrives with the system inoperative, the vessel will not be berthed until the IGS is repaired and/or put in operation. If after a reasonable time the system is not operative and/or cannot be repaired, the terminal may elect to berth the vessel and carry on the cargo operation under strictly controlled conditions and in compliance with existing governmental regulations. If the IGS breaks down after the vessel has berthed, all cargo operations will be stopped and the terminal may elect to take the vessel off the berth unless the IGS is repaired in a reasonable time. If the IGS cannot be repaired, the terminal may elect to carry on cargo operations under strictly controlled conditions and in compliance with existing governmental regulations.

All time lost because of the IGS being inoperative and/or out of order will be for the vessel's account.
Containment Equipment: The area of the refinery where the marine pipelines emerge above ground is protected by dykes which are designed to adequately impound any oil leakage from valve packings, flange leaks or pipeline leaks.

The Refinery is a member of Clean Islands Council Oil Spill Cooperative (CIC). Should an onshore or offshore oil spill occur, the Refinery has access to all the CIC equipment.

A 650 ft. Rotopak oil boom is placed aboard the ship prior to mooring. This equipment is to provide immediate first response capability in case of an offshore oil spill.

Onshore response time is within one hour. Offshore deployment time is dependent on the availability of tugs. A mooring tug is available to assist in the event of an offshore oil spill, under the operational control of the Mooring Master. Depending on the reason for the spill, ocean conditions, and the vessel's situation, the Mooring Master may or may not allow the tug to return to port to obtain the spill containment equipment.
GENERAL:
Charts and Publications:
The anchorage area is shown on the following charts:
National Oceanic and Atmospheric Administration
19362 – Oahu, Ahua Point to Barber's Point.
19357 – Island of Oahu.
Publications of value and interest are:
Current edition of United States Coast Pilot No. 7 (Pacific Coast).
Hawaiian Refinery Emergency Plans and Procedures Manual.
U.S. Coast Guard Regulations 33CFR153, 154, 155 and 156.
Rules of the Road: All vessels should be aware that inland rules apply inshore of a line connecting the Diamond Head Light and Barber's Point Light.
Provisions: Arrangements for provisions are made with the ship's Agent. Provisions are brought from Honolulu to the ship by launch. Weather conditions usually allow loading only on the vessel's port side. Terminal Regulations prohibit lifting stores with the hose boom while the submarine hose is connected.
Launch Service: If shore leave is allowed, the vessel's Master must make arrangements with the Agent to provide personnel launch service. A mooring launch is provided for line handling. The mooring launch does not leave the terminal area while the ship is in the berth.
Check List: A Marine Terminal Check List has been prepared for vessels using the berth. It must be signed by the vessel's Master and Chief Engineer and the Mooring Master before cargo can be handled. Its purpose is to ensure that important safety and anti-pollution procedures are followed by all personnel aboard the vessel.

PILOTAGE: Compulsory. Radio to local Agent who arranges Pilot a specifies boarding time. U.S. Coast Guard requires 24 hours' notice advance of arrival Galveston Bar. Pilot boats and station on V Channel 66, Bridge to Bridge is Channel 13 and tugs for docking a off-docking on Channel 14. 3 Pilot boats marked "HP No. 1" – 53 "HP No. 2" – 61 ft. and "HP No. 3" – 106 ft. in length. Pilot boa contacted by light in International Morse code; no sound signal. P taken on board at Sea Buoy No. 1, located 6.7 miles from Galvest Seldom, if ever, is water too rough for boarding at above locati Anchorage located in Bolivar Roads, 6.7 miles inward from Sea Bu No. 1.

ANCHORAGES: Vessels are prohibited from anchoring in the Hous Ship Channel or Turning Basin, except in cases of emergency, in wh circumstances they shall anchor as near as possible to the channel ed or Turning Basin so as not to interfere with free navigation or obstru the approach to any pier.

Vessels may anchor in the Gulf of Mexico in the Galveston Entran Anchorage Areas, just inshore of the intersection of the Galveston Sa Fairway with the Coastwise Fairway. Inside Galveston Harbour, federally designated anchorage area has been established along t North side of the Inner Bar Channel, this area is described as follow bounded by the North edge of the channel, extending West from Bu 10 (Latitude 20° 20′ 48.5″ N., Longitude 94° 42′ 52.5″); thence to Bu 12 (Latitude 29° 20′ 43″ N., Longitude 94° 44′ 46.5″ W.) thence 029° Buoy B (Latitude 29° 21′ 15″ N., Longitude 94° 44′ 47″ W.) thence 09 to Buoy A, (Latitude 29° 21′ 05.3″ N., Longitude 94° 42′ 51.4″ W thence 183.5° to the point of origin. This anchorage area is for tempora use of vessels of all types, but especially for naval and merchant vesse awaiting favourable weather and travel conditions. Except when stre of weather makes sailing hazardous, vessels are not permitted to anch in this area for periods exceeding 48 hours, unless longer periods a expressly authorised by the Captain of the Port.

In Galveston Bay, small craft can anchor anywhere outside t dredged channels where the depth is sufficient. The water in the b may be lowered as much as 2 ft., by a "Norther" and vessels sho anticipate this when selecting an anchorage during the Winter.

RESTRICTIONS: None with respect to time of day or night, or with sta of tide.

Notes: (1) Includes 400 ft. channel width.
(2) Includes 300 ft. channel width.
(3) 40 ft. to Brady Island. Authorised.
*All depths refer to the plane of mean low tide.

Tidal Range and Currents of Galveston Bay:
Under ordinary conditions, mean tidal range is 0.6 ft. to 1.3 ft. in the lower and upper parts of Galveston Bay and 0.5 ft. to 1 ft. in the San Jacinto River and Buffalo Bayou. Extreme ranges, under ordinary conditions, are about 2 ft. in the lower part of Galveston Bay, 1.2 ft. in the upper part of the bay and 1 ft. in San Jacinto River and Buffalo Bayou. Freshets cause rises of over 12 ft. in Buffalo Bayou, however, this condition has not occurred since completion of Addicks and Barker Dams for flood control on the upper watershed of Buffalo Bayou. Height of tides is dependent largely on the wind, and during strong "Northers" in Winter season the water surface of Galveston Bay may be depressed 2 ft. below mean low tide.

Report: Mariners are advised that ship-to-ship lightering activity is regularly conducted in the following general vicinities which are 50 miles – 60 miles from the Galveston Sea-Buoy.

Lat. 28° 35′ N., Long. 94° 15′ W.
Lat. 28° 25′ N., Long. 94° 34′ W.

Mariners are urged to use caution when transitting these areas, as they make their way to the Port of Houston.

MAX. SIZE: Max. 850 ft. long, 115 ft. breadth and 39 ft. draft. Tide minimal, affected primarily by wind only. Should a vessel's draft exceed 39 ft., permission to enter must be obtained from the U.S. Coast Guard.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph – ITT – Galveston call letters KLC.

TUGS: Tugs come alongside just off dock or immediately prior to entering turning basin if vessel is to turn, or at Pilot's discretion.

BERTHING: No special requirements other than authority from terminal operator local Agent.

*Dredging is accomplished every 4 years.

Care Shipping Inc.: Located 12 miles East of Houston. Deep-water terminal. Length 500 ft. Depth alongside 38 ft.

Manchester Terminal Company: 3 ship berths – 1,650 ft. in length (including 1 piling cluster). Depth 32 ft.

Served by 1 marginal track and 2 outside tracks behind docks plus loading tracks to all other facilities. Special loading-unloading docks for motor trucks available.

Equipment: 62 lift machines; 7 tractors; 1 towmotor, 30,000 lbs. capacity; 4 sweepers, 3 scrubbing machines.

Manchester Terminal Company also has 18,000 cargo pallets.

New Terminal Warehouse Corporation: Capacity 3 ship berths. Wharf 1,400 ft. long. Open storage areas of 50,000 sq.ft. Covered storage areas of 200,000 sq.ft.

Other Wharf Facilities: In addition to the for-hire terminals Port of Houston has some 43 ship berths plus various barge facilities on the Ship Channel maintained and used exclusively by industries. Most of these facilities are tanker ship berths at the refineries. There are also 4 liquid-bulk terminals for hire: Amerada Hess Terminal and General American Tank Storage Terminals, the latter having 2 separate locations; South Coast Terminals; Robertson Terminals, Inc.

Fentress Bracewell – Barbours Cut Terminal: The Port of Houston Authority continues development of its massive intermodal facility. Barbours Cut is located 2.5 hours from open sea where the Houston Ship Channel enters Galveston Bay. The facility is equipped to handle container, Ro/Ro and LASH services. There are 4 container berths each 1,000 ft. in length, representing 4,000 ft. of continuous quay. The channel is dredged to a depth of 40 ft. Additionally, 8 Paceco Portainers service the 4 container berths. The 4 container berths are backed up by approximately 152 acres of container marshalling are suitable for both grounded and wheeled operations. 11 rubber tyred yard cranes handle the stacking of containers in the container yard.

A Ro/Ro platform is provided for vessels equipped with ramps. There are two 100,000 sq.ft. Ro/Ro transit sheds with rail service available as well as 35 acres of concrete paved open storage for heavy equipment and automobiles. A "U" head pier and mooring dolphins provide for berthing of LASH ships. Additionally, a barge fleeting area and barge mooring dolphins are provided.

There is a container freight station with 55,000 sq.ft. of covered storage and rail service available. A railroad yard or ramp point with 1 lead track, 1 storage track and 2 working tracks provides a facility to unload containers and trailers to and from flat cars. The car capacity on the working and storage tracks is approximately 121 ft.×89 ft. long cars.

Container and chassis repair services are available on and off terminal. Container storage areas are available adjacent to the terminal as are automobile storage and preparation facilities.

Bayport Division: A 300 ft. wide by 42 ft. deep Bayport Ship Channel and its 1,600 ft. diameter turning basin connects with the Houston Ship Channel in Galveston Bay and extends approximately 2 miles inland to provide berths for deep-draft tankers and bulk freighters. Petro United Inc., Celanese Corporation, American-Hoechst Corporation and Hudson Oil Company have docks and facilities on the Bayport Ship Channel.

BULK HANDLING FACILITIES:

Public Grain Elevators: Back of Wharves 14 and 15. Capacity 6,000,000 bushels. Max. LOA 700 ft. Air draft 36 ft.

Equipped to unload from 110 to 120 cars in 10 hours, or deliver a combined total of 80,000 bushels per hour to 2 ships. 6 mechanical grain trimmers are in use at the Elevator as well as other major equipment including 3 hopper car dump tracks and 7 hopper scales of 150,000 lbs. capacity. 2 modern grain truck dumpers can unload up to 30 trucks/hr.

Public Bulk Materials Handling Plant: At Greens Bayou. Loading capacity at 67 lb./cu.ft. material, unloading capacity at 94 lb./cu.ft. material free digging rate. Fully automatic plant handles dry bulk commodities rapidly to and from ships and barges through the loading and unloading towers, conveyor systems, hoppers, pits, surge bins and scales; with rail and truck facilities and ample ground storage. Rail cars are rapidly moved with large rubber-tyre tractors. Boom of unloading tower reaches 76 ft. from face of dock, bucket capacity is 12 tons; loading tower boom reaches out 66 ft. from dock face and is equipped with automatic trimmer. Both towers can travel the full length of the dock. Mooring facilities for a waiting vessel have been installed next to existing dock. Also available: 2 heavy-duty front-end loaders and 4 heavy-duty car shakers. Max. LOA 750 ft. (larger if cleared with Houston Pilots prior to chartering). Max. beam 116 ft. Max. draft 39 ft. Air draft 40 ft. Depth of water 40 ft. Minimum hatch size 25 ft.×25 ft. Travel of loader 500 ft.

Transfer capabilities of dry bulk weighing 50 lb./cu.ft. or more from vessels, barge, rail or truck into 20 ft. containers.

Elco Shipside Elevator Company: 2,000,000 bushel capacity elevator which loads up to 25,000 bushels per hour to vessels berthing at Dock No. 2 of the Port Authority's Manchester Wharves. Length of berth 500 ft. Depth 32 ft.

Woodhouse Corp.: Grain elevator with 12,000,000 bushel capacity – 4 ship berths. Also general cargo handling. Max. draft 38 ft. Loading rate 1,000 t.p.h.

Union Equity Co-Operative Exchange: Grain elevator with 6,000,000 bushel capacity, 1 grain berth, 1 lay berth, each 980 ft. long, water depth of 40 ft. for all berths. Loading rate 1,200 t.p.h.

Adams Terminal: Phillips Terminal Company. 2,700 linear ft., capacity 5 vessels. Bulk cargo loading conveyor system rated at 400 t.p.h.; horizontal boom, hammerhead-type clamshell unloader equipped with five-yard ore bucket, rated at 150 to 250 t.p.h.; 2 gantry cranes, capacity 40 tons at 30 ft. radius; Robbins heavy-duty car shakeout; 20-ton truck mounted crane. One D & H gantry crane modified to handle five-yard bucket for bulk ore discharge. 100 t.p.h. Specialists in import and export bulk cargo. Covered storage – 73,000 sq.ft.

International Terminal Corp.: Shiploading Rate 3,000 t.p.h. Depth in turning basin 42 ft. Storage capacity 150,000 tonnes (corn, soya, wheat, etc.).

Jacintoport Terminal: Deep-water shipside terminal located on the North side of the Ship Channel some 15 miles downstream from the Turning Basin.

Three ship berths (length 1,500 ft.) with water depth alongside the wharf at 36 ft. 24,000 sq.ft. of transit sheds; 2 berths for preferential berthing for Omniport. Rail service by the PTRA and Missouri Pacific. Slip is 4,200 ft. long and 400 ft. wide, owned by Port of Houston Authority.

Cargill, Inc.: Grain elevator with a capacity of 5,700,000 bushels. 2 ship berths. Max. draft 40 ft. Loading rate 70,000 bushels per hour to 140,000 bushels per hour.

CRANES: (Capacities 1 ton=2,000 lbs.)

Mobile Crane – Diesel: Capacity 80 tons
Gantry, American Revolver R-25 Electric: Capacity at 65 ft. radius – 50 tons
Gantry, Clyde Whirley, Diesel Electric: Capacity at 45 ft. radius – 30 tons
Gantry, Portainer, Electric: Capacity at 81 ft. reach – 27.5 tons
Gantry, Portainer, Diesel Electric: Capacity at 113 ft. reach – 44 tons
Gantry, Portainer, Electric: Capacity at 140 ft. reach – 30 tons
Stiff Leg Derrick, Electric: Capacity at 50 ft. reach – 75 tons

BRIDGES: Two bridges cross channel, one immediately East of Public Wharf 31, clearance of 135 ft. and the other immediately West of the Shell Terminal, clearance 175 ft.
STEVEDORES: Stevedore, on advice from representative of local Agent, must order labour prior to 1700 for 0700 or 0800 hrs. start the following day. Can order at 0800 for 1000, 1100 for 1300 and 1700 for 1900 hrs. start. Gangs must be ordered prior to 1700 hrs. on Saturday for Sunday or holiday.
MEDICAL: Give sufficient notice to order doctor or ambulance. Numerous hospitals available. Seaman's health certificate required.
TANKERS: No specific requirements for oil carriers with respect to load/discharge lines. Tankers must be gas free to enter turning basin area. 12 tanker berths available
Limitations: Houston Ship Channel Limitations are set by the Pilot Association:

(a) Bolivar Roads to Barbours Cut: 950 ft. LOA, 135 ft. beam, 95,000 d.w.t., 40 ft. draft.
(b) Baytown to Boggy Bayou (Shell Terminal): 860 ft. LOA, 120 ft. beam, 80,000 d.w.t., 40 ft. draft.
(c) Boggy Bayou to Sims Bayou (Arco Terminal): 750 ft. LOA, 116 ft. beam, 55,000 d.w.t., 40 ft. draft.

Note: For vessels with beam from 105 ft. to 116 ft. no passing traffic above the Shell Terminal at Boggy Bayou.

(d) Sims Bayou to Turning Basin: 750 ft. LOA, 105 ft. beam, 45,000 d.w.t., 36 ft. draft.

Note: For vessels greater than 700 ft. LOA and/or 37 ft. draft daylight transit only.

All dead ships and LPG/LNG vessels greater than 550 ft. LOA daylight transit only through the entire Houston Ship Channel.

Arco/Sims Bayou: General: The Arco Refinery Terminal consists of berths "B" and "C". This terminal is located in the vicinity of Sims Bayou, approximately 48 miles from Sea Buoy.

Mooring and Berth: At both berths 2 or 3 tugs are used for docking, while only 1 is necessary for undocking. The tugs and Docking Master meet the vessel 1 mile below the berths and turn the ship at the Arco Turning Basin for a starboard side berthing. The terminal does not provide a gangway.

Cargoes handled at both berths include crude, gasoline, distillate, lube oil, av. gas, jet fuel, and petro-chemicals. Sizes of cargo hoses are 4 in., 6 in. and 8 in. All cargoes are pumped at 100 p.s.i. Both berths can receive ballast and slops. Only av. gas and jet fuel are handled by a common pipe-line.

Charter International Oil – Traweek: General: The Charter International Oil Company Berth is the Traweek Dock located 49 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are generally turned, if light, in the vicinity of the berth and moored starboard side to. Breasting units keep the vessels directly off the side of the dock. All lines are doubled-up. Long bow/stern leads allow considerable fore and aft movement of the vessel. To counter the movement good spring lines are required. Hooks on shore are secured to 2×1.625 in. wires to a "deadman" on the upper bank. All lines are handled by a workboat. The terminal does not provide a gangway.

Passing ships in the Ship Channel affect vessels at this berth. Strict attendance to mooring lines is essential.

Cargoes handled at this terminal include gasoline, fuel oils, jet fuel, No. 6 fuel oil, and kerosene. All cargoes are transferred through 8 in. lines and hoses at a maximum pressure of 100 p.s.i. Connections at the manifold are made with bolted flanges. Both ballast and slops can be received at this berth.

Crown Central Petroleum Co.: General: The Crown Central Petroleum Co. Berth is located 50 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 1 or 2 tugs are used for undocking. Tugs meet the vessel below the berth depending on existing conditions and turn the vessel prior to docking. No gangway is provided at this terminal.

Cargoes handled at this terminal include distillate, gasoline, petro-chemicals, heavy fuel oil and crude oil. Petro-chemicals are handled through 6 in. lines at 40 p.s.i. All other products and crude are handled through 8 in. lines with pressures varying between 30 p.s.i. and 100 p.s.i. All cargo hose connections are ASA-type connections. Ballast and slops are received at this terminal.

GATX No. 1 and No. 2 – Galena Park: General: The Galena Park Terminal of GATX consists of 2 berths, No. 1 and No. 2. Storage capacity: 5 million barrels.

Mooring and Berth: 2 tugs are used for both docking and undocking. Vessels are usually turned when in the light condition. The terminal does not provide a gangway.

Cargoes handles at both berths include heavy fuel oil, special petroleum products, solvents, and other clean products. Heavy fuel oils are handled through 8 in. lines only. All other products are handled through 4 in., 6 in. and 8 in. lines. Maximum pumping pressure for all products is 100 p.s.i. All connections are ASA flange connections.

GATX – Pasadena: Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are normally turned in the light condition. The berth is close to the Houston Ship Channel and vessels can be affected by passing traffic. Vessels moored at this berth should be well moored and all lines kept taut. The terminal does not provide a gangway.

This terminal handles a variety of products. Crude oil or products requiring heating are not handled by this terminal. All products are handled through 4 in., 6 in. and 8 in. lines at 100 p.s.i. Hose handling may be expected to be slow on account of the limited equipment on the pier.

Hess No. 1: General: The No. 1 Ship Dock of the Amerada Hess Co
is located 48 miles from the Sea Buoy on the Houston Ship Channe

Mooring and Berth: Vessel's Master determines tug requirements
docking and undocking. The vessel proceeds past the berth wh

not provided by the terminal.

Intercontinental No. 1: Mooring and Berth: 2 tugs are required
docking and undocking. The vessel is met by the tugs and Dockin
Master near Lynchburg Crossing. As the vessel approaches Sloug
tugs assist in turning the vessel broadside to the channel and in li
with the berth. The vessel is then manoeuvred into the berth. Mo
vessels are moored starboard side to. A gangway is not provided
the terminal.

Various clean products are handled by this terminal. There are
facilities for receiving ballast or slops.

Oil Tanking No. 1, No. 2 and No. 3: General: These berths are locate
at the Oil Tanking of Texas Terminal which is 42 miles from the Se
Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 2 tugs a
used for undocking. Vessels docking at Berth No. 1 are turned
starboard for a port side mooring. Vessels are moored head-in, starboa
side to in Berth No. 2 and port side to, head-in at Berth No. 3. At Ber
No. 2 and No. 3 mooring lines are handled by a launch. Bollards on th
outer breasting/mooring platform are fitted with hooks on steel wi
pennants so as to be accessible to the boat crew. The terminal ca
provide a gangway at all 3 berths.

Vessels should use extra spring lines leading aft as there are no ster
line leads available. The terminal plans to install a mooring buoy betwee
the platform and the nearer channel line.

Crude oil and clean products are handled at Berth No. 1. Crude oi
the only product handled at Berth No. 2 and No. 3. All cargo transf
lines are 16 in. Connections are made with ASA flanges, reducers a
furnished by the terminal. There are no facilities for ballast or slops.

Paktank No. 1 – Deer Park: Cautionary Advice: There is a considerab
chance that passing traffic and/or wind could cause a ship exceedi
630 ft. LOA to break away from the berth, which could lead to disastrou
consequences with regard to oil pollution.

General: The Paktank Terminal is located at Deer Park which
36 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A mooring buoy has been installed by the termin
to secure stern lines. This mooring buoy is apparently inadequate bot
from a standpoint of proper location and strength.

2 tugs are normally used for docking and undocking. The vessel
turned into the berth directly off the channel, upbound. A compleme
of mooring wires and leads are used at this terminal.

Crude oil, petro-chemicals, and various refined petroleum produc
are handled by this terminal. All transfer hose and lines are 6 in. or 8 i
Connections to the manifold are bolted. Maximum pumping pressure
100 p.s.i. There are no facilities for receiving ballast or slops.

Shell No. 1, No. 2, No. 3 and No. 4 – Deer Park: General: The She
Oil Company Refinery is located 42 miles from the Sea Buoy on th
Houston Ship Channel.

Mooring and Berthing: When docking at any of the 4 berths at th
terminal, 1 or 2 tugs are used. 1 tug is normally used for undockin

complement of mooring lines and/or wires are used at these berth
Constant attention must be paid in keeping proper tension on all line
due to the surging effect caused by passing ships in the channe
Gangways are provided by the terminal at all 4 berths.

Crude oil, No. 6 fuel oil, gasoline, diesel fuel, jet fuel, aviation fue
and other refined petroleum products are handled at this terminal. A
cargoes are transferred through 8 in. lines with bolted connections
the ship's manifold. Maximum pumping pressure for all products
100 p.s.i. The terminal has facilities for handling ballast and slops.

Warren Gas No. 2 and No. 5: General: The Warren Gas Terminal Be
No. 2 and No. 5 are located 46 miles from the Sea Buoy on the Hous
Ship Channel.

Mooring and Berthing: Tug requirements for undocking and dockin
are determined by the Master. Vessels proceed directly into Berth No
for a port side mooring. A motor launch is used to run wires or lines
the mooring points. Gangways are only provided when requested pr
to arrival.

Propane and butane are handled at Berth No. 2 and No. 5. All trans
lines are 12 in. at Berth No. 2 and 16 in. at Berth No. 5. Connections
ship's manifold are bolted. Maximum pumping pressure is 100 p.s.i.
Berth No. 2 and 150 p.s.i. at Berth No. 5.
DENSITY: Classed as full fresh but varies with rainfall and tide, usua
4 in. to 5 in. allowance on full draft.
FRESH WATER: Available at all terminals through pipe and hose.
FUEL: All grades and viscosities available.
FIRE PRECAUTIONS: All standard precautions per code of Fede
Regulations plus local ordinances. Tankers, unless gas free,
permitted at wharves in the immediate turning basin area.

REPAIRS: All types available.

DRY DOCKS: Todd Shipyard, 12,000 ton dry dock at Greens Bayou and 14,000 ton capacity (length 400 ft.) dry dock in the Houston Ship Canal.

GANGWAY/DECK WATCHMEN: Not required, but are available and can be arranged by local Agent at Master's request.

OPENING/CLOSING HATCHES: By stevedores only – vessel will be charged for this work if done by crew.

CUSTOMS ALLOWANCES: Tobacco, 300 cigarettes, 100 cigars, 1 lb. of tobacco or combination for each man. Wine and/or Spirit, 1 quart bottle for each crew member.

SURVEYORS: District Headquarters for the following Societies:
Panama Bureau of Shipping, Inc.
Registro Italiano Navale.
Hellenic Register of Shipping.
8200 La Porte Road, Suite 2,
Houston, Texas 77012-3734.

Caleb Brett. Tel: 946-2420.

CARGO GEAR: Cargo gear safety certificate required.

REPATRIATION: Danner Guard Service can handle all phases.

AIRPORT: Approximately 0.5 hours by car; served by regular airlines.

TIME: Central Standard with daylight saving time effective from April to October.

HOLIDAYS: January 1st; January 15th; February 12th; 3rd Monday in February; March 2nd; March 17th; Good Friday; last Monday in May; June 19th; July 4th; First Monday in September; 2nd Monday in October; November 8th; November 11th; 4th Thursday in November; December 25th. When holiday falls on Saturday or Sunday the following Monday will be holiday.

POLICE/FIRE/AMBULANCE: All services provided or available.

TELEPHONES: Currently no arrangements for placing telephones aboard but easily accessible on wharves.

SERVICES: All services available.

SHORE LEAVE: Shore leave granted except when individual not qualified.

IDENTIFICATION CARDS: Immigration Form I-95 card required.

GARBAGE DISPOSAL: Browning-Ferris Ind. (solid waste systems). Tel: 713-635-7777.

WASTE OIL DISPOSAL: Waste Management of Houston. Tel: 713-695-4055.

SEAMAN'S CLUBS:
Houston International Seafarers' Center, P.O.Box 9506, Houston, Texas 77261. Tel: 713-672-0511. Facilities: Chapel, library, gift shop, cafe, T.V., table tennis and pool tables.

DEVELOPMENTS: Channel depths to be maintained at 40 ft.

Bayport development East and South of Morgans Point to have deep draft berths for liquid bulk and general cargo.

Construction of Berths No. 5, 6 and 7 at Barbours Cut underway. Berth No. 5 completed 1992.

SHIPMASTER'S REPORT:

Customs:
Bond remained sealed.
2 copies of Curio Lists.
2 copies Stores Lists.
1 copy Crew List.

Immigration:
No visit. 1 copy Crew List.

Agents:
Given Travelling copies of Clearance last port, Tax Tonnage receipt last port plus cargo manifests.

Agricultural Dept. Re-sealed meat and vegetable rooms. Inspected Galley Messrooms, etc. Garbage cans to be covered.

Provisions and Stores. Satisfactory. Select own ship chandler.

Laundry. Facilities available but not used.

Coast Guard. No visit.

National Cargo Bureau: Same as New Orleans.

Watchmen: None placed on board. Security at gate strict.

Telephone: None placed on board. Use dock office.

Fresh Water: Available.

Fuel: Available by barge if required. Do not over stem.

Engineering and Repairs: Efficient and satisfactory. Price high compared to N.Z.

Radio Messages: Send ETA after departure New Orleans to Agents and Houston Pilots with draft. Notify Agents of any explosives.

Stevedores: Hours of work. 0800 to 1200 hrs., 1300 to 1800 hrs., 1900 to 2300 hrs. Weekday gangs will work through meal hours to finish. At weekend, day labour works right through to midnight if necessary on time and a half then double time for meal hours.

Crew must not clean hatches. Labour has claim on cleaning and has to be paid in addition to crew. Crew open and close hatches, but not until hatch foreman present. Not before labour working hours.

Working heavy lifts with ship's gear loading rate very slow, especially at end of shift. Due to nature of deck cargo; 11 ton lifts 52 ft. long.

Constant supervision needed for deck cargo.

Head stevedore checks Factory Act Book before starting.

If detailed plan is required for break bulk (general cargo) additional clerk must be ordered.

General: Pilot boards from large grey metal cutter off Fairway Buoy. Flash every 2.5 seconds. Give good lee and have ladder 8/10 ft. above water with usual manropes, heaving line, etc.

If you have to anchor, most vessels use the Eastern anchorage about 1.5 miles East of fairway buoy and clear of fairway marked channel. Soft mud bottom. Use plenty of cable.

Berth: Ships spaced very close to each other. Rise and fall of tide about 1 ft.

Moorings: At least 4 head lines and stern lines plus 2 springs each end. Ships frequently passing and channel narrow consequently a good deal of surge. Lines to be frequently looked at and kept tight. Parted 3 springs in as many days!!! Gangway also to be watched. General rule is to use ship's gangway. Wide apron in front of sheds with rail lines but fork-lifts used most.

Agents have office on wharf with direct line to city office and outside lines.

Wooden piling which acts as fenders. Bollards of the large cleat type. Sufficient but not plentiful. Two linesmen each end when arriving and departing. No permanent cranes but mobile ones can be hired. Quay about 25 ft. above water.

Recommended not to walk about or up to bus especially at night. Better for 2 or more to get a taxi. Fairly good, 3–4 dollars to Houston.

Seaman's Mission near by. Very good, new and modern.

Tugs: Used for berthing and unberthing. Had 2 on arrival due to strong wind and close proximity of mast top to bridge.

Sailing had 1 tug lashed up alongside forward shoulder.

Tugs use own lines.

Bridge: There is a bridge above Upper Clinton Bend from Manchester on the South to Clinton Park on the North. This is a relatively new bridge to be passed under with a clearance of only 135 ft. Check the rise of tide on way up.

SHIPMASTER'S REPORT: August 1980.
Tenneco Terminal – Vessel discharged ammonia.

Approaches: B.A. Chart 975.

The safety fairway is usually very busy and it is advisable to ensure that you are in fact keeping to the starboard side.

At the entrance to the fairways there are many oil rigs. With the predominately low lying coast, radar positions are extremely difficult. Satellite navigator is highly useful in this respect. The first good check is off the buoys in the final safety fairway. These showed on radar at about 7 miles.

Some radar echoes are received from Galveston itself.

The charted rigs in Anchorage 'A' are in fact in those positions.

Pilotage: If anchored, the pilot boat will call vessel into the "Whistle Buoy" for boarding.

The cutter is a large, fast launch and usually lies inside until working a vessel.

Pilot ladder about 8 ft. from the water to clear the boarding platform.

Contact can be made via Galveston Pilots initially on Channel 16 who will relay the messages. Houston Pilots themselves work on Channel 14.

One Pilot, the length of pilotage is about four hours to the first line ashore. Two tugs used.

No night time pilotage for a vessel of this size (32,000 g.r.t.) and type. There is a TV video surveillance system operating throughout the length of the channel.

Berth: About 4 miles below Warren Terminal.

Plant and terminal now owned by Occidental (Oxy) but Tenneco rent the berth.

Berth is far too small for this vessel, at least as far as the moorings are concerned. Typical American 'T' barge jetty, the head of which is only about 25 m. long, with walkways leading to 3 dolphins at each end. The bow and stern overlap these mooring dolphins and head and stern lines are taken to posts on the river bank. These are only breast lines and it is advisable to make advance preparations to put out as many as 4 springs at each end. There is a great deal of traffic passing continuously.

Gangway: The gangway should remain stowed until in position. Whether vessel can use the accommodation ladder will depend on draft. If vessel deeper than 26 ft. there will not be sufficient clearance from the fender so a "B.O.T." type gangway resting on accommodation turntable will have to be used.

When the accommodation ladder is used it has to be turned through 120° and landed on the aft dolphin immediately adjacent to the jetty head.

Discharge: 12 in. flexible hose 150 ASA used. 'T' piece, two shore hoses.

Max. back pressure allowed is 50 p.s.i. Vapour return line is 4 in.

The plant ashore is only equipped to export cargo and its reliquefaction plant is small.

A shore walkie-talkie is placed with the officer of the deck.

Discharge rate can vary (October 1979 – 260 t.p.h., August 1980 – 550 t.p.h.).

Shore surveyors figure taken for bill of lading. Density 1001.

USCG: No inspection prior to commencement, apparently this is normal. The port is far too busy for them to visit every ship. But be prepared, they are very particular on navigation equipment and Officers' Certificates and experience.

General: It is possible to load bunkers by barge alongside the terminal if prior arrangements and permission are obtained but it depends on Agent and Authorities.

Fresh water is available from the jetty, at a very low rate.

Storing can present difficulties as the after crane does not plumb the dolphin. By arrangement, vessel can use shore crane when the operation is not too difficult.

Public telephone on dock – minimum charge 25c.

Liferaft service available, 24 hours' service.

A considerable distance from the city, which rather complicates services and communications.

Agents leave a radio onboard for contact with Agent and office, but often outside range, office on maximum range.

No private transport (taxis) allowed into refinery area. Transport to the gate by their own minibus and then telephone for taxi. Crew transport service allowed into berth area with pass from Agent.

SHIPMASTER'S REPORT: October 1991.

Approaches: Galveston Light is visible at over 25 miles. There are Racons on the oil rigs in the approach safety fairways which are conspicuous. The "G.B." Buoy is equipped with a Racon and is also conspicuous.

Anchorage: The Fairway Anchorage is to the East of the "G.B." Buoy and the traffic separation area. It is often very crowded and has poor holding and there is no shelter.

Bolivar Roads Anchorage off the Inner Bar Channel near Galveston is the only inner anchorage for vessels awaiting berths that have been cleared inward. This anchorage is often used by vessels changing berths or awaiting berths.

Pilotage: The pilot boards and leaves near the "G.B." Buoy from a large cutter which is nearly always on station outside the Galveston breakwaters. The cutters have accommodation for 5 pilots and maintain watch on VHF Channel 14.

The pilot requires 6 hours notice of ETA when arriving from sea, with updates every 2 hours. The pilot for sailing from the berth requires an initial notice of 4 hours and if a vessel is delayed, the pilot can be re-ordered within 2 hours.

The distance from the "G.B." Buoy to Deer Park Basin is 41 miles and time from pilot boarding to first line ashore is about 4 hours.

There is no dock pilot. The sea pilot docks vessels and also boards for shifting in the berth.

The channel depth is maintained at 40 ft.

Tugs: Tugs are supplied by Bay Houston Towing Co., who have about 10 tugs up to 4,500 h.p. stationed at Houston. They usually secure "American Style".

Services: Laundry: Ship's Laundry of Houston were very good and prompt and provide a 24 hour service. Tel: 713-661-5315.

Supplies: We used Cross & Co. (Tel: 713-673-3100. Telex: 775602) who we found to be very good. The quality of provisions was also very good.

Telephones: The agent provides a mobile telephone and pager unit for the Master. Only U.S. calls are possible.

At Paktank 1 there is a telephone in the dock office adjacent to the dock.

At Paktank 2 there is a telephone adjacent to the dock.

At Paktank 3 no telephone is available.

At ITC 1, 2 and 3 there are telephones about 100 m. West of ITC 1.

Airport: It takes about 1 hour to get to Houston International Airport, which is North of the ship canal.

Berthing:

Paktank 1: The berth is an 'L' shaped pier with a length of 50 m. and depth alongside 35 ft. Vessels can berth either side alongside. Ship's gangway required. Fresh water not available. Stores cannot be taken at the berth. Flexi-hoses are required for handling of products. Crane available. We loaded Exxon additives at 140 tonnes/hr. per line.

Paktank 2: The berth is located in the N.E. corner of the basin and vessels can berth either side alongside. The length of the berth is 80 m. and depth alongside 35 ft. This is the best berth for storing of all the berths as trucks are allowed within 25 m. of the ship's side. A crane is available for hire at U.S.$100.00 per hour. No fresh water available at the berth. Ship's brow gangway required.

Products are handled through flexi-hoses or Chicksans. Additives are loaded either from Paktank storage tanks at 150 tonnes/hr. or from manufacturing facility which is about 5 miles away but the rate is only 30 tonnes/hr. Shore cranes are available for hose handling.

Paktank 3: The berth was completed in 1990 and is in the main ship canal. The location of the flat faced concrete pier is Lat. 29° 44.89′ N., Long. 95° 05.88′ W. The length of the berthing face is 100 m. and the depth alongside is 40 ft. The fendering system is good and is made up of flat shock spring timber and rubber. When berthed alongside, the vessel heads up channel with port side alongside. Ship's brow gangway required. Products are handled through flexi-hoses and there are cranes available for hose handling. We loaded additives at 120 tonnes/hr. per line. No fresh water available. Store trucks may not proceed closer than 100 m. from the vessel. Good moorings are required, they should be kept tight at all times due to passing traffic.

ITC 1: The berth is a flat faced concrete jetty on the S.W. side of the basin. Vessels berth head in only, starboard side to. Fresh water available at a very slow rate. Good berth for handling of stores. Ship's accommodation ladder can be used. Flexi-hoses required for handling of products.

ITC 2: This flat faced pier is an extension of ITC 1. Vessels can berth either side alongside. Depth at berth 33 ft. Fresh water available at a very slow rate but storing is not possible. A brow gangway is required at the berth. Flexi-hoses and Chicksans are available for cargo handling. We loaded additives at 180 tonnes/hr. per line.

ITC 3: The berth is opposite ITC 2 and has recently been dredge 35 ft. Length of berth 150 m. Fresh water is available at a slow rate storing is difficult. Vessels berth head in only, port side alongside. B gangway required. Chicksans and flexi-hoses are available for hand products.

Fuel: Bunkers are not usually taken at ITC Berths as a surcharge imposed on the barges. No bunker surcharge at Paktank Berths.

AUTHORITY: Port of Houston Authority, P.O.Box 2562, Houston, Te 77252-2562. (111 East Loop North, Houston, Texas 77002) *Tel:* (7 226–2100. *Telex:* 910-881-5787. *FAX:* (713) 670-25 *Contact:* H. Thomas Kornegay, Executive Director. John Hor Director of Operations.

HUENEME, California: 34.09 N. 119.12 W. (See Pla

PORT LIMITS: No laytime boundary. "Arrived Ship" status commenc at berth dockside.

DOCUMENTS: See "San Francisco".

PILOTAGE: It is requested that ships entering port stand-by 1 mile harbour entrance just seaward of the Port Hueneme seabuoy designat "R2" (Fl. R. 4 secs. Bell) and await port Pilot who will board from a tu The U.S. Coast Guard Station at the Channel Islands Marina maintai a radio beacon. Contact Pilot or "Port Hueneme" on VHF Channel shifting to Channel 14 for Administration; VHF Channel 65A for tug/pi bridge.

All vessels 300 g.r.t. and over or carrying a foreign flag enterin leaving and shifting within the Port of Hueneme, including area of th Oxnard Harbour District, must be piloted by a port Pilot duly licensed perform the services of piloting vessels within the Port of Hueneme. Th Oxnard Harbour District does not maintain Pilots; licensed Pilots a available on a 24-hour-a-day basis from Port Hueneme Pil Association (Captain Carl Dingler at (805) 984-4933).

ANCHORAGES: If there is a wait for Pilot caused by weather, visibili congestion in harbour, or any other reason, the best anchorage area W.S.W. of the harbour entrance where there are no hazards and the is some protection afforded by the natural curve of the coastline.

RESTRICTIONS: The length of entrance channel is 2,300 ft. Th narrowest width of harbour entrance channel is 330 ft. Howeve because of prevailing fresh winds, this is a one-way channel; thus, dee draft ships not able to manoeuvre easily in a restricted channel ha precedence over smaller craft. Vessels may enter/leave at any time da or night.

MAX. SIZE: Due to the 1,400 ft. × 1,200 ft. turning basin, vessels wi greater length than 700 ft. requires U.S. Navy permission to ente Longest vessel berthed in harbour was 826 ft. Vessels draft normally be 2 ft. – 3 ft. less than water depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illne Reports made to Los Angeles Quarantine Station.

Ships required to pass quarantine may enter port and moor. "Q" Fl is to be flown. Upon mooring, ship must post gangway watch until sh has passed quarantine. When Port of Hueneme is its port of first arri in the United States from foreign ports or from States other tha California, a ship must be inspected by the Department of Agricultu There is a local representative in Oxnard. The Oxnard Harbour Distr will order officials if requested by ship or Agent.

RADIO: The "Port Hueneme Wharfinger" guards Channel 16 and w normally shift to Channel 14 for administrative purposes. The harbo tugs guard Channel 16 continuously. The harbour Pilots, when expecti a commercial merchant vessel guard Channel 16 voice circuit and voi call "Port Hueneme Commercial Pilot".

Tugboat working frequency is VHF Channel 65A (156.275 MHz).

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tug services for Port of Hueneme are furnished by the Oxnar Harbour District, Port Hueneme, California. Requests for tug servic may be made to the Executive Director or Director of Operations of th Oxnard Harbour District, who will act as Agent for ship in forwardi them. 3 tugs are available on a 24 hour basis. The tugs are 3,000 s.h single and twin screw vessels. The number of tugs to be used on a movement is determined by port Pilot in charge of the movement. Tu are not available for deep-sea towing, except in case of emergency save life or property. A twin screw 500 h.p. pusher/pilot boat is al available for small tows and assistance work. As a service to all vesse the Oxnard Harbour District, acting as Agent for vessel, will pay all t fees to United States Government when necessary, subject reimbursement conditions as arranged between the vessel, her Owne or Agents, and the Executive Director, Oxnard Harbour District. Seld are tug charges more than the minimum due to the short transit time berths.

BERTHING: Berthing arrangements should be made with the Direct of Operations by Agent as far in advance of arrival date as possib specifying dates of arrival and sailing, and nature and quantity of car to be handled. Agent is requested to submit Berthing Application in time manner. The Oxnard Harbour District also has a licence agreement w the U.S. Naval Construction Battalion Center, Port Hueneme, for t use of additional berths and terminal facilities on an "as available" bas Prior arrangements must be made, should use of these additio facilities be desired or necessary. The Port of Hueneme has 5×600 berths with depth 35 ft. MLW and appropriate terminal facilities. At t present time there are 11 deep-draft berths within the entire port ar

Bottom is sand and mud. Mean low water is + 1.5 ft. Height of wh above the MLLW is 13 ft. 6 in.

CRANES: Many land cranes available which can handle loads up to over 100 tonnes in most cases.

STEVEDORES: Stevedore work is presently performed by resident stevedores, the Marine Terminals Corporation, Stevedore Services of America and Metropolitan Stevedoring Co., who also have offices in San Francisco, Long Beach, etc. MTC maintain an office at 111 Ponoma Street, Port Hueneme; SSA at 241 Market Street, Suite 1 and MSC at P.O.Box 547, Wilmington, CA 90748. They provide modern handling equipment to suit cargo's need. There is no special fixed bulk handling equipment available as yet. Longshoremen are members of the International Longshoremen's and Warehousemen's Union and conform to the Pacific Coast Longshore Agreement. Hours of work are as outlined in this agreement. Longshoremen at this port do all covering and uncovering of hatches and rig the gear. There are 8 gangs available in the port. Day and night gangs for Tuesday through Saturday (except Monday through Saturday, 1900 hrs. initial start) must be ordered by 1500 hrs. the previous day. Night gangs required Monday for a 1900 hrs. initial start, and Sunday and Monday gangs must be ordered by 1100 hrs. Saturday. Cancellation time is same as ordering time, if gangs which have been ordered are cancelled after the aforementioned deadlines, the agreement's 4 hour minimum applies. Normal day shifts begin at 0800 hrs. and normal night shifts at 1800 hrs. Each shift consists of 8 hours and on sailing day 10 hours may be worked by the final shift. There are no obstructions on the wharf to keep all hatches from being worked concurrently.

MEDICAL: Patients are provided with medical attention at the Medical Center, Port Hueneme, or St. John's Hospital, Oxnard California. Temporary visa must be obtained from Department of Immigration and Transportation if a crew man or passenger must remain after the ship sails.

FRESH WATER: Fresh water is available. There are hydrants along the wharves and delivery to ship is effected by hose. Water is good to taste but is hard. It is not suitable for boilers. Contact wharfinger on duty for delivery of water. Boiler feed water is available by truck upon request.

FUEL: Diesel oil and bunker fuel is available by pipe-line at Wharf No. 1 and by truck at all wharves.

REPAIRS: Minor repairs may be made in port. Machine shops in Ventura and Oxnard are qualified for normal voyage repair work.

GANGWAY/DECK WATCHMEN: Gangway or special wharf watchmen are available upon request.

HOLIDAYS: U.S. Federal and State holidays are observed by the Port and Terminal management. If stevedoring is required on holiday it is performed in accordance with the International Longshoremen's and Warehousemen's Union-Pacific Coast Longshore Agreement.

TELEPHONES: Pay telephone booths are located at the centre of Wharf 2 and 12 pay telephone booths on Wharf No. 1. The wharfinger's office has a telephone which may be used by people calling in to contact the ship. This telephone is manned 24 hours a day for convenience. Its number is (805) 488-4615. The Port of Hueneme office telephones are available to ship's officers and Agents for local calls or collect long distance calls. Wharf lines permit a telephone to be installed at a nominal charge if desired by Agent.

SHIP SUPPLY SERVICE: Port Hueneme Marine Supply, 700A Hueneme Road, Port Hueneme, CA 93041. Tel: (805) 488-0988. Fax: (805) 488-3141. Total ship chandlery, except food.

Allied Maritime Agency, 345A Ponoma Street, Port Hueneme, CA 93041.

AUTHORITY: The U.S. Navy (Commanding Officer, U.S. Naval Construction Battalion Center) exercises overall Port Control Authority; the Oxnard Harbour District is solely responsible for its commercial operations.

Port of Hueneme, Oxnard Harbour District, P.O.Box 608, Port Hueneme, California 93041-0608. *Tel:* (805) 488-3677. *Contact:* Robert K. Harmuth, Director of Marine Operations. Anthony J. Taormina, Executive Director.

HUNTINGTON BEACH, California: 33.38 N. 118.00 W. (See Plan)

LOCATION: Approximately 1.3 miles off Huntington Beach as shown on United States West Coast California San Pedro Channel Chart 18746, published by the U.S. Department of Commerce National Oceanic and Atmospheric Administration.

A lighted Bell Buoy "2HB" is located 2,242 ft. from the spare buoy at the Western approach to the Seaberth. It is a private aid to navigation and is shown on the above chart.

PILOTAGE: Mooring Master will board the vessel in the Los Angeles area for an inspection and acceptance of the ship's mooring facilities. He may accompany this vessel, after agreement, to the Seaberth. On repeat visits, he may join vessel at Seaberth area.

RESTRICTIONS: In addition to max. size, wind force, wave height and direction in conjunction with mooring lines, sizes, place limits on conditions for remaining in the mooring. When these conditions are approached or predicted the vessel will return the submarine hose to the seabed after flushing, as necessary, to avoid damage to the crude unloading facilities. The determination of these limitation conditions is made by the Mooring Master in conjunction with the Terminal Supervisor.

MAX. SIZE: Length 1,000 ft., beam 150 ft., draft 43 ft.

TUGS: A mooring vessel will run the ship's lines to the buoys and serves also as a first response Pollution Control Vessel. It has aboard, for immediate deployment, 1,000 ft. of 14 in. Expandi Boom.

BERTHING: *Multi Point Mooring:* Consists of 8 buoys. Water depth 50 ft. Tidal range 5 ft. to 6 ft. Bottom sand. Current max. 1.7 knots, excluding storm conditions.

Normal Mooring: Bow anchors and 7 buoys are used.

Mooring Equipment: Require 14 lines, either 9 in. synthetic or 1.25 in. wire rope minimum. Minimum length for 9 in. synthetic rope 720 ft. Minimum length of 1.25 in. wire rope on drum 1,200 ft. Both bow anchors serviceable with an appropriate length of chain for vessel's size according to Lloyd's or ABS requirement. Usual mooring conditions require 8 to 10 shackles of chain in the water.

To allow flexibility in the charter market or vessel availability, the 1,200 ft. wire rope on drum requirement can be reduced to 900 ft. provided 720 ft. is usable at the rail and a 2,500 h.p. to 3,000 h.p. tug is utilised, charged to the vessel's account. The tug will normally only be needed during the mooring operation if the vessel cannot slip its wire mooring lines off the drums. A tug, again, may be necessary for the vessel's account in unmooring.

If mooring wires are used, the synthetic tail or eye, if so fitted, must be in good condition and of 125 per cent breaking strength of the wire. The tail or eye, if so fitted, shall be connected to the wire with a Mandell Shackle or equal. A minimum pennant length of 60 per cent, if possible, is requested for ease of handling by the mooring vessel.

Mooring Gear: If ship's gear and winches preclude fast deployment of mooring lines a tug may be required. This applies primarily to vessels with hydraulic winches and is dependent on the size of vessels, sea and wind conditions.

General: The moorings at seaberth have been modified to allow handling of vessels up to 150,000 d.w.t. under certain wind, wave and sea conditions. This modification includes the repositioning of all buoys, increasing the size of the dip and riser chain to 3.125 in. and the installing of additional 5 ton anchors to supplement the 10 ton existing anchors.

No. 4 or D buoy, which is at the stern of the vessel, has 2×3.125 in. dip and riser sections and 4 shackles of 3.125 in. chain. Mooring lines to this buoy are doubled during each mooring operation. Weight has been added to each buoy to decrease the buoyancy. An additional buoy, No. 8 or H, was added to allow the moorings to be used by barges.

DISCHARGING: *Lifting Equipment Requirements:* Derrick that can be utilised to lift the 12 in. hose from the seabed and swing the hose to the ship's manifold. Minimum lifting capacity, 5 tons.

Products Received: Crude, Naphtha and other refinery requirements.

Discharge Rate: Maximum 22,000 bbls./p.h. through 8 or 9 lengths (200 ft. – 225 ft.) of hose, 12 in. diameter into 22 in. I.D. sealine. Emergency flush possible from cross connected 10 in. line from shore. Pumping distance to shore tanks 9,479 ft. Height to shore tank 3 ft. – 4 ft. Tank height max. 39 ft. 6 in.

Temperature Limitation at Rail: Maximum product, Crude or Fuel Oil temperature of 150°F.

General: Refinery will furnish the Mooring Master with pertinent information on crude pours and vessel charter conditions, e.g. pump rates or lay time, in order that the Mooring Master can be fully appraised of the Charter Party Terms and conditions. Deviations from the Charter Party Terms furnished, if not correctable in discussions with the vessel's Master, will be discussed via radio with the Supervisor of Pipe-lines and Terminals to determine if a protest should be filed.

FRESH WATER: Not available.

FUEL: Not available.

BALLAST: No facilities.

GARBAGE DISPOSAL: Not available. See "Agriculture" before first U.S.A. port (Albany).

WASTE OIL DISPOSAL: Only as per 33 CFR 158.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

AUTHORITY: Berth within Los Angeles Customs District.

Operator: Golden West Refining Co., 13539 E. Foster Road, Santa Fe Springs, CA 90701. Postal address: P.O.Box 2128, Santa Fe Springs, CA. 90670. *Tel:* (213) 921-3581. *Telex:* 910-583-4797 GWR-CO-SFES-UD. *FAX:* (213) 921-7510. *Contact:* John W. DeVries, Manager, Shipping and Receiving.

HURON, Ohio: 41.24 N. 82.35 W.

Refer to St. Lawrence Seaway for important general information.

PILOTAGE: None required other than what is required for Great Lakes.

ANCHORAGES: Depth 3 to 10 fathoms.

MAX. SIZE: Length 716 ft., breadth 75 ft., draft 26 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMI Lorain.

TUGS: Meet vessel at the pier head. Use ship's lines.

BERTHING: Norfolk and Western Ore Dock, operated by the Lake Erie Dock Co., can handle 15,000 tons of ore in 8 hours. Ore slip is 1,400 ft. long with 26 ft. of water.

Limestone Dock, 700 ft. length with 26 ft. of water.

Grain loading facilities operated by the Pillsbury Company. Load speed, 20,000 bushels; unload speed, 15,000 bushels; berthing space, 832 ft.; max. length 610 ft.

STEVEDORES: None available.

FRESH WATER: Available.

FUEL: None available.

CONSULS: Nearest at Cleveland.

REPAIRS: No facilities.

REPATRIATION: No facilities.

AIRPORT: 50 miles from port (Cleveland International Airport).

POLICE/AMBULANCE/FIRE: 433-4114.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required by Immigration.
AUTHORITY: The Huron Joint Port Authority, P.O.Box 468, Huron, Erie County, Ohio 44839. *Tel:* (419) 433-5240. *Contact:* F.James, Chairman.

JACKSONVILLE, Florida: 30.20 N. 81.40 W. (See Plan)

DOCUMENTS:
Public Health:
Maritime Quarantine Declaration Form HSM 13.19.
Customs:
3 U.S. Customs Manifests for cargo to be discharged at first port of entry.
2 U.S. Customs Manifests covering all other cargo on board vessel for discharge at other than first port of entry.
3 Stores Lists.
3 Crew Lists.
3 Passenger Lists.
3 Curio and Crew Personal Items Lists.
Vessel's Clearance from last port.
Vessel's Register and Load Line Certificate.
Vessel Utilisation and Performance Report.
Form MA.578 for dry cargo vessels.
Immigration:
1 Certified Crew List and Landing Permit form I-95 for each crew member.
Valid Passport for each crew member.

PILOTAGE: Vessels approach Pilot Entrance Buoy STJ No. 2 (Red) approximately 6 miles at sea off jetty entrance to St. John's River. Pilot station located just inside jetty on river channel at Mayport Naval Station. Pilot station operates both VHF and HF frequencies, VHF Channels 16 and 18 A. HF Frequencies 2738 and 2182 kHz. Pilot cable address "Jaxpilot". Pilot boards from pilot boat "Jaxpilot" just East of Entrance Buoy STJ No. 2. Pilot boat does not maintain station at sea but answers call or is dispatched on information by vessels' Agents. Vessels anchoring awaiting Pilot should anchor as near Entrance Buoy as safely possible.
ANCHORAGES: 2 anchorages located inside harbour near dock sites with depth of about 31 ft.
RESTRICTIONS: For vessel drawing not more than 38 ft. water no restrictions and vessel can enter and clear harbour on 24 hour basis. Pilots and tug assistance available all hours day or night. Vessels drawing more than 38 ft. required to await tide.
MAX. SIZE: Draft should not exceed 38 ft. for dry cargo vessels and tankers.
Note: St. John's Bar Pilot Association advises max. draft 37 ft. (20th April, 1982).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Tropical Radio, Miami, Fla. Call letters WAX. Lantana Radio, Boynton Beach, Fla. Call letters WOE.
TUGS: Under normal conditions with vessels able to proceed under own power, tugs approach vessel in vicinity of pier at which vessel is to dock. Tugs use own lines but no charge made.
BERTHING: Vessels can dock day or night. Transit time from pilot station to berths about 2 hours.
Blount Island Terminal: Operator: Jacksonville Port Authority. Length of berth, 6,300 ft. Depth alongside at MLW 38 ft. (11.6 m.). Containers, autos, paper and general cargo are handled.

Blount Island has 3 on-terminal transit sheds with a total cargo floor area of 372,000 sq. ft. There are also 357 acres of paved open storage area. For cargo handling, Blount Island offers 3×40 ton capacity Paceco container cranes, 2×40 ton capacity IHI container cranes, 3×70,000 lb. container stackers; a 100 ton capacity gantry crane; a 40 ton Le Tourneau straddle hoist; a 50 ton capacity gantry crane; 2 self-propelled multi-level rail car automobile loading ramps; and 390 reefer outlets. 2 Ro/Ro berths. Berth No. 1, depth 38 ft. Berth No. 2, depth 30 ft.
Tallyrand Docks and Terminals: Operator: Jacksonville Port Authority. Length of berth 4,660 ft. Depth alongside at MLW 38 ft. Cargo handled – general, cars, lumber, containers, steel, coffee and petroleum.

There is over 275,000 sq. ft. of warehouse space available, with 40,000 cu. ft. being refrigerated. Talleyrand's cargo handling equipment includes 2×40 ton capacity container cranes; 2×33.5 ton capacity container cranes; 1×100 ton multi-purpose, level luffing gantry Whirley crane; 1×50 ton gantry Whirley crane; 3×40 ton straddle container stackers, capable of stacking 3 high; 7×35 ton straddle container stackers capable of stacking 2 high; 1×35 ton container stacker; 1×40 ton container stacker; 3×10,000 lb. capacity forklift trucks; 3×10,000 lb. capacity clamp trucks; 2×30,000 lb. capacity forklift trucks; 1×46,000 lb. capacity forklift truck; 310 refrigeration outlets; and tanker discharge facilities.

Talleyrand and Blount Island are served by railroad and truck service. 2 surface tracks on the pier apron and 2 platform-level tracks serve both facilities.
Commodore Point Terminal: Length of wharf 2,750 ft. Depth alongside 34 ft. Cargo handled: Oil, cement and liquid chemicals. Terminal also occupied by North Florida Shipyards. Storage facilities: Charter Oil; 340,000 barrels. Glidden – Durkee: 60,171 barrels for chemical storage. Atlantic Cement; 6 silos capacity 40,000 tons. Universal Atlas Cement; 6 silos capacity 32,000 tons.
Jacksonville Bulk Terminals: A subsidiary of Occidental Petrole
Length of loading berth 1,000 ft. Depth MLW maintained at 36 ft. – 3
2 fixed loading towers capable of loading vessel at a rate of 2,850
tons of phosphate per hour. Maximum outreach 81 ft., clearance ab
MLW of 40 ft. Terminal also capable of loading superphosphoric a
phosphate rock, zircon sand (of sufficiently low moisture), gran
fertilisers, tachonite, ilmenitite and mullite. Storage facilities: 6 conc
silos, each with a designed capacity of 5,000 tons of phosphate r
Six tanks with capacities of 15,000 tonnes of superphosphoric acid e
Dunns Terminal: Length of wharf 1,000 ft. Depth 38 ft. Leased
exclusive use by Military Sea Transportation Services.
Celotex Corp: Tel: (904) 751-4800. Berth: 635 ft. (205 m.) with dolph
Depth: 32 ft. (9.8 m.). Terminal for receipt of gypsum rock by s
unloading vessels.
BRIDGES: Only 1 bridge that vessel would have to negotiate and t
only if docking at Commodore Point terminal.
STEVEDORES: Master should keep Agents closely advised by radi
ETA and any amendments to first ETA given. Recommended that Ma
give ETA 72, 48 and 24 hours in advance of arrival. Enables orde
gangs or cancelling gangs ordered in event of delayed ETA.
MEDICAL: Hospital facilities available. International Vaccina
Certificates required by all crew members.
TANKERS: All petroleum terminals provide own hose ranging from 8
to 12 in. Prior to arrival, Master should request information from Term
Company size of connection required.

Private Terminals:
Amerada Hess: Tel: (904) 765-4427. Berth: 200 ft. (60.1 m.) w
dolphins. Depth: 30 ft. (9.2 m.). Tank storage capacity: 460,000 barr
Receipt of petroleum products.
Alton Box Board Company: Tel: (904) 353-3611. Berth: 750 ft. (230
with dolphins. Depth: 24 ft. (7.2 m.). Receipt of residual fuel oil.
Eastern Seaboard Petroleum Company: Tel: (904) 355-9676. Ber
250 ft. (80 m.) with dolphins (1); 160 ft. (48 m.) with dolphins (
Depth: 18 ft. (5.5 m.). Tank storage capacity: 1,266,000 barrels.

Shipping of petroleum products by barge; loading of barges
bunkering vessels at berth in the harbour; fueling of tugs and sm
vessels.
Gulf Oil & American Oil: Berth: 200 ft. (60.1 m.) with dolph
Depth: 33 ft. (11.5 m.). Tank storage capacity: 900,000 barrels.

No bunkering of vessels.
Texaco Pier: Tel: (904) 356-6344. Berth: 550 ft. (167 m.) with dolph
Depth: 32 ft. (9.8 m.). Tank storage capacity: 320,000 barrels. Rece
and shipment of petroleum products; fuels towboats.
Report: *Approaches:* The Jacksonville Sea Buoy lies outside t
entrance of the St. Johns River on the edge of the Gulf Stream whe
a strong Northerly current is usually experienced. The Sea Bu
("2STJ") is a red/white, lighted and whistle (Morse (A)) buoy. A coun
current setting to the South is usually found close along the coast
inshore of the Sea Buoy. Both the direction and velocity of currents a
counter currents vary depending on past and prevailing weat
conditions.

Broken ground with least depths of 4 to 5 fathoms lies fr
4 to 6 miles from the coast for a considerable distance Northward a
Southward of the St. Johns River entrance.

Numerous fish havens are Eastward of the entrance to St. Joh
River; the outermost, marked by a private unlighted buoy, is abo
27 miles Eastward of St. Johns Light.

All vessels should approach Jacksonville Sea Buoy from between S
and N.E. to avoid shallow water along the coast. There are many bri
lights ashore at night which would cause confusion or mistaken iden
with navigation lights. Refer to current N.O.S. charts regarding dang
and cautionary areas.

Sea traffic, especially Southbound ships steaming inshore near t
Sea Buoy to avoid the force of the Gulf Stream and take advantag
the counter current, may be encountered.

Naval vessels may be encountered entering and departing Mayp
and may also be encountered on exercises outside the Sea Buoy an
Entrance Channel: A Federal project provides for a channel dept
42 ft. from the ocean to St. Johns Point. A lighted whistle buoy is abo
2 miles off the entrance to the river. The 800 ft. wide entrance chan
between 2 converging rubblestone jetties is marked by lighted buo
Two-way traffic is normal.

The echo sounder should be monitored continuously for any sil
that may occur and findings reported.
Anchorages: Vessels waiting outside the entrance to St. Johns Ri
can anchor in depths of 36 ft. – 50 ft. N.N.E. of the jetties if wind a
sea permit. Anchorage South of the jetty is not recommended becau
of heavy shrimp boat activity in that area.

Pilots sometimes anchor vessels in the channel opposite Mayp
Basin or at St. Johns Bluff in emergencies or while waiting for wea
to clear upstream; however, these anchorages are not recommen
due to strong currents. A tug should be stationed alongside to ass
turning during change of tide.

St. Johns River Designated Permanent Anchorages:
General (Upper) Anchorage: Located on the South shore off Commodore Point between Miller Creek and Empire Point. Vessels remaining in the anchorage more than 24 hours require a permit from the USCG Captain of the Port.
Quarantine (Lower) Anchorage: Located in the area off the Tallyrand Docks and Terminal. Use requires permit from the USCG Captain of the Port.

The holding ground in both anchorages is only fair and both are somewhat constricted. It is not recommended that vessels with drafts over 34 ft. use these anchorages.

DENSITY: Varies from fresh water 1000 density to mixed salt water 1007.5 density. St. John's River is fed from fresh water sources and for most practical purposes may be considered fresh.

FRESH WATER: Potable water is available through hose connections at all berths operated by the Port Authority. No water barges.

FUEL: Most grades marine fuels available ranging from bunker "C" to light marine diesels with intermediate blends in between. Most major oil companies have bunkering facilities.

FIRE PRECAUTIONS: No smoking except in officers' lounge and crew's lounge. No open flames. No sparking from funnel.

OPENING/CLOSING HATCHES: Crew may open hatches prior to vessel's arrival at dock. After arrival at dockside this work reserved for longshoremen. Vessels equipped with MacGregor type or other automatic opening devices, crew may open hatches at any time. Longshoremen do not open and close these type hatches.

CERTIFICATES: Vessel Register, Load Line, Gear Certificate, Derat.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per man. If vessel remains in port over extended period of time, sea stores can be opened under Customs supervision and additional allowances made. Wine/Spirits: No specific limits as to quantity allowed per man; Customs accept Masters' recommendations for allowances so long as they are reasonable. This applies to beers, wines and spirits.

GANGWAY/DECK WATCHMEN: Watchmen services available but not necessary.

CONSULS: Costa Rica, Denmark, Dominican Republic, Finland, France, Germany, Guatemala, Italy, Netherlands, Norway, Spain and Sweden.

REPAIRS: All types engine and deck repairs possible. 2 well-equipped shipyards.

DRY DOCKS: 3 large dry docks of 18,000 to 33,000 tons capacity and 6 smaller with capacity of 1,000 to 12,000 tons.

GARBAGE DISPOSAL: Service available from Browning Ferris Industries and Cities Service Highway.

WASTE OIL DISPOSAL: Service available from Ali Marine Inc., Lake Charles. Tel: (318) 436-8656.

SEAMAN'S CLUBS: Lake Charles Seafarers Center, 150 Marine Street, Lake Charles. Tel: (318) 436-1315.

DELAYS: Very few delays encountered at any berth.

SHIPMASTER'S REPORT No. 1: 1977.

Cities Services Oil Co., Clifton Ridge:

Location: Lat. 30° 09′ 32″ N., Long. 93° 19′ 30″ W.

Max. Size: Length 805 ft., beam 115 ft., draft 39 ft. (FW).

Density: 1005.

Restrictions: Vessels may berth and unberth at any stage of the tide day or night.

Anchorage: At Bar: 2 miles East of seabuoy in depth of 42 ft. For Bunkering: South of Clooney Island in Old Calcasieu River Channel in midstream.

Distance to Berth: Sea buoy to berth 45 miles.

Terminal Information: 2 × 10 in. Chicksan arms. Max. discharge pressure 150 p.s.i. Derricks not required. Accommodation ladder not required.

Services: Fresh water, provisions, fuel oil, diesel and lube, doctor, hospital, airport and laundry.

The following services are not available: Repairs, drydocks, Lloyd's Surveyor and slop tanks.

Telephone Numbers: Dock 318-583-2432. Terminal Supervisor 318-491-6121, 318-491-6437.

SHIPMASTER'S REPORT No. 2: 1979. Olin Chemical Berth.

Approach: If without Loran "C" or satellite navigator the approach night can be awkward, best made in daylight.

Due to flat coastline, lack of European navigation aids (Decca an Racon) plus numerous oil rigs the entrance to Calcasieu River (lik Sabine) is difficult to make.

Calcasieu and Sabine D/F good.

Numerous oil rigs South of buoyed channel which are either side safety fairway. This corridor can be clearly seen on radar and provide a good longitude.

The soundings, in particular the 100 fathom line, give a good latitude

The wreck buoy on chart 975 – (Approach to Calcasieu River at Lat. 29° 19.5′ N., Long. 93° 12′ W. has been removed.

'CC' Buoy was picked up at 6 miles.

Pilot/Channel: (B.A. Chart 975). The channel is easy to follow as lon as U.S. system of buoyage is remembered. Vessels under 30 ft. can g out of the channel on their starboard side leaving starboard hand buoy to port. This is quite in order up to Pilot Area No. 1. Do not go on po side or West as this is spoil ground.

A Westerly current sets across channel 90% of the time and up t 1 knot. The boarding area is as Vol. No. 6 ALRS. If vessel takes a Pil at Area No. 3 it costs $300 more than No. 1 (not necessary unless vessel restricted by draft – 24 hour service).

Pilot boat is an ex-fishing cutter. White, very fast and strong. Minimum notice for Pilots: Boarding at Area No. 1 four hours, Area No. 3 six hours For sailing from Lake Charles 2 hours. From Area No. 1, one Pilot t Lake Charles, from Area No. 3, two Pilots. Pilot will *not* use hoist.

VHF: Calcasieu Pilots Channels 12, 13 and 16. Difficult to contact pil station until well into channel North of 'CC' Buoy.

Public Correspondence: Several stations in area – Port Arthu Cameron, Erath, Lake Charles, a number, notably Erath and Lak Charles have the "80" Channels which they use in preference to "20 Channels. Very busy, but if you search around you can get through fair quickly. As with all U.S. Marine Operators, overseas ships have difficu if not calling 'Collect'.

Calcasieu Channel: About 35 miles to Lake Charles from breakwaters 5 hours from Pilot Area No. 1 to 'Olin' Chemical Dock.

With Northerly wind and heavy rain on ebb, a current of up to 5 knots at Cameron at entrance just North of breakwater.

Bridge: Highway 102 gives 135 ft. clearance HW. 3.75 hours North o breakwater.

Draft: Max. transit draft of 38 ft. 6 in. (FW) from No. 30 buoy to Lake Charles Docks. We consistently had 39 ft. on echo sounder.

Tugs: 2 tugs of 2,500 h.p. and 3,200 h.p. secure in American style, por side, at bridge 102 and leave in same area.

Berthing: Olin Chemical.

Dock: At head of seagoing navigation at bridge interstate 10. In cut, s no traffic passing. New concrete pier upgraded from barge dock Min. depth 30 ft. Head in, starboard side to. Vessel left at 0200 hrs without difficulty.

Moorings: 3 headlines, 2 breast lines and 2 springs each end. Spring go on to bollards on the jetty and breast lines and stern lines on to hook on the bank.

Cargo Hoses: 8 in. × 300 ASA and spool piece to 12 in. × 150 ASA 3 lengths, ship connects. Takes about 1 hour to connect and disconnec

VRL: No.

Venting: No, on shore there are detectors on the tanks for ammonia Generally the wind is onto the works which makes th detection of venting immediate. Vessel has to wait for change of wind from the North.

Samples: Taken by chemist of tank atmosphere before loading. Mus have min. 97% NH_3 by volume before loading.

Rate: Max. 330 t.p.h. (15 minutes of notice if possible, to stop).

Nitrogen: Available but not for hose purge.

Fresh Water: Water on berth very acid. Difficult to get hold of fresh wate barge.

Stores: Ship's crane can reach end of jetty. Also small crane on hos platform on jetty which can be used for stores. Lorry cannot get to ship side.

Gangway: No difficulties. Some ships have to use pilot ladder.

Developments: LPG dock at Beacon 85/86 about half way up the cana owned by Citgo Petroleum Corp. Good mooring facilities. 1 Chicksa Dredged area 1,000 ft. long, 45 ft. deep.

SHIPMASTER'S REPORT No. 3: June 1988.

Louisiana pilot's office works on Channel 66. Passage in and o varies between 2 hours and 5 hours, depending on tide and whe vessel leaves pilot on way out.

The Customs District for this port is New Orleans.

At Conoco Berth (Clifton Ridge), their regulations prohibit the loadi of any flammable goods while vessel discharging cargo. (I pointed o that we were discharging 66,000 tonnes of flammable goods, i.e. crud oil and on our return we were able to load flammable goods durin discharge). However, vessels unable to take bunkers alongside an have to go further up river and then anchor, 1 shackle in water and against the bank. This means that vessels require 2 tugs when departin from anchorage.

AUTHORITY: Lake Charles Harbor and Terminal District, Port of Lak Charles, 150 Marine Street, P.O.Box AAA, Lake Charles, Louisian 70602. *Tel:* (318) 439–3661. *Telex:* 50–2449 Port Lk Chas. *FAX:* (31 493-3523. *Contact:* William T. Duke, Executive Director.

LONG BEACH, California: 33.45 N. 118.13 W. (See Plan)

DOCUMENTS:

Certificate of Registry.
International Load Line Certificate – Tonnage Certificate (Admeasurement).
Inspection Certificate.
Derat Certificate.
Safety Radio Certificate.

Inbound cargo for discharge – United States must have a Travellers' Manifest (Form 7527), original manifest, and dock inspection copy covering cargo to be discharged at first U.S. port of entry, Custom's Utilisation Form 1302 (Inbound), Form 1302A (Outbound) must be filed within 10 working days after vessel's entry at first U.S. port. Landing permits must be made out prior to arrival (Form I-95) for each crewman of alien origin for the U.S. Department of Immigration (and Form I-418 for each passenger of alien origin). 3 sets of Crew Lists (Form I-418) must be presented to U.S. Customs, plus 2 sets to the Immigration Inspector, and 1 for the U.S. Public Health Service (Quarantine), and 3 sets Stores Lists plus 3 sets Curio Purchases List for U.S. Customs.

American Ships from Foreign Ports:

Safety Equipment Certificate.
Cargo Ship Safety Construction Certificate.
Customs Form CF 226 Affidavit of Repairs Abroad.
Certified Crew List.

Foreign Ships:

1 copy of Visaed Crew List for Immigration (Form I-418 & 5 copies). Other forms may be necessary under certain circumstances, but normally can be taken care of after the vessel's arrival.

If a foreign vessel from a foreign port departs for a foreign port, 2 copies of (Form I-418) covering crew changes in the United States must be submitted to the Department of Immigration upon sailing of the vessel.

(a) Number of copies required: all single except as noted.
(b) The reports mentioned above are all government laws, requested by U.S. Customs, U.S. Immigration, Department of Agriculture, Public Health Service, and B.I.A.
(c) Purpose of documents: to record all vessel movements such as cargo, crew changes, health standards, etc.
(d) Procedure of presenting documents: documents must be presented to Quarantine Boarding Officer and Customs Broker and/or Agent, during or immediately after Quarantine.

PILOTAGE: Pilots ordered by local Agents. Order placed by telephone to 435-6354/5. Pilots require 1 to 2 hours notice prior to arrival. Pilot station contacted on VHF radio Channel 12 (156.6 MHz) or Channel 16 (156.8 MHz). Call sign KMA – 372 Long Beach Pilots. Pilot boats motor cruisers, light grey, fly International Flag "H". Local whistle signal for a Pilot on ship's whistle, 1 short and 1 long blast. Pilot boat normally meets vessels in vicinity Long Beach Sea Buoy or approximately 1 mile South of breakwater entrance. Vessels should have a Pilot ladder on starboard side, weather permitting. In bad weather vessels may be required to proceed inside breakwater entrance prior to Pilot boarding. Pilot boat on VHF Channel 13.

ANCHORAGE: Preferably outside anchorage approximately 0.5 mile S.E. of Long Beach Sea Buoy in 66 ft. of water. Inside anchorage available N.E of channel in outer harbour at approximately 8 fathoms of water depth. Special explosive anchorages available by request, on both sides of entrance channel in 48 ft. of water.

U.S. Coast Guard Anchorage Regulations:

1. The Master of every vessel upon anchoring shall notify the Coast Guard Captain of the Port giving vessel name, anchorage number and time anchored.

2. The Master of every vessel upon departing anchorage shall notify the Coast Guard Captain of the Port giving vessel name, anchorage number, time underway and destination; i.e., bound for sea or for berth number.

3. For the above reports, the call to the Coast Guard Captain of the Port should be made on VHF Channel 16.

RESTRICTIONS: Vessels with dangerous cargoes aboard or loading or discharging such cargo within port district shall obtain permit from U.S. Coast Guard, countersigned by Long Beach Fire Prevention Bureau and Long Beach Port Authority, subject to safety inspection prior entry to assigned anchorage or berth. (Application for entry or handling dangerous cargoes must be requested by Steamship Company or authorised Agent and approved prior entry.)

Also see "Tankers" last paragraph.

MAX. SIZE: (1) Designed depth of water at general cargo berths is 30 ft. – 42 ft. at MLLW.

The Entrance Channel is maintained at 65 ft. MLLW.

(2) No length or breadth restrictions at general cargo berths.

(3) Dry bulk facility berths designed depth at MLLW is 36 ft. to 50 ft. No restriction on length. However, ships with over 130 ft. beam might experience some difficulty in loading without turning ship.

There are 10 bulk oil facilities, 2 with 76 ft. of water at MLLW and 8 with 37 ft. to 52 ft. of water at MLLW alongside berths. It is feasible that vessels over 1,000 ft. in length could use the deep-water oil facilities. There are no restrictions as to beam.

QUARANTINE: Quarantine Station, U.S. Public Health Service, 200 World Way, L.A. International Airport, Los Angeles, CA 90045, Tel: 215-2365. Hours: 0600 – 1800 hrs. regular boarding hours. 1800 – 0600 hrs. overtime boarding hours.

STANDARD PROCEDURE FOR MARITIME BOARDING

Dockside Boarding: Vessels subject to Quarantine Inspection are normally boarded upon arrival in berth.

A vessel crewman should be stationed at the gangway to prevent any crew member from going ashore and shore personnel from coming aboard until the vessel has been passed by the Quarantine Boarding Officer.

Vessels are boarded at anchor.

Boarding in the Stream: Vessels are boarded at anchor:

Only if ship is to be at anchor for some time, such as waiting berth, etc.

Or upon special request by the ship's Agent.

Effective July 1st, 1973, Radio Pratique as a method of quarantine clearance was discontinued at all ports under control of the United States. Changes in regulations, policies, and procedures concerning Maritime Public Health Clearance has been promulgated.

Vessels Subject to Routine Inspection: Only vessels in the following categories will be subject to on board Public Health Inspection upon arrival at ports under control of the United States:

A. Vessels which, during the 15 days prior to arrival in the United States, or since the last U.S. port (whichever period is shorter) have or have had on board among passengers or crew any of the following conditions or illness signs or symptoms:

1. Temperature of 100°F (38°C) or greater (a) which persisted for 2 days or more; or (b) which was accompanied or followed by any one or all of the following: rash, jaundice, glandular swelling; *or*

2. Diarrhoea severe enough to interfere with work or normal activity; *or*

3. On board occurrence of death, regardless of the signs and symptoms above.

B. Vessels which have been in plague infected country in the 60 days prior to arrival in the United States.

Procedures: Vessels in any of the categories A or B above will be granted Provisional Pratique and boarded upon arrival for inspection. In addition, vessels boarded for quality control may be boarded upon or subsequent to arrival. IN ACCORDANCE WITH REGULATIONS YOU MUST INFORM THE QUARANTINE STATION, THROUGH YOUR VESSEL AGENT, AT OR NEAREST THE INTENDED PORT OF YOUR VESSEL'S FIRST ARRIVAL IN THE UNITED STATES OF THE OCCURRENCE OF ILLNESS AS SPECIFIED IN A ABOVE. Based on information you provide your Agent, or information your Agent already possesses regarding your vessel's itinerary, your Agent will notify the Quarantine Station if your itinerary included a plague infected country.

ARRIVING VESSELS NO LONGER NEED TO COMPLETE A MARITIME PUBLIC HEALTH DECLARATION UNLESS BOARDED FOR INSPECTION AS DESCRIBED ABOVE. THE BOARDING INSPECTOR WILL PROVIDE THE DECLARATION.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Station KOU Marine Operator, San Pedro.

Channel 1 — ship transmit on 2009 kHz
ship receive on 2566 kHz
Channel 4 — ship transmit on 2126 kHz
ship receive on 2522 kHz

Station KOU also monitors Channel 16 (156.8 MHz) and Channel 26 (157.3 MHz) for distress, safety and calling.

Hours of report 0805, 2005 PST. Operator gives notice 5 minutes prior to each report. No ship traffic is handled during report period.

RADAR/VHF: Radar service provided to vessels only if Pilot aboard, in which case radar advisory information will be fed from shore-based radar at Pilot Station.

Use	*Channel*	*Frequency* (MHz)
Distress, Safety and Calling	16	156.80

Harbour tugs, secondary	65A	156.275
San Pedro Marine Operator	24	157.20
San Pedro Marine Operator	26	157.30

Note: The Marine Operator does not guard Channel 16.

Channel 77 – Pilot/Tug channel: This channel is restricted to communications by a harbour pilot and support personnel in the movement and docking of ships. The use by commercial and recreational boat users is *in strict violation* of FCC rules. The loss of communications between a pilot and his assisting tugs due to interference by unauthorised users could result in a serious catastrophe within a harbour.

Channels 12, 14, 65A – Port Operations channels: Messages are restricted by FCC Rules to "the operational handling, movement and safety of ships and, in emergency, to the safety of persons." Other use is a violation of FCC rules.

Channel 13 – Navigational Bridge to Bridge channel: Use of this channel is restricted by FCC rules to navigational communications, such as meeting and passing arrangements, and vessel traffic services. No shore-based of this channel is permitted in this harbour area except Marine Exchange VTIS and the Cerritos Channel lift bridges.

Vessel Traffic Information Service: Upon entering the precautionary area, vessels are encouraged to contact the Marine Exchange on VHF Channel 13 (Call Sign KGW-299) to ascertain what vessel traffic may be expected.

TUGS: Tugs will meet vessel inside breakwater prior reaching inner harbour area. Pilot and tugs are in communication.

BERTHING: No requirements as to time of entry providing berthing arrangements have been made with Port Authority. Assignments classified as follows:

Preferential Assignments. Secondary Assignments, Subordinate Right granted for use of Preferential Assigned Berth. Temporary Assignment – temporary permission granted to use certain berth.

Note: All berth assignments shall be held by Assignee subject provisions of Port of Long Beach Tariff as to charges, rates, rules and regulations applicable thereto, and to all of terms, conditions and provisions contained in such assignment.

Depths/Elevations: Average elevation of wharf decks above mean lower low water datum and design depth of water alongside berths below mean lower low water datum. (Design Depths are subject to variations) (Data as of 1992)

GENERAL CARGO FACILITIES:

Berth 1, 2:

Terminal Operator:	Cool Carriers
Cargoes Handled:	Fresh citrus fruit, bananas, frozen shrimp.
Total Terminal Area:	7.9 acres (2.8 ha.)
Length of Berths:	1,070 ft. (326 m.)
Wharf Height:	25.3 ft. (7.7 m.)
Wharf Area:	37,995 sq.ft. (3,530 sq.m.)
Apron Width:	34 ft. (10.4 m.)
Open Storage Area:	174,240 sq. ft. (16,204 sq.m.)
Loading Platform Area:	13,000 sq.ft. (1,208 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	108,000 sq.ft. (10,044 sq.m.)
Special Equipment/Facilities:	Specialised equipment to handle unitised cargo. Also handles genera cargo and containers.

Berths 3, 4:

Terminal Operator:	Cooper/T. Smith Stevedoring Co.
Cargoes Handled:	Steel, lumber.
Total Terminal Area:	8.5 acres (3.4 ha.)
Length of Berths:	1,000 ft. (304.8 m.)
Wharf Height:	22.4 ft. (6.8 m.)
Wharf Area:	34,075 sq.ft. (3,166 sq.m.)
Apron Width:	35 ft. (10.7 m.)
Open Storage Area:	275,000 sq.ft. (25,548 sq.m.)
Loading Platform Area:	11,505 sq.ft. (1,069 sq.m.)
Design Depth of Water:	30 ft. (9.1 m.)
Transit Shed Area:	99,840 sq.ft. (9,275 sq.m.)
Special Equipment/Facilities:	Mobile cranes, forklifts.

Berth 201:

Terminal Operator:	Port of Long Beach.
Cargoes Handled:	Standby berth.
Length of Berths:	600 ft. (183 m.)
Wharf Height:	16 ft. (4.9 m.)
Wharf Area:	36,000 sq.ft. (3,066 sq.m.)
Apron Width:	60 ft. (18.3 m.)
Open Storage Area:	36,000 sq.ft. (3,066 sq.m.)
Loading Platform Area:	36,000 sq.ft. (3,066 sq.m.)
Design Depth of Water:	32 ft. (9.8 m.)
Special Equipment/Facilities:	None.

Berth 208:

Terminal Operator:	—
Cargoes Handled:	Fresh bananas.
Total Terminal Area:	5.7 acres (2.3 ha.)
Length of Berths:	600 ft. (183 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Wharf Area:	24,000 sq.ft. (2,044 sq.m.)
Apron Width:	40 ft. (12.2 m.)
Loading Platform Area:	14,000 sq.ft. (1,300 sq.m.)
Design Depth of Water:	40 ft. (12.2 m.)
Transit Shed Area: Special Equipment/Facilities:	4 electric, travelling banana unloaders. Capacity 17,000 boxes (365 tons) per hour. Electric conveyor system from unloaders to trucks, with automatic computer controlled diverter system. Truck scale, maintenance building, 41,500 sq.ft. refrigerated warehouse

Berths 12, 13:

Terminal Operator:	Cool Carriers
Cargoes Handled:	Bananas.
Total Terminal Area:	20.4 acres (8.3 ha.)
Length of Berths:	2,696 ft. (821 m.)
Wharf Height:	18.7 ft. – 22.2 ft. (5.7 m. – 6.8 m.)
Wharf Area:	108,462 sq.ft. (10,076 sq.m.)
Apron Width:	45 ft. – 200 ft. (13.7 m. – 61 m.)
Open Storage Area:	186,325 sq.ft. (17,310 sq.m.)
Loading Platform Area:	12,000 sq.ft. (1,115 sq.m.)
Design Depth of Water:	32 ft. – 36 ft. (9.7 m. – 11 m.)
Transit Shed Area:	180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities:	Mobile cranes, forklifts, container handlers, Ro/Ro ramp. Heavy lift capability. Rail spur.

Berths 17, 18, 28, 29, 30, 31, 34:

Terminal Operator:	California United Terminals.
Cargoes Handled:	Breakbulk general.
Total Terminal Area:	30 acres (12.1 ha.)
Length of Berths:	2,900 ft. (884 m.)
Wharf Height:	10.5 ft. – 18.5 ft. (3.2 m. – 5.6 m.)
Wharf Area:	126,000 sq.ft. (11,705 sq.m.)
Apron Width:	45 ft. – 130 ft. (13.7 m. – 39.6 m.)
Open Storage Area:	288,600 sq.ft. (26,811 sq.m.)
Loading Platform Area:	9,000 sq.ft. (836 sq.m.)
Design Depth of Water:	36 ft. – 43 ft. (11 m. – 13.1 m.)
Transit Shed Area:	96,000 sq.ft. (8,922 sq.m.)
Special Equipment/Facilities:	Stevedoring equipment. Access for rail to heavy lift berths. Ro/Ro ram

Berth 122:

Terminal Operator:	Weyerhaeuser Company† Fremont Forest Products‡
Cargoes Handled:	Lumber and lumber products.
Total Terminal Area:	19.9 acres (8 ha.)† 7.5 acres (3 ha.)‡
Length of Berths:	600 ft. (183 m.)
Wharf Height:	22.7 ft. (6.9 m.)
Apron Width:	50 ft. (15.2 m.)
Open Storage Area:	432,600 sq.ft. (40,188 sq.m.)† 210,000 sq.ft. (1,951 sq.m.)‡
Design Depth of Water:	40 ft. (12.2 m.)
Transit Shed Area:	2 dry storage sheds total 10,000 sq. ft. (929 m.)‡
Special Equipment/Facilities:	150 ft. notched wharf to accommodate barges and lumber handling equipment. Notch height – 12.7 ft. (3.9 m.) Weyerhaeuser storage located at Berths No. 115-116.

Berths 204, 205:

Terminal Operator:	Steel Terminal, Inc. (SSA).
Cargoes Handled:	Steel and lumber products.
Total Terminal Area:	18.9 acres (7.6 ha.)
Length of Berths:	1,275 ft. (335 m.)
Wharf Height:	18.5 ft. (5.6 m.)
Wharf Area:	130,000 sq.ft. (12,077 sq.m.)
Apron Width:	50 ft. – 150 ft. (15.2 m. – 45.7 m.)
Open Storage Area:	480,000 sq.ft. (45,335 sq.m.)
Loading Platform Area:	9,000 sq.ft. (836 sq.m.)
Design Depth of Water:	36 ft. (11 m.)
Transit Shed Area:	180,000 sq.ft. (16,722 sq.m.)
Special Equipment/Facilities:	Stevedoring equipment. Terminal services.

Berths 206, 207:

Terminal Operator:	Crescent Terminal, Inc. (SSA).
Cargoes Handled:	Steel products.
Total Terminal Area:	17.5 acres (7 ha.)
Length of Berths:	1,192 ft. (313 m.)
Wharf Height:	18.5 ft. (5.6 m.)
Wharf Area:	57,500 sq.ft. (5,341 sq.m.)
Apron Width:	48 ft. (14.6 m.)
Open Storage Area:	530,000 sq.ft. (49,237 sq.m.)
Loading Platform Area:	13,800 sq.ft. (1,288 sq.m.)
Design Depth of Water:	32 ft. (9.8 m.)
Transit Shed Area:	190,000 sq.ft. (17,651 sq.m.)
Special Equipment/Facilities:	Stevedoring equipment. Terminal services.

Berth 62:

Terminal Operator:	Cooper/T. Smith Stevedoring Co.
Cargoes Handled:	Steel, plywood, automobiles, trucks.
Total Terminal Area:	20 acres (8 ha.)
Length of Berth:	750 ft. (228.5 m.)
Wharf Height:	12 ft. (3.9 m.)
Apron Width:	89 m.
Open Storage Area:	579,348 sq.ft. (53,879 sq.m.)
Design Depth of Water:	42 ft. (12.8 m.)
Transit Shed Area:	44,160 sq.ft. (4,107 sq.m.)
Special Equipment/Facilities:	Stevedoring Equipment. Terminal services.

Berth 50:
Berths 52, 53 54:

Terminal Operator:	Forest Terminals Corp.
Cargoes Handled:	Newsprint/lumber/lumber products.
Total Terminal Area:	13.8 acres
Length of Berths:	3 wharfs, 1,982 ft. (604 m.)
Wharf Height:	10.2 ft. – 17.1 ft. (3.1 m. – 5.2 m.)
Wharf Area:	63,645 sq.ft. (5,912 sq.m.)
Apron Width:	30 ft. – 38 ft. (9.1 m. – 11.6 m.)
Open Storage Area:	6.9 acres lumber storage
Loading Platform Area:	9,750 sq.ft. (906 sq.m.)
Design Depth of Water:	40 ft. (12.2 m.)
Transit Shed Area:	2 × 247,400 sq.ft. (22,984 sq.m.)
Special Equipment/Facilities:	Specialised ships and barges designed for newsprint vacuum handling, loading and unloading. Vacuum lift truck on dock, heavy-duty lift trucks for lumber handling, easy access to L.B. Frwy. Minimum time truck loading.

Berths 82, 83:

Terminal Operator:	Toyota Motor Sales, U.S.A.
Cargoes Handled:	Automobiles.
Total Terminal Area:	144 acres.
Length of Berths:	1,300 ft. (396 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Wharf Area:	61,750 sq.ft. (5,737 sq.m.)
Apron Width:	95 ft. (30 m.)
Open Storage Area:	2,730,000 sq.ft. (253,617 sq.m.) 2,100,000 sq.ft. (195,090 sq.m.)
Design Depth of Water:	38 ft. (11.6 m.)
Special Equipment/Facilities:	Toyota Motor Sales, U.S.A. – office and processing buildings, body shop, car wash, truck bed installation building.

CONTAINER FACILITIES:

Berths 6, 8, 10:

Terminal Operator:	Long Beach Container Terminal, Inc.
Total Terminal Area:	85.3 acres (34.5 ha.)
Length of Berths:	2,700 ft. (823 m.)
Wharf Height:	15 ft. (4.6 m.)
Crane Truck Gauge:	100 ft. (30.4 m.)
Clear Lift/Above Water:	105 ft. (32 m.)
Boom Outreach:	137 ft. (41.8 m.)
Backreach:	50 ft. (15.2 m.)
Open Storage Area:	3,216,000 sq.ft. (298,766 sq.m.)
Design Depth of Water:	50 ft. (15.2 m.)
Cargoes Handled:	General cargo in containers.
Special Equipment/Facilities:	Ground and chassis operation. 4 travelling container cranes of 40 long ton capacity; 46 tons without spreader. 11 transtainers, 4 and 5 high stacking. 14,000 TEU ground capacity, incl. 340 reefer outlets, 2,000 FEU chassis slots, 600 FEU chassis stacked vertically.

Berths 24 – 26:

Terminal Operator:	California United Terminals.
Total Terminal Area:	96 acres (38.8 ha.)
Length of Berths:	1,950 ft. (594 m.)
Wharf Height:	11.3 ft. – 18.4 ft. (3.4 m. – 5.6 m.)
Crane Truck Gauge:	50 ft. (15.2 m.)
Clear Lift/Above Water:	98 ft. (29.9 m.)
Boom Outreach:	115 ft. (35 m.)
Backreach:	50 ft. (15.2 m.)
Open Storage Area:	2,520,000 sq.ft. (234,108 sq.m.)
Design Depth of Water:	37 ft. (11.3 m.)
Cargoes Handled:	General cargo in containers, Ro/Ro cargo, breakbulk and steel slabs.
Special Equipment/Facilities:	2 Ro/Ro ramps, one stern ramp. 4× 40 ton travelling container cranes, transtainers, top handlers, side handlers. Container storage space for 14,400 TEU ground capacity, 2,500 FEU chassis slots, 360 reefer outlets. 11-lane main gate and 6 scales. Rail spurs.

Berths 227, 228, 229, 230:

Terminal Operator:	Sea-Land Service, Inc.
Total Terminal Area:	108.6 acres (44 ha.)
Length of Berths:	2,550 ft. (778 m.)
Wharf Height:	15.6 ft. (4.8 m.)
Crane Truck Gauge:	100 ft. (30.4 m.)
Clear Lift/Above Water:	106 ft. (32.3 m.)
Boom Outreach:	115 ft. – 127 ft. (35 m. – 38.7 m.)
Backreach:	60 ft. (18.3 m.)
Open Storage Area:	5,317,200 sq.ft. (493,619 sq.m.)
Design Depth of Water:	42 ft. – 44 ft. (12.8 m. – 13.4 m.)
Cargoes Handled:	General cargo in containers
Special Equipment/Facilities:	Ground and chassis operation. 6×30 ton travelling container cranes. Space for 10,230 TEU containers, 2,550 grounded, 5,900 chassis, including 482 reefer chassis spaces. Container freight station separate from terminal with 71,150 sq.ft. (6,610 sq.m.). 4 transtainers.

Berths 232, 233, 234:

Terminal Operator:	International Transportation Services, Inc.
Total Terminal Area:	103.6 acres (42 ha.)
Length of Berths:	2,300 ft. (701 m.)
Wharf Height:	16 ft. (4.9 m.)
Crane Track Gauge:	50 ft. – 100 ft. (15.2 m. – 30.4 m.)
Clear Lift/Above Water:	96 ft. – 106 ft. (29.3 m. – 32.3 m.)
Boom Outreach:	115 ft. – 137 ft. (35 m. – 41.8 m.)
Backreach:	45 ft. – 50 ft. (13.7 m. – 15.2 m.)
Open Storage Area:	2,980,460 sq.ft. (276,885 sq.m.)
Design Depth of Water:	36 ft. – 42 ft. (11 m. – 12.8 m.)
Cargoes Handled:	General cargo in containers.
Special Equipment/Facilities:	Ground and chassis operation. 4×30 and 2×40 long ton container cranes. 2×40 long ton and 6×30 long ton capacity transtainers. Space for storing 3,487 TEU containers on ground, including 384 reefer outlets. 4,000 TEU chassis slots. Container Freight Station with 60,100 sq.ft. (5,583 sq.m.).

Berths 243, 244:

Terminal Operator:	Maersk Line Pacific, Ltd.
Total Terminal Area:	54 acres
Length of Berths:	1,200 ft. (366 m.)
Wharf Height:	15.9 ft. (4.8 m.)
Crane Track Gauge:	50 ft. (15.2 m.)
Clear Lift/Above Water:	106 ft. (32.3 m.)
Boom Outreach:	115 ft. – 125 ft. (35 m. – 38 m.)

Backreach: 50 ft. (15.2 m.)
Open Storage Area: 1,512,000 sq.ft. (140,464 sq.m.)
Design Depth of Water: 42 ft. (12.8 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Chassis operation. 3×40 ton travelling container cranes. 2,460 FEU container slots on chassis and 1,800 TEU container slots grounded, 250 reefer outlets. Side handler and top pick with 15 and 40 ton capacity. One rail line through Berth 246.

Berths 245, 246, 247:
Terminal Operator: Pacific Container Terminal.
Total Terminal Area: 62.5 acres (25.3 ha.)
Length of Berths: 2,100 ft. (640 m.)
Wharf Height: 15.9 ft. (4.8 m.)
Crane Track Gauge: 50 ft. (15.2 m.)
Clear Lift/Above Water: 91 ft. – 106 ft. (27.7 m. – 32.3 m.)
Boom Outreach: 115 ft. – 125 ft. (35 m. – 38 m.)
Backreach: 50 ft. (15.2 m.)
Open Storage Area: 2,500,000 sq.ft. (232,250 sq.m.)
Design Depth of Water: 36.4 ft. – 40 ft. (11 m. – 12.2 m.)
Cargoes Handled: General cargo in containers.
Special Equipment/Facilities: Ground and chassis operation. 5×40 ton travelling container cranes. 40 ton transtainers. Athwartship capability. Space for storing 12,000 TEU containers. Complete reefer container services and storage, with 168 reefer outlets. Container freight station, 34,000 sq.ft.

Berths 60 – 62:
Terminal Operator: Hanjin Shipping Company.
Total Terminal Area: 57 acres (23 ha.)
Length of Berths: 1,807 ft. (550 m.)
Wharf Height: 15.0 ft. (4.5 m.)
Crane Track Gauge: 100 ft. (30.4 m.)
Design Depth of Water: 42 ft. (12.8 m.)
Cargo Handled: General cargo in containers.
Speical Equipment/Facilities: 3×40 ton container gantry cranes. Space for storing 3,400 TEU containers. 200 reefer points.

CRANES: Barge cranes available capacity 45 tons – 275 tons. A U.S. Navy floating crane capacity 385 tons available for hire.

BRIDGES: No restrictions into Port of Long Beach. The Gerald Desmond Bridge over Back Channel has vertical clearance of 155 ft. Cerritos Channel which connects Long Beach through Back Channel to Port of Los Angeles has 2 bridges which must be opened for passage of vessels.

Signal for Opening: 3 long blasts on horn or whistle. During inclement weather, call through a megaphone or make a loud and distinct stroke on a bell.

MEDICAL: Advance notice preferable. Adequate hospital and medical facilities available for providing necessary or emergency care. From information available, Public Health Department may, if required, request certain information prior to granting Free Pratique for inoculations, Vaccination/Fever Certificates.

DENSITY: Local water density 1.025 grams per millilitre or pure sea water at all stages of tide.

FRESH WATER: Potable fresh water available all Municipal berths through 2 in. lines. Rental charge for use of each 50 ft. length water hose when furnished.

FUEL: All grades (viscosities) of bunker fuels available in any amount through pipe-lines at most Municipal berths, and by barge at anchor or at berths if desired. Notify quantity and type desired to local Steamship Company or Agent.

DRY BULK FACILITIES:

Berths 32, 33:
Terminal Operator: Pacific Coast Cement Corp.
Cargoes Handled: Bulk cement.
Total Terminal Area: 2 acres (0.8 ha.)
Length of Berths: 676 ft. (206 m.)
Wharf Height: 13.8 ft. (4.2 m.)
Open Storage Area: 157,623 sq.ft. (14,643 sq.m.)
Design Depth of Water: 36 ft. (11 m.)
Special Facilities/Equipment: Silo capacity 50,000 tons. Screw-type unloader capacity 600-800 t.p.h., unloads to conveyor system direct to silos. Highest elevation vertical screw 42.5 ft., lowest elevation vertical screw 38 ft. Max. reach 94 ft. from face of wharf (concrete), 91.5 ft. from pierhead line. Vertical clearance under boom at MHW 89 ft., under vertical screw at MHW 20 ft. Truck loading spouts.

Berth 46:
Terminal Operator: Domtar Gypsum.
Cargoes Handled: Gypsum.
Total Terminal Area: 9 acres (3.6 ha.)
Length of Berths: 600 ft. (183 m.)
Wharf Height: 12 ft. (3.7 m.)
Design Depth of Water: 36 ft. (11 m.)

Berth 82:
Terminal Operator: Gold Bond Building Products.
Cargoes Handled: Bulk gypsum.
Total Terminal Area: 17.3 acres (7 ha.)
Length of Berths: 650 ft. (198 m.)
Wharf Height: 14.4 ft. (4.4 m.)
Open Storage Area: 65,340 sq.ft. (6,076 sq.m.)
Design Depth of Water: 38 ft. (11.6 m.)
Special Facilities/Equipment: Adjustable, elevated receiving hopper served by an elevated electric belt conveyor system extending to a 40,000 ton capacity storage building. 800-900 t.p.h. capacity.

Berths 209, 210:
Terminal Operator: Morton Salt
Cargoes Handled: Bulk salt.
Total Terminal Area: 4.9 acres (2 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 19.2 ft. (5.9 m.)
Open Storage Area: 117,740 sq.ft. (10,938 sq.m.)
Design Depth of Water: 40 ft. (12.2 m.)
Special Facilities/Equipment: Movable inclined elevated electric belt conveyor system with receiving hopper extending from wharf to stock pile area. Packaging plant adjacent.

Berths 210, 211:
Terminal Operator: Koch Carbon Co.
Cargoes Handled: Dry bulk products.
Total Terminal Area: 6.7 acres (2.7 ha.)
Length of Berths: 1,100 ft. (335 m.)
Wharf Height: 19.3 ft. (5.9 m.)
Open Storage Area: 291,000 sq.ft. (27,000 sq.m.)
Design Depth of Water: 42 ft. (12.8 m.)
Special Facilities/Equipment: Truck wash, new conveyor system, truck dump for petroleum coke with new control room. Silo storage 65,000 tons.

Berths 212, 213, 214, 215:
Terminal Operator: Metropolitan Stevedore Co.
Cargoes Handled: Bulk petroleum coke, coal, potash, borax, soda ash and prilled sulphur
39.2 acres (15.9 ha.)
Total Terminal Area: 1,900 ft. (243 m.)
Length of Berths: 18.5 ft. – 18.8 ft. (5.6 m. – 5.7 m.)
Wharf Height: 75,000 metric tons
Open Storage Area: 37 ft. – 50 ft. (11.3 m. – 15.2 m.)
Design Depth of Water: Stockpile area 85,682 sq.ft. (7,960
Special Facilities/Equipment: sq.m.). Two electric, travelling bulk shiploaders. The first with retractable straight-line bridge boom having 58 ft. (17.7 m.) outreach beyond pierhead line, 60 ft. (18.3 m.) above MLLW to bottom of shuttle, 47.5 ft. to bottom of swivel. Boom equipped with 48 in. (1.2 m.) electric belt conveyor and a telescopic loading spout with mechanical trimming head. Loading rate 3,900 long tons/hr. The second shiploader features a retractable straightline bridge boom with a 75 ft (24.2 m.) outboard reach 66 ft. (20.1 m.) air draft telescoping loading spout with spoon. Designed loading rate is 5,000 metric tons/hr. Rail facilities: 85 car unit trains can be accommodated while waiting movement to dump sites. One rota and one bottom dump system. Shiploaders travel on rails along rear of wharf for distance of 1,485 f (453 m.); working range is 1,175 ft. (358 m.). Bulk materials are handled by 48 in. (1.2 m.) and 72 in. (1.9 m.) belt conveyor systems extended to shiploader through tunnel reclaim from car unloading sheds and storage areas. Prilled sulphur also exported from facility. Two covered silos with 30,000 tons of sulphur storage capacity.
Covered Storage: 380,000 ton
Silo Storage: 30,000 ton

TANKERS:

Berths 30, 31, 32:
Terminal Operator: Baker Commodities Inc.
Cargoes Handled: Tallow, vegetable oils (coconut oil, palm oil, cotton seed oil).
Total Terminal Area: 1.2 acres (0.5 ha.)
Length of Berths: 992 ft. (302.4 m.)
Wharf Height: 10.9 ft. – 12.1 ft. (3.3 m. – 3.7 m.)
Design Depth of Water: 43 ft. (13 m.)
Special Facilities/Equipment: 2×6 in. pipelines from Wharf D-30 to storage tanks. Storage capacity 6.7 million gallons. Also 3×10 in. pipelines from Berth D-32 to stora tanks.

Berths 73, 74:

Terminal Operator:	Powerline Oil Company.
Cargoes Handled:	Crude oil and fuel oil.
Total Terminal Area:	8.8 acres (3.6 ha.)
Length of Berths:	830 ft. (253 m.)
Wharf Height:	11.7 ft. (3.6 m.)
Design Depth of Water:	37 ft. (11.3 m.)
Special Facilities/Equipment:	Storage capacity: 570,000 bbls.

Berths 76, 77, 78:

Terminal Operator:	Four Corners Pipe Line Company.
Cargoes Handled:	Petroleum.
Total Terminal Area:	28 acres (11.3 ha.)
Length of Berths:	2,150 ft. (655 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Design Depth of Water:	46 ft. (14 m.)
Special Facilities/Equipment:	Capacity for storage: 1,800,000 bbls.

Berths 82, 83:

Terminal Operator:	Petro-Diamond.
Cargoes Handled:	Gasoline, gasoline blend stocks, diesel, toluene, MTBE and lube oil. 1×8 in. dock hose conecting into one of 2×500 ft., 12 in. dock lines capable of receiving up to 7,500 bbls./hr.
Total Terminal Area:	5.4 acres (2.2 ha.)
Length of Berths:	1,300 ft. (396 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Design Depth of Water:	38 ft. (11.6 m.)
Special Facilities/Equipment:	Terminal has pipeline connections which allow petroleum products to be shipped to most L.A. Basin Refiners and common carrier pipelines. Truck rack at the Terminal is capable of loading 100 trucks per hour period. Permits are available for DSP and bonded storage. Capacity for petroleum products: 410,000 bbls.

Berths 84, 85, 86, 87:

Terminal Operator:	Texaco Inc.
Cargoes Handled:	Crude oil, petroleum products, bunker fuel.
Total Terminal Area:	10.7 acres (4.3 ha.)
Length of Berths:	1,770 ft. (540 m.)
Wharf Height:	16.3 ft. (5.0 m.)
Design Depth of Water:	52 ft. (15.8 m.)
Special Facilities/Equipment:	Discharge capacity 32,000 bbls./hr.; 24 in. pipeline to storage and tank farm. Storage capacity: 245,000 bbls.

Berth 118:

Terminal Operator:	Four Corners Pipe Line Company.
Cargoes Handled:	Petroleum products.
Total Terminal Area:	3.3 acres (1.3 ha.)
Length of Berths:	1,000 ft. (305 m.)
Wharf Height:	21.5 ft. (6.6 m.)
Design Depth of Water:	55 ft. (16.8 m.)
Special Facilities/Equipment:	4×12 in. (30.5 cm.) hydraulic-operated, marine swivel-jointed loading arms mounted on elevated steel structure on centre wharf. Discharge capacity is 50,000 bbls. (7,950,000 litres) per hour.

Berths 120, 121:

Terminal Operator:	Four Corners Pipe Line Company.
Cargoes Handled:	Crude oil and petroleum products.
Total Terminal Area:	5.7 acres (2.3 ha.)
Length of Berths:	1,100 ft. (335 m.)
Wharf Height:	20 ft. (6.1 m.)
Design Depth of Water:	76 ft. (22.4 m.)
Special Facilities/Equipment:	4×16 in. diameter articulated crude unloading arms and 1×8 in. diameter articulated bunker/diesel loading arm; 275 p.s.i. max. working pressure; designed to accommodate tankers from 50,000 to 265,000 d.w.t. tankers; arms are FMC Chicksan with hydraulic couplings. Storage tankers available at ARCO facilities in Carson and the inner harbour via 42 in. and 24 in. pipelines.

Berths 209, 210, 211A:

Terminal Operator:	Golden West Distribution.
Cargoes Handled:	Petroleum products and bunker fuel.
Total Terminal Area:	4.6 acres (1.9 ha.)
Length of Berths:	790 ft. (241 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Storage tankage for bunker fuel 404,570 bbls. Discharge rate: 4,500 bbls./hr.

Berth 210:

Terminal Operator:	Westway Trading Corp.
Cargoes Handled:	Crude products.
Total Terminal Area:	1.9 acres (0.77 ha.)
Length of Berths:	570 ft. (174 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Design Depth of Water:	40 ft. (12.2 m.)
Special Facilities/Equipment:	Storage capacity; 62,000 bbls.

Berth 242:

Terminal Operator:	Westway Trading Corp.
Cargoes Handled:	Bulk molasses, miscellaneous bulk liquid chemicals and bunker fuel.
Total Terminal Area:	7.4 acres (3 ha.)
Length of Berths:	700 ft. (213.4 m.)
Wharf Height:	15.0 ft. (4.6 m.)
Design Depth of Water:	36 ft. (11.0 m.)
Special Facilities/Equipment:	Pumping and pipeline system designed to handle product from barges, ships rail cars and trucks. Heavy duty pumps to handle a variety of bulk liquids, storage tank capacity: 13 million gallons. Also use Pier A, Berth 210.

The following is part of a letter sent by the Captain of the Port to a tanker operator:

The safety of the port and the VLCC tankers using the harbour for bunkering and provisioning is of paramount concern to the Coast Guard. Consequently the following guidelines have been established for all such vessels 200,000 d.w.t. and larger when utilising the Outer Harbour (inside of the breakwater) of the ports of Los Angeles/Long Beach:

a. Vessels may enter or depart the harbour areas inside the breakwater only during daylight if over 56 ft. draft.
b. Minimum visibility of 1 mile is established for vessel movement.
c. Adequate tugboat assistance shall be provided when passing through the breakwater entrances upon entering or departure, and when navigating inside the breakwater to and from anchorages.
d. A qualified Pilot must be onboard when entering or departing the harbour. One way traffic is to be maintained during the VLCC's transit through the breakwater entrance.
e. Vessel must have a 10% draft clearance under the keel when crossing either the Los Angeles or Long Beach entrance.
f. No "dead ship" status will be permitted without prior approval of the Captain of the Port.
g. No vessel with a beam in excess of 200 ft. shall enter either harbour without the permission of the Captain of the Port.

FIRE PRECAUTIONS: 2 fire boats and 1 fire station; in addition City fire service available.

Special fire precautions required at all berths handling petroleum products or dangerous cargoes. In addition to all applicable provisions of Long Beach Municipal Code, flammable and combustible liquids and flammable gases shall be handled and stored at Marine Petroleum Terminals in accordance with minimum fire safety requirements promulgated by Chief, Department of Fire, City of Long Beach.

CONSULS: (Consul Generals, Consul or Vice-Consul). In Los Angeles. (Area code 310)

2. Pacific Cargo Inspection Bureau, Pier A, Berth 4, Long Beach, CA 90802. Tel: 435-7861.

Jacobsen and Associates, Inc., 1324 N. Avalon Blvd., P.O.Box 248, Wilmington, CA 90748. Tel: 834-4553.

GANGWAY/DECK WATCHMEN: Normally used, but only compulsory when detainees aboard.

OPENING/CLOSING HATCHES: Crew can open or close hatches at sea or at anchor. If closed or opened at dockside, the use of longshoremen compulsory.

CUSTOMS ALLOWANCES: Tobacco, each crew member entitled to 300 cigarettes, 50 cigars and 3 lb. of tobacco or combination of above. If the stay in port is such that additional tobacco is required, Customs will so issue. Wine and/or Spirit, not to exceed 1 quart of alcoholic beverage each adult non-resident. This exemption for alcoholic beverages may be applied to more than one kind but not to an aggregate volume of more than 1 quart for each adult crew member.

Note: Upon arrival of vessel from foreign port, or vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use or consumption on board while vessel in port, and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action.

CARGO GEAR: Employer shall not use ship's cargo handling gear until he has ascertained that vessel has a current and valid Cargo Gear Register and Certificate indicating that cargo gear has been tested, examined and annealed in accordance with requirements of International Labour Organization Convention No. 32.

REPATRIATION: Through U.S. Department of Justice, Immigration and Naturalisation Service, and clearance of personal effects by U.S. Customs.

AIRPORT: Los Angeles International Airport approximately 18 miles from port, and provides regular scheduled and international airline service.

TIME: GMT minus 8 hours. United States observes Daylight Saving Time, from first Sunday in April till last Sunday in October.

POLICE/AMBULANCE/FIRE: Port of Long Beach – Police 590-7320 (routine), 911 (emergency); Fire Department and Paramedics 911; Harbour Security Officers 590-4195; U.S. Customs 590-2457.

In an emergency dial 911.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Captain of the Port, 165 N. Pico Ave., Long Beach, CA 90802. Tel: (310) 590-2326.

HOLIDAYS: The subject Legal holidays are defined as follows: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (3rd Monday February); Memorial Day (Last Monday May); Independence Day (4th July); Labour Day (1st Monday September); Admission Day (9th September); Columbus Day (2nd Monday October); Veterans' Day (11th November); Thanksgiving Day (4th Thursday November); Christmas Day (25th December).

Notes: (1) Also, every Statewide Election is a holiday.

(2) Also, any other legal holiday that may be proclaimed by State or National authority is a holiday.

(3) When one of the above days falls on Sunday, the following Monday shall be observed as a holiday.

TELEPHONE: Installation of telephone aboard ship at Municipal berths.

SERVICES: All services from tank cleaning to compass and instrument repair available at various locations within greater port area.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck by prior arrangement.

2. No restriction on storing from barge while vessel is discharging or loading except when the vessel is handling hazardous cargo, petroleum products or bunkering.

3. Truck can proceed alongside the berth for the purpose of delivering or receiving stores and chandlery supplies.

4. Forklift trucks may be used on the berth to handle stores with approval of the stevedoring company.

5. Customs Regulation regarding storing: Stores *not in bond* may be taken on board the vessel on an export declaration certified by the Customs' Inspector on duty. Stores *in bond* must be signed off by the bonded warehouse on a vessel supply export document and received on board the vessel by the Customs' Inspector on duty.

6. Riggers employed to assist with storing, stevedores or longshoremen assist with the stores on the wharf but the storing on board vessel is done by the ship's crew.

SHIP SUPPLY SERVICE: See "Los Angeles".

SHORE LEAVE: Crewmen allowed shore leave providing necessary application presented to U.S. Immigration Officer is approved and crewmen's Landing Permit issued (Form 5129). Customs declaration required for articles to be landed by crew members (1 quart of alcoholic beverage with seal broken is allowed).

IDENTIFICATION CARDS: U.S. Department of Justice, Immigration and Naturalization Service Form I-95-A (Form I-94 for passengers) must be completed.

GARBAGE DISPOSAL: Not available. See "Agriculture" before first U.S.A. port (Albany).

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: International Seafarer's Centre, 120 So. Pico Avenue, Long Beach, CA 90802-6247. Tel: (213) 432-7560. Facilities include telephone, postage, shop, pool tables and basketball.

CURRENCY: U.S.Dollar (U.S.$).

DELAYS: Arrival at berths are normally on time as scheduled. Howeve there are times of inclement weather or lack of cargo at a berth whic create a short delay. Shortage of longshoremen can also cause a dela in discharging or loading cargo. No delay experienced in bunkering.

GENERAL: For information regarding various social organisations, ca 436-9041. Long Beach Recreation Department, for information.

DEVELOPMENTS: 2 container terminals will come on stream in 199

AUTHORITY: Board of Harbor Commissioners, Port of Long Beac P.O.Box 570, (925 Harbor Plaza), Long Beach, California 90801 – 057 *Tel:* (310) 437-0041. *Telex:* 656452. *FAX:* (310) 491-023 *Cables:* Portobeach. *Contact:* Steven R.Dillenbeck, Executive Directo Don Wylie, Director of Trade and Maritime Services.

LONGVIEW, Washington: 46.10 N. 122.55 W.

(See Plan

DOCUMENTS:

3 Complete Cargo Manifests.
3 Stores Lists.
3 Possessions Lists.
3 Crew Lists on Immigration forms.
Vessel's Documents.
Tonnage Tax Statement.
Quarantine Form completed.

At first port of arrival, ship is boarded and inspected by Customs Immigration, Public Health and Agriculture officials. At each subsequen port only Customs Agent will board prior to docking.

PILOTAGE: See "General – Pilotage" before first U.S.A. port.

ANCHORAGE: Safe anchorages indicated by Columbia River Pilots.

RESTRICTIONS: None in regard to arrival time or state of tide. Channe depth 40 ft. at mean low water and tidal range varies between 2.5 f and 4 ft.

MAX. SIZE: No limitation on length or breadth. Depth alongside 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Columbia River Pilots have knowledge of tug positions and othe knowledge pertaining to tugs aiding a vessel.

BERTHING: 7 berthing facilities are available at Port Longview, starting adjacent to the Lewis & Clark Bridge and extending upstream for a distance of nearly a mile.

Berths 1 through 4 are located on one continuous wharf 2,155 ft. long Berths 1, 2 and 3 are equipped to handle general cargo, pelletised fee grains, bulk ores and chemicals. One gantry crane serves Berths 1 an 2 and a 600-ton capacity heavy lift is located at Berth 3. A paved 2. acre assembly area fronting Berth 2 is suitable for handling lumber o multi-commodity project shipments. 3 transit sheds and 1 gear locke are located near the three berths.

Berth 4 is used for receiving and shipping grain and is served by a 5 million bushel grain elevator operated by the Port.

Berth 5 is a 515 ft. wharf and is an exporting facility for the shipmen of bulk chemicals. It is also available for the loading of logs using ship gear from the water side of the vessel, and handling barges.

Berths 6 and 7 form a continuous wharf 1,500 ft. long. The ship-sid container crane is located at Berth 7. An open cargo handling area o 54 acres is located adjacent to the 2 berths. On the dock is one larg transit shed (100,666 sq.ft.). 3 rail tracks are located along the lengt of the apron. There is a rail spur on the inland side of the transit she

Port Longview operates its own facilities and performs all termina services between ship's tackle and consignees or inland carriers.

In addition to these facilities operated by the Port, there are 9 othe berths operated privately in the Longview Port District. Weyerhaeuse Company owns 6 berths and Reynolds Metals Company, Internationa Paper Company and Longview Fibre Company each operate 1 bert apiece. 6 of the 9 berths are used primarily for export while the othe 3 are used mainly for receiving raw materials used by the mills.

BULK HANDLING FACILITIES:

Containers: Port Longview's container facility centres around a 30 lon ton, electrically operated, rail mounted crane.

The crane has a rated lifting capacity of 30 long tons below th spreader and 37 long tons below the cargo beam. The telescop spreader can be adjusted to handle 20 ft., 27 ft., 35 ft. and 40 containers. It is designed to handle 20 load/discharge containers p hour.

The boom can be raised and lowered to provide clearance of sh superstructure and is designed for through-leg rapid load-handling.

With an outreach of 124 ft. from the waterside rail and a vertical rea of 110 ft., the crane can service Panamax size vessels.

Utilising a unique "trailer-train" system, a continuous flow of containe can be maintained between storage and staging areas to sust loading/unloading operations.

A 40-acre area located behind Berth 6 – 7 is for use as a contai storage yard.

Containers received from the vessel can be immediately inspec and rerouted either to warehouses for devanning or to rail or truck ongoing movement. Export containers are staged to the vessel in load sequence in the adjacent cargo assembly area.

Grain: The Port operates the 5,165,000 bushel capacity grain elevator at the Port of Longview Terminal.

Pellets/Soda Ash/Coke/Fertiliser: Port Longview has three dry bulk shipping facilities. Sugar beet pulp pellets are loaded at Berth No. 1 through a 600 t.p.h. loader.

At Berth 2, a new state-of-the-art loader went into operation in the Summer of 1990 to handle bulk chemicals and minerals at 1,800 t.p.h.

Atlantic Richfield Co. uses a calcined coke storage/loading facility at Berth No. 5 that loads at 900 t.p.h.

Two portable hoppers with belt conveyors are available to handle inbound free flowing dry bulks unloaded by ship's gear or dock Whirley cranes equipped with clams.

Roll-on/Roll-off: A 240 ft. extension to the upstream end of Berth 7 to accommodate Ro/Ro vessels is available at the Port of Longview. 96 ft. of the extension is constructed at a level 8 ft. lower than the remainder of the dock and serves as the loading/unloading area to accommodate a Ro/Ro vessel's stern ramp.

BRIDGES: One bridge crossing Columbia River at Longview has sufficient clearance so as not to present a problem. Clearance 169 ft. – 185 ft. depending on season.

CRANES: 1 electric-powered gantry crane serves Berths 1 and 2 on 550 ft. of track. It is equipped with a 130 ft. boom and has a capacity of 60 tons at a 45 ft. radius.

The 'Columbia Giant', a 600-ton capacity shore-based crane located at the port, is one of the largest capacity lifting facilities on the West Coast. The twin booms of the derrick reach 130 ft. above the dock and have a tested lifting capacity of 660 tons. The blocks can be hoisted separately or in tandem. The lifting system is certified by Federal and State agencies and has passed safety requirements for heavy lifting of AEC controlled projects. The 'Columbia Giant' is available for single lifts ranging from 65 short tons up to its rated capacity of 600 short tons.

Also see "Berthing" – Berths No. 6 and 7.

STEVEDORES: At least 24 hours notice necessary to arrange gangs before ETA. Arrange through Port Office via Ship's Agent.

MEDICAL: Hospital facilities available.

TANKERS: No facilities.

DENSITY: Columbia River is fresh water at Longview.

FRESH WATER: Available through 8 in. line with 2.5 in. connections. Rate of delivery approx. 14.5 t.p.h.

FUEL: Available by tanker trucks only.

CONSULS: At Portland, Oregon.

REPAIRS: Some deck and minor engine repairs are possible at Longview.

GANGWAY/DECK WATCHMEN: Arrangements for security guards can be made.

OPENING/CLOSING HATCHES: Work carried out normally by stevedores.

CUSTOMS ALLOWANCES: See "Portland, Oregon".

REPATRIATION: No facilities for effecting crew changes or repatriations.

AIRPORT: Nearest airport served by regular airlines is in Portland. Charter flights may be arranged from a small local airport.

TIME: GMT minus 8 hours. In addition, clocks are moved ahead 1 hour on the first Sunday in April and returned back 1 hour on the last Sunday in October, at 0200 hrs. local time on those 2 days.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King Jr.'s Birthday (3rd Monday in January); President's Day (3rd Monday in February); Memorial Day (last Monday in May); Independence Day (July 4th); Special Longshore Holiday (July 5th); Labour Day (first Monday in September); Veteran's Day (November 11th); Thanksgiving Day (fourth Thursday in November); Christmas Day (December 25th). Cargo work can be arranged on most of these holidays.

POLICE/FIRE/AMBULANCE: Police 911; Fire 911; Ambulance 911.

TELEPHONES: Available at dockside.

BANKS: Security Pacific Bank and Seattle First National Bank.

STORING: See "Prelims".

1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. —
6. Yes.

SHIP SUPPLY SERVICE: The only firm currently engaged in the ferrying of personnel from ship to shore in the Columbia River in the Port Longview area is Brix Maritime Co. Their address is: Brix Maritime Co., 611 East "A" Street, Rainier, Oregon 97048, U.S.A. Tel: (206) 577-0487.

SHORE LEAVE: Crews allowed ashore if papers are in order.

IDENTIFICATION CARDS: Advisable but not necessary.

GARBAGE DISPOSAL: Collection receptacles can be placed on dock alongside ship by a private firm, Waste Control Ltd. Tel: 425-4302. Charges will be quoted by the firm.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: Seaman's Information Service, 455 Oregon Way (about 1 km. from the dock). Tel: 636-0450.

AUTHORITY: Port Longview, P.O.Box 1258, 10 Port Way, Longview, Washington 98632. *Tel:* (206) 425-3305. *FAX:* (206) 425-8650. *Contact:* Ken O'Hollaren, Executive Director.

L.O.O.P. TERMINAL (Louisiana Offshore Oil Port), Louisiana: 28.53 N. 90.01 W. (See Plan)

OPERATOR:

Official Address: LOOP Inc., One Seine Court, Box 6638, New Orleans, Louisiana 70174-6638.

Requests for Port Information: LOOP Inc., One Seine Court, Box 6638, New Orleans, Louisiana 70174-6638. Attention: Vice-President, Operations.

TWX Address: LOOP Inc. (810) 950-5875 (LOOP MARTERM), (810) 951-5165 (LOOP Inc., Nola).

Telephone Number:

New Orleans Office	(504) 368-5667.	Contact: A.B. Cranstoun, Administrative Coordinator
Operations Centre	(504) 632-6970	
Marine Terminal	(504) 632-6980	

Radio Contact:

Call sign "Loop Radar".

Frequencies:

VHF-FM

U.S. Channel	10	156.500 MHz	(Simplex only)
U.S. Channel	16	156.800 MHz	(Simplex only)
U.S. Channel	74	156.725 MHz	(Simplex only)

LOOP Personnel involved in Tanker Discharge:

(1) Port Superintendent: Resident at Marine Terminal who has overall authority over the Marine Terminal and port.
(2) Vessel Traffic Controller: Resident at marine terminal. Responsible for traffic control at the port.
(3) Mooring Master/Assistant Mooring Master: Assists the Master in mooring and unmooring the vessel. Remains on board to coordinate the discharge.
(4) Deck Watch: Maintains a 24 hour watch of tanker's manifold and bow while vessel is moored.
(5) Cargo Transfer Supervisor: Resident of Galliano Operations Centre. Supervisor of cargo discharge. In constant radio contact with the Mooring Master.

Time Zone: Local-Central Standard Time (CST). Greenwich Mean Time (GMT) minus 6 hours or Zone plus 6.

Note: From the first Sunday in April to the last Sunday in October, this is modified by use of Daylight Saving Time to minus 5 hours GMT or Zone plus 5.

Official Language: English.

U.S. Coast Guard: Telex: 701801 (USCG NLN-UD).

The LOOP Inc. deepwater port and associated facilities are designed for unloading crude oil cargoes from deep draft tankers. The marine terminal is located in open waters of the Gulf of Mexico approximately 29 km. (18 statute miles) offshore from the State of Louisiana.

The port is owned and operated by LOOP Inc. under licenses granted by the Government of the United States of America and the State of Louisiana. The port is governed by the laws of the United States in the same manner as if the port were an area of exclusive federal jurisdiction located within a state.

LOOP shall not permit a tanker registered in a foreign state or flying the flag of a foreign state to utilise its facilities unless the foreign state involved does not object to the jurisdiction of the United States over the tanker and its personnel while the tanker is located within the safety zone of the port, and unless the tanker owner or operator has designated an agent in the United States for receipt of service of process in the event of any claim or legal proceeding resulting from activities of the tanker or its personnel while located within the port safety zone, and unless the tanker owner carries insurance or demonstrates financial responsibility as required by Title 33, United States Code Annotated, Section 1517 and any amendment.

At the time of nomination of a tanker, LOOP shall require the person nominating the tanker, or his authorised agent nominating the tanker, to provide LOOP with the name and address of the tanker's designated agent in the United States.

The United States Coast Guard's Marine Safety Office, whose office is in Morgan City, La., has governmental authority over LOOP.

LOOP's Port Superintendent has overall authority over the marine terminal and port. This encompasses all personnel at the port, including contract personnel, and all vessel and aircraft operations at the port. During emergency conditions, all response activities at the port are directed by the Port Superintendent. This includes the shutdown of tanker cargo discharge. Emergency conditions are those that, in the Port Superintendent's judgment, involve or could involve safety, environmental protection, personnel injury or property damage. Examples of these emergencies include, but are not limited to, the following, if they occur at the marine terminal, or on a tanker, or other vessel or aircraft, or at any other location anywhere in that portion of the deepwater port that lies within the safety zone:

(a) Oil spill.
(b) Fire or explosion.
(c) Tanker collision, actual or potential, with another vessel or with the pumping platform complex.
(d) Tanker grounding.
(e) Electrical power failure on the platform.
(f) Disruption of communications between shore and the port.
(g) Aircraft disaster.
(h) Serious illness, injury or death.
(i) Presence of poisonous gas.
(j) Evacuation operation of the platform (usually due to impending hurricane).

The Port Superintendent is present at the port at all times when oil transfer operations are in progress.

ABBREVIATIONS:

AMM – Assistant Mooring Master
ANSI – American National Standards Institute
AST – Atlantic Standard Time (ZD + 4)
CFR – Code of (U.S.) Federal Regulations
CST – Central Standard Time (ZD + 6)
EST – Eastern Standard Time (ZD + 5)
FERC – Federal Energy Regulatory Commission
GCLW – Gulf Coast Low Water (Datum)
GPM – Gallons Per Minute
M – Thousands (used with barrels of oil)
MBPH – Thousands of barrels per hour
mi – Miles
MM – Mooring Master
n – Nautical (used with the word *miles*)
NOAA – National Oceanographic and Atmospheric Administration
OTS – Oil Transfer System
PLEM – Pipe-Line End Manifold (at the SPM)

PLATFORMS:

Pumping Platform Complex:

The Marine Terminal pumping platform complex consists of the pumping platform and the control platform. The two platforms are connected by a walkway bridge between the lower decks. The top of the lower deck of each platform is 21.3 m. (70 ft.) above MHW.

The pumping platform measures 61 m.×65.5 m. (200 ft.×215 ft.) and contains equipment for receiving, measuring, sampling, controlling and pumping oil to assist in cargo unloading.

The control platform contains a control room manned 24 hours a day for communications, traffic control, monitoring and surveillance purposes. Also, a supervisory control and monitoring system provides the capability for the control room personnel, when so directed, to assume control of all marine terminal processes otherwise normally initiated from the Operations Centre located near Galliano, Louisiana.

The control platform is a two-deck structure measuring approximately 21.3 m.×21.3 m. (70 ft.×70 ft.). The lower deck contains platform utility equipment and supporting facilities. The upper deck supports a two-level control building.

DOCUMENTS: See "New Orleans".

PILOTAGE: See "Tanker Arrival".

MAX. SIZE: See "Berthing".

TANKER ARRIVAL:

Arriving from Seaward: Tankers will normally approach LOOP via the 63 mile Safety Fairway. Communications with LOOP shall be established when the tanker is 20 miles from the entrance of the Safety Zone on the International Calling Frequency 156.800 MHz (Channel 16). The Vessel Traffic Controller will assign a working frequency, usually 156.725 MHz (Channel 74) and will pass instructions to the vessel. The arrival time for a tanker is recorded as the time and date the inbound tanker enters the Safety Zone.

Tankers Proceeding Directly to a Mooring:

(a) Weather permitting, the tanker should have on both sides, a pilot ladder 2.0 m. above the water and, when so instructed, an accommodation ladder properly prepared for use by the Mooring Master, Assistant Mooring Master, deck watch and oil inspectors. The tanker will be advised of what side the mooring and connecting equipment will be handled on, so that the appropriate derrick can be topped and rigged in preparation for lifting the equipment aboard and for handling the hose after mooring. The derrick block should be plumbed midway between the rail and the manifold at the manifold centreline. Tankers are asked to turn and make a lee in order to allow for a safer boarding and an easier equipment handling operation.

(b) The Mooring Master, Assistant Mooring Master, deck watch and oil inspectors will board the tanker, and the port furnished equipment is picked up by the tanker prior to entering the Safety Zone. The boarding area is usually at the North end of the Safety Fairway where it turns and joins the approach section at the Safety Zone. The entrance to the Safety Zone is marked at the lateral boundaries by Buoys No. 1 and 2. (Note: Also see "General" – "Helicopter Transfer of Personnel and Supplies" – Section (B) for times when Mooring Master boarding is done by helicopter).

(c) Equipment brought aboard the tanker for use in the mooring arrangement is transported to the tanker's bow by the tanker's personnel if it was not taken aboard at the bow. Supervised by the tanker's designated officer and advised by the Assistant Mooring Master, tanker personnel prepare and arrange the tanker's mooring equipment and fittings for the mooring operation to the satisfaction of the Assistant Mooring Master and tanker's Master.

(d) After the Mooring Master is aboard, the tanker may proceed under his guidance into the Safety Zone to the assigned berth for mooring. The shipper and tanker owner shall be responsible and liable to LOOP for any damage or injury done by his tanker to any LOOP facility, equipment or personnel. Services of the Mooring Master, Assistant Mooring Master, deck watch, mooring launches and their crews, and such other LOOP personnel as may be required aboard the tanker are provided with the express understanding that the Master of the tanker has and accepts the ultimate responsibility for the tanker and crew. If it becomes necessary for the Master of a tanker to disregard a Mooring Master's advice in order to ensure the safety of his ship, it is requested that a written report from the Master be submitted promptly to LOOP.

(e) Specific tanker speed will be recommended by the Mooring Master to the vessel, consistent with the International Rules for Navigation, Rule 6 – Safe Speed.

Tankers Proceeding Directly to LOOP's Anchorage (in Safety Zone):

(a) Tankers proceeding directly to LOOP's anchorage may proceed into the Safety Zone without a Mooring Master on board when the following conditions are met:
   (1) The tanker is proceeding directly to the designated anchorage section.
   (2) Entry is via the designated Safety Fairway through Buoys No. 1 and 2.
   (3) Clearance is obtained from the Vessel Traffic Controller.
   (4) No other tankers are underway in that portion of the Safety Zone that is South and East of Buoys No. 3 and 4.
   (5) No more than 4 tankers are anchored in the designated anchorage.

(b) Specific tanker speeds are to be consistent with the International Rules for Navigation, Rule 6 – Safety Speed.

(c) The shipper and tanker owner shall be responsible and liable to LOOP for any damage or injury done by his tanker to any LOOP facility, equipment or personnel.

Tankers Proceeding to Mooring from Anchor (in Safety Zone):

(a) The Vessel Traffic Controller advises the tanker of the arrival time of the Mooring Master, Assistant Mooring Master, deck watch and oil inspectors, and of the equipment to be made ready. Included is advice for preparation of an accommodation ladder and/or pilot ladder and equipment hoist. (Note: See "General" – "Helicopter Transfer of Personnel and Supplies" – Section (B) for times when Mooring Master boarding is done by helicopter).

(b) Upon receiving clearance from Vessel Traffic Controller, tanker may get underway without a Mooring Master on board for the purpose of making a lee only. The Mooring Master will then board the vessel and proceed to the bridge to pilot the vessel to berth.

(c) Equipment brought aboard the tanker for use in the mooring arrangement is transported to the tanker's bow by the tanker's personnel if not taken aboard at the bow. Supervised by the tanker's designated officer and advised by the Assistant Mooring Master, tanker personnel prepare and arrange the tanker's mooring equipment and fittings for the mooring operation to the satisfaction of the Assistant Mooring Master and tanker's Master.

(d) Specific tanker speed will be recommended by the Mooring Master to the vessel, consistent with the International Rules for Navigation, Rule 6 – Speed.

Tanker Proceeding to Mooring from Anchor (Outside of Safety Zone):

(a) The Vessel Traffic Controller advises the tanker of the arrival time of the Mooring Master, Assistant Mooring Master, deck watch and oil inspectors, and of equipment to be made ready. Included are instructions for preparation of an accommodation ladder and or pilot ladder and equipment hoist. (Note: See "General" – "Helicopter Transfer of Personnel and Supplies" – Section (B) for times when Mooring Master boarding is done by helicopter). Tanker may raise anchor and get underway prior to Mooring Master's arrival, but under no circumstances shall the tanker enter the Safety Zone until the Mooring Master is on board.

(b) Equipment brought aboard the tanker for use in the mooring arrangement is transported to the tanker's bow by the tanker's personnel if not taken aboard at the bow. Supervised by the tanker's designated officer and advised by the Assistant Mooring Master, tanker personnel prepare and arrange the tanker's mooring equipment and fittings for the mooring operation to the satisfaction of the Assistant Mooring Master and tanker's Master.

(c) Specific tanker speeds will be recommended by the Mooring Master to the vessel consistent with the International Rules for Navigation, Rule 6 – Safe Speed.

Navigational Assistance: During the mooring operation the Mooring Master and the Assistant Mooring Master perform the following functions:

(a) The Mooring Master advises the tanker's Master on operational and ship control matters and regulations that are peculiar to the port, such as navigational aids, depth and current characteristics of the manoeuvring area during existing conditions, mooring equipment and procedures, and the port's vessel control procedures. The Mooring Master will maintain communications with the Vessel Traffic Controller, mooring launches and the Assistant Mooring Master until the mooring operation has been completed.

(b) The Assistant Mooring Master is stationed on the forecastle of the tanker during mooring operations to assist the Mooring Master by reporting position approach data relative to the SPM and to advise the tanker's personnel in the handling of mooring equipment peculiar to the port.

Vessel Routeing and Approach to Moor: Tankers must enter and depart the port via the Safety Zone between Buoys No. 1 and 2. *Tankers proceeding to moor must have anchors housed and windlass brakes must be checked for absolute tightness in order to prevent the anchors from being accidentally dropped, with resultant damage to submarine pipe-lines.*

Transiting the Approach Section and Anchorage Section: The Master of the tanker, a competent deck watch officer and a competent helmsman must be on the bridge at all times while the ship is manoeuvring in the approach section and anchorage. A competent deck officer is to be on the bow along with one seaman as lookout, who is capable on command of letting go the anchor, if necessary. A watch engineer and sufficient crew to operate the power plant shall be in the engine room.

Transiting the Terminal Section and Approach to Moor: The Master of the tanker, a competent deck watch officer and a competent helmsman must be on the bridge at all times while the tanker is transiting the terminal section of the Safety Zone and approaching an SPM to moor.

A competent deck officer is to be on the bow along with one seaman as lookout. Sufficient qualified engineers should be in the engine room to operate the plant properly and safely.

Anchor Watch: While the tanker is at anchor in the anchorage section of the Safety Zone, a competent deck officer shall be stationed at all times on the bridge to watch for any dragging of the anchor which can be detected by taking radar ranges or rounds of bearings as necessary on the pumping platform or on any other fixed object.

Manoeuvring Capabilities: LOOP SPM buoys are located on a radius of 2,438 m. (8,000 ft.) from the Marine Terminal Pumping Platform Complex, with spacing between buoys of 1,981.2 m. (6,500 ft.). Tankers must have the capability to perform the manoeuvring required to approach and depart from an SPM within an area not greater than 1,524 m. (5,000 ft.) radius from the buoy at speeds not exceeding 5.5 km./hr. (3 knots). LOOP may require evidence of a tanker's capability to approach and enter the safety zone. The Mooring Master may determine this by pre-berthing checks of a tanker's manoeuvring characteristics.

Berthing Order: When a buoy becomes available, the tanker with the earliest Firm Arrival Window will be berthed, provided that tanker has issued its Notice of Readiness to discharge. LOOP may adjust a tanker's position in the queue a maximum of one position when such adjustment is necessary for optimum operations of the LOOP system.

VESSEL REQUIREMENTS:

Navigation Equipment: Any vessel calling at LOOP must meet the U.S. Coast Guard navigational equipment requirements for a vessel entering U.S. waters; i.e. 33 CFR 164.35. Coast Guard personnel will board selected arriving vessels to ensure compliance with Federal Regulations.

Pre-arrival, Connection and Transfer:

Preparations, procedures, tests and inspections to be followed both by the tanker and by the LOOP platform during the pre-arrival time, connection and transfer must meet the requirements of 33 CFR 150(D), and the recommendations of the OCIMF Safety Guide.

The Mooring Master will have a LOOP Check List, which includes a Declaration of Inspection, that shows all the items to be tested or inspected in order to comply with the Federal Regulations and with current OCIMF recommendations. This Check List is to be signed both by the tanker's Master and by the Mooring Master.

Oil Transfer Equipment:

All tankers must meet the requirements of 33 CFR 155, with regard to oil transfer equipment. Cargo hoses must be connected by the tanker's personnel, under the guidance of the Mooring Master or the Assistant Mooring Master.

The Mooring Master will provide a remotely operated Emergency Shutdown Signalling Device to be kept in the Cargo Control Room. Activation of this alarm requires an immediate, rapid stopping of the pumping operation. The Mooring Master will explain the use of the Emergency Shutdown Signalling Device.

Physical Parameters of Vessel:

Tankers to be accepted by LOOP must:

(a) Have oil transfer equipment that conforms to the technical recommendations of the Oil Companies' International Marine Forum (OCIMF). (Any OCIMF recommendations that change after issuance of this manual are overriding to LOOP's requirements).

(b) Be equipped with shipboard mooring fittings installed and located for safe and effective mooring to an SPM.

(c) Be equipped with a derrick, located near the cargo manifold for hose handling, capable of lifting and sustaining a safe working load of 10 tons to a height of 13.7 m. (45 ft.) above deck level. (ULCCs should have a 15 ton crane because of the extra hose weight due to their greater freeboard).

(d) Not exceed maximum mooring load limitations of SPMs. See "Berthing".

(e) Have serviceable pumping equipment.

(f) Be capable of delivering a cargo size or quantity that is in accordance with LOOP's Terms and Conditions of Service.

Hull Condition: Hulls of tankers calling at LOOP shall be free of obstructions, (e.g. barnacles) which could cause damage to marine hoses, pollution, or injury to personnel.

Deck Floodlighting:

Illuminated Locations: In addition to the light usually displayed, tankers are required to furnish adequate additional lighting for night operations including:

(a) Proper safety lighting of the accommodation ladder for personnel embarkation and disembarkation. This is particularly essential for arriving and departing tankers when the Mooring Master and Assistant Mooring Master board or depart the tanker. A deck officer is required to supervise these procedures.

(b) Lighting of the forecastle area.

(c) Lighting of areas encompassing the derricks, deck and water during equipment and hose handling operations.

(d) Lighting to illuminate the cargo manifold.

(e) Proper safety lighting for any bunkering or transfer of supplies or equipment.

(f) Portable or hand-held safety lanterns for inspections and other deck activities that may require particular attention.

Type of Equipment: Only explosion-proof lighting equipment and electrical apparatus certified intrinsically safe for use in a hazardous area is permitted to be used on deck while a tanker is at an SPM. Portable electric lamps or other apparatus with flexible cable shall not be used without permission from the ship's officer-in-charge and from the Mooring Master/Assistant Mooring Master aboard the tanker. In this regard, the recommendations of ISGOTT paragraph 2.4.2 should be followed.

Accommodation: Tankers discharging at LOOP must provide meals and accommodation for the Mooring Master, the Assistant Mooring Master and deck watch, during their time on board and for an independent Petroleum Inspector during his required time on board. In addition to these persons there is at times a United States Coast Guard Inspector, who also may need accommodation.

Vessel Readiness:

Equipment/Personnel: Vessels at moorings or anchorage must maintain engines and propulsion machinery in readiness to clear the Marine Terminal area under full power on short notice. No repairs are permitted which would interfere with this requirement. Vessel trim and draft should also be considered in determining vessel manoeuvring capability. Masters of tankers are advised to have sufficient personnel aboard to enable them to depart upon advice from the Vessel Traffic Controller. The Master of a tanker may, in an emergency, for the protection of life or property, depart without clearance from the Vessel Traffic Controller, if the Master advises the Vessel Traffic Controller of the circumstances by radio at the earliest moment.

Minimum Ballast: The Master is to maintain his vessel in a seaworthy condition and be ready to sail and manoeuvre at all times. This port is in the open sea and *is not in a Harbour.* Weather can change rapidly as mentioned in section on weather. The Master is to maintain his vessel with sufficient ballast to obtain full immersion of the propeller at all times while maintaining a reasonable stern trim. These additional factors must be considered by the Master in maintaining the seaworthy condition and readiness to sail and manoeuvre.

A 10 minute or less ready standby requirement for engines and anchors will be invoked in the event of rough weather. The Port Superintendent will invoke the rough weather advisory.

NAVIGATION AIDS:

SPM Buoys: In addition to the port name "LOOP" and an SPM number, each SPM buoy is painted white on top with yellow sides and is equipped with the following navigational aids:

(a) A quick flashing (0.3 seconds "on", 0.7 seconds "off") white light installed on the buoy at a height of 5.5 m. (18 ft.). The light can normally be seen through 360° of arc at a range of 7.4 km. (4 nautical miles). It is actuated by a solar photo-electric switch.

(b) A 406.4 mm. (16 in.) diameter all-directional radar reflector mounted on the highest point of the buoy.

(c) Buoy number daymarks at 90° intervals around the buoy hull.

Platform Complex Beacon Light: A rotating beacon which shows a flashing white light (6 flashes per minute) is mounted above the pumping platform atop the communications tower at an elevation of 64 m. (210 ft.) above MHW and it is visible all around the horizon. It is actuated from the control platform. The light is 47,000 candela and is visible for at least 18 miles.

Platform Complex Obstruction Lights: Obstruction lights are installed at each corner of both platforms and one on the bridge connecting the structures. The lights on the pumping platform are 25 m. (82 ft.) above MHW and on the control platform are 23 m. (76 ft.) above MHW. They are quick flashing white (0.3 seconds "on", 0.7 seconds "off") (60 flashes per minute). They flash in unison and are placed so that at least one light can be seen for a minimum of 5 nautical miles from any approach angle to the platform complex. They are actuated from the Control Platform at night and in periods of low visibility.

Platform Complex Fog Signals: 2 fog horns are installed at the platform complex. One is hung below the lower deck near the middle of the Northwest edge of the pumping platform about 21.3 m. (70 ft.) above MHW, and the other is hung below the lower deck on the Southern edge of the control platform. The signals are synchronized to sound a 650-800 Hz 2 second blast every 20 seconds and can be heard for at least 3.7 km. (2.0 nautical miles). They are actuated from the control platform.

Buoys: The following table lists the characteristics of the buoys marking the approach section of the safety zone:

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Water Depth Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
No. 1	Green	47.5	156	Green	X	X
No. 2	Red	46.3	152	Red	X	None
No. 3	Green	37.5	123	Green	X	None
No. 4	Red	36.9	121	Red	X	None

From seaward, Buoys No. 1 and 3 define the port (left) lateral limits of the approach section and Buoys No. 2 and 4 the starboard (right) lateral boundary. Buoys No. 1 and 2 are located at the entry to the approach section when proceeding from seaward.

Safety Zone Boundary Marker Buoys: The Safety Zone is shown in "Plan Section" together with the location of floating aids to navigation and marine terminal components. International "Rules of the Road" apply in the safety zone. The purpose of a deepwater port safety zone is to define an area in which any activity that may directly or indirectly increase the environmental and safety risks associated with port operation may be minimised or prohibited. The Inter-Governmental Maritime Organization (IMO) vessel routing measure known as a precautionary area; i.e. a routing measure comprising an area within definite limits where ships must navigate with particular caution and within which the direction of traffic flow may be recommended, has been adopted as the concept for U.S. deepwater port safety zones. The safety zone is made up of 3 parts; the approach section, the anchorage section, and the terminal section. Inside the terminal section there are 4 "areas to be avoided"; one is 600 m. in radius around the pumping platform complex and 3 are 500 m. in radius around each of the SPMs. "Areas to be avoided" conform to IMO measures to keep ships or certain classes of ships outside a delineated area. 4 navigational marker buoys define the boundaries of the approach section of the safety zone. Proceeding from seaward, the 3.7 km. (2.0 nautical miles) wide approach section extends 9.3 km. (5 nautical miles) from the Safety Fairway to the terminal section. The buoys have the following characteristics:

Daymarks:	Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2 nautical miles) minimum.
Lights:	Installed at 4.6 m. (15 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"); light intensity 75 candela, actuated by solar photoelectric switches.
Radar Reflectors:	All-directional; detectable from at least 15 km. (8.0 nautical miles) by typical shipboard radar systems.

Fog Signal: (Buoy No. 1 only) minimum audible range approximately 1 km. (0.5 nautical miles); programmed to send Morse code "L" at 20 second intervals. This buoy's fog signal operates continuously.

Safety Fairway: The LOOP Safety Fairway, shown in NAV 3A, "Plan Section", has no marker buoys. To lessen the chance of accidents, ships enter and leave U.S. Gulf Coast ports via safety fairways. The fairways are 2 miles wide. No offshore drilling rigs or structures are permitted in them. LOOP recommends that tankers enter or leave the LOOP Safety Fairway at its Southernmost point or at least South of 28° 18′ N. NOAA Chart 11359 has details of the LOOP Deepwater Port including pipe-lines within the safety fairway and safety zone.

Service Vessel Mooring Buoys: The 2 buoys provided for mooring port service vessels at the marine terminal are white with a horizontal blue band between the top of each buoy and the waterline. The buoy identification is reflective. Battery powered, slow flashing (0.4 seconds "on", 3.6 seconds "off") white lights are installed 2.4 m. (8 ft.) above the water, and are actuated by solar photoelectric switches.

Also see "Anchorage".

ANCHORAGE: *Anchorage Section Marker Buoys:*

The designated anchorage section of the safety zone is a 3.7 km. (2.0 nautical miles) wide area beginning at safety zone Buoy No. 2 and extending 7.4 km. (4.0 nautical miles) along and next to the Eastward boundary of the safety zone. Buoys "L-B" and "L-A" mark the corners and define the outer boundaries of the anchorage section. The anchorage section buoys have characteristics as follows:

Daymarks:	Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2.0 nautical miles) minimum.
Lights:	Installed at 4 m. (13 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"), actuated by solar photoelectric switches.
Radar Reflectors:	All-directional; detectable at 15 km. (8.0 nautical miles) by typical shipboard radar systems.

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
L-B	White	45.7	150	White	X	None
L-A	White	37.1	122	White	X	None

Also see "Tanker Arrival".

RADIO/VHF: *Notices of Arrival:*

The Master of a tanker bound for LOOP should send his first arrival advice message as nearly as possible to 7 days before his expected date of arrival, even if he is in port at the time. If his trip to LOOP is less than 7 days he should also send another arrival advice as soon as possible after leaving his loading port. His next arrival advice should be sent 72 hours before the estimated time of arrival. The arrival advice should be transmitted and updated again at 48 hours and again not later than 24 hours before the estimated time of arrival. An arrival advice message can and should be sent at any time when there is a significant change in a previously estimated arrival time. These arrival advice messages should be sent to LOOP INC. The first message should contain, at a minimum, the following:

1. Tanker's name and call sign.
2. Estimated time of arrival at LOOP.
3. Draft fore and aft.
4. Type(s) and amount(s) of cargo on board. '
5. Basic discharge plan, times and pumping rates.
6. Cargo manifold size and type, if 16 in. not available.
7. Type of mooring equipment installed.
8. Expected discharge rate.
9. Expected number of ballast hours upon completion.
10. Any special requirements which need early actions.

These messages can be sent by Western Union International TWX (810) 950-5875, LOOP MARTERM or by radio to coast stations WNU Slidell, WLO Mobile or WPA Port Arthur. It is suggested that ETA advice also be sent to tanker's Agents, with logistics requirements.

Pre-Arrival Instructions: A message will be sent to LOOP-bound tankers approximately 72 hours prior to their arrival, outlining arrival procedures and discharge planning recommendations. See "Pre-Arrival Message" below.

LOOP's Pre-Arrival Message:

To Master:

(a) Mooring Master Station is 28° 47′ N., 89° 53′ W. Recommend approach via existing safety fairways. If anchoring on arrival, you may enter the LOOP Anchorage without a Mooring Master, if cleared by the port.

(b) LOOP Terminal call sign is "LOOP Radar" and guards Channel 16, VHF-FM.

(c) Advise "LOOP Radar" when 20 nautical miles from Pilot Station.

(d) LOOP's marine facility includes pipeline and pumping systems to receive crude oil from the tanker and pump the crude to the Clovelly Dome Storage Area 46 miles away. Since the terminal has no crude storage tanks, efficient discharge at LOOP requires a discharge plan different from those used when discharging to terminals with storage tanks.

For efficient discharge at LOOP, it is important that during the bulk of the discharge, the vessel pumps at it's maximum rate, further, the rate should be maintained as constant as possible.

Reductions in the discharge rate for Crude Oil Washing (COW) or stripping should be avoided. COW and stripping can most efficiently be handled at prearranged periods, when the vessel is not pumping ashore at the end of the bulk of the discharge.

You are requested to plan your discharge accordingly, subject to safety considerations prevailing at all times. Be further advised that the Master is to maintain his vessel in a seaworthy condition and ready to sail at all times, even if this requires early COW of dirty ballast tanks to allow for ballasting.

Please advise LOOP of your basic discharge plan including pumpi times, rates, any planned shutdown for stripping and Crude O Washing and the percentage of crude oil tanks to be Crude O Washed.

Upon arrival, the vessel's Master should submit a fully detaile discharge plan to the Mooring Master for review. –

Signed: Port Superintendent.

24 Hour Message: By regulation, the 24 hour arrival message shall b addressed both to the Coast Guard Captain of the Port, Morgan C (Telex 701801 USCG NLN-UD) and to LOOP INC. This message shou contain the following:

1. Name, gross tonnage, and draft of the tanker.
2. Type and amounts of cargo on board.
3. Any condition on the tanker that may impair its navigation, suc as fire, malfunctioning propulsion machinery or steering equipment, o limitations on navigational or radiotelephone capabilities because o equipment or material malfunctions. (No vessel will be allowed to b underway in the Safety Zone with any significant steering or propulsio equipment deficiency).
4. Any leaks, structual damage, or machinery malfunctions that ma impair cargo transfer operations or cause a discharge of oil.
5. ETA at the Safety Zone. If the information reported changes at an time before entering the Safety Zone, or while the tanker is in the Safe Zone, the Master of the tanker shall report the changes to the Coas Guard Captain of the Port and to LOOP INC. as soon as possible, b cable and single side band.

Radio Frequencies for Berthing: In addition to the above notices, radi communication on the International VHF Maritime Band (Channel 74 156.725 MHz.) should be started at a distance of 20 nautical miles fro the safety zone, or more, if possible. This Channel should be used fo a "twenty-mile", final arrival notice, and for communications with th terminal and with the Mooring Master, until he boards the tanker.

Radio Communications at the Port: The LOOP platform always guard the international calling frequency 156.800 MHz. (Channel 16). LOOP working frequencies are VHF Maritime Channel 74 (Primary), an Channel 10 (Secondary). Use of shipboard radar and HF radio i forbidden while moored to an SPM. While in port, LOOP communicate with the tankers via the Mooring Master's UHF portable radio.

LOOP's Communications Facilities: LOOP has the ability to use th following communications for vessels trying to contact the Port:

Type of Communications	*Frequencies*	*Call Sign*
VHF-FM Maritime Mobile	(Carrier assigned in MHz) 156.500, Channel 10, Commercial Working. 156.800, Channel 16, Distress, Safety and Calling. 156.725, Channel 74, Port Operations.	KR-7808

Transit Traffic: LOOP maintains a VHF Maritime radio system capabl of communicating with vessels other than tankers or LOOP suppo vessels if such vessels are equipped with comparable equipment. Whe necessary to communicate with vessels of unknown communication capabilities, the Vessel Traffic Controller will attempt to contact suc vessel on VHF Channel 16. If such efforts at radio communication ar unsuccessful, a LOOP mooring launch or personnel boat will b dispatched to advise the vessel of any potential danger to the vessel a observed by the Vessel Traffic Controller's surveillance and also t advise the vessel operator of the port's precautionary areas and area to be avoided.

When requested by a Master of a vessel other than a LOOP suppor vessel or tanker, the Vessel Traffic Controller shall furnish informatio concerning tankers, support vessels, and other vessels underway o moored in the safety zone.

Weather Advisory System: Coast Guard radio stations make two type of marine information broadcasts: radiotelephone (voice) for all seagoin users, and radiotelegraph (CW) for vessels carrying trained radi operators. Scheduled radiotelephone broadcasts include routin weather reports, small craft warnings, storm warnings, navigationa information and other advisories on working frequencies, following preliminary call on the voice international distress and callin frequencies. Urgency and safety broadcasts are made upon receipt o the information, urgency information is repeated 15 minutes later, an both are included in the next scheduled broadcast unless cancelle before that time. Additional broadcasts may be made at the discretio of the originator. Urgency broadcasts are preceded by the signal: "PAN for radiotelephone and "XXX" for radiotelegraph. Both the urgency sign and message are transmitted on 2182 kHz and 156.80 MHz (Chann 16). Safety broadcasts are preceded by the signal: "SECURITE" f radiotelephone and "TTT" for radiotelegraph. After a preliminary call o 2182 kHz, or 156.80 MHz, the station shifts to its assigned workin frequency for the broadcast.

The following Coast Guard Radio stations in the Gulf of Mexico ar and its approaches make urgency, safety and scheduled mari information broadcasts preceded by a preliminary call on 2182 kHz 156.8 MHz, at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NCF, Miami Beach, Florida	2670 kHz.	0400, 0600, 0800, 1050 1300, 1900 and 2250 ES
	157.10 MHz (Channel 22)	0630, 1200 and 1730 ES
NOK, Key West, Florida	157.10 MHz (Channel 22)	0600, 1200 and 1700 ES
NMA-21, St. Petersburg, Florida	2670 kHz	0920 and 2320 EST
	157.10 MHz (Channel 22)	0650, 1250 and 1750 ES

Station	*Working Frequency*	*Time(s)*
NMG, New Orleans, Louisiana	2670 kHz	0435, 0635, 1035, 1150, 1635 and 2350 CST
	157.10 MHz (Channel 22)	0450, 1050 and 1650 CST
NMG-15, Grand Isle, Louisiana	157.10 MHz (Channel 22)	0435, 1035 and 1635 CST
NOY, Galveston, Texas	2670 kHz	0450, 0650, 1050 and 1650 CST
NOY-3, Port Aransas, Texas	157.10 MHz (Channel 22)	0440, 1045 and 1645 CST
NCH, Port Isabel, Texas	2670 kHz	0440, 0640, 1040 and 1640 CST
	157.10 MHz (Channel 22)	0435, 1035 and 1635 CST
NMR, San Juan, Puerto Rico	2670 kHz	1100 and 2300 AST
	157.10 MHz (Channel 22)	0710, 1310 and 1810 AST

Scheduled radiotelegraph broadcasts include routine weather reports, small craft warnings, storm warnings, navigational information and other advisories on working frequencies following a preliminary call on the radiotelegraph international distress and calling frequency 500 kHz. Urgent and safety broadcasts are made as follows:

(a) Safety broadcasts are made upon receipt of the information; urgent broadcasts are also made upon receipt of the information except within 10 minutes of the next silent period.

(b) Safety and urgent messages are made during the last 15 seconds of the first silent period after receipt, and are repeated at the end of the first silent period which occurs during the working hours of one-operator ships, unless the warning has been cancelled or superseded by a later warning message. Urgent broadcasts are preceded by the signal "XXX". Both the urgent signal and the message are transmitted on 500 kHz. Safety broadcasts are preceded by the signal "TTT". After the preliminary call on 500 kHz, the station shifts to its assigned working frequency to transmit the broadcast. The following Coast Guard radio stations in the Gulf of Mexico area and its approaches make urgent, safety and scheduled marine information broadcasts preceded by a preliminary call on 500 kHz, at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NMA, Miami, Florida	440 kHz	1100 and 2000 EST
NMG, New Orleans, Louisiana	428 kHz	1120 and 1830 CST
NMR, San Juan, Puerto Rico	466 kHz	1220 and 2120 AST

LOOP also has weather and sea monitoring equipment installed at the Marine Terminal and receives private and government weather advisories. Upon request, weather information will be transmitted to tankers in the vicinity.

In addition, NOAA gives continuous weather information, forecasts and warnings on the following frequencies:

WX1 162.500 MHz   WX2 162.400 MHz.

Weather facsimile information is available via WLO, Mobile on the following frequencies:

6852.0 kHz.
9157.5 kHz.

RADAR: *Navigation Advisory System (Surveillance Radar):* 2 radar surveillance systems, X-band and S-band frequencies, are installed at the marine terminal. The systems provide coverage from the platform complex to a range of about 50 km. (27 nautical miles) for tankers, and include, among other things, a collision avoidance system. After an incoming tanker makes radio contact on the VHF system about 20 miles from the safety zone, the Vessel Traffic Controller will advise of the location of navigational hazards as well as relative positions and estimated courses and speeds of other vessels within radar range of the platform.

Radar Beacon: The LOOP radar beacon (RACON) operates 24 hours daily on the X-band frequency from 9300 to 9500 MHz. The transponder is mounted on top of the communications tower 64 m. (210 ft.) above MHW. The RACON will respond to incoming signals by transmitting Morse coded letter "O" as the identifying signal for the marine terminal platform complex. The RACON has a range of about 40 km. to 48 km. (22 nautical miles to 26 nautical miles), depending on the height of shipboard radar antennas.

TUGS: Support Vessels: *List of Characteristics by Vessel Name:* The following 2 launches are operated by LOOP for the primary purpose of assisting in mooring operations:

Names: "Loop Line" and Loop Loader".
Length overall: 26 m. (85 ft.).
Beam: 7.9 m. (26 ft.).
Draft: 2.1 m. (7 ft.).
Propulsion: 2 model 16V-92 GM diesel engines, twin screw, 1,200 h.p. total.
Maximum speed: 10 knots.
Bollard pull: 3,629 Kg. (8,000 lb.) line pull.
Navigation and Communications: Sitex 48 mile radar, digital fathometer, Loran C, SSB and VHF radios (Channel 10, 16 and 74) plus an 8 Channel LOOP UHF radio.
Construction material: Steel.
Fuel Capacity: 75,708 litres (20,000 gallons).

The LOOP maintenance vessel functions primarily for inspection, servicing, and maintenance of marine terminal components.

Name: "Loop Lifter".
Length overall: 61 m. (200 ft.).Beam: 15.2 m. (50 ft.).
Draft: 3.7 m. (12 ft.).
Propulsion: 2 D-399 Caterpillar engines, twin screw, 3,000 h.p. total.
Maximum speed: 11 knots.
Navigation and communication: Auto pilot, Sitex 48 mile radar, fathometer, Loran C, SSB and VHF radios (Channels 10, 16, and 74), plus an 8-Channel LOOP UHF radio.
Construction material: Steel.
Fuel Capacity: 80,000 gallons.
Fire pump: 9,475 litres per minute (2,500 GPM).

LOOP also employs a crew boat for transporting LOOP personnel between the small boat harbour and the marine terminal.

BERTHING: LOOP single point moorings (SPM) are the single anchor leg mooring (SALM) type, designed for tankers up to 700,000 d.w.t. The SPMs are numbered clockwise and are described as follows:

SPM 102:

Water Depth	35.1 m. (115 ft.)
Maximum Tanker Draft*	28.7 m. (94.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
Minimum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Diameter	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)

SPM 103:

Water Depth	35.7 m. (117 ft.)
Maximum Tanker Draft*	29.4 m. (96.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
Minimum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Size	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)

SPM 104:

Water Depth	35.1 m. (115 ft.)
Maximum Tanker Draft*	28.7 m. (94.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
Minimum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Diameter	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBPH)

*The maximum drafts shown here allow for a gross underkeel clearance of 6 m. (19.7 ft.) during Gulf coast LW and calm seas. The maximum drafts result in a clearance of 2.9 m. (9.4 ft.) above the SPM base U-joints, since the U-joints are 3.4 m. (11.3 ft.) above the ocean bottom. Gross underkeel clearance means the distance between the keel of a tanker and the ocean bottom when the tanker is moored in calm seas. Net underkeel clearance means the distance between the ocean bottom and the keel of a tanker that is anchored, considering ship motion in response to wind, wave, tide and current conditions. It is required that there be a net underkeel clearance of 4.7 m. (15.3 ft.) during bad weather.

The limiting drafts at various significant wave heights that will result in a 4.7 m. (15.3 ft.) underkeel clearance during bad weather, when a tanker may be pitching or rolling, are shown on graphs in the Plan Section.

Note: Significant wave height is the average height of the highest one-third of all waves passing a point in a given period of time.

MOORING:

Mooring Equipment: In accordance with OCIMF recommendations LOOP will provide, in addition to the mooring hawser assemblies, the supporting equipment needed to connect the mooring lines to the tanker. Such equipment includes snotters, shackles, and devices for holding the mooring while connection is made. This equipment will include such items as special mooring gear and a hawser load monitoring device to be used at the bow, gaskets, bolts, tools, elbows, and adapter spool pieces (when required). Mooring equipment and other associated gear supplied by LOOP is lifted aboard the tanker from the mooring launch which transports the Mooring Master and Assistant Mooring Master. *Prior to arrival the ship should notify LOOP of the type of mooring equipment installed on the ship's bow in order for required port-furnished equipment to be readied to be put aboard the tanker.*

As recommended by OCIMF, the shipowner, depending on tanker mooring equipment, should supply as a means of securing the mooring chafe chain:

(a) (Preferred) bow chain stoppers, designed to accept the 76.2 mm. (3 in.) section of the chafe chain; or
(b) Smit type brackets built to specified dimensions; or
(c) Mooring bitts, suitably positioned and of adequate strength; and
(d) Bow fairleads spaced near the tanker's bow and capable of accepting 2×76.2 mm. (3 in.) chafe chains with a triangular plate 356 mm. (14 in.) wide;
(e) Pedestal roller fairleads and winch drums or capstans to provide proper leads and clearances (drum end of anchor windlass is acceptable). Tankers are requested to remove the blank flanges from their discharge manifolds before mooring so as to expedite the connecting of the floating hoses.

Mooring Hawser System: Before a tanker is accepted for offloading, LOOP may require information necessary to determine whether the mooring equipment installed on the tanker is capable of sustaining the safe working load that will be imposed on it when the tanker is moored at a LOOP SPM. It is recommended that tankers calling at LOOP be fitted with properly installed and positioned bow chain stoppers and bow fairleads for mooring at SPMs. Other arrangements are acceptable when evidence is provided that such arrangements will not be below the required safe working load for the tanker. The exact arrangement will be determined by the Assistant Mooring Master after inspection of ship's fittings and equipment. *Mooring and unmooring is to be done by the crew of the tanker with the advice of the Assistant Mooring Master.*

Two launches will normally assist in mooring. One launch will tend the hawser systems. Successively for each of the two hawser systems, the launch personnel will secure the tanker's messenger line to a pick-up line in order for the hawser system chafing chains to be winched

aboard the tanker and secured to the shipboard mooring fittings. All tankers are required to utilise the two hawser systems to moor to the buoy. The second launch tends the floating hose strings during the tanker mooring, drawing the hoses aside from the tanker's track during the approach and mooring. LOOP has no tugs to assist in mooring.
Hawser Monitoring: Each SPM is provided with a hawser load monitoring system, with strain gauges mounted in pins in mooring couplers on the mooring buoy. Also see "Tanker Arrival".
HOSES: *Floating Hoses:* The floating hoses, which extend approximately 1,100 ft. from each buoy, consist of 2×24 in. crude oil discharge hoses with 16 in. inside-diameter tails, each with 150 ANSI flanges for connection to the tanker's manifold. Each hose-string has a pick-up buoy at its end, along with a pick-up sling. In order to avoid delays in connecting hoses, tankers should have an adequate number of reducing spools to fit 16 in. standard ANSI flanges. *Connecting and disconnecting of the cargo hoses is to be performed by the crew of the tanker under the advice of the Assistant Mooring Master.*
Hose Handling: Mooring launches tow each floating hose into position beneath the tanker's lifting derrick. The derrick runner is lowered to the launch and secured to the hose pick-up wire. After the hose is lifted above the level of the tanker's rail, it is swung inboard. A snubber chain connected between the first and second hose-lengths are then used to control its angle; i.e., to guide it towards its proper place on the cargo manifold. When the hose has been raised enough to span the distance between the tanker's rail and the cargo manifold, the snubbers can be made fast. The hose end is then lowered to the manifold and connected to it. Upon completion of discharge, each hose is disconnected from the manifold after its weight is borne up by the derrick runner. It is then swung outboard, lowered to the water, and released.
Care in Raising and Lowering the Hose: Care is necessary in raising the hoses before discharge and particularly in lowering them after discharge. At these times they are especially vulnerable to kinking.
Damaging Configurations for the Hose: While the cargo transfer hose is connected to the tanker, certain positions that the tanker might take relative to the SPM could cause the hose to bend excessively and thus could damage it.

For example, if a tanker overrides the buoy, it could damage both the hose and the buoy. This condition can be corrected by the tanker's going astern or being pulled astern.

Another damaging position could happen if the SPM seabed swivel does not turn as the tanker swings around it. In such a case the Mooring Master will seek LOOP's assistance. If this situation is not immediately resolved, the Port Superintendent or the Mooring Master should issue the order to stop pumping cargo.

Also see "Tanker Arrival".
CARGO OPERATIONS: *Tanker Discharge Planning:* Ship's officers should be aware of LOOP's requirements prior to preparing their pre-arrival discharge sequence planning. Consistent with maintaining vessel seaworthiness and readiness to sail and manoeuvre, LOOP encourages the highest possible bulk discharge rate followed by a stoppage for consolidation of strippings and Crude Oil Washing (COW). This runs counter to conventional tanker practice of always keeping some flow going ashore but is necessary at LOOP in order to maximise pipeline utilisation. While stopped for stripping and/or COW, another ship will normally be pumping at a high rate.
Discharge Operation: The discharge operation will be controlled and personally supervised by a ship's officer, to the satisfaction of the Mooring Master or the Assistant Mooring Master. Upon being informed by the ship's officer on watch that the tanker is ready to begin discharging, the Mooring Master will request the discharge operation to proceed according to a previously agreed upon plan regarding start-up rates and maximum discharge rates. *In the event of any emergency, either on board the tanker or on the operating platform, or anywhere in the LOOP system, all oil transfer must be stopped and all oil transfer valves closed.*

These emergencies are:
(a) Fire or explosion of a tanker, on the platform, or anywhere on the LOOP system.
(b) Loss of power or steering on a tanker underway in the safety zone.
(c) Breakage of a hawser.
(d) Rupture of a floating hose.
(e) Any confirmed pipe-line rupture in the LOOP system.
(f) Power failure at any LOOP pipe-line facility.
(g) Severe electrical storm in the area of the port. (Ballast receipt must also be stopped during such electrical storms.)
(h) Failure of the UHF radio communication system.

In the event of failure of the UHF radio communication system, the tanker will sound 5 long blasts on her whistle. Cargo discharge is then stopped until communications are re-established.
Oil Transfer Watch: One crew member will be stationed at the bow and an additional crew member stationed at the cargo manifold area. A licensed officer and pumpman will be based in the cargo control room, with the pumpman moving onto the deck as necessary. During the cargo transfer, the watch organisation must provide the capability to shut down pumping on short notice and to stay in constant communication with the Mooring Master and LOOP personnel at the Marine Terminal and the Galliano Operations Centre. Communications for cargo handling will be directly with the Mooring Master through the LOOP UHF portable radio system. (NOTE: Each Tanker shall have an officer who is fluent in English on duty at all times.).
Crude Oil Washing (COW): Crude Oil Washing of cargo tanks is allowed after LOOP is assured that the operation will be done safely. In order for Crude Oil Washing to be undertaken, the tanker and the tanker's personnel must satisfy the following requirements:
(a) Strict compliance with USCG Regulations 33 CFR 157. A copy of this regulation must be aboard the tanker and readily available to key shipboard personnel.
(b) Strict adherence to ISGOTT Recommendations for Crude Oil Washing are required. A copy must be aboard the tanker and readily available to key shipboard personnel.
(c) Notwithstanding the above regulations and guidelines, no CO will be permitted until the Mooring Master is satisfied that:
1. All cargo tanks have discharged at least 1 m. of cargo dep in order to eliminate any water that may have accumulated the bottoms of cargo tanks.
2. The Chief Officer or the person in charge of the CO operation has participated at least twice in Crude Oil Wa operations aboard a tanker similarly equipped.
3. There is a sufficient number of adequately trained person onboard to assist in the dual operations of transferring car and crude oil washing, in order to ensure that:
    (i) Gun nozzles are rotating in proper sequence.
    (ii) Enough source product remains in the tan supplying the cleaning oil.
    (iii) The on-deck piping system carrying the cleaning is continuously watched.

Note: Consideration should be given to washing dirty ballast tanks a soon as is practical to allow for ballasting, should the weather conditio deteriorate.
Departure Readiness: Vessels at moorings or anchorage must mainta engines and propulsion machinery in readiness to clear the mari terminal area under full power on short notice. During dischar sufficient ballast condition must be maintained, to insure that the vesse propeller is immersed at all times. No repairs are permitted which wou interfere with this requirement. Masters of tankers are advised to hav sufficient personnel aboard to enable them to depart upon advice fro the Vessel Traffic Controller. The Master of a tanker may, in a emergency, for the protection of life or property, depart without clearan from the Vessel Traffic Controller if the Master advises the Vessel Traf Controller of the circumstances, by radio, at the earliest possib moment.
DEPARTURE: *Normal Departure Procedure:* Upon completion of th cargo discharge, the tanker's Master or Chief Officer and the Moorin Master together estimate the time needed to prepare the tanker f departure. This time will be given to the Vessel Traffic Controller on th control platform, so that clearance for departure can be planned and s that a mooring launch can be summoned to assist the tanker in th operations of unmooring.

When the tanker is ready to leave the SPM, the Assistant Moorin Master on the bow recommends the use of the tanker's engines in orde to ease the load on the mooring lines. When the load is eased enoug the tanker's crew can then disengage the mooring hawser and lowe the mooring lines to the water.

Departure time is the time when the last mooring line is cast off. Afte the tanker is unmoored, she manoeuvres to go clear of the SPM buo and to take a course for departure through the safety fairway.

Departure from the SPM to the disembarking point of the Moorin Master is done under the Mooring Master's guidance and the Vess Traffic Controller's surveillance.
Emergency Departure Procedures: An emergency departure can b initiated either from the control platform or from the tanker. If initiate from the platform, the Mooring Master is so notified. The tanker's engine must then be made ready for immediate service, and if cargo is bein discharged, the tanker's pumps must be shutdown in accordance wi the seriousness of the emergency. *If an abrupt shutdown of th platform's booster pumps is necessary, it is essential that the tanker pumps either be immediately shutdown or else immediately shifted t a recirculation mode.* In accordance with the nature of the emergenc cargo hoses may be lowered by line-slipping to the water. All othe procedures are the same as those initiated from the ship. The Maste of a tanker may, in an emergency, for the protection of life or propert depart from an SPM without clearance from the control platform.
Emergency Shutdown: Following are the procedures to be followed i case the offload pumping must be quickly stopped because of som emergency.
(a) LOOP's Cargo Transfer Supervisor notifies the tanker's watc officer and the Mooring Master of the emergency shutdown, an activates the Emergency Shutdown Signalling Device.
(b) The LOOP system automatically goes into a pumping ra reduction, and shuts down the pumps and meters as the flo rate dictates.
(c) The tanker's manifold valves and the hose end butterfly valve are closed as soon as LOOP's pumps and the tanker's pump are shut off.
(d) The Pumping Platform Supervisor shuts LOOP's PLEM valves
(e) If the emergency is one that makes a quick departure of the tank necessary, the emergency departure procedures of the preced paragraph will then be followed.

MEDICAL: Agents can arrange medical and dental treatment as w as consultation and hospitalisation at short notice.
FRESH WATER: Not available.
FUEL: LOOP does not provide any bunkering services or facilities t tankers operating in the LOOP deepwater port area. Such bunker will be conducted by private concerns under arrangements made w the owners or operators of tankers. Bunkering will not be allowed t interfere with the safe and expeditious unloading of crude oil fro tankers. All companies, craft, equipment and personnel involved i bunkering inside LOOP's deepwater port area *must* have LOOP's pr approval and must also follow LOOP's Bunkering Guidelines a Regulations, copies of which are available upon request from LOOP
FIRE PRECAUTIONS: As per the "International Safety Guide f Tankers and Terminals".
SURVEYORS: *Petroleum Inspectors:* A contracted "Inspector Record" is available at the port to make shipboard inspection of t cargo. Use of this service is at the option of the shipper and is at shipper expense. Shipper shall have the right to have representations witne the inspection. Shipper should contact LOOP or the "Inspector Record" regarding the prevailing fees and to make known intentio regarding use of the service.

REPAIRS: Skilled craftsmen are available for all on-board repairs through Agent.

AIRPORT: New Orleans International Airport is serviced by major airlines with world wide connections. The airport is located 90 miles from LOOP.

WEATHER: *Waves and Currents:* At the port, significant wave height is less than 1.8 m. (6 ft.) for 72% of the time, and greater than 3 m. (10 ft.) for 5.4% of the time. Currents take a generally Westerly direction 25% of the time. Average current speed is 0.72 knots, but 3% of the time the current can reach a speed of 2 knots.

Weather at the Port: LOOP's Marine Terminal is located in a semi-tropical zone. Average Summer temperature is 29°C (84°F), and average Winter temperature is 14°C (57°F). Lowest temperature recorded is -12°C (10°F) and highest is 38°C (100°F).

Thunderstorms in Summer and cold fronts in Winter develop quickly and can be quite severe, with storm winds (up to Force 10) developing for short periods. The Terminal is in a hurricane zone, and although such storms are an infrequent occurrence at the port, the area is often affected adversely between the months of June and November by hurricanes passing East or West of the port. Poor visibility occurs most often in January when visibility of 2 nautical miles or less occurs 2% of the time.

Weather Operating Rules: As a general rule, the LOOP Port Superintendent will use the following guidelines in deciding whether various port activities will be allowed to begin or continue, or whether they will be terminated:

(a) Bunkering is generally allowed in significant seas of up to 1.5 m. (5 ft.) if bunkering within the Safety Zone.

(b) Tanker mooring and hose hook-up generally are allowed in significant seas of up to 2 m. (6 ft.)

(c) Operation of the mooring launches and work boat, as well as cargo discharge, are generally considered safe in significant seas of up to 4 m. (12 ft.)

(d) In seas of 4 m. (12 ft.) or more, cargo discharge may be stopped and cargo hoses disconnected, especially if a storm is building up.

(e) Tankers may be required to depart:
  (1) if seas become greater than 5 m. (15 ft.);
  (2) if winds become greater than 22 m. per second (44 knots);
  (3) if current becomes greater than 1 m. per second (1.8 knots) and is aligned with winds of 20 m. per second (40 knots) or more;
  (4) if current becomes 0.6 m. per second (1.2 knots) and is perpendicular to 20 m. per second (40 knot) winds.

(f) The complete shut-down of all systems and the evacuation of the port will be ordered when it is predicted that the centre of a hurricane will pass within 290 kilometers (180 statute miles) of the port. Normally evacuation orders will be issued 36 hours before the storm's expected arrival.

(g) A hurricane alert is issued 72 hours ahead of an approaching hurricane. Incoming tankers will not normally be berthed after a hurricane alert, and berthed tankers will complete discharging as soon as possible and depart the port.

Also see "Radio".

REPATRIATION: Crew changes and repatriation of crew members can be arranged through Agent.

GENERAL:

List of United States Federal Regulations referenced in this Port:

Title 33 USCA 1517	– Deepwater Ports – Liability.
Title 33 CFR 150(D)	– Oil Transfer Operations.
Title 33 CFR 150.345	– Regulated Vessel Activities.
Title 33 CFR 155	– Oil Pollution Prevention Regulations for Vessels.
Title 33 CFR 157	– Rules for the Protection of the Marine Environment Relating to Tank Vessel Carrying Oil in Bulk.
Title 33 CFR 157.25 – 157.49	– Vessel Operations.
Title 33 CFR 159.7	– Marine Sanitation Devices – Requirements for Vessel Operators.
Title 33 CFR 164	– Navigation Safety Regulations.
Title 33 CFR 164.35	– Equipment: All Vessels.

Annex V of MARPOL 73/78.

Charts: The following official charts of the National Oceanographic and Atmospheric Administration (NOAA) are recommended for use when approaching LOOP's Marine Terminal:

11340 (U.S. Gulf Coast – Mississippi River to Galveston).
11358 (U.S. Gulf Coast – Barataria Bay and Approaches).
11359 (U.S. Gulf Coast – Louisiana, LOOP Deepwater Port).

The latest editions of NOAA charts are listed in NOAA's publication "Dates of Latest Editions", which is issued quarterly and available free from National Ocean Survey, Division C44, Riverdale, Maryland 20840, U.S.A.

Support Vessel Base: National Oceanographic and Atmospheric (NOAA) Administration Chart No. 11358 shows the navigable route from the marine terminal to the small boat harbour located on the East shore of Bayou Lafourche near Belle Pass where the support vessels are based.

Onshore Components: Major onshore components are: the Clovelly Dome Storage Terminal for receiving and storing the oil coming from the Marine Terminal and for delivering it to connecting facilities; the Operations Centre for controlling and monitoring system operations; and the Fourchon Booster Station for helping to pump the crude oil from the Marine Terminal to Clovelly Dome Storage Terminal.

Services: LOOP does not provide facilities for logistic services to tankers using the port. The company is not an "Agent", but does render to all tankers calling at its terminal the services necessary to effect a prompt, efficient turnaround. LOOP provides those services and facilities necessary for scheduling, receiving, mooring, unloading of cargo and departure of tankers calling at the port. Arrangements for logistic services must be made through each tanker's agent. Lists of logistic services can be obtained from the Agents. Messages concerning such requirements, except in an emergency, will not be accepted by LOOP.

Vessel used to deliver bunkers and tanker supplies must be approved by LOOP. Such vessels must apply for approval in accordance with the LOOP Guidelines and Regulations covering logistical service. Lists of currently approved vessels are available from LOOP on request. No telephone service is available to the ships.

Included in tanker services that need to be arranged through tankers' agents are mail services, medical services and garbage pick-up. Garbage collection shall be in compliance with Annex V of MARPOL 73/78. There are no facilities for handling mail. *It is important that mail for tankers not be addressed to LOOP Inc.* There is no medical service on LOOP's offshore platforms. Medical service ashore, as well as helicopter service for medical evacuation, is available through the Agents.

Helicopter Transfer of Personnel and Supplies: Helicopter operations are sanctioned on tankers, subject to the Master's and the Port Superintendent's approval, for the following situations:

(a) Medical evacuation, personnel transfer and replenishment of supplies by helicopter is permitted on an individual basis. The Port Superintendent has authority to determine when conditions are not safe for such helicopter operations. Shoreside treatment for medically evacuated patients must be arranged by the tanker through the tankers' agent. LOOP will assist with communication relays for emergency medical purposes but will not act as agent.

(b) When weather conditions dictate, helicopters may be used for transfer of Mooring Masters and other port personnel at the discretion of the tanker's Master. The Mooring Master and the Port Superintendent jointly decide when such a condition exists.

(c) In order to facilitate decisions about the safety or feasibility of helicopter operations on tankers, LOOP advises Masters of the characteristics of any helicopters that LOOP itself dispatches.

Personnel Transportation: LOOP provides no boats for transportation of tankers' personnel to shore. When transportation is required, it must be arranged through tanker's agents. There is almost no public transportation on land from towns near the LOOP platform. Any such land transportation should also be arranged in advance through tanker's agents.

Small Boats and Visitors: No boats are permitted or authorised to come alongside tankers calling at the port except those required by LOOP or by the ship to furnish services or carry out official business, and then only after clearance from the Vessel Traffic Controller and Mooring Master.

It is strongly recommended to Masters of tankers that visitors to the ship be restricted to a minimum, because of the hazards involved. Visitors to the ship are not allowed to embark or disembark by the way of LOOP's platforms or launches.

Masters of vessels are advised that decks and the ship's ladders should be well lighted and ladders should be kept well clear of the water during unloading to prohibit unauthorised persons from boarding the ship.

Cargo Documentation: The cargo quantity and quality report, which is a LOOP document, will be completed as much as possible by LOOP personnel before each tanker's arrival. After the tanker finishes discharging, the Mooring Master receives the necessary figures by radio from the Control Transfer Supervisor, so that the document can be completed before sailing. Cargo quantity is measured by representatives of LOOP by using turbine meters and provers on the pumping platform. Cargo quality is monitored by automatic sampling devices on the platform, and for accounting purposes manual tests are done on samples taken from the automatic sampler on the platform. LOOP furnishes United States Customs authorities with the necessary documentation.

Pollution: Discharge of oil or oily slops into the sea is strictly forbidden. LOOP has no facilities for receiving any oil residues or oily ballast water. Tankers wishing to offload such substances must do so elsewhere. Tankers that release oil or oily ballast water either at the SPM or in the anchorage area will be held responsible for all clean-up costs. The U.S. Coast Guard Regulations concerning water discharges at sea are contained in 33 CFR 157.25 to 157.49. Regulations in 33 CFR 159.7 require an operable marine sanitation device aboard all vessels in United States waters. For purposes of these regulations the LOOP safety zone is considered U.S. waters.

Note: All ballast and bilge overboard discharge valves are to be shut and sealed and all deck scuppers plugged while at a LOOP SPM or anchorage, although scuppers can be temporarily opened to drain off rainwater.

Safety: LOOP maintains a vigorous safety programme. The Mooring Master will discuss and review LOOP's safety requirements and procedures with tanker's Master and Chief Officer before cargo discharge begins. Coast Guard Inspectors will board all foreign vessels, at least annually, to ensure compliance with federal regulations, including Part 164, Title 33 of the United States Code of Federal Regulations, Navigation Safety.

Drug and Alcohol Policies: It is the company's belief that the use of drugs or alcohol impairs employee performance and creates unsafe working conditions, thereby posing dangers to employees, contractors, vessel personnel and to the environment. LOOP is committed to maintaining a productive and safe working environment. To that end, all LOOP employees and employees of contractors performing services for LOOP, are not permitted to consume or have in their possession any alcohol or drugs, while on Company premises. For this policy's purpose, the Safety Zone is considered to be Company premises.

Masters, whose ships are in the Safety Zone, are strongly encouraged to voluntarily follow LOOP's policy concerning consumption of alcohol and drugs by crew members, thus contributing to a safer discharge.

Customs: LOOP furnishes customs authorities with documentation of volumes and evidence of quality of cargoes received into the system based on measurements at the Marine Terminal pumping platform.

Arrangement for the posting of such sureties and payment of fees or duties, and for other documentation that may be required, is the responsibility of the importer and/or operator of the tanker. The importer's customs broker, or his other authorised representative, will advise the importer regarding procedures and the amount of duty or fees levied on oil shipped through the port complex.

Storage: Procedures and charges for storage of crude oil by shippers in excess of normal residence time are covered in the Terms and Conditions of Service.

State Fees: There are presently no usage fees directly assessed by Louisiana to shippers and tankers at the deepwater port. If Louisiana imposes any fees in the future, tankers will be responsible to pay them.

Provisions: All deck and engine room stores are available in quantity. High quality fresh and frozen provisions available through Agent.

Regulated Vessels Activities: Vessel activities permitted and prohibited at the port, controls on those activities, and the specific safety zone areas in which the controls apply are set forth in 33 CFR 150.345.

	Safety Zone		
Regulated Vessel Activities	*Areas to be avoided around each PPC and SPM*[1]	*Anchorage Area*	*Remaining Portion of Safety Zone*
Tanker calling at port.	C	C	C
Support vessel movement.	C	C	C
Transit by vessels other than tankers or support vessels.	N	P	P
Mooring to SPM by vessel other than tankers or support vessels.	F		
Anchoring by vessels other than tankers or support vessels.	N	F or P	N
Fishing, including bottom trawl (shrimping).	N	P	N
Mobile drill operations or erection of structures[2].	N	N	N
Lightening/transshipment[3].	N	N	N

[1] The radius of areas to be avoided around each PPC is 600 m. and around each SPM is 500 m.

[2] Not part of Port Installation.

[3] Exception, 33 CFR 150.423(e).

Note: The person in charge of any vessel planning to enter a Safety Zone should contact the port's Vessel Traffic Supervisor on Channel 16 VHF-FM before entry and comply with that person's instructions.

Key to regulated activities:

F – Force Majeure.

N – Not permitted.

C – Tanker calling at port and support vessel movements: Permitted when cleared by Vessel Traffic Supervisor.

P – Vessels other than tankers or support vessels: Permitted when not in immediate area of tanker, clearance by Vessel Traffic Supervisor required.

Communications with Vessel Traffic Supervisor required.

For transitting foreign flag vessels, the requirement for clearance to enter the Safety Zone is advisory in nature.

AUTHORITY: LOOP Inc. (See "Operator").

LOS ANGELES, California: 33.43 N. 118.16 W.

(See Plan)

PORT LIMITS: The seaward boundary of the Port of Los Angeles is, for most purposes, the breakwater through which arriving vessels pass at Angels Gate Light.

DOCUMENTS: *First Port of Arrival:*

1 Complete Manifest deposited with Customs, original and traveller.
1 Complete Manifest returned to vessel.
1 Manifest of first port cargo deposited with Customs broker.
2 Quarantine Declarations (Form PHS 43).
2 Agriculture Declarations (Form AIQ 43).
1 Visaed Crew List (Form I-418) 5 additional copies.
1 Crewman's Landing Permit (Form I-95A) for each crew member and (Form I-94) for each passenger.
1 Dangerous Cargo Manifest deposited with Captain of the Port.
1 copy in hands of Chief Officer for review by the Fire Department.
The Coast Guard Captain of the Port must be informed of vessel's ETA 24 hours prior to vessel's arrival.

Second and each subsequent Port of call in U.S:

2 Manifests of Cargo for second U.S. port left with Customs.
1 Travelling Manifest returned to Master.

(Note: Travelling Manifest is carried and deposited with Customs at final port of discharge in U.S. – in addition to above required documents 4 additional copies should be available.)

Radio Officer's Report: April 1991.

Immigration: Hand over form issued by Immigration at previous U.S. port.

Customs Broker:
1 copy Travelling Manifest.
2 copies Master's Oath (Form 1300).
2 copies Crew List (Form 1-418).
2 copies Ship's Stores List (Form 1303).
2 copies General Declaration (Form 1301).

Agriculture: Officials will board the vessel and inspect and seal stores.

Crew Signing-off: Fill in Crew Declaration (Form 5129), state only number of suitcases and bags. Hand over 1-95A to Agent to prepare Immigration matters (together with Passport).

Crew Signing-on: Crew member to hand over Form 1-94 to Agent or Immigration.

PILOTAGE: Request made through Agent. Contact can be ma through VHF Channels 14 (156.7 MHz) or 16 (156.8 MHz). Call: K 260 Los Angeles Pilots. Tel: 519-3805. Not less than 1 hour's notic arrival or departure. 1 long and 1 short blast on ship's whistle or si or international signal. Pilot will board in vicinity of sea-buoy ("L entrance buoy, lighted bell buoy "L.A." red and white vertical strip Radar reflector).

Under normal weather conditions, the pilot ladder should be on t starboard side 1 m. above water.

Arriving vessels should keep to Eastward of Los Angeles Sea-Bu

Departing vessels should keep to Westward of Los Angeles Se Buoy.

Masters or Agents are requested to advise the pilot station whenev there is a change in the arrival or sailing time.

Note: Ships arriving can usually make good VHF radio contact exc between Point Vicente and Point Fermin.

ANCHORAGES: Anchorages defined on charts. No permit required anchor less than 10 days. Permit for over 10 days obtained from Capt of the Port, USCG and Harbour Department Port Warden. Permit required for Explosives anchorage.

APPROACHES: Vessels approaching the ports of Long Beach/L Angeles should use the prescribed traffic separation scheme. advised that the traffic separation scheme has been tempora modified, pending adoption of permanent changes by the Marit Safety Committee. The modification reconfigures the Western approa to the Los Angeles/Long Beach precautionary area in the follow manner: a portion of the TSS separation is reduced from 2 miles 1 mile in width and merges with the existing separation zone at a sligh adjusted turn point; the outbound lane has been shifted 1 mile South its present charted location; and the precautionary area is reduced size on its Eastern side. Vessel charts should be corrected as per mo recent Notice to Mariners for geographical positions of these change Large tankers should pick up the Pilot 1 to 2 miles South of the s buoy and Pilots should have the opportunity to board without excess way on the vessel so as to have her under control before entering t breakwater area. All vessels entering the port should pass Eastward the respective sea buoy and vessels outbound shall pass Westward the sea buoy. The Master should use extreme caution in t Precautionary Area due to proximity of outbound traffic and numero small craft, when at night, their lights are not easily distinguishable and around breakwaters or against the background of harbour ligh Outbound vessels should avoid setting course before clearing South the sea buoys and adjoining anchorages and be alert for crossing traf

MAX. SIZE: Restrictions on draft only. Supertanker terminal in ou harbour has fairway of 51 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illnes Reports made to Los Angeles Quarantine Station.

Quarantine: U.S. Quarantine Station, Los Angeles International Airpo 380 World Way, Box N-19, Los Angeles, CA 90045. Tel: (213) 215-2345

1991 Standard Procedure: The Master of a ship destined for a U. port *must report immediately* by radio, through the owner, operator agent, to the Public Health Service Quarantine Station at or nearest t port at which the ship will arrive, the occurrence on board of any dea or any ill person among passengers or crew (including those who ha disembarked or have been removed) during the 15 day period preced the date of expected arrival or during the period since departure from U.S. port, whichever period of time is shorter (Section 71.21 of Pub Health Service Foreign Quarantine Regulations 42 CFR part 71).

As used in these regulations the term "ill person" means a pers who (1) has a temperature of 100°F. (or 38°C.) or greater, accompan by a rash, glandular swelling, or jaundice, or which has persisted more than 48 hours, or (2) has diarrhea. (Section 71.35)

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph, call letters "KOK" L Angeles Radio.

RADAR/VHF: The Los Angeles Harbour Pilot's station equipped w radar for use of Pilot. The Pilots also monitor VHF Channels 14 (15 MHz) and 16 (156.8 MHz). Also see "Long Beach" and "Services".

TUGS: On stand-by 24 hours a day. However, should be ordered p to arrival. Tugs join vessel in main channel, tug lines used, except wh towing astern.

BERTHING: Generally arranged through Agent. Berthing under con of Port of Los Angeles' Chief Wharfinger. There are 32 general ca berths with depth alongside 45 ft. (See "Max. Size".)

Berth No.	*Depth* (ft.)	*Remarks*
45–47	51	
49–50	51	Coal (Berths No.49–53). Loading rate 1,400 t.p.h. Travel 600 ft.
51–55	35	Coal, General Storage
57–60	40	Warehousing
72	14	Fish Markets
73 A–E	20	Commercial Fishing Vessels
87–89	35	General Cargo
90–92	35	Cruise Ships
93 A	35	Cruise Ships
93 B	35	Cruise Ships
126–131	35	Containers, General Cargo
134–135	35	Cement
136–139	45	Containers
142–144	35	General Cargo
153–155	35–36	General Cargo
174–176	45	Omni–use
177–179	35	
191	35	Cement
195–199	32–36	Cars
200 A	34	Cars, Lumber
207–209	40	Container, Cars
210–211	35	Scrap Metal

Berth No.	Depth (ft.)	Remarks
212–215	45	Containers
216–225	45	Omni–use
227–236	45	Containers
237	38	Oil, Ship Repairs
257	18	Boat Repairs

CONTAINER HANDLING FACILITIES:

Container Terminal: Berths 87 – 90.
Operated by: Public berth.
Contact: LA Harbor Department, Tel: (213) 519-3860.
Total Land Area: 25 acres (10.1 hectares).
Berth Length: 800 ft. (244 m.)
Container Capacity: 1,800 TEUs, 120 reefer outlets.
Number of Cranes: 2 × 40 ton portainers.
Stevedores: Optional.
General: Handles containers and breakbulk.

Container Terminal: Berth 131.
Operated by: Public berth.
Contact: LA Harbor Department, Tel: (213) 519 3860.
Total Land Area: 18 acres (7.28 hectares).
Berth Length: 800 ft. (244 m.).
Container Capacity: 1,500 TEUs, 120 reefer outlets.
Mode of Operation: Grounded and Chassis
Number of Cranes: 2 × 40 ton portainers.
Stevedores: Optional.
General: Terminal has one gate, and the yard is fully computerised.

American President Lines: Berths 121 – 126.
Operated by: Eagle Marine Services Limited, Berths 121 – 126, San Pedro, CA 90733.
Contact: For general information, Tel: (213) 548-8000.
Total Land Area: 114.6 acres (46.4 hectares).
Berth Length: 2,000 ft. (609.6 m.).
Container Capacity: Grounded and Chassis.
Mode of Operation: Wheeled/Grounded.
Number of Cranes: 5 × 40 ton.
Stevedores: Eagle Marine Services Limited.
General: Container freight station of 154,000 sq.ft.(14,307 sq.m.).
Maintenance and repair station of 39,000 sq.ft.(3,623 sq.m.).
Underground Bunkering.
Services: American President Lines (APL), ANZDL and PM&O.

Hanjin Container Terminal: Berths 127 – 129.
Operated by: Marine Terminal Corporation, 1606 West Water Street, Long Beach, CA 90802.
Contact: Ray Cunan, Tel: (213) 499-4500.
Total Land Area: 40 acres (15 hectares).
Berth Length: 1,600 ft. (488 m.).
Container Capacity: 2,662 TEUs with 200 reefer outlets.
Mode of Operation: Grounded and chassis.
Number of Cranes: 2 × 40 ton single-lift portainers.
Stevedores: Marine Terminal Corpration.
General: Maintenance and repair facilities.
Services: Hanjin Shipping Line.

Trapac Terminal: Berths 136 – 139.
Operated by: Trans Pacific Container Service Corporation, 920 West 'B' Street, P.O.Box 1178, Wilmington, CA 90748.
Contact: John Maddox, Tel: (213) 830-2000.
Total Land Area: 70 acres (28 hectares).
Berth Length: 1,775 ft. (540 m.).
Container Capacity: Stacking area for 2,450 units, including 48 reefer units. On-chassis area for 1,850 units plus 206 reefer units.
Mode of Operation: Grounded and Wheeled Storage.
Number of Cranes: 4 × 40 ton.
Stevedores: Trans Pacific Container Service Corporation.
General: Three transtainers and one toplifter. 80,000 sq.ft. (7,432 sq.m.) for a future container freight station.
Service: Mitsui OSK, ACT/PACE, Dole Fresh Fruit, Columbus Line.

Matson Terminal: Berths 206 – 209.
Operated by: Matson Terminals Inc., P.O.Box 3367, Terminal Island, CA 90731.
Contact: Richard Bliss, Tel: (213) 519-6538.
Total Land Area: 86 acres (34.8 hectares).
Berth Length: 2,180 ft. (655 m.).
Container Capacity: 10,000 TEUs with three and four-high stacking.
Mode of Operation: Grounded and Chassis.
Number of Cranes: 5 × 30 – 40 ton capacity gantry cranes.
Stevedores: Matson Terminals Inc.
General: Container freight station of 6,200 sq.ft. (576 sq.m.).
Additional four-rail mounted Morgan cranes, four transtainers, 12 straddle carriers and four side loaders.
Services: Matson.

Indies Terminal: Berth 216 – 225.
Operated by: Stevedoring Services of America, 965 Harbor Scenic Way, Long Beach, CA 90802.
Contact: John Di Bernardo, Tel: (213) 547-3351.
Total Land Area: 99 acres (40 hectares).
Berth Length: 3,000 ft. (915 m.).
Container Capacity: 40 acres (16.19 hectares) grounded storage, plus area for on-chassis.
Mode of Operation: Grounded and Chassis.
Number of Cranes: 4 × 40 ton.
Stevedores: Stevedoring Services of America.
General: Two warehouses of 200,000 sq.ft. (18,580 sq.m.) each full time Customs service.
Services: NYK, Elma, Nedloyd, Grancolombiana, Yangming, Star Shipping, Shipping Corporation of India (SCI), Hyundai, Hiuka American, H.J. Baker, P.T. Moges, Chilean Fruit, Baltic.

Evergreen Terminal: Berths 229 – 236.
Operated by: Metropolitan Stevedore Company.
Leased by: Evergreen Marine Corporation (California) Limited, 260 West 5th Street, San Pedro, CA 90731.
Contact: Robert Chiu, Tel: (213) 514-4000.
Total Land Area: 118 acres (47.8 hectares).
Berth Length: 3,900 ft. (1,200 m.).
Container Capacity: 3,600 TEUs, one high; 636 × 20/40 chassis, 130 with reefer plugs.
Mode of Operation: Grounded and Chassis.
Number of Cranes: 5 × 40 ton.
Stevedores: Metropolitan Stevedore Company.
General: Customs, full-service maintenance and repair facilities available. Refrigerated container wash rack and maintenance. Nine transtainers and two tophandlers.
Services: Evergreen, Johnson Scanstar.

SPECIALISED CARGO HANDLING: Bulk loading facility, especially designed to handle coal and other dry bulk materials. Wharf length 800 ft. Depth alongside 51 ft. Loading rates up to 3,000 t.p.h., and unloading 500 t.p.h.

The cement storage ship "Muscat Cement", located at Berth No. 134, is a 600 ft. 60,000 d.w.t. vessel that transfers cement from bulk carriers to trucks for distribution.

Other specialised facilities include the GATX Petrochemical Terminal, designed especially to receive petrochemicals; the Hugo Neu Corporation installation, where old automobiles are reduced to scrap metal for export; Coos Head and Louisiana Pacific Terminals; United Brands Company's Banana Terminals; and the processing and shipping plant of the U.S Boron Company.

BRIDGES: Highway suspension bridge (Vincent Thomas) crosses main channel between Berth 95 and Berth 225; overhead clearance of 185 ft. in centre. 2 bridges on Cerritos Channel separating Los Angeles and Long Beach harbours, 1 double leaf-bascule (Badger Avenue Bridge) the other is a lift bridge (Schuyler F. Heim), as these bridges are less than 50 ft. apart they will be treated as one, overhead clearance 155 ft. at centre of Heim Bridge.

TANKERS: Load and discharge lines have 6 in. and 8 in. standard flanges (super-tanker terminal has 12 in. lines with standard flanges). If not so equipped ship must furnish its own "C" clamps. Recommend ship have reducers on board to handle 6 in. and 8 in. flanges. Residue discharge facilities available for limited quantities. All types and grades of petroleum available. Also see Long Beach – "Tankers".

Berth No.	*Length* (ft.)	*Depth* (ft.)	*Operator*	*Remarks*
45–47	898	50	Unocal/Mobil	Crude, bunkering, products. 5 loading arms. Pipeline 1.4 miles by 30 cm. 2 conveyor belts for stores.
70–71	575	37	GATX	Petrochemicals, petroleum products. 111 tanks, capacity 578,000 barrels. Pennzoil uses Berth 71 for lube oils.
97–102	848 805	32 32	Chevron	Petroleum, bunker fuel, diesel, lube. 21 tanks, capacity 660,000 barrels. Access by road only.
118–119	821	35	GATX	GATX have 4×30 cm. and 2×15 cm. pipelines from wharf to 11 storage tanks, total capacity 535,000 barrels. B.P. North American Petroleum also uses this public berth.
120–121	418	35	Western Fuel Oil Co.	Petroleum, LPG and chemicals. 30 cm., 25 cm. and 15 cm. pipelines to Western Fuel, Petrolane, B.P. and GATX tanks.
148–151	1,344	45	Unocal	Refined products.
163–164	892	35	Wickham Oil Terminal Inc.	Also used by Ultramar Inc., received base oil, fuel oil and diesel.
165–166	679	45	U.S. Borax	Exports borates. Rate 1,000 t.p.h.
167–169	1,249	45	Shell	Receives crude, receives and ships petroleum products. 16 storage tanks, capacity 672,000 barrels.
171–173	1,412	35	GATX	Public terminal. Receives crude, ships petroleum products. 19 storage tanks, total capacity 1,000,000 barrels.
187–190	No Limit	45	Wilmington Liquid Bulk Terminals Inc.	Public terminal for storage and shipping of various liquids (lube, diesel, caustic, coconut oil, etc.). 65 tanks, capacity 1.3 million barrels.

CRANES: *Barge Cranes:* 1×350 tons capacity (Manson).

STEVEDORES: Agents make necessary arrangements.

MEDICAL: Necessary to notify Agents of required medical attention: this can be done when final ETA is determined. Hospital facilities available (private).

Vaccinations/fever certificates, etc., shall conform with rules and models prescribed by the International Sanitary Regulations.

DENSITY: Average density 1026 (exception during or after heavy rain).

FRESH WATER: Availability unlimited, delivery universal, rate of delivery 100 t.p.h.

FUEL: Unlimited fuel, all grades at attractive rates. 48 hours' advance notice generally required.

FIRE PRECAUTIONS: Whenever vessel bunkering, sufficient serviceable fire hose with suitable nozzles attached to reach all parts of vessel shall be connected to fire main on vessel and made ready for instant use at all times during bunkering operations. If no adequate water pressure available on board, connections shall be made to shore lines to obtain adequate pressure. All tankers shall be moored bow seaward and have wire towing pendants rigged fore and aft readily available for emergency use, fire hoses shall be connected as above at all times while vessel in port.

International fire signals will be used in case of fire (5 prolonged blasts of ship's whistle or siren of 4 to 6 seconds duration).

SURVEYORS: ABS, Det Norske Veritas, Lloyd's Register and NKK.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: Largest dry dock 659 ft. by 97 ft., 22,000 displacement tons. 3 smaller dry docks (17,500, 15,000, 10,000 tons).

CERTIFICATES: *Passenger Vessels:*

Safety Certificate, with 50 or more passengers.
Load Line Certificate.
Radio Certificate.
Radio Telephone Certificate, if aboard.

Cargo Vessels:

Safety Equipment Certificate.
Load Line Certificate.
Certificate of Inspection/Home Certificate.
Trading Certificate.
Cargo Gear Certificate.
Radio Certificate, Radio Telephone Certificate, if aboard.

If carrying passengers from U.S. ports, vessels must have P (Persons in Addition to Crew) Certificate issued by USCG.

Tanker Vessels:

Same as cargo. Exception: If carrying exotic cargo, required to ha cargo facilities plan reviewed and approved by USCG, Washington, D.C On vessel's first visit it will be inspected and receive a letter compliance.

GANGWAY/DECK WATCHMEN: Gangway watch recommende Tankers and vessels handling dangerous cargo required to ha gangway and deck watch.

OPENING/CLOSING HATCHES: Automatic hatches may be opene and closed by crew, manual hatches opened and closed by stevedore

CUSTOMS ALLOWANCES: Tobacco, either 300 cigarettes, 50 ciga or 3 lb. of smoking tobacco, for the personal use of crew member. Wi and/or spirit, 1 quart for personal use of crew member.

CARGO GEAR: Gangway net attached between ship and doc extending 5 ft. beyond turntable in one direction and 5 ft. beyond poi of intersection of gangway and stringpiece in the other directio Preventer guy must be rigged separately to head of boom from workin guy. Exception if cast head of boom is capable of withstanding the stres of all the lines attached thereto. (This is a West-Coast requirement.)

REPATRIATION: Arrangements can be made through Immigration o request of Agent to have crewman change ship or return to home po

AIRPORT: Approximately 20 miles to International Airport which serve all major airlines.

TIME: Standard Time, GMT minus 8 hours. Daylight saving time GM minus 7 hours (April through October).

HOLIDAYS: Cargo may be worked on holidays with holiday pay scal

POLICE/AMBULANCE/FIRE: The telephone numbers are Fire (21 832-4241, Police (213) 832-7211, Ambulance (213) 832-4243. Fi Alarm boxes adjacent to all cargo sheds. Emergency number is 911.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Rescue Co ordination Centre. Tel: 590-2225.

TELEPHONES: For passenger vessels at passenger terminals only.

SERVICES: A ship-reporting service "The Marine Exchange" locate at Angels Gate Park near Los Angeles Harbour.They monitor Channe 14 (156.7 MHz) and 16 (156.8 MHz) VHF and have Channel 9 (156. MHz) VHF as their own. Primary duties are reporting arrivals, departure and locations of vessels.

BANKS: Over 50 international banks.

SHIP SUPPLY SERVICE: The port is served by numerous sh suppliers offering a wide range of services.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: 1 crewman's landing permit (Form I-95A) Immigration card (Form D-1).

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. po (Albany).

This service is provided by the terminal operators, who should be ab to provide details on request.

WASTE OIL DISPOSAL: This service is provided by the termin operators, who should be able to provide details on request.

SEAMAN'S CLUBS: Worldport LA, The Port of Los Angeles, produ a small booklet – Mariners Guide – detailing the facilities available seafarers, including seafarers centres, public transportation, and a po map amongst others.

There follows a list of the seafarers centres from whom furthe information can be obtained:

Seafarers' Communications Center, World Cruise Center, Berth 93 Cargo Mezzanine. Tel: 832-1470.

Seamen's Church Institute, 101 West 11th Street, San Pedr CA 90731. Tel: 832-2563.

Norwegian Seamen's Church, 1035 South Beacon Street, San Pedr CA 90731. Tel: 832-6800.

Swedish Seamen's Church, 1035 South Beacon Street, San Pedr CA 90731. Tel: 832-6800.

Catholic Maritime Ministry, 570 West Sepulveda Boulevard, Sa Pedro, CA 90731. Tel: 832-7817.

International Seafarers Center, 120 South Pico Avenue, Long Beac CA 90802. Tel: 432-7560.

CURRENCY: U.S.Dollar (U.S.$).

REGULATIONS: Permits required for hot work (welding, cutting, et Permit required for any dangerous cargo. Permit to discharge balla (clean water) required. Restrictions on bunkering operations (scupp plugged, valves closed).

DELAYS: No delays in berthing, load or discharge or bunkering can expected.

DEVELOPMENTS: Pier 300: 130 acre container terminal, 103 ac consolidated dry bulk terminal and 47 acre near-dock railyard.

CTC: Consolidated Transportation corridor.

Berths 212-215: 100 acre container terminal for Nippon Yusen Kais

AUTHORITY: Port of Los Angeles, P.O.Box 151, (425 S. Palos Ver Street), San Pedro, California 90733-0151. *Tel:* (213) 519-34 *FAX:* (213) 831-0439. *Contact:* Ezunial Burts, Executive Direc Ward Pierce, Chief Pilot.

MANITOWOC, Wisconsin: 44.06 N. 87.38 W.

LOCATION: Situated on the Western shore of Lake Michigan, 70 miles North of Milwaukee. Port open all year round.
DOCUMENTS: Vessels cleared by Quarantine Officials at Quebec. Customs Officer stationed at Green Bay.
PILOTAGE: Not locally required or available. Pilots should be taken on board prior to entering harbour.
MAX. SIZE: Max. draft 21 ft., vessels up to 600 ft. LOA can berth.
HEALTH: See "Documents".
TUGS: Not available.
BERTHING: 2 breakwaters protect the harbour. Entrance dredged to 25 ft. Outer harbour from pier heads to inner red light dredged to 23 ft. Inner harbour up to Medusa Cement Company dredged to 21 ft. Maximum depth alongside docks, 19 ft. Turning basin, 600 ft. radius.

All berths owned by private industry and located as follows from harbour entrance:

1. Manitowoc Public Utilities: 2 slips capable of handling 400 ft. car-ferries which handle railroad freight cars or Ro/Ro vehicles. Located port side at a right angle to river channel South side of harbour.
2. C. Reiss Coal Company, 509 Jay Street: A 900 ft. slip just inside car-ferry docks, at a right angle to river channel, South side of river.
3. Manitowoc Company Inc., 500 South 16th Street: 800 ft. long. South side of channel, parallel docking.
4. Busch Agricultural Resources Inc., 605 Washington Street: 490 ft., South side, has marine leg for unloading grain.
5. McMullen & Pitz Construction Company, 901 Commercial Street: 300 ft. North side of river between 8th and 10th Street bridges.
6. Soo Line Railroad Company, 923 Commercial Street: 300 ft. North side of river just above 10th Street bridge. This includes an unused car-ferry slip capable of handling a 400 ft. car-ferry. Also, 600 ft. North side just above car-ferry dock but is unimproved.
7. Manitowoc Company Inc., 500 South 16th Street: Approximately 8 berths varying in length from 180 ft. to 850 ft., port side bordering the peninsula.
8. Medusa Cement Company, 1801 Spring Street: Final large dock upriver, 1,200 ft. starboard side.
9. Consumers Steel & Dock, 1311 Spring Street: 330 ft. starboard side just prior to Medusa dock.

CRANES: Manitowoc Company Inc.: One fixed crane max. 80 tons lift. Travelling crane max. 70 tons lift.
BRIDGES: Operating regulations in effect. Contact City Police or the Harbour Master in advance.
DENSITY: 1000.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Can be undertaken by Bay Shipbuilding Co.
DRY DOCKS: Floating dock available. Length 604 ft., width 70 ft., depth over blocks 13 ft., max. LOA 640 ft. – Bay Shipbuilding Co., Sturgeon Bay, Wis.

Bay Shipbuilding Co. have 1 drydock which will accept vessels of 1,000 ft. LOA and 35,500 gross tons. Depth over sill 17 ft.
SURVEYORS: Lloyd's Surveyor available from Cleveland.
AIRPORT: Manitowoc County. N.W. side of City off Monasha Avenue. Simmons Airlines, commercial feeder line, passenger and freight.
TIME: GMT minus 6 hours.
GARBAGE DISPOSAL: Daily operation with 2 containers. Contact: Manitowoc Disposal. Tel: (414) 682-7758.

BERTHING: 2 berths: 1. City Dock: 400 ft. long and 60 ft. wide. More than 35 ft. deep. Due to shallow water at East end, a starboard landing is usually made. No covered storage, temporary open storage. 4 fork lifts, 2 of 20,000 lb. capacity.

2. Annette Island Canning Co.; 200 ft. long and 23 ft. deep. 15 ton crane and 2 fork-lifts. 1×25 ton fork lift.
CRANES: No Port Authority cranes.
STEVEDORES: 4 gangs available.
MEDICAL: Hospital available in Ketchikan; small clinic in Metlakatla.
SUPPLIES: Bonded and unbonded stores from Ketchikan.
FRESH WATER: Available.
FUEL: Not available.
REPAIRS: Facilities at Ketchikan.
SURVEYORS: Cargo Inspectors and Surveyors available in Ketchikan.
AIRPORT: Small charter plane only. Jet to Juneau and Seattle via Ketchikan Airport only.
EMERGENCY CO-ORDINATION CENTRE: At Ketchikan.
BANKS: National Bank of Alaska.
STORING: See "Prelims".

1. By truck.
2. Yes.
3. Yes.
4. Yes.
5. None.
6. Yes.

DEVELOPMENTS: New state ferry pier under construction.
AUTHORITY: Port of Metlakatla, P.O.Box 434, Metlakatla, Alaska 99926. *Tel:* 886 – 4646. *FAX:* (907) 886-3124. *Contact:* Bruce Guthrie, Harbour Master. *Tel:* 886-3531 (Residence).

MIAMI, Florida: 25.46 N. 80.10 W. **(See Plan)**

PORT LIMITS: The Miami Harbour embraces the artificial basins, slips and channels that have been dredged along the bay front of Miami and in the bay and through the shoal water of Biscayne Bay to the ocean, and is located generally at Lat. 25° 46' N., Long. 80° 10' W.
Administration: The Port of Miami is a "non-operating" port, taxpayer-owned and administered by the Seaport Department, a function of Metropolitan Dade County Government. Permanent facilities are leased to port users and operators. All equipment (except the gantry cranes) is owned and operated by private companies. The gantries are lease-operated under Seaport Control. Berth space is authorised by the Port Director, and scheduled by Seaport Operations. The U.S. Coast Guard serves as Captain of the Harbour.
Physical:
Total port land area: 600 acres (242.83 hectares).
Dodge Island: 300 acres (121.41 hectares).
Lummus Island: 300 acres (121.41 hectares).
Total lineal dimension: 30,000 ft. (9.144 km.).
Bulkhead berth space: 11,510 ft. (2.18 miles) (3.51 km.).
Container berth: 3,500 ft. (1,066.8 m.) bulkhead.
Lineal balance 17,635 ft. (3.34 miles) (5.38 km.) under development.
Dodge and Lummus Islands connected by two-lane partial, temporary connecting causeway.
DOCUMENTS:
Customs: All foreign and "in bond" goods entering the Port/Country are subject to Customs examination and duty. Manifest of foreign cargo inbound must be presented to the Customs Boarding Officer prior to commencing discharge.

Ship's Agent must notify Customs 2 hours prior to the ship's arrival. Regular working hours, Monday through Saturday 0800 – 1700, telephone 536-5261. Outside normal working hours, telephone contact 526-2305; overtime is charged.
Forms required:

2 Master's Oath on Entry of Vessel in Foreign Trade	Form 1300
2 General Declaration	Form 1301
2 Ships Manifests	Form 1302
2 Ship's Stores Declaration	Form 1303
2 Crews' Effects Declaration	Form 1304
Crew Members' Declaration (1 Declaration for each Crew member)	Form 5129
1 Application – Permit – Special Licence (Unloading, loading, overtime services)	Form 3171
2 Passenger Lists	Form I – 418
2 Crew Lists	Form I – 418
Customs Declaration (Passengers) (1 Declaration for each family)	Form 6059 – B
2 Declarations of foreign repair to vessels (U.S. flag vessels only)	Form 226

Immigration: An Immigration Inspector will meet all ships entering port. Valid travel documents/passport/visa/entry permit are required in some cases.

Ship's Agent must notify Immigration at least 1 hour prior to ship's arrival. Regular working hours, Monday through Friday 0800 – 1630, telephone 350 – 5739. Outside normal working hours, telephone contact 526 – 2626; overtime is charged.
Forms required:

Crewmen's Landing Permit	Form I – 95
Alien Passengers' Landing Permit	Form I – 94
Passenger List	I – 418
Crew List	I – 418

PILOTAGE: All vessels with a draft of 7 ft. or more are required to take a Pilot who boards near the Outer Sea Buoy, 2.5 miles offshore.

Request Pilot through Biscayne Bay Pilots Association, 24 hours in advance, call sign KGW 303, VHF Channel 16, direct from ship or through vessel's steamship Agent accompanied by particulars of draft and berthing assignment. Ship to confirm on VHF Channel 16 one hour prior to arrival. Channel 16 is monitored 24 hours and station can monitor VHF Channels 10, 12 and 14. Ship may cable pilot station direct through RCA Radio Lantana, Florida, call sign, Miami Pilots. Estimated time of departure should be made when ship docks and must be confirmed by phone (375-9453) 1 hour prior to the Pilot boarding.

ANCHORAGES: The prescribed anchorage area for vessels anchoring outside the harbour is located Eastward of a line about 1.5 nautical miles offshore and Northward of a line about 0.2 miles nautical miles North of the sea buoy at the entrance to the ship channel. The entire anchorage area lies North of the entrance channel to Miami. The Northern and Southern extremities of this area are marked by spar buoys. Vessels desiring to anchor off the entrance to the Harbour of Miami are required to do so within this area, to avoid possible damage to cables laid on the ocean bottom in the vicinity. Refer to anchorage area 202.188 on Coast and Geodetic Survey Chart No. 547.

RESTRICTIONS: *Locations:* Main Turning Basin: Lat. 25° 47′ N., Long. 80° 11′ W. Sea Buoy and Channel Entrance: Lat. 25° 46′ N., Long. 80° 06′ W. (approx.).

Channels, Turning Basins: The main channel is marked by 2 sea buoys about 2 miles (3.38 km.) East of the port, at the Western fringe of Gulf Stream shipping lanes. From that point, at which the depth is 44 ft. (13.41 m.), the channel runs 1.02 miles (1.65 km.) at 256° magnetic to a bend, changing to a control depth of 42 ft. (12.80 m.) and turning to 296° for 3.64 miles (5.82 km.), terminating in a 1,700 ft. (518.16 m.) (along North-South axis) by 1,650 ft. (502.92 m.) (East-West) turning basin. MLW depth in the main channel, at Northside berths and in the turning basin, is 36 ft. (10.96 m.). At a distance of 1.3 miles (2.08 km.) from the entrance channel bend at the outer bar cut, the Fisherman's Channel (South Channel) branches off due West for 1.01 miles (2.69 km.), then turns parallel to the main channel for another 1.01 miles, then turns to 247° for 1,500 ft. (467 m.) to intersect the Intracoastal Waterway. Depth along the entire Fisherman's Channel is 25 ft. (7.62 m.), except for the Easternmost 3,300 ft. (975.36 m.), where it is 38 ft. deep. Width of the main channel is 400 ft. (121.92 m.) from the sea buoys, for 3.65 miles (5.84 km.), and 900 ft. (247.32 m.) wide along Dodge Island and into the main turning basin. Width of Fisherman's Channel is 500 ft. (152.4 m.) along its entire length.

MAX. SIZE: No limit to length at port complex. Dodge Island has 4,300 ft. (1,310.64 m.) of lineal berthing space for general cargo, quarter ramp and side ramp vessels plus 4,740 ft. (1,444.75 m.) for 10 Ro-Ro berths at MLW depths from 25 ft. (7.62 m.) to 36 ft. (10.97 m.). Lummus Island container berth has 3,500 ft. (1066.8 m.) of berthing with a MLW depth of 42 ft. (12.80 m.).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

Ship's Agent must request quick clearance, "Pratique", from United States Public Health Department.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

An Agriculture inspector will board all foreign, coastwise and domestic ships on arrival.

Ship's Agent must notify Agriculture at least 1 hour prior to ship's arrival. Regular working hours, Monday through Friday 0800 – 1630, telephone contact 536-4758. Outside normal working hours, telephone contact 526 – 2821; overtime is charged.

Forms required:

1 copy of Cargo Manifest.
1 Report of Ship's Stores and Port of Origin.

Forms provided by and filled out by the inspector:

Cargo Form 212
Boarding Report 288

RADIO/VHF: The Coast Guard and pilot station can be raised on VHF Channel 16. Telephone contact to Agents, receivers, etc., can be made via Miami Marine Operator.

Port of Miami maintains a guard on VHF Channel 16, call letters "KCE 254".

BERTHING: Berths are all marginal berths, no piers or slips. 9,040 ft. (2,755.40 m.) at MLW depths of 25 ft. (7.62 m.) and 36 ft. (10.97 m.). Dock aprons are 68 ft. (20.72 m.) wide. Large ships are able to turn at berthside in the 900 ft. (274.32 m.) wide main (North side) channel or may continue into the 1,700 ft. (518.16 m.) × 1,650 ft. (502.89 m.) turning basin. The new (Fisherman's Channel) South Channel is 500 ft. (152.40 m.) wide and 42 ft. (12.80m.) depth at the Eastern end for a distance of 3,500 ft. (1,066.8 m.) and continues Westerly at a depth of 25 ft. (7.62 m.) for its remaining 10,000 ft. (3,048 m.) with 3 turning basins: one at the confluence with the main channel, one midway and one (under construction) at the Western junction with the Intracoastal Waterway. There are 10 Ro-Ro berths for bow and stern loading vessels. Lummus Island container berth at port's Eastern end is 3,500 ft. (1066.8 m.) long with a MLW depth of 42 ft. (12.80 m.). (Note: 42 ft. plus 1 ft. overdredge from Government Cut to West of Container Berth No. 3; 44 ft. plus 1 ft. overdredge from Government Cut out to Sea Buoy. 1,200 ft. diameter turning basin East of Lummis Island).

Gear and Heavy Lift Equipment: 8 shipside cranes, all truck-mounted, rubber-tyred with outriggers, capacity 2×140 tons; 2×150 tons, 1×165 tons, 1×180 tons and 2×200 tons; 20 container movers ("port packers") to 85 tons, 4×35 ton forklifts, 12 forklifts from 15 to 31 ton capacities, and about 125 smaller forklifts from 3,000 lb. to 30,000 lb. capacities.

Cruise Ship Piers: Marginal berthing for 12 cruise ships, each with modern air-conditioned passenger lounge and Custom Inspection areas.

Container Handling: 3×40 long ton (with telescoping spreader for 20 ft. and 40 ft. containers; 45 long ton under hook) gantry cranes with 130 ft. outreach and 85 ft. vertical clearance over apron. Duty cycle 40 per hour and 3×50 long ton (with telescoping spreader for 20 ft., 40 ft and 45 ft. containers with 60 ft. clearance between legs; 70 long tons under hook) gantry cranes with 151.5 ft. outreach and 85 ft. backreach with 100 ft. vertical clearance over apron. Duty cycle 45 per hour. All 6 cranes service a 3,500 ft. (1066.8 m.) concrete container berth at the Easternmost end of Fisherman's (South) Channel, just 2.3 miles (3.7 km.) from ocean shipping lanes, with a MLW depth of 42 ft.

Cold Storage Cargo: Current port facilities provide in excess of 45,000 sq.ft. of refrigerated space. In addition, there are approximately 300 reefer outlets throughout the port.

Commercial Warehouses: Ample on the mainland. On Port, 81,754 sq.m. in 7 modern transit cargo buildings.

TUGS: Large tugs up to 3,000 h.p. available 24 hours per day. Requ tug service via pilot station. Big tugs privately owned by Coastal T and Barge Inc. who work closely with Pilots. Smaller tugs available Miami River and operated by Backus Towing Inc.

BRIDGES: There are no bridges between the open sea and the po or the Miami River. The new South Channel provides direct access fro shipping lanes and the river, as well as all berthing on the seapo South side. A highway and rail bridge spans the Intracoastal Waterw between the island seaport and the mainland. Only smaller ships ent the Miami River, which is dredged to 15 ft. at HW and is 150 ft. wide t a distance of 3 miles above entrance. A bridge about 0.5 miles fro entrance is closed from 0700 hrs. to 0900 hrs. and 1600 hrs. to 1800 hr local time.

STEVEDORES: All receiving, recording, moving, loading and discharg of cargo is performed by the stevedoring companies. They emplo longshoremen members of the International Longshoremen Association (I.L.A.). Normal working hours 0800 – 1700. Overtime charged for Saturdays, Sundays, and holidays. Port open 24 hours pe day.

MEDICAL: Clinics available.

TANKERS: No slop (residue) discharge facilities in the Port.

Private facility: Coastal Fuels, Fisher Island – No slop (residu discharge facilities. One tanker berth available, 760 ft. Max. draft of 34 at MLW. No special fittings required. Telephone contact 672-1065.

Report: Cautionary Advice – Approaches: All approaches to the Se Buoy should be made from the East to avoid shoal areas to the Nor and South of the Entrance Channel. The Gulf Stream current runnin to the North may be felt just outside the Sea Buoy. A counter curre usually sets to the South in the vicinity of the Sea Buoy and Southbou traffic is usually encountered 1 mile off the Sea Buoy.

Miami has numerous passenger ships calling at this por Most movements between Sea Buoy and berths take place betwe 0500 to 0700 hrs. and again at about 1700 hrs.

Care must be taken to carefully identify each navigation light to avo mistaken identity with bright lights along the coast.

Vessels may anchor to the Northward of the Sea Buoy outside th 50 ft. depth line.

Entering and Berthing: Vessel should have full manoeuvring powe available and competent helmsman at the wheel. The currents aroun Fisher Island are strong (3 to 4 knots reported), and the ebb tide run from a direction of 270° at the berth to approximately 300° in the Ma Channel. Ranges and buoys are used to identify channel limits. Th Outer Channel is 500 ft. wide and the Main Channel starting betwe the jetties narrows to 400 ft. The distance between Sea Buoy and Fishe Island is 4.5 miles.

The draft of a tanker berthing at Fisher Island is limited due to dep limitation at the berth and just offshore of the bow and stern areas o vessel in the berth. (See "Plan").

Berthing is limited to beginning of ebb tide period in order to tak advantage of higher water level as well as to stem the outgoing tid The ship is difficult to control in the Turning Basin off the berth with strong current running. Unberthing is carried out during flood tide whe current is weak.

The berth at Belcher Oil Terminal has a total berthing face of 700 with a total of 8 pier bollards spaced 100 ft. apart. The ship berths po side to the pier.

Gangway: There is no pier gangway available. There is ample room o the pier deck for the ship's gangway.

FRESH WATER: Available every 240 ft. at Port of Miami, Dodge Islan and at Container Berth, Lummis Island. Delivered via hose.

FUEL: All grades; bunker, intermediate and marine gas oil, Diese bunker C. Ships fuelled at dockside from Coastal Fuels barges.

All deliveries in both ports are made by barge.

FIRE PRECAUTIONS: Usual safety precautions on smoking, flying "B mooring pendant available, ample persons aboard to fight fires, fire hos led out, etc.

Coastal Fuels tugs equipped with fire fighting equipment.

The Royal Bank of Canada. Tel: (305) 539-5200.
Vereins-und Westbank. Tel: (305) 372-9216.
Many American banks also available.

SERVICES: All types of special services such as tank cleaning, compass adjusting, admeasurement, radar/radio repairs, rathometer repairs, etc., available.

SHORE LEAVE: Crew members are allowed ashore after clearance by Customs, Immigration and Quarantine.

IDENTIFICATION CARDS: Definitely needed in order to return to ship at night. A security guard at Port of Miami will check.

GARBAGE DISPOSAL: Waste Management of Dade County. Tel: (305) 247-1000. Roll-off containers provided. State-of-the-arts radio dispatched trucks. Service charges depends on size of container. $ 225.00 for 20 cu.yd. to $ 350.00 for 40 cu.yd. Collection time: Radio dispatched.

WASTE OIL DISPOSAL: Ricky Oil Service. Tel: (305) 822-2253. Fax: 822-8004. Tanker truck capacity 7,000 gallons. Fast response by radio dispatched trucks, on call 24 hours. Charges are $ 65.00 per hour for man and equipment and up to U.S.$ 0.65 per gallon of bilge water/oil.

SEAMAN'S CLUBS: Leif Eriksson Seamen's Center, 1180 S. America Way, Miami, Florida 33132. Tel: (305) 371-8909. Services: Cafe, international telephone booths, swimming pool, tennis courts, soccer pitch, track and field, gift shop, newspapers, watch repair, film developing and stamps.

CURRENCY: U.S. Dollar. No restrictions placed on seafarers.

AUTHORITY: Port of Miami, 1015 North America Way, Miami, Florida 33132, U.S.A. *Tel:* (305) 371-7678. *Telex:* 493-1214 Port Mia. *FAX:* (305) 372-7918. *Contact:* Mr. Carmen J.Lunetta, Port Director.

MILWAUKEE, Wisconsin: 43.01 N. 87.53 W. (See Plan)

PORT LIMITS: The Port of Milwaukee limits are generally considered to be the harbour breakwall housing the harbour entrance lighthouse. However, unless specifically declared to the contrary in the covering charter party, a vessel will be considered an "arrived ship" upon anchoring outside the harbour breakwall, in the event that a proper berth and/or anchoring space inside the harbour breakwall is not available.

DOCUMENTS:

Vessels from Canadian ports:
Dominion clearance and Public Health Pratique (both issued at Montreal).

Vessels from all other nations:
Inward Foreign Manifest(s)
Stores Lists, over Master's oath.
Curio Lists, over Master's oath.
Permit to Lade and Unlade.
Discharge Manifest.
Inspection by U.S. Dept. of Immigration (Crew List).
Inspection by U.S. Dept of Agriculture.
Receipt of Entrance fee.
Receipt of Tonnage Tax.

Additional documents may be required, dependent on commodity involved in the carriage, point of origin, flag or any unusual circumstances existing.

PILOTAGE: Pilot boards at Montreal and at several other stations along St. Lawrence Seaway route.

ANCHORAGES: The chart does delineate anchorage area for large vessels and shows the 27 ft. depth just East of South Piers 1, 2, and Liquid Cargo Pier. This deep area, about 2,400 ft. × 5,400 ft., used by large vessels for anchorage.

MAX. SIZE: 739 ft. × 75 ft. with 27 ft. draft. No tidal effect, although lake levels vary seasonally. Minimum depth above low water level 27 ft.

HEALTH: See "Health: All Ports" before first U.S. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station at City Heavy Lift Dock. Harbour Master and Dock Superintendent can be reached at this facility Monday through Friday between 0800 and 1630 hrs.; 156.8, 156.6 and 156.5 MHz.

TUGS: Normally pick up vessel inside breakwater. Tugs optional at discretion of ship's Master. Fee for use of tug's lines.

BERTHING: The time of passing harbour entrance lighthouse establishes order of berthing, provided vessel is ready to work.

BRIDGES: No bridges are transited, except to smaller, shallow draft (22 ft.) private docks up river. This portion of the harbour generally reached only by small Laker vessels and barges. Bridges closed between 0730 hrs. and 0830 hrs. and 1630 hrs. and 1730 hrs. except on Sundays and 8 legal holidays. In addition, 2 hours' notice required for opening bridges across Milwaukee River North of and including Buffalo Street.

SPECIALISED CARGO HANDLING FACILITIES: In addition to the 3 general cargo terminals of approx. 340,000 sq. ft. covered area (9 berths), and dry bulk terminal, the port is served by a refrigerated warehouse of 10,000 sq. ft.; 1 open dock area (2 berths) for handling bulk commodities such as pig iron; 1 open dock (3 berths) for heavy lifts and equipped with a 220-ton stiff leg crane and 2 gantry cranes of 70 and 50 tons; 1 liquid cargo pier for edible and inedible fats, greases and tallow; 2 grain elevators of 3.5 million and 2.5 million bushel capacity and 2 scrap iron loading facilities. The port is also equipped with a mobile heavy lift/container crane, of 200 tons capacity, capable of serving all berths.

STEVEDORES: Vessel should provide a stowage plan, manifest of inbound cargo and exceptions list (unusual vessel or cargo characteristics affecting facilitation of cargoes). Vessel should comply with the U.S. Dept. of Labor's safety regulations.

MEDICAL: Advance notice desirable. Hospitalisation available.

TANKERS: Diameter of load lines and discharge lines 8 in. and 10 in. Slop residue facilities. 4 berths available, with draft to seaway depth.

FRESH WATER: Potable water available at most berthing areas.

FUEL: All grades of fuel oil available by truck delivery at shipside, also 24 hour refueling berths available for bunkering.

CONSULS: The following countries are represented:
Belgium
Costa Rica
Denmark
Dominican Republic
France
Nicaragua
Norway
Sweden
Yugoslavia

REPAIRS: Full service repairs, except large vessel dry docking.
GANGWAY/DECK WATCHMEN: Not necessary, but available on request.
OPENING/CLOSING HATCHES: At the option of ship.
CERTIFICATES:
Registry of Ship.
Master's Licence.
1st, 2nd and 3rd Officer's Licences.
Radio Licence.
Wireless Operator's Licence.
Derat Certificate (done each year).
(Additional certificates may be required, dependent upon Registry, cargo, trade route engaged in, nationality of crew, etc.).

CUSTOMS ALLOWANCES: Tobacco, 10 packages or 200 cigarettes in possession at any time. Wine and/or Spirits, 1 bottle per officer.
REPATRIATION: Local Agents effect repatriation.
AIRPORT: 5 miles distant.
TIME: U.S.A. Central Time. Central Daylight Time from early April to late October – 5 hours behind GMT. Central Standard Time from late October to early April – 6 hours behind GMT.
HOLIDAYS: Memorial Day, Columbus Day, Veterans Day, July 4th (if on a Sunday, Monday is a holiday); First Monday in September; Fourth Thursday in November; Christmas Day; New Year's Day. Cargo can be worked on these days at holiday pay.
POLICE/AMBULANCE/FIRE: Police – non-emergencies Tel: 273-8660; Emergency, including emergency ambulance service Tel: 765-2323; Fire, including rescue squad service Tel: 347-2323.
TELEPHONES: Can be arranged, but unnecessary because sufficient phones available in dockside offices.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: U.S. Immigration rules.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Two companies, both certified by U.S. Coast Guard, can provide mobile reception facilities. Containers up to 30 cu.yd. can be made available alongside vessel with 24 hours prior notice.

BFI Waste Removal, Inc., Town & Country Division, W143S6400 College Ct., Muskego, WI 53150. Tel: (414) 679-0860.

Waste Management, Inc., Best Disposal Division, 10627 S. 27th Street, Franklin, WI 53132. Tel: (414) 761-2100.

WASTE OIL DISPOSAL: Collection of waste oil provided by mobile reception facility. Contractors are certified by U.S.C.G. 24 hours notice required. Contact AAA Environmental Industries, Inc., 6510 W. Forest Home Avenue, Milwaukee, WI 53220. Tel: (414) 541-1462.
SEAMAN'S CLUBS: Seamen's Center, 1200 S. Harbor Dr., Milwaukee, WI 53207. Tel: (414) 747-9494. Facilities include shop, international telephone service, church services, football matches arranged, dances, minibus collection, postage facilities, games available
DELAYS: No delay.
GENERAL: Chandlery services for foodstuffs, ship complements and laundry services available. Garbage and waste disposal are available through private operators, chandler usually making the arrangements.

The Liquid Cargo Pier is also available for non-petroleum liquid cargoes and vessel bunkering.

DEVELOPMENTS: Milwaukee inner harbour berth for maximum size bulk vessels under-going comprehensive site enhancement.
AUTHORITY: Port of Milwaukee, 500 North Harbor Drive, Milwaukee, Wisconsin 53202, U.S.A. *Tel:* (414) 278-3511. *Telex:* TWX 910-262-3042. *Cables:* Milharcomil. *FAX:* (414) 226-8506. *Contact:* Kenneth J. Szallai, Municipal Port Director.

MOBILE, Alabama: 30.40 N. 88.02 W. (See Plan)

DOCUMENTS:
3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I.418).
2 copies Crew List (Form I.418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Health Pratique.
Master's Oath (Form 1300).
All foreign clearances.
U.S. Certificates of Payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilotage is compulsory.
ANCHORAGES: If berth is congested, vessel may anchor at the bar (35 miles from harbour).
RESTRICTIONS: Controlling depth: 40 ft. for entrance, channel and anchorages. Mean tidal range 1.5 ft. Nature of bottom: soft mud. Vessel can dock and sail at any hour at any stage of the tide.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: There are 7 tugs, available 24 hours, with max. 2,600 h.p.
BERTHING: There are 34 berths at most of which, direct loading unloading can be effected from quayside tracks.Ro/Ro berth availab
Public Grain Elevator: Depth alongside 40 ft. Loading rate 115,0 bushels/hour for grain. Grain received by rail, truck and barge.
McDuffie Terminals: 2 berths. No. 2 with dolphins, total length 320 No. 1 length 170 m. Bulk coal handling plant, depth alongside the be is 45 ft. Shiploaders can load over 4,000 t.p.h. or 7,000 t.p.h. combine 3 stacker/reclaimers can handle 4,000 t.p.h., one tipple for rail cars wh can dump 30 cars per hour and one tipple that can dump 60 cars p hour, rated at 4,000 t.p.h. and 3 barge unloaders that work 3,500 t.p each. A conveyor belt system connects the entire complex.
Bulk Handling Plant: 2 berths, depth alongside 40 ft. Total quay leng 1,500 ft. 2 unloading towers which can unload 3,000 t.p.h. and 2 loadi conveyors, rate 2,000 t.p.h.

Depth alongside other public berths as follows:

Pier 2	38 ft. MLW	Pier River End B	38 ft. ML
Pier 3	38 ft. MLW	North Pier B 1	40 ft. ML
Pier 4	38 ft. MLW	Pier North B 2	40 ft. ML
Pier 5	38 ft. MLW	Pier North B 3	40 ft. ML
Pier 6	38 ft. MLW	Pier South C1	41 ft. ML
Pier 7	38 ft. MLW	Pier South C 2	41 ft. ML
Pier 8	38 ft. MLW	Pier South C 3	41 ft. ML
Pier South A	37 ft. MLW	Pier River End C	38 ft. ML
Pier River End A	30 ft. MLW	Pier North C 1	39 ft. ML
Pier North A 1	38 ft. MLW	Pier North C 2	37 ft. ML
Pier North A 2	38 ft. MLW	Pier D Cold Storage	37 ft. ML
Pier North A 33	38 ft. MLW	Berth 1 tipple	Under repai
Pier South B 1	41 ft. MLW		
Pier South B 2	41 ft. MLW	Berth 2 tipple	44 ft. ML
Pier South B 3	41 ft. MLW	Berth 3 tipple	40 ft. ML

CRANES: 1,600 ton capacity (1,200 tons at 208 ft.) crane, 75 t stationary crane, 50 ton mobile crane and 80 ton floating crane.
SPECIALISED CARGO-HANDLING FACILITIES: Container ber length 894 ft., equipped with 1×45 ton lift capacity crane.

1 Ro/Ro berth at Pier A.

STEVEDORES: Normal working hours for the port are 0800/1700 h Monday through Friday.
TANKERS: Max. length 950 ft. restricted by turning basin. Americ Bituminals & Asphalt Co. – Jetty berth dredged to 38 ft.
Magazine Point: Hess Terminal: Jetty berth dredged to 43 ft.
FRESH WATER: Available ex-wharf at all berths.
FUEL: Most grades fuel/diesel available via pipe-line, barge or truc
DENSITY: 1000 (Fresh Water).
REPAIRS: *Atlantic Marine, Inc.* – Dry Docks ranging from 5,000 18,000 tons displacement all serviced by 51 ton gantries. Dock leng range from 380 ft. to 620 ft. Also available is a 70 ton floating cran Any type of repair can be effected.
Bender Ship Repair. 1 dry dock of 2,500 tons displacement. Majority repair work is top-side. 100 ton floating crane available.
CUSTOMS ALLOWANCES: At the discretion of customs office Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wi or spirits per man. Additional allowances may be given if conside necessary, due to length of vessel's stay in port.
HOLIDAYS: Normally no work is performed on New Year's Day, Easte July 4th, Labour Day, Christmas Eve (1200 hrs.–2400 hrs.), Christma Day and New Year's Eve (1200 hrs.–2400 hrs.). Working holidays a New Year's Eve (0001 hrs.–1200 hrs.), Martin Luther King's Birthd Holiday, Mardi Gras Day, Monday after Easter, Veteran's Da Thanksgiving Day and Christmas Eve (0001 hrs.–1200 hrs.).
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to b made up for each crew member on arrival. Not necessary for crew m already holding Form I-95, issued for the same vessel.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. p (Albany).

Under the provisions of Annex V of MARPOL 73/78, port recept facilities for ships garbage and separation on board vessel of vario waste are required. Garbage is defined as "all kinds of victual, domes and operational waste excluding fresh fish and parts thereof, genera during the normal operation of the ship and liable to be disposed continuously or periodically". In order to accommodate the needs shipping through facilities of the Alabama State Docks, the Departme has filed an Application for a Certificate of Adequacy with the Capta of the Port, United States Coast Guard, for garbage reception facilit Applicants for berth at any facility of the Alabama State Docks sh provide, upon request, the reception facilities which meet t requirements contained in 33 CFR, Parts 151, 158. Berth applica shall require a 24 hour notice of vessel's intent to discharge garba and reception facilities for food, plant, meat, and other potenti infectious waste shall be provided by the berth applicant or t designated contractor when requested by the vessel in accordance w the above and with the requirements set forth in 7 CFR 330 and 9 C 94. Regluated food waste must be handled at a facility approved by t Animal and Plant Health Inspection Service (APHIS). Berth applica or their designees shall provide the necessary reception facilities wh requested to do so for other than APHIS regulated garbage from a commercial, full-service solid waste firm. The firm listed below h indicated to the Captain of the Port of Mobile that they are intereste contracting their services in this regard and are approved by t Department of Agriculture, Animal and Plant Health Inspection Serv

Waste Management, 4770 Hamilton Boulevard, Theodore, Alaba 36582.

WASTE OIL DISPOSAL: If desiring to discharge oily waste, a vess her owners and agents are responsible for selecting an inspected a approved company that meets United States Coast Guard requireme for receipt of oily waste and further are responsible for making t necessary arrangements for discharging the oily waste. Such discha operations are to be reported to the superintendent or terminal mana in charge of the particular facility prior to the actual discharge.

The firms listed below have indicated to the Captain of the Port of Mobile that they are interested in contracting their services in this regard. Their listing herein does not indicate a preferential recommendation on the part of the Alabama State Docks Department but merely reflects the company's desire to function in the above capacity and the Captain of the Port's recognition of the firm with respect to the Alabama State Docks Department's application. All enquiries should be directed to the Captain of the Port, United States Coast Guard. Any contractor is subject to the applicable regulations for the transfer of oil (33 CFR 154-156).

Aaron Oil Company, Inc., P.O.Box 2304, Mobile, Alabama, 36652.

Midstream Fuel Service, Inc., P.O.Box 2626, Mobile, Alabama, 36652.

SEAMAN'S CLUBS: Catholic Maritime Club, 273 Dauphin Street, Mobile. Tel: 432-7339.

International Seaman's Center, 605 Texas Place, Mobile. Tel: 432-7953.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: The 400 ft. wide ship channel was recently dredged to 45 ft. and to be dredged at a later stage to 55 ft. with a width of 550 ft.

The Alabama State Docks is currently involved in a $25 million capital improvement program, which will upgrade the general cargo warehousing and docking facilities. A 365,000 sq.ft. forest products warehouse and steel and heavy lift berth is presently being built to better serve dock customers. A 14 acre waterfront site was recently purchased and renovated providing a 1,400 ft. pier system, open storage area and a 175,000 sq.ft. warehouse.

AUTHORITY: Port of Mobile, Alabama State Docks Department, P.O.Box 1588, Mobile, Alabama 36633-1588, U.S.A. *Tel:* (205) 690-6047. *Telex:* TWX 810 – 741 – 7748. *FAX:* (205) 432-5328. *Contact:* E.G. Browning, Jr., General Manager, Market Development.

MOREHEAD CITY, N. Carolina: 34.43 N. 76.42 W. (See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.

2 copies Crew Manifest (Curio List).

2 copies Passenger List (Form I-418).

2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Health Pratique.

Master's Oath (Form 1300).

All Foreign Clearances.

U.S. Certificates of Payment of Tonnage Tax (Customs Form 1022).

Certified Crew List.

PILOTAGE: Pilots obtained from Morehead City Pilots' Association, Morehead City, North Carolina 28557. Tel: 919-726-4068.

The Port Terminal at Morehead City is 3.5 miles from the Sea Buoy. The port is located on the Intracoastal Waterway and is situated 75 miles S.W. of Cape Hatteras and 14 miles West of Cape Lookout.

Pilots should be given 24 hours notice and then contacted by VHF Channel 16 about 2 hours before arrival at Sea Buoy R "2BI".

Pilot boat is about 40 ft. long, with white hull and superstructure; the hull is marked with "Pilot" in black letters on both sides.

RESTRICTIONS: The channel at Morehead City is maintained at a controlled depth of 40 ft. – MLW.

The East Turning Basin has a depth of 42 ft. and the West Turning Basin has a depth of 35 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available. Service provided by (1) Carteret Towing Co. Inc., Radio Island, Morehead City, North Carolina 28557. Tel: 919-726-5440. (2) Delta Marine Inc., P.O.Box 3546, Morehead City. Tel: 726-8847. Fax: 763-7119.

BERTHING: The wharf is 5,500 ft. long. This length enables the port to provide berths for 10 × 500 ft. general cargo ships and 1 petroleum tanker at any given time.

Adjacent to the general cargo dock area is a 1,000 ft. deep water berth for out-loading through the bulk handling facility.

The wharf is constructed of concrete and steel and has marginal tracks and crossovers for full length. Truck ramps are located at various points for easy Roll-on/Roll-off access.

Morehead City also provides a barge terminal with 1,487 ft. of modern berths. This terminal was developed as a part of the bulk handling facilities, but is also used for the loading or off-loading of a variety of cargoes.

Bulk Handling Facilities: 6,000,000 ton annual capacity bulk facility for receipt, conveyance, storage and shipment of bulk cargoes. Loading capacity 3,000 t.p.h. Storage capacity 225,000 tons (used mainly for phosphate).

Woodchip handling facility which can outload 1,000 s/tons per hour, annual capacity two million tons.

CRANES: 2×115 ton capacity gantry cranes with container handling capability.

FUEL: Available from Colonial Oil and Texaco Inc.

SURVEYORS: Saybolt, Lloyd's, S.G.S. and National Cargo Bureau.

REPATRIATION: This is possible but should be avoided as there is no Immigration Office. Closest airport is about 1 hour's drive from the town.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from first Sunday in April till last Sunday in October.

SERVICES: There are no shipyards in the port. Service on any kind of electronic equipment is not available.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Garbage disposal is available though it must be pre-arranged with the port before vessel's arrival. Drums and skips are normally provided alongside ship. Charges and collection times will be given when pre-arrangements are made. Contact James Lawrence, Dock Superintendent, Morehead City Port, Morehead City, North Carolina. Tel: (919) 726-3158.

WASTE OIL DISPOSAL: Waste oil disposal is available but pre-arrangement must be made. All docks are serviced by tanker trucks. Contact James Lawrence, Dock Superintendent, Morehead City Port, Morehead City, North Carolina. Tel: (919) 726-3158.

SEAMAN'S CLUBS: There is a Seaman's Center at the port which is sponsored by the local churches. This facility is located near the large water tank and provides telephones to call home and general assistance.

CURRENCY: U.S.Dollar (U.S.$).

AUTHORITY: North Carolina State Ports Authority, P.O.Drawer 829, 113 Arendell Street, Morehead City, North Carolina 28557. *Tel:* (919) 726-3158. *Telex:* 510 924-2983. *FAX:* (919) 726-1943. *Contact:* Robert D. McMahan, General Manager.

MYRTLE GROVE (incl. Davant), Louisiana: 29.38 N. 89.57 W.

LOCATION: West Bank of Mississippi River, about 82 miles (via Southwest Pass) from sea (at Mile 61.5 above Head of Passes).

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Minimum of 2 tugs required for berthing and unberthing. Additional tugs at Elevator Management's discretion.

BERTHING: *Mississippi River Grain Inc.:* Distance between bollards 1,000 ft., alongside 500 ft. dock, depth 48 ft. (consistent with Southwest Pass). Loading rates, 80,000 to 120,000 bushels per hour.

Loading Spouts: 4 spouts in use with 1 additional planned. Total distance between 5 spouts after completion (pivot to pivot) 500 ft.

International Marine Terminal: Max. LOA 290 m. Max. draft 12.2 m. Max. beam 48 m. Berth length 312 m. Length of travel of loader 244 m. One loading spout. Max. loading rate for coal 9,000 tonnes per hour.

Davant:

Electro Coal Transfer Corporation: Terminal located 55 miles above Head of Passes opposite Myrtle Grove. Total length of dock 3,000 ft. Channel depth 12.19 m. Depth alongside 18.0 m. One fixed loader, rate 4,840 tonnes per hour and one travelling loader, rate 6,000 tonnes per hour.

There is to be a Topping-Off operation 2 miles from the S.W. Pass entrance using 4×600 t.p.h. cranes mounted on a 38,000 d.w.t. ocean-going barge.

DENSITY: Fresh Water (1000).

FRESH WATER: Not available.

FUEL: Not available.

NAWILIWILI, Hawaii (including Port Allen): 21.57 N. 159.21 W. (See Plan)

DOCUMENTS:

4 Crew Lists.

4 Passenger Lists.

Customs Documents.

Clearance, Travelling Manifest.

Local Manifests.

Health Documents.

Bill of Health and Vaccination Certificates.

4 Manifests.

4 Bills of Lading.

Ship's Papers.

Certificate of Registration or Enrolment.

Annual Inspection Certificate.

Load Line Certificate.

Derat Certificate.

Drinking Water Certificate.

Radio Certificate and Licence.

4 Stores Lists.

PILOTAGE: Vessel's Agent orders Pilot 48 hours in advance by telephone, correcting ETA as necessary with 4 hours final notice if a last minute change occurs. Pilot boat "Anini" from Hawaii Pilots Association serves Nawiliwili and Port Allen. Tel: (808) 521-2780. Pilot boards 1 mile East of Nawiliwili and 0.5 miles South of Port Allen. Signals in accordance with International Code.
ANCHORAGES: *Nawiliwili:* Between Nawiliwili Light and Carters Point in 5 – 9 fathoms. Not good in strong trade-wind weather. Fair holding ground. Not recommended.
Port Allen: 0.5 miles South of Port Allen Breakwater Light in 5 – 10 fathoms. Fair holding ground. Untenable in Kona or S.W. storms which occur from November to March.
RESTRICTIONS: 24 hours notice of arrival is obligatory. Nawiliwili: Arrivals sunrise, departures sunset time. From October 21 to March 21 Pilot boards at 0630 hrs. Balance of year 0600 hrs. Port Allen: No time restrictions.
MAX. SIZE: *Nawiliwili:* Length 687 ft., draft 32 ft. 6 in.
Port Allen: Length 687 ft., draft 32 ft. on North side and 28 ft. on South side. Pier is 600 ft. long, so larger vessels overhang.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Honolulu Quarantine Station.
RADIO: Communicate through RCA or ITT stations in Honolulu. Also KQM marine operator for radio telephone and telephone to Kauai.
TUGS: One 1,500 h.p. tug meets vessels off port and in outer harbour. Both ship's lines and/or tug's line may be used. Has radio telephone, "WBY 8343" and Channel 12 is usually used. Extra tugs available from Honolulu.
BERTHING: Limited to one large vessel at Nawiliwili and one at Port Allen. Considerable barge traffic. Prior reservations by Agent necessary with Marine Cargo Specialist. Berth conflicts usually solved in Honolulu by rerouting of Island ports.
Ro/Ro barge facility at Pier 1.
New Pier 3 and yard under construction.
CARGO HANDLING FACILITIES: Nawiliwili has 2 sugar loading gantries on Pier 2; no equipment or storage to handle grain, ore, coal, sulphur. Fertiliser is discharged by self-unloading barge, and the bulk hauled away via truck. There is a container yard but no facilities to off-load containers. Weekly service is by a self-unloader. Roll-on/Roll-off cargo is moved on ramps furnished by barges. LPG and petroleum product lines are privately owned.
STEVEDORES: All stevedoring by McCabe Hamilton and Renny Co. Ltd., with headquarters in Honolulu and branches in outports. 48 hours notice by Agent for labour and equipment. Inward cargo is containers, general, bulk fertiliser, petroleum products, and building and construction materials. Outward is raw sugar, general and molasses. Foreign vessels are subject to heavy fines for carrying stevedore gear inter-island without Customs Clearance.
MEDICAL: 2 hospitals on Kauai with 2 doctors under contract to United States Public Health Service. Standard international inoculations and vaccination required. Advance notice by Agent desirable but not necessary.
TANKERS: All piers have pipe-line connections for incoming cargo and outgoing molasses. Fuel oil 10 in., molasses 10 in., water line 6 in., gasoline, kerosene and diesel 8 in. These are the main lines under the wharves. Hose connections to ships vary with the type of riser and hose so size of fittings should be checked with Agent. No slop discharge facilities available. 4 tanker berths available.
DENSITY: Varies from full salt to brackish in periods of heavy rainfall with freshets in the streams. No specifics available.
FRESH WATER: Available from 2 in. dock hydrants via ship's hose. About 100 gallons per minute.
FUEL: Bunker C not available for large vessels. Diesel fuel available via tank truck with 6 hours notice. Weekend and holidays order previous day.
CONSULS: All in Honolulu.
REPAIRS: Light machine shop, welding and burning and pipe work available. Plantations may do some heavy repairs if part can be sent to their shop. Their engineers are helpful in emergencies. Heavy or technical repairs must be done in Honolulu.
GANGWAY/DECK WATCHMEN: Tankers discharging gasoline required to have uniformed dock watchman. Usually off duty policeman. All ships provide own gangway and deck watch.
OPENING/CLOSING HATCHES: Normally done by stevedores. A few foreign ships prefer doing it with own crew.
CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one bottle, U.S. quart, wine or spirits.
REPATRIATION: Agent can arrange by air via Honolulu. Immigration clearance necessary.
AIRPORT: Lihue is 3 miles from Nawiliwili and 20 miles from Port Allen; served by inter-island regular carriers. Numerous lines, and charter flights available.
TIME: GMT minus 10 hours, all year round.
HOLIDAYS: National: New Year's Day (January 1st); President's Day (February 22nd); Memorial Day (May 25th); July 4th; Labour Day (first Monday in September); Election Day (first Tuesday in November); Veteran's Day (November 11th); Thanksgiving Day (November 26th) and Christmas Day (December 25th). Cargo can be worked but at penalty rates.
POLICE/AMBULANCE/FIRE: Emergency calls – Dial 911 for all services, or dial "O" for operator.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard Search/Rescue Centre, Tel: (808) 246-0390.
TELEPHONES: Arrangements by Agent.
SHORE LEAVE: Permitted after Immigration check. Eastern Bloc visitors may be restricted.
IDENTIFICATION CARDS: Desirable but not required by law.
DEVELOPMENTS: Turning basin may be enlarged to handle liners and large bulkers. Project depth 35 ft.

AUTHORITY: State of Hawaii, Department of Transport, Harbo Division, 3242 Waapa Road, Lihue, Kauai, Hawaii 96766, U.S *Tel:* (808) 245-6996. *FAX:* (808) 246-9344. *Contact:* Barry K Harbour District Manager.

AGENT: See "Honolulu".

NEW BEDFORD, Massachusetts: 41.38 N. 70.55 W.

(See Pla

DOCUMENTS: See "Boston".
PILOTAGE: Compulsory. 3 Massachusetts State Pilots availab ordered through Agent. VHF Channel 16 monitored. Pilot on station o after 12 hours notice. Small pilot vessel with basic communicat equipment. Pilots board all vessels at Buzzards Bay Buoy at t entrance to New Bedford Outer Harbour situated at Lat. 41° 30′ 42″ Long. 70° 50′ 07″ W.
ANCHORAGE: It is recommended that vessels delayed due to weathe etc., anchor 0.5 miles South of Buzzard's Bay Bell Buoy.
RESTRICTIONS: A modern harbour approach begins at Buzzard's B Buoy and runs a straight course of 7.5 miles direct to the pier facilitie The channel is 350 ft. wide and has a depth of 30 ft. MLW. The chann leads into a moderate size (1,000 yd.) turning basin.
Hurricane dyke barrier gate 150 ft. wide with depth of 30 ft. MLW.
MAX. SIZE: 700 ft. length. Vessels over 30 ft. draft restricted by tide
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S. port (Albany). Illne Reports made to New York Quarantine Station.
RADIO: RCA Chatham Radio, New Bedford Marine Operator for VH and Boston Marine Operator for ship to shore frequencies.
VHF: Pilot vessel on Channels 16 and 13. Pilot office on Channels and 18A.
TUGS: Tugs join vessel in inner harbour. Tug lines used. 2 tu available. Tugs are not normally used at the State Pier in docking a undocking of deep-water vessels. The large turning harbour basin, t wind-sheltered position of the pier and lack of tidal current minimise u of tugs. In extreme weather conditions tugs are used.
BERTHING: At State Pier, berthing space for 3 ships:
North side 600 ft. length, South side 775 ft. length, East side 450 length.
Depth of water at all berths is 30 ft. MLW.
Maritime Terminal, depth 27 ft.
BRIDGES: Passage to upper reaches of harbour to Maritime Termi requires navigation through the New Bedford and Fairhaven Bridge o in daylight for larger vessels over 250 ft. length.
STEVEDORES: 24 hour notice required for New Bedford Stevedor Corporation to prepare gear. 25 tons discharged or loaded per hour average production per gang. Nearly all cargoes handled.
MEDICAL: 24 hours notice required. Excellent hospital facili available.
DENSITY: Static, since tidal variations light. Density same as oce water.
FRESH WATER: Fresh water available.
FUEL: All types available, to be ordered in advance.
CONSULS: Most Consuls available in Boston, 50 miles or 1 hour aw
REPAIRS: All types of minor ship repairs available.
GANGWAY/DECK WATCHMEN: Watchmen available. Non police police.
OPENING/CLOSING HATCHES: Depends on negotiated contract a cargo handled.
CUSTOMS ALLOWANCES: Designated by U.S. Customs with rega to particular circumstances.
REPATRIATION: Agent can handle formalities.
AIRPORT: 3 airports within 1 hour's drive. All international services
HOLIDAYS: New Year's Day (January 1st); Washington's Birthd (February 22nd); Patriot's Day (April 19th); Memorial Day (May 30t Independence Day (July 4th); Labor Day (first Monday in Septembe Columbus Day (October 12th); Veterans' Day (November 11 Thanksgiving Day (last Thursday in November); Christmas D (December 25th).
TELEPHONES: No telephones on board, but exist adjacent to pier.
SERVICES: All services can be obtained if required.
SHORE LEAVE: If U.S. Immigration has cleared crew member, he allowed ashore.
GARBAGE DISPOSAL: Garbage containers are available on most p and wharves. Contact: A.B.C. Disposal. Tel: (508) 995-0544 and Fra Disposal. Tel: (508) 995-9121.
WASTE OIL DISPOSAL: Contact Franklin Recycling Co. Tel: (508) 9 1179.
SEAMAN'S CLUBS: None.

SHIPMASTER'S REPORT: December 1982.
Documents: See "Boston"
Pilotage: Compulsory. Pilot boards at "BB" in Buzzards Bay. Ad Agent 6 hours prior to arrival.
Restrictions: Vessels enter and leave on rising tide during daylight ho The approach is hazardous as vessel has to pass through hurric barrier (width 150 ft.) and swing bridge (width 94 ft.).
Max. Size: LOA. 600 ft. Beam 85 ft. Draft 25 ft. Underkeel clearan 5 ft. required in channel. Mean tidal range 3 ft.
Radio: Chatham Radio.
Tugs: 3 tugs available (2,000 h.p.). 2 tugs are normally sufficien berthing/unberthing.
VHF: Pilot on VHF Channel 16.

Berthing: Maritime Terminal Wharf: Distance from "BB" Buoy to Berth is 9 miles. U.S. and U.K. Pilot Books indicate 30 ft. to 31 ft. at berth. Least depth in Channel from sea to berth 30 ft. Nature of bottom at berth – very soft mud. Density 1025. Good security. Palletised cargo and 20 ft. and 40 ft. containers handled. Ample storage space for containers.

Services: Fresh water, fresh provisions, limited repair facilities, Lloyd's Surveyors (at Boston), Salvage Surveyor (New York), laundry service, (Boston). Bunker fuel oil, diesel oil, lubricating oil, doctor, hospital, groceries and meats (Boston).

AUTHORITY: City of New Bedford, Harbor Development Commission, Wharfinger Building, Fisherman's Wharf, New Bedford, Massachusetts 02740. *Tel:* (508) 993-1770. *FAX:* (508) 991-6181. *Contact:* Martin Manley, Director.

NEW HAVEN, Connecticut: 41.14 N. 72.55 W.

(See Plan)

DOCUMENTS: Refer to "New York".

APPROACHES: *From New York:*

Charts: 12339, 12366, 12367, 12363, 12354, 12371.

Vessels leaving New York bound for New Haven will be transiting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transiting this area.

There are numerous dangers to be wary of when making the passage from New York to New Haven. In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell Gate at HWS only. Sluggish handling vessels should arrange for towboat assistance up the East River and through Hell Gate.
2. 26 ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.
4. Stratford Shoals deep draft vessels pass at least 1 mile off the South of the shoal then alter course to New Haven Sea Buoy.

From Block Island:

Charts: 13205, 13215, 13209, 12354, 12371.

On approaching Block Island from the Southerly direction, Block Island's Southern shore is mainly high rock cliffs, and a good radar target is obtained along with bearings taken from the RDF station at Southeast Light.

Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to the East due to the numerous shoals found on the Western side of the island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to New Haven. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock, with a least depth of 19 ft., nearly in the middle of the Race, is surrounded by shoal area. A lighted bell buoy is Northward of the rock.
3. Great caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound due to the heavy small boat traffic, especially in the area in proximity to The Race.
4. Fog is prevalent during the Summer months and is heavy. Good judgement should be used before transiting the area during fog.

Good water is found in Long Island Sound from The Race to New Haven as long as the Mid-Channel Buoys "P1" and "CF" are passed close to and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" lighted bell buoy. When a vessel is within 4 or 5 miles of New Haven, the depth of the water is reduced, so caution is again needed. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used to ascertain positions. Also fathometer readings will be helpful.

PILOTAGE: Compulsory. State Pilots are available on a 24 hour basis and are usually arranged through the ship's Agent or directly by shipping companies. Pilot will board vessel in vicinity of New Haven Sea Buoy, marked "N.H." – short and long flash; black and white vertical stripes. Boarding will be from a 44 ft. steel launch named *New Haven Pilot* – blue hull with "Pilot" marked on both sides in white letters, or from a tug-boat. Contact can be made via VHF telephone, Channel 13 (156.65 MHz), Channel 16 (156.80 MHz), or Channel 19A (156.95 MHz).

Pilotage Association Report: The New Haven – Bridgeport Pilots maintain a tide gauge, from where they depart to meet vessels. The normal tidal range is 6 ft. They believe that 4 ft. of water in excess of the ship's deep draft is necessary for a safe transit. A rule of thumb, used by them, is 31 ft. on LW, and 37 ft. on HW. (For any variation of this, a Pilot should be consulted.) A normal transit time from the entrance buoy to any of the berths in the inner harbour is 45 minutes to 1 hour. Docking time of 30 minutes to 1 hour should be added to this average, dependent on where the ship is berthing, as well as possible weather conditions.

There was a maintenance dredging of New Haven Harbour, completed in 1983. The after-dredging survey submitted to them by the U.S. Army Corps of Engineers shows a controlling depth, with rock bottom of 35 ft. at MLW. This rock is located at South West Ledge Light at a point where a 35° turn is executed by the ship.

Prevailing winds are Westerly, and have a decided effect on the rise of tide. The tide gauge is the determining factor as to the time of entry when wind conditions do exist.

Advice from State of Connecticut, Department of Transportation:

Pilotage is compulsory for vessels transitting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours on Long Island Sound. Vessels bound for New Haven via Block Island/Long Island Sound usually board a Pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W.; 2 miles South of the Point Judith R "2" whistle buoy), or the Montauk Pilot Station (41° 02′ N., 71° 42′ W.; 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound Pilots also serve as Pilots for New Haven. If a local harbour Pilot is to be boarded, he will usually board vessel in vicinity of New Haven Sea Buoy, marked "N H" – short and long flash; red and white vertical stripes.

ANCHORAGES: Vessels awaiting berth, and or tides, will find good anchorage up to 40 ft. draft within 1 mile S. – S.E. of the "N.H." Buoy.

RESTRICTIONS: Vessels can proceed to and from berths in New Haven Harbour at any hour during the day or night, weather and tide permitting. Entrance channel dredged to 35 ft. MLW and width 400 ft.

MAX. SIZE: Draft up to 38 ft. subject weather and tides. Vessels of 50,000 d.w.t. with part cargo, do call occasionally, but should consult with the Pilot and terminal concerned.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports", before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Vessels arriving from North use Chatham Radio. Vessels from South use Amagansett Radio on Long Island.

Bridgeport Marine Operator on VHF Channels 24 and 27.

TUGS: Gateway Towing operates tugs based in New Haven and serves Long Island Sound ports. The office is on VHF Channel 13, 24 hours a day. The 24 hour telephone number is (203) 469-7288. The 2 tugs stationed in New Haven have 2,400 h.p. with twin screws. There are two other New York based tug companies serving this area, Spentonbush Red Star Co., Tel: (800) 223-5470, and Reinauer Transportation, Tel: (800) 782-8847.

BERTHING:

Wyatt Inc.: Ships are not docked on the West side at ebb tide, though ships in ballast can sail whenever ready, regardless of flood or ebb tide. The East berth docking is done on flood or ebb, with draft to be considered. In the Spring of 1983, this terminal was dredged to 37 ft. on the West side, and 32 ft. on the East side. Fresh water and bunkers are available, with steam on the East side available through a 2 in. line, with 125 lb. pressure.

Ships of 715 ft. are regularly docked here. Vessels are docked port side to on the West side, and would be delayed if the East berth is occupied by a ship.

Gulf Terminal: The Gulf Dock is located parallel to the channel on the East side of the inner harbour, and ships of 35,000 d.w.t. with draft of 35 ft. and LOA of 675 ft. are considered to be maximum size. (350 ft. from bow to manifold.)

The dock parallels the channel and consists of 2 main caissons, a centre platform and dolphins connected by a catwalk. Ships consigned for Gateway Terminal use this facility.

Gateway Terminal: Gateway Terminal is an independent deep-water marine terminal owner and operator, handling various types of dry and liquid bulk cargoes. It features its own petroleum transfer and oil storage tank farm (4 tanks), with an aggregate capacity of approximately 500,000 barrels. The fuel transfer facility is connected to the Buckeye-Jet line Pipeline System servicing central Massachusetts, and has a working arrangement with Gulf Oil to utilise a number of their immediately adjacent facility components, including their T – dock.

Gateway Terminal has a newly constructed concrete pier, 750 ft. length by 60 ft. width, which is at a 90° angle to the main channel. The pier provides up to 3 berths and can accommodate on the South side 40,000 d.w.t. tankers and dry cargo vessels up to 68,000 d.w.t., 750 ft. LOA, 106 ft. beam and 36 ft. draft at MLW. Smaller vessels and barges with up to 30 ft. draft at MLW use the North side. Also available are 3×9,000 ton elevators for cement storage. The pier provides a timber/rubber cushion 50 ft. on centre fendering system. Two high speed gantry cranes with capacity 40 tons are on the pier and additional mobile cranes with capacity 25 tons are available. Advanced truck loading and weigh stations are immediately adjacent to the pier. Ships can berth port or starboard side to.

Bunkers, petroleum products and fresh water are available at all times.

New Haven Terminal, Inc.: This facility has 3 ship berths on a 90° heading from the channel, dredged in 1983. The Scrap Dock, as it is called, is a continuous pier, with a wearing strip cushioned by a rubber backing. The pier is 650 ft. long, with 35 ft. at MLW. Scrap is loaded from here and all types of dry cargo handled. Two gantry cranes are on the dock and additional mobile cranes are available. Railroad cars can be brought on to the dock. Ships berth port side to.

The Finger Pier on the North side is a continuous pier, 650 ft. long, and is mainly used as a tanker berth. Bow to manifold is 350 ft. (additional hoses can be added to increase this distance.) The slip is 196 ft. in width, and 2 ships may be accommodated at the same time, as long as 30 ft. is allowed for a tug boat between the ships. Depth 35 ft. at MLW.

The South side is a tanker or general cargo berth, with 38 ft. at MLW. Bow to manifold is 350 ft. and additional hoses may be used. Ships of 700 ft. may be secured at all 3 of these berths.

Bunkers can be trucked in, and fresh water is available at all berths. New Haven Terminal Inc., 100 Waterfront Street, New Haven. Tel: (203) 469-1391. Telex: 710-465-2994. Fax: (203) 469-1318.

Exxon Terminal: Exxon Dock parallels the main channel. The dock is 750 ft. long with 2 main caissons, dolphins, and platform connected by a catwalk.

Ships of 50,000 d.w.t. call at this dock, with a draft of 36 ft., docking on the rising tide. Ships are docked starboard side to. Bunkers are not available, though fresh water is.

MEDICAL: All facilities available.

TANKERS: See "Berthing".

BALLAST: There are no slop lines available.

FRESH WATER: Available at all terminals.

FUEL: Available from oil terminals or delivered by barge.

CONSULS: All countries represented in New York.

CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wine/ spirits per man. Additional allowances may be given if considered necessary, due length of vessel's stay in port.

AIRPORT: New Haven Airport 1 mile distant. New York International Airport 70 miles distant.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (1st January); Washington's Birthday (22nd February); Memorial Day (30th May); Independence Day (4th July); Labor Day (first Monday in September); Columbus Day (12th October); Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).

SERVICES: Professional Sea Services (monitor Channels 16 and 19A) of New Haven offers launch service to ships at anchor, movement of stores, and skin divers. Tel: (203) 932-2159.

Sea Support, 500 Waterfront Street, New Haven, CT. 06512. (P.O.Box 9166, New Haven, CT. 06532). Tel: (203) 467-1590 (24 hours). Fax: (203) 468-2670. Telex: 413474 Conn Marine. Contact: Ralph Gogliettino. Services: Boom deployment, oil containment and recovery, air, sea and shore terminal services.

GARBAGE DISPOSAL: Agent must make arrangements with Department of Agriculture.

Charges: U.S.$ 250.00 per container; haulage U.S.$ 10..00 per container; disposal U.S.$ 80.00 per net ton.

WASTE OIL DISPOSAL: Service available and must be arranged through ship's Agent.

See "Services".

SEAMAN'S CLUBS: None.

GENERAL: Through a co-operative agreement, all the terminals have a slick boom, skimmers and absorbent available at all times.

There are no slop tanks available in this port for pumping ballast.

None of the terminals supply gangways; ships must use their own.

AUTHORITY: U.S. Coast Guard, Captain of the Port, Long Island Sound.

Contact: Captain D. V. Monks, New Haven-Bridgeport Pilots' Association, 45 Alison Avenue, Wallingford, Connecticut 06492. *Tel:* (203) 878-8667, (203) 265-3673 (Residence).

NEW LONDON (Including Groton), Connecticut: 41.21 N. 72.06 W. (See Plan)

DOCUMENTS: Refer to "New York".

PILOTAGE: Pilotage is compulsory for vessels transiting the waters of Long Island Sound via Block Island Sound bound to or from ports and harbours on Long Island Sound. Vessels bound for New London harbour via Block Island/Long Island Sound usually board a pilot at either the Point Judith Pilot Station (41° 17.2′ N., 71° 28.5′ W., 2 miles South of the Point Judith R "2" whistle buoy,) or the Montauk Pilot Station (41° 02′ N., 71° 42′ W., 3 miles due East of Montauk whistle buoy Mo (A) "MP"). Some Block Island/Long Island Sound pilots also serve as pilots for New London. If a local harbour pilot is to be boarded, he will usually board the vessel at General Anchorage "E" or if under way inbound, approximately one mile South of New London entrance buoys "1" and "2". Vessel's agent will arrange pilotage and advise vessel of pilot boarding area.

ANCHORAGES: General Anchorage "E": In the waters off the mouth of New London Harbour, approximately 1.5 miles S.S.E. of New London Ledge Light (See "Plan").

RESTRICTIONS: Vessels can proceed to or from berths in New London or Groton at any hour during the day or night, weather and tide permitting. Transits of the Thames River to or from Dow Chemical's Terminal at Allyn Point are limited to daylight hours.

The U.S. Navy has dredged New London Harbour to provide a main ship channel with depths of 36 ft. and 40 ft. at MLW, 500 ft. wide from Long Island Sound to the Route I-95 bridge.

MAX. SIZE: Dry cargo vessels of approximately 600 ft. – 650 ft. and tankers of approximately 800 ft. have been using the harbour.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Vessels arriving from North use Chatham Radio on Cape Cod. Vessels from South use Amagansett Radio on Long Island. However, either one may serve the purpose.

VHF: New London Marine Operator monitors VHF Channels 25, 26 and 86.

TUGS: Usually join vessel at Ledge Light if a dry cargo vessel and near entrance buoys "1" and "2" if a tanker. Tugs use their own lines. Three tugs of about 1,000 h.p. – 3,000 h.p. are usually available with advance notice. Tel. (203) 443-9433.

BERTHING: Advance ETA must be made for berthing.

State Pier No. 1: Depth-pending completion of hydrographic su pilot and terminal should be consulted (Vessel's draft normally no exceed 31 ft. – 32 ft.).

Long Wharf: Consult Pilot and Terminal Operator regarding d limitation/availability of Long Wharf for berthing.

Dow Chemical Co. Wharf: Depth 22 ft. MLW (docking on rising ti daylight docking and undocking.

Hess Groton: Depth 36 ft. MLW.

City Pier (South side): Depth approximately 18 ft. MLW (not used a cargo terminal). Contact New London Marine Commerce a Development Office. Tel: (203) 443-8331.

BRIDGES: There are no bridges across Main Ship Channel. Howev at New London, at the head of the Main Harbour, the Thames River crossed by 1 drawbridge and a twin fixed bridge: the Amtrak Railro bascule bridge with a horizontal clearance of 151.5 ft. and a vertic clearance of 30.9 ft. at high water and a fixed highway bridge with vertical clearance of 135 ft. for a middle width of 200 ft.

STEVEDORES: Gangs must be requested on weekdays no later th 1630 hrs. preceding the scheduled work day.

MEDICAL: All facilities available.

TANKERS: Amerada Hess Oil Dock: Max. draft 36 ft. (Lines 10 in. a 12 in.).

Pfizer Wharf: Barge berth, currently not handling tankers.

Report: Port Approaches – Cautionary Advice: When approaching Blo Island from the South or East, prior to picking up the Pilot, all marine should be aware of the precautionary zone to the S.E. of Block Islan Usually ships bound for Point Judith Pilot Station will make for 1 m East of Block Island S.E. lighted whistle buoy then, traffic permittin head due North, to pick up the Pilot. All traffic in this area should monitoring VHF Channels 13 and 16. Principal navigational aids us in making landfall are RDF stations at Montauk Point, S.E. Point, Po Judith, Brenton Reef Light and Buzzards Bay Light Tower. The hig bluffs on the South side of Block Island also provide excellent rad targets for position fixing. Ships bound for Point Judith Pilot Station a advised to approach the pilot station from the East side of Block Isla due to the shoals found on the island's Western side. Ships bound t the Montauk or Point Judith Pilot Station should be cautioned agai proceeding past the pilot boarding area without a pilot on board. Vess agents arranging boarding at Montauk Pilot Station should consult pil regarding draft restrictions for vessels transitting the Montauk-Blo Island Channel, S.W. of Block Island. Among the dangerous shoals that area is Southwest Ledge, marked by a lighted buoy. There a numerous dangers to be wary of when making the passage from t pilot station to Groton. In order of approach they are:

Block Island North Reef Buoy "1BI" marking a dangerous shoal whi should be given a wide berth.

"The Race" which is a narrow channel leading into Long Island Sou Strong Easterly and Westerly currents exist during maximum flood a ebb tides (flood set to the West) and an accurate position should maintained at all times so that any unusual set may be observed.

It should also be noted that sport fishing boats frequent the area great numbers practically all year round. Tugs with large barges on lo hawsers can also be expected. Valiant Rock, with a least depth of 19 nearly in the middle of The Race is surrounded by shoal area. A ligh bell buoy is northward of the rock. Security broadcasts should be ma on VHF Channels 16 and 13 when approaching the area and passi situations discussed before entering "The Race".

Cautionary Advice: Extreme caution should be exercised during t Summer months when transiting through Block and Long Island Soun due to heavy small boat traffic, especially in the area around "The Rac

Submarine operating areas are in the approaches to New Lond Harbour and off the Northern end of Long Island. Submarines may operating either surfaced or submerged in these areas.

Fog is prevalent during the Summer months and can be very dens Prudent judgement should be used before transitting the area dur fog because of the aforementioned hazards.

Berthing: (Hess Oil – Groton): The harbour provides excellent room manoeuvring. Currents of up to 0.5 knots exist but set fair with t channel. The tidal range averages 2.6 ft. with a spring range of 3.1 Vessels approach the berth at a small angle. Usually vessels do starboard side to. Once alongside the platform, the bow will be secur first, followed by the stern. The Platform is well protected by rubb fenders. Lines are run to offshore piles and a mooring buoy by a sm boat. 12 mooring lines are used under normal weather conditions. (S "Plan").

FRESH WATER: Available at pier side through 2.5 in. and 1.5 in. hos

FUEL: Bunker or marine diesel not normally available (arrangeme are possible, if ship's Agent is given sufficient advance notice).

CONSULS: Nearest at New York.

REPAIRS/DRY DOCKS: Drydocks of sufficient size/capacity to han cargo ships currently unavailable to the public. Towing and minor repa are available through Thames Shipyard, Inc. in New Lond Tel: (203) 442-5349.

GANGWAY/DECK WATCHMEN: Not required and not recommend

OPENING/CLOSING HATCHES: May be performed by stevedores ship's personnel.

REPATRIATION: Facilities exist.

AIRPORT: Nearest airport is Groton - New London Airport, situated the Southeast part of Town of Groton, Connecticut. USAir prov scheduled commercial service to this field.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Sav Time, GMT minus 4 hours, from first Sunday in April till last Sunda October.

HOLIDAYS: Eleven holidays may affect stevedore services at S Pier. With the exception of Labor Day, cargo work can be arranged holidays. The Terminal Operator should be contacted at Tel: (203) 4 3939 for information concerning observed holidays.

POLICE/AMBULANCE/FIRE: Dial 911.

TELEPHONES: Available if required.

GARBAGE DISPOSAL: For specific information regarding garbage disposal contractors, the State Pier Terminal Operator should be consulted at Tel: (203) 442-3939. Necessary arrangements might also be made through the vessel's Agent.

WASTE OIL DISPOSAL: Upon request, information concerning Waste Oil Contractors will be available through the Terminal Operators, vessel's Agent or the Office of Waterways, located at State Pier. Tel: (203) 443-3856.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar.

AUTHORITY: State of Connecticut, Dept. of Transportation, Bureau of Aviation and Ports (Office of Waterways), State Pier, New London, Connecticut 06320, U.S.A. *Tel:* (203) 443-3856. *FAX:* (203) 437-7251. *Contact:* D. Douglas Brown, Director of Port Operations.

NEW ORLEANS, Louisiana: 29.56 N. 90.04 W.

(See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
2 copies previous Tax Certificates (Form 1002).
2 copies Certificate of Financial Responsibility.
2 copies General Declaration (Form 1301).
2 copies Vessel Repairs (Form 226) (Required only for American Flag vessels arriving from foreign ports).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

Master's Oath (Customs Form 1300).
All foreign clearances.
Certified Crew List.

The Bureau of Customs at New Orleans, Louisiana, will not, regardless of the circumstances, accept Customs Entry Papers from vessels unless they are on the proper U.S. Customs Forms and properly prepared.

Specially referred to are Customs Forms 1303 (Ship's Stores Declaration), 1304 (Crew Effects Declaration) and 1302 (Inward Foreign Manifest).

U.S. Customs at New Orleans require that the 1303 be completed, that is all stores (deck, engine, etc.) be listed on the form; it must also include firearms and medicines. They will not accept "as per attached list".

Form 1304, Crew Effects List, must likewise be properly completed. All effects and curios will have to be listed on the form. The term "souvenirs" is not sufficient and may not be used. All values have to be listed. Attachments to the 1304 are not permitted. (This does not apply to American Flag vessels using the Form I-418 Crew List with Crew Declaration numbers listed for their souvenir list.)

Also see "Berthing – Ama (Shipmaster's Report) – General" regarding Customs' areas of jurisdiction.

APPROACHES: *Operator's Report:* 1984 (Corrected to 1988 conditions).

The coastline of the Mississippi River delta is low lying and generally swampy, having no easily distinguished geographic characteristics. The oil rigs and drilling platforms off Southwest Pass are usually sighted well before any navigational aids or landmarks. The first navigational aid to be seen is normally the Southwest Pass Entrance Light near the end of the East Jetty, a red tower on a white dwelling, 85 ft. above the water. The Entrance Light is also equipped with a Racon displaying Morse K (-·-) and Radio Beacon "OT" (307 kHz). The East End Jetty is also a conspicuous navigational aid consisting of a red triangular daymark on a red skeleton tower, 50 ft. above the water.

The sea buoy ("SW") is a red/white light (Morse (A)) buoy located approximately 1.6 miles South of the jetties and may be difficult to distinguish at long range due to the numerous oil wells and other lights in the vicinity.

Entry and transit should not be attempted during dense fog or any other unfavourable conditions.

River Transit: *General:* The Army Corps of Engineers has the responsibility for maintaining a project depth of 45 ft. in the entrance to and along the navigable channel in the Mississippi River up to Mile 150 AHP and 40 ft. from Mile 150 AHP to Baton Rouge. However, even with regular dredging, there will be occasions when the project depth cannot be maintained, resulting in a reduction of the transit draft. A decrease in water depth is most likely to occur when:

(a) the river stage is at its highest usually between January and June, and
(b) the river current velocity decreases causing siltation primarily after major Winter and Spring run-offs of rain and melted snow.

The influence of the above factors on water depth cannot be accurately predicted, neither for the day nor the location in the river. While this is not of concern for many miles of the river where deep water is always available, it is of particular concern within the 9 crossings between New Orleans and Baton Rouge.

Within these crossings it is, therefore, necessary for the Corps of Engineers to take frequent soundings not only to keep track of where the least water depth is, but also to determine the priority crossing for dredging.

Soundings taken for this purpose are very comprehensive, i.e., lines of soundings within each crossing are along the centre line ranges as well as along parallel lines 125 ft. to 250 ft. on either side of the centre line; soundings are recorded on these lines at about 150 ft. intervals. The maximum allowable transit drafts within the river are determined by the available water depth in the deepest 250 ft. wide channel in the 500 ft. wide crossings. As a result, Pilots in selecting such a navigable route may not always proceed on the centre line ranges of a crossing. The maximum draft will never exceed 45 ft. to Mile 150 AHP and 40 ft. from Mile 150 AHP to Baton Rouge.

Currents in the river vary according to the stage of the river (currents due to tides are a negligible factor) being of greater strength and velocity during high river flood stages and of lesser velocity during low river stages. High river stages normally occur in April and the low stages in October. Vessels transiting the river during flood stages should take precautions to avoid wash damage to the banks.

Extra caution is required in navigating the river in the vicinity of Algiers Point, particularly when the river is high. When the Carollton Gauge reaches 10 ft. on a falling stage, all vessels in the vicinity of Algiers Point shall be governed by the Governor Nichols and Gretna traffic lights. Furthermore, low powered vessels should not navigate the area unless they can clear Algiers Point during daylight.

When transiting the river it should be noted that the VTS is not in operation. Thus, the mariner may be confronted at any time with unreported hazards. It is important, therefore, that all Pilot rules and other applicable rules and regulations be strictly adhered to.

Six bridges cross the Mississippi River between Head of the Passes and Baton Rouge, with the following clerances:

Mile (AHP)	*Bridge*	*Horizontal Clearance* (ft.)	*Vertical Clearance* (ft.)	*Span*
94.0	Hale Boggs	1,400	170.0	A
95.7	Greater New Orleans	1,400	170.0	A
106.1	Huey P. Long	725	153.0	A
121.7	Luling & Destrehan	1,200	154.9	A
167.4	Sunshine	750	168.0	B
229.3	Baton Rouge I-10	500	172.5	A

Note: The vertical distance is measured at zero elevation of the river at the nearest gauge on the river. For example: the Baton Rouge I-10 bridge shows a clearance of 172.5 ft. at zero on the gauge. When the gauge shows 10 ft., the clearance is 172.5 ft. − 10 ft. = 162.5 ft.

Ferries transport passengers and cars across the river at Pointe a la Hache, Belle Chase, Chalmette, New Orleans, Gretna, Destrehan, Reserve, Lutcher, Donaldsonville, White Castle and Plaquemine.

When fog is predicted for the lower Mississippi River and/or Gulf, outbound vessels above New Orleans should anchor around Norco or above. Vessels below New Orleans should anchor well above Pilottown unless the weather can be expected to remain clear up to the entrance of the pass.

Draft/Speed Relationship: It is important to take account of the effect of "squat" when navigating within the crossings of the Mississippi River. For your guidance, the increase of draft due to "squat effect" is approximately 1 ft. for each 5 knots of speed.

River Crossings: The 9 crossings are critical areas, therefore, it is desirable to obtain either from the Pilot or local Agent the most recent information on locations where soundings indicate water depth less that the project depth 40 ft. or 45 ft. You should discuss with the Pilot what the intended track within a crossing should be in order to remain within the deepest water. In order to further reduce the risk of bottom touching, a reduction in speed is considered necessary in these circumstances. Reduction of speed should be discussed with the Pilot to ensure that the effect of "squat" is compensated for while in a crossing. Since it is important to ensure the desired ship response to rudder movements while in a crossing, speed reduction has to be carried out before entering a crossing.

The manoeuvres required at the crossings are rather unique. In most cases the channel is not parallel to the river current, and the Pilot will, therefore, utilise the set of the current to negotiate the crossing. Speed has to be sufficient to compensate for the effect of the current, while at the same time maintaining a balance with increased draft due to "squat". Full sea speed is to be avoided.

When entering or leaving a crossing, the Pilot may manoeuvre close to the bank and on occasions take advantage of bank rejection to aid the manoeuvre.

Experienced helmsmen are required during the entire river transit between New Orleans and Baton Rouge.

River Traffic: Surging caused by passing channel traffic is a common problem. To avoid damage to Chicksan/hose connections and the parting of wires or lines, special attention should at all times be given to the condition and tautness of moorings. It is recommended that one or several qualified crew members be assigned exclusively to the tending of mooring lines and winches.

PILOTAGE: Advise Agents ETA at sea buoy 48 hours in advance. Agent will arrange for Pilot. Pilot boat 46 ft. long, red hull, white cabin, flying blue and white Pilot flag. Pilot boards at sea buoy, requires Pilot ladder 6 ft. above water level, and in compliance with Chapter V, Regulation 17 of the International Convention for the Safety of Life at Sea, 1974. Pilot boats can be contacted by VHF, Channel 9 or 16 when 30 to 40 miles off. Bar Pilot is exchanged for River Pilot at Pilottown, Head of Passes.

Following Advice Received from Crescent River Port Pilots' Association:

Cable: Crespilots, New Orleans.

Vessels bound to any destination on the Mississippi River and Mississippi River Gulf Outlet (MRGO) are requested to supply the following information via Coastal Radio Telegraph addressed to Crespilots, New Orleans:

(1) ETA – 24 hours before expected arrival at pilot station (Sea Buoys), and any change of ETA in excess of 6 hours.

(2) Indicate if vessel is arriving Mississippi River or Mississippi River Gulf Outlet.

(3) Deepest fresh water draft and speed of vessel.

(4) Please contact pilot station at entrances via VHF Radio Phone on Channel 16 (156.80 MHz), Channel 9 (156.45 MHz), or, Channel 13 (156.65 MHz) at least 2 hours prior to arrival for boarding instructions. (This is normally done by the Bar Pilot).

Your co-operation will greatly assist in expediting the dispatching of Pilots and avoid costly delays to your vessels.

ANCHORAGES: Safe anchorage within 2 miles of South Pass or S.W. Pass entrance. Vessels may anchor at the Point below New Orleans. depending on ship size, weather, etc., tug assistance may be required.

MISSISSIPPI RIVER DESIGNATED PERMANENT ANCHORAGES:

Pilottown Anchorage: An area extending from Mile 1.5 to Mile 6.7 AHP along the right descending bank and having a width of 1,600 ft. at its upper and lower limits.

Boothville Anchorage: An area extending from Mile 12.2 to Mile 18.5 AHP along the right descending bank and having a width of 1,000 ft. at its upper and lower limits.

Ostrica Anchorage: An area extending from Mile 23.5 to Mile 24.4 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Port Sulphur Anchorage: An area extending from Mile 37.5 to Mile 39.7 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Magnolia Anchorage: An area extending from Mile 45.5 to Mile 46.9 AHP on the right descending bank, having a width of 1,100 ft. measured from the Low Water Reference Plane from Mile 45.5 to 46.3, and 600 ft. measured from 500 ft. riverward of the Low Water Reference Plane from Mile 46.3 to 46.9.

Davant Anchorage: An area extending from Mile 53.5 to Mile 54.5 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Alliance Anchorage: An area extending from Mile 63.6 to Mile 65.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Wills Point Anchorage: An area extending from Mile 66.5 to Mile 67.6 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Cedar Grove Anchorage: An area extending from Mile 69.9 to Mile 70.6 AHP on the right descending bank, 700 ft. wide with a Western limit 400 ft. from the Low Water Reference Plane on the right descending bank.

Belle Chase Anchorage: An area extending from Mile 73.1 to Mile 75.2 AHP along the left descending bank and having a width of 1,000 ft. at its upper and lower limits.

Lower 12 Mile Point Anchorage: An area extending from Mile 78.5 to Mile 80.8 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower 9 Mile Point Anchorage: An area extending from Mile 82.7 to Mile 85.0 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

New Orleans General Anchorage: An area extending from Mile 89.3 to Mile 90.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits. (See Appendix, paragraph 8).

Quarantine Anchorage: An area extending from Mile 90.9 to Mile 91.6 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits (See Appendix, paragraphs 6, 8 and 9).

Kenner Band Anchorage: An area extending from Mile 115.1 to Mile 115.6 AHP along the right descending bank and having a width of 700 ft. at its upper and lower limits.

Ama Anchorage: An area extending from Mile 115.7 to Mile 117.2 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Bonnet Carre Anchorage: An area extending from Mile 127.3 to Mile 128.8 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits. (See Appendix, paragraph 10).

La Place Anchorage: An area extending from Mile 134.7 to Mile 135 AHP along the left descending bank and having a width of 600 ft. at its upper and lower limits.

Reserve Anchorage: An area extending from Mile 137.0 to Mile 137.5 AHP along the right descending bank and having a width of 800 ft. at its upper and lower limits.

Lower Grandview Reach Anchorage: An area extending from Mile 146.5 to Mile 147.1 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Upper Grandview Reach Anchorage: An area extending from Mile 147.7 to Mile 148.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits.

Lower Sunshine Anchorage: An area extending from Mile 165.0 to Mile 165.9 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Upper Sunshine Anchorage: An area extending from Mile 166.3 to Mile 167.0 AHP along the left descending bank and having a width of 800 ft. at its upper and lower limits.

Baton Rouge General Anchorage: An area extending from Mile 225.8 to Mile 227.3 AHP along the right descending bank and having a width of 1,400 ft. at its upper and lower limits. Less than 27 ft. draft.

Lower Baton Rouge Anchorage: An area extending from Mile 228.5 to Mile 229.0 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Middle Baton Rouge Anchorage: An area extending from Mile 229.6 to Mile 229.8 AHP along the left descending bank and having a width of 700 ft. at its upper and lower limits. Light draft.

Upper Baton Rouge Anchorage: An area extending from Mile 230.6 to Mile 231.0 AHP along the left descending bank and having a width of 1,075 ft. at its upper limit and 1,200 ft. at its lower limit. Light draft.

Note 1: Loaded vessels are not allowed to use Middle and Upper Baton Rouge Anchorages.

Note 2: An explosives anchorage, approximately 1,000 ft. wide, is located on the West side of the river 1.4 miles upstream of Oak Point Light (63.0 miles AHP) and cannot be used by any vessel without previous approval from the Commander, Eighth Coast Guard District.

All anchorages have mud bottoms and are protected by the Missis River banks on each side. Vessel's position should be moni continuously for dragging while anchored. No specific distances required between anchored vessels. Caution is advised if require anchor off Baton Rouge Docks, due to proximity of submerged pipe crossing just South of docks.

The Coast Guard advises that during high water conditions, Mari should give anchored vessels a particularly wide berth. Fast currents may cause anchored vessels to swing in wide arcs. Under th conditions, it is important that the Mariner beware of anchor chains

APPENDIX:

Regulations Concerning Designated Anchorages have been extrac *from 33 CFR 110.195.*

(1) Anchoring is prohibited outside of established anchorages exc in cases of emergency. In an emergency, if it becomes necessary anchor a vessel outside an established anchorage, the vessel shal anchored so that it does not interfere with or endanger any facility other vessel. The Master or person-in-charge of the vessel shall no the Captain of the Port of the location of the emergency anchoring the most expeditious means and shall move the vessel as soon as emergency is over.

(2) In an emergency, if it becomes necessary to anchor a vesse Southwest Pass, the vessel shall be positioned as close to the descending bank as possible.

(3) No vessel may be anchored unless it maintains a bridge wat guard and answer VHF Channel 16, maintains an accurate position and can take appropriate action to ensure the safety of the vess structure, and other vessels.

(4) When anchoring individually or in fleets, vessels shall be ancho with sufficient anchors or secured with sufficient lines, to ensure th remaining in place and withstanding the action of winds, currents a the suction of passing vessels.

(5) No vessels may be anchored over revetted banks of the river within any cable or pipeline area. The locations of revetted areas a cable and pipeline areas may be obtained from the District Engine Corps of Engineers, New Orleans.

(6) The intentions to transfer any cargo while in an anchorage shall reported to the Captain of the Port, giving particulars as to name of sh involved, quantity and type of cargo, and expected duration of operation. The Captain of the Port shall be notified upon completion operations. Cargo transfer operations are not permitted in the Ne Orleans General or Quarantine Anchorages. Bunkering and simi operations related to ship's stores are exempt from report requirements.

Note: Activities conducted within a designated anchorage (e.g. car transfer, tank cleaning, stack blowing, etc.), may be restricted other Federal, State or local Regulations. Owners, or persons charge of any vessel should consider all safety and environmental regulations prior to engaging in any activity wit designated anchorges.

(7) Nothing in this section relieves the owner or person-in-charge of a vessel from the penalties for obstructing or interfering with navigation navigational aids or for failing to comply with the navigation laws lights, day shapes, or fog signals and any other applicable laws a regulations.

(8) Vessels carrying cargoes of particular hazard as defined in 33 CF 126.10 or cargoes of petroleum products in bulk may not be ancho in the New Orleans General Anchorage or Quarantine Anchora without permission from the Captain of the Port.

(9) Except when required by the United States Public Health Serv for quarantine inspection, the Quarantine Anchorage may be used as general anchorage.

(10) When the Bonnet Carre Spillway is open, no vessel may anchored in the Bonnet Carre Anchorage.

RESTRICTIONS: Draft governed by Southwest Pass, project dep 45 ft. Entrance day and night. New Orleans is 115 miles upriver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illne Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, and join vessel off berth if required. One tug norma used for berthing/unberthing at New Orleans.

BERTHING: *Public Grain Elevator:* No. 2 Berth, 670 ft. long, 40 ft. dep No. 3 Berth, 650 ft. long, 40 ft. depth; No. 4 Berth, 635 ft. lon 40 ft. depth.

Loading Rates 20,000 bushels per hour per belt, in Berths No. 2 a 3; up to 40,000 bushels per hour per belt, in Berth No. 4. Each be has 2 loading belts.

Southern Scrap Material Co.: Berth 550 ft. long, 32 ft. depth. Load 200 t.p.h. with cranes.

Kaiser: Chalmette Wharf: Aluminium discharge facilities, max. d 38 ft.

Westwego: Continental Grain Elevator: 2 Berths, 600 ft. long and 50 long, 40 ft. depth; loading 2 booms upstream, 3 "Buhler" arms a 1 boom downstream. Loading rate 2,000 t.p.h. – 3,000 t.p.h.

Louisiana Dock: 28 ft. alongside, bulk oil products loaded 200 t.p

Pacific Molasses Co.: Berth 35 ft. alongside.

Ama: Shipmaster's Report: February 1985 (Corrected to 19 conditions).

Berth: ADM – Growmark.

Location: Lat. 29° 56.4′ N.,Long. 90° 18.5′ W. On the S.W. bank of Mississippi about 122 miles from the Southwest Pass (New Orle Customs Zone).

Health/Agriculture: See "U.S.A. – General" before first Port.

Tugs: Tugs normally used.

Berth: Length of berthing face about 550 ft.

Port side to, head up. Head, stern, breast lines to dolphins. Spr to wharf or dolphins according to size (Moorings: 4 head lines, 2 bre lines, 2 forward backsprings, 2 after backsprings, 2 breast lines a 3 stern lines). Strong current along berth. River traffic passes close

Substantial moorings required, with regular adjustment. Poop gangways generally do not reach wharf. A contractor's gangway normally on wharf but is charged for delivery, collection in addition to rental. Access road very narrow, no vehicles allowed on wharf. Road deliveries must be collected manually from levee 300 yards away. Otherwise delivery by boat from Fairview Wharf. All provisions, laundry, etc., from New Orleans. Public telephones on wharf.

Loading: Loading rate about 1,500 t.p.h. – 2,000 t.p.h. Using 4 "Buhler" arms simultaneously. Sometimes there is a delay in back weighing cargo for preparation of documents.

Fresh Water: Available from wharf via 2 in. line, at a low rate.

Fuel: By barge at anchorage only.

Density: 1000.

General: Now only one Customs Zone for entry and departure. Three copies of following documents required – Crew Manifest, Stores List, Crew List, and one Visaed Crew List.

It is a common practice for ships to anchor below New Orleans for clearance by Customs, N.C.B. and U.S.D.A. before going on towards a bulk or grain loading terminal. Bunkers are generally taken during this period as the grain elevators normally refuse permission to do this alongside.

Also see "South Louisiana".

CONTAINER HANDLING FACILITIES: Handled at most docks. Full container facilities at France Road Berth No. 1 with 830 ft. leased to Sea-Land. Napoleon Avenue wharf 1,520 ft. Nashville/Henry Clay wharf 2,820 ft.

France Road Berth No. 4, wharf 700 ft. France Road Berth No. 5, wharf 900 ft. Berth No. 6, 800 ft. Berth No. 4 leased to Navieras de Puerto Rico and Berths No. 5 and 6 leased to New Orleans Marine Contractors, Inc.

France Road Berth No. 6, with Ro/Ro pier.

BRIDGES: 6 bridges. 3 bridges cross river at New Orleans, 1 at Baton Rouge, 1 at Destrehan and 1 at Donaldsonville. Sufficient clearance at all times.

STEVEDORES: Working hours 0800 – 1200 and 1300 – 1700, Monday to Friday.

MEDICAL: All facilities available.

TANKERS:

Chalmette: Humble Oil Terminal: Tanker berth 30 ft. depth; Tenneco Oil Terminal: Tanker berth 35 ft. depth.

Amesville: Texaco Tanker Loading Berth, 34 ft. alongside. 2×8 in. hoses loading up to 12,000 bbls.p.h. No ballast facilities.

Avondale: American Liberty Tank Terminals Berth, 60 ft. alongside. 4×6 in. hoses loading up to 18,000 bbls.p.h. No ballast facilities. International Tank Terminals Berth, 45 ft. alongside. 12 in. hoses loading 150 t.p.h.

Gretna: Publicker Chemical Corp.: Berth 30 ft. alongside. Southern Pacific Company: Berth 600 ft. long, 35 ft. depth; dry cargo discharging only. Industrial Molasses Corp: Berth 27 ft. depth; 2×10 in. pipe-lines, loading 200 t.p.h.

Marrero: Hess Terminal Corp: Tanker berth 38 ft. depth; 6×12 in. hoses loading 500 t.p.h. Texaco: Tanker berth 35 ft. depth; 6×16 in. lines loading 250 t.p.h. No ballast facilities.

St. Rose: Cities Service: Tanker berth 35 ft. depth; International Tank Terminals: Berth 35 ft. depth; no fresh water available.

Operator's Report:

Pilottown: General: The Texaco Terminal is located on the East side of the river, 1.7 miles AHP and is a crude oil terminal consisting of a single berth. The dock, mooring dolphins and walkway are constucted of steel and concrete. The dock itself is a 'T' head dock 60 ft. in length; the total cluster of mooring dolphins, however, spans 1,000 ft.

Water at the berth is brackish with an approximate tidal range of 1 ft.

The berth is isolated and far from any commercial centre or district. Launch service to Venice, a small fishing village 8 miles upriver from Pilottown, may be available on request.

Cargo Handled and Shore Installations: Crude oil is loaded to vessels from an 820,000 bbls. capacity storage tank through a 22 in. shoreline leading into 3×8 in. hoses; maximum loading rate is 24,000 bbls.p.h. The hoses are supported by a steel boom at the top of the hose handling structure on the dock.

The berth is equipped with an emergency shutdown system located on the dock; the vessel is provided with a similar piece of equipment for emergency use.

Docking: The River Pilot berths the vessel. No tugs are required for docking or undocking; docking is strictly starboard side to.

Vessels should approach the dock stemming the current, dropping the port (offshore) anchor when off the dock. The anchor is then used to help manoeuvre the vessel alongside the dock. When undocking, the anchor is hove up as the vessel manoeuvres away from the dock.

Mooring bollards on the main dock structure are rated at 100 tons; mooring hooks on the dolphins are rated at 60 tons or more.

Gangway: The ship's gangway must be used and should be properly illuminated and rigged.

Bunkers and Fresh Water: No bunkers or fresh water are available at the dock.

Ballast/Slop Facilities: No ballast or slop facilities are available at Pilottown; vessels arriving with dirty ballast should plan for this.

Venice: General: Getty No. 1 Dock is a crude oil loading dock located on the West bank of the river approximately 11.8 miles AHP.

The 3 arms provided for loading cargo have a designed maximum rail to manifold distance of 12.5 ft. Vessels with a manifold inset greater than 12.5 ft. must use a 10 ft. long spool, provided by the dock, to connect the loading arms.

Cargo Handled and Shore Installations: Crude, the only cargo handled, is loaded through 3×12 in. Chicksan loading arms fitted with 8 in. manifold connections. Maximum loading rate is 40,000 bbls.p.h. The terminal requires that a minimum rate of 10,000 bbls.p.h. be maintained throughout the loading.

Emergency shutdown systems are located in the dock office and on the approach to the dock. The vessel is provided with a portable emergency stop.

Docking: Port side to docking is required and is normally performed by the River Pilot. No tugs are required for docking or undocking; the vessel's starboard anchor is usually used to control the vessel's movement during these manoeuvres. Approach should always be made with the vessel stemming the current.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Connecting Hoses: Chicksan arms are connected to the ship's manifold by ship's personnel.

Communications: A public telephone located at the terminal site, near the dock, is available for use by ship personnel.

Repairs: Only emergency repairs which do not involve hot work are allowed.

Bunkers and Fresh Water: No fuel or fresh water are available at this berth.

Ballast/Slop Facilities: A single 64,000 bbls. capacity tank is available for ballast storage/treatment. The maximum permissible discharge pressure is 150 p.s.i.

The terminal specifies that ballast shall not be loaded or discharged while handling bulk cargo and requests that vessels arrive with the minimum possible amount of ballast under the prevailing weather/river conditions.

Empire: General: The Chevron Terminal is a crude oil loading dock and is located at Mile 26.7 AHP on the East bank of the river. The dock consists of a 'T' head hose handling platform, 2 breasting dolphins and 5 mooring buoys (3 upsteam of the platform and 2 downstream). The dock is connected to shore by a 12 ft. wide pier capable of supporting 2-ton loads.

Cargo Handled and Shore Installations: Crude is loaded through 3×12 in. hoses attached to a loading arm assembly on the hose platform. The maximum delivery rate is 40,000 bbls.p.h.

An emergency shutdown system is located on the hose handling platform with a portable remote control unit aboard the ship.

Docking: Docking is generally performed by the River Pilot and only starboard side to dockings are allowed. No tugs are required for docking or undocking as the vessel uses its offshore anchor to manoeuvre alongside the dock.

Approaches should be made stemming the river current and the port anchor should be dropped when the vessel is above the dock to facilitate manoeuvring into position. The anchor is hove up as the vessel leaves the dock.

Repairs: Only emergency repairs which do not involve hot work are allowed.

Communications: A public telephone located on the hose handling platform is available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: No bunkers or fresh water are available at this dock.

Ballast/Slop Facilities: All dirty ballast and slops must be pumped to the shore ballast tank, (capacity 80,000 bbls.) connected to the hose platform by a 16 in. pipe-line. Ballast and cargo operations cannot be handled simultaneously.

Maximum discharge rate for ballast is 20,000 bbls.p.h. at a maximum rail pressure of 125 p.s.i.

Bellechase: General: The Gulf/Alliance dock is a multiple product berth located on the right descending bank of the river, approximately 65.6 miles AHP.

Transfer of cargo is made through a set of 10 in. hoses attached to a loading arm assembly on the dock. Shore lines vary in size from 8 in. for toluene and benzene to 20 in. for crude oils.

Tank washing while alongside the dock is strictly prohibited.

Cargo Handled and Shore Installations: Products commonly handled by the dock include xylene, LPG, crude, naphtha, carbon black, toluene, benzene, gasolines, jet fuel and heating oil.

Maximum allowable rail pressure for discharging vessels is 100 p.s.i.

An emergency loading stop is located on the dock; another, portable, unit is placed aboard the ship.

Docking: The River Pilot normally handles docking and undocking operations. Docking is port side to only and generally requires the aid of a 1,200 h.p. tug. Small tankers are occasionally allowed to dock without the aid of a tug, using their starboard anchor instead. However, since dock regulations prohibit the use of an anchor while alongside, it is recommended that a tug be used by all vessels calling at the berth.

Approach to the dock should be made stemming the current with a tug on the vessel's starboard bow. The vessel is then manoeuvred into position alongside the dock.

Repairs: Minor repairs, excluding hot work, may be undertaken with written consent from the dock's Chief Operator countersigned by the offsite Shift Supervisor.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available at Gulf/Alliance. Fresh water, however, is available and can be delivered at a maximum rate of 7 t.p.h.

Ballast/Slop Facilities: All slops and ballast must be discharged ashore. The shore storage tank has a 100,000 bbls. capacity; ships discharge ballast/slops into this tank through an 18 in. line at a maximum rate of 12,000 bbls.p.h.

Meraux: General: Murphy Oil Refinery is located on the North side of the Mississippi River, approximately 75 miles AHP. The tall stacks and cracking towers of the refinery are prominent features of the shoreline.

The berth serves as a primary receiving dock for crude oils which are refined into various petroleum products for transfer by ship and barge to other ports.

Cargoes Handled and Shore Installations: Crude is received at a maximum rate of 20,000 bbls.p.h. or a maximum 125 p.s.i. rail pressure. Refined products (gasolines, jet fuel, etc.) are loaded on to vessels at an average rate of 5,000 bbls.p.h. All cargo transfer is made through 8 in. hoses.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. All vessels are required to use a minimum of 1 tug for docking and undocking; more tugs may be used at the Master's discretion. Vessels approach the refinery dock stemming the current with a tug on the port bow. The tug assists vessels manoeuvring into position alongside.

Communications: A public telephone located at the head of the dock is available for use by ship's personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at this dock.

Chalmette: General: The Exxon dock is a small dock with 310 ft. of dock face consisting of a concrete deck on steel pilings. Mooring bollards on the dock and mooring dolphins are serviced by air driven capstans for hauling ship's mooring lines.

Cargo Handled and Shore Installations: Marine diesel and Bunker-C are handled at this dock. The dock is equipped with a loading arm assembly to which 3×8 in., hoses are attached for the transfer of cargo. Maximum allowable discharge pressure at the rail is 125 p.s.i.

An emergency loading stop control is located on the dock.

Docking: Docking and undocking are performed by the River Pilot and require the aid of an 800 h.p. tug. Vessels approach the dock stemming the current with a tug on the port bow and are then manoeuvred into position, starboard side to, alongside the dock.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, inter-fuel, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: There are no ballast or slop facilities available at the berth.

Harvey: General: The Commercial Solvents Wharf is located on the South side of the river near Harvey Canal; and consists of an 'L' shaped dock with 370 ft. of dock face and 6 mooring dolphins.

Cargo Handled and Shore Installations: Various clean speciality products are handled. The product most frequently handled is methanol. Cargo is transferred through a single 6 in. hose with a 6 in flanged connection at the vessel's manifold. Maximum rail pressure for vessel's discharging is 100 p.s.i., maximum loading rate is 2,500 bbls.p.h.

Docking: Docking is performed by the River Pilot and is strictly port side to. 2 tugs are required for docking operations and a single tug for undocking. The general mooring arrangement calls for 2 head lines, 2 stern lines, 1 breast line forward, 2 breast lines aft, 2 forward spring lines and 2 after spring lines for a total of 11 mooring lines.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: No fuel or fresh water are available at the dock.

Ballast/Slop Facilities: There are no ballast or slop facilities at the terminal.

St. Rose: General: The International Matex Tank Terminal berths are located on the North side of the river, approximately 103 miles AHP. The terminal consists of two individual tanker berths (No. 1 and No. 5) and a barge dock.

No. 1 Dock, upstream of No. 5 Dock, consists of a small 'T' head dock with 5 mooring buoys to accommodate head, stern and breast lines. No. 5 Dock has a longer dock face which can accommodate all but the head and stern lines. Both docks are connected to shore by catwalks.

The velocity of the river current at both berths varies between 1 knot and 4 knots, depending on river conditions.

Cargo Handled and Shore Installations: No. 1 Dock handles mainly the receipt of crude oils and the shipment of Bunker-C, No. 2 fuel and naphtha. The cargoes most frequently handled at No. 5 Dock are No. 6 fuel oil and No. 2 diesel oil.

No. 1 Dock is fitted with a set of 12 in. Chicksan arms. Cargo at No. 5 Dock is transferred through a maximum of 3×8 in. hoses. Maximum discharge pressures are 100 p.s.i. at No. 1 Dock and 90 p.s.i. at No. 5 Dock.

Docking: Docking is performed by the River Pilot and is strictly starboard side to at both berths. All vessels are required to use at least 5 tugs for docking and undocking; 3 tugs are required when the river is above 15 ft. on the St. Rose gauge.

The general mooring arrangement at No. 1 Dock call for 4 head lines, 2 breast and 2 spring lines forward, 2 spring lines aft and 2 stern/breast lines. The lead for stern lines is poor. Wires may be used on all bollards and hooks except those on the loading platform. The terminal prefers polypropylene lines to wires for docking at No. 5 Dock. This dock requires 2 head lines, 2 stern lines, and one breast and one spring line both forward and aft.

Communications: Public telephones located on each dock and at the shoreside end of each catwalk are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Fuel (Bunker-C, inter-fuel and diesel) and fresh water are available at each dock upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at either dock.

Marrero – Texaco: General: The Texaco Tanker Berth is located o South side of the river some 86.5 miles AHP. The berth consists 'T' head dock with pontoons and mooring buoys alongside formi 750 ft. berthing space.

Cargo Handled and Shore Installations: Various products are ship and received by barge; the only product handled by tanker is bo heavy fuel oil. This product is received through a single 10 in. hos a maximum pressure of 100 p.s.i. on the dock.

Docking: Docking is normally performed by the River Pilot an strictly port side to. Tugs are recommended, but are not compuls for docking and undocking operations.

Approach is made stemming the current and parallel to the do When no tugs are used for docking, the vessel's starboard anchor m be used to manoeuvre the vessel alongside.

Gangway: The ship's gangway must be used and should be prope rigged and illuminated.

Bunkers and Fresh Water: Fresh water is available upon reque fuel, however, cannot be obtained at this berth.

Ballast/Slop Facilities: There are no ballast or slop facilities at t terminal.

Marrero – Hess: General: The Hess Tanker Dock is a concrete struc with steel pilings and 320 ft. of dock face. Mooring dolphins provid location for head, breast and stern lines.

Current at this dock varies from 2 knots to 4 knots, depending on conditions.

The dock is located on the South or left descending bank of the approximately 86 miles AHP.

Cargo Handled and Shore Installations: Crude oils, Bunker-C a heating oil are commonly handled at this berth. All cargo transfe made through 8 in. or 10 in. Chicksan arms.

Maximum loading rate for crude oil is 25,000 bbls.p.h. and for o products approximately 6,000 bbls.p.h. Maximum rail pressure discharging vessels is 100 p.s.i.

An emergency loading stop control is located near the dock mani

Docking: Docking is strictly port side to and performed by the R Pilot. Vessels under 35,000 d.w.t. are required to use 2 tugs for dock and undocking; vessels greater than 35,000 d.w.t. are required to 3 tugs. During extremely high river stages all vessels are required use 4 tugs for docking and undocking operations.

Berth mooring requirements specify that 4 head lines, 4 spring l forward, 2 after spring lines, 2 after breast lines, and 4 stern lines used by all vessels (a total of 16 mooring lines.)

Gangway: The ship's gangway, properly rigged and illuminated, m be used.

Bunkers and Fresh Water: Bunker-C, diesel oil, inter-fuel and fr water are all available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at terminal.

DENSITY: Fresh water (1000).

FRESH WATER: Available ex-wharf.

FUEL: Only available by barge. Oil companies can supply Bunker ex-terminals at Amesville and Marrero. Chemoil can also supply fu

Stella Maris Maritime Center, 4219 Constance Street, New Orleans, LA 70115. Tel: (504) 891-6677. Contact: Deacon Robert M.Balderas Sr., Director and Port Chaplain. Services: Library, athletic, recreational and chapel facilities, snacks. Shipboard services on request. Port representative, American Merchant Marine Library Association.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: Jourdan Road Terminal Complex comprising of a two berth facility with 290,000 sq.ft. of open space, 144,000 sq.ft. transit shed, complete with crane rails and marginal track, plus 440,000 sq.ft. marshalling area. Marshalling area adjoining the terminal complex consisting of 10 acres with an additional 34 acres of preload area to be developed as required.

Lower Mississippi River dredged to 45 ft.

A Capital Improvements Program includes construction of the New Nashville Avenue Terminal, which will be a multi-purpose terminal handling a variety of cargoes. Upon completion in 1993, the Nashville B Wharf will stretch 3,150 ft., and connect the existing Nashville Avenue Wharf with the Napoleon Avenue Wharf, resulting in a continuous wharf 2.03 miles in length.

SHIPMASTER'S REPORT: 1975.

Customs: Stores List. Curio List. 1 Crew List. Sealed High Duty Bond, Unchecked.

Immigration: Visaed Crew List. Seaman's Red I.D. Card or Passport along with American Crew Pass. Typed. Question asked by Officials "How long at sea?" I.D. Card handed back to seaman with American Pass stamped. Department very thorough and efficient.

No mail or money to be distributed until Immigration completed, also no persons permitted ashore or onboard until formalities completed except for Agents and Officials.

If no visaed Crew List Master signs official form. Cost U.S.$10.0 for whole ship's company.

Port Health: Radio Pratique not granted as Seaman's Cards not completed. No representative visited vessel. Report any death through Agents.

Agriculture Dept.: Inspected vessel. Galley, Messrooms, Store-rooms, etc. Meat and Vegetable rooms sealed.

Garbage bins to be covered (Collection expensive, retain on board until sail if possible).

Ratguards to be used.

Provisions and Stores: Select own supplier. Prices comparable U.K. with good quality expensive. Stores and medicines ordered through providore.

Laundry: Satisfactory. Billed by weight. 24 hour service.

Watchmen: None placed on board but security police at section openings.

Telephone: None placed on board. Use office on quay side.

Water: Plenty available. Shore connections used.

Bunkers: Delivered by barge. Charged for what is ordered. Do not over stem. Barge hired from private firm. Any bunkers not taken paid for and revert to barge owners.

Walport Films: Exchanged.

Coast Guard: Require number of Oil Pollution Certificate (Certificate of Financial Responsibility). Whether AMVER participant. Require ship's particulars including horsepower. Displacement tonnage on sailing. Name of Master and Chief Officer. Dangerous cargo particulars and stowage.

National Cargo Bureau: Representative from National Cargo Bureau comes onboard and requests ship's particulars also ports of call to and from. Inspector looked at hatches where cargo to be loaded. He then issues a Certificate of Readiness. Loading can then commence.

Code of Federal Regulations: Each ship should have a copy. Difficult to come by. Acquired 1970 copy from Agents. Equivalent to our 'Blue Book'.

Repairs: Select own firm. Anxious to please. Unable to judge as little work contracted out.

Money: Delivered by separate security firm. Satisfactory.

Radio Messages: Send ETA at least 48 hours before arrival to Agents and Branch Pilots with draft. Notify Captain of the Port of any explosives for discharge or in transit. If all healthy and documentation correct ask for Radio Pratique. Confirm ETA at 24 and 10 hours. Inwards send ETA to Agents after passing Pilot Town. Agent will notify if Radio Pratique granted. Not necessary to fly "Q" flag going up river.

Stevedores: Hours of work 0800 to 1200 hrs., 1300 to 1700 hrs. Straight time. Weekday gangs will work until 1800 or 1900 hrs. to finish. Night: 1800 hrs. to midnight, 0100 to 0600 hrs. Head Stevedore checks Factory Act Book. Gangs will work continuously except for 3 hours in any 24 hours. 4 different Union Contracts. Plan maker makes own plan then airmails same to ports of discharge. Crew open hatches also close same. Crew not to do any cleaning.

General: Use S.W. Pass at all times. South Pass has only 18 ft. of water and shoaling all the time.

Pilot boards on lee side at Sea Buoy – Flash "A" (· –) from fast launch painted black. Ladder about 6 ft. from water level. Branch Pilot takes vessel to Pilot Town where River Pilot takes over. Ladder usually starboard side inward and port side outward 8 ft. above water. First come first served at sea buoy. About 1.5 to 2 hours from Sea Buoy to Pilot Town and about another 6 hours to berth. Proceed up river at harbour full speed. Reduce speed occasionally for long tows, dredgers and ships on loading berths.

River Pilot docks vessel.

Signals by day "H" flag. By night nothing.

Inland waterways rule of road applies.

We had clear daylight run up river and down at night. Mid December. Start of fog. Low fog experienced on water also some patches, fairly thick. If fog does develop it is worth remembering that once past Pilot Town Southbound, few if any places to anchor and one has to continue.

Racon at entrance useful. Anchorages as per charts. When arriving contact Pilot on VHF Channels 9, 12, 13.

Berth: Satisfactory. 24/29 Market Street. Just past bridge. Quite a long walk to open section to get out of docks. Recommend at night get taxi back and if walking into town by day at least 2 persons.

Sufficient bollards. No cranes. Berth head up. Usually starboard side to.

Moorings. 4 headlines, 4 sternlines plus 2 springs each end. Passing traffic fairly heavy with considerable wash. Ratguards required.

Ship's gangway. Quay about 25 ft. above water level. Wooden pile fenders very effective.

Tugs: Used for berthing and unberthing. 1 only alongside port forward shoulder. 2 tug's lines. When making fast tug passes portable Walkie Talkie on board to send up to Pilot on bridge. Pilot left by tug which used own ladder.

Radar: Satisfactory repairs carried out.

SHIPMASTER'S REPORT: 1979.

South West Passage:

Pilotage: Pilots prefer accommodation ladder together with pilot ladder but will sometimes use pilot hoists, on larger vessels.

Restrictions: For 100,000 d.w.t. vessel max. draft for S.W. passage is 35 ft., (fresh water) to sail out at any time.

SHIPMASTER'S REPORT: 1979.

Mississippi Lightening Area:

Port Limits: Centred at Lat. 28° 00′ N., Long. 89° 30′ W. and within 15 nautical miles radius.

Documents: Officials take photostat copies of Bill of Lading and give receipt for cargo, and take one copy of Notice of Readiness.

Pilotage: They are equipped with Loran "C".

Anchorages: Very deep. Vessel drifted 7 nautical miles N.N.E. in 11 hours (February) with wind N.E. – 3. Checked with satellite navigator.

Health: No formalities.

Radio: Initial contact on W/T via "WLO" Mobile then by R/T 12427.5 kHz A3J. When close enough Channel 16 VHF; then Channel 11 for all operations. If vessel fitted with bridge wing VHF extension then best to give all engine room orders over Channel 11 so that lightening vessel can also hear.

Berthing: As per OCIMF/ICS SSTG (P). Require 2 headlines and 1 stern line from STBL after putting aboard their lines which are all polypropylene except springs which are wires with nylon tails. Steamed at about 3.5 knots. They throw across heaving lines and carry all necessary equipment. Do not require derrick, they have gangway and 4 'Yokohama' fenders.

Tankers: STBL can load at up to 10,000 t.p.h. They prefer to use 2 centre manifolds with reducers down to 16 in.

Identification Cards: Required.

SHIPMASTER'S REPORT: December 1990.

Restrictions: Though project depth is listed at 40 ft., currently greater drafts are available in the lower reaches of the river. Some loaded grain vessels have sailed with 45 ft. – 47 ft., and current information should be obtained from Agents (topping-off may be required).

Fresh Water: Supply from shore is refused at certain berths as being not potable. A number of fresh water barges are available along the river. Typical charges are $ 140 per hour away from berth, plus $ 3.50/4.00 per ton. Pumping rates can range from 30 t.p.h. – 90 t.p.h. Minimum charge is for 200 tons of water.

SHIPMASTER'S REPORT: October 1991.

Pilotage: Pilot boards from a fast cutter off the S.W. Buoy, 1.5 miles South of the S.W. Pass Lighthouse. Prior to arrival call "Bar Pilots" on VHF Channel 9 (Channel 67 mentioned in ALRS is only used for Bridge-to-Bridge Communications).

Bar Pilot Station is situated on the West bank of the S.W. Pass, about 1.0 miles North of the S.W. Pass Lighthouse. There are approximately 60 Bar Pilots, of which 25 may be on station at any one time.

Vessels change Pilots at Pilottown, which is 21 nautical miles above the S.W. Pass.

Crescent River Pilots take vessels from Pilottown to Algiers, off New Orleans, and about 94 nautical miles above S.W. Pass.

With a nominal sea speed of 13 knots, passage to Pilottown with a half knot current is 2 hours and a further 6 hours up to New Orleans. There are about 80 Crescent River Pilots of which half are on station at any one time.

Bar Pilots will attempt to board a vessel in any weather, but good lee is required.

Baton Rouge Pilots take vessels above New Orleans and board at Algiers.

Entrance: The Racon on S.W. Pass Lighthouse is very conspicuous. An oil rig to the West of the safety fairway entrance channel is also equipped with a Racon.

A strong Westerly setting current and strong Westerly winds are often encountered near the S.W. Buoy, so great care has to be taken when in the vicinity of towing vessels when entering and leaving S.W. Pass, due to their lack of manoeuvrability.

River: A depth of 40 ft. is maintained up to Baton Rouge. In October 1991 48 ft. fresh water was allowed to Baton Rouge.

The river current is slack between September and December and runs at approximately 0.5 knots. During the Spring months the currents can run as high as 7 knots. During this time, passage for low powered vessels can take a long time and it is potentially dangerous due to the large strings of barges which have little directional control.

Anchoring: Anchorage is possible off the S.W. Buoy but this is not considered a good anchorage due to poor holding ground and oil rigs in the vicinity.

There are numerous river anchorages which are safe when the current is running at a low rate, but when the river is running at a high rate vessels should be on full stand-by at all times.

Tugs: There are many powerful tugs available, they generally wait around in the anchorages. When the river is running at a high rate their services are called upon continuously.

Airport: New Orleans International Airport is just West of the city centre.

Charts: B.A. Chart No. 3382 and U.S. Chart No. 11370.

It should be noted that no B.A. Charts are published for the area between New Orleans and Baton Rouge. U.S. Chart No. 11370 covers this area. The U.S. Army Corps of Engineers "Plans of the Mississippi River" are published annually in book form and are very useful for giving berth positions, limits of deep channels and other useful information not published on charts.

Berthing:

International Matex Terminal (IMTT), Avondale:

Location: The berth is located on the South Bank of the river at Mile Post 108.2 (113 miles above S.W. Pass Lighthouse) and 3 miles above Huey P. Long Bridge, just upstream from Avondale Shipyard.

Facility: The facility has a tank farm dealing exclusively with vegetable oils. The intake is by rail and road tanker trucks.

Berth: The berth is a typical Mississippi River berth and was originally built for handling of barge traffic but was strengthened at a later date for handling ocean-going vessels. The berth can accept vessels up to 30,000 d.w.t., depth alongside is 50 ft.

The berth consists of 2 pile dolphins 150 m. apart with an old decked over barge moored between the dolphins forming a flat front. The barge is set back 2.0 m. from the dolphin line.

We berthed with the bow resting on the upstream end of the barge and the stern alongside the downstream dolphin (the stern is not allowed to touch the end of the dolphin). There are fenders on the dolphins and large truck tyres on the upstream end of the barge, there are no fenders on the downstream end of the barge.

Moorings consisted of 3 headlines/sternlines and 2 springs at each end. The headlines and sternlines are sent to the shore and secured to hooks. The forward springs are sent to the barge and the after springs are sent to the aft dolphin. When the river is running at a high rate (up to 7 knots) additional moorings are required.

One tug is used for berthing and there is also a mooring boat but it is unreliable.

Fresh water was not available at the time we called as the line was broken. Storing is not possible at the berth.

No shore gangway available and we could not use a short b gangway, so pilot ladder was used for surveyor and the offs gangway and a hired launch was used for boarding of officials.

Cargo: 1×6 in. flexi-hose connection from tanks to the vessel loaded peanut oil at a rate of 150 t.p.h. A careful preloading surve carried out when loading vegetable oils. Flexi-hoses are used for al different grades and occasionally the ship's hoses are used as the sh hoses are of insufficient length when the vessel is in a ballas condition.

Chevron at Oak Point:

Location: The berth is one mile below Belle Chase and 91 miles ab S.W. Pass Lighthouse, on the West bank of the river.

Berth: The berth is a well constructed steel pile structure with ab 60 m. of flat faced side, with breasting dolphins at either end and moor dolphins to the North and South of the breasting dolphins. All dolph are connected by a catwalk.

The jetty has recently been rebuilt after nearly being destroyed b passing tanker whose steering failed. One tug used for berthing.

The berth is generally used by barges but ocean-going vessels up 50,000 d.w.t. can berth at the facility.

Storing trucks are allowed alongside if they are diesel driven. Fre water available at a rate of 20 t.p.h., ship's hoses used. A shore gangw is provided. A public telephone is available on the shore.

Cargo: Polymers are imported and only lube oil additives are expor There are dedicated Chicksans with 6 in. connections.

The ship has to shift when changing grades, unless the ship's ca lines can be changed over. Flexi-hoses are not allowed.

We loaded grade "858C" from a tank about 1 mile away and rate w very slow, 26 tonnes/hr. Other grades were loaded at a rate 100 tonnes/hr. – 150 tonnes/hr. Heavy "pigging" required on complet of grades, be careful if tank is full.

AUTHORITY: Board of Commissioners, Port of New Orleans, P.O.Box 60046, New Orleans, Louisiana 70160, U.S.A. *Tel:* (504) 522-2551. *Telex:* 58-7496. *FAX:* (504) 524-4156. *Contact:* Mark Reynolds, Port Marketing & Sales. Kenneth Parker, Marine Terminals.

NEW YORK, New York and New Jersey:
40.43 N. 74.00 W. **(See Plan)**

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I – 418).
2 copies Crew List (Form I – 418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate.

In addition the following documents will be required for formal entry, to be made within 48 hours of arrival from abroad:
Health Pratique.
Master's Oath (Form 1300).
All Foreign Clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
Vessel's certificates may be inspected by a Coast Guard Boarding Officer during the vessel's Port call. Some of the certificates that may be required by the Coast Guard Boarding Officer include:
Certificate of Financial Responsibility (Mandatory).
National Cargo Bureau Certificate (Optional).
Load Line Certificate (Mandatory).
Oil Record Book (Mandatory).
International Oil Pollution Prevention Certificate (IOPP Mandatory).
SOLAS Safety Equipment Certificate (Mandatory).
SOLAS Safety Construction Certificate (Mandatory).
Radiotelephone Certificate (Optional).
Radiotelegraphy Certificate (Mandatory).
Vessel's Deck Log (Mandatory).

Note: The vessel's navigational charts are also subject to Coast Guard inspection. Mariners should have onboard and corrected up to date, the largest scale (greatest detail) charts for the intended route of transit through the port. Certain foreign charts have been approved for use. Contact Captain of the Port, New York for details.

Shipmaster's Report: March 1987.

3 copies of all necessary documents. All are given to Agent, who distributes them to Immigration, Customs, etc.

For all U.S. ports, the name of vessel's operator must be the same on Form 1300 as that shown on the U.S.C.G. Certificate of Financial Responsibility (Water Pollution).

For tankers, the cargo figures shown on Form 1302 should be in gallons and barrels.

MAX. SIZE: Restricted only by berth depth and location.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

APPROACHES: Ambrose Channel, 2,000 ft. wide, is the principal entrance from the Sea to the Lower Bay and onward to The Narrows between Staten Island and Brooklyn, which is 15 miles from Ambrose Tower. The project depth of this channel is 45 ft. MLW. Vessels proceeding up Sandy Hook Channel are limited by a project depth of 35 ft. MLW and an 800 ft. wide channel.

Vessels arriving at the Port of New York normally utilise General Anchorages No. 23 and No. 24 which are North of the Verrazano Bridge and adjacent to the Stapleton Quarantine Station or Anchorage No. 21 off Bay Ridge. However, at times it may be necessary to direct inbound tonnage to the Gravesend Anchorage, No. 25, South of the Verrazano Bridge. Occasionally, due to congested conditions at the above locations, vessels may be directed to anchor at the newly established anchorage adjacent and N.W. of Ambrose Tower. Vessels instructed to use the anchorage off Ambrose Tower must pick up a Pilot for proper selection of an anchorage location.

For limits of anchorages generally used in the Port of New York see "Plan". Use of Charts 12349 and 12334 is strongly recommended.

Specific operating and safety procedures have been agreed upon with the Pilot's Association, as follows:

1. Flood Tide Procedure:

Vessels with an LOA in excess of 800 ft. or a draft of more than 40 ft. (salt water) will not be brought in from sea to the General Anchorages off Stapleton, Staten Island (Southern part of No. 23 and entire area of No. 24) on the flood tide. This will avoid the need to turn around in order to anchor at a location which may be congested with traffic and ships at anchor.

2. Transit Restrictions:

Ambrose Channel: Guideline for starting in from Ambrose Tower during normal weather conditions.

Vessels with Drafts of 46 ft. 06 in.:
Thirty mintues after high water Sandy Hook.

Vessel with Drafts of 46 ft:
Thirty minutes to one hour after high water Sandy Hook.

Vessel with Drafts of 45 ft. 06 in.:
From thirty mintues after high water Sandy Hook to one hour and thirty minutes after high water Sandy Hook.

Vessels with Drafts of 44 ft. 06 in.:
From thirty minutes after high water Sandy Hook to two hours and thirty minutes after high water Sandy Hook.

Vessels with Drafts of 43 ft. 06 in.:
From thirty minutes after high water Sandy Hook to three hours and thirty minutes after high water Sandy Hook.

Vessels with Drafts of 42 ft. 06 in.:
From thirty minutes after high water Sandy Hook to five hours after high water Sandy Hook.

Vessels with Drafts over 40 ft. 00 in.:
From 30 minutes after high water Sandy Hook to 5 hours after high water Sandy Hook. All vessels in the above categories should pass through the Narrows before low water slack at the Narrows.

The procedures outlined above are guidelines only. Weather conditions, tides, currents and ship capabilities should, of course, be taken into consideration.

3. Anchoring Procedures:

The Pilot Association has notified the Pilots to stay aboard all arriving ships at anchorage until the following procedures are carried out:

(a) The anchor chain is to be brought up and ship is to be stationary.
(b) The Pilot will point out landmarks so proper bearings may be obtained and plotted on the charts.
(c) Pilots will inform the Master of conditions that he may encounter at the anchorage.
(d) The Master will be briefed on currents and time of tide change.
(e) All Pilots must record the ship's bearings on the back of their Pilot Orders.

In order to assist the attending Pilot, the Master should inform him on boarding of any special characteristics of his vessel, such as port manoeuvring speeds, turning circle, compass error and exact draft.

4. Anchor Watch:

Due to usually congested anchorages, strong tidal current, occasional fresh winds and traffic, all Masters are cautioned to maintain a continuous bridge anchor watch by a deck officer with engine on standby. Anchor bearings should be taken frequently and plotted to ensure proper anchor holding. During change of tides, the anchor windlass should be in readiness with a deck officer standing by.

If an anchorage becomes dangerously congested after a ship has been anchored, the ship's Master may request Agent to (a) send a Pilot to relocate vessel to a safer anchorage, or (b) send a tug to assist vessel in turning during a change in tide, or to stand by during fresh wind conditions.

PILOTAGE: Compulsory for foreign flag ships, and U.S. ships bound to and from foreign ports.

24 hours notice of ETA required. N.Y. N.J. Sandy Hook Pilot boat should be contacted on VHF Channel 16, call "Ambrose Pilot", pilot vessel also on Channels 13, 8 and 73 or ship-to-ship Channel 2638 or 2738. Vessels requiring Pilot should hoist signal letter "G" in daytime. In foggy weather the letter "X" should be sounded on whistle.

Pilot boat is generally found about 1.5 miles West of Ambrose Light Tower. In bad weather Pilot tries to stay windward of normal pilot station.

In poor visibility an inbound ship should make Ambrose Tower and then proceed at slow speed to the Ambrose Channel Sea Buoy while blowing the letter "X" on her whistle. If no Pilot is obtained by the time she is in the vicinity of the sea buoy she should then anchor about 0.5 mile to 1 mile North of the line from Ambrose Tower to the sea buoy and await Pilot.

ANCHORAGES: For ships entering from Sandy Hook there are anchorages in Lower New York Bay, Gravesend Bay, Raritan Bay, and Arthur Kill off Perth Amboy. In the Upper Bay, anchorages available off Bay Ridge for 30 days and off Stapleton for 48 hours. For vessels entering via Long Island Sound there are anchorages in the Western end of the Sound and in the East River.

Vessels must notify the Captain of the Port when it anchors, vessel's name, length and draft and its position in the anchorage.

Regulations for anchorages may be found in the 33 Code of Fe Regulations, Part 110.155.

Vessels entering New York Harbour are required to have 2 wo anchors, by U.S.C.G. regulations.

Also see "Approaches".

RESTRICTIONS: Ambrose Channel, 10 miles long, maintained width of 2,000 ft. and a depth of 45 ft. MLW. The Northern approa the harbour is through Long Island Sound into the East River. channels in the port are maintained to a depth of 45 ft. MLW.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Alban

VHF: All vessels over 100 tons gross are required to keep continu watch on VHF Channel 13 when in areas where U.S. Inland W Regulations apply.

V.T.S. became operational in December 1990. Channels to be u are 16, 13, 11, 12 and 14. (Channel 14 for vessels calling).

TUGS: Over 50 private towing and transportation companies registe in the port.

BERTHING:

Brooklyn: 8 berths at South Brooklyn Marine Terminal, includin container berths; 4 berths at 23rd Street Pier; 7 berths at Red H Marine Terminal.

Hudson River: Passenger Ship Terminal on Manhattan Shore betw 48th and 52nd Streets provides 6 ship berths.

Hoboken Port Authority Marine Terminal: 2 piers, 4 general cargo ber

Jersey City: 2 berth container facility at Port Jersey (Global Termi with 5 gantry cranes.

Newark, N.J.: Port Newark (22 general cargo, 5 specialised, an container berths). Depth range alongside 30 ft. – 34 ft. Berths No and 12 handle coal with 3 floating cranes, rate 10,000 tonnes per d

Elizabeth, N.J.: Elizabeth Port Authority Marine Terminal, 22 container berths, channel depth 35 ft.

Department of Ports and Trade: The Department of Ports, Internatio Trade and Commerce (PITC) of the City of New York is responsible maintaining, leasing, and developing City-owned waterfront prope One of the principal maritime agencies in the nation's busiest port, Department is actively involved in harbour affairs. As part of commitment to the economic vitality of the Port, the Department pl a leading role in pressing for streamlined dredging operations, impro transportation connections, expansion of marine terminals, and development of international trade and investment opportunities.

Howland Hook Container Terminal – Staten Island:

Operator: Vacant.

Shipping Line: —

Situated on 187 acres in N.W. Staten Island, this facility offers 2,50 of berthing space with a depth of 35 ft. 4×40 long-ton and 1×50 lo ton capacity container cranes on rail tracks move the entire lengt the wharf so that vessels may be worked simultaneously by combination of cranes. Special features include 360 reefer outl 22,000 sq.ft. of refrigerated warehouse space, plus 21,000 sq.ft. hazardous cargo storage area. Shedded space of 280,000 sq.ft. exclusively devoted to LCL shipments.

A Chessie System rail turnout directly links Howland Hook with Con track at Staten Island Junction in New Jersey. The terminal's locat offers excellent access to the New Jersey Turnpike and Metropol New York.

South Brooklyn Marine Terminal:

Operator: Continental Terminal Inc.

Shipping Lines: Various lines bring cocoa shipments to this dedica cocoa terminal.

Depth: 32 ft.

Located directly off the Buttermilk Channel, this multi-purpose term can service as many as 9 vessels – container, LASH, Ro/Ro a breakbulk – simultaneously. Special features on this 110 acre s include a 90 ft., 75 ton capacity Ro/Ro ramp and 137 outlets refrigerated containers. The terminal has a 70 short-ton, 2×50 long- capacity container cranes and a 140 long-ton P&H mobile cra Also available is 705,000 sq.ft. of shedded space.

The Terminal is adjacent to the New York Cross Harbor Railway intermodal rail yard, providing carfloat/bridge and overland serv connecting the terminal and Bayridge rail line with Oak Point Yar the Bronx to points throughout the U.S., Canada and Mexi Connections via Interstate 278 provide direct access to the regio major truck routes and airports.

With the cocoa operator in place since 1988, The City of New Y is seeking other specialised breakbulk and container operators for terminal.

Red Hook Container Terminal – Brooklyn:

Operator: Universal Maritime Service Corporation.

Shipping Lines: Elma-Empresa Lineas Maritimas-Argentinas-Elma Bottacchi S.A. de Navegacion, America Africa Europe Line, F Amazonica, Chilean Line, D. B. Turkish, Egyptian National L Grancolombiana, Torm Lines, Venezuelan Line, Ivaran Lines, Ho Lines, Holland Pan-American Line, Jugolinija, P.T. Djakarta Llo Waterman.

The newest cargo terminal in the harbour, Red Hook, is a joint ven between the City of New York, New York State and the Port Autho of New York and New Jersey. Situated on the 40 ft. deep Butter Channel, this 79 acre facility offers 6,700 ft. of berthing space serv by 4×40 long-ton capacity container cranes, 660 ft. of Ro/Ro bert space. Water depth alongside the container berth is 40 ft. (MLW) 35 ft. (MLW) by the Ro/Ro and breakbulk berths. Approximately 350 sq.ft. of cargo consolidation and breakbulk handling space is avail at dockside. A computerised inventory control system provi maximum efficiency and security.

Barge service between Red Hook Container Terminal and Unive Container Port at Port Newark: Container barge service is offered a extra charge to all container lines located at Red Hook.

Red Hook's convenient location saves 3 hours sailing time over most New Jersey terminals and saves in tugboat costs. Direct rail access to the New York Dock floatbridge is available, allowing for direct delivery of boxcars and flatcars. Connections via Interstate 278 provide direct access to the region's major truck routes.

Pier 36 Terminal – Manhattan:

Operator: Vacant.

Situated on 10 acres off the East River, Pier 36 is the sole marine terminal in Manhattan capable of handling breakbulk, Ro/Ro and containerised cargo. In 1986, 82,000 long-tons were handled. The facility offers 1,300 ft. of berthing space with a dockside depth of 32 ft. and 175,000 sq.ft. of covered transit shed space. Its location offers direct access to the lucrative Manhattan market, as well as convenient access to major truck routes in the Metropolitan area.

Pier 42 Terminal – Manhattan:

Operator: Vacant.

Shipping Lines: —

More recently used for handling imported bananas, pineapples and coconuts, Pier 42 is located on the East side of Lower Manhattan. 4 specialised gantry cranes and a highly mechanised operation enable this terminal to move 150,000 boxes of fruit per day. The facility handled 200,000 long-tons of fruit over the course of calendar year 1986. The terminal contains over 120,000 sq.ft. of warehouse space including an air-conditioned storage area. Water depth at dockside is 32 ft. 48 truck loading bays ensure that goods move quickly from dockside to the road.

CONTAINER FACILITIES: *Mayer/Elizabeth:*

Location: South side of Elizabeth Channel (Berths 68, 70, 72, 74 and 76).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Mayer.

Address and Telephone: 2170 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 289-3000 or (800) 526-6802.

Total Area of Terminal: 102 acres.

Length of Ship Berths: Berths 68 to 74: 2,825 ft. Berth 76: 750 ft.

Depth: 35 ft.

Container Cranes: 3×30 tons (Paceco).

Equipment: 5 Clark straddle carriers (31.5 tons.) 15 Ottawa hustlers (25-ton capacity). 13 Ottawa hustlers (35-ton capacity). 1 Ottawa hustler (125-ton capacity). 1 P & H truck crane with 70 ft. boom (90-ton capacity). 2 Hyster cranes (5-ton capcity). 41 Hyster trucks (capacities ranging from 2.5 tons to 23 tons). 1 Kalmar truck (25-ton capacity).

Stuffing and Stripping Facilities: 145,880 sq.ft. 88 truck bays. Served by rail siding.

Ro/Ro Accommodations: 2 ramps×60 tons.

Rail Service: Conrail.

Global Marine Terminal/Jersey City:

Location: West shore of Upper New York Bay at the Jersey City-Bayonne boundary (part of the Port Jersey industrial complex).

Owner or Lessee: Global Terminal and Container Services, Inc.

Terminal Operator: Global Terminal and Container Services, Inc.

Address and Telephone: P.O.Box 273, Jersey City, NJ 07303. Tel: (201) 451-5200 or (212) 344-7020.

Total Area of Terminal: 100 acres.

Length of Ship Berth: 1,800 ft.

Depth: 40 ft.

Container Cranes: 3 Star×40 tons. 1 Krupp×40 tons.

Toploader: 1 Taylor×30 tons.

Sideloader: 1 Taylor×8 tons.

Mobile Yard Gantry Cranes: 3 Drott×30 tons. 2 Krupp×40 tons EP.

Fork Lift Trucks: 1×26 tons, 1×30 tons, 2×15 tons.

Stuffing and Stripping Facilities: 140,000 sq.ft. 150 truck bays. Served by rail siding.

Rail Service: Conrail and Port Jersey R.R.

Chassis Vertical Stacking: 18 racks with a total capacity of 324 chassis stored vertically.

Howland Hook Terminal/Staten Island:

Location: Staten Island on the Arthur Kill just North of Goethals Bridge.

Owner or Lessee: The Port Authority of NY & NJ.

Terminal Operator: Vacant.

Address and Telephone: 300 Western Avenue, Staten Island, NY 10303. Tel: (718) 816–7748.

Total Area of Terminal: 187 acres.

Length of Ship Berth: 2,500 ft.

Depth: 25 ft. – 30 ft.

Container Cranes: 4 IHI×40 tons, 1 Peiner×50 tons with rotating spreader, 2 Paceco×50 tons (2 on order).

Fork Lift Trucks: 19×10 tons to 50 tons.

Stuffing and Stripping Facilities: 208,000 sq.ft., 150 truck bays, 22,000 sq.ft. refrigerated warehouse plus MID defrost and inspection facility, 21,000 sq.ft. Special cargo warehouse.

Equipment: 4 heavy fork lifts (11.5 tons to 30 tons), 4 top loaders×50 tons, 3 top loaders×35 tons, 1 top loader×30 tons, 48 yard tractors, 79 hilos×2.5 tons.

Rail Service: Delaware Otsego Corp. (SIRC).

Maher Terminal/Fleet Street, Elizabeth:

Location: South side of Elizabeth Channel (Berths 62, 64 and 66).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maher Terminals, Inc.

Address and Telephone: 202 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 527-8200 or (212) 962-6322.

Total Area of Terminal: 94 acres.

Length of Ship Berth: 2,000 ft.

Container Cranes: 2 Star×40 tons, 2 Star×30 tons.

Equipment: 20 straddle carriers, 30 yard hustlers, 14 fork lifts×15 tons, 15 fork lifts×4 tons, 30 fork lift×2.5 tons.

Stuffing and Stripping Facilities: 155,000 sq.ft. 120 truck bays. Served by rail siding.

Rail Service: Conrail.

Maher Terminal/Tripoli Street, Elizabeth:

Location: Newark Bay (Berths 78, 80, 82, 84 and 86).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maher Terminals, Inc.

Address and Telephone: 4010 Izmir Street, Elizabeth, NJ 07201. Tel: (201) 527-8400.

Total Area of Terminal: 243 acres.

Length of Ship Berth: 3,150 ft.

Depth: 38 ft.

Container Cranes: 3 Paceco×40 tons (low profile), 1 Canron×30 tons, 3 Morris×30 tons.

Equipment: 80 yard hustlers, 12 stackers (15-ton capacity), 7 top-loaders×40 tons, 40 fork lifts×2.5 tons, 60 fork lifts×4 tons, 4 transtainers.

Stuffing and Stripping Facilities: 371,000 sq.ft., 238 truck bays. Served by rail siding.

Rail Service: Conrail.

Maersk Line Terminal/Port Newark:

Location: North side of Elizabeth Channel (Berth 51).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Maersk Container Service Co., Inc.

Address and Telephone: 231 Tyler Street, Port Newark, NJ 07114. Tel: (201) 465-1000.

Total Area of Terminal: 61.8 acres.

Length of Ship Berth: 764 ft.

Depth: 37 ft.

Container Cranes: 2 Paceco×30 tons.

Equipment: 1 top loader×50 tons, 1 top loader×35 tons, 1 top loader×13 tons, 1 stacker×15 tons, 70 hilos×5 tons to 7 tons.

Stuffing and Stripping Facilities: 198,000 sq.ft., 154 truck bays. Served by rail siding.

Rail Service: Conrail.

Navieras de Puerto Rico Terminal/Elizabeth:

Location: South side of Elizabeth Channel (Berths 52, 54, 56, 58 and 60).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Puerto Rico Marine Management, Inc.

Address and Telephone: P.O.Box 1910, Elizabeth, NJ 07207. Tel: (201) 352-2700 or (212) 775-7330.

Total Area of Terminal: 97 acres.

Length of Ship Berth: 2,875 ft.

Container Cranes: 3 Paceco×30 tons.

Stuffing and Stripping Facilities: 116,700 sq.ft., 163 truck bays. Served by rail sidings.

Ro/Ro Accommodations: 3 ramps for side port operations.

Rail Service: Conrail.

Red Hook Container Terminal/Brooklyn:

Location: Brooklyn Waterfront, near entrance to Brooklyn-Battery Tunnel.

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Universal Maritime Service Corp.

Address and Telephone: Building 115, foot of Hamilton Avenue, Red Hook, Brooklyn, NY 11231. Tel: (212) 875-0777.

Total Area of Terminal: 79 acres.

Length of Ship Berth: 3,030 ft.

Depth: 35 ft. – 40 ft.

Container Cranes: 3 Paceco×40 tons.

Equipment: 11 top handlers, 2 fork lifts×26 tons, 5 fork lifts×15 tons, 33 yard hustlers, 16 flatbed trailer, 125 hilos×3 tons.

Stuffing and Stripping Facilities: Break-bulk consolidation shed, 200,000 sq.ft., 80 truck bays.

Ro/Ro Accommodations: 660 ft. berth.

Rail Service: New York Dock Railway.

Sea-Land Terminal/Elizabeth:

Location: Newark Bay (Berths 88, 90, 92, 94, 96 and 98).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Sea-Land Service, Inc.

Address and Telephone: P.O.Box 1050, Elizabeth, NJ 07207. Tel: (201) 558-6000.

Total Area of Terminal: 232 acres.

Length of Ship Berth: 4,519 ft.

Depth: 40 ft.

Container Cranes: 6 Paceco×40 tons.

Equipment: 3 top loaders×30 ton capacity, 45 fork lifts×2.5 tons to 12.5 ton capacity, 60 yard hustlers.

Stuffing and Stripping Facilities: 306,000 sq.ft., 328 truck bays. Served by rail siding.

Rail Service: Conrail.

South Brooklyn Marine Terminal/Brooklyn:

Location: Brooklyn shore of Upper New York Bay.

Owner or Lessee: The City of New York.

Terminal Operator: Continental Terminals, Inc.

Address and Telephone: Foot of 39th Street, Brooklyn, NY 11232. Tel: (718) 499-6300.

Length of Ship Berths: 1,535 ft. container berth plus 7 general cargo berths.

Depth: 32 ft.

Container Cranes: 1 Star×50 tons, 1 Star×70 tons, 1 Kone×50 tons

Equipment: 9 Valmet straddle carriers, 6 Clark straddle carriers, 10 Ro-Ro yard Tractors, 8 stackers, 65 fork lift trucks (varying capacity).

Stuffing and Stripping Facilities: 705,050 sq.ft., 4 separate LTL sheds 446,000 sq.ft. CFS and general cargo sheds.

Roll-On/Roll-Off Accommodations: 2

Rail Service: New York Cross Harbour Railroad Terminal Corp.

Universal Terminal/Port Newark:

Location: North side of Elizabeth Channel (Berths 53, 55, 57 and 59).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Universal Maritime Service Corp.

Address and Telephone: 221 Starboard St., Port Newark, NJ 07114. Tel: (201) 589-6200.

Total Area of Terminal: 85 acres.

Length of Ship Berth: 3,058 ft.

Depth: 35 ft.

Container Cranes: 3 Paceco×40 tons.

Equipment: 11 top handlers, (42-ton capacity), 2 fork lifts, (26 tons), 5 fork lifts (15 tons), 33 yard hustlers, 16 flatbed trailers, 25 hilos (3 tons).

Stuffing and Stripping Facilities: Break-bulk shed 400,000 sq.ft. Served by rail sidings.

Rail Service: Conrail.

Also see "Berthing".

CRANES: Mobile floating cranes with capacity up to 500 tons available.

STEVEDORES: 13 stevedoring firms are active in the port, many of whom are also terminal operators. Normal working hours 0800 – 1700 hrs. Bulk Cargo work usually continues through 24 hours.

TANKERS: There is a history of repeated breakouts in the New York area due to sudden wind gusts of up to 60 knots, particularly associated with squalls. Moorings should, therefore, be kept tight and winch brakes tightened up after moorings have been adjusted.

Brooklyn: Paragon Oil Terminal, 2 berths, depth 37 ft.; Patchoque Oil Terminal, 2 berths, depth 29 ft. and 35 ft.; Whale Oil Terminal, 1 berth, depth 36 ft.

Hudson River: Tappan Oil Co., 1 berth, 35 ft. depth.

Bayonne, New Jersey: Public Oil Terminal, 3 berths, 32 ft. depth; Humble Oil Terminal, Constable Hook, up to 38 ft. depth; Belcher Oil Co., 3 tanker berths up to 38 ft. depth; Texas Oil Co., 4 tanker berths, up to 32 ft. depth; Texaco, 4 berths up to 32 ft. depth. Constable Terminal: 1 berth for handling caustic soda, chemicals, vegetable oil and molasses. 27 tanks (9 million gallons). Max. draft 31 ft. MLW.

Kill Van Kull: Lehigh Tanker Terminal, chemicals, 35 ft. depth; Humble Oil Co., 3 tanker berths, up to 38 ft. depth; Texas Oil Co., 4 tanker berths up to 32 ft. depth; Ross Oil Co., 1 berth up to 32 ft. depth.

Newark, New Jersey: 4 berths, 31 ft. and 32 ft. depth.

Elizabeth New Jersey: Chevron Oil Company, 1 tanker berth, 26 ft. depth; Crown Central, 1 tanker berth, 30 ft. depth.

Arthur Kill: **Perth Amboy,** Chevron Oil Co. (tanker berth, 26 ft. depth); Hess Oil Co. (tanker berth 30 ft. depth); Cities Service (tanker berth, 34 ft. depth); **Stolt-Nielsen,** (tanker berth max. draft 38 ft.); **Sewaren,** Royal Petroleum Co. (tanker berth, 32 ft. depth); Public Service Co. (tanker berth, 35 ft. depth); Shell Oil Co. (tanker berth, 35 ft. depth). **Port Socony,** Mobil Oil Co. (2 tanker berths, 27 ft. and 30 ft. depths). **Carteret,** American Oil Co. (tanker berth M, 25 ft. depth); General American (2 tanker berths, 25 ft. and 35 ft. depth). **Linden,** Cities Service (tanker berth, 32 ft. depth); Humble Oil Co. (tanker berth, 35 ft. depth); Sinclair Oil Co. (tanker berth 31 ft. depth). **Gulfport,** Gulf Oil Co. (tanker berth, 32 ft. depth).

Lightering Operations: Most crude and black oil tankers and an occasional clean oil tanker entering the Port of New York must be lightered before proceeding to their assigned discharge berths. All such vessels are assigned an anchorage either off Stapleton, Bay Ridge, or Gravesend Bay. (See "Anchorages" and "Approaches").

Lighters used in the New York area range from 1,000 – 12,000 d.w.t. capacity.

The U.S. Coast Guard has established regulations for oil transfer operations in U.S. waters as a means to avoid oil pollution. These regulations are enforced. The principal items covered by the new regulations are as follows:

1. Designation of person(s) in charge.
2. Qualifications of person(s) in charge.
3. Oil transfer procedures.
4. Emergency shutdown.
5. Records.
6. Requirements for oil transfer.
7. Connections, drip pans.
8. Declaration of Inspection.
9. Supervision by person in charge.

In most instances, an oil Company employed Oil Pollution Prevention Inspector will board vessel at anchorage to assist with the USCG requirements. In any case, the lighter officer must contact vessel for a joint inspection and completion of a Declaration of Inspection before oil transfer can be started.

Exxon Bayonne Terminal: The Exxon Bayonne Terminal at Bayonne, New Jersey, is located on the Northside of Kill Van Kull, 1.6 miles East of the Bayonne Bridge.

The terminals structure is a 700 ft. long concrete pier having a hose gantry and shore gangway. 2 teflon faced fenders breast the vessel out into the dredged basin.

Lube Dock – Pier 1: Docking/Mooring: Usually all vessel dock portside to at Bayonne with 2 tugs assisting. Vessels should arrive off the berth at slack water, turn, and head into the slip. Care should be taken not to have too much headway or to set down on the corner of the pier which is not fendered. Vessels should be taken completely into the slip before landing on the fenders. Fenders are teflon faced and will not slow the forward motion of the vessel. Once in position, 2 tugs will hold the ship while lines are run out. If the vessel extends past the end of the pier, then extra lines should be used aft as a precaution for the tidal current and passing traffic. Vessels having a bow thruster can undock with 1 tug, at the discretion of the Master. (See "Plan").

Hoses/Pumping: All shore connections are 6 in. A maximum pressure of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunkers are not available at this facility. Bunkering can be arranged at anchor. For bunker requirements, the vessel's Agent should be contacted prior to taking arrival at Ambrose. Fresh water is not available at the dock.

Weather: There is a history of repeated breakouts in the New area due to sudden wind shifts accompanied by strong and gusty w Vessels alongside the dock must insure that mooring lines are tau properly set. Vessels are strongly advised to maintain a VHF wea watch and to shut down operations if conditions warrant. The tem closes the berth during sustained Westerly winds of 50 m.p.h. or du sustained winds over 73 m.p.h. from any direction. During th conditions, vessel must shut down and disconnect; a tug ma required to stand by.

Fuels and Specialty Dock – Pier 6: The Fuels and Specialty docks located on the North side of Kill Van Kull, just off the Constable H Range. The terminal structure is a steel and concrete pier connecte a concrete capped turning dolphin and fender system on the offs end.

Docking/Mooring: Prior to berthing the intended docking manoeu should be reviewed with the Pilot. Information on the velocity direction of the current as well as water height should be obtained the Pilot. Tidal data is recorded from stations at the Battery, New Y and Bergen Pt., New Jersey every 6 minutes. Readings can be obtai through VHF Channel 9 KEH 567.

Generally, vessel is assisted by 2 tugs. One of the 2 tugs will m fast near the bow. The second tug stands by on the inboard bert side forward without making fast. As the vessel approaches the b the inboard tug moves aft along the ship's side. This tug then shif the outboard quarter of the vessel in order to assist in berthing the s against the dock fenders.

If installed, bow thruster should be ready for immediate use.

Ships should arrive off the berth at slack water. Care should be ta approaching the berth with minimum headway. Vessel should be ta completely into the slip before landing on the dock fenders.

Occasionally, unexpected cross currents are experienced w approaching the berth. Immediate corrective action may be required maintain the ship within the dredged area in the vicinity of the bert

Vessels approaching Pier 6 for docking on the North berth will app to be making an approach towards the South berth. When the vess bow is close to the dolphin a the end of Pier 6, the ship is moved late North and ahead a sufficient distance to clear the fender line of the N berth. This manoeuvre is necessary due to the shoal area North of dredged basin. Once in position 2 tugs will hold the ship while lines run out. If the vessel extends past the end of the pier, then extra li should be used aft as a precaution for the tidal current and pass traffic. Vessels having a bow thruster can undock with 1 tug at discretion of the Master. (See "Plan")

Hoses/Pumping: Presentation flange sizes are grade dependent a can be obtained from Agent prior to arrival. A maximum hose press of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunker C is available at this facility. Other bunk can be arranged at anchor. For bunker requirements, the vessel's Ag should be contacted prior to taking arrival at Ambrose. Fresh wate available in limited quantities at a rate of about 20 t.p.h.

Exxon Bayway Terminal: The Exxon Bayway Terminal, consisting 2 marginal type berths, is owned and operated by Exxon Compa U.S.A.

It is situated on the West bank of Arthur Kill just below Goethals Brid

Proceeding from Anchorage to Bayway: The Pilot/Mooring Master a tugs join the vessel at the anchorage. One of the tugs will assis holding the stern of the ship up against the tide if a turn is required the anchorage. Departure from anchorage is timed so that the ves will arrive off Bayway at HW slack.

Before leaving the anchorage, the Pilot will broadcast a message VHF advising other ships and New York VTS of the position of the ves and the route it will follow. Normally 2 tugs attend the vessel wh proceeding from the anchorage through the Kill Van Kull and Arthur (between Staten Island and New Jersey) to the berth.

Three bridges are passed:

Bayonne Bridge: Vertical clearance of 140 ft. over channel at MH

Lift Bridge: Vertical clearance of 135 ft. over channel at MHW.

Goethals Bridge: Vertical clearance of 137 ft. over channel at MH

Because of the heavy traffic situation in the Port of New York and close proximity of berthed vessels, ships should proceed at a modera speed during the entire passage to Bayway. Also, ship personnel sho stand-by the anchors.

On entering the Kill Van Kull the tide will be setting Northwestwa and attention is to be paid to stay well clear of the bank extend Southward from Robbins Reef.

As a rule, the Pilot will be aware in advance of seagoing vess proceeding Eastward through the Kill Van Kull. Normally the vessel not enter the Kill until such outbound vessels have cleared the entran

Extreme caution is to be exercised when approaching and pass Bergen Point (about 3 miles Westward of the entrance to the Kill V Kull) where 3 channels converge. In this are the view is obstructed the Bayonne Bridge and by oil storage tanks located on Bergen Po

The Pilot will communicate (VHF Channel 13) with the Pilots on other vessels approaching this point and make arrangements for vessel to pass this area without encountering other seagoing sh Traffic information is also obtained from the operators of the railro drawbrige across Newark Bay.

At times, cargo ships with destination Port Elizabeth wait off Berg Point for the drawbridge to open. Normally, the Pilot is aware of situation well in advance and the speed is adjusted to ensure that s ships are not passed off Bergen Point.

Berthing: The dock is a substantial concrete marginal-type bollards located on land and on the dock. Most breast lines are ru hooks located on the dock which are secured to the shore bollards wires. Spring lines are generally passed to the dock first. Large vess dock and undock with the assistance of 2 tugs.

Large ships are berthed starboard side to (see "Plan") head Southward; LPG ships docking at Berth No. 2 may berth portside (See "Report" dated August 1984).

The dredged basin at Berth No. 1 requires that the vessel be stopped off the berth and breasted into position. During docking, when vessels are in position, tugs hold the vessel alongside until all mooring lines are passed.

Passing traffic could cause the ship to break away from the Berth if mooring lines are not maintained tight and if the ship is not kept snug alongside at all times.

The following minimum moorings are required at the Bayway Pier:

Forward	*Aft*
2 head lines	2 stern lines
2 breast lines	2 breast lines
2 spring lines	2 spring lines

Depending on circumstances, additional moorings may be run out.

Departure:

1. Ships under 660 ft. LOA and mast height up to 130 ft. are turned off the berth and proceed to sea along the route which was followed when entering. The same precautions have to be taken when approaching the area off Bergen Point outward.

2. Ships over 660 ft. LOA are not turned off the berth because of limited manoeuvring space. They proceed to sea via the Southern part of Arthur Kill and Raritan Bay. A tug will accompany the ship until it has cleared Tufts Point (about 4 miles South of Bayway). The depths in the channel Southward of Bayway limit the departure draft to 33 ft.

The bridge across the channel near the Southeastern tip of Staten Island has a clearance of 143 ft. over the channel at MHW. Rounding Tremley Point (about 2 miles South of Bayway) requires particular attention. The view in this area is obstructed, therefore, before reaching this point the Pilot should ensure that there is no traffic approaching from the South which could hamper safe passage. Off Tufts Point, a 70° course alteration to starboard has to be made. The manoeuvring space is limited, and if required, the attending tug will assist in making the turn.

Tidal Information: Off Bayway the HW levels vary between 2.5 ft. and 5.0 ft. above MLW. Extreme LW has been reported as low as 4.0 ft. below MLW level. Current velocities of up to 2.0 knots are experienced.

Loading Connections: Berth No. 1 has 3×10 in. Chicksan Arms for receipt of crude oil.

Berth No. 2 has 3×10 in. Chicksan Arms for LPG receipt.

Both berths can also handle many refined black and clean products with various hose sizes up to 10 in.

Bunkers and Fresh Water: No bunkers are available through the pier connections at Bayway. All grades of bunkers may be supplied by barge, either at anchorage or while alongside the pier, providing arrangements are made in advance.

Fresh water is available in unlimited quantities, at approximately 20 t.p.h. to 25 t.p.h.

Stores, Provisions, Lubricants: All kinds of stores and provisions can be made available and delivered by truck or lighter, if advance request of at least 24 hours is received. During normal working days, stores and provisions may be supplied on very short notice.

Weather: There is a history of repeated breakouts in the New York area due to a sudden wind shifts accompanied by strong gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. During wind shifts and frontal passages, vessels have been blown off the dock with vessel and dock damage as well as pollution resulting. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant. Dock personnel will also advise vessels to shut down operations if an electrical storm is in the vicinity or if winds exceed 30 m.p.h. At 35 m.p.h. to 40 m.p.h., hoses and/or arms may be disconnected.

Belcher Bayonne Terminal: The Belcher Terminal in Bayonne, New Jersey is located 1.1 miles East of the Bayonne Bridge on the North bank of Kill Van Kull. The dock's facilities consist of 2 concrete mooring islands protecting a 600 ft. long wooden pier on which all pipe-lines and the hose gantry are supported.

Transit from Anchorage to Terminal: The Pilot/Mooring Master will board and heave anchor approximately 1.5 hours to HW (Battery). Then proceed into Kill Van Kull. 2 tugs will assist the vessel in docking. (See also Bayway Terminal).

Docking and Mooring: All vessels dock starboard-side-to with the assistance of 2 tugs. Vessels approach the terminal at time of HW slack with minimal headway. Due to the shape of the dredged basin all vessels are normally spotted off the berth and then moved broadside into position alongside the breasting islands. Tugs hold vessel in position while a small line boat runs head and stern lines to pile clusters. Note that the head line cluster is placed well inshore resulting in long (460 ft.) head lines leads. Head and stern lines cannot be wire due to the inadequacy of the small line boat. See "Plan".

Due to heavy passing vessel traffic, all mariners are advise to run extra lines to ensure that the vessel will remain safely in berth at all times.

The minimum suggested mooring arrangement is as follows:

4 head lines
3 forward springs
3 after springs
4 stern lines

Due to the poor mooring line leads from the bow, extra care should be given to the tending of all lines during the discharge. *There have been reports of vessels being pulled from the berth by passing traffic; exceptional care must be taken to properly tend mooring lines at all times.*

Hoses and Pumping: Cargo manifolds should be prepared prior to docking. The proper size and number of reducers should be in place and the blanks removed. Prior to berthing, ask the vessel's Agent what number and size of reducers are required. This will vary depending on the particular cargo being delivered. All shore hoses are equipped with 8 in. American standard flanges. Maximum working pressure allowed at the manifold is 125 p.s.i.

Bunkers and Water: Some grades of fuel oil are available from the dock in emergency situations, but most vessels bunker by barge. Fresh water is available in unlimited quantities at approximately 20 t.p.h.

Weather: There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

Shipmaster's Report: 1976.

Greater New York Terminal, Astoria, Long Island:

Location of Berth: Lat. 40° 47′ N., Long. 73° 53.7′ W.

Distance from Entrance to Berth: 28 miles.

Max. Size at Berth: LOA, 900 ft. Draft, Pilot stated 34 ft.

Restrictions: Vessel should be ballasted sufficiently to pass under Brooklyn Bridge, clearance 127 ft.

Vessels may berth and unberth day and night but only at certain stages of the tide.

Anchorage: At Stapleton as designated by USCG.

Terminal Information: Starboard side manifold to barge at Stapleton Anchorage, use 6 in. hoses. Port side manifold used at the berth, ship's hoses not required. The connection is 12 in. running into 18 in. Nearest shore tank 1,000 ft. from berth. Line fitted with steam jacket but not efficient. Max. pressure allowed 125 p.s.i. Shore gantry used at berth. Derrick used at anchorage for discharging into barge. Product handled: Fuel Oil (Heating Oil). No slop tanks available.

General: Pilotage compulsory. Ambrose Pilot requires 24 hours' notice of arrival. Radio station handling traffic is Chatham. Most services are available at the berth, however it is advisable to take stores and send laundry from Stapleton Anchorage as there is no means of delivery at the berth other than carrying by hand. Stapleton Launch Service, tel. 981-8333/8384. Fresh water may have to be taken by barge in very severe weather as shore lines become frozen.

Approaching: From a Line from Rockaway Inlet to Ambrose thence Highlands Light, vessel must remain on VHF Channel 13 for ship-to-ship communication. When Pilot on board he maintains this Channel and ship can use own VHF other Channels. Marine operator on VHF 26 (call). For the passage of East River (remember Brooklyn Bridge Clearance 127 ft.) one tug each bow alongside. After Hell's Gate and passing Port Morris to port, vessel cants to starboard to pass between North and South Brothers to starboard and Rikers Island to port through 500 ft. wide buoyed channel (some unlit) South to berth (inwards). It is preferable to come through Hell's Gate at HW or LW slack, thus avoiding cross currents between Brothers at other times.

Report: August 1984.

Exxon LPG Berth at Bayway:

United States Coastguard requires all vessels with cargo on board (other than heel) to both enter and depart via Southern Channel, regardless of length. If vessel discharges completely (only heel remaining), then vessel is considered non-dangerous by U.S.C.G., and may depart via North Channel (without turning). (If completely discharged, other gas carrier restrictions – daylight only, 2 mile visibility, etc. – also do not apply.)

There are obstructions to South of Exxon berth which limits distance between manifold and bow or stern to 330 ft. (May be stretched to 335 ft. by Exxon on case by case basis.)

Other limitations given by Exxon for berth:

Draft: 31 ft.
Beam: 100 ft. (may be stretched)
Manifold Position: 13 ft. to 68 ft. above water line, 6 ft. to 15 ft. from deck edge.

Therefore any vessel which sails with part cargo must be turned for departure to comply with U.S.C.G. although it is physically possible to turn vessels up to 725 ft. – 730 ft. LOA off Exxon Berth provided there is no vessel berthed opposite Exxon at Gulfport (it has been done). Exxon is afraid that vessel might damage sea water intake structure for refinery while turning, and therefore says vessels longer than 660 ft. (may be stretched to 680 ft.), cannot be turned.

Other possibilities for turning are:

Continue North about 1 mile to Elizabethport Container Terminal where channel is wider.

Back ship anywhere between a few ship lengths to 0.5 miles South of Exxon, and then turn. We were advised by East Coast Pilots that it is possible to turn ship up to 730 ft. LOA at that location, with draft limit 25 ft. forward, 30 ft. aft. However, others advise that although oil tankers customarily turn at that location, it involves touching bottom (mud) at bow, and is therefore inadvisable for gas tankers.

FRESH WATER: Available at most piers in the port district at a nominal rate. Water barge available to serve vessels at anchor in emergency but this is expensive.

FUEL: All grades of fuel readily available. Except for tankers loading or discharging, bunkers are normally delivered by barge. It may be economical to shift vessel to refuelling berth.

NIKISKI (including Kenai), Alaska: 60.41 N. 151.24 W.

(See Plan)

Located on West side of Kenai Peninsula between Homer and Anchorage. Pan and brash ice in Inlet from November to March. Never freezes solid. Open all year.

Nikiski is approximately 12 miles from the city of Kenai and has a group of 3 berths, privately owned by Unocal Chemical Division (manufacturer of liquid ammonia and urea which is exported by tankers and bulk vessels), Phillips Petroleum Co. (manfacturers of liquid natural gas which is exported by Marathon tankers to Japan) and Kenai Pipeline Dock (which operates the dock for Tesoro Alaska Petroleum Co. which exports residual fuel oil and diesel products on various tankers).
DOCUMENTS: See "Anchorage, Alaska".
APPROACHES: Via Cook Inlet.
PILOTAGE: Pilot pick-up point 1 mile South of Homer Split light. Also see "Homer" Pilotage.

Vessels are docked by pilots using tide and current for assistance. Transit time from pilot station in Homer, Alaska to Nikiski is 6 – 7 hours.
ANCHORAGES: Good anchorage.
MAX. SIZE: Harbour depth in excess 40 ft. Max. size 80,000 d.w.t. Tides diurnal range 28 ft. Also "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, local. Immigration and Customs from Anchorage, Alaska.
TUGS: Not available.
BERTHING:

1. Port Nikiski Dock: 3 sided, 550 ft. long, 200 ft. on each side, 1,000 ft. wide, 12 feet at MLLW. 400 ft. by 75 ft. covered storage.
2. Three finger piers for tankers and bulk carriers. All exceed 40 ft. depth at MLLW.

All 3 berths are dolphin berths ideal for rapid bulk loading. Main products:

(a) Unocal Chemicals and Minerals Dock: Bulk urea and ammonia liquid. Vessels docking at Unical require between 20 – 24 lines, depending on length and beam of vessel and season. Loading of urea is done through fixed spout, loading rate approximately 800 short tons per hr. Vessel must shift alongside from hold to hold. This is only done during slack tide which is about every 6 hours and lasts for about 1 hour.
Also see "Shipmaster's Report".
(b) Phillips Petroleum Dock: Petroleum products and liquid natural gas.
(c) Kenai Pipe-line Dock: Refined and crude petroleum products.

Vessels at Kenai Pipeline Dock must maintain 5 ft. under keel clearance at all times. Vessels require 8 wires in their mooring arrangement and must have 12 lines as a minimum and 18 – 20 lines in Winter.
STEVEDORES: Two gangs.
MEDICAL: Health Centre, 3 doctors, 3 dentists.

TANKERS: Report: February, 1985.

Vessel to load ammonia at Kenai in position 60° 33′ N., 151° 16

Regulations:

1. Vessel must have on board 20-24 mooring lines, each a min of 400 ft. in length, depending on weather on arrival.
2. Fresh water cannot be obtained or loaded at the wharf. Provis to be obtained through ship chandler.
3. No preventative engine maintenance can be allowed at the w and vessel's engines must be maintained in such a way as to pe immediate manoeuvring power at all times while vessel is alongside berth.
4. Sufficient vessel personnel must remain on board during load to handle any emergency situation and adequate deck watch must maintained on a 24 hour basis.
5. For proper light ship survey vessel must arrive suitably trim and sufficiently submerged both fore and aft.
6. Ballast tanks must be either full or empty and all cargo holds m be totally devoid of any ballast.
7. Please also ensure vessel has all certificates in order, including Pollution Certificate (Certificate of Financial Responsibility).

General:

Please obtain Master's acknowledgment and confirmation of above. Advise Master that pilot station is located Lat. 59° 36.2′ N., Lo 151° 24.5′ W. Master should cable ETA Homer pilot station to Agen

Master to monitor ITT KFS (San Francisco) while in transit. If s has telex on board, please provide number.

Rental mooring lines available at U.S.$300 each plus load unloading costs of U.S.$1800. Advise how many lines onboard a Agent will request funds based on how many rental lines necessary

Berth Operator sometimes makes exceptions to restrictions on a ca by case basis.

IFO fuel is virtually unobtainable in Alaska. While there is one supp at Kenai (and none elsewhere in Alaska), they have a long standing a firm 5,000 bbl. minimum requirement with no exceptions.

Vessel will vacate berth during purging and will either purge at anc off berth or at Homer.

Load rate 400 tonnes/p.h., except during purging, when rate mu slower.

Confirm vessel has Letter of Compliance issued by Coast Guard a that vessel has been licensed to carry propane/ammo simultaneously.
REPAIRS: Repairs of a minor nature can be carried out in Homer.

Small machine shop also available in Homer.
FRESH WATER: Available by barge from Homer at a cost of U.S.$15 per ton (minimum supply 150 tons). For supply contact Cook Inlet Mar (Tel: 235-8086).
FUEL: Only available if minimum 5,000 bbls. ordered from Tesoro.
TRANSPORTATION: Highway to Anchorage and Homer. Air transp available.
SERVICES: Saling Ship Services (see "Agent") can supply limi stores (fresh provisions, rice, flour, dry goods and soft drinks, but bonded stores).
GENERAL: Port is open all year. Winters vary, some being mild a some being severe. The port has had ice in years past from Novem till March.

Currents are between 4.0 knots and 6.5 knots.

Kenai is a town of 5,000 people with several banks, supermarkets mall, dental and medical offices. The Central Peninsula Hotel is loca in Soldotna, a small neighbouring town 12 miles away. Kenai also h several motels, a theatre, book store and post office. Excellent fish during June, July and August. Fresh salmon available during this ti

SHIPMASTER'S REPORT: July 1985 (Updated 1992).
Unocal Chemicals and Minerals Dock: (Formerly Collier Pier):

In addition to the comments on the "Plan", which see; the follow notes are to be considered as a advice to those entering the Por Nikiski:

Mooring without tugs. There is a 24 hour mooring service.

No mooring during slack tide.

Currents from up to 1.5 knots to 6.0 knots experienced.

Whilst mooring present bow first as near as possible to the pier at angle of about 25° to the pier.

Firstly pass 2 spring lines and 2 head lines forward, engines runn ahead for riding off the current.

It is most important during the entire mooring operation to hold b forward springs and both head lines tight.

Send out 2 breast lines forward; tighten; put both head lines on t bitts making sure not to allow any slack.

Send out 2 spring lines and two stern lines aft and tighten.

Send out 2 breast lines aft as soon as both stern lines are on the b and heave the stern along. Keep both aft springs tight at all times.
Note: Ships loading urea have to shift alongside when changing another hatch, as the conveyor belt is a single point loading type.

Whilst shifting along the pier be aware of strong currents, or ic Winter season getting caught between pier and ship's bow.

SHIPMASTER'S REPORT: October 1987 (Updated 1992).
Unocal Chemicals and Minerals Dock: This dock is the Southernm dolphin berth and extends into the sea for approximately 800 m. It h a fixed loader for Urea. Ammonia gas is also loaded at this berth.
Anchorage: No anchoring allowed off Nikiski or Kenai. If the vesse has to vacate the berth for a priority vessel/barge, the vessel is ta back to Homer, a distance fo 84 nautical miles.
Berthing: Well handled by Pilots, making use of the tidal streams tugs available. The tidal stream runs at up to 6 knots and the range the tides are up to 28 ft. For this reason a vessel is moored with a t of 14-24 ropes, depending on size of vessel and weather conditio Extra ropes can be hired and put on board at Homer Pilot Station.

Shifting alongside: This is only possible shortly before the changing of the tide. At all times have engines ready. Shifting up to 50 m. (2 holds) is not too difficult. We shifted from Hold No. 1 to No. 5 (100 m.) which took us about 3 hours. This is a much bigger operation than mooring as all ropes have to be shifted and there are only 4 men available ashore to assist. Also, by the time we finished there was already a strong flood tide running. When shifting over such a distance, I advise vessels to make use of a pilot.

Ice/Winds: According to pilots, some ice in Winter which makes berthing even more difficult. Strong southern winds may cause swell alongside.

Bunkers: Apparently fuel is available at another dolphin berth when unoccupied, but probably expensive.

Provisions: Ship chandlery service is available (Saling Ship Services). No vehicular access to the vessel. Provisions transported on small car which runs through narrow 1 km. tunnel to the gate. This is also used by the crew.

Loading: Loading rate approximately 500 – 700 tonnes/hr. The figures of a draft survey are taken for the final cargo loaded.

AUTHORITY: *Operators:* Unocal Chemicals and Minerals Division, P.O.Box 575, Kenai, Alaska 99611. *Tel:* (907) 776-8121. *FAX:* (907) 776-5579. *Contact:* D.W.Allred, Supervisor – Shipping.

Phillips Petroleum Co., Drawer 66, Kenai, Alaska 99611. *Tel:* (907) 776-8166. *Contact:* L. Porter, Supervisor – Vessel Operations.

Kenai Pipeline Company, P.O.Box 5555, Kenai, Alaska 99611. *Tel:* (907) 776-5555, 776-8711. *Contact:* O.E. Jackson, Operations Supervisor.

AGENT: Saling Ship Agency, 427 Rogers Road, Kenai, Alaska 99611, U.S.A. Tel: (907) 283-5053. Fax: (907) 283-4794.

NORTHPORT, New York: 40.57 N. 73.20 W. (See Plan)

LOCATION: The Northport offshore oil discharge facility is operated by the Long Island Lighting Company. It is located in Lat. 40° 57′ 15.4″ N., Long. 73° 20′ 29.6″ W., approximately 10,000 ft. offshore from the power station, and approximately 2.6 miles East of Eatons Neck Point.

APPROACHES: *Approaches to Pilot Station and Transit to Northport:* On approaching Block Island from the South, Block Island's high Southern shore provides a good radar target. Also, bearings can be taken from the RDF station at Southeast Light.

It is advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are several dangers to be wary of when making the passage from the pilot station to Northport.

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.

Caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound in view of the heavy small boat traffic, especially in the area in proximity to The Race. Dense fog is prevalent during the Summer months.

Good water is found in Long Island Sound from The Race to Northport as long as the mid-channel buoys "P1" and "CF" are passed close by and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" Buoy. "Stratford Shoal" should be passed to the South.

In the event that adverse weather restricts berthing, vessels should anchor, if necessary, North and East of the facility to avoid electric cables on the bottom. The submarine cables lie West of the facility and are shown on Chart No. 12363.

PILOTAGE: Pilotage is arranged by the vessel's Agent. A Pilot will be required to standby aboard vessel throughout transfer.

Vessels approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

The pilot boat 'Rhode Island Pilot' or 'Northeast Pilot' should be called via VHF Channel 16 approximately 1 hour prior to arrival at the pilot station.

ANCHORAGES: All vessels are advised that 7 submarine electric cables lie West of the facility, as shown on USC & GS Chart No. 1213. To avoid any possibility of damage to these cables, vessels should anchor (if necessary) North and East of the facility.

RESTRICTIONS: Berthing of vessels shall be limited to 1.5 hours prior to and 30 minutes following high slack water, and shall be prohibited when winds exceed 20 knots.

MAX. SIZE: The maximum size vessel for which the Long Island Lighting Company can presently provide a safe berth, is a ship with a loaded displacement tonnage not to exceed 70,000 long tons and meeting all of the additional parameters as follows:

Hull Design:	Welded construction only.
Cargo Holds:	Compartmented.
Max. Length overall:	825 ft.
Max. Draft:	40 ft. at H.W.
Max. Beam:	144 ft.
Rail to Manifold:	15 ft. maximum.
Loaded Freeboard:	10 ft. minimum.
Light Freeboard:	40 ft. maximum.
Number of Mooring Lines:	20 independent lines.
Bow to Manifold:	50% of LOA.

RADIO: *ETA:* Vessels are required to send ETA message 72, 48 and 24 hours in advance of arrival at Block Island Pilot Station. These messages are to be sent to Agent in New York. Advise arrival draft (salt water) in initial message.

VHF: Pilots can be contacted on VHF Channels 16, 13 and 18A.

TUGS: A minimum of 2 tugs are required for mooring and a minimum of 1 tug for unmooring. Terminal requires 1 tug in attendance while vessel is alongside. A launch is provided by terminal to run vessel's lines to the mooring buoys. Launch will stand-by throughout operations.

BERTHING: *Precautionary Weather Information:* There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the platform must insure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

The terminal requires suspension of transfer operations and clearing of the berth whenever sustained winds of 45 m.p.h. or greater are anticipated. Southerly winds (off the platform) of 30 m.p.h. may require similar action. The terminal is equipped with an anemometer. Similarly, heavy swells may require the suspension of transfer operations.

Berth Facilities: The berth consists of 3 concrete platforms and 6 mooring buoys. The 2 outer platforms provide a breasting face of 310 ft. The centre platform is fitted with 2×12 in. Chicksan arms for fuel oil unloading, and is 19 ft. above Mean Low Water.

A quick flashing white light is located 26 ft. above the extreme outboard end of each breasting platform.

Each mooring buoy is fitted with a quick release hook.

Berthing Operation: Vessels approach Sea Berth stemming current and/or wind.

Berthing port side to is recommended, weather permitting.

Moorings: It is imperative that the vessel remains in position alongside the berth. LILCO considers the minimum safe mooring for this berth to be as follows:

1. Two lines to buoy "A" (synthetic or steel).
2. Two lines to buoy "B" (synthetic or steel).
3. Two lines to buoy "C" (steel preferred, synthetic acceptable).
4. Two lines to buoy "D" (steel preferred, synthetic acceptable).
5. Two lines to buoy "E" (synthetic or steel).
6. Two lines to buoy "F" (synthetic or steel).
7. Two bow springs to one breasting platform bollard (steel preferred, synthetic acceptable).
8. Two stern springs to the other breasting platform bollard (steel preferred, synthetic acceptable).
9. Two lines from well deck to East breasting platform bollard (synthetic).
10. Two lines from well deck to West breasting platform bollard (synthetic).

Note: There shall be no mixing of wire and synthetic lines on any one buoy.

A boat will be provided by LILCO to handle the vessel's lines to the mooring buoys. Personnel will be provided to handle the vessel's lines to the breasting platform bollards.

Warping winches must be adequate to handle mooring lines under heavy strain. Stoppers must be readily available to stop off mooring lines for transfer from winch to bitts without loss of tension. Mooring lines secured on surge or tension winches are prohibited; any line on a winch must be set tight using the brake only.

CARGO OPERATIONS: The Chicksan arms are designed to permit fore and aft drift and some lateral movement. However, vessel should maintain position at all times. Failure to observe this will result in suspension of operations and disconnection of unloading arms. Ship's crew connect and disconnect arms.

Ships equipped with inert gas systems shall have such systems in operation prior to berthing, throughout the transfer and until the ship is released from the facility and underway.

A responsible member of the ship's crew, *capable of speaking and understanding the English language,* must be available on the vessel's deck to take any remedial action necessary to maintain safe and efficient cargo transfer.

FRESH WATER/FUEL/STORES: Bunkers and fresh water are not available ex-berth. Stores cannot be loaded from dock.

Transfer of bunkers from barge is not permitted while alongside.

MEDICAL: There is a hospital in Huntington, New York, Tel. No. 516-351-2000. Medical attention must be arranged by the vessel's Agent. The nearest United States Public Health Service Marine Hospital facilities are in New York City, which is approximately 45 miles West of Northport.

GENERAL: *Fire Fighting Facilities:* The terminal has very limited fire fighting equipment. 4×100 lb. CO2 extinguishers are provided; no fixed fire fighting gear is available. The standby tug is fitted with a low capacity fire pump hose.

Fire wires should be hung, one forward and one aft, on the offshore side for easy reach by a tug in case of fire.

The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

Pollution: All U.S. harbours have stringent pollution regulations forbidding the discharge of oil into harbour waters or the emission of heavy smoke. Long Island Sound is a particularly sensitive area and all anti-pollution regulations are rigidly enforced. In the event of an emergency or pollution, the Agent should be contacted immediately.

Launch Service: LILCO does not provide launch service for ferrying of ship's personnel or stores. Vessels must make their own arrangements for such service. The LILCO standby boat is for the exclusive use of LILCO personnel, and will not be used for launch service. The LILCO standby boat will be used for initial boarding upon arrival.

Customs and Immigration: Northport is a Port of Entry whenever a vessel docks without first calling at another United States port. Entry and clearance must be arranged by the vessel's Agent. The appropriate authorities in New York City must be advised well in advance of the vessel's arrival; 24 hours advance notification is recommended as a minimum.

AUTHORITY: Long Island Lighting Co., Northport Power Station, Waterside Avenue, Northport, N.Y. 11768. *Tel:* (516) 262-2293. *FAX:* (516) 757-5797. *Contact:* Kevin Fox, Chief Engineer.

OAKLAND, California: 37.50 N. 122.18 W. (See Plan)

See "San Francisco" *for Documents, Pilotage, etc.*

RESTRICTIONS: Minimum depth in harbour 35 ft. Tidal range 5.6 ft.
HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness Reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 4,200 h.p. – 9,000 h.p.
BERTHING:

Outer Harbour:

Bay Bridge Terminal: Berths No. 8, 9 and 10.
Operator: Pasha Maritime (For information call Port of Oakland).
3 Berths:
Berth 8: Length 304 m.
Berth 9: Length 366 m.
Berth 10: Length 256 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Facilities: Accepts Ro/Ro barges, combination ships.
Services: Water, lights, fencing, taxi, telephone.
Temporarily inoperative due to 1989 earthquake damage.
Multi-purpose cargo terminal designed to handle general cargoes, steel, autos and containers.

Sea-Land Terminal: Berths No. 20, 21 and 22. (Containers; preferential assignment to Sea Land).
Operator: Sea Land Services, Inc., 1425 Maritime Street, Oakland, CA.94607. Tel: (510) 271-1000. Fax: (510) 271-1277. Terminal Manager: J. Christopher Lytle.
3 Berths: Total length 699.2 m.
Deck Height: 4.3 m.
Depth: 12.2. m.
Cranes: 4×30 ton container gantry cranes.
Storage System: Chassis.
Reefer Capacity: 250 outlets × 480V.
Total TEU Storage Capacity: Over 3,900.
Total Terminal Area: 26.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

Marine Container Terminal: Berth No. 23. (Containers; preferential assignment to NYK/NOL).
Operator: Yusen Terminals, inc., 1195 Maritime Street, Oakland, CA. 94607. Tel: (510) 271-1800. Fax: (510) 763-5728. Terminal Manager: Edward Stellin.
1 Berth: Total length 274 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 2×40 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 98 outlets (56×480V; 42×240V and 96 portable 240V).
Total TEU Storage Capacity: Over 3,200.
Total Terminal Area: 16.2 hectares.
Rail Spur for direct Transfer.
Services: Water, light, fencing, taxi, telephone.

Maersk Terminal: Berth No. 24. (Containers; preferential assignment to Maersk Line).
Operator: Maersk Pacific Ltd., 909 Ferry Street, Oakland, CA. 94607. Tel: (510) 835-7500. Fax: (510) 763-3545. Terminal Manager: Michael Bourgault.
1 Berth: Length 319 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 3×50 ton container cranes.
Storage System: Chassis.
Reefer Capacity: 157 outlets × 480V.
Total TEU Storage Capacity: Over 2,700.
Total Terminal Area: 18.5 hectares.
Rail Spur for direct Transfer.
Services: Water, lights, fencing, taxi, telephone.

TransBay Container Terminal: Berths No. 25 and 26. (Containers; preferential assignment to K-Line).
Operator: TransBay Container Co., 707 Ferry Street, Oakland, CA.94607. Tel: (510) 839-8228. Fax: (510) 444-6219. Terminal Manager: Robert Bergman.
2 Berths: Total length 412.4 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 2×40 ton container gantry cranes.
Storage System: Transtainer, chassis.
Reefer Capacity: 120 outlets × 240V. (capability for another 50 outlets).
Total TEU Storage Capacity: Over 2,400.
Total Terminal Area: 11.3 hectares.
Services: Water, lights, fencing, taxi, telephone.

7th Street Complex:

Matson Terminal: Berths No. 32, 33 and 34. (Containers/break preferential assignment to Matson).
Operator: Matson Terminals, Inc., 3050 7th Street, Oakland, CA.94 Tel: (510) 271-9756. Fax: (510) 465-2803. Terminal Manager E. Roselle.
2 Container Berths: Total length 468 m.
1 Ro/Ro berth: 219 m. with concrete dolphins.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 1×28 ton, 1×30 ton and 1×40 ton gantry container cra
Storage System: Straddle carrier, chassis.
Reefer Capacity: 460 outlets × 240V.
Total TEU Storage Capacity: Over 5,500.
Total Terminal Area: 26.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

TraPac Terminal: Berth No. 35. (Containers; preferential assignme Mitsui OSK).
Operator: Trans Pacific Container Service Corp., 5100 Ferry St Oakland, CA.94607. Tel: (510) 834-0680. Fax: (510) 834-0681. Term Manager: Michael LaPorte.
1 Berth: 329.4 m. in length.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 3×50 ton container gantry cranes.
Storage System: Chassis.
Reefer Capacity: 96 (portable) × 480V.
Total TEU Storage Capacity: Over 1,200.
Total Terminal Area: 5.2 hectares.
Services: Water, lights, fencing, taxi, telephone.

Marine Container Terminal: Berths No. 37 and 38. (Container; pu user facility).
Operator: Marine Terminals Corp., 520 Third Street, Oakla CA.94607. Tel: (510) 891-0990. Fax: (510) 763-9086. Term Manager: Russel Houk.
2 Berths: Total length 592 m.
Deck Height: 4.3 m.
Depth: 12.2 m.
Cranes: 2×40 ton and 1×30 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 96 (portable) × 480V.
Total TEU Storage Capacity: Over 2,500.
Total Terminal Area: 14.4 hectares.
Services: Water, lights, fencing, taxi, telephone.

Berth 40: General cargo, contact Port of Oakland.
1 berth: 188 m. in length.
Deck Height: 4.3 m.
Depth: 10.7 m.
Restricted capability due to earthquake 1989.

Middle Harbour:

American President Lines: Berths No. 60, 61, 62 and 63. (Contai preferential assignment to APL).
Operator: Eagle Marine Stevedoring, 1395 Middle Harbour Ro Oakland, CA. 94607. Tel: (510) 272-2010. Fax: (510) 272-79 Terminal Manager: Robert Fairbanks.
4 Berths: Total length 836 m.
Deck Height: 11.6 m.
Cranes: 4×40 ton and 2×45 ton container gantry cranes.
Storage System: Chassis.
Reefer Capacity: 344 outlets, 151×240V, 193×480V.
Total TEU Storage Capacity: Over 4,500.
Total Terminal Area: 30.5 hectares.
Services: Water, lights, fencing, taxi, telephone.

Inner Harbour:

Howard Terminal: Berths No. 67, 68 and 69. (Containers; public facility).
Operator: Stevedoring Services of America, 1 Market Street, Oakla CA.94607. Tel: (510) 271-1889. Fax: (510) 451-4779. Term Manager: Sandra Lira.
3 Berths: Berths No. 67 and 68: Length 500.5 m., plus 21.3 m. dol
Berth No. 69: Length 173 m.
Deck Height: 4.3 m.
Depth: 12.2. m.
Cranes: 2×40 ton and 1×50 ton container gantry cranes.
Storage System: Port-packer, transtainer, chassis.
Reefer Capacity: 144 outlets×480V.
Total TEU Storage Capacity: Over 3,000.
Total Terminal Area: 19.8 hectares.
Services: Water, lights, fencing, taxi, telephone.

Ninth Avenue Terminal: Berths No. 82, 83 and 84. (General cargo, s lumber; public user facility).
Operator: Marine Terminals Corp., 520 Third Street, Oakla CA.94607. Tel: (510) 891-0990. Fax: (510) 763-9086. Term Manager: Robert Holoch.
3 Berths: Berths No. 83 and 84: Total length 348 m.
Berth No. 82: Length 282 m.
Deck Height: 4.3 m.
Depth: 10.7 m.
Cranes: 4×100 ton mobile cranes.
Storage System: As required.
Reefer Capacity: As required.
Total TEU Storage Capacity: Limited.
Total Terminal Area: 8.02 hectares.
Services: Water, lights, taxi, telephone.

Schnitzer Steel Products: Private Berth. (Scrap metals).
1 Berth: 240 ft. at each of 2 pier faces.
Deck Height: 14 ft.
Depth: 33 ft.
Services: Water, light, taxi.

STEVEDORES:
Metropolitan California Stevedore Company. Tel: (211) 816-6500.
Levin-Richmond Terminal. Tel: (415) 232-4422.
Marine Terminals Corporation. Tel: (415) 986-6576.
Matson Terminals. Tel: (415) 271-9333.

Tweed Towing Inc. Tel: (415) 233-4213. Tugs up to 4,200 h.p.

GARBAGE DISPOSAL: Alongside drop-box service available for any garbage-debris only. Contact Terminal Operator to arrange service, 48 hours advance notice required.

WASTE OIL DISPOSAL: Normally not available. Limited tank truck service available in emergency. Contact Terminal Operator.

SEAMAN'S CLUBS: Apostleship of the Sea, 600 Terminal Street, Oakland. Facilities: Meals, snacks, bar, football, money exchange, international telephone, transport to town centre.

AUTHORITY: Port of Oakland., 530 Water Street (P.O. Box 2064), Oakland, California 94604-2064, U.S.A. *Tel:* (510) 272-1100. *FAX:* (510) 839-3458. *Contact:* Charles R. Roberts, Executive Director. Charles Foster, Deputy Executive Director. William D. Stevens, Director of Maritime. Raymond A. Boyle, General Manager – Marine Terminals Department. Tel: (510) 272-1300.

OGDENSBURG, New York: 44.42 N. 75.30 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Seaway Pilot boards at Cape Vincent or Snell Lock and acts as docking Pilot.

ANCHORAGES: Anchorage area West of city at open roadstead area.

RESTRICTIONS: No tide. No restrictions other than Pilots' discretion as to wind and visibility.

MAX. SIZE: Largest vessel to enter 730 ft. long. Draft 27 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

RADIO: Western Union to OCN Corp. VHF Seaway Channel via Maria Radio Cardinal.

TUGS: No tugs necessary.

BERTHING: By prior notice only. Port Authority Terminal, length 1,200 ft., depth 27 ft. One Grain Elevator capacity 500,000 bushels.

CRANES: Available, up to 82 tons capacity.

BRIDGES: Ogdensburg/Prescott International Bridge – 126 ft. clearance MWD.

STEVEDORES: Order by 1800 hrs. day preceding arrival. Advise any change of ETA.

MEDICAL: Excellent medical service and availability of doctors. No vaccination necessary.

DENSITY: Fresh water.

FRESH WATER: Available by pipeline at Port Authority Terminal.

FUEL: One day's notice, all grades. Diesel, Bunker "C", Kerosene.

REPAIRS: Limited dockside repairs available.

GANGWAY/DECK WATCHMEN: Normally not used.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Tobacco, wine/spirits, normal Customs allowance U.S. Ports.

CARGO GEAR: 25 ton mobile crane, fork trucks to 13 tons capacity. Ship's gear to be in good working order.

REPATRIATION: Can be arranged.

AIRPORT: (0.5 mile from city). Chautaugua Airline – 3 flights daily to Syracuse, New York, etc.

TIME: Eastern Standard Time GMT minus 5 hours. Daylight Saving time in Summer GMT minus 4 hours from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year; Washington and Lincoln's Birthdays; Memorial Day; 4th July. Labour Day, Veteran's Day.

POLICE/AMBULANCE/FIRE: Police, Tel: 393-1551; Ambulance, Tel: 393-1221; Fire, Tel: 393-1010.

TELEPHONES: Available at Pierside (315) 393-7580.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Needed as per Immigration Department requirements.

AUTHORITY: Ogdensburg Bridge and Port Authority, Bridge Plaza, Ogdensburg, New York 13669. *Tel:* (315) 393-4080. *FAX:* (315) 393-7068. *Cables:* Ogdenport. *Contact:* Salvatore L. Pisani, Port Director.

OLYMPIA, Washington: 47.00 N. 122.53 W. (See Plan)

PORT LIMITS: Vessel is to be considered an "Arrived Ship" at the Port of Olympia, Washington, when anchor is dropped in Budd Inlet or when the vessel is all fast at the dockside.

DOCUMENTS: See "Tacoma".

PILOTAGE: The vessel picks up Puget Sound Pilot at the Port Angeles Pilot Station located at the entrance to Puget Sound on the Straits of Juan de Fuca, and it is normal for the vessel's Agent to provide the pilot station with a 48-hour, 24-hour, 12-hour and 8-hour ETA. The pilot station monitors VHF Channel 13.

ANCHORAGE: Safe anchorage is located North of Olympia Shoal in 30 ft. to 45 ft. of water. The bottom is sandy and area is a sheltered inlet.

RESTRICTIONS: Channel depth 30 ft. MLW with a high tidal range of 14.4 ft. Also restricted turning basin of 800 ft. Vessels max. size would be governed by the turning basin of 800 ft. and draft of 30 ft. at MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: "KPH" San Francisco or Mackay Radio, Everett "KLB".

VHF: No VHF other than Pilot to tug or ship to tug available at Olympia.

TUGS: 2 Crowley Maritime tugs are berthed at the port. They use ship's lines to assist the vessel in turning at the turning basin and to moor.

BERTHING:
Berth No. 1 is a concrete dock with depth of 40 ft.
Berth No. 2 is a concrete dock with 40 ft. depth MLW.
Berth No. 3, is a concrete dock with 40 ft. depth MLW.

BULK CARGO FACILITIES: Presently discharged with ship's gear at Berths No. 1 and 2. Primary back-up cargo yard of approximately 12 acres handling coke, coal, pig iron and other bulk-type cargoes.

SPECIALISED CARGO HANDLING FACILITIES: Olympia has approximately 100 acres of open cargo yard; 33 acres are paved, however, it can be adapted for Ro-Ro traffic and is presently engaged in handling bulk cargoes such as coal, coke, etc.

Warehousing: Olympia has a 76,000 sq.ft. warehouse between Berths Nos. 1 and 2. The site has a 150 ft. apron from the face of the pier and is served by rail. In addition, there is another 40,000 sq.ft. of off-dock warehousing available for cargo storage.

BRIDGES: None pertinent to this area.

STEVEDORES: 3 stevedoring companies available in the Olympia area. 9 local gangs available for loading or discharging.

MEDICAL: Medical and hospital facilities are available without prior notification for emergencies; otherwise all medical and dental requirements can be taken care of by appointment.

TANKERS: No shore facilities for loading or unloading of tankers.

DENSITY: Salinity is on an average 29 parts per thousand.

FRESH WATER: Delivered to vessel by shoreside hose.

FUEL: Most grades available by barge from Seattle for fueling at dockside.

FIRE PRECAUTIONS: Standard for U.S. ports.

CONSULS: Most located at Seattle 60 miles to the North.

REPAIRS: All types of repairs possible.

DRY DOCKS: None available in Olympia. Nearest 60 miles to North at Seattle.

SURVEYORS: Lloyd's, A.B.S., N.V. available out of Seattle area.

GANGWAY/DECK WATCHMEN: Not required at Olympia under most circumstances unless crew members detained.

CUSTOMS ALLOWANCES: Sufficient quantities of tobacco, wine and spirits are permitted out of bond for each crew member sufficient to cover length of stay anticipated at the time of arrival. Actual quantities are at the discretion of the boarding customs officer.

CARGO GEAR: Generally vessels are loaded and/or discharged using ship's gear.

REPATRIATION: Facilities exist for repatriation of crew members.

AIRPORT: Local airport service by commuter airlines only. Major international airport (Seattle-Tacoma) located 40 miles to the North.

TIME: GMT minus 8 hours. Daylight saving time in effect during Summer months, from first Sunday in April to last Sunday in October.

HOLIDAYS: Official holidays observed by the State of Washington for 1980 were: January 1st, February 12th, February 18th, May 26th, July 4th, September 1st, November 11th, November 27th, November 28th and December 25th.

Work is available on an overtime basis on all days except Christmas, December 25th; January 1st, New Year's Day; July 4th and 5th; 4th Thursday in November (Thanksgiving).

POLICE/AMBULANCE/FIRE: Telephone dispatch for emergency services, the numbers 911 dialled on any public telephone.

TELEPHONES: Public telephones are located within 100 ft. of any berth and are not provided on board the vessel.
SERVICES: Tank-cleaning, tank-washings, compass adjusting, etc., are all available from the Seattle area, located 60 miles to the North, and most services provide travelling repairs.
SHORE LEAVE: Crew are allowed shore leave by U.S. Immigration, depending on individual case.
IDENTIFICATION CARDS: Not issued by the Port of Olympia, and Seaman's Book is generally sufficient to allow Immigration to determine whether shore leave should be granted.
GARBAGE DISPOSAL: Service available from Seattle Disposal Co., 54 South Dawson Street, Seattle. Tel: (206) 763-2800.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
REGULATIONS: Similar to all North American ports; no special rules or regulations applied to vessels by the Port of Olympia. Rules are set forth in Tariff No. 7.
DELAYS: Only delays that should be encountered at the Port of Olympia would be in the event of berth congestion.
GENERAL: Rail Service: The Port of Olympia is served directly by the Burlington Northern and Union Pacific railroads.

Highway Access: The Port of Olympia is 0.7 miles from Interstate Highway 5, the major North-South highway on the West coast. Access to and from the Port is unobstructed.
AUTHORITY: Port of Olympia, 915 Washington Street N.E., P.O.Box 827, Olympia, Washington 98507-0827. *Tel:* (206) 754-1650. *Telex:* 152689. *FAX:* (206) 586-4653. *Contact:* Bill McGregor, Director of Operations.

ORANGE, Texas: 30.06 N. 93.44 W. **(See Plan)**

DOCUMENTS: Crew Lists, Passenger List and Customs Documents.
PILOTAGE: Radio to Agent, 12 hours and Pilots 2.5 hours in advance of ETA. Pilots contacted by VHF Channels 12 and 13. Pilots board at Sabine Pass, Sea Buoy position 29° 36′ N., 93° 48′ W. or upon request board at 29° 25′ N., 93° 40′ W. Pilot boats FM (VHF) Channel 65 – 156.275 MHz.
ANCHORAGE: Off Sabine Bar – 40 ft.
RESTRICTIONS: Sabine River Channel: Project depth 30 ft.; bottom width 200 ft., including slip at port; marked and lighted for 24-hour navigation. Turning basin, 1,000 ft.×3,000 ft.
MAX. SIZE: Length – no limit, breadth – no limit, draft – 30 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: RCA – Global Communications.
TUGS: Join vessel in port turning basin. Tug's line used, no charge.
BERTHING: 2,308 ft. mooring space to accommodate 4 deep-sea vessels; all concrete docks; additional berthing space in slip for laying-up 4 vessels. Lay-berth facilities also available. 11 finger piers ranging in length from 480 ft. to 900 ft.
STEVEDORES: 5 stevedore companies – handled through Agent.
MEDICAL: Local facilities – complete.
TANKERS: Limited to 30 ft. draft.
DENSITY: Brackish.
FRESH WATER: Ample fresh water, through 2.5 in. connection, rate of delivery about 500 gallons per minute.
FUEL: All grades available; 8 hours advance notice required.
FIRE PRECAUTIONS: No welding or burning without U.S. Coast Guard welding permit; also special authority required for ships loading explosives.
CONSULS: None available locally.
REPAIRS: Facilities available.
DRY DOCKS: Texas Drydock:

388 ft.×142 ft. 10,000 tons, 10 ft. 6 in. draft over blocks.
SURVEYORS: National Cargo Bureau, Inc., 550 Fannin, Petroleum Building, Suite 821, Beaumont, Telex: 77701.

American Bureau of Shipping, 398 Pearl Street, Goodhue Building, Suite 806, Beaumont, Telex: 77701.

OSTRICA, Louisiana: 29.22 N. 89.32 W.

Terminal has ceased operating and has been mothballed. Sho facilties are now part of Chevron U.S.A. Inc. Shore facilities Empire, See "New Orleans".

OSWEGO, New York: 43.28 N. 76.30 W. **(See Pla**

LOCATION: Oswego Harbour is located on the South shore of La Ontario about 15 miles from its East end at the outlet to the Oswe River. It is the first major port on the Great Lakes off the seaway. I also the Great Lakes entrance to the Great Lakes – Hudson Riv Waterway which connects with the Hudson River at Troy.
PILOTAGE: No requirements.
RESTRICTIONS: Average navigation season – April 1st to Decemb 15th.
Approaches: Through entrance between the Arrowhead Breakwater p heads and detached breakwater.

Entrance is 750 ft. wide with a depth of 25 ft. at LW datum.
Controlling depth of water 25 ft. at datum.
No vessel length and beam limitations.
Approach open 24 hours a day.
Navigation lights available

Harbour: Controlling depth – front of each terminal open for public us 21 ft. on West side. 28 ft. on East side.

Turning Basin – 115 acres.
Accessible 24 hours per day.
No vessel length and beam limitations.

HEALTH/AGRICULTURE: See "Health" and "Agriculture" before fi U.S.A. port (Albany).
TUGS: Towage facilities available on request.
BERTHING: The general cargo facilities are operated by the Port Oswego Authority. The West Side Facility is a finger pier 1,000 ft. lo providing 4 berths and has 21 ft. of water alongside at LW datu 28,000 sq. ft. of covered storage is available with limited open storag A million bushel grain elevator is situated on this pier. The East Si Facility is a marginal wharf 1,900 ft. long, providing 3 berths and ha 27 ft. of water alongside at LW datum. 134,000 sq.ft. of covered storag is available with unlimited open storage.

Oswego exports general cargo. It imports grain, cement, wood pu fertiliser, petroleum and general cargo.
New Marginal Wharf: Length of berth 1,750 ft. Depth 25 ft. at LW datu
BRIDGES: None.
CRANES: Mobile heavy lift equipment available.
BULK HANDLING FACILITIES: One 1,000,000 bushel capac elevator equipped with 3 loading spouts, 2 Marine legs and 2 car pi
FRESH WATER: Available at all general cargo docks.
FUEL: Seaway Terminal of Metropolitan Petroleum Corporation, 4 tan – Capacity 327,000 barrels of No. 2 and No. 6 oil. Coal bunkera available by truck delivery.
CONSULS: None.
REPAIRS: Above waterline repairs available.
AUTHORITY: Port of Oswego Authority, P.O.Box 387, Foot of East Fi Street, Oswego, N.Y. 13126. *Tel:* (315) 343-4503. *Telex:* 9260 *FAX:* (315) 343-5498. *Contact:* John E. Fitzgibbons, Executive Direc

PALM BEACH, Florida: 26.46 N. 80.03 W. **(See Pla**

LOCATION: Port is located on a salt water sound known as Lake Wo and lies 1.3 miles from the 37 ft. contour of the Atlantic Ocean to whi it is connected by an artificial cut at the North end of Lake Worth kno as Lake Worth Inlet. The Inlet is located within the boundaries of t City of Riviera Beach, Florida.
PORT LIMITS: Sea Buoy at channel entrance. Dockage charg commence when vessel is made fast to wharf, and are on a 24 ho basis or fraction thereof.

DOCUMENTS: Basic Customs Documents for Entry:
2 copies Master's Oath, Form CF-1300.
2 copies General Declaration, Form CF-1301.
2 copies Arrival Crew Lists, Form I-418.
2 copies Passenger List, Form I-418.
2 copies Stores Lists, Form CF-1303.
2 copies Crew's Effects Declaration, Form CF-1304.
1 copy Clearance from Last Foreign Port (if available).
1 copy Manifest of *All* Foreign Cargo onboard.
1 copy Manifest of Cargo for Discharge.
1 copy Dangerous Cargo Manifest.
1 copy Form CF-3171 for formal entrance at Customs House.
Valid original vessel documents.

All vessels shall, upon arrival, report to Port Director all cargo to be discharged. Such report shall be in form of copies of Ship's Manifest, or certified statements, and shall show number of units, commodity, weight, destination, consignee, and all other information which Port of Palm Beach deems necessary for compilation of commercial statistics, for reserving of necessary warehouse or wharf space, or other purposes. (Also see "Jacksonville").

PILOTAGE: Compulsory. Provided by Pilots' Association of the Port of Palm Beach, 200 13th Street E, Riviera Beach, Florida, 33404. Tel: (407) 845-2628. Telex: 529327.

Pilot's communicate with vessel on VHF Channel 16; if no answer contact Marine Operator to call Pilots on land line. Tel: (305) 845-2628.

Notice of ETA and request for Pilot must be made to the Pilots at least 24 hours in advance.

CHANNEL: Entrance to the harbour is by a dog-leg channel running due West through the jetties and then turning South-westerly to the terminals. The channel is 400 ft. wide, narrowing to 300 ft. in width as it continues across the lake another 3,000 ft., leading into a trapezoidal turning basin, 1,400 ft. by 1,310 ft. adjacent to the port terminals on the West shore, with an extension of 672 ft. at 25 ft. depth to the New North Wharf and Loading Ramps. Present depth of entrance channel is 33 ft. at MLW.

ANCHORAGES: Anchorage is designated by the Bar Pilots, which in most instances is at sea. Port has two federally designated anchorages, one South of the entrance channel and one North of the entrance channel.

MAX. SIZE: Vessels up to 620 ft. in length with draft of 33 ft. have used facilities.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Port has no communication equipment. U.S. Coast Guard Station, Peanut Island, Riviera Beach, Florida, can be reached on 2182 kHz – 2678 kHz or VHF Channel 16 (156.8 MHz). Pilots VHF Channel 16.

TUGS: Available to assist berthing. Service is provided by the Port Towing Corporation, P.O.Box 30369, Palm Beach Gardens, Florida 33410-0369. Office Tel: 622-6422 and 622-8688, nights and holidays 844-4244 and 622-7548.

Tugs normally join vessel at jetty entrance. Tug's lines normally used.

BERTHING: 2 slips and 4 marginal wharves with 6 Ro/Ro ramps including a 29 acre dedicated container yard.

No. 25	North Half Container Wharf	225	25

Supplementing the berths are 295,000 sq.ft. of transit shed storage space. Open storage areas consist of approximately 55 acres. 33 acres dedicated to container handling.

All vessels, their Owners or Agents, desiring a berth at wharves, shall, as far in advance of date of docking as possible, make application to port specifying date of docking, sailing, nature and quantity of cargo to be handled, and name of the vessel.

SPECIALISED CARGO HANDLING FACILITIES: Ramps for Roll-on/Roll-off cargo and wharfside accommodation for equipment to handle containerised cargo only.

Dry Bulk Storage: 55,000 short tons (Cement); 20,000 short tons (Sugar).

Liquid Bulk Storage: 12,500,000 gallons (Molasses).

Freezer/Chill Facility: U.S. Dept. of Agriculture and U.S. Customs approved facility. 17,600 sq.ft. off pier site with rail siding. 5 minute trucking time to port docks.

Also see "Developments".

CRANES: See "Cargo Gear".

STEVEDORES: The recognised working hours of port are from 0800 until 1200 hrs. and from 1300 until 1700 hrs., Monday through Friday, holidays excepted. During the recognised working hours services will be charged for on a straight time basis.

When vessels are loading or discharging cargo the port may furnish checker-foremen to supervise release of cargo being loaded and/or check cargo being discharged. The charge for each man furnished will be based on labour-furnished rates for foremen, with the Port reserving right to furnish as many men as they deem necessary to protect their interests. Charges for this service will be rendered against the vessels, their Owners, or Agents.

MEDICAL: Full hospital facilities available without prior notice. Dentists available during normal work hours.

TANKERS: The port receives tankers each month in the 15,000 to 18,000 gross ton range. Petroleum tankers are handled in Slip 2, Berths 2/3 or 5/6. All petroleum tankers are boomed during pumping operations. Slop facilities at port by mobile tank trucks of private companies.

Report: Port Approaches – Cautionary: All approaches to the Sea Buoy must be made from the East to avoid shoal waters near the coast to the North and South of the Entrance Channel. The Gulf Stream current running to the North may be felt a short distance East of the Sea Buoy. A counter current usually sets to the South in the vicinity of the Sea Buoy. However, this may vary depending on weather conditions. Southbound vessels, avoiding the Gulf Stream, are encountered in close vicinity of the Sea Buoy.

Care must be taken to carefully identify navigation lights to avoid mistaken identity with strong lights along coast.

Vessels may anchor S.E. of the Sea Buoy in approximately 75 ft. – 100 ft. of water.

Entering and Berthing: Vessel should have full manoeuvring power available and competent helmsman at the wheel. Vessels leaving the Gulf Stream usually set sharply to the South and care must be exercised to keep vessel in channel. Ranges and buoys are used to identify channel limits. The turning basin is situated adjacent to Slip No. 2 where tankers berth. Tidal currents in Lake Worth Inlet set North on flood tide and South on ebb tide. Berthing of deep draft bulk carriers has been limited to High Water Slack period, due to the limitation of tug horsepower. If a current is against the tide, an anchor is usually dropped and dragged into the berth. Due to the limited depths of water and the possibility of holing the ship's bottom if the anchor is run over, the use of anchor should be limited to emergency use.

The slip is 700 ft. in length with a width of 225 ft. Pier bollards are situated 50 ft. apart. The last soundings survey indicated depths of 35 ft. or more throughout area of slip with exception of extreme inside section where depths decreased to 32 ft.

FRESH WATER: Fresh water delivered to vessels at wharves or docks by pipe-line. Hoses can be supplied by port per tariff charges. Fittings on pipe-line are 2.5 in. Minimum charge of U.S.$50.00. Water $0.90 per ton of 240 gallons.

FUEL: Private firms (9) with trucks or barges available by prior arrangement through vessel's Agent.

FIRE PRECAUTIONS: Smoking is strictly prohibited in transit sheds, warehouses, or on apron of wharves and on vessels, handling dangerous, hazardous, or inflammable cargo. Smoking is also prohibited in any areas where gasoline or like materials are being handled or serviced to equipment.

Explosives and hazardous or highly inflammable commodities or materials may be handled over, or received on, the wharves or other facilities of Port of Palm Beach by special arrangements with and at the option of the Port Director, and the receiving, handling, or storage of such commodities shall be subject to Federal and State laws, rules and regulations.

In all cases where explosives and hazardous or highly inflammable commodities or materials are to be handled, prior consent by the U.S. Coast Guard must be received and a copy of the consent filed with the Port Director. Responsibility for safeguarding of life and property will be the duty of the shipper. Proof of sufficient liability insurance must be presented to Port Director prior to arrival of such materials.

DRY DOCK/REPAIRS: No major facilities at port. Mobile repair companies available. No berths dedicated for repair work.

SURVEYORS: Marine surveyors representing Lloyd's, A.B.S., N.V., operate at the port or nearby ports.

C. L. Marine Inc., 825 Oleander Street, Boca Raton, FL 33432. Tel: (407) 391-8932.

Douglas G. Lamb & Associates, P.O.Box 11367, Fort Lauderdale, FL 33339. Tel: (305) 564-3045. Telex: 159052 (ASST. CTR.)

Continental Marine Consultants, Inc., P.O.Box 14915, North Palm Beach, FL 33408. Tel: (407) 844-6111.

Donald J. Mahoney & Co. Inc., Marine Surveyors & Adjusters, The Tamiami Mall, 8776 S.W. 8th Street, Miami, Florida 33174. Tel: (305) 553-7066. Telex: 52-2268.

GANGWAY/DECK WATCHMEN: No requirement for watchmen required except for special vessel conditions or security reasons as determined by Port Director.

HATCHES: Normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: United States Customs Regulations.

REPATRIATION: Facilities exist for changes of crews and repatriation of seamen. Scheduled aircraft service Palm Beach area daily with additional flights from two nearby airports. Airports are 5 miles, 35 miles and 70 miles from port.

POLICE/AMBULANCE/FIRE: Police Tel: 845-4123 or 911; Fire Department Tel: 845-4111; Sheriff Tel: 833-7471; Ambulance Tel: 844-6577; Hospital Tel: 844-6300.

CARGO GEAR: Crane capacity can accommodate single lifts up to 300 tons. Also available are 2×150 ton cranes, 3×200 ton crane, 1×65 ton crane and 1×40 ton crane also 1×23 ton fork lift. 7×40 tonne straddle carriers, 7×40 ton fork lifts, 3×25 ton fork lifts, 1×20 ton fork lift, 33 tractors in terminal (10×40 tons and 23×35 tons). Load/discharge operations can be performed by ship's gear or shore gear.

HOLIDAYS: New Year's Day; Washington's Birthday; Columbus Day; Decoration (Memorial) Day; Independence Day; Labour Day; Veteran's (Armistice) Day; Thanksgiving Day; Christmas Day. When any one of these falls on Sunday, the following Monday is observed as a holiday. When any one of these falls on Saturday, the preceding Friday is observed.

BANKS: *Banks with Foreign Departments:*

Barnett Bank, 2001 Broadway, Riviera Beach, FL 33404. Tel: (407) 845-3400.

DOCUMENTS:

3 Passenger Lists.
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
Register.
Load Line Certificate.
Tonnage Tax Certificate.
Certificate of Financial Responsibility (Oil Pollution).

PILOTAGE: Compulsory. Pilots board at sea-buoy. Guard Channel 16 VHF. Safe anchorage at sea-buoy if waiting for Pilot.

PC Port Pilots Inc.: Pilot boat, grey and white hull with black lettering. Tel: (904) 785-2209.

PC Pilots Inc.: Pilot boat, red and white hull. Tel: (904) 769-0058.

ANCHORAGES: Several safe anchorages inside bay with 32 ft. or more depth.

RESTRICTIONS: Maximum safe draft over bar is 32 ft. No other restrictions except in case of bad weather.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Preferably WLO Radio, Mobile, Alabama, U.S.A. Also good service from RCA. Vessel should radio ETA and cash requirements.

TUGS: 2 tugs available. Tug is used only to assist in berthing. Always uses ship's lines.

BERTHING: Any time, except for unusual weather. Good safe port. Berths are about 1 hour from Pilot station.

Deepwater Terminal in St. Andrew's Bay:

1. 2,590 ft. of deepwater berthing:
   (a) 5 berths.
   (b) Mean depth of water 32 ft.
   (c) Concrete apron 60 ft.
   (d) Construction – steel sheet piling.
2. 6 Transit sheds totalling 280,000 sq.ft.
3. Bulk Warehouse (28,800 sq.ft.). Storage Silos (6,500 ton capacity) with scale weight in and out.
4. Covered loading/unloading rail service to each warehouse.
5. Truck dock serving each warehouse.
6. Marginal track capability.
7. Heavy lift capability by prior arrangement.
8. 24 hour security service.
9. Paved open storage – 300,000 sq.ft.
10. Ro/Ro capabilities.
11. Container facilities.
12. Barge/Container feeder service.

Barge Terminal in St. Andrew's Bay and Gulf Intracoastal Waterw

1. 600 ft. of shallow draft:
   (a) Mean depth of water 12 ft.
   (b) Concrete apron.
   (c) Construction – steel sheet piling.
2. Transit shed totalling 30,000 sq.ft.
3. Bulk transfer capability.
4. Service for:
   (a) Covered rail loading and unloading.
   (b) Truck loading and unloading.
5. Paved open storage – 90,000 sq.ft.
6. Heavy lift capability by special arrangement.

Port Equipment:

1. 8 lift trucks, 5,000 lb. capacity.
2. 9 paper roll clamp machines, 7,000 lb. lift capacity.
3. 1 trackmobile switcher.
4. 1 diesel switch engine.
5. Rail tracks owned by Panama City Port Authority, capab accommodating approximately 80 rail cars.
6. Sweepers.
   (a) Tennant.
   (b) Tractor with brush and front end loader.

STEVEDORES: 7 companies. Must have ETA by 1500 hrs. local t in order commence loading 0800 hrs. next day. Normal work day 08 – 1200 hrs., then from 1300 – 1700 hrs., Monday through Friday.

MEDICAL: Medical and hospital service available.

TANKERS: No slop discharge facilities, oil waste by barge.

DENSITY: Salt water. 1.5 ft. tide range.

FRESH WATER: Available all berths but ships must supply hose.

FUEL: Limited amount of diesel oil available. No heavy fuel. Lo agents can make available through truck transfer or barge. Midstre Fuel Supply located at Port.

CONSULS: None.

REPAIRS: Limited deck and engine repairs can be effected.

GANGWAY/DECK WATCHMEN: Only if required by ship's Owners Master.

OPENING/CLOSING HATCHES: Only MacGregor hatches may b opened by the crew.

CUSTOMS ALLOWANCES: Tobacco, 1 carton 200 cigarettes. Wi Spirits, reasonable quantity – 1 or 2 bottles.

CARGO GEAR: Must show safety inspection if requested.

REPATRIATION: Available.

AIRPORT: Approximately 4 miles from port. Served by 2 scheduled lines (Republic Airlines and Air New Orleans).

TIME: Central Standard Time (GMT minus 6 hours).

Central Daylight time in Summer (GMT –5 hours).

HOLIDAYS: *No work holidays:* New Year's Day; Easter; 4th July; Labo Day; Christmas Day.

Working holidays: Lincoln's Birthday (February 12); Geor Washington's Birthday (Third Monday in February); Memorial Day (La Monday in May); Veterans' Day (Fourth Monday in Octobe Fall Festival Day, Thanksgiving Day (Fourth Thursday in November,

POLICE/AMBULANCE/FIRE: Dial operator, or Tel: 785-6161.

TELEPHONES: Placed aboard only by very special arrangement – normally available.

SERVICES: Most repairs to radio, radar and other such equipme Advance notice required.

SHORE LEAVE: Any time – any berth.

IDENTIFICATION CARDS: All crew must have U.S. Immigrat Landing Permit.

DELAYS: Normally, delays infrequent and for short durations.

AUTHORITY: Panama City Port Authority and Foreign Trade Zone P.O.Box 15095, 5321 West Highway 98, Panama City, FL 32406. (904) 763-8471. *Telex:* 324775 Port Pc Usa. *FAX:* (904) 769-56 *Contact:* H. R. Etheredge, Port Director. T. L. Berry, Assistant Director.

PASADENA, Texas: 29.43 N. 95.13 W.
Refer to "Houston" for all general information.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illne Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PASCAGOULA, Mississippi: 30.21 N. 88.34 W. (See Pla

PORT LIMITS: Subject to Charter-Party Terms, an "arrived sh subject to jurisdiction of the Port Authority, occurs when a ship arri at Horn Island Sea Buoy.

DOCUMENTS: See "New Orleans".

PILOTAGE: Compulsory. Pascagoula Bar Pilots' Association ((6 –762 – 1151). Pilot boat to be contacted on VHF Channel 16, pilot b has black hull with white house, International light and sound signa be made by vessel requiring a Pilot. Pilot to be taken aboard vess vicinity of Horn Island sea buoy. Usual safety measures are requi with respect to boarding. Vessels may anchor in this area while awa Pilot, there is a 35 ft. to 50 ft. depth with good holding bottom.

ANCHORAGES: Only anchorages permitted are in vicinity of Horn Island Sea Buoy or seaward.

RESTRICTIONS: Under normal conditions there are no entry restrictions as to time or state of tide.

From Horn Island Sea Buoy to Horn Island Pass the channel is 350 ft. wide by 40 ft. deep; from Horn Island Pass to Pascagoula River Turning Basin the channel is 350 ft. wide and 38 ft. deep; the Pascagoula River Turning Basin is 950 ft. wide and 38 ft. deep.

Channel into Bayou Casotte (East Harbour) from Junction Buoy to mouth of Bayou Casotte Harbour is 225 ft. by 38 ft. deep; thence at inner harbour channel is 300 ft. wide and 38 ft. deep into the Bayou Casotte Turning Basin; the Bayou Casotte Turning Basin is 940 ft. wide and 38 ft. deep. All dimensions listed are project dimensions; depths refer to MLW datum.

No vessel or tow shall enter Bayou Casotte Channel outbound after a seagoing vessel or tow has passed Buoy 30 inbound, and; no vessel or tow shall enter Bayou Casotte Channel inbound after a seagoing vessel or tow has passed Buoy 11 outbound. Vessels or tows which are at a dock should remain at the dock until the inbound seagoing vessel or tow has passed, or until it has reached its berth, whichever occurs first.

MAX. SIZE: Pascagoula River: Length of vessel is restricted to approx. 900 ft. by turning basin, no breadth restriction, draft 38 ft. at MLW. Normal tidal range 1.6 ft.

Bayou Casotte: Length restricted to 785 ft. Max. breadth 125 ft. and draft 38 ft. at MLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Use of Pascagoula Marine Radio (KLU-775) is advisable for ETA cables to Agent. Stands by on VHF Channel 16 and operates on Channel 27 throughout 24 hours.

RADAR/VHF: Radar and VHF radio on pilot boat, Channel 16.

Every vessel shall, when entering the Horn Island Pass Channel, and the Bayou Casotte Channel, or when getting underway from a berth, or when approaching the Pascagoula Channel while transiting the Intracoastal Waterway:

(a) Maintain a radio watch on VHF – FM Channels 13 and 16 in accordance with Vessel Bridge to Bridge Telephone Regulations of January 1st, 1973.

(b) Check on other traffic operating in the area by transmitting on Channel 16:

> "SECURITY, SECURITY, SECURITY
> (Vessel Calling)
> THIS IS ....
> ENTERING....................................
> CHANNEL PROCEEDING FROM
> ....TO ....
> CHECKING FOR TRAFFIC, STANDING
> BY ON CHANNELS 13 and 16, ...
> (Vessel Calling)
> .... OUT"

If other traffic replies, utilise Channel 13 for exchange of information relative to safe navigation.

TUGS: Tugs will join vessels in harbour or off docks. No escort required. Tugs lines normally are used.

BERTHING: Private and public berths are available, by prior arrangement, in both the Pascagoula River Harbour (West Harbour) and the Bayou Casotte Harbour (East Harbour).

West Harbour – Public: Grain Elevator, 3,100,000 bushel capacity, 900 ft. berth at 780 ft. wharf and 38 ft. deep.

Terminal 'A' with transit shed, 500 ft. wharf and 38 ft. deep.

Terminal 'B' with transit shed, 544 ft. wharf and 38 ft. deep.

Terminal 'C' with bulk cold storage, 718 ft. wharf and 38 ft. deep.

Terminal 'D' with 732 ft. by 187 ft. open wharf by 38 ft. deep, with transit shed.

South Clusters, 1 ship berth approximately 600 ft. by 24 ft. deep.

West Harbour – Private – Ingalls Shipbuilding: Note. These berths are normally occupied with ships being fitted out and are not normally available.

West Bank Shipyard, 4,410 ft. bulkhead, 5 berths by 38 ft. deep.

East Bank Shipyard, three 600 ft. piers, one 800 ft. pier, each 32 ft. deep.

Ham Industries, rig repair facility; 1,100 ft. wharf by 38 ft. deep.

East Harbour – Public:

Terminal 'E' with transit shed, 517 ft. wharf by 38 ft. deep;

Terminal 'F' with transit shed, 737 ft. wharf by 38 ft. deep;

Terminal 'G' with transit shed, 516 ft. wharf by 38 ft. deep;

Terminal 'G' Extension 695 ft. by 64 ft. open wharf by 15 ft. deep.

Terminal 'H' with transit shed, 556 ft. wharf by 38 ft. deep.

East Harbour – Private:

Chevron U.S.A. Inc., Wharf No. 1, 5 berths by 38 ft. deep;

Chevron U.S.A. Inc., Wharf No. 2, 1 berth by 38 ft. deep; (crude and coke dock).

Chevron U.S.A. Inc., Wharf No. 3, 1 berth by 38 ft.;

Mississippi Phosphate Company, 2 loading docks each 475 ft. by 34 ft. 18 depth;

Chicago Bridge & Iron Company, slip 900 ft. by 16 ft. deep.

SPECIALISED CARGO HANDLING: Chevron U.S.A. Inc., Wharf No. 1 has facilities for handling acid, caustic, ammonia, and LPG, in addition to petroleum products. Chevron U.S.A. Inc., No. 2 has facilities for handling coke and crude. Chevron U.S.A. Inc., No. 3 has facilities for handling crude.

Gulf Cold Storage Inc.:

Freezer Area: 1.5 million cu.ft. of −10°F. storage.

Cooler Area: 500,000 cu.ft. of +40°F. storage.

Blast Freezers: 2× −50°F. Capacity 160,000 lbs. per day.

Location: Approx. 3 miles South of I – 10 of the West Bank area of the port. Adjacent to dock on a 38 ft. channel.

CRANES: The Port has a heavy lift capability of 400 tons by an arrangement with Ingalls West Bank Facility. Truck cranes with capacity up to 110 tons also available in the port area.

BRIDGES: None affecting 38 ft. channels.

Two bridges across the Pascagoula River above the turning basin, not passed through between channel and harbour.

STEVEDORES: 12 hours notice requested to arrange stevedore gangs. *Straight Time:* 0800 hrs. – 1200 hrs. and 1300 hrs. – 1700 hrs. Mondays through Fridays except Holidays. All other hours and days are overtime.

MEDICAL: Agents to be advised if immediate medical attention is required. Free Pratique granted except in case of communicable diseases aboard, inoculations required by Public Health Service, etc. Doctors and hospital services readily available.

TANKERS: Chevron U.S.A. Inc. owns and operates 3 wharves on East side of Bayou Cosotte harbour. Facilities have 6 in., 8 in. and 12 in. lines with adaptors, discharge tanks with a capacity of 60,000 tons, 3 tanker berths with a 38 ft. draft. Wharf No. 2 for receiving crude oil from large tankers. Wharf designed and built for 50 ft. draft, but presently limited to 38 ft. draft on account of channel and seaward. Wharf No. 2 also handles coke ships.

Also see "Shipmaster's Report" and "Specialised Cargo Handling".

DENSITY: Density varies with the state of tide and wind, from fresh to salt water.

FRESH WATER: Potable water is available at most berths. Water at public terminals can be delivered at flow rate of 50 g.p.m.

FUEL: Vessels are bunkered at berth in the harbour by truck or barge. All grades of fuel are available.

FIRE PRECAUTIONS: Usual safety precautions required. Verify unusual procedures for approval of U.S. Coast Guard.

CONSULS: Many countries have consuls within a 100 mile radius of Pascagoula. (Mobile and New Orleans).

REPAIRS: Most deck and engine repairs could be arranged within port facilities.

DRY DOCKS: Ingalls Shipbuilding Corporation, West Bank Shipyard, has 1 launch pontoon (dry dock) with 38,000 ton capacity.

Ingalls Shipbuilding Corporation, East Bank Shipyard, has 1 graving dock, 485 ft. inside length, 75 ft. wide gate, 34 ft. deep, with loading capacity of 1 ton per sq. ft.

Flechas Shipyard has one 600 ton dry dock.

There are several marineways in vicinity, capacities 50 – 100 tons.

SURVEYORS: Licensed Marine Surveyors are available in Port.

GANGWAY/DECK WATCHMEN: Port guards are furnished for the general cargo terminals at the port's expense. At least 1 person must be on duty aboard vessel.

HATCHES: Opening/closing hatches by the crew is at the discretion of the ship.

CUSTOMS ALLOWANCES: Each crew member is allowed either 300 cigarettes or 50 cigars or 3 lbs. of tobacco. In addition, each member is allowed 1 quart of alcoholic spirits as regulated by provisions of the Mississippi Alcoholic Beverage Commission Rules.

CARGO GEAR: No requirements for cargo gear other than it be certified by a recognised International organisation.

REPATRIATION: The City of Pascagoula is served by regularly scheduled transportation. Vessel's Agent to arrange clearance with Customs and Immigration officials.

AIRPORT: An airport is available approx. 35 miles from the city and is served by regularly scheduled airlines.

TIME: The Port of Pascagoula is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months. (First Sunday in April to last Sunday in October).

HOLIDAYS: New Year's Day (January 1st); King's Birthday (3rd Monday in January); Washington's Birthday (3rd Monday in February); Mardi Gras (41 days before Easter – Tuesday); *Easter Sunday/Easter Monday (1st Sunday after 1st full moon after March 21st); King's Memorial Day (April 4th); Memorial Day (Last Monday in May); *Independence Day (July 4th); *Labour Day (1st Monday in September); Veterans' Day (November 11th); Thanksgiving Day (Last Thursday in November); *Christmas Eve (December 24th); *Christmas Day (December 25th); *New Year's Eve (December 31st).

(*Non-working). Non-working holidays are observed from midnight of the holiday through to 0700 hrs. of the following day with the exception of Christmas Eve and New Year's Eve when the non-working portion of the holiday commences at noon.

Should any of the above holidays except Easter, Christmas Eve, and New Year's Eve fall on a Sunday the following Monday will be observed.

Elevator employees observe Martin Luther King's Memorial Day instead of Birthday.

Saturday shall not be considered as a layday in determining time ships are in berth in this harbour.

POLICE/FIRE/AMBULANCE: Telephone numbers for emergency services are: Fire 762-1133; Police 762-2211; Ambulance 762-4949 or 762-4848. Universal emergency No. 911.

TELEPHONES: Not available.

SERVICES: Facilities are available for compass adjusting. Tank cleaning and receipt of tank washings can be arranged by contract services available in the area.

SHORE LEAVE: Allowed for any crew member not detained by Immigration Office.

IDENTIFICATION CARDS: Standard Immigration Form I-95 to be made up for each crew member on arrival. Not necessary for crewmen already holding Form I-95 issued for the same vessel.

GARBAGE DISPOSAL: Garbage collection available upon request. Arrangements should be made through ship's Agent. Service provided by BFI. (Tel: (601) 769-7850), and Waste Management. (Tel: (601) 832-3144).

WASTE OIL DISPOSAL: Service provided by Waste Oil Collectors. (Tel: (601) 497-4585). Arrangements should be made through ship's Agent.

SEAMAN'S CLUBS: Seamans Center operated by Jackson County Baptist's Association, 3709 Hospital Road, Pascagoula. Tel: (601) 769-7101. Services: Telephones, postage, stationery, games, transportation to shopping area.

CURRENCY: (18.2.92).

U.S.$ 1.00 = 1.6465 German Marks.
U.S.$ 1.00 = 1.4870 Swiss Francs.
U.S.$ 1.00 = 5.6010 French Francs.
U.S.$ 1.00 = 1.8525 Dutch Guilders.
U.S.$ 1.00 = 1,235 Italian Lire.
U.S.$ 1.00 = 1.1895 Canadian Dollars.

DELAYS: Berths at Public Terminals and the South Clusters are assigned by the Harbour Master of the Port of Pascagoula. Berths at private docks are assigned by the respective owners. No exceptions to this are allowed. Berth at grain elevator is assigned by the Lessee-Operator, the Louis Dreyfus Corporation. No delays are encountered by following this procedure, emergencies excepted.

GENERAL: Some difficulty encountered by unscheduled tows who use harbour for shelter in inclement weather. Pilot Association aware of current situations. Ample barge storage is available in Barge Fleeting Area operated by Colle Towing Company who may be contacted on VHF Channel 16 (KKV-933). Tel. (601) 762-5700.

SHIPMASTER'S REPORT: June 1980.

Vessel: 32,000 g.r.t., loading ammonia at Chevron Refinery.

Approaches: Charts BA. 3981 and 3380.

Approach made from the South East along the Safety Fairway using "Satnav" positions for the approach to the fairway entrance. Failing this the echo sounder may be used to good effect in conjunction with sights.

Two large oil rigs were sighted at the South East entrance to the fairway, but their positions were not plotted.

On the final approach visibility is often reduced due to industrial smog and the outlying islands are low and give no reliable positions until about 8 miles off. There are 4 conspicuous flares beside the Chevron Refinery which will give a good lead to the "HIP" Buoy. These flares are not marked on either chart, but their approximate position is Lat. 30° 20.2′ N., Long. 88° 29.3′ W.

Petit Bois Island is the first to show but with no distinguishing features until close to it. "HIP" Buoy is easily identified at least 8 miles away and shortly afterwards the channel buoys may be identified on radar. These buoys are not marked on B.A. 3380, but help indentify "HIP" Buoys should there be fishing boats in the vincinity. There are numerous fishing vessels in the approaches but they do seem to keep the fairway clear. Many tugs and tows also in the area.

Pilotage: There is no berthing at night for vessels of this size (32,000 g.r.t.) due to having to turn in the turning area above the berth. Vessels may sail at night but careful consideration should be given to weather conditions before agreeing to do so.

Contacted Pilot Office on VHF Channel 16, thereafter working on Channel 13.

Pilot boards from a fast, black hulled launch off "HIP" buoy, ladder on lee side about 1 m. above water.

> *CAUTION:* The outer channel is well marked with conspicuous buoys but the configuration of the channel is liable to change. The approach may be swept with strong conflicting cross currents and, since the widest section is only 350 ft., very careful attention must be paid to steering.

Once inside Petit Bois Island the channel narrows to 225 ft. in places; the Pilots do have an unofficial 'one way traffic scheme' in progress but this is not always adhered to by tows and fishing vessels.

Proceeding inwards, the vessel is turned at the very head of the harbour with the assistance of 2 tugs; vessel is turned to starboard and the head tug then shifts from the port bow to the starboard bow for berthing. Berthing is always port side alongside.

There is not a great deal of room in the turning basin, although the Pilots say that vessels over 800 ft. are turned there regularly.

On sailing, with a deep draft (32 ft. maximum) special care must be paid to steering within the channel. With a width of just over 200 ft. there is no room for error. I would advise that the watchkeeping officer be in attendance on the helmsman throughout the passage.

Time from Pilot aboard to 1st line ashore is about 2 hours.

Berth: Chevron Refinery: Least depth sounded 12.2 m. Very good, with a substantial Chicksan area and fairly good mooring arrangements.

Once made fast and loading a very careful watch must be kept on the moorings since large tankers pass up and down the harbour to the tanker berth close ahead; the shore personnel will not hesitate to stop loading if they think the moorings will allow the vessel to surge.

No motor access to the gate some 200 m. distant.

Telephone on the quay.

Loading: No difficulties were experienced. The facility is very keen on pollution and will watch the discharge of ballast very closely.

The refinery do require ballast to be discharged ashore but that is out of the question. A disclaimer will be presented for the ship to sign.

Since the upreach of the Chicksan is not sufficient, the low extension or flexible hoses will have to be rigged prior to arrival. Shore connection is 8 in. 150 ASA and was done on this occasion by ship's personnel.

No vapour return line.

There is a recirculating system and there was no need to blow through lines on completion.

Product was cold at this call but 'warm' product has been experienced here in the past. Overall load rate was 343 t.p.h. which the shore personnel were extremely happy with. Hourly rates frequently over 500 t.p.h.

Shore Surveyor attended and all figures were based on ship's gauges. Personnel generally helpful.

General: Fresh water available on the quay but reported as *not potable*. Bunkers available.

Stores have to be manhandled along the jetty but there are small trolleys available.

Gangway: Best left turned in until in position thence no problem, b clear of obstructions.

No objection made to ship's crew "touching up" ship's side from q

U.S.C.G.: No inspection this call but they are known to carry out cargo and navigational inspections.

Films: Exchanged by ship chandler: Bow and Stern Marine.

Consul: The nearest British Consul is at Houston or Atlanta, should surveys be required.

EQUIPMENT: Leased Equipment: 18×6,000 lb. fork lift truc 8×9,000 lb. fork lift trucks, 2×15,000 lb. fork lift trucks, 1 front e loader, 2 motorised driven sweeper, 1 motorised driven scrubber, paper clamp and stevedoring equipment: Fork lift trucks have individ heights of 10, 14, 15, 16 and 17 ft. Attachments permit conversion handling paper rolls and bales. 1×63,000 lb. lift truck.

TANKERS: *Private:* Coastal Fuels Marketing, Tom Chandler, Manag Mid Gulf Area, Port of Pensacola, P.O.Box 12626. Pensacola, FL 325 Tel: 904-432-2471. Facilities: Industrial, Marine Fuels. 6 bulk oil ta of 662,000 barrels capacity connecting by pipeline to Berths 1, 2 and 5 positions for loading and unloading. 5 bunkering stations and a tr loading facility.

Report: Port Approaches – Cautionary Advice: Vessels can approa the Sea Buoy with little or no difficulty. Deep loaded vessels should enter past Buoy No. 1 without a Pilot. Currents in the Gulf of Mex are varied, but will usually set in direction of the wind; sometim approaching 4 to 5 knots during severe storms. When entering harb full manoeuvring power and a good helmsman are essential as t current in the Entrance Channel can reach 5 knots. Currents inside t harbour are approximately 1 knot and set fair with channel. Ves should anchor outside of Buoy No. 1 and off the centre of channel when no Pilot is available to take them to the Inner Anchorage. Lighter is permitted at the Inner Anchorage. Harbour bottom consists of s mud. There is very little harbour traffic.

Entering and Berthing: This harbour is serviced by one 1 P organisation who knows all anticipated movements within the harbo so no unexpected traffic should be encountered and all passing is do at desirable positions. Vessels can enter and berth at any stage of t Pilots will use West Channel for ships docking at Berth No. 3 on t pier face. When docking at Berth No. 3, the Pilot approaches the be dredging the vessel's anchor and passes her lines. When tugs available in the harbour, Pilots will employ them.

FRESH WATER: Available.

AIRPORT: Pensacola Regional Airport is served by both domestic a international air carriers in addition to intrastate airline service.

GARBAGE DISPOSAL: Service available. Dumpsters up to 40 cu.y on board or alongside. Collection on demand. Contact: B.F.I. on (9 433-7425, or Environmental Waste on (904) 478-0633. Rates request.

WASTE OIL DISPOSAL: Collection available for liquid or contamina solids. Capacity into trucks up to 10,000 gallons. Available at any berth. Charges available on request. Contact: Industrial Waste Inc (904) 479-1788, or Pensacola Pollution Control on (904) 479-8095.

SEAMAN'S CLUBS: None.

DEVELOPMENTS: An additional warehouse of 25,000 sq.ft. has be approved for construction prior to year's end 1992.

PHILADELPHIA, Pennsylvania: 39.57 N. 75.10 W.
(See Plan)

DOCUMENTS:
3 Crew Lists, Form I-418 (suggest 6 be made).
3 Passenger Lists, Form I-418 (suggest 6 be made).
3 Customs Stores Lists (suggest 6 be made).
3 Curio Lists (own ship Form) (suggest 6 be made).
3 Narcotics Lists (own ship Form) (suggest 6 be made).
Manifest (Ship Cargo List). If Philadelphia first port of call, require 1 copy for Customs and 1 copy to be used as "traveller" surrendered last port of call. If Philadelphia not first port of call, 2 copies required, all cargo to be discharged at Philadelphia.
For *Immigration Service:*
Visaed Crew List.
Valid Passport or Seaman's Book for each person on board.
Crewman's Landing Card (Form I-95) for each crew member.

PILOTAGE: Pilotage is provided by members of the Pilots' Association for the Bay and River Delaware who maintain a shore station and operations tower at Cape Henlopen. The pilot station is in operation on a 24 hour basis and guards VHF Channels 16 and 14. Telegraphic address is: Delpilots, 214 S. Eleventh Street, Philadelphia, Pa. 19107. Telex: 510-1002653. Arrangements for Pilot may be made by the local Agent although an ETA and draft either by cable or VHF radio will be greatly appreciated and will facilitate prompt boarding on arrival. The pilot boarding area is inside a line between Entrance Buoys No. 5 and 6, or approximately 2 to 2.5 miles S.E. of Harbour of Refuge Lighthouse. Pilots may board further off-shore upon special request.

ANCHORAGES: Large and deep draft vessels awaiting berth are encouraged to avail themselves of the deep water anchorage adjacent to the Breakwater near the pilot station. There are 16 anchorage areas available along the Delaware River for moderate size vessels of lesser draft.
Shipmaster's Report: Good holding ground at Big Stone Anchorage. There is a launch service from Big Stone Anchorage to the shore, call VHF Channels 9 and 14.

RESTRICTIONS: There are no restrictions imposed upon entry except those dictated by vessel draft. Throughout most of its length, the Delaware River is dredged to 40 ft. at MLW. In addition there is a mean tidal range of about 5.7 ft. Vessels of 40 ft. fresh water draft can safely transit the river on a rising tide.

MAX. SIZE: Deep-draft oil carriers are lightered in a special anchorage approximately 10 miles N.W. of the pilot station. Vessels are restricted to a max. draft of 55 ft. by Federal Law.
Chesapeake/Delaware Canal: See "Wilmington" – Delaware.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A port radio service operated by The Ports of Philadelphia Maritime Exchange on a 24 hour basis is also available to all vessels while transiting the Delaware River. VHF Channels 16 and 14 guarded for purposes of this service.
Ship reporting service in operation.

TUGS: Tugs normally join vessels adjacent to berth. Tug's lines are used.

Piers 38/40	1,100	35	Newsprint, Wood Pulp, Forest Products.
Petty's Island	1,000	35	Trailers (dry and reefer), Ro/Ro, Containers, Steel Products.
Beckett Street	2,300	30-40	Containers, Scrap Metal, Steel Products, Plywood, Lumber, Salt, Breakbulk.
Broadway	4,000	30-40	Bananas, Pineapples, Coal, Petrocoke, Minerals, Breakbulk.
Tioga (Container)	1,450	40	Containers, Breakbulk, Automobiles, Ro/Ro.
Tioga (Fruit)	1,753	40	Refrig. and Fresh Fruit, Containers, Paper, Cocoa Beans, Autos, palletised and Project Cargoes.
Northern Shipping	3,300	34	Breakbulk, Containers, Bulk, Project and General Cargoes.
Chester	1,100	35	Containers, Steel, Metals, Hardboard, Lumber, Glass, Woodpulp, Paper Products.
Fairless	2,500	40	Steel Products, Iron Ore.

CONTAINER HANDLING FACILITIES: *Tioga Marine Terminal:* Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 2×45 ton container cranes. Length of the marginal wharf is 3,300 ft., upper slip berth 725 ft. and lower slip berth 625 ft.
Packer Avenue Marine Terminal: Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 5×45 ton container cranes, one has a heavy lift capacity of up to 375 tons. The marginal wharf is 3,800 ft. in length and the Roll-on/Roll-off slip berth is 825 ft. in length. 80 Reefer outlets.
Holt Marine Terminal: 2×35 ton container cranes. Ro-Ro facilities available.
Gloucester City Marine Terminal: Located on the New Jersey side of the Delaware River, in Gloucester City. Terminal area 150 acres. 6 berths with total length 5,500 ft. (4 berths – depth 40 ft.; 1 berth – depth 35 ft. and 1 berth – depth 30 ft.). 320 reefer outlets. 2×45 tons container cranes, 1×300 tons P&H truck crane, 1×180 tons Vicon truck crane. 4×92,000 lb. Toploaders, 5×30,000 lb. Toploaders, 230×3,000 lb. – 35,000 lb. forklifts and 30 yard hustlers.

BULK HANDLING FACILITIES:

Berth No.	*Location*	*Operator*	*Berth Length (m.)*	*Berth Depth (m.)*	*Loading Rate (tonnes/p.h.)*
Pier No. 124 (inactive)	Greenwich	Conrail	310	12.19	5,000 (coal)
Pier No. 122 South (2 berths)	Greenwich	Conrail	260	12.19	3,000 (ore)
Pier E	Port Richmond	Conrail	260	12.19	
Camden-Beckett Bulk Terminal (4 berths)	Camden	South Jersey Port Corp.	200	11.50	

STEVEDORES: Ship's Agents make arrangements for stevedore gangs. Agents should be kept advised of any change in ETA.

MEDICAL: Advance notice of requirements desirable to the extent possible. Hospital facilities are available.

TANKERS: All terminals are equipped with reducers. There are slop (residue) facilities at most terminals. Some main terminals listed below:

Fort Mifflin	Atlantic Refining and Marketing Co.	40 ft. depth
Point Breeze	Atlantic Refining and Marketing Co.	32 ft. depth
	Ballast Wharf	32 ft. depth
Hog Island	Chevron U.S.A. Oil Terminal	40 ft. depth
Paulsboro	Mobil Oil Terminal	30 ft. and 40 ft. depth
	B.P. Oil Terminal	36 ft. depth
Marcus Hook	B.P. Oil Corp.	35 ft. depth
	Sun Oil Co.	40 ft. depth
Westville (Eagle Point)	Coastal Eagle Point Oil Co.	40 ft. depth
Girard Point	Chevron U.S.A.	33 ft. depth
Delair	Amerada Hess Corp.	31 ft. depth
Delaware City	Texaco Inc.	37 ft. depth

In addition to the above, the following are available for tankers and chemical carriers:
GATX (NJ) – 3 berths.
GATX (Pa.) – 1 berth.
Citgo (NJ) – 3 berths asphalt).
TCI (Pa.) – 1 berth.

Atlantic Refining and Marketing Co. – Fort Mifflin: Entering and Docking: There is a 5-knot tidal current that may cause extra care in tending lines while moored. Passing river traffic also requires constant attention to mooring lines. "A" and "B" Berths are 800 ft. in length and total mooring leads to each berth being 15. Maximum bow/manifold at "A" Berth is 375 ft.; head lines are 4 breast line leads. "A" Berth also requires 4 forward springs, 2 stern lines, 2 stern/breast lines and 4 after spring lines. "B" Berth requires 2 head lines, 2 forward breast lines, 4 forward spring lines, 2 stern lines, 2 after breast lines, 4 after spring lines. A gangway is not provided by the terminal.

Berthing: If the vessel is under 50,000 d.w.t., 2 tugs (1,000 h.p. – 2,000 h.p.) are required. Vessels in excess of 50,000 d.w.t. and equipped with a bow thruster may utilise 2 tugs. However, if the vessel is in excess of 50,000 d.w.t. and has no bow thruster, then 3 tugs should be used for docking. During normal conditions for vessels of any tonnage 1 tug (1,000 h.p. – 1,500 h.p.) should be employed for undocking. The vessel is normally turned off the dock prior to docking for starboard side mooring. Normal mooring is done approximately 1.5 hours prior to HW. A Pilot is required during docking and undocking. All hoses are 10 in. with bolted flanges. Cargoes handled are: crudes, gasolines, heating oil and kerosene. Maximum working pressure is 100 lbs. The terminal has no facilities for handling ballast or slops.

British Petroleum – Marcus Hook:

Pilotage and Docking: The services of a Pilot and Docking Master is both compulsory and recommended. When docking vessels of tonnages up to 30,000 d.w.t., 1 tug (1,700 s.h.p.) is required. Tonnages less than 50,000 d.w.t. require 2 tugs and vessels with a tonnage greater than 50,000 d.w.t. require 3 tugs when docking. For undocking vessels of any tonnage, 1 tug is required.

Hose Connection: Crude oil is discharged through 2×10 in. and 1×8 in. arm. All cargo connections are made with hydraulic quick coupler loading arms. Maximum loading and discharge pressure is 100 lbs. Fuel oils and heating oil are discharged through 10 in. and 8 in. arms to the vessel. The terminal has storage facilities for up to 92,000 bbls. of ballast and does not handle slops.

Facilities and equipment available at the terminal for cargo control include check valves on the dock leading to the shore pipe-line system. An emergency control to stop loading is located at the dock manifold.

Bunkers: Fuel oil and diesel oil are available from an 8 in. line with a maximum delivery rate of 2,500 bbls.p.h Quantities delivered are as required. Fresh water is piped at a maximum rate of 20 t.p.h. through a 3 in. line, there are no restrictions on amount delivered.

British Petroleum – Paulsboro:

General: The BP refinery at Paulsboro is located 1.5 miles Eastward of Bramell Point (87 miles from the Sea Buoy). The terminal has 2 offshore wharves which provide 1,053 ft. of berthing space. Depths of 38 ft. are reported alongside, and deck heights are 11 ft. and 12 ft. There is a 3.5 million-barrel storage capacity. The terminal is used for receipt and shipment of petroleum products and bunkering vessels. The berths are parallel to the channel and each have 4 steel dolphins.

Vessels up to 675 ft. in length and a maximum of 38,000 d.w.t. can be accommodated at the Terminal Dock. Max. draft (fwd) is 37 ft. at the dock. Docking of vessels is done 2 hours prior to HW. Vessels up to 26 ft. can dock or undock at any stage of the flood tide. Vessels in excess of 26 ft. must wait for HW to dock or undock. Passing river traffic will cause some surge to take place. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

Pilotage and Tugs: The services of a Pilot and Docking Master is both compulsory and recommended. Vessels tonnages in excess of 1,000 g.r.t. required tug assistance from 1 or 2 tugs depending on prevailing winds. For undocking vessels of any tonnage 1 tug is required. Due to shoaling adjacent to the berth, be advised that undocking vessels should be lined up on the Billingsport Range prior to the exchange of the Docking Master and Pilot.

Hose Connection: Clean products, No. 4 fuel oil and No. 6 fuel oil are handled at this terminal through 8 in. hoses. These hoses are connected with bolted flanges, there are 2 connections for each product. All products are pumped with a maximum pressure of 100 lbs. The terminal has no facilities for handling ballast or slops.

Bunkers: Fuel oil and diesel oil are available in desired quantities. Maximum delivery rate is 2,000 bbls.p.h. through 8 in. lines. Fresh water is not available.

Dupont – Gibbstown:

General: Deepwater Point, located 0.6 miles above the New Jersey end of the Delaware Memorial Bridge and 59 miles from the Sea Buoy, is the site of the Dupont Chemical Company plant. The 550 ft. wharf (Lat. 39° 41′ 37″ N., Long. 75° 30′ 40″ W.) at the plant can provide 600 ft. of berthing space with dolphins. Depths of 33 ft. are reported alongside; dock height is 10.5 ft. Liquid sulphur, acids, and chemicals are handled at the wharf.

Pilotage and Docking: Vessels up to 630 ft. in length, beam 90 ft. and 28,000 d.w.t. can be accommodated at the dock. Max. draft allowed is 32 ft. The dock has a limited strength. Shoaling in the berth places a limit on vessel draft. For drafts of 32 ft. docking is done 2 hours prior to HW. Undocking can be done at any stage of the tide. Passing river traffic will cause the vessel to surge in it's berth. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

The services of a Pilot and Docking Master is compulsory and recommended. Recommended mooring is with the bow downriver. The vessel is turned off the dock with tug assistance. For docking, 2 tugs (approximately 2,000 h.p.) are required. When undocking 1 tug (approximately 2,000 h.p.) is sufficient. The dock runs parallel to the river channel. All vessels are moored port side to. No mooring cables can be employed. All leads must be manilla or polypropylene lines.

Hose Connection: Fuel oil is discharged through 2×10 in. lines. These lines are connected by a flange. Maximum pumping pressure is 100 lbs. Numerous cargo lines are located on the dock for handling barge shipments of petro-chemicals and acid. Assigned vessels are cautioned to keep mooring lines clear of cargo lines. Safety check-lists are employed at this facility. Personnel at the facility are familiar with and follow safety practices. The terminal has no facilities for ballast or slops.

Fresh Water: Fresh water is only available at the dock. Fresh water is piped at 20 t.p.h. and supplied in an emergency only.

Chevron Oil – Hog Island (Berths No. 3 and 4):

General: The Hog Island Wharf is located 90 miles from the Sea Buoy on the Mifflin Range section of the Delaware River at Lat. 39° 51′ 46″ N., Long. 75° 14′ 15″ W. The terminal is a deepwater berth providing 2,754 ft. of berthing space with dolphins. Depths of 37 ft. are reported alongside the dock and deck height is 16 ft. The terminal is used for receiving crude oil and shipping refined petroleum products. There is a 5.5 million-barrel storage capacity at the terminal.

Entering and Docking: Vessels up to 1,000 ft. in length, 135 ft. be and 110,000 d.w.t. can be accommodated at both berths. Maxim fresh water departure draft allowed is 37 ft. Vessels over 35,000 d have a maximum fresh water departure draft of 36.5 ft. For ves making arrival to the Hog Island Berths that have pre-ar displacements over 35,000 d.w.t. a lightering service is available in vicinity of Big Stone Beach. Chevron provides Yokohama Fenders the lightering operations. Vessels over 35,000 d.w.t. should hav minimum arrival draft of 36.5 ft. (salt) prior to transit up the Delaw River. A gangway is not provided by the terminal.

Pilot and Tugs: The services of a Pilot and Docking Master compulsory and recommended. Vessels should arrive off the be 2 hours prior to HW. All vessels are turned prior to docking for starboa side berthing with the heading down-river. 2 tugs are required if the is between 1,000 h.p. and 2,000 h.p. 3 tugs are required for vess exceeding 35,000 d..w.t. For undocking 1 tug is required for all tonnag No gangway is provided by the terminal. Passing river traffic will ca berthed vessels to surge. All mooring lines and/or wires should tended at all times. Additional spring lines are recommended for vess in excess of 35,000 d.w.t.

Hose Connection: Crude oil is discharged through 4 loading arms both berths. The hoses are 12 in. and are connected with a bolted flang Max. discharge pressure is 100 lbs. All lines on shore are common cru lines. The terminal has no facilities for ballast or slops.

Fresh Water/Fuel: Fresh water when required by the vessel can provided by the terminal. Max. delivery rate is 50 t.p.h. through a pi line. Fuel oil can be delivered by barge only.

Citgo Petroleum:

General: The Citgo Fuel Pier is located at the S.W. limits of Man Anchorage, 81 miles from the Sea Buoy. The entrance of Mantua Cre is adjacent to the Western end of the Fuel Pier dolphin located at ea end of the pier. The terminal is used for the discharge of crude oil, h oil, heating oil, jet fuel and petrochemicals.

Vessels up to 800 ft. in length, 125 ft. beam and 80,000 d.w.t. can accommodated at the berth. Maximum fresh water draft allowed at t pier is 37.5 ft. Shoaling at the berth may place further limitations on t allowed fresh water draft.

Pilotage and Tugs: The services of a Pilot and Docking Master compulsory and recommended. Following transit of the Delaware Riv on a rising tide, vessels should arrive off the dock 2 hours prior to H Vessels are turned around in the Anchorage Area North of the termi with 2 tugs assisting. After completion of the turn the vessel is th breasted, port side, into the berth. The berth is almost parallel to t channel. 2 tugs are used for docking vessels of all sizes. 1 tug is us for undocking all vessels. Approximate tug horse-power required 2,000 h.p. All vessels are moored port-side to. The terminal recommen that manila or polypropylene mooring lines be used at this locatio Passing river traffic will cause surging of the vessels at the ber To minimise this surging, the terminal recommends doubling of fore a aft spring lines. All mooring lines should be tended constantly.

Hose Connection: Cargo handled at this terminal includes crud heating oil, fuel oil and jet fuel. Jet fuel is handled through an 8 in. li All other cargoes are handled through 10 in. lines. Connections of hos are made with flanges. Maximum pumping pressure is 90 lbs. completion of cargo discharge the terminal displaces the cargo in t hose with nitrogen. The terminal connects and disconnects all hos and has no facilities for ballast or slops.

Bunkers and Freshwater: No fuel or freshwater is available at t berth. The terminal will not permit fueling of vessels at this berth.

Mobil Oil – Paulsboro:

General: The Mobil Oil Terminal is located at Bramell Point at t West end of the Paulsboro waterfront which is approximately 80 mi from the Sea Buoy. Facilities include a 2,453 ft. marginal wharf provid 2,254 ft. of berthing space. Depths of 39 ft. have been report alongside and deck height is 12.5 ft. There is a 6.2 million-barrel storag capacity. The terminal is used for the receipt and shipment of petrole products and bunkering vessels.

Vessels up to 900 ft. in length, unlimited beam and 80,000 d.w.t. c be accommodated at the terminal berths. Drafts to 38 ft. (freshwat have also been accommodated at these berths. Shoaling at the be may place further limitations on the allowed fresh-water draft.

Pilots and Docking: The services of a Pilot and Docking Master compulsory and recommended. Vessels should arrive off the do 2 hours before HW and are turned prior to docking for a port si mooring. After completion of the turn the vessel is breasted into t berth. Additional spring lines are recommended to prevent surg caused by passing river traffic. To insure a proper lead on the spri lines, the terminal recommends the spring lines be crossed. The termi does not provide a gangway.

Tugs: Tug requirements for docking vessels include: 1 tug for vess up to 30,000 d.w.t., 2 tugs for vessels over 30,000 d.w.t. For undock vessels tug requirements include 1 tug for vessels up to 50,000 d.w and 2 tugs for vessels in excess of 50,000 d.w.t.

Hose Connection: Crude is discharged at No. 1 Berth. 4 loading ar with 10 in. hoses using bolted flanges are connected to the ship. Ma discharge pressure is 125 lbs. Clean lubes are handled at No. 2 Ber through 3 loading arms when loading and 4 loading arms wh discharging. 8 in. hoses with bolted flanges are connected to the sh Max. line pressure is 100 lbs. Lube oils are handled at No. 3 Bert the same manner as No. 2 Berth. The terminal has limited facilities handling ballast through a 6 in. line. There are no common pipe-li for cargo in the terminal. Safety check lists and practices are follow by terminal personnel.

Bunkers and Fresh Water: All quantities of fuel oil, diesel oil and fre water are pumped to the vessel as required.

Sun Oil – Marcus Hook: (Also see "Shipmaster's Report").

General: Located at Mile 69 North, Marcus Hook is an important petroleum centre where large quantities of crude oil are received and refined petroleum products are shipped. Vessels can be bunkered at the rate of 1,500 and 5,000 bbls.p.h. Sunoco Wharf No. 3 (Lat. 39° 48′ 23″ N., Long. 75° 25′ 10″ W.), and Sunoco Wharf No. 2 (250 yards and Northeastward of Wharf No. 3) are both owned and operated by Sun Oil Company.

Wharf No. 2A can accommodate vessels up to 750 ft. in length, 125 ft. beam, max. 50,000 d.w.t. and max. fresh water draft 35 ft. Wharf No. 3A can accommodate vessels up to 810 ft. in length, 125 ft. beam, max. 76,000 d.w.t. and max. fresh water draft of 35 ft. Wharf No. 3C can accommodate vessels up to 1,000 ft., 125 ft. beam and draft 35 ft. Shoaling at the berth may place further limitations on allowed fresh water drafts.

Pilots and Docking: The services of a Pilot and Docking Master is compulsory and recommended. Vessels should arrive off the dock 2 hours prior to HW. Vessels are turned above the facilities prior to docking. Undocking is done at any stage of the water height. After completion of turn the vessel is then breasted into the berth for a starboard side mooring. Passing river traffic will cause moored vessels to surge unless proper tension is maintained on mooring leads at all times.

Tugs: Tug requirements for docking vessels include 2 tugs between 1,500 h.p. and 2,000 h.p. For vessels undocking 1 tug is sufficient.

Hose Connection: Crude and fuel oil are discharged at Berths No. 2A and 3A. Both berths have 4 loading arms, 12 in. hoses, and max. pumping pressure of 125 lbs. All connections are made with a bolted flange. Clean products are handled at all 3 berths through 8 in. or 12 in. hoses. Maximum pumping pressure is 125 lbs. Petro-chemicals are discharged at Berth No. 3A through a 10 in. line with a max. pumping pressure of 125 lbs. All connections for clean products and petro-chemicals are made with bolted flanges.

Bunkers and Fresh Water: Fuel oil and water is available at all berths. Fuel oil is delivered at 2,000 bbls.p.h. through an 8 in. line. Fresh water is piped at a rate of 45 t.p.h. Quantities available are enough to satisfy individual vessel requirements.

Tank Cleaning Inc. – Harkness Point, Schuylkill River:

General: The Schuylkill River is approximately 85 miles from the Sea Buoy on the Northside of the Delaware River. The junction is marked with a flashing red 4 sec. light mounted on a stone pile on the right side of the junction and Buoy "C1" on the lest side of the junction. A fog signal is located on the West side of the river junction. A lighted range (bearing 021.5°T) marks the entrance. Vessels proceeding to Harkness Point will pass under the Girard Point Bridge and Penrose Avenue Bridge, 0.6 miles and 1.3 miles, respectively, above the river mouth. Both bridges have fixed spans with clearances of 135 ft.

Pilotage and Docking: The terminal berth can accommodate vessels up to 630 ft. in length, 90 ft. beam, max. 28,000 d.w.t. and max. fresh water draft of 33 ft. There is a bow-to-manifold restriction and no proper breast line leads therefore the present mooring arrangement considered to be unsafe. Vessels should arrive at the Schuylkill River at HW slack for docking. Undocking can take place at any stage of the tide. A parallel approach is made when docking. A Pilot and Docking Master are compulsory and recommended. 2 tugs are assigned to all vessels when docking. For all vessels undocking 3 tugs must be employed. Undocking vessels have to be backed down the Schuylkill River to the junction with the Delaware River before turning can be accomplished.

Hose Connection: Fuel oil, heating oil, bunker and gasoline are all offloaded at this terminal. Bunkers are also loaded onto vessels at the berth. 4×10 in. lines are used for fuel oil and heating oil. All cargo lines are connected with a bolted flange. Max. pumping pressure on all lines is 100 lbs. 1×6 in. line is used for bunkers and 1×8 in. line is used for gasoline. The terminal has no facilities for ballast or slops. The dock manifold only permits the discharge of one grade at a time, this could affect the trim of the vessel.

Fresh Water/Fuel: Fuel oil and water is available at the berth. Fuel oil is delivered through a 6 in. line at 2,000 bbls.p.h. as per vessel requirements. Fresh water is piped at 40 t.p.h. maximum delivery rate.

Coastal Eagle Point Oil Co. – Westville Nos. 2 and 3:

General: The Terminal is located 90 miles from the Sea Buoy at Lat. 39° 52′ 43″ N., Long. 75° 09′ 30″ W., East of Eagle Point. The facility has an offshore wharf which provides 1,380 ft. of berthing space. Depths of 40 ft. are reported alongside and deck heights are 6 ft. and 16 ft. There are water and elecrical shore power connections. Vessels can be bunkered at the rate of 1,500 bbls.p.h.

The terminal can accommodate vessels up to 910 ft. in length, unlimited beam, max. 85,000 d.w.t. with a max. fresh water draft of 38 ft. The controlling depth at the berth is 40 ft.

Pilotage and Docking: A Pilot and Docking Master are compulsory and recommended. Vessels dock at HW or first stage of ebb. Undocking takes place at any stage of the tide. For docking 2 tugs are recommended. For undocking the Master may decide to use 1 or 2 tugs, depending on the weather and tidal conditions. Vessels are turned prior to docking for a port side mooring. No gangway is provided by the terminal. A normal mooring arrangement is used. Distance between shore manifolds is 878 ft. The terminal requires 100 ft. clearance between vessel when Berths No. 2 and 3 are occupied simultaneously.

Hose Connection: Berth No. 2 handles off-loading of crude, No. 4 and No. 6 fuel oil through 12 in. and 8 in. hoses. All connections at both berths are bolted flanges. Max. pumping pressure at both berths is 100 lbs. for all cargoes except chemicals which are pumped at 95 lbs.

Berth No. 3 handles No. 4 and No. 6 fuel oil through 6 in., 8 in. and 12 in. hoses. The terminal can handle up to 10,000 tons of ballast providing the separator is operational. Slops can also be sent ashore. The shore ballast line is segregated. Fuel Oil and crudes are handled through a common line.

Fresh Water/Fuel: Available.

Dirty Ballast Facilities:

Marcus Hook (Sun): Line 8 in. Max. quantity acceptable 1,800 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Marcus Hook (B.P.): Line 8 in. Max. quantity acceptable 2,000 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (Mobil): Line 6 in. Max. quantity acceptable 2,000 tons. Rate 150 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (Exxon): Line 10 in. Max. quantity acceptable 4,000 tons. Rate 800 t.p.h. Clean ballast may be pumped overboard.

Point Breeze (Atlantic): Line 6 in. Max. quantity acceptable, no limit. Rate 300 t.p.h. Clean ballast may be pumped overboard.

Eagle Point (Coastal): Line 10 in. Max. quantity acceptable, no limit. Rate 1,000 t.p.h. Clean ballast may be pumped overboard.

Girard Point (Chevron): Line 8 in. Max. quantity acceptable, no limit. Rate 500 t.p.h. Clean ballast may be pumped overboard.

General: Lighterage of deep drafted tankers effected at anchorage inside the Capes and before entering the main Ship Channel, i.e. at Big Stone Reach Anchorage, etc.

The holding ground in the upper river anchorages, such as Reedy Point, Marcus Hook, Mantua Creek, etc. is reported to be poor, whilst considerable siltation is also reported in these areas. Masters are therefore advised to take suitable precautions when having to use these anchorages.

Loading Fresh Water: This is effected at Mantua Creek Anchorage only.

Shipmaster's Report: September 1984.
Sun Oil Jetty (3C) at Marcus Hook.
Vessel: 140,000 d.w.t. LOA 270 m.

This is the only berth at Marcus Hook suitable for tankers of this size. Usually berth starboard side alongside, arriving off berth about 2 hours before HW. 1 tug each end, tugs' lines and usually made fast on main deck. 2 back springs first then 2 to 3 breasts and 2 to 3 head/stern lines. With this size of vessel it is better to have forward back springs from forecastle and use main deck moorings as head lines. Aft normally have back springs and stern lines from poop and breast lines from main deck.

Shore gangway and with an accommodation ladder about 20 m. abaft after manifold it is best to remove platform and land shore gangway there.

If bunkering then usual to pull off berth and anchor in Marcus Hook Anchorage.

Berthing Pilot boards off and normally uses accommodation ladder.

LNG/LPG: COAST GUARD REGULATIONS:

REQUIREMENTS FOR THE TRANSPORT AND TRANSFER OF LNG/LPG:

The following requirements are issued in the interest of port safety to supplement existing local, State, and Federal Regulations.

A. GENERAL REQUIREMENTS.

1. *Pre-arrival Conference:* Prior to a vessel's initial port call, or when such a vessel has not been to the port within six months, and is laden with LNG or LPG enroute to a facility under the jurisdiction of the Captain of the Port, Philadelphia zone, as defined in 33 CFR 3.15-25, a pre-arrival conference shall be held with all personnel concerned in the delivery and operation of the facility. The purpose of this conference is to disseminate and explain Captain of the Port requirements, local regulations, and establish emergency procedures for that vessel during the initial and subsequent port calls. The conference will include representatives of the Coast Guard, the vessel's Agent and charterer or operator, terminal owner/operator, and local authorities including the fire department.

2. *Notification:* The Captain of the Port must be notified:

(a) At least 72 hours in advance of a vessel's arrival at the Delaware Breakwater with confirmation 12 hours in advance, and certification upon arrival.

(b) Of the vessel's ETA at Delaware Memorial Bridge.

(c) Of the intended length of port call and estimated time of departure.

(d) Of any changes in the intinerary.

B. VESSEL DOCUMENTS: Prior to proceeding past the Delaware Breakwater at Cape Henlopen, the Master of the vessel shall ensure the following documents are valid and can be produced on demand:

1. A Certificate of Financial Responsibility issued by the Federal Maritime Commission.

2. If U.S. Flag, a Certificate of Inspection endorsed for the product(s) carried.

3. If foreign flag, a Letter of Compliance (LOC) for the carriage of the product(s) carried.

a. Vessels not holding a valid LOC shall be boarded by a joint COTP/OCMI inspection party at the Breakwater Anchorage prior to proceeding upriver. The vessel shall be examined in accordance with 46 CFR, part 154. If the examination is satisfactory, the vessel will be permitted to proceed upriver to the facility. Compliance with part C of this chapter will be strictly observed.

C. TRANSIT RESTRICTIONS FOR VESSELS LADEN WITH LNG/LPG CARGO:

1. *Vessel Movement:* Vessel movement will be conducted only with prior approval of the Captain of the Port.

2. *Propulsion and Machinery Status Report:* No vessel may proceed past the Delaware Breakwater unless the Master sends a message to the Captain of the Port within 12 hours before arrival stating that "To the best of my knowledge and belief there are no known casualties to this vessel or its machinery and all cargo handling and gas detection equipment is in proper operating condition". Should any condition be present that precludes the sending of this message, the vessel shall be boarded by the Coast Guard at the Breakwater Anchorage so that a determination can be made as to the vessel's seaworthiness and repairs necessary prior to transiting the river.

3. *Transits:* LNG/LPG laden vessels may only transit the Delaware Bay/River daytime during hours if the visibility is two miles or greater. After discharging, a vessel empty of LNG/LPG cargo may depart at any time.

4. *Intra-Harbour Movement:* An LNG/LPG carrier should submit 2 hours' advance notice of intra harbour movement to the Captain of the Port, earlier notice is desired if practicable.

5. *Radio Guards:* Continuous radio guard must be maintained on Channel 13 (156.65 MHz) and Channel 16 (156.8 MHz) during transit.

6. *Tug Escort:* No LNG/LPG laden vessels shall transit the Delaware River above Delaware Memorial Bridge without at least one commercial tug escorting.

7. *Coast Guard Escort:* Unless specifically authorised by the Captain of the Port, no vessel may transit the Delaware River above Delaware Memorial Bridge without a Coast Guard escort vessel.

8. *Meeting and Overtaking:* While transiting the river, the vessel will not overtake river traffic; nor will river traffic be allowed to overtake the vessel. The vessel shall be navigated so as not to meet other vessels at bends in the river channel. During meeting situations, neither vessel shall proceed in such a manner that they will meet at a relative speed greater than 20 knots.

9. *Emergency Situations:* In the event of an emergency situation, the Captain of the Port must be promptly notified of the vessel's position, draft, nature of emergency, time required to restore normal operations and future intentions. The vessel's Master or Agent shall have the authority to immediately enlist commercial assistance in an emergency situation or when the COTP deems that commercial assistance is required to prevent an emergency.

D. ANCHORAGE RESTRICTIONS AND REGULATIONS:

1. Transfer of product at anchorage is not permitted except in the event of an emergency such as to warrant, in the opinion of the Captain of the Port, specific authorisation.

2. A live bridge watch shall be maintained by a qualified watch officer. A round of bearings and/or ranges fixing the vessel's position shall be taken hourly followed by a report on the hour to COTP Philadelphia on Channel 16 FM reporting anchor holding and operations normal or any significant change in position or deviation from the norm. In addition to these requirements, during periods of sustained winds in excess of 25 knots, but less than 40 knots, the vessel must maintain the capacity of having engines on line within 30 minutes; if sustained winds are 40 knots or over, the main propulsion plant must be on line.

3. A continuous radio guard shall be maintained on Channel 16 FM while at anchor.

4. Vessels anchored in Mantua and Marcus Hook Anchorages may be required by the Captain of the Port to have tug assistance during the change of tide.

E. VESSEL TRANSFER OPERATIONS: (The Master shall be responsible for compliance with this section): Prior to the commencement of transfer operations, a Coast Guard boarding party will examine the vessel. Cargo transfer shall commence only after satisfactory completion of the inspection and issuance of Coast Guard Form 4260, Permit to Handle Dangerous Cargo.

1. The following is a partial list of items inspected by the Coast Guard boarding party:
   (a) Relief valve records and data.
   (b) Gas detection system/alarms operation and records.
   (c) Remote shutdown operation.
   (d) Firefighting equipment.
   (e) Boiler burn off system (if installed).
   (f) Condition of piping, flanges, expansion joints, relief valves, cargo valves, and gauges.
   (g) Intrinsically safe equipment.
   (h) Automatic controls.

2. In addition to the above, the inspection party will ensure the following requirements are complied with:

(a) Person-in-Charge: The Master shall ensure a licensed officer or qualified supervisor is aboard the vessel throughout the entire cargo discharge/loading operation.

(b) Other Vessel Activities: Only such activities as bunkering, loading of stores, repairs i.e., normal ship maintenance and support activities as approved by the Captain of the Port at the pre-arrival conference, will be permitted – under such conditions as stipulated – while vessels are transferring LNG/LPG. No cutting, burning, welding or other hot work is allowed on the vessel without specific approval from the COTP.

(c) Smoking Areas: Smoking areas shall be designated by the Master and posted at the gangway.

(d) Bonding: The Terminal Manager shall ensure the vessel is electrically bonded to the shore ground prior to commencing transfer operations. The connection shall be maintained until transfer operations are secured. An approved connection shall be used for securing, i.e., alligator clamps are not acceptable. "C" clamps would meet minimum requirements, bolted connections are recommended. The Master shall not commence hookup until this action is taken.

(e) Mooring Requirements: The vessel shall, when possible, moor bow to seaward, and be prepared to get underway on short notice. it may be required to have a live tug standing by during operations. A wire rope towing hawser shall be made ready forward, amidships, and aft with the bight at water's edge.

(f) Operations During Storms: Cargo transfer operations shall cease if an electric storm occurs and at any time lightning is observed or thunder heard; cargo transfer connections may be maintained.

(g) Language Requirements: Ship's supervisory personnel directly involved in supervision of cargo transfer operations must be able to read, speak and understand the English Language.

(h) Transfer Connections: Each flange in the overall transfer operation will be secured with all bolts and properly gasketed, or with a Coast Guard approved quick disconnect device.

(i) Venting: Venting of boil off vapours is prohibited. LNG vessels must demonstrate the ability to contain or consume boil off vapours for a minimum of 21 days.

(j) Fire System: The Master shall ensure the vessel's fire ma linked to the waterfront facility fire fighting system so that the vesse maintain a firefighting capability, even if its fire pumps are inopera The bonding hose shall never be charged unless in use during a l

(k) Personnel Aboard: A minimum number of personnel to be reta aboard the vessel shall be established during the pre-arrival confere or dockside inspection.

(l) Barge Personnel: In operations involving barges. a tanker possessing an appropriate certificate for the product being handled s be present during cargo operations.

F. FACILITY OPERATIONS: (The Terminal Manager shal responsible for compliance with this section).

A pre-arrival conference shall be held in accordance with para A that the following regulations may be explained and disseminated p to the initial operation of a facility. Drawings indicating cargo routing fr the dock to all storage tanks shall be provided to Coast Gu representatives. A current list of qualified cryogenic supervisors sha maintained with copies provided to the COTP. The following regulatio shall be complied with during all transfer operations.

1. *Facility Security:* All facility/terminal security zone areas are to posted and restricted to personnel authorised by the terminal manag Adequate physical security shall be provided, including a guard forc allow on authorised personnel, i.e., those persons who have an offi need for presence on the facility, during operations.

2. *Equipment Inspections:* Immediately prior to handling cargo, t shore piping which is to be used in the operation shall be inspected proper operation of automatic controls, gas detection, a instrumentation. If any of the system contains air, it shall be purged p to handling the product by an inert gas, in special circumstances, using low pressure LNG/LPG vapour. Care shall be taken in purging minimise the volume of flammable mixtures present at anytim Following the purging, piping shall be so cooled as to prevent excess thermal stress.

3. *Supervisor and Personnel:* A designated cryogenics supervi shall be in attendance at the waterfront facility in the proximity of a during all cargo operations. During all periods of cargo transfer, t terminal shall have one man on board the vessel and one man at t tank car or storage tank loading stations who shall be able to co municate with each other at all times with intrinsically safe equipme

4. *Language Requirements:* All shore supervisory personnel direc involved in supervision of cargo operations must be able to readily re speak and understand the English language.

5. *Smoking:* No smoking shall be permitted except in designa areas determined by the facility operator, subject to the approval of t COTP.

6. *Hot Work:* Hot Work will not be permitted without prior authority the COTP.

7. *Notification:* The COTP shall be notified one hour in advance the commencement and termination of the cargo transfer operations the waterfront facility.

8. *Fire Equipment:* The Terminal Manager will ensure currently tes and inspected fire hoses are laid out and connected to hydrants in ta car and storage tank loading areas unless otherwise provided w approved, permanently installed facilities. The international sh connection shall be connected in accordance with para. E, Ves Transfer Operations. Hydrants shall be tested for satisfactory flow p to connecting hoses. In addition to portable equipment, the offsh mooring area or waterfront facility area shall have any combination semi-portable dry chemical extinguishers totalling 600 pounds. A main water source and spray equipment must be available as wel will be the Terminal Manager's responsibility to have his fire marsh and fire equipment present at the connecting and disconnecting stag of the operation.

9. *Lighting:* Adequate shoreside lighting in conformance with t National Electric Code shall be provided.

10. *Hoses:* Each hose used to handle cargo shall have been design for handling such products and shall be tested at 1 – 1.5 times maximum allowable working pressure or 250 psi, whichever is grea prior to commencing the transfer operation.

11. *Vessel Protection:* Vessels moored to existing facilities a marginally to a channel, or when otherwise deemed necessary by t COTP, must be afforded protection through the use of barges or came Any such protection shall have specific approval of the COTP.

12. *Inspection of Reception Facilities:* All tank cars, tank truc barges and storage tanks shall be inspected prior to loading. Time their last test shall be verified. Operability of overpressure protect devices shall be verified by a person designated by the termi manager.

13. *Remote Shutdowns:* Remote cargo shutdowns shall be certi satisfactory by a person designated by the terminal manager.

14. *Transfer Completion:* Upon completion of all cargo transfers, t product line from pier head to tank car and/or storage loading statio in the type of operations where this applies, shall be unloaded into clos containers and not vented into the atmosphere. Where the operation the LNG/LPG terminal is such that the product will be circulat continuously, it need not be unloaded – thus there will be no delay the start of each cargo transfer operation while bringing the piping do to operating temperature, and a resultant reduction in cycling of therm stresses. However, the unloading arms shall be drained, using nitrog purge and left in a nitrogen atmosphere with the shipboard end of t unloading arm blanked off until ready for the next transfer operation

15. *Bonding:* The terminal manager shall ensure the vesse electrically bonded to the shore ground prior to commencing trans operations. The connection shall be maintained until transfer operati are secured. An approved connection shall be used for securing, i alligator clamps are not acceptable. "C" clamps would meet minim requirements, bolted connections are recommended.

DENSITY: Philadelphia ports are fresh-water ports.

FRESH WATER: Fresh water normally not available directly at berth. Fresh water available by tank truck or through fire department. Water by barge available.

River Associates, Inc. of Philadelphia, Tel: (215) 922 – 6027, provides wash water in Philadelphia and Delaware Bay with two barges, 220 tonnes and 1,000 tonnes capacity.

FUEL: Bunker C and diesel fuel available at most oil terminals. Vessel's Agent should confirm berthing space at least 24 hours in advance.

CONSULS: The following countries are represented in Philadelphia:

Austria
Belgium
Chile
Costa Rica
Denmark
Dominican Republic
El Salvador
Finland
France
Germany
Great Britain
Guatemala
Haiti
Honduras
Iceland
Israel
Italy
Japan
Korea
Lesotho
Mexico
Netherlands
Norway
Panama
Portugal
Spain
Sweden
Switzerland
Venezuela

REPAIRS: All types of ship repairs can be effected.

DRY DOCK: Floating dock with capacity 70,000 tons.

SURVEYORS: American Bureau of Shipping. Tel: (609) 354-6366.
Caleb Brett. Tel: (215) 521-1725.
National Cargo Bureau. Tel: (215) 925-3546.
E. W. Saybolt. Tel: (215) 583-4460.
Bureau Veritas. Tel: (215) 543-5884.
China Corp. Register of Shipping. Tel: (215) 543-5884.
Panama Bureau of Shipping. Tel: (215) 543-5774.
SGS Controls Services, Inc. Tel: (609) 467-1702.

GANGWAY/DECK WATCHMEN: These services are left to the discretion of the Master. It is often recommended by ship's P & I Club that watchmen be engaged when seamen are detained by U.S. Immigration. Ship is subject to fines by U.S. Government if any detained seaman deserts vessel.

OPENING/CLOSING HATCHES: Normally by stevedores.

CERTIFICATES: Ship's Register and Load Line Certificate are mandatory. If vessel is carrying passengers from the U.S. they will require a U.S. Coast Guard Certificate. This can easily be obtained in about 1 or 2 days subject to meeting the requirement for life-saving equipment.

CUSTOMS ALLOWANCES: No set rule. Reasonable amount allowed for personal use.

CARGO GEAR: For exceptionally heavy lifts, Pennsylvania Shipbuilding Co. has a floating derrick with 800 tons lifting capacity.

AIRPORT: Philadelphia International Airport is located approximately 6 miles from central harbour area.

TIME: Standard Time GMT minus 5 hours. Daylight Saving Time (GMT minus 4 hours) from first Sunday in April till last Sunday in October.

HOLIDAYS: New Year's Day (1st January); Martin Luther King, Jr's. Birthday (15th January); Lincoln's Birthday (12th February); Washington's Birthday (22nd February); Thomas Gleason Birthday (17th March); Richard L. Askew Birthday (6th April); Good Friday; Memorial Day (Decoration Day); Flag Day (14th June); Independence Day (4th July); Labour Day (1st Monday in September); Columbus Day (12th October); November Election Day (1st Tuesday in November); Armistice or Veteran's Day (11th November); Thanksgiving Day; Christmas Eve; Christmas Day; and any other national holiday as may be provided by executive authority.

POLICE/FIRE/AMBULANCE: Fire Tel: LO 3-6700; Police Tel: 231-3131; Port Disaster Tel: 609-WO 3-6420 or WA 5-8780.

SHIP SUPPLY SERVICE:
Fleet Helicopter Service. Tel: 282-4100.
Keystone Helicopter Corp. Tel: 644-4430.
Seaboard Air Charter, Inc. Tel: 563-1564, (302) 856-6545.
Delaware Bay Ship Chandlers. Tel: (302) 422-8088.
Delaware Ship Supply Co. Inc. Tel: HO.3 – 1700.
Delaware Bay Launch Service Inc. Tel: (302) 422-8088.
Delaware River Harbour Service. Tel: 365-9777.
Hueber Launch Service. Tel: (215) 872-3544, (215) 425-3155.

GARBAGE DISPOSAL: Service available through Agent.

WASTE OIL DISPOSAL: Service available through Agent.

SEAMAN'S CLUBS: Seaman's Church Institute, 249 Arch Street. Apostleship of the Sea, 2319 South Third Street. All services available.

CURRENCY: Masters should indicate requirements to Agent, who will advise exchange rates.

AUTHORITY: Philadelphia Regional Port Authority, 210 West Washington Square, Philadelphia, Pennsylvania 19106, U.S.A. *Tel:* (215) 928-9100. *FAX:* (215) 928-1488. *Contact:* John P. La Rue, Executive Director. Joseph P. Menta, Jr., Assistant Director of Communications.

Delaware River Port Authority, Bridge Plaza, Camden, New Jersey 08101. *Tel:* (215) 925-8780. *FAX:* (609) 541-6379. *Contact:* Eugene J. McCaffrey, Sr., Executive Director. Tel: (609) 963-6420, Ext. 2363.

South Jersey Port Corporation, 2500 Broadway, Camden, New Jersey 08104. *Tel:* (609) 541-8500. *FAX:* (609) 757-4903. *Contact:* Joseph A. Balzano, Executive Director.

PINEY POINT, Maryland: 38.08 N. 76.32 W. (See Plan)

Steuart Petroleum Company Terminal on East bank of Potomac River, 82 miles from sea.

DOCUMENTS/PILOTAGE: Refer to "Baltimore".

ANCHORAGE: Unlimited, available in Chesapeake Bay.

RESTRICTIONS: Berthing 24 hours a day with max. draft of 38 ft. Vessels exceeding 725 ft. or 36 ft. draft, 2 tugs required docking and sailing. Vessels under, 1 tug docking and sailing.

MAX. SIZE: Limited by depth at berth, 38 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMH Baltimore Radio. VHF Channel 26.

TUGS: 2 tugs available for berthing, join vessel off berth. Tugs despatched from Baltimore.

BERTHING: 1 tanker berth only operated by Steuart Petroleum Company. Long lines required for first ashore.

FRESH WATER: Available at berth.

FUEL: Bunker "C" only, available at berth.

AIRPORT: Washington National (80 miles) or Baltimore-Washington (100 miles).

TIME: GMT minus 6 hours. Summertime from April to October.

SHORE LEAVE: Allowed.

GENERAL: Nearest city with full services is Washington, 65 miles distance and Baltimore 110 miles.

AUTHORITY: Maryland Ports Administration, The World Trade Centre Baltimore, Baltimore, Maryland 21202. *Tel:* (301) 659-4550.
Operator: Steuart Petroleum Co., Piney Point, Maryland 20674.

PORT ADAMS, Texas: 29.45 N. 95.11 W.

Refer to "Houston" for all general information.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PORT ANGELES, Washington: 48.08 N. 123.25 W. (See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".

APPROACHES: Depth at entrance 100 ft. – 160 ft. No bar.

PILOTAGE: Compulsory for all vessels except those in coasting trade. Pilot station at Ediz Hook serves all vessels bound for Puget Sound ports. Pilot boards off Port Angeles.

ANCHORAGE: In harbour, depth at least 42 ft. MLLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available from Foss Launch and Tug Co.

BERTHING: 3 pier berths and 2 dolphin berths, depth up to 45 ft. MLLW. Forklifts with capacity to 10 tons.

STEVEDORES: 8 local gangs, additional gangs may be imported if required.

MEDICAL: All medical facilities available. Local hospital.

DENSITY: Salt water.

FRESH WATER: Available at all wharves.

FUEL: Barge delivery only.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities specified; reasonable allowance at discretion of Custom's Inspector.

AIRPORT: William R. Fairchild International Airport 3.5 miles from the harbour.

HOLIDAYS: See "Tacoma".

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany). Service available through local agent. City provides dumpsters alongside. Contact Solid Waste. Tel: (206) 457-0411.

WASTE OIL DISPOSAL: Disposal available via Seattle or Tacoma environmental transporters. Contact Port of Angeles, Marine Terminal. Tel: (206) 457-1909. Fax: (206) 452-1129.

SEAMAN'S CLUBS: Limited services available through church groups. Contact Port Authority.

CURRENCY: U.S.Dollar (U.S.$).

AUTHORITY: Port of Port Angeles, P.O.Box 1350, 338 W. 1st Street, Port Angeles, Washington 98362. *Tel:* (206) 457-8527, 457-1909. *Telex:* 469230. *FAX:* (206) 452-3959, 452-1129. *Contact:* D. G. Hendricks, Executive Director. David H. Hagiwara, Director of Marketing. Kermit Guenkel, Marine Terminal Supervisor.

PORT ARTHUR, Texas: 29.52 N. 93.56 W. (See Plan)

DOCUMENTS:

Entrance Direct from a Foreign Port:

Master's Oath on entry on vessel in Foreign trade, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).
Ship's Stores Declaration, Customs Form 1303 (2 copies).
Crew Effects Declaration, Customs Form 1304 (2 copies).
Clearance from Last Port.
Inward Foreign Manifest, Customs Form 1302 (2 copies)
Passenger/Crew List. Form I-418 (3 copies).

In event import cargo is onboard, an additional copy of each of the above Forms is required for travelling Manifest. A copy of the Manifest for each port is also required.

Entrance from Domestic Port:
Clearance from Last Port.
Crew Effect Declaration, Customs Form 1304 (2 copies).
Stores List, Customs Form 1303 (2 copies).
Crew List, Customs Form I-418 (2 copies).
Master's Oath, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).

PILOTAGE: Come up in vicinity of the Sea Buoy. 24 hours notice of ETA should be given and revised if ship is delayed 1 hour or more. Telegraphic address is "Sabine Pilots, Port Arthur, Texas". Pilot station keeps 24 hour continuous watch on VHF Channel 12 – 156.6 MHz and on 2738 kHz. Pilot boat is motor vessel with black hull, white housing flying Pilot insignia by day and Pilot light by night. Location of pilot boat is in general vicinity of Sabine Pass Sea Buoy. Pilot ladder only on lee side of vessel.

Pilot will, upon request and at extra cost, board incoming vessels at buoy marked "SB" in position Lat. 29° 25′ N., Long. 93° 40′ W.

Gulf of Mexico Pilots

American Master Mariners licensed by the United States Coast Guard. They are experienced in handling vessels of all types and sizes, and have many years of experience in navigating the Gulf of Mexico.

Gulf of Mexico Pilots cover the entire Gulf and the Florida Straits. They are on call to board vessels wherever requested within the service area, on 48 hours advance notice.

Request for service may be directed to:
Gulf of Mexico Pilots, 3741 Memorial Blvd., Port Arthur, Texas 77640.
Cables: Gompilots. Tel: (409) 982-2961.

The Gulf of Mexico Pilot will provide assistance and advise in heavily congested areas. He will utilise up-dated local knowledge of conditions peculiar to navigation in the Gulf of Mexico. He will assist with VHF radio communications, expedite arrivals and departures between the Gulf Ports resulting in savings of time and fuel, while easing the human-fatigue factor caused by the demanding duties of Shipmasters operating in unfamiliar environment and the continuously changing conditions therein.

RESTRICTIONS: The Port Arthur Ship Channel is in operation 24 hours per day. The only restrictions that might hamper vessel traffic would be the draft of the vessel (Port will be able to handle vessels taking up to 40 ft. of water) or extremely bad weather conditions such as fog or high winds. Also, vessels of the 85,000 ton or more class can only be moved during daylight hours.

MAX. SIZE: Port Arthur Ship Channel will be authorised to 40 ft. in depth and will vary from 400 to 800 ft. in width. Turning basin, which is located at Mile 19 (only about 0.5 miles upstream from existing port facility) is 900 ft. in width. Bulk carriers going to grain elevator at Port Arthur or to one of the oil refineries would only be restricted by draft which would vary from 30 ft. to 40 ft. depending on load/discharge berth the vessel is en route to. See "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: For a vessel in the Gulf of Mexico, and en route to Port Arthur, the best way to route an ETA message is to radio "Port Arthur Radio" (Radio Marine Corporation of America) whose call sign is WPA. Port Arthur Radio will then either send the message through Western Union via its telefax machine or via telex if the receiver of the message has a telex machine. There are also radio stations located in Galveston, Texas (Mackay Radio, call sign KLC) and in Mobile, Alabama (call sign WLO).

VHF: Pilot office on Channel 20. Pilot boat on Channels 12, 13, 16 and 65A.

TUGS: The exact position that the tug meets the vessel varies with each vessel but usually they meet just below Texaco Island. In some cases they meet as far up as Great Lakes Carbon Co. Berth (usually when vessel is in ballast and going to Gulf Oil Docks). Whether or not the tug uses the vessel's lines or its own lines depends entirely on the circumstances involved but the tugs usually use the ships lines. Port Arthur is served by 2 towing companies, (1) Moran Towing of Texas and (2) Sabine Towing & Transportation Company, Inc.

BERTHING: The first procedure for obtaining a berth at Port Arthur is to submit a Berth Request Form. The Berth Request will contain the following information and will be submitted, in duplicate, to P.O. Box 1428, Port Arthur, Texas: Date of request; type and name of vessel; loading ports; registry or flag; where vessel is to arrive from; ETA; where vessel is to sail for; estimated date of departure; what inbound cargo, if any, consists of; what outbound cargo, if any, consists of; date you expect to begin receiving outbound cargo. The Form must be signed by the Agent or Owner of the vessel. (Berth Request Form will be made available by the Port.) Upon receipt of a Berth Request from the Agent or Owner, the Port will then, upon determining availability of berth, return one copy of the initial Berth Request to the Owner or Agent as an assignment of berth. Berths are assigned on a first come first served basis at all times. All changes in vessel's ETA must be given to the Terminal Office immediately. All mooring and unmooring will be done by the Port. Procedure may differ at the various private terminals which are not under the jurisdiction of the Port Arthur Navigation District.

Also see "Developments".

BULK HANDLING FACILITIES: *Pabtex Terminal Company:* Bulk Marine Terminal in the Port's deepwater industrial park is located at Mile 26, handles dry bulk commodities from rail cars to storage to vessels at rates up to 3,000 t.p.h. and has space available for shipper storage tanks on pads, with open storage for 300,000 tons. The terminal also includes a 750 ft. wharf and is located directly on the Sabine-Neches Waterway which presently offers an authorised channel depth of 40 ft. All terminals described above are served by subject waterway and limitations of depth will vary at the face of dock at individual terminals. Pabtex maintains 40 ft. depth at the face of their facility.

Great Lakes Carbon Co.: Length of berth 300 m. Max. LOA 210 m. Max. draft 10.5 m. 2 loaders with total loading capacity 500 tonnes p.h. Petroleum, coke and coal handled.

CRANES: 1×75 ton diesel electrical crane services Berths No. 1

BRIDGES: There are no bridges that would require a vessel to a at any certain time at Port Arthur, however, the first bridge approa involves a vertical clearance of 136 ft. MHW.

STEVEDORES: Advance order for longshore gangs varies a contract held by ILA (International Longshoremen's Association). In Arthur, gangs have to be ordered as follows: Order by 1800 hrs. fo next morning (either 0700 or 0800 hrs.); order by 0800 hrs. for 100 order by 1100 hrs. for 1300 hrs.; order by 1600 hrs. for 1900 hrs. order by 1800 hrs. day before for any starting time Sunday or Hol

MEDICAL: It is not usually required that the Agent be given adva notice of required medical attention but in some instances it is he in arranging transportation to a hospital and in obtaining a bed in event the hospitals are near full. Port Arthur is served by 2 hosp (1) St. Mary's Hospital and (2) Park Place Hospital, both of which very well staffed and have adequate facilities for almost any emerge Also, advance notice is helpful when vessel is scheduled to dock in evening or during night, as doctors are not in their offices and h to be located.

Particular inoculations required by the Public Health Department as to the vessel's last foreign port of call. Any crew members who h not had the required inoculations can usually be given these inocula on board either by the Public Health Officer or a Physician. This is usu arranged by the Agent or Owner.

TANKERS: There are 3 major oil companies: Chevron Oil Corpora Star Enterprise Inc.; and Fina Oil and Chemical Company. Chevron Corporation and Star Enterprise Inc. are 2 of the largest oil refinerie the country. The diameter of load/discharge lines range anywhere fr 4 in. to 12 in. depending on the grade of the petroleum product be loaded. As far as slop discharge facilities are concerned there are bal tanks at all major oil companies. Chevron Oil has 3,400 linear ft. of be accommodation and Star Enterprise has 5,299 linear ft. of be accommodation together enough to accommodate 11 supertankers p barges. Fina Oil and Chemical Co., being the smaller of the 3 companies, has berth accommodation for 3 vessels.

Report: Chevron Oil Terminal is located on the East side of the Ta Bayou Turning Basin 30 miles from the Sea Buoy. The controlling de of the channel and turning basin is 40 ft. The maximum size ves normally received at this terminal is 50,000 d.w.t. The water about terminal is salt. Docking and undocking occurs day and night. Vess are cautioned of shoaling in the basin.

Vessels are normally turned upon arrival so as to head out. Wire rop are not permitted unless fitted with fibre rope pennants of at le 3 fathoms in length. Fire wires must be rigged fore and aft.

Two tugs are normally used when docking unless vessel is o 34,000 d.w.t. when 3 would be used. When undocking, 2 tugs are us for vessels over 30,000 d.w.t., under 30,000 only one tug is used.

Amdel Pipe-line is located at the former ARCO Docks on the Nech River Channel 42 miles from the Sea Buoy and includes Berths 1, and B. Controlling depths for the channel, manoeuvring area/turn basin, and berth is 40 ft. The water at the berth is fresh to brack Attention to moorings by deck watch is required when passing vess approach due to the close proximity of the berths to the channel.

Berth No. 1 is the largest and will accommodate vessels approximately 50,000 d.w.t. Berth "A" normally accommodates vess of 28,000 d.w.t. Berth "B" is normally used for crude oil and barge tra Loaded vessels normally moor starboard side to with standard moor lines fore and aft. 2 tugs are used for both docking and undockin Incoming vessels are met by tugs 1 mile below the berth. Vessels a turned just above Berth "B". Fire wires must be out fore and a For undocking 2 tugs are normally used.

DENSITY: Varies from fresh water (1000) to pure salt water (10 depending on amount of rainfall and tide variations. According to figu obtained from the National Cargo Bureau, average density is 50% s water or (1012.5).

FRESH WATER: The Port has 4 ships service outlets for fresh wat each of which is served by a 4 in. water line. Watering barges a available in the area for facilities which are not equipped to prov watering services.

FUEL: Almost any grade of fuel or marine diesel is available. In so instances there are fuel lines running directly to docks, but if n bunkering barge is available. An advance notice is usually required bunkering barge depending on number of vessels awaiting bunkerin

FIRE PRECAUTIONS: The Port has, in each of 4 equally spac indentations along the front of its transit shed, a fire hose outlet fed an 8 in. water line and there are numerous fire hose boxes throug the transit shed. In addition to this a 24 hour guard service is consta on the watch and is in direct communication with the Port Arthur F Department which is only seconds away. Authorized on-dock smok areas are clearly defined for proper safety controls.

CONSULS: The nearest Consul-Generals are in Houston, Tex approximately 90 miles from Port Arthur.

REPAIRS: All types of deck and engine repairs can be accomplish Main ship repairers are: Vessel Repair, Inc., Bethlehem & Gulf Cop & Manufacturing Corp., Sabine Propeller Company and Coastal Ma Service, all of which are located in Port Arthur.

DRY DOCKS: 2 dry docks, largest being Bethlehem Steel's new f service rig/vessel facility located 8 miles up-river from the Sabine Pa Anchorage. The dry dock at this new Bethlehem repair yard is l enough to lift any mobile offshore unit working the Gulf today. It w handle any jackup, whether mat-supported or independent-leg. F semi-submersibles, submersibles or drill ships. This sectional steel do offers lift capacity of 56,000 long tons, 30 ft. of water over the blo and it can be configured to provide a clear docking area of ei 362×310 ft. or 825×122 ft., depending on the size and shape of t incoming vessel. The dock is outfitted with machine, pipe and ot shops, and has the crane capacity to give it full repair service capac For especially heavy lifts Bethlehem's 400-ton capacity derrick barg available.

The smaller dry dock is Vessel Repair, Inc., which occupies 60 acres with 3,200 linear ft. of frontage on Port Arthur Ship Channel. This yard also designs, constructs and repairs barges, tugs and other vessels. It has fully equipped shops, 2 marine railways with haul-out capacities of 1,000 and 1,500 tons and 1 floating dry dock of 3,000 ton capacity.

SURVEYORS: American Bureau of Shipping, Goodhue Building, Beaumont, Texas.

Triangle Marine, Inc., 8700 Ninth Avenue, Port Arthur, Texas 77640. Tel: (713) 722-1922

Underhill Adjustment Agency, 1335 Proctor Street, Port Arthur, Texas 77640. Tel: (713) 985-9329

World Marine Associates, Inc., 580 Fannin, Suite 718, Beaumont, Texas 77701. Tel: (713) 838-9980.

GANGWAY/DECK WATCHMEN: Under normal conditions a watchman is not necessary on most vessels. Under certain conditions such as a communicable disease or a malafide crewman, a watchman would be feasible but the decision is left up to Master or owner of the vessel. There is a $1,000 fine if a malafide crewman disembarks from the vessel.

OPENING/CLOSING HATCHES: Paragraph 2, Rule No. 1 of the Deep Sea Longshore and Cotton Agreement for Texas ports and Port of Lake Charles, Louisiana, states as follows: "When vessel is in loading or unloading berth, loading and laying of dunnage and the opening and closing of hatches, when in connection with the handling of general cargo and/or cotton, is longshore work and will not be done by ship's crew." This agreement, however expired in 1978.

CUSTOMS ALLOWANCES: Tobacco: Each crewman is allowed to keep 300 cigarettes out of bond while in port. Wine and/or Spirits; Each crewman is allowed to keep 1 quart of spirits out of bond while in port.

CARGO GEAR: A current certified Gear Certificate is required to be on board at all times and is to be kept up to date.

REPATRIATION: There are facilities for effecting crew changes and repatriation.

AIRPORT: Port Arthur is served by Mid-Jefferson County Airport which is located approximately 10 miles North of Port Arthur on Highway 69. The Mid-Jefferson County Airport is served by various airlines.

TIME: Central Standard Time (GMT minus 6 hours) during Winter. From first Sunday in April till last Sunday in October Central Daylight Time (clocks are moved ahead 1 hour).

HOLIDAYS: Longshore Holidays are: Veterans Day (Nov. 11th), Thanksgiving Day (Fourth Thursday in Nov.), Christmas Day (Dec. 25th), New Year's Day (Jan. 1st), Martin Luther King's Birthday (Jan. 15th), Washington's Birthday (Third Monday in Feb.), Texas Independence Day (March 2nd), Good Friday, Memorial Day (Last Monday in May), June 19th, July 4th, Labour Day (First Monday in September). At Lake Charles, LA., Mardi Gras Day to be substituted for Texas Independence Day. No work shall be performed on Labour Day or Christmas Day, except in case of fire or where property is in danger.

When holidays fall on Sunday, the following Monday to be recognized as the holiday. No work to be performed between 1600 hrs. and 1900 hrs. on election days. When Christmas falls on Sunday, Monday will be an overtime day and gangs will work as ordered.

POLICE/AMBULANCE/FIRE: Police Department Tel: 983-8600; Fire Department Tel: 983-8700; Ambulance Service Tel: 985-5504 or 983-5666.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Captain of the Port, 2875 75th St., Highway 69, Port Arthur, Texas 77640. Tel: (409) 724-4343.

TELEPHONES: Facilities for placing a telephone on a vessel by request. There is a coin-operated telephone on the dock for anyone's use.

SERVICES: Tank cleaning done in port must be done by longshore labour. All major oil companies have facilities for removing tank washings.

BANKS: First Interstate Bank, 441 Austin Avenue, Port Arthur, Texas 77640. Tel: (409) 985-8851.

First Bank & Trust, 4000 Twin City Highway, Groves, Texas 77619. Tel: (713) 963-1141.

Bank One Port Arthur, 8200 Highway 69, Port Arthur, Texas 77642. Tel: (409) 727-0123.

First National Bank of Port Neches, 1025 Port Neches Avenue, Port Neches, Texas 77651. Tel: (409) 722-4365.

Mid County Bank & Trust, 800 Magnolia, Port Neches, Texas 77651. Tel: (409) 727-2361.

Nederland State Bank, 1308 Boston, Nederland, Texas 77627. Tel: (409) 727-3161.

Bank One, 3723 Gulfway Drive, Port Arthur, Texas 77640. Tel: (409) 982-5741.

STORING: See "Prelims".

1. Vessels are generally stored by truck in the area but barge storing does occur on rare occasions.
2. There are no specific regulations covering barge storing while vessel is working other than what the individual terminal may deem proper.
3. Trucks normally deliver at shipside at the Ports' facilities but this will vary from terminal to terminal.
4. Fork lift trucks are never used on the jetty to handle stores.
5. None other than Bonded Warehouse products.
6. Can but are seldom used. Generally handled by ship's crew or other less costly labour that is available in the area.

SHORE LEAVE: The question of whether shore leave is allowed is entirely up to the ship's Master. The only requirements being; each crewman on shore leave must have a landing permit issued by the Immigration Department and no malafide crewman may be granted shore leave. Port Arthur has no restrictions pertaining to shore leave.

IDENTIFICATION CARDS: American crewman do not need any identification card. Foreign crewman need only the landing permit from Immigration Department in order to go ashore.

GARBAGE DISPOSAL: Arrangements should be made through local steamship agent. Service provided by Browning Ferris Inc. (BFI), Highway 69, Nederland, TX 77627. Tel: (409) 724-2371.

WASTE OIL DISPOSAL: Arrangements should be made through local steamship agent. Service provided by Carotex Inc., P.O.Box 3901, Port Arthur, TX. 77643. Tel: (409) 962-0251.

SEAMAN'S CLUBS: Port Arthur International Seaman Center Inc., 700 Fourth Street, Port Arthur, TX. 77640. Tel: (409) 982-4504.

DELAYS: Delays in berthing usually arise from vessels ETA being delayed and thereby causing a berth conflict. The port is on a first come, first serve basis.

GENERAL: On vessels arriving directly from a foreign port there are 3 Government Agency Representatives that must board. Already mentioned and explained are Customs and Immigration. The remaining one, Animal and Plant Inspection Services. The Meat Quarantine representative boards the vessel to seal up all meat with the exception of what will be needed while in port. In the event a vessel is detained in port for some reason and more meat is needed the Meat Quarantine Rep. must return to the vessel and personally break the seal and then re-seal the remaining meats. This representative boards all vessels entering the port whether from foreign or coastwise.

The Plant Quarantine Rep. boards all vessels entering from a foreign port to check all fresh fruits and vegetables for any foreign insects such as the Khapra Beetle.

NOTICE:

Notice from U.S. Coast Guard (dated May, 1983).

Liquified Gas Vessels.

This is to clarify U.S. Coast Guard policy regarding liquified gas vessels operating in the Calcasieu Waterway that seems to be causing some confusion. Synopsis of each is as follows:

(1) The Captain of the Port (COTP), Port Arthur, Texas, needs to be informed of the arrivals and departures of all liquified gas vessels, whether loaded or in ballast, a minimum of 4 hours advance notice is required to ensure that a Notice to Mariners is broadcast. The vessel is reminded to have a Calcasieu River Pilot's confirmation of movements prior to notifying the COTP at (409) 724-4330.

(2) The COTP has determined that it is an unsafe practice to bunker a loaded or partially loaded liquified gas vessel at anchor from a barge alongside. If you have a loaded vessel arriving that needs bunkering, make your arrangements so that the vessel is offloaded prior to bunkering. If an empty vessel arrives, make arrangements to have the vessel bunkered prior to loading.

If there are any questions concerning these guidelines, please contact Port Arthur (Tel: (409) 724-4337 or 724-4339) or Lake Charles, La (Tel: (318) 433-3765).

Signed: Captain, U.S. Coast Guard, Capt. of the Port, Port Arthur, Texas.

DEVELOPMENTS: Located only 19 miles from sea, the new Public Ocean Terminal of the Port is located on the Sabine-Neches Waterway, presently 40 ft. deep with a minimum bottom width of 400 ft. The initial facility encompasses 360,000 sq.ft. including 1 transit shed 180 ft. × 1,080 ft. or 194,400 sq.ft. Rail trackage totals 120 car-spots at dockside with a 150-car storage yard behind the wharves. The facility includes a Gantry Crane (handling dry bulk, magnet, container and heavy lift cargoes) which straddles 2 of the 3 marginal tracks, travelling the entire 1,200 ft. length of dock. Crane will lift 75 tons a distance of 75 ft. off the face of docks, with all areas brilliantly lighted for 24 hour cargo operations. In addition to the 25 acre facilities described above, the District owns a total of 73 acres or 1 mile of frontage for future development. The master plan calls for a total of 4 Transit Sheds, additional open-dock wharves and Roll-on/Roll-off facilities.

AUTHORITY: Port of Port Arthur Navigation District of Jefferson County, Texas, 900 Fourth Street, P.O. Box 1428, Port Arthur, Texas 77641. *Tel:* (409) 983-2011. *FAX:* (409) 985-9312. *Contact:* Ben Goldstein, Port Director.

PORT CANAVERAL, Florida: 28.25 N. 80.35 W.

(See Plan)

DOCUMENTS: Vessels arriving in the Customs Territory of the United States, Bureau of Customs Documentary Requirements:

1. The vessel's Register, International Load Line Certificate, Tonnage Tax Certificates, Clearance from last Foreign Port, and Certificate of Financial Responsibility (Oil Pollution).
2. Additional Documents required:
   - *(a)* Original Manifest (lists) of:
     All Cargo on Board – Customs Form 1302.
     All Passengers on Board.
     Stores List.
     Crew Purchase List.
     Crew List.
     Narcotic List.
   - *(b)* All items listed in Nos. 1 and 2 *(a)* must be presented to the boarding Customs Inspector and later at the Customhouse for entry. In addition a Customs Form 1300 (Master's Oath) and Customs Form 1301 (General Declaration) must be presented at the Custom House.

(c) Duplicate Manifest (lists) of:
1. All Cargo for discharge at this port.
2. All Passengers for discharge at this port.
3. Stores List.
4. Crew Purchase List.
5. Crew List.
6. Narcotic List.
7. CF3171 – Permit to Lade or Unlade (this will usually be furnished by the vessel's Agent prior to the arrival of the vessel).

(d) If vessel is proceeding coastwise from Port Canaveral with residue foreign cargo on board, prepare a Traveling Manifest which is a true copy of everything listed in the Original Manifest *(2(a))*. This must be presented to the boarding Customs Inspector and later at the Customhouse.

3. Other Documentary requirements: The Immigration Officer will require the original certificate Crew List on Form I-418. The same for passengers. He will also require the presentation of all passports and documents of seamen and passengers as to their immigration status for entry into the United States. A supply of Seaman's Landing Permit Form No. I-95A and passenger Permit No. I-94 should be maintained and they should be typed and ready for landing.

The Immigration Officer will want to inspect the entire crew. The Customs and Agriculture Officers will want to inspect the food storage areas and the quarters of the crew. The Agriculture Officer will also require a stores list. The Customs Officer will place a seal on the Bonded Stores Locker.

Certificates:
Ship's Register.
Load Line Certificate.
Tonnage Tax Certificate.
Derat Certificate or Derat Exemption Certificate.

PILOTAGE: Pilotage is compulsory for all foreign vessels and for United States vessels under register in the foreign trade. Pilotage is optional for United States coastwise vessels who have on board a Pilot licensed by the Federal Government. Vessel applies for Pilot through Agent or Port Authority. May also call Pilot Office direct, Tel: (407) 783-4645. Pilot will board at Buoys 3 and 4 (Lat. 28° 22.6′ N., Long. 80° 31.7′ W.). Pilot boat is 37 ft. long with black hull, white house and buff deck, has "Pilot" painted on sides. Standard day/night pilot signals are displayed. Pilot boat stations itself 1 mile S.E. of Buoys 3 and 4, 0.5 hours before ETA of vessel. Vessels may anchor anywhere in area. Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz), but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given.

ANCHORAGES: Within the harbour itself, none. Vessels may anchor anywhere in the area of the Pilot Station, Buoys 3 and 4.

RESTRICTIONS: Docking and undocking carried on day and night. Draft restrictions – if draft exceeds 34.6 ft. vessel must await rising tide to enter port.

MAX. SIZE: Length and draft at Tanker Berth No. 1 and No. 2, 650 ft., with 35 ft. draft. Cargo dock, length unlimited – 35 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. ports (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz) but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given. Best to route ETA cables through Western Union Telegraph. Port Canaveral is equipped with VHF Port Operations frequency 156.6

TUGS: There are 2×1,800 h.p. tugs and 1 × 2,400 h.p. at Port Canaveral; most ships use the tugs for docking and undocking, but it is not mandatory. Tugs normally join vessel inside jetties and tugs lines are used.

BERTHING: All vessels unless prevented by conditions will be turned around upon entering turning basin and will be berthed headed seaward. No berthing permitted without Port Pilot aboard.

Northside:

Piers 1, 2, 3 and 4, all 35 ft. draft, general cargo, water available. Piers 3 and 4 with combined continuous length of 1,200 ft. – 35 ft. draft. Potable water and electricity available.

Southside:

Marginal Wharf with total length of 1,350 ft. 1,100 ft. at 35 ft. draft, 250 ft. at 24 ft. draft, general cargo, bunkers, water available.

Ro/Ro Ramp No. 1: 30 ft. width, elev. + 3 ft. MLW.

Tanker Berth No. 1: Dolphin type, 35 ft. draft, petroleum products, cement, bunkers, water available.

Tanker/Cargo Berth No. 2: Length 450 ft., 35 ft. draft, petroleum products, water available.

Cruise Terminals No. 2 & 3: 35 ft. draft, 1,300 ft. combined length.

Cruise Terminal 4: 35 ft. draft, 750 ft. berth.

Cruise Terminal 5: 35 ft. draft, 900 ft. berth.

Also see "Tankers".

STEVEDORES: Important that vessel gives accurate ETA at least 24 hours in advance to enable Agent to order gangs.

MEDICAL: Advance notice for Agents not required, but if available is appreciated. There are good hospital facilities available and an emergency walk-in clinic at the Port. A contract physician's office of the U.S. Public Health Service is at Cocoa Beach, just South of the port.

TANKERS: Tanker Berths No. 1 and 2 available at present for discharge operations, with 35 ft. draft limit. No oil to be pumped overboard. Heavy fines imposed for oil pollution, however slight. The ship or ship's Agent will immediately report any spillage of oil on the wharf or on the water and the extent of the spill to the Port Manager and the Harbour Master. If spillage is considerable all cargo operations must stop and vessel prepare to undock.

FRESH WATER: All wharves have facilities for supplying fresh water, delivered by 4 in. water line.

FUEL: The general cargo wharf and Tanker Berth No. 1 have facilities for supplying fuel. 24 hours' notice requested. Fuelling by truck available at other berths.

FIRE: Ships discovering fire on board or close by on shore will s repeated long whistle blast signals and use every other available m to report the fire.

Gasoline Tankers: All deck scuppers must be plugged before sta to discharge cargo. Supply of sand or sawdust must be on hand the discharge headers. Static cable must be connected to w Minimum 100 lb. pressure must be on water main and fire h connected. Discharging must be stopped during severe lightning. D Officers must keep close check on hose connections for gasket le Emergency Ship Movement Policy of Port Canaveral must be obser

CONSULS: None.

REPAIRS: Available in the port.

SURVEYORS: Surveyors are available on request.

GANGWAY/DECK WATCHMEN: Not usually employed, this servic to discretion of Master.

OPENING/CLOSING HATCHES: Usually done by stevedores.

CUSTOMS ALLOWANCES: 300 cigarettes per crew member. W and/or spirits: 1 quart per crew member.

REPATRIATION: All facilities available for effecting crew changes a arranging any necessary repatriations.

AIRPORT: Two airports available, serviced by regular airlines, Orla International Airport, Orlando, Florida, approximately 50 miles from Port; Melbourne Regional Airport at Melbourne, Florida, approxima 35 miles from Port. Also Space Coast Executive Airport approxima 25 miles from the Port, but this airport has only limited service.

TIME: GMT minus 5 hours normal, GMT minus 4 hours Daylight Sa Time.

HOLIDAYS: Numerous holidays do not effect operation of port, wh operates 24 hours a day, 7 days a week.

POLICE/AMBULANCE/FIRE: Police/Fire, Tel. 783 – 78 Ambulance, Tel. 452 – 1444.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Gu Station, Port Canaveral. Tel: (407) 853-7601.

TELEPHONES: Arrangements are not available for placing on boa

BANKS: The American Bank, 326 E. Merritt Island Causeway, Me Island, Florida.

Barnett Bank, 430 Brevard Avenue, Cocoa, Florida.

The First Bankers of Florida, N.A., 111 George King Bouleva Port Canaveral, Florida 32920.

The First National Bank of Brevard, 15 E. Merritt Island Causew Merritt Island, Florida.

United National Bank, 82 N. Atlantic Avenue, Cocoa Beach, Flo 32931.

Numerous other banks are available in this area.

STORING: See "Prelims".
1. Vessels stored by truck only.
2. N/A.
3. Yes.
4. No.
5. Usual.
6. Yes, if required.

SHIP SUPPLY SERVICE: No ship supply services operate at the p

In times of emergency, launch or tug service could be arrang through the Port Authority, and helicopter evacuation provided throu the United States Coast Guard.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Required.

REGULATIONS: All radio frequency radiations from ships in P Canaveral must be scheduled to prevent any possible interference missile tests conducted on the Cape Canaveral Missile Test Annex. T only exception is standard ship/shore HF harbour control frequenc Vessels desiring to radiate will request permission from the P Manager and/or Harbour Master.

GENERAL: All vessels, civilian and military, will provide wire ropes f the bow and stern with eyes that can be reached by tugs com alongside. Pilots will make sure wires are in proper position be leaving vessel. All vessels will undock and proceed to outer anchora when so ordered by Port Manager and/or Harbour Master in the ev of: *(a)* a severe oil spillage; *(b)* fire is discovered on board a ves laden with petroleum, explosives or a quantity of dangerous car *(c)* vessel is in jeopardy due to conditions on shore. Emerge movement of ships will be made with an able sea watch without awa for return of other ships personnel.

DEVELOPMENTS: Western Basin Expansion started in mid-19 completion 1995. 7 additional ship berths, including container, gen cargo, bulk cargo, shipyard and cruise terminals. Estimated c U.S.$110 million.

AUTHORITY: Canaveral Port Authority, P.O.Box 267, Cape Canave Florida 32920. *Tel:* (407) 783-7831. *Telex:* 981573 Ptcanave *FAX:* (407) 784-6223. *Contact:* Charles M. Rowland, Executive Direc Joseph Lapolla, Deputy Executive Director. Louis J.Perez, Director Cargo and Cruise Marketing. C.Rowland, Port Director.

PORT EVERGLADES (including Fort Lauderdale), Florida: 26.05 N. 80.05 W. (See Pl

LOCATION: Port Everglades is on the Southeastern coast of the Flo Peninsula, within the three cities of Hollywood, Fort Lauderdale, Dania, as well as unincorporated Broward County. The seaport is loc approximately 23 miles North of Miami, 48 miles South of West P Beach, and 312 miles South of Jacksonville.

Sea Buoy: The Port Everglades Sea Buoy is located Lat. 26° 05′ 31″ N., Long. 80° 04′ 46″ W.

DOCUMENTS:

3 copies Travelling Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Health Pratique.
Master's Oath (Form 1300).
All foreign clearances.
All other ship's documents (Water Pollution Certificates, etc.).
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.
American vessels only – All foreign repairs (Customs Form 226).

PILOTAGE: Pilot boards at Port Everglades Sea Buoy, located in Lat. 26° 05′ 30″ N., Long. 80° 04′ 45″ W. Pilot available 24 hours a day.

ANCHORAGE: A Sea Anchorage is designated outside the harbour and North of the Entrance Channel, where ships may anchor without damaging existing underwater cables or the local reef system. Water depth is 60 ft. – 90 ft. The rectangular anchorage is 1,000 ft. wide and 1.5 miles long, inside the following designated area:

N.E.	Lat. 26° 07′ 46″ N.,	Long. 80° 04′ 49″ E.
N.W.	Lat. 26° 07′ 46″ N.,	Long. 80° 04′ 49″ E.
S.E.	Lat. 26° 06′ 20″ N.,	Long. 80° 05′ 02″ E.
S.W.	Lat. 26° 06′ 20″ N.,	Long. 80° 05′ 12″ E.

There is a Government Restricted Area immediately offshore, South of the Entrance Channel.

Offshore Loading: Sea Anchorage limited to above coordinates. Water depth 60 ft. – 90 ft. No lighters based at Port.

RESTRICTIONS: Entrance to Port Everglades is by a straight channel running in a due Westerly direction for a distance of 1.7 miles from the 50 ft. contour of the ocean to the turning basin. The channel is 500 ft. wide at its seaward end, narrowing to 450 ft. wide from the jetty entrance to the Turning Basin. The water depth is 44 ft. including the Turning Basin. All depths are at Mean Low Water.

BASIN: *Main Turning Basin:* The Main Turning Basin is 1,200 ft. East and West and 2,450 ft. North and South with a depth of 44 ft. The North extension of turning basin is 620 ft. wide East and West on the North limits and 900 ft. wide East and West on the South limits and 1,150 ft. North and South, with a depth of 31 ft. The South extension of the Main Turning Basin is 1,300 ft. wide East and West by 1,300 ft. North and South, with a depth of 44 ft.

Southport Turning Basin: 900 ft. East and West by 800 ft. North and South, with a depth of 44 ft.

Tide: Mean tidal range at the harbour entrance is 2.5 ft. with a Spring tide of 3.0 ft. Tide range in the slips is from 0.2 ft. – 0.3 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO/VHF: The following radio channels are available to communicate with facilities at Port Everglades:
Ship calling and safety: Channel 16.
Harbour Master: Channels 16, 14, 7A and 18A.
Operations: Channels 14, 7A and 18A.
Port Everglades Bar Pilot: Channels 12, 16, 13, 14, 18A, 19A.
Port Everglades Towing Co.: Channels 16, 13, 77, 14 and 18A.

BERTHING: *Berth Bulkheads:* Bulkheads are sheet steel piling with concrete caps and rubber high impact absorbing fendering.

Berth Dimensions and Usage: There are 45 berths available with various lengths and depths for ocean-going vessels. Ten are in 3 slips, the remainder are located along marginal wharves and T-heads. Total berthing space is 25,222 lineal ft.

Berth	*Length* ft.	*Depth* ft.	*Use*

Cruise Terminals: There are a total of 9 modern air-conditioned passenger terminals, 8 of which are equipped with elevators, escalators and loading bridges. Cruise facilities are at Terminals No. 1, 2 and 4 at the North end of the Port, and 19, 21, 22/24, 25 and 26 at Midport. The 9th cruise facility, Terminal No. 25, was dedicated in May 1992.

Footage dedicated to Cruise Operations:

Cruise Terminal No. 1:	21,600 sq.ft.
Cruise Terminal No. 2:	34,000 sq.ft.
Cruise Terminal No. 4:	30,000 sq.ft.
Cruise Terminal No. 19:	40,000 sq.ft.
Cruise Terminal No. 21:	42,000 sq.ft.
Cruise Terminal No. 22/24:	42,000 sq.ft.
Cruise Terminal No. 25:	36,000 sq.ft.
Cruise Terminal No. 26:	29,000 sq.ft.

Foreign Trade Zone Warehouses: There are 5 warehouses in the Foreign Trade Zone (FTZ) with a total of 401,000 sq.ft. of space.

FTZ "A"	110,000 sq.ft.
FTZ "A Annex"	110,000 sq.ft.
FTZ "B"	30,000 sq.ft.
FTZ "E"	45,000 sq.ft.
FTZ "F"	106,000 sq.ft.

Transit Warehouses: There are 9 transit sheds containing a total of 536,900 sq.ft. of in-transit storage space.

Warehouse area (sq.ft.):	
No. 1	50,400
No. 2	38,000
No. 4	65,000
No. 6	17,500
No. 16	90,000
No. 18	90,000
No. 19	50,000
No. 26	80,000
No. 29	54,300

Open Storage: Approximately 286 acres, paralleling the length of the harbour, and located next to cargo berths, and transit warehouses are set aside for open storage. All berths have vehicular access, and Berth No. 4 has rail service. Most dry and general cargo berths are designed for dual requirements of open and coverage storage, eliminating the necessity of shifting vessels after partial unloading. Open storage areas are enclosed and secured with chain link fencing.

Typical commodities consigned to open storage are lumber, containers, construction steel and steel products, automobiles, heavy duty equipment, scrap metal and other bulk commodities.

Open Yard Area Facilities:

Location	*Acres*	*Use*
West of Building 4	4	Containers
West of Berth 4A	4	Containers
Pier 2	1	Containers/Steel
Midport Container Yards	44	Containers
Midport Marina	10	Containers
Berth 29	18	Bulk/Lumber/Steel
Southport	155	Containers/Trailers
S.E. 18th Avenue	18	Future Development
Southport	20	Scrap Metal
FTZ	4	Vacant
FTZ	8	Warehouse Expansion

Foreign Trade Zone: Port Everglades Authority is the Grantee and Operator of Foreign Trade Zone No. 25 located within the Port. Use of the facilities is outlined in Foreign Trade Zone No. 25 Tariff No. 1, which may be obtained from Foreign Trade Zone staff.

Reefer Outlets: There are currently 421 reefer outlets located at Port Everglades, primarily 3 phase 480V, 60 cycle, 100 amps. Includes the Sea Land Terminal at Midport with 141 outlets and the CCT Terminal at Southport with 120 outlets.

Refrigerated Warehousing: A one million cubic foot reefer plant with 6 temperature adjustable chambers (Primlaks (USA), Inc.) is located less than 200 ft. from the Container Terminal (Berths No. 16 – 18).

Roll-On/Roll-Off Facilities: There are 8 Ro/Ro ramps built into the sea walls. One ramp is located at Berth No. 1, two ramps are located at the West end of Berths No. 4 and 5, and two additional ramps are located at the corner of Berths No. 18 and 19. Three ramps are located in Southport at Berths No. 33A, 33B and 33C.

Ramp	*Width* (ft.)	*Depth* (ft.)
Berth 1	70	31
Berth 4	145	43
Berth 5	145	43
Berth 18	43	38
Berth 19	84	38
Berth 33A	140	44
Berth 33B	120	44
Berth 33C	120	44

TUGS: 3 tugs available to assist berthing with up to 4,200 h.p. Available 24 hours a day.

Port Everglades Towing Inc., P.O.Box 13038, Port Everglades, FL.33316. Tel: (305) 523-2200. Fax: (305) 527-1744. Telex: 514840.

CRANES: With the exception of rail-mounted container gantry cranes, all cargo handling equipment is owned and operated by stevedoring and agency firms. Companies provide modern handling equipment, mobile cranes of 100, 65, 30 and 20 tons. Attachments include clamshell buckets, electric magnets and automated ship-unloaders. No floating cranes or derricks are based at the Port.

BULK CARGO FACILITIES: Port Everglades is highly diversified in the type of cargoes it handles. Storage facilities are available for petroleum, scrap metal, bulk cement, etc.

Cement: Berths No. 14 and 15 are the Port's designated berths for handling bulk cement. There are currently 30 bulk cement silos, 12 owned by Rinker Cement and 18 owned by Continental Cement Company of South Florida, Inc. The Rinker facility has a total holding capacity of 50,000 short tons and handles both white and grey cement with bagging for white cement. Product is distributed by Rinker Transport Company and others, to destinations throughout Southeast Florida. Rinker has a newly installed, privately owned Kovako ship unloader sitting on approximately 700 ft. of dockside rail, and providing the capacity to unload up to 400 metric tons of bulk cement per hour. Continental Cement's 18 silos have a total bulk grey cement capacity of 30,000 tons. Continental has a privately owned Siwertell ship unloader, located adjacent to its dockside silos sitting on 400 ft. of rail, with the capacity of discharging cement at a rate of 800 metric tons per hour. Bagging services are available at Continental, which also distributes its product throughout Southeast Florida.

Lumber: The designated lumber yard is located at Berth No. 29. There are currently two primary lumber companies with Port Everglades operations. MacMillan Bloedel Ltd. ships hemlock, cedar and spruce from private mills in British Columbia, and provides transportation and distribution services throughout South Florida. Gulf Atlantic Lumber Sales ships Western red cedar and Western hem fir from British Columbia mills with distribution throughout the State of Florida.

Petroleum: There are 264 various sized petroleum storage tanks located in the Port Everglades jurisdiction, with a total capacity of approximately ten million barrels. The majority of tanks are privately owned. Also see "Tankers".

Scrap Metal: Ten acres are dedicated to scrap metal storage and processing. The two primary companies providing these services are Port Recycling Industries, and SIDCO Enterprises, Inc./Sunshine Metal Processing, Inc.

Steel: Construction steel and other steel products are normally stored at Berth No. 29. Indoor storage of steel coils at Terminal 29.

Waste Paper/Newsprint: Indoor storage is made available for these commodities in dockside transit warehouses No. 1, 2, 19 and 20. St.John's Shipping is the Port's principal waste paper shipper.

CONTAINER HANDLING FACILITIES:

Berths: Container operations are currently centered around Midport Berths No. 16, 17 and 18 with 3 gantry cranes, lighted and secured. Container operations not currently utilising gantry cranes, also at Berth No. 6, 28F, 29 and Southport Berths No. 30 and 33A.

Handling Equipment: A full range of container handling equipment is available, including container top handlers, yard mules, high capacity forklifts, chassis and flatbed trailers.

Terminals: Storage areas total 59 acres in the Midport and Northport area, accommodating both wheeled and grounded configurations. All container terminals are adjacent to the Berths to facilitate container transfer and loading. Trailer operations are already in effect at the developing 155 acre Southport Container Complex through Crowley Caribbean Transport's 55 acres container/trailer facility. Gantry crane operations will be available at Southport in 1993.

Cranes: Port Everglades currently has 3 container cranes available for service. All are rail-mounted, diesel electric single trolley, through-leg load handling, gantry type container cranes.

Kone Oy Gantry Crane (Located at Midport):

Operator: Port Everglades Authority.

Operating features:	
Rated capacity (below spreader)	30 long tons
Rated capacity (below cargo hook)	37 long tons
Hoist speed at rated capacity	160 ft./min.
Lower speed at rated capacity	160 ft./min.
Hoist acceleration at rated capacity	2 sec. (approx.)
Hoist speed with empty spreader	380 ft./min.
Trolley travel	500 ft./min.
Boom travel (up or down)	5 min.
Principle Dimensions:	
Rail gauge	50 ft.
Frame leg clearance	50 ft.
Overall portal clearance	44 ft.
Total lift, top of rail to underside of spreader	81 ft.
Total lift minimum	131 ft.
Outreach, centreline waterside rail – centreline spreader	130 ft.
Backreach, centreline landslide rail to centreline of spreader	40 ft.
Width of crane with bumpers extended	95 ft.
Boom stowed crane height	240 ft.

Paceco Gantry Crane (Located at Midport).

Operator: Port Everglades Authority.

Operating features:	
Rated capacity (below spreader)	50 long tons
Rated capacity (below cargo hook)	58 long tons
Hoist speed at rated capacity	150 ft./min.
Lower speed at rated capacity	190 ft./min.
Hoist acceleration at rated capacity	2 sec. (approx.)
Hoist speed with empty spreader	360 ft./min.
Trolley travel	500 ft./min.
Gantry travel	150 ft./min.
Boom travel (up or down)	5 min.
Principle Dimensions:	
Rail gauge	50 ft.
Frame leg clearance	60 ft.
Overall portal clearance	51 ft.
Total lift, top of rail to underside of spreader	100 ft.
Total lift minimum	150 ft.
Outreach, centreline waterside rail centreline spreader	135 ft.
Backreach, centreline landslide rail to centreline of spreader	75 ft.
Width of crane with bumpers extended	95 ft.
Boom stowed crane height	270 ft.

Spreaders:

Bromma Telescopic 20 ft., 35 ft., 40 ft. rated 40 long ton capa

Paceco Telescopic 20 ft., 35, ft. 40 ft. rated 40 long ton capac

Paceco Telescopic 20 ft., 35 ft., 40 ft., 45 ft. rated 50 long capacity.

Paceco Gantry Crane (Located at Midport).

Operator: Sea Land Service Inc.

Operating features:	
Rated capacity (below spreader)	30 long tons
Rated capacity (below cargo hook)	35 long tons
Hoist speed at rated capacity	100 ft./min.
Lower speed at rated capacity	100 ft./min.
Hoist acceleration at rated capacity	2 sec. (approx.)
Hoist speed with empty spreader	250 ft./min.
Trolley travel	410 ft./min.
Gantry travel	150 ft./min.
Boom travel (up or down)	6 min.
Principle Dimensions:	
Rail gauge	50 ft.
Frame leg clearance	50 ft.
Total lift, top of rail to underside of spreader	75 ft.
Total lift minimum	135 ft.
Outreach, centreline waterside rail centreline spreader	129.5 ft.
Backreach, centreline landslide rail to centreline of spreader	41 ft.
Width of crane with bumpers extended	101 ft.
Boom stowed crane height	270 ft.

Spreaders:

Paceco Telescopic 35 ft., 40 ft. spreader.

Paceco Fixed 20 ft. spreader.

Southport: 3 cranes to be operational in 1993.

Operator: Port Everglades Authority.

Operating and maintenance features:	
Main hoist speeds at:	40 long tons
Hoist loaded	180 ft./min.
Hoist unloaded	380 ft./min.
Lowering loaded	180 ft./min.
Lowering unloaded	380 ft./min.
Trolley speed	600 ft./min.
Boom shuttle time	2.5 minutes in, 2.5 minutes out.
Gantry speed	150 ft./min.
Principle Dimensions:	
Post Panamax, low profile type shuttle boom.	
Dock rail gauge	100 ft.
Clear height under spreader over rail	106.25 ft.
Maximum gantry width (bumpers free)	86.5 ft.
Workable outreach	145.5 ft.
Minimum workable backreach at Post Panamax working position	45 ft.
Overall height limit above rail	151.25 ft.
Total lift	155 ft.
Maximum boom width	30 ft.
Portal clearance	50 ft.
SWL capacity	40 long tons

STEVEDORES: These services are provided by licensed stevedo firms. Arranged by Agent.

TANKERS:

Berth 4: Length 900 ft., depth 43 ft.

Operators: Coastal Fuels Marketing Inc.; Exxon Co., U.S.A.; Marat Oil Co.

Berth 5: Length 900 ft., depth 43 ft.

Operators: Coastal Fuels Marketing Inc.; Exxon Co., U.S.A.; Amer Hess Corp.; Marathon Oil Co.; Shell Oil Co.; Trumbull Asphalt.

Berth 6: Length 400 ft., depth 38 ft.

Operators: Coastal Fuels Marketing Inc.

Berths 7 and 8: Length 1,200 ft., depth 38 ft.

Operators: Amoco Oil Co.; Coastal Fuels Marketing Inc.; Citgo Co Exxon Co., U.S.A.; Porto Fina Oil Co.; BP Oil Co.; Amerada Hess Co Marathon Oil Co.; Mobil Oil Corp.; Shell Oil Co.; Chevron, U.S Texaco, U.S.A.; Louis Dreyfus Energy Corp.

Berths 9 and 10: Length 1,200 ft., depth 38 ft.

Louis Dreyfus Corp.: 2×12 in.; 2×8 in.
Warren Petroleum Company: Propane.

FRESH WATER: Available.

FUEL: All berths, except Berths No. 23, 29 and Southport, are accessible to pipeline hose connections for bunker fuels. All berths are accessible by tank truck and barge.

Coastal Fuels Marketing Inc., P.O.Box 13124, Port Everglades, Fl. 33316. Tel: (305) 525-4261. All deliveries ex-pipeline or tank truck. All grades of bunkers available.

CUSTOMS ALLOWANCE: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 litre wine or spirits per crewman for personal use. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); President's Day (3rd Monday in February); Washington's Birthday (February 22nd); Good Friday; Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Veteran's Day (November 11th); Thanksgiving Day; Christmas Day (December 25th).

When any of the above holidays fall on a Sunday, they will be observed on the Monday following. Work on these holidays is by special arrangement only.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours, from first Sunday in April to last Sunday in October.

BANKS:
Abbott Foreign Exchange, 255 E.Flagler, Miami. Tel: (305) 374-2336.
Bank Atlantic, 1750 E.Sunrise Blvd., Fort Lauderdale. Tel: (305) 760-5000.
Barnett Bank (45 branches), Fort Lauderdale/Miami. Tel: (305) 765-1764.
917 SE 17th Street Causeway, Fort Lauderdale. Tel: (305) 765-1645.
C & S National Bank, One Financial Plaza, Fort Lauderdale. Tel: (305) 765-2376/2734/2739.
County National Bank of S.Florida, 1401 E.Broward Blvd., Fort Lauderdale. Tel: (305) 651-7110.
Safrabank II, NA., 1600 SE 17th Street Causeway, Fort Lauderdale. Tel: (305) 467-8772.
Southeast Bank, NA., Everglades Banking Center, 1710 S.Andrews Avenue, Fort Lauderdale. Tel: (305) 467-5310.
Sun Bank/South Florida, NA., 501 E.Las Olas Blvd., Fort Lauderdale. Tel: (305) 465-7500.
Thomas Cook Foreign Exchange, 3526 N.Ocean Blvd., Fort Lauderdale. Tel: (305) 566-2666.

TELEPHONES: Public telephone are available at all cruise terminals and most berths.

IDENTIFICATION CARDS: Standard U.S. Immigration Form I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 if issued for the same vessel.

GARBAGE DISPOSAL: Dumpsters for domestic garbage only are available with 3 cu. yard capacity and 30 cu. yard capacity.

WASTE OIL DISPOSAL: *Oily Mixture Discharge:* The Port has facilities to receive oily mixtures from ships, and holds a U.S. Coast Guard Certificate of Adequacy as a reception facility. Oily mixtures may not be discharged, except to Port-approved facilities which are assigned when the vessel docks. Oily mixtures include bilge slops, oily wastes, oil residues, sludge, oily ballast water and washings from oil tanks.

SERVICES: *Post Office:* A United States Post Service Contract Station is located within the Port at the Sailor's Canteen, Building No. 64, Spangler Blvd. Hours are Monday – Friday, 0830 hrs. – 1200 hrs., 1430 hrs. – 1700 hrs., Saturday 0830 hrs. – 1200 hrs.

Restaurants:
Burt & Jacks Restaurant: Located at Berth 23. Formal American dining in a Mediterranean villa with water on three sides. Prime steaks and jumbo Maine lobster are the specialities for this award winning restaurant. Owners are Mr.Jack Jackson and Mr.Burt Reynolds. Entertainment nightly. Jackets required for dining. Tel: (305) 522-5225.

Port Restaurant: Located in Building No. 62, 1600 S.E. 24th St. Counter or table service. Hours: Monday – Friday, open until 1900 hrs. Food service until 1500 hrs. Saturday: 0700 hrs. – 1300 hrs. Tel: (305) 462-2335.

Sailor's Canteen: Located in Building No. 64, State Road No. 84 (S.E. 24th St.), 0.5 mile inside Port Everglades. Hours: Monday – Friday 0500 hrs. – 1730 hrs. Saturday 0500 hrs. – 1400 hrs. Serving fresh sandwiches, soda/coffee. Counter service only. Candy, cigarettes, post cards, film, magazines, books, radios, cameras, sundries available. Tel: (305) 524-1467.

Snack Bars: Snack bars are in operation at each cruise terminal when a cruise ship is embarking or disembarking passengers at that terminal.

DEVELOPMENTS: Construction of 155 acre Southport Container/Trailer Complex underway. Ro/Ro ramps operational – 3 gantry cranes in 1993. Depth 44 ft.

AUTHORITY: Port Everglades Authority, P.O.Box 13136, 1850 Eller Street, Fort Lauderdale, Florida 33316, U.S.A. *Tel:* (305) 523-3404. *Telex:* 240042. *FAX:* (305) 525-1910. *Cables:* Portglades. *Contact:* James J. O'Brien, Port Director.

PORT HURON, Michigan: 42.59 N. 82.26 W.

Refer to St. Lawrence Seaway for important general information.

PILOTAGE: Compulsory, by Seaway Pilots.

ANCHORAGES: Near head of St. Clair River at Sarnia. Vessels should anchor as close to shore as safely possible to keep channel clear for passing vessels.

RESTRICTIONS: Navigation season from mid-March to end-December approx. Dock channel depth – 25 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours notice of ETA at first U.S. discharge port is required. Port can be contacted through Marine Operator, Sarnia.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING: Port Terminal Co. Dock: 700 ft. long 26 ft. – 31 ft. depth.

MEDICAL: All facilities available.

DENSITY: Fresh water.

FRESH WATER: Obtainable by pipe-line at all docks.

FUEL: All grades available by pipe-line at all docks.

REPAIRS: Machine shops available for limited deck and machinery repairs.

AUTHORITY: *Managers:* Port Huron Seaway Terminal Co., 2336 Military Street, Port Huron, Michigan 48060. *Contact:* W. R. Neal, President.

PORT JEFFERSON, New York: 40.59 N. 73.06 W.

(See Plan)

OPERATOR'S REPORT: 1981

APPROACHES: *Port Approaches – Cautionary Advice:* (via New York) Charts: 12339, 12366, 12367, 12363, 12362, 12354.

Vessels leaving New York bound for Port Jefferson transit New York's East River and Long Island Sound.

Sandy Hook Pilots handle the ship in the East River and Hell's Gate, and the Long Island Sound Pilots handle the ship in the Sound. The change of Pilots is made off City Island. The pilot boat can be raised on Channel 13. All shoals and rocks are well marked and the shore line provides an excellent radar target for position checking.

During Summer months, thick fogs present a hazard on this route. Long Island Sound is also a major yachting centre so extreme care must be exercised while transitting this area.

There are several dangers to be wary of when making the passage from New York to Port Jefferson; in order of approach they are:

1. East River and Hell's Gate are areas of strong tidal currents averaging 4.6 knots during ebb tide which set in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell's Gate only at Slack High Water. Sluggish handling vessels should arrange for tug assistance through the East River and Hell's Gate.
2. 26-ft. buoy "32A"; usually passed well clear to the South.
3. Cable and Anchor Reef; usually passed to the South.

Port Approaches – Cautionary Advice: (From Block Island) Charts: 13205, 13215, 13209, 12354, 12362.

On approaching Block Island from a Southerly direction, a good radar picture is obtained of the Island's South coast. The RDF station at S.E. Light is also useful.

It is advisable to remain at least 1 mile to the East of Block Island because of the numerous shoals close in shore.

Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

There are several dangers to be wary of when making the passage to Port Jefferson; in order of approach they are:

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of possibility of unusual set. Valiant Rock may be passed on either side. The Race is an extremely popular area for sport fishermen and the area is usually congested with small craft.

Extreme caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound as there is heavy traffic of pleasure craft.

Thick fog is prevalent during Summer months.

Good water is found in Long Island Sound from The Race to Port Jefferson as long as the mid-channel Buoys "P1" and "CF" are passed close to, and care is taken so as not to pass North of "28-ft. shoal" buoy.

Vessels headed for Port Jefferson will pass South of "Stratford Shoal" light. Radar is the best navigational aid in this area, also, there are several RDF stations that can be used.

PILOTAGE: Harbour Pilot/Docking Master will board outside of the sea buoy. If at anchor, Docking Master will board at the anchorage.

ANCHORAGE: Anchorage is available North of "Mount Misery" shoal in depth of 80 ft. to 100 ft. Barges are available for lightering from New York. Winter weather conditions with strong winds sometimes hold up lightering operations 2 to 3 days. Vessels with stern anchors can sometimes minimise this delay by making a lee for the barge.

RADIO: Send ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival at Block Island pilot station. Advise max. draft (salt water) in the initial message.

VHF: Pilot: Channel 13, 16 and 18A. Tugs: Channel 19A "KFT 234" 18A. Traffic Control: Channel 13. USCG: Channel 16. Terminal: Channel 13.

TUGS: 3 tugs available from New Haven, 2 single screw diesels of 1,800 s.h.p. and 1,600 s.h.p. and a twin screw boat of 1,800 s.h.p.

TANKERS: Consolidated Petroleum Terminal: Traffic at times may be heavy near the harbour entrance and in the inner harbour. Sand and oil tows, coastal tankers, and the Bridgeport/Port Jefferson ferry may be encountered. Arrangement should be made with the Pilot ensuring that other traffic is not hampering the safe entrance and channel transit.

Vessels start in one hour prior to HW. The entrance between the jetties is made by lining up with the ranges at the head of the harbour. Consideration should be given to a possible cross set. Once inside the jetties, speed is reduced, and the vessel is stopped off the dock. The vessel is then breasted into position starboard side to with the assistance of 1 or 2 tugs. The terminal is located approximately 1.8 miles from the breakwaters on the starboard side of the channel.

Vessels in a light condition, when departing with the assistance of 1 or 2 tugs, are backed and turned off the LILCO dock with the forward draft not exceeding 14 ft.

Shore Facilities: 3×8 in. hoses.
3×16 in. shoreline (3.5 miles long).
Shore booster pumps.

FRESH WATER/FUEL: Bunkers are not readily available; in an emergency, bunkers could be arranged by Exxon Marine, Bayway, N.J. and delivered by barge from New York. Fresh water is available ex berth.

GARBAGE DISPOSAL: Drums available alongside. Service provided by Marine Pollution Control at 24 hours notice (Tel: (516) 369-4900).

WASTE OIL DISPOSAL: Contact Mr.Czujko at Northville (Tel: (516) 941-4040) 24 hours in advance. Tanker trucks available with 2 in. hose.

SEAMAN'S CLUBS: At New York, which is 40 miles away.

GENERAL: *Gangway:* Ship's gangway is required.

Tides and Depth of Water: The depth of water in the channel determines the safe draft for entering. Agent and Pilot should be consulted as to safe draft. Strong Westerly winds will cause the water level to be lower than usual, and strong Easterly winds will increase the water level. Average range of tide is 6.6 ft.

Oil Pollution: This area is very sensitive to oil pollution, so extreme care should be exercised. In case of an oil spill, consult with Pollution Control Officer and notify U.S. Coast Guard, Terminal Representative and Agent. Visible smoke from ship's stack is also a very critical area of pollution in this port. Spill booms are deployed.

Security: The terminal is fenced and guarded. Maintaining a gangway watch is recommended.

Ballast/Slop Facilities: There are no dirty ballast or slop facilities in Port Jefferson.

Firefighting Facilities: The terminal is equipped with 2 fire pumps which service 2 fire monitors on the dock. The fire line has the capability to deliver foam. There is a 150 lb. wheeled dry chemical extinguisher, various hand extinguishers, and a 2,000 lb. dry chemical extinguishing system at the head of the dock to cover the hose tower area.

Fire wires should be hung, one forward and one aft, on the offshore side with eyes which can easily be reached by tugs in case of fire. The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

AUTHORITY: Consolidated Petroleum Terminal, Inc., P.O.Box 312, East Setauket, New York 11733. *Contact:* Zenon Czujko, Manager.

PORT LAVACA/POINT COMFORT, Texas:
28.40 N. 96.35 W. **(See P**

DOCUMENTS:
2 Cargo Manifests.
2 Stores Lists, Form CF1303.
2 Crew's Effects Declaration, Form CF1304.
1 Clearance from Last Port.
Vessel's Register, tonnage, tax receipts, etc.
2 copies Crew List.
2 copies Passenger List.

Certificates: Load Line, Foreign Clearance, Safety Equipment, Finan Responsibility (oil pollution), Tonnage Tax Receipts, will be require

PILOTAGE: Ship's Agents notify Matagorda Bay Pilots as to vesse ETA. Pilot boat can be contacted on VHF Channel 16, then switch Channel 26 to continue conversation. Pilot boards at Buoy 1-A at posi Lat. 28° 23′ N., Long. 96° 17′ W.

ANCHORAGES: Marked on chart of Matagorda Bay and approach

RESTRICTIONS: Vessels may enter any time day or night. Entra channel depth 38 ft. Bay Channel depth 36 ft.

MAX. SIZE: Public Dock – max. length approximately 750 ft. D controlled by channel depth of 36 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Ill Reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany

RADIO: Galveston Radio (ITT Mackay Marine) and Port Lavaca Ma operator can be contacted on VHF Channel 16, then switch to Chan 26 for continued conversation.

TUGS: One tug available, joining vessel shortly before arriving at be A second tug is normally available on request.

BERTHING: Vessels berth at Public Dock.

STEVEDORES: Boyd-Campbell & Co. and Dix Shipping Company Corpus Christi, Texas. At Alcoa's Dock all plant labour is used.

MEDICAL: No advance notice required. Several clinics and 1 hosp available in Port Lavaca.

DENSITY: Average density is 1010/1012.

FRESH WATER: Fresh water available alongside berth.

FUEL: Fuel is available from VAL-CAP located in Port Lavaca. Can delivered by barge or truck.

CONSULS: Only Norwegian Vice-Consul Tel: 512-987-2311.

REPAIRS: Only minor repairs possible. No dry docks.

OPENING/CLOSING HATCHES: At Public Dock this is done stevedores. At Alcoa Dock this is done by ship's crew.

REPATRIATION: Arrangements are possible but preferably should accomplished in larger ports.

AIRPORT: Nearest airport 30 miles at Victoria, Texas, served Continental Express only, Corpus Christi Airport about 90 miles; Hous Airport about 150 miles.

TIME: Central Standard Time during Winter (GMT minus 6 hou Beginning first Sunday in April until last Sunday in October, Dayl Saving Time (clocks are moved ahead 1 hour).

HOLIDAYS: All holidays observed by contract with ILA. See "Housto

POLICE/AMBULANCE/FIRE: Police Department, Fire Department a Ambulance Service, Tel: 911.

TELEPHONES: Telephones are available ashore only. Telephone bo on Public Dock.

IDENTIFICATION CARDS: Immigration Crew Landing Permit required for each man.

GARBAGE DISPOSAL: Dumpster available on pier for non-APH waste. No charge for use of dumpster. APHIS waste minimum cha is $ 550.00. Garbage services arranged through Port Authority.

WASTE OIL DISPOSAL: Waste oil disposal available through use vacuum truck. Arranged through Port Authority.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar.

DEVELOPMENTS: Plans for lengthening dock and another wareho are now being considered.

SHIPMASTER'S REPORT: July 1991.

Radio: Unable to contact any public correspondence radio station VHF. The tug relays any arrival message to pilot, etc.

Bauxite: The Aluminum company imports several million tons of ore year using both sides of its finger pier. This is said to be 875 ft. lo with 39 ft. depth alongside. It is equipped with 2 grab cranes and conveyor belt, said to be capable of handling 1,750 long tons/hr. Ca from 2 ships may be discharged at the same time onto the single b

Charter Party: This has been amended to read discharge to "mach clean only", the implication is that if the ship's crew do not dig out ca from the corrugations, ladders, ledges, brackets and sloping sides, ship will be ordered off the berth with several hundred tons of ca remaining. At least one regular caller with wet grade bauxite enga a 15 man cleaning gang for the passage to the next port. This ga brings its own high pressure water pump and its own bilge pumps the operation.

General: Fresh water was obtained from a single outlet at the outer of the pier, well placed for the after peak. Local provisions can obtained, such as for port use. Technical stores ordered by owners w delivered from Corpus Christi at a charge of U.S.$85.00. All sh messages, copying, doctor, etc., were handled by Owner's Ag attending from Galveston. Ship's crew access by locked turnstile g no visitors allowed. Nearest shopping centre is surprisingly large, charge is U.S.$12 each way. Walking is prohibited and uncomfortable because of the heat and mosquitos.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.
BERTHING: Texaco Chemical Co. (Jefferson Dock) Chemical Co.: Distance from sea 30 miles, depth at berth November to March 32 ft., and from March to November 35 ft. Max. LOA 800 ft.

Texaco Terminal: Distance from sea 34 miles, depth at berth 38 ft. Max. LOA 810 ft.
MEDICAL: All facilities available.
DENSITY: Fresh water.
FRESH WATER: Available by barge.
FUEL: Bunker C not available ex-wharf at Texaco Terminal, only by barge from Port Arthur or Beaumont.
CONSULS: Nearest at Houston.
REPAIRS, DRY DOCKS: See "Port Arthur".
GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spirits for each man.
AIRPORT: 15 minutes from docks. Several flights a day 0600 hrs. – 2200 hrs. to Houston International Airport.
IDENTIFICATION CARDS: Foreign crew only require Immigration Landing Permit.
AUTHORITY: *Operators:* Texaco Chemical Company, P.O.Box 27712, Houston, Texas 77227-7712, U.S.A. *Contact:* W.C.Kent, Manager – Distribution Operations.

PORT ST. JOE, Florida: 29.49 N. 85.19 W.

DOCUMENTS:
All documentation must be on United States forms.
At least: 3 Passenger Lists.
3 Crew Lists (1 for visa Crew List).
3 Curio Lists.
3 Stores Lists.
2 Complete Manifests.
Clearance from Last Port.
PILOTAGE: Apply for Pilot through ship's Agent – address is "Port St. Joe, Pilots" and advance ETA 18 hours. "VHF – Channel 16". Pilot boat station is at Sea Buoy, Port St. Joe only and location of anchorage for vessel awaiting a Pilot is 1 mile West of Sea Buoy.
ANCHORAGES: Local harbour charts indicate safe anchorage.
MAX. SIZE: Draft 32 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Call sign WLO, Mobile, Alabama.
TUGS: None presently available.
STEVEDORES: ETA must be received by 1800 hrs. in order to have gangs at 0800 hrs. following day.
MEDICAL: No notice required. Hospital facilities available. Inoculations required same as public health U.S. Government requirements.
TANKERS: Discharge lines 8 in. No residue discharge allowed. 2 tanker berths 32 ft. draft.
DENSITY: Salt water – heavy concentration.
FRESH WATER: Available in unlimited quantities by hose connection from dock to ship, 1.5 in. to 2.5 in. size at 60 p.s.i.
CONSULS: None.
REPAIRS: None.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Only when requested by ship.
OPENING/CLOSING HATCHES: Work can be performed by either stevedores or crew.
CUSTOMS ALLOWANCES: 1 carton of cigarettes per week per crew member permitted. Further allowances would depend on circumstances. Wine and/or Spirits 1 bottle per crew member as allocated by Customs.
CARGO GEAR: Must be in compliance with "U.S. Government Longshoremen Safety Codes".
REPATRIATION: Can be accomplished by Agent and Immigration but should be accomplished in larger ports if possible.
AIRPORT: Served by regular airlines. (Southern Airways, National Airways). 6 combined flights a day. Distance 40 miles.
TIME: Standard Time GMT minus 5 hours. GMT minus 4 hours Daylight Saving Time from first Sunday in April to last Sunday in October.
HOLIDAYS: *No Work Holidays:* No work performed New Year's Day, Fourth of July, Labour Day, Christmas Day, or December 24th & December 26th, and Easter Sunday, except handling of mail, baggage and perishables (except bananas) or unless a ship is in distress, such as fire or leaking bottom, or, other causes that would damage cargo or vessel. In event work done on New Year's Day, Fourth of July, Labour Day, Christmas Day, December 24th & December 26th, or Easter Sunday, rate of pay for such ship work shall be double the normal time rate. Should above holidays fall on Sunday, double time will be paid. Following Monday will be paid at time and one-half.

Working Holidays: Armistice Day, Thanksgiving Day and Memorial Day are to be paid for at overtime rate – one and one-half times straight-time rate. Should any of above holidays, except Sunday fall on Sunday, the following Monday will be observed.
POLICE/AMBULANCE/FIRE: Police Tel: 229-8265; 227-4526; Ambulance Tel: 227-1115 (Comforter), 277-1818 (St. Clair), 229-8111; Fire Tel: 227-1115.
TELEPHONES: Available for placing aboard.
SHORE LEAVE: Shore leave allowed when cleared by Immigration.
REGULATIONS: Normal working hours of longshoremen from 0800 to 2230 hrs. only, 7 days a week.
DELAYS: Only when due to port congestion.
GENERAL: In sending ETA when ship is going to arrive over weekends (Saturday and Sunday), an ETA notice should arrive prior to 1700 hrs. Friday.
AUTHORITY: Port St. Joe Port Authority, P.O.Box 280, Port St. Joe, Florida 32456. *Tel:* (904) 227-1111. *Contact:* Amelia Tapper.

PORT SAN LUIS, California: 35.10 N. 120.45 W.
(See Plan)

APPROACHES: The approach channel, directly off the end of the Harbour District's Pier is an entrance channel, which is unlit and identified by large green or red buoys.

The tanker channel runs North/South to Pier No. 2 (Union Oil) and small vessels using Pier No. 3 (Harford) run a course of approx. S.E. – N.W.
ANCHORAGE: The best anchorage in the Harbour is on the starboard side, coming from the sea, being the area between Pier No. 3 and the second, Union Oil Terminal Pier. Anchorage be outside of the existing mooring area and the holding ground is primarily sandy bottom.
MAX. SIZE: Tankers up to 750 ft. length and 26 ft. draft.

48,000 d.w.t. tankers may not use Pier No. 3 (Harford). Vessels wishing to use Pier No. 3 must give prior notice in writing, except commercial fishing vessels.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Los Angeles Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Vessels should contact Union Oil Company through Marine Operator. "Walkie-talkie" sets used for communication with terminal. VHF station KTD 411, Channels 10 and 16.
VHF: Harbour Office, call sign "KYZ 664", on VHF Channel 16 throughout 24 hours, working Channels 10 and 12.
TANKERS: Tanker berths only at Union Oil Company Pier. Vessels tie off pier at Berth No. 4. Depth alongside 32 ft. MLW.

1×12 in. and 1×16 in. load/discharge lines. No ballast discharge allowed.
DENSITY: Salt water, 1025.
MEDICAL: Services available.
FRESH WATER: Available.
FUEL: The Harbour District maintains and operates a diesel fuel facility, capacity 12,000 gallons. The facility is at the end of the District's 1,400 ft. pier. Limited use restricted to small vessels up to 300 d.w.t.
CONSULS: Nearest consuls situated at Los Angeles and San Francisco.
REPAIRS: There is a work dock facility available, equipped with power and water.
AIRPORT: County Airport, San Luis Obispo, situated 12 miles distant. 6 flights daily to Los Angeles and to San Francisco.
HOLIDAYS: Christmas and New Year; Martin Luther King Day; President's Day; Memorial Day; Independence Day; Labour Day; Veteran's Day; Thanksgiving Day and following day.
GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

No garbage services for large craft other than local garbage dumpsters by special order.
WASTE OIL DISPOSAL: 50 galls. collection drums on one pier only.
SEAMAN'S CLUBS: None.
WEATHER: The mean tidal range in San Luis Obispo Bay is 3.6 ft., the Spring range is 5.3 ft. and the maximum range is approximately 9.8 ft. The highest observed tide was 7.5 ft. above MLLW mark in January, 1948. The lowest tide of −2.3 ft. MLLW mark occured on January 7th, 1951. Tidal level above the MHHW or MLLW will occur approximately 20% of the time during severe storms. The existing breakwater gives partial protection from waves approaching from the Western part of the San Luis Bay. The bay is exposed to open sea from the South to Southwest. Northwesterly winds are predominant, except during the Winter months, October through April, when these storms from the South generate waves that approach from the S.W. to S.E. The magnitude of the surge is usually less than 0.5 ft. However, 1 ft. waves are common.

The prevailing wind is from the N.W. and averages 5 to 15 knots and, during a Southerly storm, can go up to 60 knots.

The climate and weather are typically mild and favourable. The rainy season, including the storm season, is generally from November 15th to April 15th. Occasionally, brisk winds or fog make it temporarily difficult to navigate within the Port. Rain and heavy winds are not usually experienced at other times of the year. Normally, the temperature is from the low 50's to the high 70's.
GENERAL: Port San Luis is an official Port of Entry with U.S. Customs. The Port Director is on duty Monday to Friday from 0800 hrs. to 1630 hrs.

There is a boat yard with a 60 ton mobile hoist.
AUTHORITY: Port San Luis Harbour District, Pier No. 3, P.O.Box 249, Avila Beach, California 93424. *Tel:* (805) 595-5400. *Fax:* (805) 595-5404. *Contact:* Stephen Leane, Harbour Manager. J. K. Elder, Assistant Harbour Master.

PORT SULPHUR, Louisiana: 29.28 N. 89.41 W. **(See Plan)**

DOCUMENTS, etc: Refer to "New Orleans".
PILOTAGE: A vessel coming into port from sea can arrange to pick up a Bar Pilot (Associated Branch Pilots) by furnishing ETA to the ship's Agents, radio contact by VHF Channel 9 and AM Channels 2738 and 2182. Bar Pilot is exchanged for river Pilot at Head of Passes, Pilot Town, Louisiana. River Pilot (Crescent River Port Pilot's Association) can be arranged through ship's Agent in New Orleans and radio contact as above. Vessel awaiting Pilot for departure may remain at dock until Pilot arrives. Advance notice of 3 hours is required for departing Pilots. This can be arranged by the ship's Master with the shipping foreman.
ANCHORAGES: Anchorage is available on East bank of river opposite to Freeport Sulphur Company Dock. Depth of water at anchorage is 40 ft., the controlling depth in the river.
RESTRICTIONS: No restrictions for entry because of time of day, nor conditions of tide or draft except the controlling depth of Mississippi River to Port Sulphur (35 ft. – 40 ft. as published in reports by U.S. Army Corps of Engineers).
MAX. SIZE: Max. permissible length – 750 ft., breadth not limited, draft equal to controlling depth of river.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Tropical Radio WNU New Orleans.
TUGS: Tugs not normally required. Shore crews usually handle ship's lines. Tug may join the vessel opposite the dock. Charges for handling ship's lines.
STEVEDORES: Not normally required. When requested, stevedoring services can be obtained from Port of New Orleans; contact ship's Agents for particulars.
MEDICAL: Advance notice for personnel requiring medical service is required through ship's Agents. Hospital facilities are available.
TANKERS: 1 tanker berth, permitted draft equal to or greater than controlling depth of Mississippi River. Diameter of loading/discharge lines are 12 in. and 16 in. respectively.
DENSITY: Density in port not affected by tide. Fresh water.
FRESH WATER: Not available.
FUEL: Fuel may be loaded by barge with vessel at anchor. Fuel transfer is not permitted at dock.
FIRE PRECAUTIONS: No welding repair permitted at dockside. Fuel transfer is not permitted. No other specific precautions observed except for "no smoking" precautions, etc.
CONSULS: Consuls offices are located in New Orleans, Louisiana.
REPAIRS: Engine and deck repairs are possible when the dock is not otherwise occupied.
CERTIFICATES: Certificate of condition of cargo handling gear required when use of gear is necessary.
GANGWAY/DECK WATCHMEN: Services of watchmen desirable but not required. Port does not furnish this service.
AIRPORT: New Orleans International Airport, served by most major airlines. 55 miles from Port Sulphur.
TIME: Local time is Central Standard Time (GMT minus 6 hours), except from April/October, Daylight Saving Time is in effect.
HOLIDAYS: Vessels are loaded on all holidays.
POLICE/AMBULANCE/FIRE: Police Tel: 564-2525; Ambulance Tel: 564-2525; Fire Tel: 564-3231.
TELEPHONES: Pay telephones are available.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Immigration Form I-95.
DELAYS: Loading will not commence until all holds are clean of scale and other foreign matter.
AUTHORITY: Freeport Sulphur Company, P.O.Box 1025, Port Sulphur, Louisiana 70083. *Tel:*(504) 564-3981. *Contact:* A.W. Dow, Operations Manager.

PORT WENTWORTH, Georgia: 32.09 N. 81.08 W.

PILOTAGE: Compulsory. Pilot boards at Savannah Sea Buoy. 48, 24 and 12 hours notice required through Agent.
RESTRICTIONS: Vessels can enter and leave port during hours of darkness and at any stage of the tide, however, depth of water at River Bends controls draft.
MAX. SIZE: See "Berthing".
VHF: Pilot on Channels 16, 14 and 13.
TUGS: Tugs from Savannah assist with berthing and unberthing.
BERTHING: *Continental Can & Paper Co.:* Port Wentworth is the most inland berth up the Savannah River and is 29 miles from the entrance. Max. size of vessel so far to berth was LOA 628 ft. Pilots would accept vessels of 700 ft. LOA but would be unable to swing with this length. The berth is dredged to approximately 40 ft. for a length of 700 ft. Least depth of water in channel from sea to berth 28 ft.

Mean tidal range at berth 8 ft. to 9 ft. Nature of bottom – mud.

Vessel is able to dock at any stage of the tide, however, vessels undock on the flood to swing off berth. (Approximately one hour's flood tide required). The berth is a timber faced concrete wharf of length 240 ft. *Facilities:* There are no bulk handling facilities or quay cranes. Three mobile cranes used. There are no Ro-Ro facilities or floating cranes available. Fork lifts are available for handling reels of linerboard. There are no facilities for handling containers as berth is only used by Paper Mill.
STEVEDORES: Savannah labour used (Experts on loading paper reels).
MEDICAL: Doctor and hospital available.
DENSITY: 1001.
FRESH WATER: Not available.
FUEL: Bunker fuel oil available by barge. Diesel oil and lubricatin also available.
SERVICES: (Available locally or from Savannah): Fresh provis repairs, dry dock, airport, surveyors and laundry service.
GARBAGE DISPOSAL: Service available on request at a charge.
WASTE OIL DISPOSAL: Service available on request at a charge.
SEAMAN'S CLUBS: None.
AUTHORITY: Stone Savannah River Pulp and Paper, Inc., P.O.Box 5 Savannah, Georgia 31402. *Tel:* (912) 964-1271. *FAX:* (921) 966-4 *Contact:* J.R.Knight, Traffic Manager.

PORTLAND, Maine: 43.39 N. 70.14 W. **(See Pla**

DOCUMENTS:

1 Crew List.
1 Passenger List.
2 Stores Lists.
2 Foreign Purchases Lists.
2 Inward Foreign Manifests uniform cargo.
Original Bill of Lading.
1 Form 1300 Master's Oath on entry of vessel.
2 Form 1374 Outward Foreign Manifest.

PILOTAGE: Ship's Agents usually notify Pilot approximately 48 ho in advance of arrival then changes are made at 24 and 12 hours. P boat usually called on Channel 16 and then switched to Channel 1 continue conversation. Pilot goes aboard ship in vicinity of the la navigation buoy using ladder on lee side. When weather bad, sugg vessel anchors approximately 1 mile North of the large navigation bu (LNB).

Portland Pilots Inc. Tel: (207) 774-5623. Fax: (207) 774-5683.
Docking Pilots: McDuffie Pilots Inc. Tel: 781-3954.

ANCHORAGES:
Anchorage A (General): Beginning at Eastern corner of Grand Tru Railway Company Pier No. 3 (Pier removed); thence approximately 9 1,700 yd. to Brooklyn Ledge Buoy 16; thence 330°, 350 yd.; thence 2 780 yd.; thence 303°, 750 yd.; thence 254°, 560 yd.; thence 18 750 yd.; and thence to the point of beginning.
Anchorage B (General and Quarantine): Beginning at Brooklyn Led Buoy 16, thence 58° to Little Diamond Island thence along the S shore to the pier on the Southern end of Little Diamond Island; then 143°, 1,200 yd.; thence 270.25° to House Island Light; thence along t Western shore of House Island to Fort Scammel Point Light; and then 329°, 1,620 yd. to the point of beginning. Anchorage B is intended general purposes, but especially for use by oil tankers and other dee draft ships entering the harbour at night and intending to proceed to t dock allotted at daylight the following morning, or as soon as practicab This area also is to be used for quarantine anchorage. Any ves anchored in this area shall be ready to move on short notice.
Anchorage C: Bounded on the N.W. by House Island; on the North a line running 90° from House Island Light to Peaks Island; on the E by the Western shore of Peaks Island, by a line running 198° from t Westernmost point on Peaks Island to Cushing Island, and by the sho of Cushing Island to its Westernmost point; and on the Southwest b line running from the Westernmost point on Cushing Island to F Scammel Point Light. Anchorage C is intended for use only by sm vessels and for temporary anchorage.
Anchorage D: Southerly and Westerly of a line beginning at Lighthou Channel Buoy 1; thence 35° to Anchorage Buoy E; and thence 145 the mainland. Anchorage D is for use only by small yachts and pleas craft, and small, light draft coastwise freighters.
RESTRICTIONS: No entry restrictions at night. Deep draft vesse brought in on high water only.

Max. beam through bridge – 93 ft.
Max. draft through bridge – 35 ft.

MAX. SIZE: Size of vessel restricted to 45 ft. draft in harbour an No outside installations at port at present.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illne Reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany)
RADIO: Tugs in Portland Harbour use Channel 07. Vessels arriving Portland go through radio station in Chatham, Mass., RCA installatio or call station WOU via radio-telephone. VHF Harbour Control Portland.
VHF: Voluntary reporting system in effect on Channel 13.

Channel 16, Calling & Distress Frequency, monitored 24 hours da
Channel 22A, Main Coast Guard Frequency;
Channel 11, Portland Pilots;
Channels 7A and 78, Portland Tugboat and Ship Docking;
Channel 13, Ship to Ship.

TUGS: Tugs join vessel at Spring Point in Portland Harbour. Tugs own lines at no additional charge. Docking Pilots not supplied Company but are available.
BERTHING: Tidal conditions govern arrivals and departures. De alongside up to 35 ft.
Merrill Marine Terminal: Located in the upper Fore River. 600 ft. × 13 concrete marginal wharf with 4 dolphins and provides 900 ft. berth 35 ft. MLW and a 450 ft. Ro/Ro berth with 25 ft. MLW. 2 cranes. Li storage, covered storage. This Berth handles a variety of cargo including woodpulp, steel, fertiliser, long logs, tapioca.

This is the only general cargo facility within the Port. Located on upper Fore River approximately one mile above the lift bridge adjacent to the fixed highway (U.S. Route 1) and railroad bridg Vessels normally navigate the Fore River on a rising or high tide depending on vessel's manoeuvring equipment (bow thrusters, e either one or two tugs may be required for berthing. Vessels may dock either port or starboard side to. There is no minimum number of mooring lines required. Each berthing is handled on a case by case basis. Fresh water is available at the berth. Vessels may undock at any time and again may require the assistance of one or two tugs, depending on manoeuvring capabilities.

International Terminal: A passenger, container and Ro/Ro facility with limited cargo capability. Located immediately East of the lift bridge. Tug boats required for berthing. Wharf is a marginal wooden structure with 730 ft. of face, the Easterly 290 ft. being new concrete construction, and 35 ft. depth at MLW. Fresh water is available at the berth. Vessels may undock at any time and will require assistance of tugs.

The terminal accommodates an international ferry and Hapag Lloyd's container service.

Maine State Pier Transient Berth:

Length:	270 ft.
Utilities:	Water, sewer, reefer hook-ups, floodlighted dock.
Location:	Pier face far West end of Bath Iron Works facility.
Draft:	25 ft.
General:	Layover berth for small passenger or other vessels. Immediately adjacent to downtown area, vehicle access limited. Prior reservation required via City of Portland Waterfront Office, Tel: 207-773-1613 during working hours (0800 – 1600).

BRIDGES: No undocking on ebb tide through bridge.

STEVEDORES: 4 hours notice on ordering gangs.

MEDICAL: No advance notice required by Agent. 2 hospitals, Maine Medical Center and Mercy Hospital, who take bed patients.

TANKERS: Tankers arriving at Portland Pipe-line, Pier 2, make preparations for 2×10 in. and 12 in. hoses.

Berth	*Depth Alongside*
Clean Harbours of Maine	18 ft. MLW
B.P. Oil Terminal	34 ft. MLW
Getty Terminal	34 ft. MLW
Gulf Oil Terminal	28 ft. MLW (at bow)
Koch Terminal	34 ft. MLW
Mobil Terminal	35 ft. MLW
Northeast Petroleum Terminal	35 ft. MLW
Portland Pipe-line Pier No. 1	35 ft. MLW
Portland Pipe-line Pier No. 2	48 ft. MLW
Star Enterprise Terminal	38 ft. MLW

Shore Storage: Due to shore storage difficulties the Portland Pipe-line Authorities have requested vessels leaving Venezuelan ports for discharge at Portland to provide the following information in order to avoid ship delays at this terminal:

(a) Vessel's expected time of arrival at Portland.
(b) Quantity and grade of cargo loaded.
(c) In case of split cargoes, intended order of discharge.

The above mentioned information should be radioed to Portland Agent for forwarding to Portland Pipe-line Authorities immediately on sailing from the final Venezuelan loading port.

Report: *General/Anchorages:* Deeply laden vessels will enter Portland through the Witch Rock Channel, passing between Buoys "1" and "2", which mark Witch Rock. Lightly loaded vessels will enter through Willard Rock Channel. All vessels will pass between Portland Head and Cushing Island. The swell usually subsides near Spring Point, allowing the tugs to come alongside. Vessels bound for certain Terminals (N.E. Petroleum, Getty, B.P., Koch, Mobil and Star Enterprises) must pass through the South Portland bascule lift bridge which has a horizontal clearance of 98 ft. 2 tugs assist vessels through the lift bridge; one on the starboard bow with good backing line, the other on the starboard quarter. The bridge will not open between the hours of 0700 to 0900 and 1600 to 1800, Monday through Friday. The bridgetender can be contacted on VHF Channel 13; a minimum of 1 hour's notice prior to arrival at the bridge is desired.

Vessels proceeding to Hussey Sound to lighter will be taken by the Sea Pilot through West Cod Ledge and will enter the sound via the channel between Peaks Island and Long Island. Extreme care should be exercised while passing Soldier Ledge, a rock ledge with 40 ft. of water at MLW marked by lighted buoy "6".

N. E. Petroleum Terminal: The vessel continues approximately 1 mile above the lift bridge where it is turned to port and worked ahead into the berth. Vessels dock starboard side to with a minimum of 12 mooring lines. The terminal prefers synthetic mooring lines. The first lines positioned on the dock are the forward spring lines which are passed as the vessel moves ahead slowly. The pier is a typical wooden finger pier with 2 woodfaced steel pile breasting dolphins. Breast lines are led across the dock to wood pile clusters. Vessels dock at Slack High Water and generally can undock at any time with the assistance of 2 tugs. Upon undocking, the vessel must back into the channel and turn before heading out to sea.

Gulf/Cumberland Farms Terminal: The Terminal is located in South Portland about 1 mile outside the lift bridge. The berth consists of 2 steel breasting dolphins 40 ft. in diameter which are fendered with wood. The hose rig and manifolds are located midway between the 2 dolphins. Vessels approach the finger pier and are breasted alongside by 2 tugs. Care should be taken not to work the vessel along the pier face. Vessels dock port side to with a minimum of 10 mooring lines. The 2 stern lines lead to 2 mooring buoys. Vessels start in 3 hours prior to HW in order to arrive at the dock at HW. Vessels undock with either 1 or 2 tugs. Mooring lines should be carefully tended as strong Northeasterly winds may cause a vessel to move off the breasting surfaces.

Getty, B. P. and Koch: This Terminal is located at the extreme Western end of the Fore River, approximately 1.5 miles beyond the lift bridge and adjacent to a fixed highway and railroad bridge. Vessels transit the Fore River on a rising tide in order to dock at Slack High Water. The vessel approaches the dock slowly, in line with the pier and slightly off of the face to prevent rubbing on the wood fendering. The vessel should be stopped dead in the water and then gently breasted alongside. All vessels dock port side to with a minimum of 11 lines. Stern lines are run to a mooring buoy. Vessels undock with the assistance of 2 tugs.

Mobil Terminal: This Terminal is a marginal-type berth located on the South bank of the Fore River approximately 1.25 miles above the lift bridge. The dock has 2 breasting cells 160 ft. apart. The cells are concrete capped supported by cylindrical steel pipes. The hose gantry platform is located midway between the breasting cells and is set back 3 ft. from the outer face of the cells. The breasting cells are equipped with hard rubber fixed fendering. The mooring points for head, stern, and breast lines are smaller concrete caps supported by steel pipes. A wood walkway runs the length of the dock connecting the the concrete caps. 2 tugs breast the vessel alongside for a port side to docking. 12 mooring lines are considered the minimum acceptable. Vessels dock at HW. On departure, the vessel is worked astern and then turned off the dock with the assistance of 2 tugs.

Portland Pipe-line Terminal: Portland Pipe-line Corporation operates 2 separate finger piers in South Portland. The Terminal is the Eastern terminus of a pipe-line which carries oil to Montreal, Quebec.

Pier No. 1 is the older of the 2 piers. There is a tanker berth on both the East and the West sides of the pier. Vessels dock bow in, starboard side to on the East side and port side to on the West side. On approaching the pier at Slack High Water, vessels are turned to port with the assistance of 2 tugs and are worked into the berth. Forward spring lines are positioned first. 12 mooring lines are recommended. Vessels undock with the assistance of 2 tugs at any stage of the tide. Max. size: 30,000 d.w.t. and 32 ft. draft at MLW.

Pier No. 2 consists of a 975 ft. extension to an older 1,000 ft. finger pier. There is a tanker berth on both the North and the South sides of the pier. Vessels dock bow in, starboard side to on the South side and port side to on the North side. Vessels drawing less than 42 ft. dock at Slack Water. Vessels dock at Slack Water due to the fact that the tide sets across the pier at about 1 knot. Vessels under 80,000 d.w.t. dock with the assistance of 2 tugs; vessels up to 110,000 d.w.t. may require additional tugs. Vessels make a normal approach to the finger pier, are turned to port, and worked slowly into the berth. Forward spring lines are positioned first. 12 mooring lines are considered the minimum acceptable. Vessels undock at any stage of the tide with the assistance of 2 tugs. Max. size: 124,000 d.w.t. and 45 ft. draft at MLW.

Vessels bound for Portland Pipe-line Terminal are usually brought to the inner anchorages, Diamond Island Roads, one tide before their scheduled berthing in order to dock at Slack Water.

Star Enterprise Terminal: The Terminal is located on the South side of the Fore River directly inside the lift bridge. Vessels dock with the assistance of either 2 or 3 tugs. The vessel must transit the bridge as slowly as possible for it must stop immediately after the bridge. It is then slowly turned slightly to starboard and breasted alongside the pier the tugs for a port side to docking at Slack High Water. Vessels undock at any time with the assistance of 2 tugs and are turned before proceeding through the bridge outbound. 10 mooring lines are considered the minimum acceptable.

DENSITY: Average density 1024.

FRESH WATER: Available by tug for boilers only at rate of tug hire. Drinking water available at piers.

FUEL: No. 6 diesel oil and blended intermediate fuel oils. Delivery is via barge only and 24 hours notice required.

FIRE PRECAUTIONS: None – except at certain oil piers where information given to Shipmaster upon arrival at pier. Ample fire protection, salt water lines, sprinkler system on pier, local fire department.

CONSULS: Honorary Consuls for France and Sweden.

REPAIRS: Repair facilities for all types of machinery available.

DRY DOCKS: 3 basins divided into 7 berths which can handle a vessel up to 455 ft. long and 62 ft. wide (not currently activated). Also 3 other smaller marine slipways.

80,000 ton lift floating dock. Depth over keel blocks 14 m. Length 257 m. Clear width 40.7 m.

New Bath Ironworks: New dry dock in operation.

Specifications:	Clear Width:	134 ft.
	Draft:	46 ft. over 4 ft. keel blocks
	Max. Size:	LOA 1,000 ft. Beam 130 ft.
	Max. Lift:	90,000 long tons
	Dock Length:	747 ft. without outriggers 797 ft. with one outrigger.

SURVEYORS: National Cargo Bureau, Tel: 781-4467. Caleb Brett U.S.A. Inc., Tel: (207) 799-5569. E.W.Saybolt, Tel: (207) 799-1142.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Ship's crew open hatches.

CERTIFICATES:

Load Line Certificate.
Certificate of Foreign Clearance.
Ship's Safety Certificate.
U.S. Tonnage Tax Certificate of previous trip if available.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Wine and/or Spirits, 1 bottle per person.

CARGO GEAR: Additional gear may be required for dry cargo. Vessel or agent should contact stevedores regarding same as soon as possible prior to vessel's arrival.

REPATRIATION: Arrangements must be made with Agent in advance by telegram.

AIRPORT: Portland Municipal Airport 3.5 to 4 miles distant.

HOLIDAYS: Accepted holidays: New Year's Day; Memorial Day; Independence Day; Labour Day; Thanksgiving Day and Christmas Day. Stevedoring available on any of these days by prior arrangement.

POLICE/AMBULANCE/FIRE: Switchboard 775 – 6361. Emergencies 911.

TELEPHONE: Arrangements can be made to have phone put on ship, but most docks have pay phones.
IDENTIFICATION CARDS: Form I-95 must be filled-out on arriving unless seaman has had a prior one made out for a previous arrival on same ship.
GARBAGE DISPOSAL: Several local companies available. Contact Department of Agriculture. Tel: (207) 780-3237.
WASTE OIL DISPOSAL: Several local companies available.
SEAMAN'S CLUBS: New England Seaman's Mission Inc., Boston. Tel: (617) 569-6719.
GENERAL: Discussions underway with Coast Guard and other officials to install fixed lighthouse stations to replace lightships at entrance.
DEVELOPMENTS: Plans under way for redevelopment of waterfront. Plans call for deepening Fore River from 35 ft. to 45 ft.
AUTHORITY: Port of Portland, Waterfront Division, Two Portland Fish Pier, Suite 307, Portland, Maine 04101. *Tel:* (207) 773-1613. *Contact:* Thomas F. Valleau, Director. Captain Steve Richmond, Waterfront Manager.

State of Maine, Department of Transportation, State House Station No. 16, Child Street, Augusta, Maine 04333. *Tel:* (207) 289-2841. *FAX:* (207) 289-2896. *Contact:* R.D.Elder, Port Development Director.

PORTLAND, Oregon: 45.30 N. 122.40 W. (See Plan)

PORT LIMITS: The seaward boundary of the Port of Portland is Astoria, 96 miles N.W. of Portland.
DOCUMENTS:

3 Cargo Manifests.
3 Stores Lists.
3 Crew Curio Lists.
3 Crew Lists.
1 Clearance from Last Port.
1 Tonnage Tax Certificate.
1 Copy of Vessel's Register.
1 Itinerary of Vessel, port by port.

Certificates: Registered Tonnage Certificates. Certificate of Financial Responsibility (all details must agree with vessel's register).
PILOTAGE: Compulsory. ETA Bar Pilot Astoria at least 12 hours before arrival giving deepest draft. Bar pilotage covers from sea to the Port of Astoria, river pilotage covers from Astoria to Portland. They change from launch while steaming in channel off Astoria Buoy No. 37.
Warning: Due to heavy swells on bar during stormy Winter conditions, crossings may be temporarily suspended, therefore Masters should attempt earliest VHF radio contact on Channel 16 with Pilots or coastguard station "Cape Disappointment" for latest bar conditions.

During Summer months Masters should use extreme caution in poor visibility as many small fishing craft will be encountered near mouth of Columbia River.

Also see "General – Pilotage" before first U.S.A. port (Albany).
ANCHORAGES: Vessels may anchor to await berths at various locations on the Columbia River. Usual spots are at Tongue Point Astoria, Longview and at Vancouver, Washington.
RESTRICTIONS: All vessels Masters or their Agents to obtain Coast Guard Clearance at least 24 hours before arrival. Captain of Port may impose movement restrictions if any hazardous cargo. Under 36 ft. draft no movement restrictions, 36 ft. and over up to maximum permissible draft of 39 ft. on Pilot's recommendations. Bar Pilots will take vessels up to 45 ft. draft out on HW.

No size restrictions length and beam, however, Corps of Engineers maintain only 600 ft. wide channel, therefore, deep laden vessels over 600 ft. in length to use extreme caution when turning.
MAX. SIZE: No restrictions length and breadth. Depth at Columbia River Bar 55 ft. River channel to Portland/Vancouver maintained at 40 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Portland.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness Reports made to Seattle Quarantine Station.

Master to radio with ETA state of crew health noting any sickness. Agent will report sickness to Seattle Quarantine Station for clearance instructions.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Route ETA cables through KLBITT Seattle, Washington.
Marine Exchange of the Columbia River District (Merchants Exchange): 24 hour marine reporting. Call sign "KDO 759". Call on Channel 16 VHF. Working (Astoria – Longview and 50 miles out to sea) on Channel 9 and (Longview – Portland) on Channel 11 and 18A.

Marine Exchange (Tel: 503 – 228 – 4361) pass messages to vessels from Agents and vice-versa. Coverage is good in river and 50 miles to seaward.
TUGS: Tugs normally join vessel at designated berth. Tugs' lines used at no charge.
BERTHING: The port operates 4 public ocean cargo terminals containing 19 deepwater berths, including 7 container berths with 9 high-speed container cranes. Present depths alongside berths is 40 ft. min. at MLLW.

There are general cargo berths and berths for commodities which require special handling. Port facilities include 21 transit sheds, and 9 warehouses with 2.2 million sq.ft. of sprinkler protected storage area.
SPECIALISED CARGO HANDLING FACILITIES: As well as the 9 container cranes, there are 2 Whirley cranes, 8×45 ton gantry cranes and a 175 ton mobile crane, largest of its kind on the Pacific Coast.

At Terminal 2 is a 2,535 ft. container/general cargo pier with a 40 ton, a 50 ton, a 36 ton revolving crane and an 85 ton straight line crane and 2×65 ton gantry cranes. Terminal 2 contains a Roll-on/Roll-off berth and a 400 ft. barge dock. Pier has a 27 acre open storage yard with rail and truck service. 4 straddle carriers, capable of stacking 20 ft. containers 3 high, or 40 ft. 2 high, serve the yard. Pierside warehouses and container freight station 300,000 sq.ft.

At Terminal 4 there is an 8.1 million bushel capacity grain ele (Cargill), with box car tipper, truck dumper and barge unloading fa There is a Dravo bulk unloader with digging capacity of 900 t.p.h. a bulk outloader with a loading capacity of 1,500 t.p.h. Tanks available for special cargoes such as petroleum, molassses, tallow ore concentrates. Also available is a 120 acre open storage area floating dock for import of automobiles (Toyota). Three general ca berths, totalling 2,400 ft., equipped with 1×35.5 ton straight container handling crane and 1×36 ton revolving crane.

The Terminal 5 elevator is the most modern grain outloading fa in the lower Columbia River and is operated under sub-lease Columbia Grain Inc.

The elevator has a storage capacity of 4 million bushels and is fastest on the river, with an outloading capability of 2,100 tonnes The facility can receive grain by rail, truck and barge. The barge operates at 1,000 t.p.h., trucks are unloaded at 200 t.p.h. and rai can be unloaded at 1,250 t.p.h.

Terminal 6 has a container pier, length 2,850 ft., with 3×50 ton 2×40 ton straight line cranes and a 200,000 sq.ft. container fre station and 72 acres of open storage. Also a 150 acre open storage a and 2 floating docks for import of automobiles.
Bunge Corp: Depth alongside 40 ft. Storage Capacity: 8,000 bushels. Receiving Capacity: Ex-barge 500 t.p.h.; ex–rail 750 t.p.h. ex-truck 750 t.p.h. Loading Capacity: 1,800 t.p.h. (1 belt and 5 spo
Louis Dreyfus: Depth alongside 42 ft. Storage Capacity: 1,500 bushels. Receiving Capacity: Ex-barge 600 t.p.h.; Ex-rail 350 t Loading Capacity: 1,200 t.p.h. (2 belts and 6 spouts).
BRIDGES: No arrival times designated if coming from sea and in exc of 750 tons gross. Departures regulated, with bridge closures du peak traffic flow (0700 to 0900 hrs. and 1615 to 1815 hrs.) unl permission granted by Harbour Master.
STEVEDORES: Allocation for gangs Monday to Saturday must confirmed at 1100 hrs. to longshore hiring hall. Allocation for ga Sunday and Monday made at 1100 hrs. Saturday for both day and n gangs. Same procedure applies to allocation of night gangs, but n gangs may be cancelled by 1400 hrs. in afternoon if night gangs are work.
MEDICAL: Any type medical treatment provided and hospital facil available.
TANKERS:

Berth	Max. Size Vessel Length	Max. Size Vessel Draft
Shell Oil Company	575 ft.	32 ft.
Standard Oil	660 ft. – 700 ft.	35 ft.
Texaco Inc.	650 ft.	30 ft.
Phillips Petroleum Co.	No maximum	30 ft.
Time Oil Co.	600 ft.	38 ft.
Mobil Oil Corp.	550 ft.	31 ft.
Richfield	600 ft.	30 ft.
Union Oil Co.	550 ft.	30 ft.

DENSITY: Fresh water at all times.
FRESH WATER: Available at most berths delivered through pier-s connections.
FUEL: Viscosity grades of B and lower. No advance notice requi Barging essential. Also see "Notice" No. 2.
FIRE PRECAUTIONS: Fire precautions respecting tank administered by U.S. Coast Guard, which enforces shipbo regulations under the Code of Federal Regulations, Part 46, Sub-P D, Sections 20 to 40; the Police Harbour Patrol, which controls movements, boards vessels to warn Master regarding harb regulations, including spilling of oil, etc.; Fire Marshal exerci jurisdiction regarding fire regulations at shoreside facilities serv tankers.

All vessels to have towing cables rigged fore and aft on the offsh side. Cables to be made fast with the eye 1 m. above the water.
CONSULS: The following countries are represented in Portland:

Barbados
Belgium
Cyprus
Denmark
Finland
France
Germany
Great Britain
Ivory Coast
Japan
Korea
Malaysia
Mexico
Netherlands
Norway
Sweden

REPAIRS: All types of deck and engine repairs possible.
DRY DOCKS: 3 floating docks, largest 982 ft.×185 ft. clear width, lift capacity of 81,000 long tons.
GANGWAY/DECK WATCHMEN: Option of vessel Owner/Agent available through private firms.
OPENING/CLOSING HATCHES: While ship at dock, opening closing is work of longshoremen. Ship may open or close own hatc while underway.
CARGO GEAR: Valid cargo gear certificate required, acceptable to Bureau of Labor Standards.
REPATRIATION: Arrangements possible for crew changes or repatriation.
AIRPORT: Airport 10 miles distant, served by 17 regularly sched passenger airlines with direct service and/or connections domestic and world wide. 13 cargo carriers also serve the area.
HOLIDAYS: *New Year's Day; Martin Luther King's Birthday (Jan 15th); President's Day (February 21st); Memorial Day (May 3 *Independence Day (July 4th); Harry Bridges Birthday (July 2 *Labour Day (first Monday in September); Columbus Day (October Veterans' Day (November 11th); Thanksgiving Day, *Christmas (December 25th), State-wide Election Days. Other legal holidays be proclaimed by state or national authority. When holiday falls Sunday, the following Monday is observed as holiday. Longshore performed on any of above listed days is overtime, which is one a half time rate. Days marked (*) are stop-work days, i.e. no ships w worked. This also applies to July 5th, which observed locally on unila basis.

TIME: GMT minus eight hours. Daylight Saving Time becomes effective annually on the first Sunday in April through the last Saturday in October.

POLICE/AMBULANCE/FIRE: Police Tel: 911; Fire Tel: 911; Ambulance: provided by several private firms, but can be obtained through police or fire number.

TELEPHONES: Available by order from terminal superintendents at $5.00 connection charge.

SERVICES: All services available such as compass adjusting, major or minor repairs either with work barges or at ship repair berths; lay berths available; charts available from private companies; all chandlery supplies available.

SHORE LEAVE: Crew members permitted ashore except where vessel has made first arrival from Communist-controlled port.

IDENTIFICATION CARDS: Immigration Dept. requires form No. I-95A and No. 31 (Repatriation). Changes can be effected at any U.S. Immigration Office.

GARBAGE DISPOSAL: See "Agriculture" before first U.S.A. port (Albany).

Service available using private contractors.

Contact:

Thermtec Incineration. Tel: (503) 625-7575, or

Burlington Environmental. Tel: (503) 283-1150.

WASTE OIL DISPOSAL: Portland Ship Repair Yard. Tel: (503) 240-3041. Fax: (503) 240-3080. Storage tank capacity 250,000 barrels.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

NOTICE No. 1:

Custom of the Port Rules and Regulations:

Pertaining to bulk grain and other bulk commodities customarily handled through regular grain elevators, recognised as the practice in the Columbia River District by the Merchants Exchange. It is not the intent of the Rules and Regulations to supersede the contractural relationship between vessel and shipper or charterers, but rather state customary trade practices for the purpose of facilitating commerce under conditions where the contractural arrangements do not cover specific local conditions, in which case these "Custom of the Port" rules and regulations will apply. These rules are applicable to vessels loading in the Columbia River District, which shall be considered as one port and includes grain berths from Astoria, Oregon, to Portland, Oregon, including Longview, Kalama and Vancouver, Washington. Loading berth(s) to be declared during regular business hours at least 24 hours before arrival at the Columbia River.

Rule 1:

Subject to the exceptions enumerated below, vessels shall be assigned to a berth(s) in the order in which they file with the elevator(s) as ready to load. A vessel shall be considered ready when it has obtained Certificate of Readiness issued by the National Cargo Bureau, Inc., and an official certificate of stowage examination from the U.S. Department of Agriculture, Federal Grain Inspection Service, Inspection Division, stating the vessel is completely fit in all compartments in which it is intended to receive cargo.

EXCEPTIONS:

(a) In assigning berth to vessels at any elevator, liners shall be given preference over other vessels, except that any tramp vessel whose allowed loading laytime has expired shall assume the status of a liner vessel for purposes of berth assignment. (For the purpose of these rules, the term "Liner" is defined as a vessel sailing under an advertised Pacific Coast schedule and operated by a line maintaining regular sailings from any Pacific Coast port to named ports, and on which the total quantity of all grain to be loaded shall not exceed one-half of the total deadweight tonnage of the vessel.) A vessel which arrives and presents Notice of Readiness to load in accordance with this rule, but which cannot attain "Liner" status because the allowed loading laytime is not defined in the contract of affreightment, will not lose its berthing priority to a tramp vessel with later Notice of Readiness, that has gone on demurrage.

(b) The elevator may alter the turn of the vessels whenever confronted with the urgent necessity of receiving or loading any particular grade of grain, or to facilitate conditions at the elevator. When requested, elevator operator to supply written confirmation of such loading alteration as authorised under this rule and/or applicable tariff to owner's or charterer's representative.

Rule 2

Normal working days are Monday through Saturday from 0800 hrs. to 1700 hrs. (exceptions are Sundays, legal holidays, and July 5th). Refer to notes below.

(a) July 5th – while not a legal or longshore holiday, has not been worked by Pacific Coast Longshoremen since 1935, and is considered a holiday.

(b) Overtime – is all work over 6 hours in one day, and work between 1700 hrs. and 0800 hrs., Monday through Friday, and all work on Saturdays, Sundays, legal holidays, and overtime days as defined in the Pacific Coast Longshore Contract.

(c) Awaiting vessel – where the same holiday is observed on different days in adjoining states, a waiting vessel not knowing where it could work will observe (for laytime purposes) the holiday in the state that it first works.

Rule 3

Should the vessel refuse to work during a normal working day, or beyond a normal working day when so required in writing by the elevator in accordance with its published tariff, it shall lose its turn and vacate the berth in favour of the next vessel that is willing to work overtime. The vessel so losing its turn shall be entitled to berth as soon as the berth is next available thereafter. Should any vessel refuse to vacate its berth when ordered to do so under the above circumstances, the elevator may effect the removal of such vessel at the vessel's risk and expense.

Rule 4

The Board of Directors of the Merchants Exchange will, on an annual basis, select an abitrator for the purpose of arbitration or interpretation of the Rules and Regulations set forth herein.

Requests for arbitration or interpretation of these rules shall be submitted in writing stating the parties involved and outlining the facts in brief detail to the Manager of the Merchants Exchange. The Manager of the Merchants Exchange and the arbitrator will select the time and place for the arbitration. Failure of the parties named in the abitration to respond or acknowledge the request for arbitration will require the arbitrator to rule on the facts as presented by the requesting party.

Any requests for revisions of these rules must be submitted in writing to the Chairman of the Custom of the Port Rules and Regulations Committee with a copy to the Manager of the Merchants Exchange.

Arbitration fees payable to the Merchants Exchange shall be $50 plus any extra ordinary charges in connection therewith. The above fee shall be paid by the party requesting the arbitration or interpretation.

NOTICE No.2: Issued by the Harbour Master in August, 1980.

SUBJECT: Discontinuing Ship Repairs at Grain and Oil Docks, and Refuelling at Grain Docks.

We feel after considerable deliberation that ship repair at Oil and Grain Docks is an unnecessary hazard and should be discontinued at once.

The practice of refuelling ships at Grain Docks also would be considered taking an unnecessary risk, and as such, will be stopped.

After surveying numerous longshoremen and Grain Operators who reaffirmed this position, we are hereby notifying the concerned contractors that this will be our policy from now on.

AUTHORITY: Port of Portland, P.O.Box 3529, 700 Northeast Multnomah Street, Portland, Oregon 97208. *Tel:* (503) 231-5000. *Telex:* 910-464-5105. *FAX:* (503) 231-5332. *Cables:* Portofport. *Contact:* Mike Thorne, Executive Director.

PORTSMOUTH, New Hampshire: 43.03 N. 70.45 W.

(See Plan)

PILOTAGE: Pilot boards at entrance.

TUGS: The Port of Portsmouth is serviced by 3 regular tugs, one of 1,200 h.p. and two of 1,600 h.p. operated by the Portsmouth Navigation Division of the Central Wharf Towboat Company, Inc. Tel: 1-603-436 1209 (radio frequency 1316). Additional tugs are available in the area if needed.

The rates for moving vessels from the anchorage (1 mile South of Sea Buoy KR2) to berths in the harbour vary according to distance, conditions and tonnage of vessels. Tonnage referred to is s.d.w.t. or Coastwise, whichever greater.

BERTHING:

New Hampshire Port Authority:

Operator:	J. T. Clark & Son of N.H. Inc. Tel: (603) 431-8500. Fax: (603) 427-0771.
Location:	3 miles from Outer Anchorage (Buoy KR2).
Depth at Dock:	35 ft. (MLW).
Type of Pier:	Length 600 ft. Concrete and steel pile with precast concrete deck.
Products Handled:	General cargo, bulk and containerised.
Dry Storage:	50,000 sq.ft. in two sheds.
Dockside:	Potable water, power, telephone and marine bunkers. Modern fork-lift trucks, bucket loaders, tractors and heavy lift cranes are permanently stationed at the facility to prevent any delays in servicing all types of vessels. The 4 cranes range in size from 35 tons to a 220 ton mobile container crane. Additional mobile cranes of 150 ton capacity are readily available. A certified weighing system is located in the centre of the freight marshalling area for easy access to trucks and containers entering or leaving the terminal.

Fuel Storage Inc.:

Operator:	Sea-3.
Address Terminal:	Avery Road, Newington, N.H. 03801. Tel: (603) 431-5990.
Office:	144 Washington Street, Portsmouth, N.H. 03801. Tel: (603) 436-6225.
Type of Pier:	Steel piled cells offshore 125 ft.
Depth Alongside:	38 ft. (MLW).
Normal ship side to dock:	Port.
Line Handling boat required:	Motorised shore bollards.
Access to vessel (for stores and repairs):	Trucks to shoreside, cart or hand to shipyard.
Product handled:	LPG.
Size and number of pipe-lines:	16 in. liquid line, 8 in. vapour return.
Bbls. per hour Discharge capacity:	12,420 bbls.p.hr.
Maximum vessel dimensions:	59,000 c.b.m.
Storage capacity:	400,000 bbls.
Other dock users:	Belcher Oil, Sea – 3 Products Inc., U.S. Government, Global, Trimont International, Cyro.

Also see "Shipmaster's Report".

Public Service Co. of N.H. Schiller Station:

Operator:	Mobil Oil Corp.
Address:	Gosling Road, Newington, N.H. 03801.
Depth Alongside:	34 ft. (MLW).
Normal ship side to dock:	Port.
Access to Vessels (for stores and repairs):	Limited.
Products handled:	Gasoline and distillates.
Size and number of pipe-lines:	Various.
Discharge capability of bbls.:	6,000 bbls.p.hr.
Average distance to storage tanks:	Tank farm adjacent to dock.

Simplex Wire & Cable:

Operator:	Simplex Wire & Cable.
Address:	Old Dover Road, Newington, N.H. 03801. Tel: 436-6100.
Type of Pier:	T-Shape (permanent).
Depth Alongside:	28 ft. (MLW).
Normal ship side to dock:	Port (bow upstream).
Line handling boat required:	Yes.
Access to vessel (for stores and repairs):	Yes.
Product handled:	Ocean cables.

Public Service Co. of N.H. Schiller Station:

Operator:	C. H. Sprague & Son.
Location:	1.5 miles above the Interstate Bridge.
Distance seabuoy to dock:	7.1 miles.
Controlling depth in approaches:	35 ft.
Controlling depth at dock – MLW:	37 ft., ledge bottom.
Docking and undocking conditions:	Docking is restricted to a high water operation – Pilot starting ship in from anchorage area at high water only. Undocking: Low water slack at the dock or 1 hour before high water slack at the dock.
Length of dock and construction:	700 ft. with dolphins. Concrete pile, concrete decked T-head wharf with a 100×20 ft. approach.
Tugs and line handlers:	2 or 3 tugs used to dock and undock. Terminal personnel used as linesmen.
Bunkers:	Available through 6 in. line at 2,000 bbls./hr.
Water:	Supplied through 2.5 in. line.

C. H. Sprague & Son Co., Newington Terminal:

Operator:	C. H. Sprague & Son Co.
Address Terminal:	Old Dover Road, Newington, N.H. 03801. Tel: (603) 431-5131.
Office:	One Parade Mall, Portsmouth, N.H. 03801. Tel: (603) 431-1000.
Type of Pier:	Steel piled cells (2) and mooring dolphins (3) Offshore 300 ft.
Depth Alongside:	36 ft. 6 in. (MLW).
Normal ship side to dock:	Port.
Line handling:	Motorised capstans on all dolphins. Lines handled by Sprague personnel.
Lines:	6-18 depending on size of vessel.
Access to vessel (for stores and repairs):	5 ton vehicle or less to ship side, 5 ton vehicle or more, cart or hand to ship side.
Products handled:	Kerosene, diesel fuel, No. 2 home heating oil.
Size and number of pipe-lines:	1×16 in., 1×14 in., 3×10 in., 1×8 in., 1×6 in.
Discharge Rate:	7,000-20,000 bbls./hr. (varies on product and tank size).
Max. vessel size:	700 ft. overall length.
Storage capacity:	1,200,000 bbls.
Dockside:	Potable water, pay telephone, marine bunkers (light oil only).

Gold Bond Building Products Division of National Gypsum Company:

Operator:	Gold Bond Building Products.
Address Plant:	Freeman's Point, Portsmouth, N.H. 03801. Tel: (603) 436-4840.
Mailing:	P.O.Box 270, Portsmouth, N.H. 03801.
Type of Pier:	2 circular marine cells, 40 ft. dia. at shore side.
Depth alongside:	40 ft. (MLW).
Normal ship side to dock:	Port.
Line handling boat required:	Motorised shore bollards.
Access to vessel (for stores and repairs):	Trucks to shoreside.
Product handled:	Gypsum ore through a conveyor system designed for self-unloading ships.
Other Dock Users:	Northeast Petroleum Corp. N.H. Trading Corp.

BRIDGES: *Bridge Clearances:*
Memorial Bridge (lift): Horizontal 260 ft., vertical 150 ft.
ME.-N.H Bridge (lift): Horizontal 200 ft., vertical 135 ft.
1-95 Highway Bridge (fixed): Horizontal 440 ft., vertical 135 ft.
General Sullivan Bridge (fixed): Horizontal 100 ft., vertical 46 f
New Castle Highway Bridge (Bascule): Horizontal 29 ft., vertical 12

TANKERS: Also see "Berthing".

Report: Cautionary Advice – Port Approaches: Vessels approa Portsmouth should pass South of Isles of Shoals, and, if waiting fo Pilot, anchor inside of Gunboat Shoals Buoy No. 1. Vessels shoul anchor during periods of heavy swell. It is not prudent to enter po fog, snow or when swell is running West of Whaleback Reef. Numer small craft frequent this area during Summer months.

Tugs: 4 tugs are available at this port. Pilot acts as Docking Master his advice should be heeded concerning number of tugs and num and placement of mooring lines.

General: Portsmouth Harbour is at the mouth of the Piscataqua R and is the approach to all marine terminals located on the river. T terminals are located above the City of Portsmouth. Vessels trans up-river must pass beneath either 2 or 3 bridges, depending on terminal. The first bridge is the Memorial Highway Bridge which is a bridge with a vertical clearance of 150 ft. in the raised position. T second bridge is the Route No. 1 Bypass and Railroad Bridge (N Island Bridge) which is also a lift bridge and has a vertical clearanc 135 ft. in the raised position. The third bridge is the Route 95 Br which is a fixed structure with 135 ft. of vertical clearance. The 2 bridges monitor VHF Channel 13. The minimum horizontal clear on the bridges is 200 ft.

The Agent must notify the U.S. Coast Guard 24 hours prior to vessel entering the harbour. The vessel must notify the U.S. Co Guard on VHF Channel 16 upon entering the harbour. The Pilot will a vessel under way approximately 1 hour before the tide changes order to make a Slack Water passage. Tugs will come alongside a the vessel has rounded Fort Point.

Sea 3 Terminal: LPG vessels scheduled to discharge at this term must pass through all 3 bridges. The terminal is located 2.9 miles ab the Memorial Highway Bridge on the South bank of the river. An ex ETA is important for LPG vessels due to the nature of the vessel's ca and necessary notification of state, local, and federal agencies (USC LPG vessels must meet the following Port Regulations:

(a) Vessels move within the harbour only during daylight ho (loaded or light).

(b) Vessels move within the harbour only during periods of g visibility. If the visibility falls to less than 2 miles, vessels at s must not enter port without the permission of the USCG Cap of the Port. If a vessel is under way within the harbour and visibility deteriorates to less than 2 miles, the vessel must no the Captain of the Port and then proceed to the berth or anc as directed.

(c) Vessels must continuously monitor VHF Channel 13 while un way in the harbour. Constant communications must maintained with the attending tugs and the USCG escort cra

(d) Vessels transiting in-bound may do so only during periods Slack Water. This could be either High or Low Slack Wa depending on the vessel's draft. On departure from the be vessels leave either at LW or 1 hour before Slack High Wa (daylight only).

(e) Vessels transit the harbour with at least 4 tugs in attendanc

(f) LPG vessels should not enter the port unless the terminal is a to immediately receive cargo.

(g) On a LPG vessel's first call to the port, a USCG inspection te will board the vessel at anchorage. All LPG vessels, whe awaiting inspection or harbour transit, must anchor 1 mile So of the Sea Buoy "KR2". After the initial inspection, a vesse future calls to Portsmouth need only send the following messa to the Captain of the Port, South Portland, Maine:
"To the best of my knowledge and belief, there are no kno casualties to this vessel or its machinery which might affec seaworthiness. I further state that all cryogenic handling detection equipment is in proper operating condition."
This will permit vessel to proceed to the dock for pre-trans inspection. Failure to send the message will require the ves to be inspected at anchor.

(h) Vessels must be prepared to get under way on short notic case of an emergency. One "live" tug must stand-by durin cargo operations.

LPG vessels transit Portsmouth Harbour and the Piscata River escorted by a USCG vessel with 4 tugs in attendance. T marginal-type dock consists of 3 concrete cells connected catwalks. The 4 tugs breast the vessel alongside for a port s to docking. The bow is worked in first while head and forw breast lines are positioned and secured to the bitts. The ster then worked alongside and the remaining lines positioned. T allows for the required tension on the long mooring leads forw 20 mooring lines are considered the minimum acceptable as ebb current forces the vessel off the dock and the bow ha tendency to yaw with the current. All moorings lines must carefully tended. Light vessels undock with 3 tugs; vess departing with part cargo must use 4 tugs to undock.

Also see "Shipmaster's Report".

New England Tank Industries – Newington: Located approxima 10 miles rom the Sea Buoy in the Piscataqua River. Vessels gene dock and undock with the assistance of 3 tugs. Vessels are brea alongside by the tugs for a port side to docking. 12 mooring lines considered to be the minimum as current can reach 8 knots espe during Spring freshets. Vessels dock and undock day or night. Ves are turned off the dock or in the turning basin upon undocking discharging.

Northeast Petroleum – National Gypsum: Located on the West bank of the Piscataqua River below and adjacent to the Route 95 Fixed Bridge. The berth is approximately 5 miles from the Sea Buoy and is above the City of Portsmouth. The marginal-type dock consists of 2 breasting cells set on 163 ft. centres. The hose gantry is mounted on a third cell which is set back 4 ft. from the face of the breasting cells.

Both breasting cells are fitted with hard rubber fixed fenders. A gypsum unloading conveyor gantry is located at the South end of the pier but the structure does not interfere with tanker operations. The mooring line lead to the shore mooring point is approximately 115 ft. Vessels dock day or night with the assistance of 2 tugs. The tugs breast the vessel alongside for a port side to docking. 17 mooring lines are considered to be the minimum acceptable. Vessels undock with the assistance of 2 tugs and are turned below the berth. Due to the strong river currents and the close proximity to the navigational channel, lines must be tended closely.

C. H. Sprague & Son – Company Shiller Station: Located on the South side of the Piscataqua River about 7.1 miles above the Route 95 Fixed Bridge. The dock consists of a concrete pile, concrete decked 'T'-head wharf and dolphins. The overall length of the dock with the dolphins is 700 ft. Pilots start vessels in from the anchorage area at a suitable time in order to dock during Slack High Water. Vessels dock and undock with the assistance of either 2 or 3 tugs. Vessels dock port side to using approximately 14 mooring lines due to the extreme currents experienced during maximum stages of ebb and flood. After completion of discharge, vessels are turned in the turning basin or off the dock. Vessels undock either at Slack Low Water or 1 hour before Slack High Water. As with other terminals, mooring lines must be closely tended at all times due to the strong river currents.

Tides and Depth of Water: Tidal currents are very strong in the Piscataqua River, averaging between 3 – 5 knots. Spring freshets increase this current. Eddies form around most of the berths making slack tide berthing mandatory. Tidal range is 8.1 ft.

FRESH WATER/FUEL: Available.

REPAIRS: Facilities available.

BANKS: First National Bank of Boston. Tel: (617) 434-3770.
First National Bank of Portsmouth. Tel: (603) 436-7700.
Maine National Bank. Tel: (207) 439-0451.
State Street Bank. Tel: (617) 786-3839.

VESSEL ARRIVALS AND DEPARTURES

Marine Section, Federal Building, Room 103, Portsmouth. Tel: (603) 436-7620, ext. 737.

District Office (Portland, ME): Tel: (207) 780-3328.

COMMERCIAL VESSELS, ARRIVALS & ENTRY

Report of Arrival: These vessels must report arrival to a U.S. Customs Officer within 24 hours (19 U.S.C. 1433):

A. Vessels arriving at any port or place in the U.S. from any foreign port or place (refers to domestic and foreign vessels);

B. Domestic vessels arriving at any port or place in the U.S. from another U.S. location with bonded merchandise or foreign merchandise for which entry has not been made. Failure to report results in penalties.

Entrance: Within 48 hours of arrival from a foreign port, the Master is required to make entry of his vessel, even though the vessel may be at anchor awaiting berth. Foreign flag vessels arriving in ballast from another U.S. port must also make entry within 48 hours of arrival. When vessels which have residue foreign cargo and/or passengers on board arrive from another U.S. port, entry should be made within 24 hours.

Vessels arriving from a foreign port must have made either Preliminary or Formal entry prior to transacting any type of business or permitting anyone on board other than Customs, Immigration, Agriculture, Public Health, and Agent's personnel. Vessels arriving from another U.S. port to discharge cargo must make Preliminary or Formal entry prior to discharging cargo.

Foreign non-commercial vessels are also required to make entry. In Portsmouth this will be done on board at the time of boarding by Customs. The Officer will provide necessary forms and assistance. Non-commercial vessels may contact the New Castle Coast Guard Station for assistance in obtaining a Customs Officer.

WARNING REGARDING SEA STORES

(U.S. Dept. of Agriculture, Animal & Plant Health Inspection Service)

You are hereby warned that WHILE YOUR VESSEL IS IN THE TERRITORIAL WATERS OF THE U.S., regulations of the Department of Agriculture **prohibit** the unloading for any purpose of:

1. Fresh, chilled or frozen meats;
2. Undrawn poultry carcasses;
3. Plants or plant products, including fruits or vegetables;
4. Garbage, consisting or contaminated with scraps, parts or other waste of meats, plants, fruits, and vegetables.

DEVELOPMENTS: The Port Authority has developed a comprehensive plan for maximum utilisation of existing space on a phased basis. An integral part of that plan is another docking facility, 1,000 ft. long with a depth of 35 ft. alongside at MLW. This new docking facility will provide additional berthing space for new users as well as prevent costly delays due to terminal congestion. The Port Authority is also planning to develop approximately 10 acres of new land from a tidal basin adjacent to the present facility. This area will be used for open as well as enclosed throughput storage.

SHIPMASTER'S REPORT: February 1983.

Sea-3 Terminal:

The vessel arrived off Portsmouth N.H. on the 2nd February, at the entrance to which port the Pilot boards, to take vessels up river to Newington. At the arrival time a S.E. gale was in force, so the passage was ended at 2400 hrs. and the vessel stood some 20 miles off the coast waiting for the weather to abate, as I considered it unwise to proceed to the waiting area to anchor; as the holding ground is not good, and in S.E'ly winds there is no shelter. The vessel cruised around at reduced speed until the following day.

At 1450 hrs. on the 3rd February, with the weather, and sea conditions much improved, the vessel anchored 1 mile South of Kitts Rock No. 2 Buoy (KR2). Two U.S. Coast Guard officers boarded from a local harbour tug after some difficulty in coming alongside, due to the ground swell that was still running. The Officers carried out an inspection of all cargo handling equipment, and shut down systems. The Coast Guard officers then granted permission for the vessel to enter the Port of Newington, and disembarked at 1715 hrs.

As there is a port regulation that no LPG carrier can move during the hours of darkness, and that large vessels can only dock, and undock during slack water periods, it was necessary to wait until the following morning before docking.

At 1020 hrs. on the 4th February the Pilot boarded. At 1040 hrs. anchor aweigh, and the vessel proceeded up river. At the mouth of the river there is a shallow patch with only 35 ft. over it at low water. This left only 5 ft. clearance under the keel, and the vessel had to proceed very slowly over it. Four tugs were made fast, 2 for'd and 2 aft, and a U.S. Coast Guard cutter escorted the vessel up-river. The river is narrow, with some very sharp bends. There are 3 bridges, with the port limitations governed by the Noble Island Bridge. The vertical clearance on this bridge is 135 ft., and the horizontal distance is 200 ft. Maximum draft loaded, and on high water is 36 ft. On approaching this bridge it was necessary to let go the 2 for'd tugs, and allow them to pass through the bridge first, making them fast again when the vessel has passed through.

The vessel docked at Sea 3 Terminal, at 1315 hrs. 4th February. The berth constructed from 3 cement and steel dolphins, joined together by a steel platform. It stands about 150 ft. out in the river, and is connected to the shore by a narrow footbridge. The mooring arrangements for a vessel of this size are poor. There is not sufficient leads on the head lines or stern lines due to the way the mooring bollards are placed on the shore, and all the weight is taken on the spring lines. Recommended mooring arrangements as supplied by the Port Authority (see "Plan"). On the full run of the tide the water runs at up to 4 knots alongside, and because of this there is a port regulation that a tug must stand-by at all times while the vessel is alongside. The cost of this tug, on this call was U.S.$300 per hour, which can add a considerable amount to the overall cost of calling at Newington.

Before loading commenced, a liquid and vapour return line were connected. At 1530 hrs. on the 4th February loading commenced. The vapour return line proved very important as it appeared there was a large percentage of impurities in the product received judging by the performance of the vessel's reliquification plant. It was necessary to return a considerable amount of vapour to the shore tank during loading operations. I issued a Letter of Protest, to the Terminal Manager, protesting the quality of the product.

On docking, the vessel was again boarded by the U.S. Coast Guard, and further inspections were carried out. The Coast Guard personnel remained on board throughout the loading operation; sometimes as many as 6 Officers, but never less than 3 at any one time. It was explained to me by their Commanding Officer that some of the personnel had no experience of LPG vessels, and were on board to learn. In this respect the ship's Officers gave all assistance possible in showing them around. The loading rate was slow, only reaching an average of 400 tonnes/p.h. on full rate, and the shore installations could not supply the product any faster. Loading was completed at 0730 hrs. on Monday, 7th February when the cargo loaded was estimated as follows:

Ship's figure:	23,965.127 tonnes
Surveyor's figure:	23,901.602 tonnes
Shore figure:	23,828.614 tonnes (taken from shore tank gauge reading)

The draft on completion was 33 ft. 00 in. for'd., 34 ft. 08 in. aft.

Owing to port regulations the vessel had to remain alongside until the next daylight high water which was at 0800 hrs. on the 8th February. The vapour return line remained connected during this time, as regulations prohibit releasing uncondensables to the atmosphere, and in view of the impurities in the product it was found necessary to use this vapour return line.

At 0745 hrs. on the 8th February while the vessel was preparing to sail, a Coast Guard Officer boarded and informed me that the visibility in the river was less than 2 miles, and the U.S. Coast Guard would not grant permisson for the vessel to sail. Heavy snow had fallen throughout the previous day, but had cleared during the night, and the visibility at the vessel was over 2 miles. Evidently further down river it was still snowing, and visibility was restricted. The vessel had to remain alongside until the next daylight high water which was 0900 hrs. on the 9th February.

At 0715 hrs on the 9th February while preparing the vesel to sail, the vapour return line was disconnected, and a further survey of the product on board carried out. The result was as follows:

Loss of product as found by ship:	50.283 tonnes
Loss of product as found by Surveyor:	52.568 tonnes

At 0855 hrs. on the 9th February the vessel sailed for the Panama Canal. She was assisted by 5 tugs, as both the Pilot and the U.S. Coast Guard insisted on an additional tug being employed for the down-river passage as the vessel was deep loaded. There was no difficulty in leaving the berth. All stern lines were let go, and the vessel's stern allowed to swing out into the river, while still made fast for'd, with all weight coming on the for'd spring lines. When the vessel was at right angles to the dock all lines were let go, and the tugs pushed her around until she was heading down river. The river passage went without incident, and the Pilot disembarked at 1037 hrs. when approaching Kitts Rock No. 2 (KR2) buoy. The passage commenced at 1100 hrs on the 9th February, 1983.

AUTHORITY: New Hampshire State Port Authority, Port of Portsmouth, 555 Market Street, Box 506, Portsmouth, New Hampshire 03801. *Tel:* (603) 436-8500. *FAX:* (603) 436-2780. *Contact:* Ernest Connor, Port Director. Harbour Master: *Tel:* (603) 436-8500.

PROVIDENCE, Rhode Island: 41.48 N. 71.23 W.

(See Plan)

PILOTAGE: Compulsory. Pilot boards 1 mile South of Brenton Reef Light Tower (position: Lat. 41° 25′ N., Long. 71° 23′ W.). Send ETA to Agent 24 hours prior to arrival. Pilots (call sign "Rhode Island Pilots") on Channels 16, 12 and 18A.

ANCHORAGES: There is no port anchorage for dry cargo vessels. It was reported that tankers can discharge into barges off Newport.

RESTRICTIONS: Vessels can enter and leave at any stage of the tide, day or night.

MAX. SIZE: Pilot advised max. draft is 38 ft., however, Agent recommends 38 ft. with 2 ft. keel clearance.

RADIO: Station WCC.

VHF: Port Authority on Channels 16 and 18A. Agent on 16, 18A, 13 and 9. Also see "Pilotage".

TUGS: 9 tugs available, 1,600 h.p. – 3,200 h.p. Vessels may dock and undock without tugs, however, they are required for turning in the harbour.

Providence Steamboat Company serving Ports of Providence, Narragansett Bay, Fall River and New England Electric at Brayton Point. 4 tugs – 24 hour dispatching service. 2×3,000 h.p. tugs.

BERTHING: *Municipal Pier No. 6:* The berth is the first port hand berth when entering Providence. Distance from entrance to berth 25 miles. Length and beam no limit. Max. draft 38 ft. Least depth of water in channel from sea to berth reported to be 40 ft. Mean tidal range at berth 4.5 ft. Also see "General".

Cargo Handling Facilities: Mobile cranes only available for handling bulk steel and scrap cargoes. 6 mobile cranes, capacity 100 tons to 250 tons. No Ro/Ro facilities. No floating cranes. There are facilities for handling 20 ft. and 40 ft. containers, also sufficient storage space. There is also adequate storage space for breakbulk and palletised cargoes.

MEDICAL: Doctor and hospital available.

TANKERS: LPG/LNG carriers – see "Shipmaster's Report" dated February 1985.

Report: *American Chemical-Wilkes Barre:* General: The Wilkes Barre Terminal of the American Chemical Company is located 26 miles from the Sea Buoy on the Providence River. This facility was formerly operated by Exxon Company, U.S.A. It is now operated by Union Oil Company of California and Getty Oil Co., Inc. The wharf has a 75 ft. face, 300 ft. with dolphins; 30 ft. depth alongside. Deck height of 9 ft.

The berth can accommodate vessels up to 600 ft. in length, 85 ft. beam, maximum 25,000 d.w.t., and maximum drafts to 27 ft. Docking is accomplished at HW or rising tide only. Undocking can take place at any state of the tide.

Pilotage and Docking: The services of a Pilot and Docking Master are recommended. The width in the existing berthing area and required approach manoeuvres make utilisation of the Docking Master mandatory. 2 tugs are required when docking vessels of any tonnage. A minimum of 1 tug (1,800 h.p.) is required when undocking. During strong Southerly winds 2 tugs shoud be employed for undocking.

Mooring: Normal mooring leads are adequate for this berth. However, strong Southerly winds are cause for concern. There is a poor lead for the after spring and breast lines. During times of excessive Southerly winds, all lines should be tended and checked frequently. The terminal does not provide a gangway.

Only No. 2 heating oil is discharged at this terminal. Discharge is accomplished through 2×8 in. hoses using ASA flange connections. Pumping pressure is 125 p.s.i. The terminal has no facilities for receiving ballast or slops.

Amoco – Providence, Kettle Pt.: General: The Amoco Wharf is on the East side of Providence River 26 miles from the Sea Buoy. This wharf is used for the receipt and shipment of petroleum products. The berth is aligned North and South with a total of 6 wooden breasting dolphins. The wharf has a 500 ft. face (600 ft. with dolphins). Hose rig and hoist are located on a "T" head 90 ft. long, 30 ft. wide at the centre of the pier.

Entering and Docking: 2 mooring dolphins located approximately 90 ft. inside the main pier and used for fore and aft breast lines, head lines are run to a mooring dolphin, and stern lines to bollards located on shore.

Vessels can dock either port or starboard side to but a starboard side berthing is preferred. Deep draft vessels dock on Slack High Water only, day or night, and can unberth at any stage of the tide any time.

Depth of water alongside the berth is 35 ft. MLW. Average tide at Providence is 4 ft. 6 in.

A Docking Master is recommended. Docking should not be attempted without local knowledge. 2 tugs are used for docking under normal conditions. One tug is used for normal undocking. Both tugs and Docking Master meet the vessel 0.5 miles below Kettle Point and assist vessels to the berth.

Gasoline, heating oil, diesel, and No. 5 fuel are all discharged through 8 in. hoses. All connections are made with ASA flanges. Maximum pumping pressure for all cargo lines is 90 p.s.i.

Gulf – Gulf Oil Pier: General: The berth projects Westerly into the river for a distance of 800 ft., and is 50 ft. wide, wooden piling, open faced construction, and wooden decked, terminating in a "T" head 90 ft. long and 30 ft. wide which is aligned North and South.

There are a total of 6 wooden piling breasting dolphins, 3 on each side of the "T" head for a total face of 280 ft. The hose rig, hoist, and discharge heads are located at the centre of the "T" head.

Entering and Docking: Vessels can berth heading either North or South, but a starboard side-to or up-river berthing is preferred. Bow, stern, and breast lines are run to mooring buoys.

Vessels can dock day or night, any stage of the tide, depending on draft. The depth of water alongside the berth is 35 ft. MLW.

In this area local features are such that current movement in particular is subject to considerable distortion.

This berth can accommodate vessels up to 675 ft. in length, maxi 100 ft. beam and maximum draft to 31.5 ft. at MLW. Docking shou be attempted without a Docking Master. 2 tugs are employed for doc and undocking all vessels. Tugs and Docking Master meet the ve in the vicinity of Kettle Point and assist the vessel to the berth gene with the starboard side alongside the berth. Head lines and stern l are run out to mooring buoys. Forward and back spring lines are out to the "T" head. The terminal does not provide a gangway.

Mobil – South Terminal: General: The Mobil Oil Corporation Term is located 25 miles from the Sea Buoy on the Eastern side of Providence River. This facility is used for the receipt and shipmen petroleum products and bunkering vessels.

Maximum size of vessels that can be accommodated at this fac include lengths up to 750 ft., beams to 125 ft., 50,000 d.w.t. maximu and drafts to 39.5 ft. The water at this berth is brackish. Distance f bow to manifold is limited to 390 ft. Docking is done at HW only da night.

Entering and Docking: The services of a Docking Pilot is b compulsory and recommended. 2 tugs are used for docking and o tug for undocking. Tugs and Docking Master meet incoming vessel the vicinity of Sabin Point and assist vessels to the berth for a starbo side docking. If a port side landing is required, vessels proceed ab 1 mile beyond the berth to Fox Point Reach and turn around. Nor mooring leads are used at this berth. No gangway is provided by t terminal.

C. H. Sprague: General: The C. H. Sprague and Son Terminal is loca 26 miles from the Sea Buoy at the Allens Avenue Terminal.

The main pier projects Easterly into the river and is 526 ft. long a 37 ft. wide, wooden piling, open faced construction. A turning dolph concrete crown, wooden fendered, and connected by a walkw extending out from the main pier an additional 75 ft. and fitted w 2 bollards, making for a total face of 601 ft. The berth also h 3 unloading towers serving a belt conveyor system.

The South side of the pier is not used and has a depth of 12 ft 14 ft. alongside. The North side has a depth of 35 ft. LW, but commen to shoal up 35 ft. from the inner bulkhead.

Vessels up to 650 ft. in length, maximum beams of 100 ft., and dra at MLW of 35 ft. can be accommodated at this terminal. Maxim deadweight of vessels at this terminal is 38,000 d.w.t. The water at t terminal is brackish.

Ships having a large flared bow should exercise caution as the load towers extend over the pier, and in light condition the ship has to given a 3° list before undocking.

Maximum limit bow to manifold is 380 ft. There are 4×8 in. hoses a 2 lines, 1×18 in. for No. 6 fuel and 1×12 in. line for heating oil. Vess scheduled to call at this terminal should have hose derrick ready f lifting the hose as there are no facilities on the berth for this operat

Deep draft vessels dock day or night, HW only, and undock anytim any state of the tide.

Entering and Docking: A Docking Pilot is not compulsory bu recommended. Docking should not be attempted without lo knowledge. 3 tugs are used for docking all vessels and 2 tugs are us for undocking all vessels. Tugs and Docking Master meet incom vessels in the vicinity of Kettle Point and manoeuvre vessels to the be Normal mooring leads are used at this berth.

Normal docking is done port side to. The terminal does not provid gangway.

Texaco/Curran: General: The Texaco/Curran Terminal is loca 26 miles from the Sea Buoy at the Allen's Avenue Terminal.

The berth projects Easterly into the river for a distance approximately 100 ft. and is 70 ft. wide, wooden piling, open fac construction, concrete decked for the first 800 ft. and the remainde the dock is wooden decked.

The South side has a total of 3 wooden pilings, concrete crow 20 ft.×20 ft. breasting dolphins, wooden fendered for a total face 500 ft. Usable length of the berth on the South side is 650 ft. for t loaded vessels and 700 ft. for partially loaded vessels and a control depth of 32 ft. MLW.

The hose rig hoist and discharge headers on the South side i located on a 60 ft.×25 ft. concrete platform 35 ft. from the extre Eastern end of the pier, and is used by Texaco.

The North side of the dock has a turning dolphin at the extre Eastern end of the pier, open faced wooden piling construction wit 12 in.×12 in. chafing string piece.

The North side has a usable length of 650 ft. for fully loaded vess and 700 ft. partially loaded. A controlling depth of 32 ft. MLW. The h rig and discharge headers are located 320 ft. from the extreme East end of the pier and is used by Curran & Burton.

Vessels up to 700 ft. in length, beams of any width, drafts to 32 ft MLW, and 35,000 d.w.t. maximum can be accommodated at this be Vessels normally dock at HW, day or night, and undock at any stag the tide. Water at this berth is brackish.

Entering and Docking: The services of Docking Master are compulsory but are recommended. Docking should not be attemp without local knowledge. Docking Master and tugs meet the vessel ab 0.5 miles below the berth and proceed to off the berth where the ves is turned 90° and manoeuvred into the berth for a starboard side land 2 tugs are used for all vessels and 1 tug is used for all undockings un normal conditions. Normal mooring leads are used at this berth.

Cargoes handled at this terminal include heating oil, kerose gasoline, jet fuel, diesel fuel, and avgas. Sizes of cargo lines are 8 8 in. and 10 in. All connections are ASA bolted connections. Maxim pumping pressure on all lines is 100 lbs.

DENSITY: 1016.

FRESH WATER: Available, rate 15 t.p.h. – 30 t.p.h.

FUEL: Bunker fuel oil available if vessel has contract. Diesel oi available. Lubricating oils available.

REPAIRS: Minor repairs possible, machine shop available.

AIRPORT: At Green Airport, Providence, R.I.

SURVEYORS: At Rhode Island.

GENERAL: *Quay:* Granite slab construction with a wooden pile facing. A large number of the piles are missing but there are still sufficient to land on. Surface of quay looks very rough and covered in sand and earth but it is metalled under this and will take heavy mobile crawler cranes.

Ship Chandler: Satisfactory, prices reasonable.

Laundry: Satisfactory and prices reasonable. Laundry collected Saturday 1430 hrs. and returned Sunday morning.

SHIPMASTER'S REPORT: September 1982 (Updated 1990).

Documents: The same as for other U.S. ports.

Pilotage: (Serving all ports in the Narragansett Bay area).

Pilot boards near Brenton Reef Light structure. There is a 24 hour service. Cable address for Pilots is "Rispilot Providence". Pilot launch as well as their shore establishment have VHF and operate on Channels 16 and 10.

Anchorages: There are a number en-route to Providence. Our vessel anchored off Jamestown for 3 days in a well sheltered place and good holding. Max. draft allowed I was informed is about 36 ft.

Berths: There are a number of isolated tanker berths in and around Providence, details of which are found in the Sailing Directions.

A total of 6 berths comprise the Municipal Docks. There are 2 cargo storage sheds, one of recent construction. There are 2 Alliance container gantry cranes.

Fresh Water: Fresh water is laid on to the quay.

Stevedores: Normal cargo working is from 0800 hrs. – 1700 hrs. (Monday to Friday), overtime can be worked until 1900 hrs. and also weekends.

Cargo-Imports: Mainly automobiles from Japan, containers from feeder vessels, steel, lumber and general cargo from Europe by regular liner trade.

Cargo-Exports: Scrap steel, logs, timber and latterly waste paper.

Our vessel loaded a full cargo of wastepaper (cardboard) of almost 12,000 tons. Stowage factor was 135 cu.ft./tonne. 1,400 tons were stowed on deck suitably lashed and covered. The whole cargo was loaded in 27 working days using ship's cranes. Sizes of paper bales varied immensely with weights ranging from 500 kg. to 800 kg.

Bunkers: Not available.

Repairs: Main repair facilities are at Providence (e.g. Promet Dreactor).

General: It was found difficult to bring the vessel alongside the quay at Berth No. 3 during the whole stay in port. This was due to strong water outlets on the quay face from the adjacent sewage works.

Vessel should be amply moored to compensate for strong off-shore winds which are quite common even in Summer.

SHIPMASTER'S REPORT: February 1985.

Port Limits: Entrance to Narraganset Bay, Brenton Tower.

Documents: Standard for U.S.A. Customs & Immigration. Coastwise documents are sufficient if coming from a U.S. port, no others are asked for.

Pilotage: Rhode Island Pilots, arranged via Agents, require 8 hours' notice. Board off Brenton Tower, listen VHF 16.

Anchorage: Can be obtained 1.5 miles S.E. of Brenton Tower but bottom is rock hard and holding will be doubtful in bad weather. There are allocated anchorages within Narragansett Bay.

Restrictions: Vessels can enter/leave at any time except for LNG/LPG Tankers. These must transit in/out in daylight only, whether they have cargo onboard or just cooldown 'heel' remaining. LPG Tankers are provided with a Coast Guard escort vessel, which creates a Safety Zone 2 miles ahead and 1 mile astern, keeping all other traffic clear.

Max. Size: 35 ft. draft was quoted; this vessel went in at 30 ft. comfortably.

Health: Standard U.S.A. requirements.

Radio: WCC Chatham.

VHF: All Channels used as necessary, no special allocation. "Securite" messages for LPG Tanker transit are broadcast on Channels 13 and 16.

Radar: No radar surveillance or Vessel Traffic Scheme (VTS) Control.

Tugs: Join off berth, using their own lines.

Berthing: LPG (Propane) is discharged at Municipal Wharf No. 5, with empty oil drums providing a safety area around the shore manifold, as this is a Public Wharf with free access.

Moorings were adequate, 2 headlines, 1 breast line, 2 springs forward and similar aft, the berth being a continuous quay with rubber tyre fenders.

Bridges: One vertical bridge, clearance 194 ft.

Medical: All facilities available.

Tankers: LPG discharged at No. 5. Municipal wharf at a bulk rate of 750 tonnes per hour, through a 10 in. Chicksan. This Chicksan is a mobile one connected temporarily into an underground line, and jacked up off its wheels; thus it is rather fragile and demands precise positioning during berthing, and careful control of the list during the discharge as it is at its maximum reach when a 60,000 cu.m. vessel is in ballast.

Density: Salt.

Fire Precautions: LPG Tanker, only those imposed by the ship.

Surveyors: Saybolt attended this LPG vessel on behalf of receivers.

Gangway/Deck Watchmen: None. Ship's accommodation ladder was used to the wharf.

Customs Allowances: Usual U.S.A. allowances but no check of bond made on this visit.

Repatriation: Local Airport with services to Philadelphia for International flights, or by bus – approximately 1 hour ($7.00) to Boston International.

Airport: See above.

Time: GMT minus 5 hours. Eastern Daylight Saving Time GMT minus 4 hours in the Summer.

Emergency: U.S.C.G. "Castle Hill" on Channel 16 VHF, working 22A or 12.

Telephone: At Municipal Wharf No. 5 there is a public telephone booth within 250 ft. of the foot of the gangway, against the wall of a warehouse.

Storing: No known restrictions.

Shore Leave: Bus route into town (2 miles) about 100 yards from Wharf No. 5.

Identification Cards: Standard U.S.A. Immigration requirements.

Regulations: All LNG/LPG Tankers have to anchor off Brenton Tower for U.S.C.G. inspection (2 – 3 hours), even those with valid letters of compliance and if no LOC then the inspection could take about 6 – 7 hours. During the discharge of LPG, 2 U.S.C.G. personnel are permanently stationed by the shore manifold, and do occasional spot checks onboard.

Delays: See above.

SHIPMASTER'S REPORT: October 1991.

Pilotage/Anchorage/Channel/Tugs: See "Fall River" – "Shipmaster's Report – dated 1991".

Berth: Vessel berthed at Municipal Wharf No. 5 to discharge latex.

Vessels can berth either side alongside and generally avoid berthing at night time (1700 hrs. – 0600 hrs.) due to the very high cost of the linesmen. Daytime charge is U.S.$1,000.00 and nighttime charge is U.S.$2,000.00.

The depth alongside is approximately 40 ft. and the tidal range about 4 ft. The fenders and bollards are in good condition and the vessel secures with 2 headlines, 2 breastlines and 2 springs forward and 2 springs, 2 breastlines and 2 sternlines aft.

The quay is a flat open quay with the latex manifold sunk into the quay. The tanks with a total capacity of 300,000 U.S. gallons (10,500 tonnes) are above ground.

Shore pumps and lines are used for discharge of cargo and the ship's crew are required to tend the lines.

A brow gangway is required due to the high quay face.

The berth is good for storing as trucks are allowed alongside the vessel.

LPG is also discharged at this berth using portable Chicksans and then to adjacent tank.

Density: The density at L.W. was 1019.

Fresh Water: Fresh water is available and the quality is excellent. Hoses are provided by the Port Authority and the rate of loading was about 100 tonnes/hr. Cost of water is U.S.$0.75 per tonne plus a standard labour charge of U.S.$130.00.

Fuel: IFO and MDO available at Providence by tanker truck of 31 tonnes capacity. No barge delivery service at the port.

Supplies: Fresh produce is available and of good quality and reasonable price.

Airport: T.H. Green Airport is about 10 miles South of Providence and operates services to New York and Boston.

AUTHORITY: Port of Providence, Marine Terminal Building, Municipal Wharf, Providence, Rhode Island 02905. *Tel:* (401) 781-4717/8. *Contact:* John D'Artuono, Port Director.

RED DOG (Kivalina): 67.33 N. 164.12 W. (See Plan)

LOCATION: Situated in Lat. 67° 34′ 42″ N., Long. 164° 03′ 30″ W.; Northeast of The Bering Strait near a small town, Kivalina, Alaska. This port is capable of exporting some three quarters of a million tons of zinc and lead concentrates annually for shipment during the Summer season.

DOCUMENTS: See "General".

PILOTAGE: A compulsory pilotage area has been established for vessels calling and leaving from the Red Dog Anchorage. The pilot station is located approximately 14 miles, bearing 238° (T), from the barge loading dock. Vessels bound for Red Dog should amend their ETA to pilot station as necessary and keep North Pacific Maritime, Ketchikan, Alaska, Cable "Sousteve Ketchikan", Telex: 099-55295, well posted of any change.

The Pilot will normally board via a tug from Red Dog. A combination pilot ladder must be properly rigged and, in case of arrival during hours of darkness, adequate lighting must be provided. If, because of adverse weather (or for any other reason) the Pilot is prevented from boarding the vessel at the scheduled time, Masters are to obtain permission and instructions from Red Dog Port Control prior to entering the pilotage area and proceed to the assigned anchorage position.

ANCHORAGE: An anchorage, nominally 2.5 by 2.5 miles, has been allocated to the loading of vessels; the Easternmost side of it lies about 3.4 miles from the barge loading pier, and anchorage may be reached from the open sea via a surveyed approach 10 miles long and 1 mile wide with its main axis bearing 058.75°/238.75° (T).

Water depth at the anchorage varies from 55 ft. inshore to 72 ft. offshore (17 m. to 22 m.), and likewise the surveyed approach changes depth progressively with a slight gradient.

There is a steady current at the anchorage that runs parallel to the shore in a Northwesterly direction, and vessels will tend to lie head into this predominant feature.

Although the anchorage can accommodate more vessels, usually no more than 2 vessels will be anchored at any one time, leaving ample room for final manoeuvering, safely mooring and lying at anchor. The seabed in this area is flat, comprising of silty sand with a firm muddy strata lying just below, and has proved excellent holding ground. Vessels can safely withstand winds of up to 45 knots.

The sea swell, when not coming from the 3rd and 4th quadrant, is short and lacks effective energy, and pitching, if any, is minimal.

An anchor chain length of no less than 8 shackles should provide ample holding with the second anchor kept ready to be lowered to the bottom to reduce yawing, should squally conditions develop.

With vessels loading at a maximum draft of 45 ft. or 13.72 m., it is intended that the underkeel clearance will be no less than 10 ft. at all times. However, in line with the customary safety precautions to be taken when loading in an open roadstead, Masters are requested to frequently check their vessel's position visually and by reference to radar, water depth and draft, making regular entries in the log book. Taking into account the visual position fixing aids presently available, the occurrence of lateral drift or dragging can best be detected through observing a permanent radar watch, keeping the secondary radar unit on constant stand-by. We also recommend that engines be kept on permanent short notice stand-by, and the vessel be ready to weigh anchor and shift to a position further offshore, should weather conditions deteriorate sufficiently to warrant it.

Also see "Berthing".

NAVIGATION: *Navigational Charts and Red Dog Port Site Plan:* Navigation and approach to the Red Dog Anchorage are covered by NOAA Chart No. 16005. However, with a scale 1:700,000, it was decided to supplement this with a larger scale chart entitled "Red Dog Port Site" for the final approach and anchoring. This chart has a scale of 1:24,000, and covers the surveyed approach, the anchorage and the barge loading pier. A copy of this chart will be placed on board at the earliest opportunity. The Salvage Association were commissioned by Cominco to ensure that the equipment, used by the vessel engaged to carry out the survey, was of the approved type and in good working order.

Navigational Aids: The coastal profile being low, flat, relatively featureless and with visibility sometimes below 3 miles, radar identification of conspicuous targets is of considerable importance to any approaching vessel.

The following is a list of targets most easily identifiable when approaching Red Dog Pilot Station:

(i) The De Long Mountains, together with Mulgrave Hills profile will provide first good radar targets to those vessels fitted with sensitive long range equipment.

(ii) Concentrate Storage Shed, about 1,300 ft. long and 120 ft. high. This structure lies in a direction N.W./S.E., and is about 0.75 miles inland from the shoreline. The entire structure is painted white with a distinctive left blue corner and a red horizontal stripe on the roof.

(iii) Immediately S.E. of the Storage Shed, 4 oil storage tanks, 150 ft. high, painted white, can be identified.

(iv) Concentrate surge bin (Lat. 67° 34′ 42″ N., Long. 164° 03′ 09″ W.), 112 ft. above sea level, located about 2,000 ft. inshore from the barge cellular loading pier, a "Sea Beacon 2" Racon is installed on top of this structure, operating on both X-Band (3 cm.) and S-Band (10 cm.). The Racon is transmitting the Morse code letter "K" which should be picked up at over 25 nautical miles on X-Band and at over 20 nautical miles on S-Band (recent experience shows that it has been received at a 45 mile range).

The Racon transmits on each band at separate time intervals to allow the picture on a ship's radar planned position indicator (PPI) to clear. The ON intervals for each band is 20 seconds each (i.e. the Racon transmits on X-Band 4 seconds, then on S-Band for 20 seconds, then shuts down for 20 seconds). To the mariner, a 20 second ON time would appear as 4 to 5 clear traces of the Morse code letter "K" on the PPI, before the Racon switches to a different transmit frequency. The letter "K" display size is proportional to the range scale.

Characteristics: Light – Flash (1) white every 8 sec. 15 miles Racon – Morse code letter "K" (dash dot dash) displayed 20 secs. on X-Band, 20 secs. on S-Band, 20 secs. idle.

(v) Barge loading finger pier: This structure is situated on the shore line and lies on the continuation of the surveyed approach centre line. The barge loading boom installed on this pier provides an excellent radar target, and because of the relative location of the other two targets mentioned above, may be the first echo to appear on the 48 mile range. The pier is permanently illuminated by flood lights and a quick flashing, high intensity light, is positioned above the loading control tower.

APPROACHES: *Approaches Red Dog Port:* After making good The Bering Strait, the navigational aids enroute to the port become scarce. However, for a vessel fitted with LORAN C, SATNAV, or OMEGA and the benefit of a positive departure point from Little Diomede, making good a course well clear of the shoals off Shishimaref is a relatively simple navigational challenge. Masters are, however, cautioned against the possibility of encountering ice in the early part of July, and the consequences of course adjustments on their ship's position.

Prince of Wales and Shishmaref Shoals: The closest approach to either of these shoals occurs passing through The Bering Strait when, out of necessity, the vessel's course brings it within 10 to 12 nautical miles of the Prince of Wales Shoal.

Passing within 10 to 12 nautical miles of the Prince of Wales Shoal does not constitute hazardous navigation when one takes into account:

(i) The abundance of reliable and easily identified radar targets.
(ii) The reliability of Satnav and Loran C in this area.
(iii) The existence of lights on Cape Prince of Wales and Big Diomede.
(iv) The absence of paucity of traffic.

Safely rounding the Northernmost extremity of Cape Prince of Wales Shoal has not presented any problems, due to the excellent radar targets afforded by Cape Dehzneva and Diomede, which provide the mariner with reliable reference points for his course alteration.

From the Bering Strait to the Red Dog Lighterage Area (and vice versa), vessels follow a Northerly course until reaching Lat. 66° 30′ N., and passing some 30 nautical miles to the North of the shallow waters off Shishmaref Island. With a reliable departure point as a starting reference, a Northerly current set, the ability to obtain frequent accurate fixes using Satnav and/or Loran C and echo soundings to warn of shoaling, it is difficult to conceive how Shishmaref Shoal could pose a hazard to navigation to vessels following this track. From approximate position Lat. 66° 30′ N., Long. 168° 30′ W., the d landfall course to the Red Dog Pilot Station lies approximately 6 n North of the compulsory pilotage waters boundary. Unless dictate ship's safety considerations, Masters are reminded not to enter pilo waters, unless a licensed pilot is on board (See "Plans").

As an additional guide, the Radio Beacon at Cape Dezhneva (w operative) can be used as a stern bearing until the Racon or the radar targets are picked up. It should also be remembered operations are carried out predominantly during Summer months, long daylight will largely prevail.

The following summarises navigational notes made by the Maste the tug "Justine Foss", whilst on passage from the Bering Strait to Dog Port Site in September 1989:

(i) *Loran C:* Reception poor from South of Cape Prince of Wales. B combination was slaves 29 and 47.

(ii) *Radar:* Good through The Bering Strait, Diomedes and C Dezhneva, providing satisfactory targets up to 10 miles Nor Cape Prince of Wales. 20 miles North of Diomedes, coverage p until making final approach. Mountain Peaks on the Russian s making cross bearings with Diomedes useful for clearing shoa On the final course towards Red Dog, the mountain tops beh the port provided echoes at 40 miles and the storage shed 18 miles *(Please note well, this passage was made before aids to navigation were installed at the port, and with the inclus of the Racon Beacon and the installation of the loader, m precise position fixing is available).*

(iii) *Radio Beacon:* Cape Dezhneva has a beacon. Not used, as not equipped with R.D.F.

(iv) *Satnav:* Seemed the most reliable means of fixing after The Be Strait.

(v) *Current:* Very little set in The Bering Strait, as current r Northerly. No set was experienced during transit from Strait to P Site.

Shipboard Navigation Equipment Performance: Vessels that have far navigated The Bering Strait and the Chukchi Sea, and loaded at Red Dog Anchorage, have reported the following performance:

(i) Gyro Compass: Accurate and reliable.

(ii) Radar: Accurate and reliable with many readily distinguisha targets showing at ranges of 33 to 60 n.m. (nautical miles). particular note were:
Fairway Rock: 33 to 35 n.m.
Diomede Islands: 48 to 49 n.m. (38 n.m. when astern).
Cape Prince of Wales: 51 n.m. (38 n.m. when astern).
Cape Dezhneva: 30 to 58 n.m. (60 n.m. when astern).
Red Dog Port Site: 47 to 50 n.m.
Red Dog Racon: 21 to 48 n.m.
Cape Krusenstern (Igichuck Hills): 46 n.m.
Cape Krusenstern: 34 n.m.

(iii) Satellite Navigator: Accurate and reliable with frequent (hou fixes readily obtainable.

(iv) Omega: Less accurate with errors between 2 and 8 nautical mi The error was found to increase with latitude.

(v) Loran C: Accurate and reliable, until about Lat. 67° N.

RESTRICTIONS/MAX. SIZE: The lead and zinc and concentra shipments from Red Dog Anchorage will be carried by bulk carrie basically grouped in two size categories:

(a) Panamax vessels up to 70,000 d.w.t. – These vessels will loa a draft of up to 45 ft. S.W. or their Summer marks, whichever is lesser.

(b) Handysize vessels up to 35,000 d.w.t. – These vessels will loa a draft determined by the available draft at the port of discharge or t Summer marks, whichever is the lesser.

RADIO: *Notices of Arrival:* The following parties must be notified vessel's ETA and arrival amended as necessary:

(i) Upon departure last port, 7 days prior arrival and then d thereafter.
Cominco, Vancouver. Telex: 04-507730. Fax: (604) 685-3241.
Foss Maritime, Red Dog Port. Telex: (Easylink mailbox) 626215 attention Navios Superintendent.
North Pacific Maritime, Ketchikan, Alaska. Telex: 099-552 Cables: Sousteve, Ketchikan.
Navios Corporation, Stamford, CT. Telex: RCA 238853 Navios. MCI 6819519 Navios. Fax: (203) 961-0845/0847. Cab Navcargo Stamford Connecticut (routine), Navcarush Stamf Connecticut (emergency).
In addition to the above, you are to notify all parties immedia of any delays of more than 4 hours since last ETA notice.
Please Note: Cominco Vancouver does not have a cable addre In the event of a failure of your telex, please request Navios North Pacific Maritime to pass your message.

(ii) Stowage Plan and loading sequence to be included with the 7 notice to the parties in (i) above.

(iii) In addition to the above messages, Kivalina Harbour may contacted when within reach, by VHF Channels 8, 10, 12, 16. last minute change in the Stowage Plan should be notified thro the above channels.

Notice of Readiness: To be tendered by Telex or Radio to Cominco Dog Operations Centre, with copies to Cominco Vancouver and Na immediately upon anchoring or, if conditions prevent the vessel navigating to the anchorage, N.O.R. to be tendered from the clos *safe position*.

TUGS: Two tugs will be employed in this operation: "Sandra Foss" "Stacy Foss". Both are 3,000 h.p., and equipped with Kort Noz weather fax and communication facilities. A third smaller tug, Foss", is also available on site, and is mainly used to assist b operations, hold loading vessel's sterns up wind in case of running s exceeding 4 ft. or cross swells and embarking/disembarking pilots

BERTHING/LOADING: *At the Anchorage:* The ocean vessel should anchor as close to the barge loading pier as is safely possible, but not closer than 3 miles offshore. By doing so, the barges' shuttling time will be kept to a minimum.

Loading will commence as soon as hold inspection is satisfactorily completed and the barges are made fast alongside. The vessel's crew should be ready to attend and assist the barges in making fast. An ample supply of heaving lines and good messengers should be prepared and ready on both sides on the main deck. Also, some special gear (wire slings, shackles, etc.) may be passed from the barges onto the ship's deck. They will be used in accordance with special instructions, either from shore or the barge operators.

In order that the barge operator can readily identify the hatch in which the loading boom is to be positioned, a conspicuous object should be placed at the ship's rail adjacent to the desired hatch.

Similarly, during the periods of darkness, Masters are requested to rig cargo lights at the ship's rail and the beams to be directed downwards at the water. It is suggested that three be placed evenly spaced on each side of the vessel, plus one at the stern. This will provide the tug skippers' with assistance, when the barges make their approach to come alongside.

A crew member must be on deck at all times, being ready to open or close the hatches as required, particularly during periods of threatening weather. Holds not actually in use for loading should be kept closed.

Cargo spillage on the deck or the hatch covers should be swept up promptly, and deposited in the appropriate cargo hold to avoid airborne dust pollution.

Communication with the barges is performed via VHF, and a particular working channel will be indicated at the appropriate time (usually Channels 8 or 10). Vessels not in possession of portable VHF sets will be handed one by the barge crew. These sets must be returned upon completion of loading. Communication between vessel and barges must be continuous and uninterrupted. The Master is responsible for ensuring that the entire operation is properly supervised.

Loading is performed 24 hours a day, 7 days a week; so an adequate watch schedule must be implemented on board the vessel.

The stowage of the cargo, as always, is the responsibility of the ocean vessel. Its distribution should be carefully supervised. There are no bulldozers available, therefore directing the loading spout to attain an acceptable shaped pile within the hold, is of great importance.

MASTERS PLEASE NOTE WELL:

To facilitate the loading of the end holds, the barges may have to be moored in an unconventional way, i.e. bow to stern. In some instances, where the anchor chain impedes the approach and operation of the barge, the ocean vessel may have to re-moor using the other anchor.

Access to the vessel is limited to official personnel. There is to be *no crew shore leave permitted*. No accommodation ladder is required, but a good safe pilot ladder should be rigged on both sides of the vessel.

As previously stated, cargo distribution must be planned in a manner which minimises barge shifting, but when shifting becomes necessary, the vessel's crew must be prepared to assist as required.

Red Dog Anchorage does not offer provisions, bunkering, potable water or other facilities. Medical assistance is confined to emergencies only.

Fishing is prohibited, and the use, distribution and sale of alcoholic beverages is strictly banned during the ship's stay at the anchorage.

The Shuttle Barges: Two 286 ft. × 76 ft. × 18 ft. (87.2 m. × 23.2 m. × 5.50 m.) barges, especially fitted for the transport in bulk of zinc and lead concentrates, are employed to shuttle the cargo to the anchorage (See "Plans").

An extendable boom, 120 ft. (36.5 m.) long and 38 ft. (11.6 m.) high from deck level, is positioned at the centre line.

Particular attention must be paid to the boom movement in relation to the vessel's structure, especially hatch coamings, in order to avoid damage to both the barge and the vessel. Good coordination and constant communication in clear English language are consequently essential. The cargo is transferred at an approximate rate of up to about 1,200 tonnes per hour.

The barge cargo gear has a fixed rubber spout fitted for dust control purposes only, and because the outreach of the boom will comfortably extend to the opposite hatch coaming, ore can be stowed to a pile profile acceptable within tank top stresses, and always in compliance with the provisions of IMO. It remains the responsibility of the Master or his delegated Officers to ensure the cargo is stowed correctly.

In order to take full advantage of the barge's increased stability in its fully loaded condition, and consequently eliminate the danger of contact between the loading boom and the ship's structure, it is recommended that the transfer be performed in the following sequence:

1. Loading should commence in the four corners of the hatch square in suitable pile sizes.
2. Fill in between the piles underneath the coamings.
3. Finally pour into the main body of the hatch square.

There are no bulldozers or other cargo trimming equipment available. Similarly, no discharging or lightering equipment is available at Red Dog, and Masters are warned that it is impossible to correct errors in the cargo distribution once loaded.

The mooring equipment on the barges consists of four remote controlled winches, each fitted with a 1.125 in. wire rope and a "Berger Fairlead". Two are positioned forward on each side; the after winches are, however, positioned inboard, and their fairleads are situated close to the barge's centre line. The barges are also fitted with a train of four "Seaguard" fenders, which can be positioned on either side.

The mooring concept contemplates that barges will moor using their gear only, however in case of threatening weather, or should a particular necessity arise, vessels are requested to assist, and it is recommended that two good polypropylene lines fore and aft, and the fore/aft spring lines on maindeck be made ready for this purpose.

To assist with final trimming, each barge is equipped with belt scales, but draft checks must be regularly implemented throughout loading. Particularly, it is required that a draft survey be performed halfway through the loading, and another prior to the commencement of loading from the last barge. Results are to be passed ashore for comparison and confirmation of the last barge cargo quantity.

On completion of each barge discharge, a Mate's Receipt will be signed by the Chief Officer or the Officer responsible for the cargo. Any notation regarding the nature, status and quantity, remaining on the barge, should be made on this document.

When loading is completed, the vessel will be requested to produce a ship's figure as early as possible, and the result of the draft survey passed ashore by VHF, as the vessel will be sailing soon after under the Early Departure Procedure.

Cargo: Three grades are loaded at Red Dog, namely:

(a) Zinc concentrates stowing approximately 15 cu.ft. per metric ton and 130 lb./cu.ft. having an angle of repose of 35°/45°.
(b) Lead concentrates stowing about 12 cu.ft. per metric ton and 180 lb./cu.ft. having an angle of repose of about 35°/45°.
(c) Middlings (or ISF) which is a mixture of two two ores. Stow factor and angle of repose is consequently a prorated average of (a) and (b). Please note that shippers, Cominco, will deliver cargo quantities *measured in short tons.*

The total cargo will be one or a combination of any of the above three grades. Natural segregation between grades is required, and under no circumstances can different grades be stowed in the same hold.

Great care should be exercised to properly identify each barge, its cargo grade and the appropriate receiving hold before permitting cargo transfer to take place.
